

Be alerted of new drugs in your space

This guide explains how to set up alerts to monitor updates on drugs in just a few clicks. Alerts are available at your fingertips from drug results and individual reports in Cortellis Competitive Intelligence.

When looking for drug information, you only need to run your search once, because next time Cortellis can rerun your search automatically and send you updates on competitor drugs and any new drugs in your field via email. This will help you keep an eye on, for example, new drugs presented at recent conferences or drugs changing phases of development.

All you need to do is set up an alert and then you can carry on with your daily activities while Cortellis monitors your results and sends you updates daily, weekly or monthly.

Example: Monitor new and existing drugs preclinical phase for *coronavirus infection*.

1. Run your search by indication, technology or mechanism of action.

2. Apply filters to narrow down your results.
