

Commitment: Net Zero by 2040

Carbon Reduction Plan

March 2026

Executive Summary

Clarivate Plc is committed to supporting the UK government's net zero objectives and is actively taking reasonable measures to contribute to this goal. The company is dedicated to implementing its Carbon Reduction Plan and integrating a broad range of carbon reduction initiatives into contract delivery.

This Carbon Reduction Plan has been produced in response to Procurement Policy Note (PPN) 006, which outlines the requirement for companies bidding on contracts with the UK government to establish a strategy for managing greenhouse gas (GHG) emissions and to demonstrate a commitment to achieving net zero emissions by 2050. Clarivate is committed to achieving net zero emissions by 2040.

Key reduction initiatives currently in effect at Clarivate focus on energy-saving measures that have been implemented at offices, including energy-efficient and motion-sensitive lighting. Clarivate is also implementing a data centre reduction program to reduce physical and carbon footprints and more effectively use public cloud resources.

Introduction

This Carbon Reduction Plan has been prepared in line with PPN 006 guidance to support the UK Government's commitment to a 100% reduction of greenhouse gas (GHG) emissions (compared to 1990 levels) in the UK by 2050, which is also referred to as the 'Net Zero' target.

In line with PPN 006 guidance, Clarivate has taken steps to understand its environmental impact and carbon footprint relevant to the delivery of contracts as specified in the Public Contracts Regulations 2015. Carbon reduction initiatives detailed in this plan will be in effect during the delivery of relevant contracts unless stated otherwise. This Carbon Reduction Plan will be supported and signed off by top management within Clarivate.

Clarivate has assessed and voluntarily reported emissions annually since 2021, and is committed to the following actions:

Making an organisational commitment to reducing emissions over time to achieve Net Zero by 2040

Annually quantifying and declaring relevant emissions of GHGs defined within the Kyoto protocol: carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFC), perfluorocarbons (PFC), sulphur hexafluoride (SF₆) and nitrogen trifluoride (NF₃)

Developing a Carbon Reduction Plan in line with the PPN 006 Technical Standard for Completion of Carbon Reduction Plans, outlining environmental management measures that will be applied in the performance of relevant contracts and wider business operations

Commitment to Achieving Net Zero

Clarivate is committed to achieving net zero GHG emissions by 2040 and is taking proactive measures to achieve this goal.

This is the first iteration of Clarivate's Carbon Reduction Plan. Data collection has been completed for 2023. Clarivate will review this Carbon Reduction Plan, including re-quantifying its emissions, every 12 months to meet PPN 006 requirements. If the reporting period exceeds 12 months from the date of procurement commencement, Clarivate will provide a justifiable reason for this delay. Full details of how this Carbon Reduction Plan meets the requirements specified in "Guidance on adopting and applying the PPN 006 - Selection Criteria" can be found in Table 2 of the Appendix.

This Carbon Reduction Plan has been prepared in collaboration with, Jones Lang LaSalle (JLL) and is based on the UK Government template for carbon reduction plans. Clarivate and JLL will work closely together to support Clarivate's carbon reduction goals.

About Clarivate

Clarivate is a leading global provider of transformative intelligence, supporting the entire innovation lifecycle—from cultivating curiosity to protecting the world's most critical intellectual property assets. Whether providing insights that advance an industry or accelerating the delivery of a life-changing therapy, the organization's vision is to fuel major breakthroughs by harnessing the power of human ingenuity.

The company offers enriched data, insights and analytics, workflow solutions, and expert services to customers across the Academia & Government, Intellectual Property, and Life Sciences & Healthcare markets.

- **Enriched data.** Curated, up-to-date content collections validated by skilled data scientists and domain experts with real-world experience.
- **Insights & analytics.** Predictive analytics powered by AI-enabled software paired with human insight, developed and interpreted by PhD level specialists.
- **Workflow solutions.** Automated, flexible software tools combined with enriched data sets and expert analysis tailored to specific needs.
- **Expert services.** A global network of industry specialists, consultants, and data scientists with deep subject-matter expertise.

Clarivate's solutions serve a large and diverse global customer base, helping organizations address complex challenges across research, knowledge, and innovation. More than 45,000 universities, non-profits, funding organizations, libraries, corporations, law firms, government agencies, and independent researchers rely on the company for timely, trusted information to discover, protect, and commercialize new ideas.

A proprietary suite of branded information and analytics—built through rigorous sourcing, aggregation, verification, translation, classification, and standardization—provides a reliable foundation and high quality user experience. Strong customer loyalty is reflected in annual renewal rates consistently above 90 percent.

The business operates primarily through subscription arrangements and re-occurring contracts, creating stable revenue and predictable cash flows. Additional transactional offerings are provided on a product, dataset, or project basis.

- **Subscription-based revenues.** Recurring income generated from annual contracts that license product use or deliver maintenance services throughout the contract term.
- **Re-occurring revenues.** Revenue streams tied to patent and trademark maintenance services renewed regularly across multiple jurisdictions, reflecting the ongoing nature of IP lifecycle management.
- **Transactional revenues.** Income from project-based engagements, including content sales, consulting assignments, and professional services such as software implementation.

Boundaries

Organisational and reporting boundaries have been defined following the GHG Protocol. This document will be updated accordingly if there are changes to Clarivate's organisational or reporting boundaries.

Organisational Boundaries

This Carbon Reduction Plan encompasses all emissions from facilities and activities over which Clarivate exercises operational control, in accordance with the GHG Protocol's operational control approach. The scope includes all global operations where Clarivate has direct authority over day-to-day activities and environmental performance.

At present, Clarivate reports on its global emissions, as it is not currently feasible to isolate UK-specific emissions from Clarivate's overall footprint. However, Clarivate is committed to enhancing data granularity and will implement measures in an effort to separate UK-based emissions in future reporting cycles.

Emissions are categorized at the facility level and further subdivided where data availability permits. Global facilities detailed on the specific sites included within the scope of this Carbon Reduction Plan can be found in Table 1 of the Appendix.

No sites have been excluded. Organisational boundaries refer to global operations.

Reporting Boundaries

Clarivate's reporting boundaries have been established in accordance with PPN 006 requirements and are designed to ensure comprehensive and transparent disclosure of GHG emissions. These boundaries encompass global operations, including the international supply chain serving our customers.

Clarivate is proactively collecting data to enable accurate and complete GHG quantification. Significant resources have been dedicated to gathering activity data to ensure precise measurement of organizational emissions. No attempts have been made to intentionally exclude material sources of emissions. Where exclusions have occurred due to data limitations or immateriality, explanatory notes and justifications are provided in Table 2 of the Appendix.

Emission sources or data categories considered non-relevant are those that are either outside Clarivate's operational control or have a negligible impact on total emissions. These include minor third-party activities and immaterial upstream or downstream processes where data is currently unavailable. Clarivate is committed to improving data coverage and will continue to refine reporting boundaries to enhance accuracy and completeness in future reporting cycles.

The below table summarizes the Scope 1, 2, and 3 emissions types and whether they are included in our GHG accounting, and this report.

Direct and Indirect GHG emissions Scope Summary	Type/Category	Included/Excluded
---	---------------	-------------------

Scope 1: Direct and indirect GHG emissions

Type

- Natural gas
- Fuel Oil
- HFC Refrigerants

Included

- Included
- Included
- Included

Scope 2 Direct GHG emissions and removals	Type	Included
	• Purchased Electricity	• Included
	• Purchased Steam & Chilled Water	• Included

Scope 3: Indirect GHG emissions	Category	Included/Excluded
	• 1: Purchased Goods & Services	• Included
	• 2: Capital Goods	• Excluded
	• 3: Fuel & Energy	• Included
	• 4: Upstream Transportation & Distribution	• Included
	• 5: Operational Waste	• Included
	• 6: Business Travel	• Included
	• 7: Employee Commuting	• Included
	• 8: Upstream Leased Assets	• Excluded
	• 9: Downstream Transportation & Distribution	• Included
	• 10: Intermediate Goods	• Excluded
	• 11: Use of Sold Products	• Excluded
	• 12: End of Life Treatment	• Excluded
	• 13: Downstream Leased Assets	• Excluded
	• 14: Franchises	• Excluded
	• 15: Investments	• Excluded

Exclusion Justification for Non-CO₂ Gases

Clarivate has assessed all seven Kyoto Protocol greenhouse gases in line with PPN 006. Based on this assessment, only carbon dioxide (CO₂) emissions are reported within our operational boundary. The remaining six gases—methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulfur hexafluoride (SF₆), and nitrogen trifluoride (NF₃)—are excluded for the following reasons:

- **Materiality:** These gases contribute less than 1% of total Scope 1 and Scope 2 emissions for Clarivate's operations, which are primarily office-based and service-oriented.
- **Operational Relevance:** Clarivate does not operate industrial processes, refrigeration systems using HFCs, or equipment containing PFCs, SF₆, or NF₃. Similarly, CH₄ and N₂O emissions are negligible as we do not engage in combustion processes beyond standard building energy use.
- **Data Availability and Accuracy:** No significant sources of these gases exist within our operational control, making their inclusion immaterial and disproportionate to the effort required for accurate quantification.

GHG Emissions

Quantification Methodology

Emissions have been quantified in alignment with the GHG Protocol and PPN 006.

GHG emissions have been calculated in-line with the GHG Protocol methodology and presented in a GHG Inventory displaying specific sources of emissions. Conversion factors from the Department for Environment, Food, and Rural Affairs (DEFRA) have been used to convert activity data into kilograms of carbon dioxide equivalent (kgCO₂e) as well as directly into kilograms of carbon dioxide (CO₂), methane (CH₄) and nitrous oxide

(N₂O), where appropriate. For calculating emissions within our supply chain, international conversion factors were used from government bodies such as the US Environmental Protection Agency. Emissions are calculated by multiplying the metric (e.g., kWh or miles driven) by the appropriate conversion factor. Conversion factors are based on the global warming potential of these gases.

$$tCO_2e = \text{activity data} \times \text{emission factor} / 1000$$

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured. The baseline period for quantification of GHG emissions is 1 January 2023 to 31 December 2023. All reporting periods are in calendar year format. Full details of calculations and assumptions associated with specific emission sources are included below.

Clarivate has transitioned its baseline year from 2019 to 2023 to ensure compliance with evolving procurement standards and to maintain alignment with current business operations. The COVID-19 pandemic introduced significant structural changes across global markets, supply chains, and internal processes, rendering pre-pandemic benchmarks no longer representative of present conditions. Establishing 2023 as the baseline provides a more accurate and equitable foundation for measuring sustainability performance and compliance obligations. This adjustment reflects Clarivate's commitment to transparency, proportionality and fair competition, ensuring that targets and reporting metrics are based on realistic, post-pandemic operational data.

Scope	Source	2023
Scope 1	Direct Emissions	278 tCO ₂ e
Scope 2 (location)	Indirect Emissions	15,694 tCO ₂ e
Scope 2 (market)	Indirect Emissions	15,590 tCO ₂ e
Scope 3	Purchased goods & services	66,954 tCO ₂ e
	Fuel and energy (not included in Scopes 1 & 2)	794 tCO ₂ e
	Upstream transport & distribution	414 tCO ₂ e
	Operational Waste	419 tCO ₂ e
	Business travel	8,959 tCO ₂ e
	Employee commuting	1,804 tCO ₂ e
	Downstream Transportation & Distribution	0 tCO ₂ e
Total Scope 3		
Total Emissions (location)		95,038 tCO₂e
Total Emissions (market)		95,294 tCO₂e

Energy and Carbon Intensity

Intensity ratios are calculated for energy and carbon relative to headcount (\$M).

Carbon Intensity

tCO₂e intensity is reported separately for location and market-based emissions.

tCO₂e per Colleague

Scope	FY23	FY24	Change (%)
Market-based emissions: Scope 1 & 2 (location) – per \$M	9.21	6.4	-30.51% tCO ₂ e/\$M
Location -based emissions: Scope 1 & 2 (location) and 3 (business travel) – per colleague	1.96	2.18	11.22 % tCO ₂ e/colleague

Current Reporting Year: 2024

Scope	Source	2023	2024	Change (%)
Scope 1	Direct Emissions	278 tCO ₂ e	233 tCO ₂ e	-16.19%
Scope 2 (location)	Indirect Emissions	15,694 tCO ₂ e	16,157 tCO ₂ e	2.95%
Scope 2 (market)	Indirect Emissions	15,590 tCO ₂ e	15,237 tCO ₂ e	-2.26%
Scope 3	Purchased goods & services	66,954 tCO ₂ e	63,993 tCO ₂ e	-4.42%
	Fuel and energy (not included in Scopes 1 & 2)	794 tCO ₂ e	2,944 tCO ₂ e	270.78%
	Upstream transport & distribution	414 tCO ₂ e	235 tCO ₂ e	-43.24%
	Operational Waste	419 tCO ₂ e	610 tCO ₂ e	45.58%
	Business travel	8,959 tCO ₂ e	10,498 tCO ₂ e	17.18%
	Employee commuting	1,804 tCO ₂ e	1,996 tCO ₂ e	10.67%
	Downstream Transportation & Distribution	0 tCO ₂ e	0 tCO ₂ e	0 %
Total Scope 3				
Total Emissions (location)		95,038 tCO₂e	96,666 tCO₂e	1.71%
Total Emissions (market)		95,294 tCO₂e	95,746 tCO₂e	.46%

Emission Reduction Targets

We have committed to reducing GHG emissions across our operations and value chain, with the following interim milestones:

Scope 1 & 2, 42% reduction by 2030 (vs. 2023 baseline).

Scope 1-3, 90% reduction by 2040.

Net Zero by 2040 (10 years ahead of UK Government 2050 requirement).

These targets will be reviewed annually and updated as part of our published CRP.

Assumptions and Estimates

Purchased Good and Services

A spend-based approach was used to quantify emissions from suppliers based on total spend. Office of National Statistics (ONS) 2022 conversion factors for tCO₂e/£ per sector were used. Suppliers were categorised into the most relevant SIC 07 code which were confirmed on the Companies House and the supplier websites.

Utilities

Due to a lack of access to the necessary data, utilities consumption is largely estimated based on spend and available historic data.

Waste

Waste-related emissions have been primarily estimated due to limited availability of direct measurement data. The majority of leased facilities do not include waste tracking within their service contracts, resulting in reliance on modelled estimates. Where actual data was unavailable, estimates were derived using industry benchmarks and facility characteristics (e.g., size and occupancy) to approximate waste generation. These estimates are intended to provide a reasonable representation of waste-related emissions in alignment with GHG Protocol guidance.

Business Travel

Travel activity data was sourced directly from the Navan platform, a corporate travel and expense management system that consolidates bookings and employee expense claims for air, rail, and ground transportation. All distances were standardized to kilometres to align with reporting conventions.

For air travel, flight class and distance data from Navan were used to determine emissions; where class was not specified, economy class was assumed, and a radiative forcing (RF) uplift was included. Rail travel emissions were calculated using actual distance data from Navan without additional assumptions.

Commuting

Estimated commuting data were calculated by Clarivate. This included the average number of days staff commute or work from home each week, the average mode of transport, and the average distance they travel each day to get to work. Daily commuting distance was calculated by multiplying one-way distance by two, and the annual commuting days was calculated by multiplying the average number of commuting days per week by 52 (adjusted to account for annual leave and bank holidays). The total number of commuting days per year was then multiplied by the total daily distance for each mode of transport to derive the annual commuting distance.

Carbon Reduction Initiatives

To achieve targeted reductions, Clarivate is implementing the following initiatives:

Scope 1 & 2 Initiatives

- Where feasible, transition to renewable electricity across facilities and data centers.
- Internal data center operations conduct emissions based operational efficiency implementation.
- Apply internal carbon pricing and/or purchase carbon credits to offset our global offices and data center emissions until internal decarbonization initiatives begin providing results.

Scope 3 Initiatives

Suppliers

- **Year 1 (2027): Top 30 Suppliers**
 - Engage top 30 suppliers and supplier relationship managers across our business segments to collect real GHG emissions data (Scopes 1-3).
 - Review suppliers' climate commitments and require evidence of implementation.
- **Annual Expansion**
 - Transition from spend-based estimates to actual emissions data.
 - Add 30 suppliers each year to the real-data reporting program through a tiered selection program of high-impact suppliers.
- **Supplier Engagement Programs**
 - Establish supplier cohorts for shared learning and decarbonization initiatives.
 - Incentivize high-performing suppliers with recognition programs and preferential contract scoring.
 - Integrate carbon performance into tendering criteria (minimum thresholds, weighted scoring).
- **Service Provider Engagement**
 - Embed sustainability supplier reporting requirements in service agreements of third-party service providers.
 - Score third-party service providers on sustainability performance and conduct annual reviews.
 - Launch innovation partnerships on green IT solutions.

Business Travel

- Implement sustainability guidelines within the global travel policy.
- Introduce internal carbon budgets for travel.

Data Centers & IT

- **Operational Efficiency**
 - Consolidate and reduce managed data center footprint to minimize energy use. Data centers consolidate workloads to improve IT Equipment Efficiency (ITEE)/IT Equipment Utilization (ITEU). Implement advanced cooling and power management systems.

- Data centers establish a centralized tracking system to capture emissions, energy usage and efficiency metrics for each data center and reduction initiative.

Use of Carbon Offsets During Decarbonization Ramp-Up

Over the next four years, Clarivate intends to utilize verified carbon offsets as a transitional measure to address residual emissions while our internal decarbonization programs mature and begin delivering measurable reductions. We recognize that several of our operational and supply-chain initiatives—such as renewable energy procurement, supplier engagement, energy efficiency upgrades, and data center consolidation, will require time to scale and produce quantifiable emissions impacts. In good faith, and to demonstrate continued momentum toward our Net Zero commitment, we will use carbon offsets during this interim period with full transparency and acknowledgment that these offsets will not contribute toward achievement of our science-aligned emissions-reduction targets. As our internal decarbonization efforts progress and begin yielding verifiable emissions reductions, we will proportionally reduce our reliance on offsets, enabling our actual emissions trajectory to align with and ultimately achieve our 2030 interim targets and our long-term Net Zero goal.

Governance & Reporting

- The Carbon Reduction Plan is approved at the Board of Directors level and published on our corporate website.
- Updates will be made annually, with progress reviewed by the Sustainability Steering Committee.
- Reporting will be supported by IBM Envizi (Scopes 1 & 2) and expanded Scope 3 tracking.
- Progress will be communicated to customers through:
- Annual CRP update (public website).
- Voluntary disclosures (e.g., CDP, EcoVadis).
- Customer RFP submissions.

Declaration & Sign-Off

This Carbon Reduction Plan has been completed in compliance with **PPN 006**. It has been reviewed and approved by the **Company Board of Directors**.

Table 2. Features a Carbon Reduction Plan must contain as specified in Guidance on adopting and applying the PPN 006 - Selection Criteria

	Requirement	Clarivate Response
1	Carbon Reduction Plan submitted which confirms the supplier's commitment to achieving Net Zero by 2050	Clarivate is committed to achieving Net Zero by 2040. Clarivate is committed to implementing this Carbon Reduction Plan as part of its business operations and quantifying emissions annually to gauge its success.
2	Carbon Reduction Plan submitted which contains emissions reported for all required Scopes (in accordance	Clarivate has quantified and reported on 100% of Scope 1 and 2 emissions where data allows. Some estimates have been performed where site activity data is missing. Once data is obtained,

with the required methodology),

this CRP will be updated accordingly. All estimates are carried out in a manner to avoid underestimating emissions. All required Scope 3 categories as specified in PPN 006 have been quantified and reported with the exception of upstream transportation. This is likely to be relatively low, but Clarivate is still collecting activity data to enable this (goods purchased in the reporting period and location of suppliers to calculate emission from the fabrication of products and their associated transportation to Clarivate premises).

3	Carbon Reduction Plan submitted which details environmental management and carbon reduction measures in effect during the delivery of the contract	This Carbon Reduction Plan outlines numerous environmental management and carbon reduction measures. Quantitative targets have been set for specific GHG sources. All reduction initiatives referred to in the Completed Carbon Reduction Initiatives will be in effect during the delivery of contracts unless specified otherwise.
4	Carbon Reduction Plan not submitted	Carbon Reduction Plan will be submitted upon request for relevant contracts. If Carbon Reduction Plan requires updates or amendments as a result of feedback from tendering process, they will be made in time for submission deadlines.
5	Carbon Reduction Plan fails to confirm supplier's commitment to achieving Net Zero by 2050	See Row 1
6	Emissions in the Carbon Reduction Plan are not reported for any Scopes or only for some Scopes without explanation why	100% of Scope 1 and Scope 2 emissions quantified and reported. Where quantification has been possible, no emissions have been intentionally excluded. Conservative estimates have been performed in some cases to ensure a reasonable figure can be included within this CRP. It should be noted that due to a lack of data, results are largely based on estimates. Clarivate is working to improve the availability of data for PPN 006 reporting. The following Scope 3 categories have been excluded from Clarivate's CRP as they are considered immaterial to our business operations and overall emissions profile: <ul style="list-style-type: none">• Capital Goods• Upstream Leased Assets• Intermediate Goods• Use of Sold Products• End-of-Life Treatment of Sold Products• Downstream Leased Assets• Franchises• Investments Clarivate operates primarily as a knowledge-based, service-oriented organization with minimal physical product manufacturing or

distribution. As such, these categories represent negligible contributions to our total greenhouse gas emissions.

Clarivate remains committed to transparency and will continue to review these exclusions periodically to confirm their immateriality.

7	Reporting period is more than 12 months from the date of commencement of the procurement	See row 5
8	Reporting period is more than 12 months from the date of commencement of the procurement, but provides an acceptable explanation why	See row 5 If reporting period for contracts exceeds allowable time period, an acceptable explanation will be provided.
9	Supplier fails to detail the environmental management measures in effect, including certification schemes or specific carbon reduction measures that will be in effect during the performance of the contract	Environmental management measures are detailed in the main body of this Carbon Reduction Plan, including those that have been completed and will be in effect in the delivery of contracts, and those that are planned for the near future.

About Clarivate

Clarivate is a leading global provider of transformative intelligence. We offer enriched data, insights & analytics, workflow solutions and expert services in the areas of Academia & Government, Intellectual Property and Life Sciences & Healthcare. For more information, please visit clarivate.com.
