

BioWorld Science

Dynamic, relevant drug discovery news posted every business day

Reliable information to support crucial drug R&D decisions

Every business day, BioWorld Science selects the latest, most important drug discovery and development news, places it in context, and presents it online and as email alerts in a clear, concise format that makes it easy to discover the important facts at a glance. You can search quickly on all sources, limiting your search to the period of time, drug name, patent number, company, university, institute, therapeutic category or group, type of compound, or information source relevant to your research. BioWorld Science contains an archive of news covering drug R&D since 1996, with chemical structure images.

What's covered

- News in Context: brief reports prepared from extensive sources
- Conference Highlights: news from main congresses around the world
- The Starting Line: an alerting service presenting a table, updated weekly, of the most promising compounds entering pre-clinical development, lead compounds and new mechanisms of action
- Pipeline on the Move: a weekly alerting service presenting changes detected in the status of drugs currently under active development

Once you've located the item of interest, you can link seamlessly to corresponding records in Clarivate Analytics Integrity.

How you benefit

- News is selected for importance and relevance
- More than 25 late-breaking news items posted every business day
- Practical and accurate information, including chemical structure images
- The latest advances from more than 300 congresses each year

What you can do

- Receive daily headlines by email and link directly to news items of interest
