# Showcasing your research to advance your career

A 'how to' guide for researchers

Clarivate™

As a researcher, you know that doing good work is essential to advancing your career — but your job doesn't end there.

Finding the right collaborators can make or break a project, and competition for tenure and funding has never been more intense. Various stakeholders, including hiring committees, funding agencies and other evaluators, may require you to demonstrate the breadth and impact of your research, so it's critical you put your best foot forward.

All too often, publication and citation counts alone are used in evaluation settings, alongside single-point performance scores like the h-index. This can leave little room for researchers like you to demonstrate a complete picture of your academic achievements.

Web of Science™ Researcher Profiles help you gain recognition for all your academic output. Now, you can showcase your publications and citations next to your verified peer reviews, journal editorships, dissertation or thesis, awarded grants, and preprints for a comprehensive view of your valuable research contributions.

Our best practice visualization tools also provide a nuanced picture of your publication and citation data, offering you and your evaluators more insight into your scholarly impact.

Researcher profiles in the Web of Science are free and available to all researchers. **Try it today**.

In this guide

Read our essential tips to quickly and easily showcase all your research outputs and get noticed by collaborators and evaluators.

An 'all-in-one' researcher profile

Maintaining several online profiles takes precious time away from your academic work. Your Web of Science Researcher Profile removes that burden by showcasing all of your academic achievements — from publications to peer review — in one place.

Save time with one complete profile
Tip: Too many online profiles will take you away from your research and make it harder for evaluators to understand the breadth of your impact. Use one profile to save time and get the recognition you deserve.

Stay ahead of requests
Tip: Always be prepared for evaluations, applications and proposals by collecting and organizing your research outputs as you create them.

Make sure it's verified
Tip: Maintain trust with funders, evaluators, and collaborators by providing trusted metrics and a verified record of your editorial and peer review contributions.

With a Web of Science Researcher Profile, you can:

Manage your publications
Quickly manage your publications, easily selected from the Web of Science, or imported from ORCiD and bibliographic reference managers.

Display trusted citation metrics
Display trusted citation metrics from the Web of Science Core Collection™ using best practice visualization tools.

Peer review and journal history
Show your verified peer review and journal editing history, powered by partnerships with thousands of scholarly journals.

Generate a CV
Automatically generate a CV summarizing your scholarly impact as an author, editor and peer reviewer.

Advance your career with peer review. Join our online <u>Web of Science Academy</u> to improve your reviewing skills today – it's free.

Creating your publications list

Finding a complete list of your own papers online can be difficult, especially if your name matches that of other publishing authors.

Using trusted Web of Science data, we provide a detailed list of your publication history to add to your profile. This can happen in a few different ways, depending on whether your institution has a subscription to the Web of Science.

All researchers:
Once you register for a profile, you'll be taken to a publications page that's generated using your name and email (you can add more email addresses if you wish). Simply refine and select your publications from the list to add to your profile. Learn more about this here.

Researchers at institutions that subscribe to the Web of Science:
You can add publications to your profile using the methods above or by searching for your papers in the Web of Science Core Collection. Taking control of your profile helps to ensure a more accurate representation of your work and impact. Finding and selecting your auto-generated publication list is quick and easy. To learn more, watch our helpful video here.

No publications in the Web of Science Core Collection?

If you have published research that is not included in the Web of Science Core Collection, you can quickly and easily add it to your researcher profile. Simply import from ORCiD, upload a file, or retrieve publication metadata using an identifier (DOI, arXiv ID, PubMed ID, or title). Learn more about this process here.

Taking control of your profile helps to ensure a more accurate representation of your work and impact.

Show your citation impact in context

Many funders and institutions require researchers to provide citation metrics for their work in funding applications or to support the tenure and promotion process. Your Web of Science Author Impact Beamplot makes it easy to provide this information in a way that's aligned with best practices for research evaluation.

Author Impact Beamplots provide a multidimensional visualization of citation impact based on percentiles that help you see the context. Beamplots use normalized citation percentiles as a means of comparing the citation performance of publications in the same research speciality and in the same year.

Provide a meaningful view of your research performance

Tip: Show your citations in context and with suitable benchmarks and comparators, using our new analytical tool: the Web of Science Author Impact Beamplots.

Unlike single-point metrics, Author Impact Beamplots help you:

Understand the narrative
Understand the narrative behind citation performance.

Trusted citation metrics

Display trusted citation metrics, automatically generated from reliable Web of Science Core Collection data.

More nuanced view
Acquire a more nuanced view of your scholarly influence over time, with your work measured against comparable research in the same field and no disadvantage to authors who may have taken a career break or published fewer papers during a given time span.

Read this whitepaper to understand the background and practical applications of beamplots.

You strive to do the best possible work. Make sure that evaluators see the breadth and impact of your work. Control how your career is represented with a profile that is easy to build, maintain, and share.

Follow the steps below to get started now and show the world all of your achievements in the best possible light.

Sign up for your all-in-one profile here and start adding publications

You will be automatically taken to the publications page once you sign up. If you already have access to the Web of Science Core Collection, you can also do this by selecting your auto-generated publication list. After you claim your profile, it will be automatically updated with your new articles and preprints.

Customize your CV

Your CV can be accessed from your Web of Science Researcher Profile — look for the blue button on the top, right-hand side of the page. Customize your report by including any or all of the following information for any period and in as much detail as you wish:

- Your publications
- Citation metrics
- Verified journal peer review history
- Journal editing work
- Highly Cited Researcher and Peer Review Awards

Once we've generated your CV you can download it as PDF or JSON. Learn more here.

Check out your beamplot to see — and show — the nuance of your citation impact over time

Go to the dashboard on your Web of Science Researcher Profile to view your beamplot.

Refer to this quick reference guide for more details on how to read and interpret your beamplot.

Ready to go

Include all these elements in your portfolio — you're ready for performance and salary reviews and applications (promotion, new jobs and fellowships, funding and grants, and more).
