

How do I... find an API Record?

API Records provide a quick assessment of a molecule including key information on manufacturing status, exclusivity and patents including the Constraint Date Forecast*, approval information, dose forms, unique analytics, specifically the API Availability Status and US Generic Forecast, chemical structures and more.

1. Begin by typing the name of your molecule into the search bar and choose from the drop-down list. Icons appear to indicate combination molecules. Select your molecule from the list.

The screenshot shows a search interface with a search bar containing 'ambris'. Below the search bar is a list of search results under the heading 'Products'. The results include: ambrisentan, ambris 5 mg, ambris 10 mg, ambrisentan tablets, ambrisentan mylan, apo-ambrisentan, cipla ambrisentan 5 mg, cipla ambrisentan 10 mg, and a combination entry for ambrisentan; tadalafil.

***The Constraint Date Forecast** is the date Cortellis Product Intelligence predicts a product will lose exclusivity in a market. It's calculated for over 35 markets, and it's based on patent and other exclusivity expiries. For more information see the Quick Guide on the Constraint Date Forecast.

2. The Product Key Insights Tab appears providing key information and analytics on the molecule.

The screenshot shows the 'Product Key Insights' tab for 'ambrisentan'. The page includes sections for 'Product Information' (Therapeutic Area: Antihypertensives; Endothelin receptor antagonist PAH products), 'Chemical Structure' (CAS Number: 177058-84-1), and 'API Availability' (A horizontal scale from 'No Confirmed Sources' to 'Highly Competitive' with markers for 'Excessively Available', 'Delayed Entry', 'Limited Competition', 'Moderately Competitive', and 'Highly Competitive'). A callout box points to the 'i' icon in the 'Chemical Structure' section with the text: 'Click on the 'i' icons for in-product descriptions of terms and analytics.' Another callout box points to the 'US Generic Forecast' marker on the availability scale with the text: 'The US Generic Forecast is a proprietary estimation of the likely competitiveness of a product, in the US, at loss of exclusivity.' A third callout box at the bottom points to the 'API Availability' scale with the text: 'Immediately assess how available an API is in the market and how competitive Clarivate believes the US market will be when the molecule goes generic with the above proprietary analytics.'

3. Scroll down the page to view a summary of API Intelligence, regulatory filings, patents, and more data.

4. Click on the top tabs to view more data.
