

# Patent search results you can trust

## Close the confidence gap in your search results.

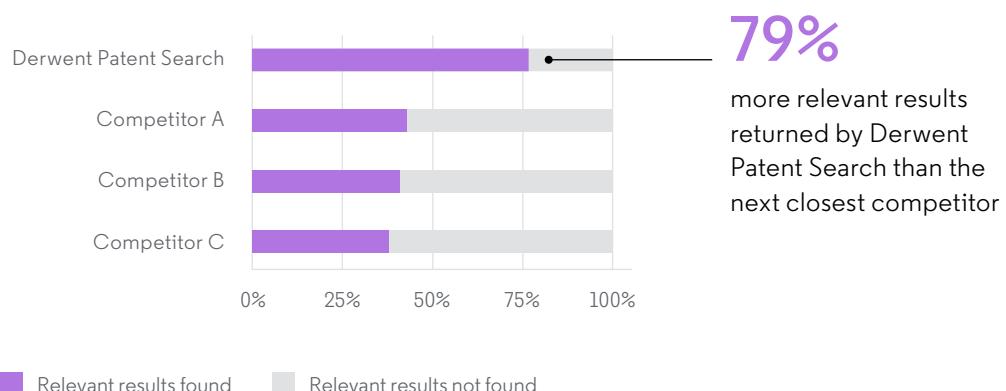

Your R&D, business and litigation teams rely on you for trusted patentability, freedom to operate (FTO), and validity recommendations. You need patent search results that give you confidence.

### We put four patent search tools to the test

Working with an outside firm, we compared results from Derwent Patent Search (formerly Derwent Innovation) to three other platforms across four technology domains.

These results show that all patent search tools are not the same — with Derwent Patent Search returning significantly more relevant results than any other competitor.

Figure 1: Results summary

## Don't compromise your patentability, FTO or validity decisions

When the stakes are this high, you can't afford to rely on patent searches that miss more than half of the total relevant results.

### In-depth comparison: Derwent Patent Search vs. next closest competitor

|  | Derwent<br>Patent Search | Competitor A | Conclusion   |
|--|--------------------------|--------------|--|
| <b>Recall</b><br>% relevant results returned from the relevant results of all four applications combined | 77%                      | 43%          | Competitor A missed <b>44% of the relevant results</b> found, on average, by Derwent Patent Search |
| <b>Precision</b><br>% relevant results found, on average, by Derwent Patent Search                       | 61%                      | 49%          | <b>More than half</b> of Competitor A's results were, on average, not relevant                     |

#### How patent search applications were evaluated

We hired an outside firm to gather and review results from Derwent Patent Search and three other well-known patent search applications. We provided the searches for each of the four technology domains. The outside firm translated the searches using each application's specific syntax and gathered the results from each application. To ensure a blind test, the outside firm consolidated the results from each application into a list of patent numbers for each search and removed any data that could be used to identify the originating search application. The results from each search were then reviewed by our team of analysts with subject matter expertise in each specific technology domain. Our analysts scored each result as not relevant, low, medium, or high relevance. These scores were then mapped to the results returned by each application. This allowed us to determine a recall and precision score for each application with equal weight given to each search. These scores are shown as percentages in Figure 1: Results summary and the table titled "In-depth comparison: Derwent Patent Search vs. next closest competitor" above.
