Conclusion

The product is partially conformant with WCAG 2.2 AA. Most criteria are supported, with some exceptions.

During the second round of retesting the CampusM University App - iOS , a smaller number of accessibility issues remained, but several were still identified by our analysts who rely on audio feedback to navigate and interact with page content.

For instance, some pages lacked proper heading structure, element states were not correctly communicated to screen reader users, inaccessible areas were still present, and issues with the logical focus order were observed.

Additionally, visually impaired users encountered difficulties due to poor colour contrast between text and background, as well as between non-text elements. These low-contrast combinations made it challenging to perceive content. Notably, these problematic sections appear to be part of third-party content and should be acknowledged in the accessibility statement.

Finally, the application did not support landscape orientation. This poses a barrier for users with mobility impairments who may prefer or require landscape mode to comfortably access content.
