

ScholarOne Abstracts Release Notes

Release v4.15

ScholarOne Abstracts

Release 4.15 – Date of issue: March 2018

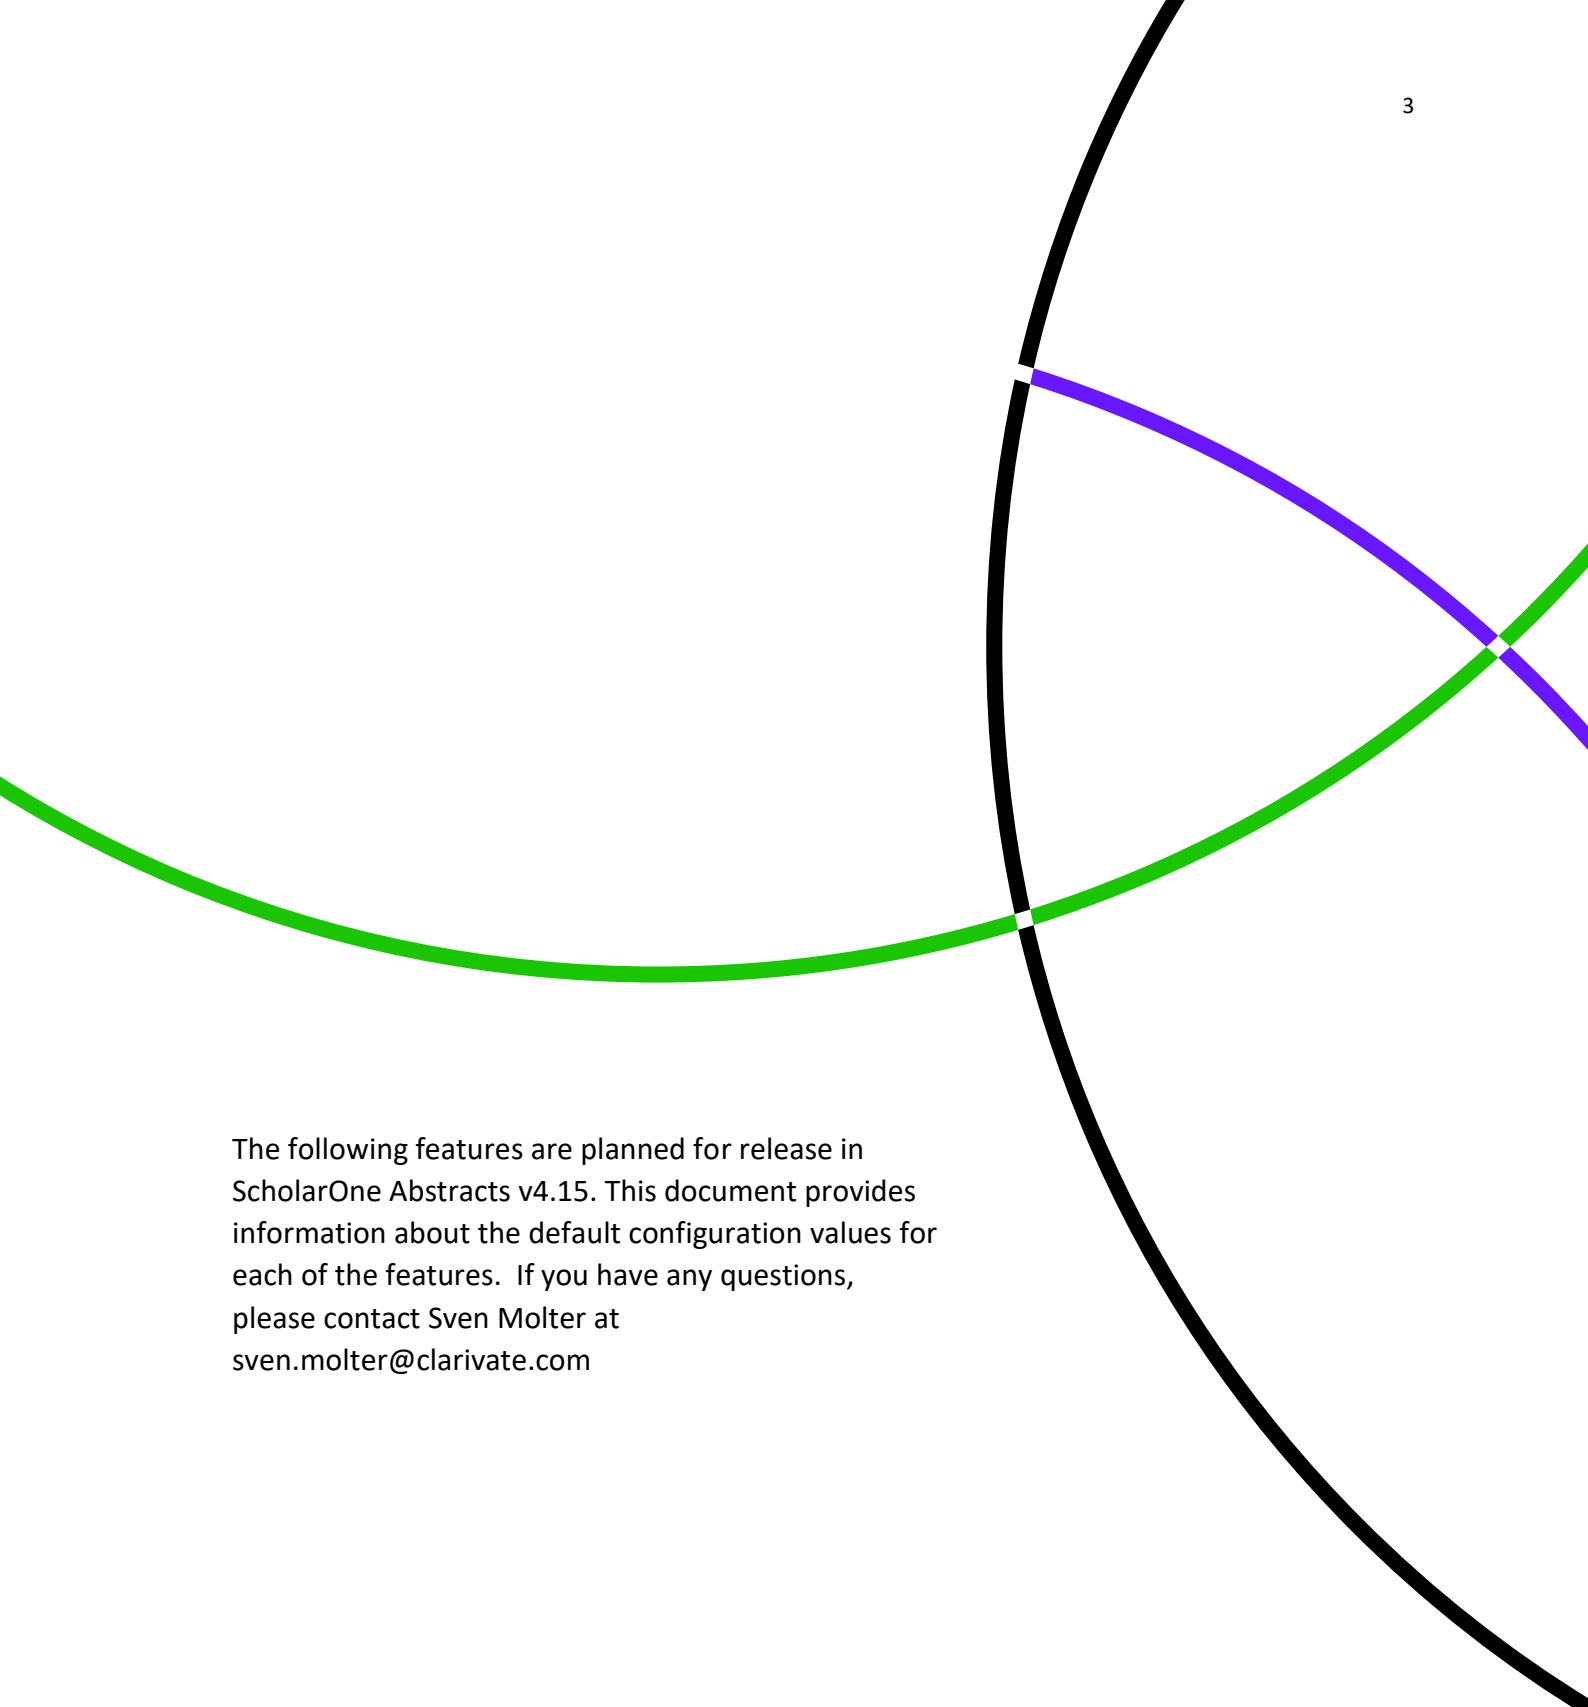

Authors

Sven Molter

Product Manager, ScholarOne

Sven has 12 years experience in the industry and has been with ScholarOne since 2009. He started as a Client Implementation Manager where he worked with clients using the ScholarOne Abstracts Platform. Sven joins the Product Management team after several years managing the Tier 2 Customer Care team for ScholarOne. Prior to working with ScholarOne he worked as the Senior Manager of Meetings, Membership and Education (Society of Behavioral Medicine) at Executive Director Incorporated where he oversaw the Annual Meeting planning process.

The following features are planned for release in ScholarOne Abstracts v4.15. This document provides information about the default configuration values for each of the features. If you have any questions, please contact Sven Molter at sven.molter@clarivate.com

Release Summary

The default configuration settings and values for each of the features in the release are outlined below.

If you wish to change any of the defaults, please contact ScholarOne by submitting a case via the 'Help' link on your ScholarOne Abstracts site.

Feature	Summary
Amazon Web Services	In the v.4.15 ScholarOne will set the stage for a transition of ScholarOne Abstracts to Amazon Web Services.
Category Type Dependent Questions	Custom questions can now be hidden or displayed based on Category Type selected. Action Required: This feature will be available by configuration.
Limit Categories by Presentation Type	Category lists may be variable depending on the Presentation Type Action Required: This feature will be available by configuration.
Session Proposal Detail Character Limit	Expanding the Session Proposal Detail Character limit beyond 1024 characters Action Required: This feature will be available by configuration.
Session Proposal Cleanup	Cleaning up the UI by removing a submission tab that should not appear
User Idea! Add Final ID	Direct from ScholarOne Ideas, Final ID will be added as a standard search. Action Required: None, this will be available upon release
Functionality Improvements	We've included several functionality improvements in the 4.15 release. Action Required: None, improvements will be available upon release.

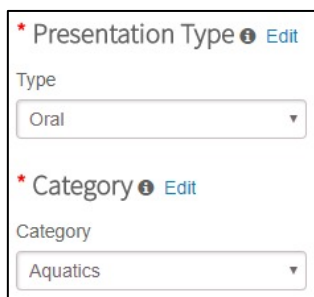

Amazon Web Services

Every home needs a good spring cleaning! With the 4.15 release, ScholarOne will set the stage for a transition of ScholarOne Abstracts to the Amazon Web Services Cloud environment. ScholarOne is moving away from the historical model of physical hardware / infrastructure in favor of a cloud-based model which will give ScholarOne greater flexibility in platform scalability. In addition, the move to Amazon Web Services will help ensure the email reputation of ScholarOne is maintained throughout the technology ecosphere. This work has taken a significant portion of this release but is setting the stage for great things to come! (See 4.15.1 and beyond section below).

Category Type Dependent Questions

We have implemented questions that will appear (or remain hidden) dependent on the category type selected.

In the example below Aquatics has been selected as the category for the submission. Aquatics has no dependent questions associated with it, so no additional text appears.

* Presentation Type ⓘ Edit

Type

Oral

* Category ⓘ Edit

Category

Aquatics

In the example below, Acute Care has been selected as the Category. Acute Care has a dependent question associated with it which appears only when Acute Care is selected in the Category drop down.

* Presentation Type ⓘ Edit

Type

Oral

* Category ⓘ Edit

Category

Acute Care

* Acute Care Publishing Approval

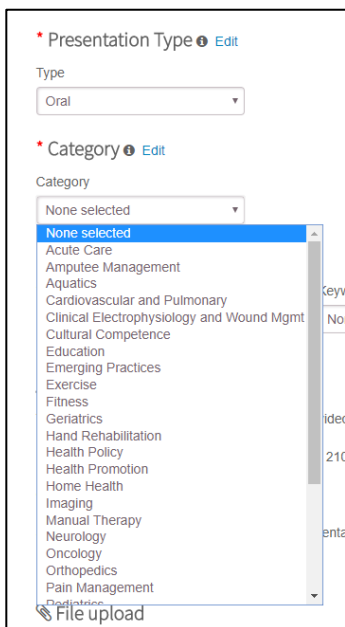

Do you grant approval for publishing in the Special Acute Care edition of the meeting proceedings?

Yes

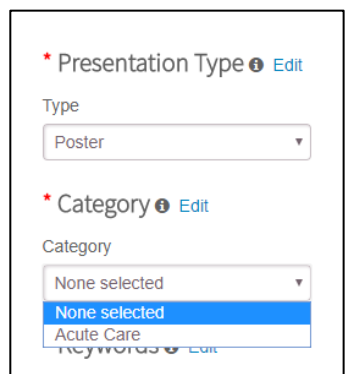

No

Limit Categories by Presentation Type

Category selections can now be limited by Presentation Type. Categories may be associated with specific Presentation Type selections, updating as selections are made.

In the example to the left, we see that Oral has been selected as a Presentation Type which allows a variety of Category selections.

With the new limits in place, we may restrict the Category dropdown to specific selections based on the Presentation Type selected. In the example to the left Poster has specific limits placed on the categories that may be associated with it so only Acute Care appears.

Important Note! Where dependencies are used in the system users are not permitted to in-line edit in the session center. This only applies to dependent questions. All other in-line editing functionality remains the same.

Session Proposal Detail Character Limit

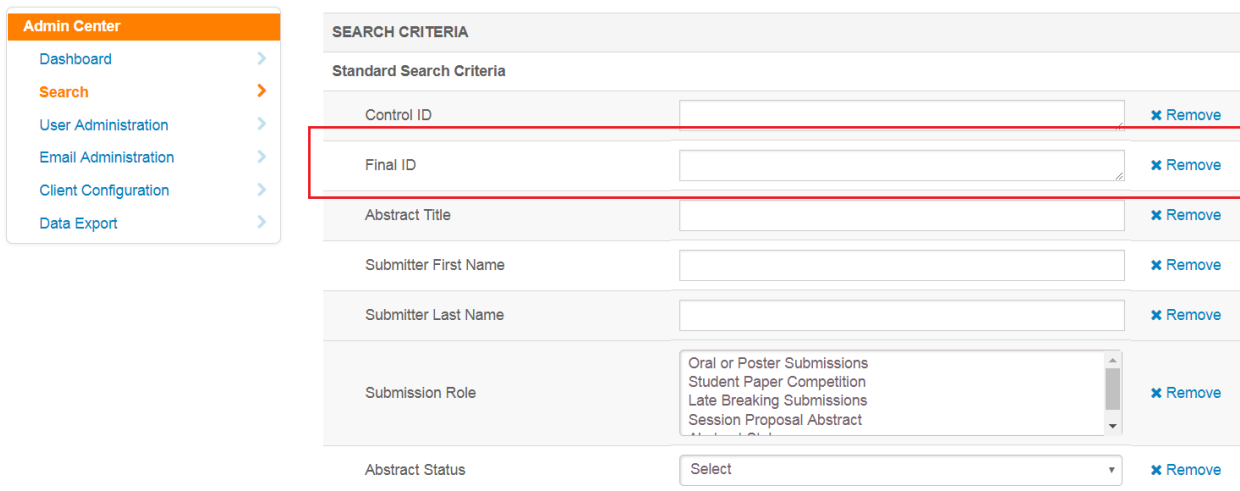

The Session Proposal Detail field limit has been expanded from 1024 to 5000 characters

Session Proposal Cleanup

Removal of the Submission Tab for those users that should not see it while in the Session Proposal module.

User Idea! Add Final ID to default search

In the Admin Center Search Final ID has been added as a default search option.

Functionality Improvements

Assign Abstracts to Sessions Import: The assign abstracts to sessions import would fail if an improper presentation type was included in the upload. The import itself will not be changed but the error message provided to clients “Import Failed. There are some invalid lines. Please verify” to “Import Failed, no presentations have been assigned. There are some invalid lines. Please verify”

Email Display: If you proxied as a user to whom an invitation was sent both the test email and actual invitation were displayed. This has been resolved so only the invitation is displayed.

Edit / View Abstract Proof: We had one report of an error when attempting to edit or view an abstract proof in the admin center. We introduced defensive coding to prevent this from occurring again.

Event Log: Reviewer comments have been added to the event log.

Invitations: When sorting on the Status column in the Invitations and Emails grid months were not sorting properly. Invitation Status and Date column has been split into separate columns to allow for better sorting.

Presenters Appearing in Duplicate: Presenters names, emails, country were double displayed in the Reviewer Score Report Grid. This has been resolved so their name appears only once as expected.

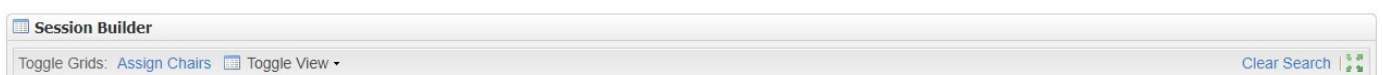

Role Removal: The system will no longer allow admins to remove roles from accounts if those roles are inked to abstract assignments for reviewers, chairs, or sessioners.

Search: When a search was saved with a Final ID that included non-numeric characters an error was thrown. This has been updated to allow for Final Ids with non-numeric characters.

After saving a search the saved search was not loading as expected. This has been resolved so when a search is created and saved, upon screen refresh, that saved search appears.

Session: Edit Session Pop-up not loading: In certain situations, the Edit Session pop-up would not load as expected. This has been resolved so the Edit Session pop-up is generated as expected.

Session Builder: The Expand Grid to Full Screen and Clear Search links have been moved to the right-hand side.

Session Details: When saving session details, we will now strip out leading or trailing spaces.

Sorting: Day/Date field sorting has been updated sorting by Day/Date instead of the name.

Session Titles which had apostrophes in their names were not sorting correctly. This has been resolved so titles with apostrophes will sort as expected.

4.15.1 and Beyond!

In June we will release 4.15.1

- Implementation of GDPR compliance
 - Terms Acceptance
 - Email opt-out

- **Session Proposal Status:** The status of the session proposal is not changing when a decision was removed. This will be updated so the status moves to the previous status.

In October / November we will release 4.16

- ORCID Functionality
- Session Proposal Enhancements
- Admin, Review and Submission Enhancements
- User Ideas! We have scheduled our greatest number of user ideas for the 4.16 release!

Make sure to visit our ideas page and vote on your favorites!
