

Save time on faculty reporting with My Organization

Completing the research analytics loop to deliver standardized researcher, team and departmental reporting.

My Organization is an integrated module within InCites Benchmarking and Analytics™ that enables you to assess researcher, team and departmental performance using responsible indicators derived from accurate, objective and complete publications data.

Retain full control of your data by importing your own verified

departmental structure, researcher names and publication records. My Organization then delivers citation metrics and standardized reporting, enabling stakeholders across your institution to make confident, data-driven decisions. You can also use the underlying data to maintain your local profiling system through the Web of Science™ and InCites™ APIs.

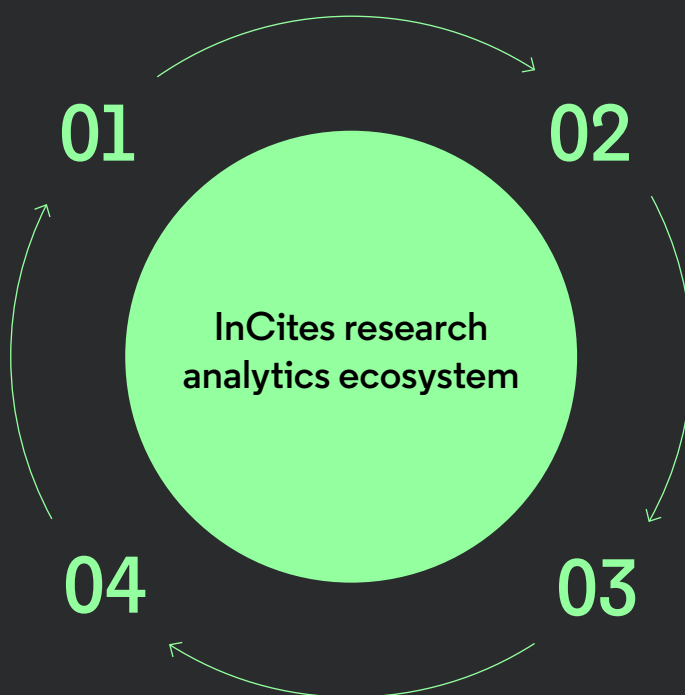

**Retain full control
of data by using
your own verified
departmental
structure.**

Benefits

- Obtain a standardized dataset for evaluation while reducing the administrative burden on researchers to validate their research outputs.
- Gain comprehensive, reproducible reporting to support your annual review process.
- Seamlessly deliver integrated metrics derived from trusted Web of Science Core Collection™ data to all relevant users.
- Showcase your institutional research by integrating the Web of Science API with your local system in order to collect the full metadata from the Web of Science against your researcher profiles.

**Seamlessly
deliver
integrated
metrics to all
relevant users.**

Figure 1: Cycle of data exchange on scientific achievements with InCites.

01 Obtain a Clarivate™ curated dataset or list of researchers matched to publications from your local profiling system

02 Data import and match to My Organization

03 Easily assess your researchers, teams and departments with InCites citation metrics

04 Use the Web of Science APIs to maintain your local researcher profiling system

How it works

Your staff can easily import data from your local profiling system into My Organization using our simple import tools.

Alternatively, you can integrate data from any research management system via APIs. Use pre-built connectors for Converis™, VIVO and other commonly used systems, or build your own connector.

Researcher outputs are matched to the Web of Science Core Collection and automatically imported into My Organization.

Any unmatched records are highlighted for review. You can import as frequently as you like.

Once the data is imported you can:

Browse and view the organizational structure

Export all reports and underlying metrics

Assess your teams, departments and researchers using InCites Benchmarking & Analytics citation metrics

Get the underlying data from the Web of Science and InCites APIs to maintain your local profiling system.
