

## David Pendlebury

Head of Research Analysis, Institute for Scientific Information

Since 1983, David has used Web of Science™ data to study the structure and dynamics of research. He explores the citation database to analyse trends in science, important topics, and researchers at the frontier of key and emerging research fields. He worked for many years with ISI founder Eugene Garfield. With Henry Small, David developed the Web of Science Essential Science Indicators™. Every year, David helps to identify our list of world-class researchers named in our Researcher Recognition program, including Citation Laureates™ and Highly Cited Researchers™.
