

Main Search and Full text search

There are different ways of searching in Cortellis: main **Search** and **Full text search**. This guide explains how they work and when they should be utilized when searching drugs, companies, patents, deals, clinical trials, regulatory and other types of information.

The main **Search** option searches fields with controlled vocabulary such as indication, mechanism of action or technology. These fields are designated by the editorial team, according to ontologies in Cortellis. This type of search is available for all report types in *Quick Search* (at the top of every page) and most fields in Advanced Search.

Main **Search** is recommended to find results directly associated to your keyword, rather than making a reference to it, e.g. finding results on a specific drug -lacosamide- vs finding competitor drugs that mention lacosamide in their profile.

Example 1: Type "lacosamide" and 5 Top suggestions corresponding to different formulations of this drug will show in the drop-down list. Click **View report** to access Drug report directly.

The screenshot shows the Cortellis search interface. At the top, the Cortellis logo is on the left, and a grid icon and a user profile icon are on the right. Below the header is a search bar with the text "lacosamide" entered. To the right of the search bar is a "Search" button. Below the search bar, a dropdown menu titled "Top suggestions" is visible. It contains five suggestions, each with a magnifying glass icon, the word "lacosamide", and a description. To the right of each suggestion is a "View report" button. A purple box highlights the first "View report" button. To the right of the dropdown menu, a purple box contains the text "Access Drug report directly". Below the dropdown menu, there is a section titled "Clinical Trials Intelligence" with a link to "Launch an interactive visualization of clinical trials timelines around a condition or company". Below this, there is a section titled "Analysis" with a link to "Launch an interactive visualization of clinical trials timelines around a condition or company". Below this, there is a section titled "Condition" with a link to "Company". Below this, there is a section titled "Support" with a link to "Support".

Click **Search** to retrieve all results for this drug.

6 results found for index Search for the search term 'lacosamide'

Report Type: Results Per page: 10 Sort by: Relevance Order Columns View: [List View] [Table View] [Map View] [Timeline View] [Network View] [Download]

Support

Example 2: Full Text search "lacosamide" retrieves 15 results, including other drugs that mention lacosamide in their drug profile or make reference to it as a competitor or related product.

Full text search

Toggle on Full text search and click Full text search button

13 results found for full text search for the search term 'lacosamide'

Results Per page: 10 Sort by: Highest Phase Highest to Lowest Order Columns View: [List View] [Table View] [Map View] [Timeline View] [Network View] [Download]

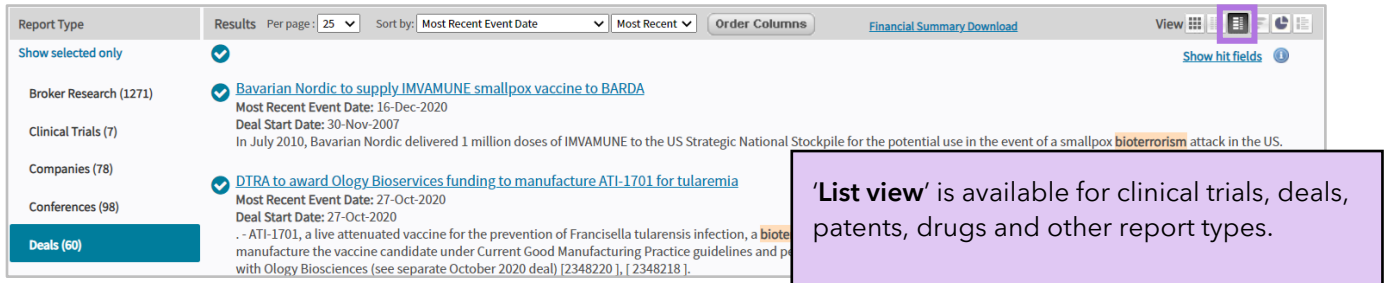

Show hit fields

After clicking 'Show hit fields', you will see more details on the location of your keyword. Click 'Hide hit fields' to go back to summarized view.

The **Full Text** option searches your keyword in all fields available in Cortellis, including those that are not indexed by the editorial team, such as titles, profiles, and abstracts. **Full Text** search typically retrieves more results, although some of them may not be as relevant. This type of search is also available for all report types in *Quick Search* and some fields in *Advanced Search*.

Full Text search is recommended when you are interested in non-indexed keyword(s) such as bilirubin, bioterrorism, first filing of patent or a company seeking to outlicense a drug.

Example 3: Use **Full Text** search to find keywords mentioned in deal reports.
