

# An AMCP dossier for a blockbuster diabetes drug aimed at healthcare decision-makers in the U.S.

Case Study | AMCP Dossier

Development of an approved-product AMCP dossier to support formulary coverage of a blockbuster diabetes drug following FDA approval.

## Background

Clarivate developed a comprehensive AMCP dossier for our client's newly FDA approved diabetes therapy, providing payers with robust clinical and economic evidence to support timely, well-informed coverage decisions.

## The Challenge

The approved-product AMCP dossier was required to clearly communicate clinical and economic evidence without a promotional tone, in accordance with AMCP criteria.

# The Solution

Clarivate's medical writing team produced a compelling, evidence-based AMCP dossier that presents clinical and economic data in concise tables, intuitive figures, and clear summary text to support confident coverage decisions.

Our willingness to challenge evidence-inclusion decisions ensured delivery of a concise and relevant dossier.

Our project manager ensured on-time delivery of the dossier, positioning it ahead of formulary deadlines to support payer access decision-making.

# The Results

Clarivate ensured timely delivery of a high-quality approved-product dossier in line with AMCP requirements.

Based on the evidence presented in the AMCP dossier, the client achieved broad coverage for the asset ahead of competitor products.

Clarivate continued to support the client with additional updates to the dossier as the market evolved.
