

Form data-driven opinions faster and with greater confidence

Streamline your trademark monitoring workflow.

Watch Opposition Strength from Clarivate™ helps you assess the potential success of filing an opposition against a third-party word mark so you can quickly identify and oppose trademark registrations that may damage your brand.

Quickly identify the most relevant results

This feature will enable you to more easily and quickly make decisions to oppose a mark as well as provide a perspective that may have previously gone unnoticed. By providing an

efficient way to identify the likely success of opposing a third party mark, this feature helps trademark professionals reduce the time spent manually researching 3rd party marks and provides data-backed evidence for decisions.

Leverage data-backed evidence for decisions

The Watch Opposition Strength uses IP case data to identify the level of risk associated with trademark Watch hits and the success rate of taking an action. The Watch Opposition Strength feature combines Darts-ip™ trademark case data with Watch trademark hits.

Combine with Darts-ip to access valuable insights

Within the feature, the "view details" function provides an overview of the related cases, showing Jurisdiction, Applicant's Trademark, Opposition's Trademark, Last Document Date, Ruling (s), and Court. This feature includes a button to view all cases on Darts-ip. With a Darts-ip subscription, users can link directly to corresponding cases on the Darts-ip platform.

Incorporate Goods and Services data to accelerate risk identification and enhance your Watch hit sorting.
