Introduction

DWPI Title Terms are the preferred forms of words appearing in the DWPI value-add title. They are generated automatically by a text editing software that converts each title word into the preferred form of the word, the MAIN TERM (shown in upper case and listed in alphabetical order).

All given derivatives of a Title Term (Sub-terms) are listed under the MAIN TERM. Whenever either a MAIN TERM or a Sub-term appears in a Derwent title, only the corresponding MAIN TERM is published in the DWPI data as a Title Term.

A Title Term will only appear once irrespective of the number of title words which may generate this preferred term. The year of introduction of a new term or the coverage range of a specific term is shown in square brackets [].

The following words are ignored when titles are scanned to generate title terms:

AN	BE	IN	ON	WHERE
AND	BY	INTO	OR	WHICH
ARE	FOR	IS	THE	
AS	FROM	NOT	THEN	
AT	HAS	OF	WHEN	

Multi-Word Terms

Certain single concept terms consist of two or more parts were linked together by a hyphen (-) from DWPI update 197804 until the end of 1998. This allows specific retrieval of multipart terms.

Examples are:

AND-
GATE U-
BEAM
X-RAY

Use of the @ sign

Certain frequently occurring compounds and elements are given an @ sign to indicate the unsubstituted compound or the free or alloyed element. The @ sign is part of the search term. This has been applied from DWPI Update 197804 to the end of 1998.

ACETONE	COPPER	PHOSPHORUS
ALCOHOL (i.e. ethanol)	ETHANOL	PLATINUM
ALUMINIUM	ETHER (i.e. diethyl ether)	POLYETHYLENE
ANTIMONY	ETHYLENE	POLYPROPYLENE
ARSENIC	FLUORINE	POTASSIUM
BARIUM	GOLD	PROPYLENE
BENZENE	HYDROGEN	PYRIDINE
BISMUTH	IODINE	SELENIUM
BORON	IRON	SILICON
BROMINE	LEAD	SILVER
OXYGEN	LITHIUM	SODIUM
CADMIUM	MAGNESIUM	SULPHUR
CAESIUM	MANGANESE	TIN
CALCIUM	MERCURY	TITANIUM
CARBON	MOLYBDENUM	TOLUENE
CELLULOSE	NAPHTHALENE	TUNGSTEN
CERIUM	NICKEL	URANIUM
CHLORINE	NITROGEN	VANADIUM

CHROMIUM
COBALT

PALLADIUM
PHENOL

ZINC
ZIRCONIUM

Acronyms

The Manual contains some very useful acronyms and abbreviations which can be used to retrieve multiword concepts by means of a single search term, for example MOSFET, IMPATT, CCD, LSI.

Chemical Names

Long chemical names are split so that the resulting parts correspond to Title Terms where possible. Common chemical moieties are kept together and rarer ones are usually split into separate terms. Multiplier prefixes, e.g. MONO, DI and TRI are normally treated as separate terms except in trade names or ring systems.

Thus for 'trifluoromethylpyrimidine' the relevant search terms are TRI, FLUOROMETHYL and PYRIMIDINE.

Polymers

From DWPI Update 197804 until the end of 1998, monomers in titles which refer to a polymer rather than the monomer itself have been converted to the poly form if the term is in the list of Title Terms.

For example, polyacrolein can be present in a title as 'polyacrolein' or 'acrolein polymer'. By searching for POLYACROLEIN as a Title Term, 'polyacrolein', 'acrolein polymer' and 'acrolein-styrene copolymer' are retrieved.

When less common polymer abbreviations are used in titles, e.g. PVF, the full form is input as Additional Words, which are stored as Title Terms. Thus a search for POLYVINYL as a Title Term also retrieves PVF.
