First-in-human study of SL-172154 (SIRPalpa-Fc-CD40L) in patients with ovarian cancer (ClinicalTrials.gov Identifier NCT04406623)
BioWorld Science July 16, 2020
[Hide summaries](#)
Shattuck Labs has initiated a first-in-human study of SL-172154 (SIRPalpa-Fc-CD40L) in patients with ovarian cancer (ClinicalTrials.gov Identifier NCT04406623). This open-label, multicenter, dose-escalation phase I study will enroll 33 patients with platinum-ineligible ovarian, fallopian tube and primary peritoneal cancers. The study design consists of dose-escalation cohorts, an optional pharmacodynamic cohort, and an optional dose-expansion cohort. The aim is to evaluate the safety, tolerability, pharmacokinetics, pharmacodynamics and antitumor activity of SL-172154 given via intravenous infusion in subjects with ovarian cancer, as well as identify the dose and schedule for future development. The trial will conclude in 2022.
