# Understand the progress of Supplementary Protection Certificates and other extensions

This guide explains how to identify potential extensions of exclusivity such as Supplementary Protection Certificates (SPCs) and pediatric protection for products of interest in Cortellis Product Intelligence. This data is provided by Derwent Innovation and is updated every week.
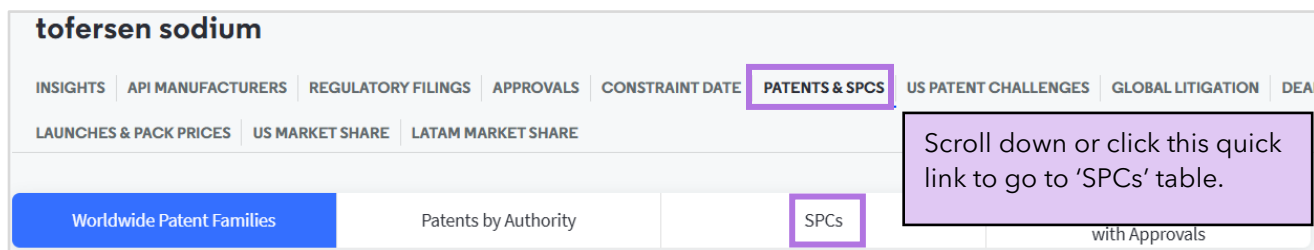

The 'SPCs' table in product records will help you find the status of different applications for Supplementary Protection Certificates and pediatric protections in individual countries to anticipate potential extensions of the loss of exclusivity (LOE) date in each market.

Example: Tofersen sodium is expected to lose protection in most countries in Europe in May 2034. Is that date likely to change? Are there any applications for SPCs or pediatric protection in progress? Are any of these extensions granted anywhere? What is the status of these applications?

1. Login to **Cortellis Product Intelligence** and search Tofersen sodium.

2. Go to 'Patents & SPCs' tab and scroll down to 'SPCs' table.

3. This table provides patent numbers, authorities and similar information for SPCs. Scroll to the right to understand 'SPC Status' of each application and potential new LOE date if these were granted in the 'Estimated expiry date'.

SPCs
