

# Find drug's phases of development by country

Cortellis Drug Reports provide a handy, filterable and sortable table called the Current Development Status table detailing the phase of development a product has reached in each country for a specific indication. You can also see the details of which company is associated with that research, date and a link to source information.

**Example:** Find where upadacitinib has launched and where it's still in development.

1. Type into the main Search box any name associated with the product and click the "View Report" button.

- Click "Development Status". Sort and or filter the table by clicking on the funnel icons in the headers. For our example, filter the table to Indication: Rheumatoid arthritis, and Status: Launched.

upadacitinib
