

Fact sheet | Innovation Intelligence

Innovate with speed and confidence

Capture reliable insights from the world's patent and scientific publications to accelerate your innovation pipeline.

Innovators face a dilemma: as speed to market becomes more important, the demand for shorter product development cycles has increased.

As a result, there's less time for research – especially the time it takes to sort through millions of publications, ranging in quality, coming from more sources, and in more languages.

Yet these publications often hold the answers innovators are looking for—answers that will help them improve products, avoid late-stage design changes, and find the right development partners.

With Clarivate™ Innovation Intelligence, innovators are able to move forward with speed, clarity and confidence. With enhanced data, AI-powered search tools, and a team of analysts with deep domain expertise, we help innovators capture the right insights to accelerate their R&D pipeline, from ideation to commercialization.

Overcome your R&D obstacles with Clarivate Innovation Intelligence

- Identify technology from other industries that could help you solve a challenge in your industry
- Understand what leading researchers in your domain are focused on and how they're approaching your industry's most challenging issues
- Analyze technology trends and evaluate whitespace to ensure R&D initiatives are in sync with how the market is evolving
- Identify new development partners or the right technology to acquire/license to accelerate speed to market
- Find relevant research that could help you improve your experiments, testing and product quality

57m+

invention abstracts covering 59 patent jurisdictions.

Transform data from the world's technical publications into actionable insights.

Make decisions with confidence

knowing your research is based on comprehensive scientific literature and patent publication data:

- 152m+ patent publications from 105 jurisdictions
- Scientific publications from 13,500+ journals
- 57m+ invention abstracts covering 59 patent jurisdictions.

Capture more accurate insights.

Proprietary manual and machine learning process corrects data errors and delivers consistent assignee and inventor norms

Quickly understand what a patent covers using manually-written patent abstracts that clearly describe the invention's novelty, use and advantage.

Find more relevant publications

with AI-powered search engines and intuitive, research-centric solutions.

Act quickly with help from

expert researchers. With a team of 300+ professional analysts, we're able to match an expert with deep domain experience to your specific field of interest.

Solutions for Innovators

Derwent Innovation™

Powerful search technology and enriched, comprehensive data helps innovators find more relevant patent and scientific publications and make decisions with confidence.

Scientific Literature from Web of Science Core Collection™

Multi-disciplinary, curated content from over 13,500 journals evaluated by the Web of Science™ editorial team helps innovators quickly find high quality publications and not lose time sifting through papers from untrustworthy sources or predatory journals.

Derwent World Patent Index™

Invention-level abstracts that clearly state novelty, use and advantage indexed across 322 technology classes help innovators quickly find the right insights from the world's patent data.

Expert Research and Analytics

Expert research from 300+ professionals with domain expertise to help innovators analyze technology trends, understand the standard essential patent landscape, and answer specific research questions.

Explore documents by topic using the text cluster visualization in Derwent Innovation

Better decisions start with better insights.
