# What is the API Availability?

The API Availability Rating is a proprietary analytic that makes it easy to understand the current availability of the active ingredient for regulated markets. Regulated markets include Western Europe and North America. The API Availability can be found on the Product Key Insights Page and it's also a searchable field in the Product Selector Tool.

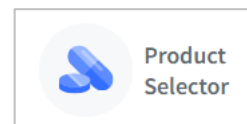

- **No Confirmed Sources** – No confirmed sources of the active ingredient exist in regulated or less regulated markets.

- **Limited Sources** – Limited sources of the active ingredient exist in regulated and/or less regulated markets.

- **Less Regulated Markets** – The active ingredient is available for use in less regulated markets and may be available in limited quantities for regulated markets.

- **Regulated Markets** – The active ingredient can readily be found for use in regulated markets.

- **Excessively Available** – The active ingredient is readily available for regulated markets and supply exceeds demand.

Product Selector Tool Search using the API Availability Field

Example: Find API with limited amounts of API on the market.

1. Go to the Product Selector Tool by clicking the pill icon
2. Make your selection in the API availability field
3. Add additional desired criteria and search
