

## Compare chosen products from different angles with the Analysis table

This guide explains how to create a table that evaluates products of interest you choose - either competitor products or potential candidates for your portfolio - and compare them from different angles.

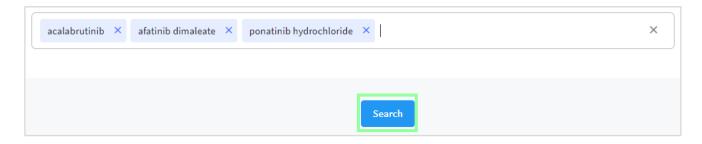

Analysis table in the Product Selector Tool helps you evaluate profitability\*, API availability, expected loss of exclusivity (LOE) dates and other relevant data for products of interest in a customizable, downloadable table.

Example: Compare API availability and expected LOE dates in the US and the UK for protein kinase inhibitors such as acalabrutinib, afatinib dimaleate and ponatinib hydrochloride.

- 1. Login to Cortellis Product Intelligence.
- 2. Go to Product Selector Tool and scroll down.

3. Enter the API names of interest, select from the suggestions and click 'Search'.

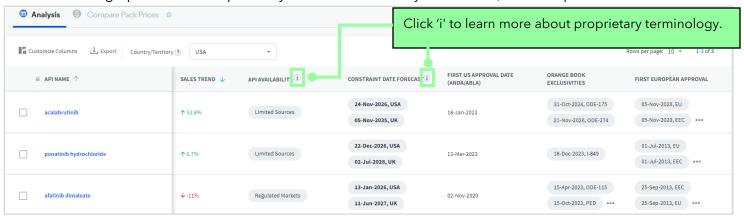

## Cortellis Product Intelligence

4. Analysis table displays API availability, expected LOE dates and additional data for the products of interest.

Sorting options at the top allow you to rank results by sales trend, for example.

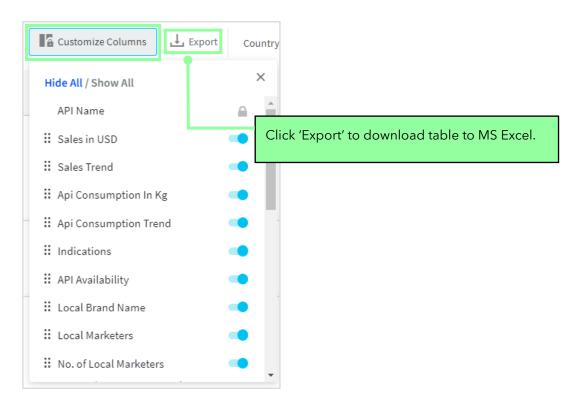

## As of July 2023:

- Afatinib dimaleate was expected to have generic competition sooner than the other 2 products: Jan 2026 in the US and Jun 2027 in the UK.
- Some API manufacturers were producing commercial quantities of *acalabrutinib* for more regulated countries, but the market is not saturated yet. The other two products are only manufactured by a handful companies for the same territories.

## Cortellis Product Intelligence

5. Click 'Customize columns' to hide, show and reorder columns in your Analysis table.

\* Users with access to Cortellis Product Global and Premium can also display and export sales volume, sales trends, indications, highest phase reached, brand names, number of marketers and names. In addition, users with access to Cortellis Product Premium are able to display and export API consumption and trends.
