INTRODUCTION	6
PART 1: GENERAL AND MECHANICAL PATENTS INDEX (GMPI) & ELECTRICAL F	
SECTION P: GENERAL	
P1: AGRICULTURE, FOOD, TOBACCO	14
P11: Soil Working; Planting	14
P12: Harvesting	
P13: Plant culture; Dairy products	
P14: Animal Management and Care	
P15: Tobacco	24
P2: PERSONAL, DOMESTIC	25
P21: Wearing Apparel	25
P22: Footwear	
P23: Haberdashery and Jewellery	
P24: Hand and Travelling Articles; Brushes	
P25: Office and Home Furniture	32
P26: Chairs, Sofas and Beds	34
P27: Shops and Household Furnishing	36
P28: Kitchen and Sanitary Equipment	
P31: Diagnosis, surgery	
P32: Dentistry, bandages, veterinary, prosthesis	
P33: Medical aids, oral administration	
P34: Sterilizing, syringes	
P35: Life-saving, safety, firefighting, fire extinguishing and fire prevention	
P36: Sports, games, toys, amusements	
P4: SEPARATING, MIXING	50
P41: Crushing, centrifuging, separating solids, sorting	50
P42: Spraying, atomizing, coating, surface treatment and liquid application	56
P43: Generating and using mechanical vibrations, cleaning, waste disposal	60
P5: SHAPING METALS	63
P51: Metal Rolling, Drawing, Extruding	63
P52: Metal Punching, Working and Forging	
P53: Metal Casting and Powder Metallurgy	
P54: Metal milling and other machining	
P55: Welding and Soldering	
P56: Machine Tools: Post-treatment for metal working	

P6: SHAPING NON-METALS	76
P61: Grinding and polishing of non-metals	76
P62: Hand tools, cutting	
P63: Working, preserving wood	82
P64: Working cement, clay, stone	
P7: PRESSING, PRINTING	86
P71: Presses	86
P72: Working Paper	89
P73: Layered Products	91
P74: Printing and lining machines	92
P75: Typewriters, stamps, duplicators	
P76: Books, special printed matter	
P77: Writing, drawing appliances; Bureau /desk accessories	
P78: Decorative art	
P8: OPTICS, PHOTOGRAPHY, GENERAL	
P81: Optics	101
P82: Photographic apparatus	
P83: Photographic processes/compositions	
P84: Other photographic	
P85: Educational, cryptographic or advertising apparatus or systems	
P86: Musical instruments, acoustics	111
SECTION Q: MECHANICAL	114
Q1 VEHICLES IN GENERAL	116
Q11: Wheels, Tyres, Connections	116
Q12: Suspension	
Q13: Powertrain/transmission, systems and their control	
Q14: Vehicle Accessories	
Q15: Transporting Special Loads	
Q16: Vehicle servicing, maintenance, cleaning equipment, Vehicle design	
Q17: Vehicle construction, Fittings, Propulsion arrangements	
Q18: Brake systems; Steering systems; Control	
Q19: Vehicle applications	
Q2 SPECIAL VEHICLES	137
Q21: Railways	
Q22: Hand/Foot/Animal Drawn Vehicles	
Q24: Ship; Waterborne Vessels; Related Equipment	
Q25: Aircraft; Aviation; Cosmonautics	
Q23. Aircraft, Aviation, Cosmonautics	130

Q3 CONVEYING, PACKAGING, STORING	156
Q31: Packaging processes and equipment	156
Q32: Container/Closure Types, Special packaging features and Transit packaging	
Q33: Packaging container and closure materials	
Q34: Types of goods packaged, bottled, bound, labelled, unpacked	164
Q35: Refuse Collection; Conveyors	168
Q36: Handling Thin Materials	169
Q37: Container Traffic (Pre-1984 Only)	169
Q38: Hoisting; Lifting; Hauling; Trucks	170
Q4: BUILDINGS; CONSTRUCTION	171
Q41: Road, rail, bridge construction	171
Q42: Hydraulic engineering, soil shifting and sewerage	173
Q43: General building constructions	175
Q44: Structural elements	
Q45: Roofing, stairs, floors	177
Q46: Building aids, special structures, ladders	
Q47: Locks, window and door fittings	
Q48: Blinds, shutters, doors and windows	
Q49: Mining	182
Q5 ENGINES, PUMPS, COMPRESSORS, FLUID PRESSURE ACTUATORS	184
Q51: Internal Combustion Engines; Reciprocating Engines; Rotary Engines	184
Q52: Reaction Engines; External Combustion; Gas Turbines; Rockets	189
Q53: Positive Displacement Fluid Engines (i.e. driven by fluid)	
Q54: Non-positive Displacement Fluid Engines (i.e. driven by fluid); Miscellaneou	
and Machines for Producing Mechanical Power/Thrust	
Q55: Positive Displacement Fluid Machines/Pumps/Compressors (i.e. for driving	
Q56: Non-positive Displacement Fluid Machines/Pumps/Compression (i.e. for dr	-
OF7. Third Drass are Astronomy Hudraulia/Drass are the in Consequence	
Q57: Fluid Pressure Actuators; Hydraulic/Pneumatics in General	
Q6 ENGINEERING ELEMENTS	196
Q61: Fastening Elements; Connections	
Q62: Shafts and Bearings	
Q63: Couplings; Clutches; Brakes; Springs; Dampers	
Q64: Belts, Chains, Gearing	
Q65: Pistons, Cylinders, Packing, Seals	
Q66: Valves; Taps; Cocks; Vents	
Q67: Pipes; Joints; Fittings	
Q68: Other Engineering Elements	
O69: Storing/Distributing Gas/Liquid	206

Q7: LIGHTING, HEATING	207
Q71: Lighting	207
Q72: Steam generation	
Q73: Combustion apparatus and processes	211
Q74: Heating, ranges and ventilating	
Q75: Refrigeration and Liquefaction	217
Q76: Drying	219
Q77: Furnaces, kilns, ovens, retorts	221
Q78: Heat exchange	223
Q79: Weapons, ammunition, blasting	225
SECTION S: INSTRUMENTATION, MEASURING AND TESTING	230
S01: Electrical Instruments	231
S02: Engineering Instrumentation	240
S03: Scientific Instrumentation	257
S04: Clocks and Timers	
S05: Electrical Medical Equipment	280
S06: Printing and Photography	292
SECTION T: COMPUTING AND CONTROL	312
T01: Digital Computers	313
T02: Analogue and Hybrid Computers	346
T03: Data Recording	
T04: Computer Peripheral Equipment	
T05: Counting, Checking, Vending, ATM and POS Systems	
T06: Process and Machine Control	
T07: Traffic Control Systems	410
SECTION U: SEMICONDUCTORS AND ELECTRONIC CIRCUITRY	415
U11: Semiconductor Materials and Processes	
U12: Discrete Devices	
U13: Integrated Circuits	
U14: Memories, Film and Hybrid Circuits	
U21: Logic Circuits, Electronic Switching and Coding	
U22: Pulse Generation and Manipulation	
U23: Oscillation and Modulation	
U24: Amplifier and Low Power Supplies	
U25: Impedance Networks and Tuning	
SECTION V: ELECTRONIC COMPONENTS	516
V01: Resistors and Capacitors	
V02: Inductors and Transformers	
V03: Switches, Relays	
V04: Printed Circuits and Connectors	543

V05: Valves, Discharge Tubes and CRTs	560
V06: Electromechanical Transducers and Small Machines	592
V07: Fiber-Optics and Light Control	610
V08: Lasers and Masers	617
SECTION W: COMMUNICATIONS	620
W01: Telephone and Data Transmission Systems	621
W02: Broadcasting, Radio and Line Transmission Systems	
W03: TV and Broadcast Radio Receivers	719
W04: Audio/Visual Recording and Systems	749
W05: Alarms, Signalling, Telemetry and Telecontrol	796
W06: Aviation, Marine and Radar Systems	820
W07: Electrical Military Equipment and Weapons	836
SECTION X: ELECTRIC POWER ENGINEERING	840
X11: Power Generation and High Power Machines	841
X12: Power Distribution / Components / Converters	847
X13: Switchgear, Protection, Electric Drives	863
X14: Nuclear Power Generation	879
X16: Electrochemical Storage	888
X21: Electric Vehicles	896
X22: Automotive Electrics	
X23: Electric Railways and Signalling	926
X24: Electric Welding	
X25: Industrial Electric Equipment	
X26: Lighting	952
X27: Domestic Electrical Appliances	960
PART 2: SUBJECT INDEX AND APPENDICES	971
Subject Index	972
Appendices	1289
Appendix 1: EPI Subject Matter Coverage	1290
Appendix 2: EPI Manual Coding Criteria	1292
Appendix 3: IPC to EPI Manual Code Approximate Concordance	1294
Appendix 4: Concise Guide to EPI and Mechanical Classification	1350
Appendix 5: Nanotechnology	1369
Appendix 6: Green technology	1373
Appendix 7: Internet of Things	
Appendix 8: Digital Health	1383

#### **GMPI and EPI MANUAL CODES**

#### Introduction

This User Manual is intended to assist users of the General and Mechanical Patents Index (GMPI) and Electrical Patents Index (EPI) Service in making the best use of the classification and indexing (Manual Coding) scheme which Clarivate applies to all patents covered.

#### **Background**

Clarivate coverage of Engineering patents is divided into two main areas: the Electrical Patents Index (EPI) and the General and Mechanical Patents Index (GMPI).

EPI was introduced in 1980 (Update 198018), to provide an improved patent information alerting service for users whose interests lie in the electrical field. Coverage is arranged in six sections (S-X), each dealing with a fairly broad range of subject matter. Within these sections are the EPI classes, 50 in total, which provide a more precise breakdown of material (see Appendix 4 for details). Associated with each class is a set of Manual Codes applied by Clarivate technical staff to allow detailed retrieval.

More recently, GMPI has also been developed from its original structure of two sections (P and Q) incorporating 103 classes, to improve its focus on mechanical engineering patents and those of general interest. This involved the introduction of Manual Codes for the mechanical transportation field in 2006, for mechanical packaging in 2012, and for the remaining classes in 2015.

For both EPI and GMPI the codes form a hierarchical indexing system, mainly intended as an online retrieval tool, that is reviewed annually. For example, the EPI manual codes, which were originally based, in part, on the International Patent Classification (IPC), numbered approximately 1,900 when introduced and have been revised yearly with the latest revision (2023) now including over 14,200 active EPI Manual Codes. There are also now over 3,200 active GMPI Manual Codes, with 1,900 of those introduced in the 2015 manual code revision.

The annual Manual Code Revision (MCR) process, carried out in consultation with our customers, is designed to update the coding hierarchy in order to reflect changes in technology, provide finer subject matter breakdown to enable customers to find the information they need with precision and accuracy, and continue to develop an alternative technical viewpoint to that of the IPC.

#### **Format of Manual Codes**

Manual Codes are structured so that an increase in the number of characters represents a finer subject matter breakdown. For the 1992 revision, the permissible maximum length of manual codes was increased to ten characters (including the hyphen), the possible formats being shown below:

ANN Class

ANN-A Generic Manual Code

ANN-ANN Sub-group

ANN-ANNAN Sub-group division
ANN-ANNAN Full Manual Code
ANN-ANNANA (9 or 10 digits)

The class to which a Manual Code belongs is indicated by the characters preceding the hyphen, thus the codes are always sub-divisions of their related Class. It should be noted that leading zeros are used to preserve the correct hierarchy. The shortest possible Manual Code is thus of five characters length (e.g. S01-A).

#### **Criteria for Assigning Manual Codes**

Manual Codes are intended to highlight the novel aspects of an invention and are therefore normally assigned according to the claimed novelty. In addition, depending on either the electrical content of the invention itself, or its intended use, codes are applied to indicate the application of an invention. (For a fuller explanation of these criteria see Appendix 2).

It should be noted that Manual Codes are frequently used in combination to represent a particular topic, so that some subjects may be routinely assigned two or three Manual Codes.

#### **Documents Assigned Manual Codes**

Manual Codes are currently assigned to all Basic patents in EPI. Prior to Update 199510, EPI classes were assigned to title-only entries, except those for Chinese and Japanese patents, which were fully coded.

#### **Transportation Codes**

Mechanical transportation Q11-Q25 codes are applied to all patent documents from 200601 and are applied to highlight mechanical application or patents with mechanical novelty.

The Q codes are designed to be used in conjunction with one another in the same way as the electrical manual codes are assigned, and they may also be applied in conjunction with the electrical manual codes when appropriate.

Q11-Q25 codes are applied to cover the core transportation areas such as vehicles in general, trains, ships and aircraft.

From 200601-201582 mechanical Q codes are applied in two other areas: namely, Q5 (Engines; pumps; compressors, fluid pressure actuators) and Q6 (Engineering elements), either when:

- (i) The patent is in a transportation technology (indicated by the presence of the Q11-Q25 class) and the Q5 and Q6 code provides a more detailed breakdown of the patent novelty than any of the Q11-Q25 codes applied; or
- (ii) The patent has an unspecified application, though one that could be of use in the transportation field, e.g. a novel piston for an internal combustion engine of unspecified application.

#### **Packaging Codes**

Mechanical packaging Q3\* codes are applied to all patent documents from 201201 and are applied to highlight mechanical application or patents with mechanical novelty. The Q3\* codes are designed to be used in conjunction with one another in the same way as the electrical manual codes are assigned, and they may also be applied in conjunction with the electrical manual codes when appropriate.

#### **General and Mechanical Codes**

From 201501 DWPI Manual Codes are applied to all P\* classes and to Q41-Q49, Q71-Q79 classes.

From 201601 DWPI Manual Codes are assigned to all P\* and Q\* classes including Q5\* and Q6\* classes irrespective of technology area, so that from 201601 all Engineering P-X classes must have corresponding manual codes.

#### **Layout of the Manual**

The manual is arranged in two sections:

#### Part 1

Codes in the eight sections P, Q, S-X are listed in alphanumeric order with details including the code definition, scope notes and associated search terms. For codes introduced post-1980 the year of introduction is indicated.

An annotated example of a typical entry in the manual is shown below:

Manual Code  Additional search terms	X25-A08  3D printing / additive m Details of 3D scanners are of See also X25-A06 for electric plastics.  3D replicator, rapid prototype fabrication, SFF, 3D modell.	coded under T04-M05. ical aspects of working ning, solid freeform	Year of code introduction	
Code Title	X25-A08A 3D printing / additive m methods X25-A08B	[2016] anufacturing [2016]		
Expanded details and scope notes	3D printing / additive manufacturing apparatus  Computer control details of 3D printing / additive manufacturing machines are coded under T01- J07B3. For details of 3D scanners see T04-M05. For ink-jet printhead details see S06-G03.  Extruder			

#### Part 2

This comprises an overall keyword index to Part 1 of the manual, with 8 appendices as follows:

- 1 Brief Summary of EPI Subject Matter Coverage
- 2 Subject Index highlighting EPI Manual Coding Criteria
- 3 IPC EPI Manual Code Approximate Concordance
- 4 Concise Guide to EPI and Mechanical Transportation Classification
- 5 Nanotechnology: Quick reference guide listing all CPI, GMPI and EPI manual codes relating to Nanotechnology industries
- 6 Green Technology: Quick reference guide listing all CPI, GMPI and EPI manual codes relating to Green technology
- 7 Internet-of-Things: Quick reference guide listing all CPI, GMPI and EPI manual codes relating to Internet-of-Things (IoT) technology
- 8 Digital Health: Quick reference guide listing all CPI, GMPI and EPI manual codes relating to Digital Health

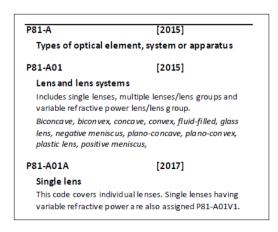

#### **Code Heading and Definition**

In this new edition, many of the code descriptors have been re-worded and expanded to include details on how the code is applied and to provide references to other Manual Codes which might be of interest to the searcher for retrieval purposes.

#### Additional Search Terms

Additional terms immediately follow most code definitions. These comprise individual terms or groups of terms which might assist users in devising search strategies. The terms have been derived intellectually by Clarivate coders aided by online searches to determine the most frequently occurring terms in titles of records to which the code has been assigned.

In order to enhance retrieval, the searcher may also wish to use terms of interest in the code title definition itself and in the accompanying scope notes. In addition, terms appearing against higher level codes in the hierarchy may be employed, e.g.

In this example, users interested in stators for optical lenses (P81-A01A) should consider terms of interest (e.g. plano-convex) under the broader code P81-A01, where terms equally applicable to both sub-divisions are listed.

It should be stressed that the lists of search terms are not comprehensive and users may find it necessary to use additional terms.

#### **Year of Introduction**

The year of implementation of codes added after the initial introduction of EPI in 1980 is indicated in parentheses immediately alongside the code, e.g. [1987], indicates the code was introduced from the start of 1987. If such a code is not a subdivision of an existing code, then the code to be searched in order to retrieve earlier records is given in parentheses following the code heading. If no year is shown alongside a code, this indicates the code was applied from the start of EPI, i.e. Update 198018.

In a few cases, revision of the Manual Codes has resulted in a particular code or code group being discontinued. These codes, which are indicated in the manual by an asterisk (\*) following the code, remain valid for records prior to the year of revision.

#### **Keyword Index**

Part 2 of the GMPI & EPI Manual comprises an alphabetical index of the key terms appearing in the definition and associated with each Manual Code, together with the corresponding code. This index is used to guide the user to the correct code(s) in Part 1 of the manual, where in order to ensure correct retrieval the user should always consult the full definition for the code including any scope notes. To avoid ambiguity, the terms appearing in the index are mainly derived from the code definition and only a few of the additional search terms are indexed.

#### **IPC - Manual Code Relationship**

An IPC-to-Manual Code concordance at generic Manual Code level is provided at the end of this manual under Appendix 3. It should be noted that the concordance cannot be guaranteed and since the codes are intellectually applied, other codes may be assigned as appropriate according to the technical content of the patent.

#### **Online Searching of Manual Codes**

All Manual Codes are searchable in the Derwent World Patents Index online files.

Retrieval may be enhanced, depending on the scope of a Manual Code and the desired search, by combining it with other search terms, such as title/abstract words, title terms, IPCs, patentee names etc. These terms may be used to restrict the Manual Code to items of particular interest or to ensure full retrieval by defining the subject matter by use of other terms in addition to the Manual Codes. For additional information on online searching, please consult the relevant Clarivate Online User Guides for each of the hosts.

# PART 1: General and Mechanical Patents Index (GMPI) & Electrical Patents Index (EPI)

### **Section P: General**

INTRODUCTION	6
PART 1: GENERAL AND MECHANICAL PATENTS INDEX (GMPI) & ELECTRICAL P	
SECTION P: GENERAL	
P1: AGRICULTURE, FOOD, TOBACCO	14
P11: Soil Working; Planting	
P12: Harvesting	
P13: Plant culture; Dairy products	
P14: Animal Management and Care	
P15: Tobacco	24
P2: PERSONAL, DOMESTIC	25
P21: Wearing Apparel	25
P22: Footwear	
P23: Haberdashery and Jewellery	28
P24: Hand and Travelling Articles; Brushes	
P25: Office and Home Furniture

P83: Photographic processes/compositions	106
P84: Other photographic	
P85: Educational, cryptographic or advertising apparatus or systems	
P86: Musical instruments, acoustics	

#### P1: Agriculture, Food, Tobacco

#### P11: Soil Working; Planting

Electrical details are coded under X25-N01. From 2015, manual codes have been assigned for all mechanical details of soil working and planting.

P11-A [2015]

Soil working (mechanical)

P11-A01 [2015]

#### Soil working using hand tools

Covers spades, shovels, hoes, rakes, etc. *Rake* 

P11-A02 [2015]

#### Soil working using ploughs

Includes man-driven ploughs, animal-driven ploughs, tractor-driven ploughs and self-driven ploughs. Also includes ploughs with rotary driven tools.

P11-A03 [2015]

#### Soil working using harrows

For the use of harrows in all soil working.

P11-A04 [2015]

#### Raking

Gatherers for removing stones, undesirable roots or the like from the soil, e.g. tractor-drawn rakes.

P11-A05 [2015]

#### Tilling

Includes soil preparations such as stirring and overturning of soil.

Tillage

P11-A06 [2015]

#### Making, covering furrows

Includes the formation of furrows by digging or dragging soil or any other process. Also involves any process for covering furrows.

P11-A99 [2015]

#### Other types of soil working

Includes aerating, thinning, loosening soil, etc. Also covers soil working using rollers, drags, etc.

Crumbler roller

P11-B [2015]

Treating and fertilizing soil

P11-B01 [2015]

#### Fertilizing soil

Includes application of fertilizers, manuring, using dung distributors, etc.

P11-B02 [2015]

#### Other fertilizer related topics

Includes other fertilizer related topics like dung storage, aerating etc.

P11-B03 [2015]

#### Treatment of soil with agricultural actives

Includes e.g. in-furrow treatment of fungicides, herbicides, insecticides, plant-growth-regulators, etc.

P11-B04 [2015]

### Treatment of soil with other types of chemicals/gases/additives

Includes soil treatment with all other types of chemicals or additives, e.g. soil conditioning agents e.g. for increasing water retention of soils, or sterilizing soil by steam. Also includes stone powders.

P11-B05 [2015]

#### **Covering soil**

Includes covering soil by agricultural foils or mulch.

P11-B99 [2015]

Other types of agricultural processes for soil treatment

P11-C [2015]

**Planting and sowing** 

P11-C01 [2015]

#### **Treatment of seeds**

Includes coating / dressing seed, immunizing seed prior to planting.

P11-C02 [2015]

#### **Germination of seeds**

Includes germination of seeds and all testing or monitoring aspects of seeds before or during germination.

#### P11-C03 [2015]

#### Sowing and handling of seeds

Includes apparatus or methods for sowing/distribution of seeds and any other handling of seeds.

Seed sowing, seed handling

#### P11-C03A [2016]

#### Sowing

Includes sowing/distribution of seeds in earth or substrate.

Sowing

#### P11-C03B [2016]

#### Seed handling

Includes seed or seedling transfer apparatus or method.

Seed handling

#### P11-C04 [2015]

#### **Planting**

Includes methods/tools for planting seedlings/plants (including trees).

#### P11-C99 [2015]

### Other types of agricultural processes around sowing/planting

#### P11-E [2015]

#### Types of crop produced

Codes in this section are used only in combination with appropriate codes in P11-A to P11-C sections.

P11-E01 [2015]

Fruits and nuts

P11-E02 [2015]

#### Vegetables and pulse crops

Including vegetables, legumes, beans, sugar beet, etc.

P11-E03 [2015]

#### **Cereals and grasses**

Includes sugar cane, bamboo, rice, turf, lawn, etc.

P11-E04 [2015]

#### Oil seeds and oil fruits

Including e.g. rape, sunflower, olives, palm fruits, etc.

P11-E05 [2015]

#### Fiber plants

Including e.g. cotton, flax, sisal, etc.

P11-E06 [2015]

#### Tea, coffee and herbs

Including also hops, spices.

P11-E07 [2015]

Mushroom/Fungi

P11-E08 [2015]

**Flowers** 

P11-E09 [2023]

Latex, resin, sap, syrup

Natural rubber, maple syrup

P11-E99 [2015]

Other types of crops

#### P11-G [2015]

### Cleaning, maintenance/repair of soil working and planting systems

Includes sharpening of blades, etc.

#### P11-T [2015]

### Constructional details of soil working machines, tools

These codes can be used in conjunction with other P11 codes to highlight the tool, e.g. blades for harrows are coded under P11-A03 and P11-T01.

P11-T01 [2015]

#### Blades, teeth, discs

Sharpening of teeth and blades are also coded under P11-G.

P11-T02 [2015]

#### Frame, beam, handle

Frames, beams, handles of equipment or tools for soil treating are coded here.

P11-T03 [2015]

Lifting or adjusting arrangements for agricultural machines or implements

#### P11-T04 [2015]

### Tractor or other driven soil working vehicle construction

Include parts and accessories to tractors for the purpose of soil working, e.g. coupling devices between tractor and machine/tool device.

#### P11-T99 [2015]

### Other constructional details of soil working machines or tools

Includes devices specially adapted for connection between animals or tractors and agricultural machines or implements.

#### P12: Harvesting

Includes all stages of harvesting, instruments and machinery used, types of produce harvested. From 2015, manual codes have been assigned for all mechanical details of harvesting.

P12-A [2015]

Types of instruments and machinery for harvesting

P12-A01 [2015]

#### Hand instruments for harvesting

Includes all hand-cutting tools, such as scythes, rakes, forks, etc.

Sickles, knives, taps, augers

P12-A02 [2015]

#### Machines for harvesting; mowing

Includes digging machines, topping machines, mowers, lifters, and harvesters or mowers combined with threshing devices, or with apparatus performing additional operations while cutting, e.g. with haymakers or dispensing apparatus for e.g. fertilisers, herbicides etc. Also includes equipment for binding, packing or storing harvested produce.

Potato ploughs, grain crop lifters, combine harvester/mower, packers, knotters, needles, discharge arms, containers, sheaf counters, outside dividers

P12-E [2015]

Types of crop harvested

P12-E01 [2015]

Fruits and nuts

P12-E02 [2015]

#### Vegetables and pulse crops

Including vegetables, legumes, beans, sugar beet, etc.

P12-E03 [2015]

#### **Cereals and grasses**

Includes sugar cane, bamboo, rice, turf, lawn, etc.

P12-E04 [2015]

#### Oil seeds and oil fruits

Including e.g. rape, sunflower, olives, palm fruits, etc.

P12-E05 [2015]

#### **Fiber plants**

Including e.g. cotton, flax, sisal, etc.

P12-E06 [2015]

Tea, coffee and herbs

Including also hops, spices.

P12-E07 [2015]

Mushroom/Fungi

P12-E08 [2015]

**Flowers** 

P12-E09 [2023]

#### Saps and syrups

Includes tapping trunks of rubber, maple, birch, walnut, pine etc. trees for natural rubber, latex, resin, maple syrup or other syrup-like substances. Sapping, resin

P12-E09A [2023]

#### Natural rubbers and latex

Rubber tree

P12-E09B [2023]

#### Syrups

Includes tapping of e.g. acer and birch trees for saps / syrups.

Birch syrup, maple syrup

P12-E99 [2015]

Other types of crops

P12-G [2015]

Cleaning, maintenance/repair of harvesting tools and machines

P12-T [2015]

Constructional details of harvesting tools and machines

P12-T01 [2015]

Conveyors and other delivering mechanisms for harvesting machines

Conveyors, bunchers, standers, reels

P12-T02 [2015]

Sieving and separating mechanisms for harvesting machines

For separating stones or foliage etc.

P12-T03 [2015]

#### Centrifugal wheels, drums, or spinners

Scoop wheels, scoop tines, screening wheels

P12-T04 [2020]

#### **Cutting parts of harvesting machinery**

Includes blades, teeth, knives, cutting and picking mechanism.

P12-T05 [2020]

Handles, frames

P12-T10 [2015]

Safety mechanisms

P12-T15 [2023]

#### **Taps and collectors**

Includes taps and collection buckets used to collect latex, resin and syrup.

Tapping, sapping

P12-T99 [2015]

Other constructional details of harvesting tools or machines

#### P13: Plant culture; Dairy products

Covers horticulture, agriculture, new plants and processes, dairy products, etc.

From 2015, manual codes have been assigned for all mechanical details of plant culture and dairy products.

#### P13-A [2015]

#### Horticulture; Agriculture

Apart from soil working / harvesting (P11/P12).

#### P13-A01 [2015]

#### **Greenhouse cultivation, Cultivation rooms**

P13-A01 is a general code for greenhouses or greenhouse cultivation, used when specific codes below are not applied. P13-A01 is also used when novel greenhouse is claimed as a whole. Electrical details of greenhouses are coded under X25-N01. Also includes cultivation rooms to grow e.g. mushrooms.

#### P13-A01A [2015]

#### Regulation of temperature in greenhouse

Includes heating and cooling of greenhouse. *Heating, cooling* 

#### P13-A01B [2015]

#### Regulation of light in greenhouse

Regulation of light intensity or wavelength, artificial lighting.

#### P13-A01C [2015]

### Regulation of ventilation/gases in greenhouse

Ventilation and controlling gas supply to greenhouses (e.g.  $CO_2$ ).

#### P13-A01D [2015]

#### Regulation of watering in greenhouse

Includes watering methods/installations in greenhouses.

#### P13-A01E [2015]

### Monitoring, measuring, testing methods in greenhouses

Includes methods and apparatus for monitoring greenhouse atmosphere or plant parameters.

#### P13-A01F [2015]

### Other equipment or methods used for green houses

Includes conveyors in greenhouses.

#### P13-A02 [2015]

#### Plant receptacles, supports and barriers

Includes all containers, supports and barriers for plants.

#### P13-A02A [2016]

#### Pots, tubs and trays

Includes all plant containers, including cultivation bags and cultivation bottles.

#### P13-A02B [2016]

#### Trellis, supports and barriers

Includes damage protection barriers, root barriers for containment or protection, tree supports, climbing/growth supports etc.

Tree support, root barrier, trellis

#### P13-A03 [2015]

#### **Forestry**

Includes planting, transplanting, uprooting, felling or delimbing trees. See also P11 class for planting of trees.

#### P13-A04 [2015]

### Methods and apparatus for plant protection

Includes methods for treatment of plants for protection against diseases/insects (e.g. using sprayers) or other dangers; treating plants using gases; generating heat, smoke, or fog in gardens, orchards, or forests. Also includes apparatus e.g. sprayers.

#### P13-A05 [2015]

#### Methods and apparatus for plant feeding

Includes methods for feeding of plants as far as not covered in P11 e.g. methods for foliar treatments e.g. using sprayers. Also includes apparatus, e.g. spreaders or sprayers etc.

#### P13-A06 [2015]

#### Water supply and management

Includes watering gardens, fields, sports grounds, plant pots, etc. Also includes methods or systems for reducing water run-off, evaporation, etc. Includes means of preventing soil erosion due to water. See also Q42-A11 for prevention of soil erosion.

#### P13-A07 [2015]

### Other methods and apparatus for modifying growth of plants

Includes chemical or mechanical methods for modifying growth of plants except for protecting or feeding of plants (covered in P13-A04 and P13-A05 codes). Includes pruning. Also includes any tools or apparatus used for modifying plant growth.

#### P13-A08 [2015]

### Methods and apparatus for monitoring status of crops and fields

Monitoring e.g. disease activity, growth and health of plant, humidity, temperature etc. Also includes any equipment used to monitor growth activity or conditions.

#### P13-A09 [2023]

#### Latex, resin, sap, syrup

Natural rubber, maple syrup

#### P13-A10 [2016]

#### Flower handling

Includes apparatus or methods for flower arranging, binding bouquets or wreaths, all aspects of flower preserving etc.

Flower bouquet, floral wreath, flower preserve

#### P13-A99 [2015]

#### Other horticulture or agriculture aspects

Includes other types of agricultural or horticultural methods or equipment not covered elsewhere.

#### P13-B [2015]

#### Plant propagation and modification

This section includes plant propagation and processes for modifying genotypes, phenotypes or plant reproduction by tissue culture techniques etc.

#### P13-B01 [2015]

#### Propagation of vegetative material

Includes propagation from seeds, cuttings, bulbs, artificial or natural dispersal of plants. Also includes propagation by scions, tissue culture, grafting, extraction, germination of material from plant buds, creating "artificial seed material", preparation of culture medium, etc. For regular seed planting, see P11 class.

#### P13-B02 [2015]

#### New plants or plant breeds

Includes methods using selection, hybridization or genetic engineering to modify or produce new plants.

P13-E [2015]

#### Types of crop cultivated

P13-E01 [2015]

Fruits and nuts

P13-E02 [2015]

#### Vegetables and pulse crops

Including vegetables, legumes, beans, sugar beet, etc.

#### P13-E03 [2015]

#### **Cereals and grasses**

Includes sugar cane, bamboo, rice, turf, lawn, etc..

#### P13-E04 [2015]

#### Oil seeds and oil fruits

Including e.g. rape, sunflower, olives, palm fruits, etc.

#### P13-E05 [2015]

#### Fiber plants

Including e.g. cotton, flax, sisal, etc.

#### P13-E06 [2015]

#### Tea, coffee and herbs

Including also hops, spices.

#### P13-E07 [2015]

Mushroom/Fungi

P13-E08 [2015]

**Flowers** 

P13-E09 [2023]

#### Latex, resin, sap, syrup

Natural rubber, maple syrup

#### P13-E99 [2015]

Other types of crops

#### P13-F [2015]

**Dairy products** 

#### P13-F01 [2015]

#### Milking and primary milk treatment

Includes machines for milking or hand milking devices. Also includes primary milk treatment, i.e. sterilizing/pasteurizing processes.

#### P13-F02 [2015]

#### Secondary milk treatment

Includes cream, butter and cheese manufacture. Includes kneading machines or hand devices for butter, devices for shaping butter or cheese, tanks for treatment of cream, etc.

Cheese coating

P13-F50 [2015]

Characterized by dairy product

P13-F50A [2015]

Milk

P13-F50B [2015]

Cream

P13-F50C [2015]

**Butter** 

P13-F50D [2015]

Cheese

P13-F50X [2015]

Other dairy products

P13-F99 [2015]

#### Other dairy product processing

Includes extraction of nutrients from dairy products, fat skimming, etc.

#### P13-G [2015]

### Cleaning, maintenance/repair of equipment

This code should be used in conjunction with other P13 codes.

#### P14: Animal Management and Care

P14-A [2015]

**Animal husbandry; Animal care** 

P14-A01 [2015]

#### Housing and fencing; Animal training

Includes items for taming animals, such as noserings or hobbles.

Wing clamps

#### P14-A01A [2015]

#### Housing and fencing

Includes pigsties, dog kennels, rabbit hutches, and the cleaning equipment. Also includes tethering poles, incubators, floor grids for preventing cattle from straying (details of electrical fencing are coded under X25-X11 and X25-N02C), etc. Incubators are also coded under P14-A05. Insect/vermin traps placed in animal shelters should be coded in both P14-A01A and P14-B01. Also includes animal transit boxes, such as dog cages and crates.

Pasture, bird cages, chicken coops, brooders, poultry runs, dovecots, beehives, artificial honeycombs, rearing-boxes, aquaria, terraria, pens

#### P14-A01B [2015]

#### **Animal training**

Mazes, labyrinths, animal behaviour

P14-A02 [2015]

#### Feeding and drinking

Feed troughs, feed pails, licking stone holders

#### P14-A03 [2015]

#### Washing and grooming

Includes curry-combs, fetlock rings, tail-holders, protection against weather conditions or insects. Also includes tools, such as clippers and shavers, for removing fleece from sheep, etc.

Dehorners, horn trainers

#### P14-A04 [2015]

#### Animal wear, including horse tack

Includes horse blankets/covers, hoods, blinders/blinkers, saddles, etc. Also includes leads for pets and jackets for dogs and cats.

Muzzles, collars

#### P14-A05 [2015]

#### Animal breeding equipment

Includes rearing or breeding of animals, including new breeds of animals, and devices for assisting or preventing mating.

Incubators

#### P14-A06 [2015]

#### Shoeing

Covers shoeing of horses but also other animals such as oxen, etc. Includes horseshoes, horseshoe nails and tools used by a farrier, such as elastic inserts, calks, studs, etc.

Soles, ice-spurs, hoof care

#### P14-A07 [2015]

#### Milking

Electrical details of milking are covered by X25-N02B.

Milking station

#### P14-A99 [2015]

#### Other details of animal husbandry

Includes marking of animals, devices for sorting and cleaning eggs, tools for collecting honey, beesmokers, bee-keepers' accessories, such as veils, etc. Also includes animal transport, such as safety harnesses, car guards, animal ramps, restraints, etc.

Manure pouch, urine pouch, honey strainers, carriers, ear tag

#### P14-B [2015]

### Catching, hunting, trapping or scaring of animals; Fishing

#### P14-B01 [2015]

#### Scaring, catching or killing of animals; Insect repellent

Includes devices for attracting insects, devices for dispensing poison, bird-scarers, traps, etc. Also includes hunting appliances, such as shooting stands, beater rattles, decoys, etc. This code can be used with P14-E codes to highlight the type of animals scared, caught or killed. Insect/vermin traps placed in animal shelters should be coded in both P14-A01A and P14-B01.

Fly papers, fly-swatters, nets, fumigators, flamethrowers, scarecrow, mosquito repellent

#### P14-B02 [2015]

#### **Fishing**

Includes fishing nets, artificial baits, fishing rods, etc.

Landing-spoons, fish-spears, fishing lines

Other details of animal care

#### P15: Tobacco

From 2015, electronic cigarettes will not carry a P15 class anymore, but will solely be coded under X27-A02F.

P15-A [2015]

Types of tobacco

P15-A01 [2015]

Tobacco for pipes, cigars and cigarettes

Kretek, beedi, bidi

P15-A02 [2015]

Chewing tobacco: Snuff

Includes dipping tobacco. *Tobacco gum, snus* 

P15-A03 [2015]

Non-consumable tobacco

Includes tobacco water and topical tobacco paste.

P15-A09 [2015]

Other specific types of tobacco

P15-L [2015]

**Tobacco harvesting and processing** 

P15-L01 [2015]

Planting, irrigation and harvesting of tobacco

Electric details of soil working and harvesting are coded under X25-N.

P15-L05 [2015]

#### **Tobacco processing**

Includes sifting, sorting, removing impurities from tobacco, blending, roasting, cooling, stripping and cutting tobacco. Also includes arrangements for feeding tobacco leaves in the cutting apparatus and other tools used during the tobacco processing. Includes chemical and bio-chemical treatment of tobacco, e.g. to form reconstituted tobacco. Electrical details of tobacco manufacturing are coded under X25-P03.

Cleaning, curing, flavouring, puffing, crimpling, tobacco-twisting

P15-M [2015]

#### Manufacture of cigars and cigarettes

Includes forming tobacco bunches followed rolling, curing and wrapping final cigars. Also includes forming paper tubes, filling tubes, conveying cigarettes, branding each cigarette and packaging finished products. Packing details are coded under Q31 to Q34 codes, and electrical details of packing are also coded under X25-F03A. Also includes hand-driven devices for making cigarettes, such as cigarette rolling machines, rolling boxes, etc. *Packaging, rolling mat, rolling tray* 

P15-T [2015]

Constructional details of tobacco products and related accessories

P15-T01 [2015]

Filter tips; Mouthpieces

P15-T02 [2015]

#### Cigarette paper and tubes

Includes dipping tobacco.

Tobacco gum, snus

P15-T03 [2015]

#### Tobacco smoking paraphernalia

Includes pipes, hookahs, arghilas, etc. Includes support and cleaning implements, and seasoning of tobacco pipes. Mouthpieces of pipes are also coded under P15-T01.

Bowl, pipe cleaner, pipe tamper

P15-T04 [2015]

#### **Packaging of tobacco products**

Includes bands for cigars or cigarettes, and boxes for cigarette and cigarette papers. Packaging details are also covered under Q32, Q33 and Q34.

Cigar case, tobacco pouch

P15-T99 [2015]

#### Other constructional details

Includes matchboxes, tobacco stoppers, cigar/cigarette holders, ashtrays, cigar cutters, device for producing smoke images/rings, lighters, etc. Electrical details of lighters are coded under X27-G01.

Cigar slitters/perforators, humidors

P15-X [2015]

Other tobacco aspects

#### P2: Personal, Domestic

#### **P21: Wearing Apparel**

From 2015, manual codes have been assigned for all mechanical details of clothes. Electrical details are covered by X27-A02B code.

#### P21-A [2015]

#### T-Shirts, shirts and vests

Includes blouses, jerseys, sweaters, etc. *Cardigan* 

#### P21-B [2015]

#### Trousers and shorts; Skirts and dresses

#### P21-B01 [2015]

#### **Trousers and shorts**

Includes dungarees.

Bermuda, leggings, jeggings, chinos

#### P21-B02 [2015]

#### Skirts and dresses

Minis, micros, kilts

#### P21-C [2015]

#### **Coats and jackets**

Includes overcoats, raincoats, capes, etc.

#### P21-D [2015]

#### Sportswear (excludes sport shoes)

Includes swimwear (including swimming aids), wristbands and headbands used during sporting activities. Swimming aids are also coded under P21-N. Sport shoes, e.g. running shoes, are coded under P22 only. Swimming gloves, boxing/golf gloves are also coded under P21-H. See also P36-A08A for sportswear.

Bathing suits, trunks

#### P21-E [2015]

#### **Undergarments; Hosiery; Nightwear**

Includes underwear, bathrobes, pyjamas, nightdresses, nursing bras (also coded under P21-K), legwarmers, etc. Socks are also coded under P22-C. Also includes absorbing material embedded in e.g. underwear. Diapers are also coded in P32-A60.

Corsets, brassieres, knickers, underpants, petticoat, panti-hose, tights, stay-ups, stockings, drawers, girdles

#### P21-F [2015]

#### Headwear

Includes hats, caps, helmets (including chin straps and visors), wigs, masks and dominoes, veils and fascinators. Also includes artificial eyelashes and eyebrows. Includes face coverings worn in public places (shops, banks, public transport, etc) to protect the public from against germs/viruses spread through coughing or sneezing. These protective masks are also coded under P35-A03C.

Toupee, hair extensions, hairpiece

#### P21-H [2015]

#### Gloves and scarves; Ties and bow-ties

Includes operating gloves, swimming gloves, baseball/boxing/golf gloves, etc. Sporting gloves are also coded under P21-D.

Snood, mittens, head-scarf, necktie

#### P21-K [2015]

#### Baby/children clothes and linen

Includes bodysuits, swaddling cloths, bibs, etc. Nursing bras are also coded under P21-E. Also includes maternity clothing.

#### P21-L [2015]

#### Belts, suspenders and other fasteners

Includes braces, suspenders for socks or stockings. Also includes trouser clips used by cyclists. Shoulder strap

#### P21-M [2015]

#### Manufacture of clothes

Electrical details of clothes manufacturing are coded under X25-T codes. Includes tracing wheels, cloth holders, cushions or boxes for needles and pins, etc. Also includes patterns, dress forms and bust forms.

Tailor aids

#### P21-N [2015]

#### **Protective clothing**

Includes overalls, apron, knee protectors, etc. Also includes swimming aids. Safety shoes are coded under P22-F04 only.

Face masks, gaiters, surgeon gown, protective gloves, helmet

#### P21-T [2015]

#### **Constructional details**

This code should be used in conjunction with other P21 codes to highlight the garment.

#### P21-T01 [2015]

#### Collars, sleeves and pockets

Includes cuffs and lining.

Closures, collar-studs, stiffeners, armhole

#### P21-T50 [2015]

#### **Novel constructional materials**

Includes novel materials only. Can be used in conjunction with other P21 codes to indicate material application.

#### P21-T99 [2015]

#### Other specific constructional details

#### P21-X [2015]

#### Other wearing apparel

Includes handkerchiefs and artificial or natural feathers and flowers.

#### P22: Footwear

From 2015, manual codes have been assigned for all mechanical details of footwear. Electrical details are covered by X27-A02B1B.

#### P22-A [2015]

#### Shoes and sandals

Includes slippers and trainers. Sport shoes are also coded under P22-F03. Also includes over-shoes. Broques, court shoes, flats, loafers, pumps, wedges,

clogs, mules, ballerina, slip-on, dockside, flip flops

#### P22-B [2015]

#### **Boots**

Includes safety boots (see also P22-F04 for safety shoes)

Ankle boots, knee-length boots, rubber boots, booties, thigh-high, knee-high, cowboy boots

#### P22-C [2015]

#### Socks

Hosiery, e.g. tights and stockings, are coded under P21-E01. Includes arrangements for securing socks to shoes

#### P22-F [2015]

Main types of footwear

P22-F01 [2015]

Shoes for babies and children

P22-F02 [2015]

Shoes for dolls and other toys

P22-F03 [2015]

#### **Sport shoes**

Includes shoes and boots for activities such as athletic events, ball games, cycling, climbing, skiing, skating and dancing.

Running shoes, climbing shoes, football shoes, ski boots, tennis shoes, dancing shoes, skating boots, ballet

#### P22-F04 [2015]

#### Safety shoes, e.g. hospital footwear

Sport shoes e.g. football boots, are coded in P22-F03.

Nursing clogs, theatre mules, surgical clogs, safety boots

#### P22-F05 [2015]

#### **Orthopaedic shoes**

Includes ventilated shoes, shoes with specific footsupporting parts or shock absorbers, etc. Insert, in-step support, toe spacer, toe spreader

#### P22-M [2015]

#### Manufacture of footwear

Electrical details of clothes manufacturing are coded under X25-T codes. Includes machines for making laces.

Goodyear welt, lasts, shoemaking, presses, flexing, shoe gluing, heel cutter

#### P22-T [2015]

#### Constructional details of footwear

#### P22-T01 [2015]

#### Soles, insoles and heels

Includes details of separate inserts and detachable wheels attached on reverse of soles.

Stiffener

#### P22-T03 [2015]

#### Uppers, boot legs and tongues

Includes sandal straps (also coded under P22-T05).

#### P22-T04 [2015]

Welt and lining

#### P22-T05 [2015]

#### Laces and other fastenings

Includes hooks and eyelets for laces, zips, snap buttons, buckles, fasteners with toggle levers, etc. Hook and loop fastener, slide/glide fastener

#### P22-T06 [2015]

#### Wear-resisting and safety arrangements

Includes non-skid attachments e.g. ice-spikes, spurs, studs

Steel toe cap, metal plate, skid-proof

#### P22-T50 [2015]

#### **Novel footwear materials**

Includes novel materials used to form footwear. Can be used in conjunction with other P22-T codes to indicate material applications.

#### P22-T99 [2015]

#### Other constructional details

Includes decorative buckles.

Ornamental

#### **P23: Haberdashery and Jewellery**

From 2015, manual codes have been assigned for all mechanical details of haberdashery and jewellery. Electrical details of jewellery are covered by X27-A02B2.

#### P23-A [2015]

#### **Haberdashery**

Includes all types of closures. Tools used to manufacture clothes, such as tracing wheels, cloth holders, cushions or boxes for needles and pins, etc are coded under P21-M.

#### P23-A01 [2015]

#### **Buttons**

Includes press-buttons, and collar studs. *Press-studs, snap fasteners* 

#### P23-A03 [2015]

#### **Cuff-links**

Sleeve-links

#### P23-A04 [2015]

#### Retainers for ties and cravats

Includes retainers for neckties, cravats, neckerchiefs, such as tie-clips, spring clips, etc. *Tie pin* 

#### P23-A05 [2015]

#### **Pins**

Includes hat pins, scarf pins and safety pins. Tie pins are also coded under P23-A04.

Brooches

#### P23-A06 [2015]

#### **Buckles, Lanyards**

Includes buckles for safety belts. Safety belts are also coded under Q14-C01.

Seat belts

#### P23-A07 [2015]

#### Zippers and other slide fasteners

Fly

#### P23-A08 [2015]

### Hook and eye fasteners; hook and loop fasteners

Includes touch-and-close fasteners.

#### P23-A50 [2015]

#### Novel constructional materials for haberdashery

This code should be used in conjunction with other P23-A codes.

#### P23-A99 [2015]

#### Other types of haberdashery

Includes key-rings, and cards for buttons, collarstuds or sleeve-links.

#### P23-C [2015]

Jewellery and coins

#### P23-C01 [2015]

#### Brooches, clips, medals and badges

Brooches are also coded under P23-A05.

#### P23-C02 [2015]

#### Bracelets, necklaces, pendant and charms

Includes fastening arrangements for bracelets and wrist-watch straps. Pendants are coded under P23-C04 only. Constructional details of watches are coded under S04-A.

Rosaries, chains, watch-chains, wristband

#### P23-C03 [2015]

#### Rings, earrings and body piercing

Includes rings worn around the finger or toe. Also includes equipment for piercing the ear-lobes.

Finger rings, toe rings, signet ring, piercing rings, piercing bar

#### P23-C15 [2015]

#### Safety arrangements

Includes arrangements for securing the item of jewellery, e.g. bracelet, to the wearer to prevent loss or theft.

Safety chains

#### P23-C20 [2020]

#### **Gem settings**

Includes arrangements for securing the gem to the piece of jewellery. This code should be searched in conjunction with other P23-C codes. Also includes setting tools. Manufacturing details are coded under P23-M.

Bezel, channel, claw, prong, rose head, buttercup setting, illusion setting

#### P23-C30 [2015]

#### Coins

Includes gambling coins, slot machine tokens, cart tokens.

#### P23-C50 [2015]

### Novel constructional materials for jewellery and coins

This code should be used in conjunction with other P23-C codes.

#### P23-C99 [2015]

#### Other types of jewellery

Includes connectible jewellery, and fancy wear such as crosses and crucifixes.

#### P23-M [2015]

### Manufacture of haberdashery and jewellery

This code should be used in conjunction with P23-A or P23-C codes. Arrangements for securing the gem to the piece of jewellery are coded under P23-C20.

#### P24: Hand and Travelling Articles; Brushes

From 2015, manual codes have been assigned for all mechanical details of clothes. Electrical details are covered by X27 codes.

#### P24-A [2015]

### Walking sticks, umbrellas and handheld fans

#### P24-A01 [2015]

#### Walking sticks

Includes walking aids for blind persons, and walking sticks convertible into seats. Walking sticks convertible into umbrellas are also coded under P24-A02. Electric details of walking sticks are coded under X27-A02E.

Hunting sticks

#### P24-A02 [2015]

#### **Umbrellas**

Walking sticks convertible into umbrellas are also coded under P24-A01. Electrical details of umbrellas are coded under X27-A02.

Parasol

P24-A03 [2015]

**Handheld fans** 

#### P24-B [2015]

#### Purses, luggage, handheld bags and cases

Includes shopping bags, handbags, beach bags, bags for shoes, rigid and semi-rigid luggage, such as suitcases, trunks, travelling baskets, sleeves or socks for mobile phones, etc. Also includes sacks that can be transformed into a different article, such as a rucksack turning into a tent, a mattress, a coat, a sleeping bag, etc. This type of bag is also coded under P24-D (camping equipment). Also includes boxes or cases for specific items, such as hat boxes, cases for telescopes, pocket holders for stamps or coins, jewel boxes, water-tight boxes used during swimming, key wallet, camera cases, etc. Make-up boxes and lipstick cases are coded under P24-C04. Backpack, money-bag, wallet, guitar case, spectacle case, watch case, picnic box, protective shell, storage box

#### P24-C [2015]

### Hairdressing and shaving equipment; beauty and cosmetic treatment

#### P24-C01 [2015]

#### Hairdressing equipment

Includes equipment for hair-curling or hair-waving, hair pins, hair grips, hair combs, and equipment for hair salons, such as backward lavabos, hair-colouring caps, spray heads, hairdressers' chairs or portable wash stands. Also includes processes for waving, straightening or curling hair, such as chemical processes, and equipment used for attaching/removing hair extensions. Hairbrushes are also coded under P24-E.

Hair clamps, hair clasps, hair nets, hair protecting caps, hair extensions, eyelash curler

#### P24-C02 [2015]

#### **Shaving equipment**

Includes gloves or brush used for lathering, shaving mugs, containers for storing shaving paraphernalia. Also includes tweezers. Details of electric razors are coded under X27-A02A3B.

Shaving mirrors, skin stretchers, shaving brush

#### P24-C03 [2015]

#### Manicure and pedicure equipment

Includes nail clippers and nail files, cuticle sticks, finger-supports, and boxes for storing manicure/pedicure equipment. Also include artificial nails.

Nail cutters, nail-tip shapers

#### P24-C04 [2015]

### Accessories/container for toilet/cosmetic products

Includes accessories such as powder puffs, masks for marking lips or eyelashes, etc. Also includes containers such as perfume bottles, make-up boxes, lipstick, boxes for shaving soap, container for artificial teeth, etc. Details of packaging for cosmetic products are coded under Q32 to Q34 codes.

Cosmetic box

#### P24-C99 [2015]

#### Other toilet/cosmetic equipment

Includes pocket mirrors (shaving mirrors are also coded under P24-C02).

Hand mirror

#### P24-D [2015]

#### **Camping equipment**

Includes tents, water bottles, hammocks, hanging seats, mosquito nets, mini camping stoves, metal plates and mugs, etc. Bags, such as rucksacks convertible into e.g. a tent, a mattress, etc, are also coded under P24-B. Also includes attachments for fastening e.g. books, hats, etc to the tent, or hammocks, etc.

Tent spikes

#### P24-E

#### **Brushes**

Includes details of bristles, handles, integrated reservoir for e.g. paint, paste, water. Also includes paint rollers and accessories for brushes, such as protective covers and special devices for cleaning brushes after use.

[2015]

Details of electric toothbrushes are coded under X27-A02A3A.

Toothbrush, paint brush, hair brush, comb

#### P24-M [2015]

#### Manufacture details

This code should be used in conjunction with other P24 codes.

#### **P25: Office and Home Furniture**

From 2015, manual codes have been assigned for all mechanical details of office and home furniture. Electrical details are covered by X27-A03.

Does not include chairs, beds, sofas and mattresses; these are coded under P26 codes only. P25 codes cover tables, wardrobes and cabinets.

#### P25-A [2015]

#### **Tables**

Includes benches combined with such as school desks.

Nesting table, wall table

P25-A01 [2015]

Types of tables

P25-A01A [2015]

#### **Desks**

Includes school desks, writing tables, drawing desks, pulpits and lecterns. Desks for computers are also coded under T04-L codes.

School bench, workstation, conference table, computer desk

#### P25-A01B [2015]

#### **Bedside tables**

Dressing tables are also coded under P25-C01C.

P25-A01C [2015]

**Garden tables** 

P25-A01D [2015]

#### **Dining/breakfast tables**

Includes tables for restaurants and dining rooms. Also includes food trays.

Kitchen table, breakfast bar, coffee table

### P25-A01X [2015]

#### Other specific type of tables

Includes sewing tables, tea trolleys and game tables. Also includes operating tables.

Card table, ironing table, billiard table, table tennis table

P25-A02 [2015]

**Components of tables** 

P25-A02A [2015]

**Table tops** 

P25-A02B [2015]

#### Legs and underframe

Feet

#### P25-A02C [2015]

#### **Drawers**

Includes sliding arrangements and handles of drawers.

Sliding tray

#### P25-A02D [2015]

### Arrangements for modifying the size of the table

Includes folding and extending arrangements. Stowable table, extensible table, drop-leaves, telescopic table

#### P25-A02X [2015]

#### Other components of tables

#### P25-B [2015]

#### Wardrobes

Includes details of doors, hanging arrangements, interior drawers and wardrobe fixings such as hinges and handles. Also includes mirror attached to the doors.

P25-C [2015]

#### **Cabinets**

Includes racks and shelf units.

Cupboard

P25-C01 [2015]

**Types of cabinets** 

P25-C01A [2015]

#### **Bookshelves and office cabinets**

Bookcase, filing cabinet

#### P25-C01B [2015]

#### Kitchen and bathroom cabinets

Includes cocktail cabinets, cabinet for perishable items, such as meat safes, bottle racks, and fruit or vegetable storage cabinets.

Welsh dresser, medicine cabinet

#### P25-C01C [2015]

#### Bedroom and dining room cabinets

Includes chests of drawers, dressing tables (also coded under P25-A01B) and bedside cabinets. Also includes television stands (see also W03-A09C), radio stands, record cabinets.

#### P25-C01X [2015]

#### Other specific types of cabinets

Includes shoe cabinets and racks for skis or guns.

#### P25-C02 [2015]

#### **Components of cabinets**

Includes systems for modifying the size of the cabinet.

#### P25-C02A [2015]

#### Feet and casing

Carcass, partition wall, upright, strut, wheel

#### P25-C02B [2015]

#### **Shelves arrangements**

Includes book-ends. Shelving systems for e.g. supermarkets are also coded under P27-A01. Book trough

#### P25-C02C [2015]

#### **Drawers and doors**

Includes sliding arrangements.

#### P25-C02D [2015]

#### Handles and other fittings

Knobs, key plate, ornaments

#### P25-C02X [2015]

#### Other components of cabinets

#### P25-L [2015]

#### Convertible/stackable furniture; multipurpose furniture

Includes furniture that can be converted into other types of furniture. This code can be used in conjunction with other P25 codes to highlight the different functions. Also includes dual-purpose furniture, e.g. a table combined with a seat. Reconfigurable furniture for vehicle cabins are coded under Q14-T only.

Combination

#### P25-M [2015]

### Manufacture of office and domestic tables, wardrobes and cabinets

This code should be used in conjunction with other P25 codes.

#### P25-X [2015]

#### Other home and office furniture

Does not include chairs, beds, sofas and mattresses; these are coded under P26 codes only. Includes easels or stands for maps, blackboards, etc.

Umbrella stand

#### P26: Chairs, Sofas and Beds

From 2015, manual codes have been assigned for all mechanical details of chairs, sofa and beds. Electrical details are covered by X27-A03.

Does not include tables, wardrobes and cabinets; these are coded under P25 codes only. P26 codes cover chairs, beds, sofas, mattresses and all furniture for babies and children.

Prior to 2012, details of upholstery were coded under Q39.

Upholstery

#### P26-A [2015]

#### Chairs and benches

Stool, hassock, rocking chair, seat

#### P26-A01 [2015]

#### Types of chairs and benches

Children chairs are also coded under P26-E.

#### P26-A01A [2015]

#### Home or office chairs

Includes armchairs and garden chairs. Armchairs are also coded under P26-B01.

Workshop, high chair, gaming chair

#### P26-A01B [2015]

#### Hairdressers, barbers or dentist chairs

Includes disabled chairs. Electrical details of disabled chairs and dentist chairs are coded under S05-K and S05-E01, respectively.

Operating chair

#### P26-A01C [2015]

#### Theatre/cinema/church benches and chairs

Includes chairs/stools for restaurants.

Stadium chair, tipping-up chair, confessional bench, prayer stool, kneeling stool, public bench

#### P26-A01D [2015]

#### Folding/collapsible/stackable chairs

Includes dismountable chairs and booster seats attached to e.g. dining chairs.

Camping chair, garden chair, beach chair, trunk chair, inflatable chair, nesting chairs

#### P26-A01F [2015]

#### Vehicle seats

Includes seats for cars, bikes, scooters, etc. See also Q14-A.

#### P26-A01X [2015]

#### Other types of chairs

Milking stool, music stool, bean bag, rocking chair

#### P26-A10 [2015]

#### Constructional details of chairs and benches

#### P26-A10A [2015]

#### Seats, armrests, headrests and backrests

Includes details of folding and reclining arrangements, and seat padding. Footrests are coded under P26-A10B only.

Frame, cushion, back support

#### P26-A10B [2015]

#### Legs and feet

Includes footrests.

Caster wheel

P26-A10X [2015]

### Other constructional details of chairs and benches

Includes hooks to attach bag or coat, such as on theatre chairs. Also includes protective covers, e.g. to protect against rain.

Cup holder

#### P26-B [2015]

#### Sofas, armchairs and beds

Divan

#### P26-B01 [2015]

#### Sofas and armchairs

Includes armrests, footrests, hidden storage, feet and legs. Armchairs are also coded under P26-A01A.

Couch, settee

#### P26-B02 [2015]

#### **Beds**

Includes bedsteads and headboards. Beds installed in vehicles are also coded under Q14-B. Cots, day-bed, wall bed, hammock, suspended bed

#### P26-B03 [2015]

#### Sofa-beds, chair-beds and wardrobe-beds

Includes folding arrangements.

Futon, cabinet bed, table bed, trunk bed

# P26-C [2015]

#### **Mattresses and cushions**

Includes spring, foam or fluid mattresses. Pillows are coded under P27-B02. Seat cushions of chairs are also coded under P26-A10A.

# P26-E [2015]

# Furniture for children; Child-proofing arrangements

This code can be used in conjunction with P25 or other P26 codes to highlight the piece of furniture, e.g. chair, bed, etc. Includes high chairs, cradles, cots, but also other nursery accessories such as baby carriers, playpens, safety harnesses, etc. Electrical details of baby equipment are coded under X27-X01. Includes general child-proofing arrangements, such as corner protectors, window restrictors, anti-tip straps for heavy furniture, etc. This code is to be used in conjunction with other P codes to specify the type of furniture the child-proofing item is connected to, e.g. P25-C01B for kitchen and bathroom cabinets, X27-F01 for fridges, etc.

Dressing table, changing table, rocking chair, carrycot, baby gate, baby proofing kit

# P26-F [2015]

# Accessories for chairs, benches, sofas, beds and mattresses

This code is used in conjunction with P26-A or P26-B codes. Includes loose furniture covers and insect nets (see also P27-C). Bedspreads are also covered under P27-B02.

Throw

# P26-M [2015]

# Manufacture of chairs, sofas and beds

This code should be used in conjunction with other P26 codes.

# **P27: Shops and Household Furnishing**

From 2015, manual codes have been assigned for all mechanical details of shop and household furnishing. Electric details are coded under X27.

# P27-A [2015]

# Furniture and fittings for shops, restaurants and warehouses

Tables and chairs are coded under P25-A and P26-A, respectively.

# P27-A01 [2015]

# Racks and cabinets for displaying/storing merchandise

Includes dispensers for granulated materials, vending jars, display stands, dummies, etc. Refrigerated cabinets are also coded under X27-F. Also includes shelving units in warehouses or storage facilities.

Showcase, bust, wire figure, shop window display

# P27-A02 [2015]

# Shop, bar or bank counters

Includes paying counters.

Check-out counter

#### P27-A99 [2015]

# Other furniture and fittings for shops, restaurants and warehouses

Includes plastic protective screens used in e.g. checkout areas or bank counters to protect staff and customers against germs and viruses spread through coughing or sneezing.

Changing rooms, sneeze guards, protective counter screens

# P27-B [2015]

# Household and table equipment

Cookware, such as pots and pans, are coded under P28-A02 only. Details of tables per se are coded under P25-A.

# P27-B01 [2015]

### Mirrors and picture frames

Shaving mirrors are coded under P24-C02.

# P27-B02 [2015]

# **Bed linen and towels**

Includes bedspreads, sleeping bags, blankets, pillows and travelling rugs. Cushions are coded under P26-C02. Paper towels are coded under P28-B03

Throw

# P27-B03 [2015]

# Tableware, glassware, cutlery and table linen

Includes plates, bowls, serving dishes, glasses, jugs, cups, etc. Also includes table linen, such as napkins and tablecloths, and tea/coffee pot cosies. Knives, forks, spoons, wine decanter, crockery, tea pot, egg cup, sugar tongs, serving tray, drinking straw

# P27-B04 [2015]

### **Carpets and rugs**

Includes stair runners and stair rods.

# P27-B05 [2015]

## Clothes hangers and racks

Includes clothes racks, hat rack, coat hangers, umbrella stands, shoe horns, etc.

Hat holder, necktie holder

# P27-B06 [2015]

## **Religious decorations**

Includes altars, Christmas trees, Christmas decorations, religious shrines, fonts, etc.

Christmas tree stand

### P27-B99 [2015]

### Other household and table equipment

Includes screens such as fire screens, flower vases, wall boards, paper baskets, key holders, letter boxes, incense burners, etc. Incense burners used during religious celebrations are also coded under P27-B06 and incense burners used as mosquito repellent are also coded under P14-B01.

# P27-C [2015]

### **Curtains and blinds**

Includes curtain rods/rails, pelmets, runners, gliders, and arrangements for opening/closing blinds and curtains. Electrical details are coded under X27-T. Also includes mosquito nets (see also P26-F when the net is attached to e.g. a bed).

Pleat curtain tape, net curtain

# P27-M [2015]

# Manufacture of shops and household furnishing

This code should be used in conjunction with other P27 codes.

## **P28: Kitchen and Sanitary Equipment**

From 2015, manual codes have been assigned for all mechanical details of kitchen and sanitary equipment. Electrical details are covered by X27 codes.

# P28-A [2015]

## Kitchen equipment

Electrical kitchen appliances, such as toaster or coffee machines, are coded under X27-B. Cooking appliances are coded under X27-C. All details of refrigerators are coded under X27-F. Tableware, such a crockery, cutlery and glassware, are coded under P27-B03 only.

#### P28-A01 [2015]

# Food and beverages preparation

Includes kitchen gadgets and utensils such as vegetable slicers, juicers, garlic presses, zesters, egg slicers, ladles, mechanical timers and scales, etc. Also includes cafetieres and espresso makers. Citrus peeler, tin/can opener, coffee grinder, salt and pepper grinder, egg whisk, nutcracker, sifter, coffee mill

# P28-A02 [2015]

#### Cookware and ovenware

Includes saucepans, woks, oven trays, casserole dishes, poachers, fish tins, etc. Also includes dish warmers and barbecues.

Frying pan

### P28-A03 [2015]

#### Kitchen storage

Includes bread bins, spice racks, plastic containers for food, etc.

Bread box

# P28-A99 [2015]

#### Other kitchen equipment

Includes holders for cooking books, oven gloves, aprons, vacuum flasks, splashguard for sink, etc. *Cutting board* 

# P28-B [2015]

# Sanitary equipment and toilet accessories

Bathroom cabinets are coded under P25-C only.

# P28-B01 [2015]

### Wash-stands and sinks

Also includes stoppers for sinks and baths, and bathroom cabinets placed underneath sinks.

Wash-basins

# P28-B02 [2015]

#### **Baths and showers**

Includes bidets, shower screens, shower curtains, and anti-slip mats, etc. Bath stoppers are included in P28-B01. Electric details of baths and showers are coded under X27-A02A4.

Bath feet

# P28-B03 [2015]

#### **Bathroom accessories and linen**

Includes soap and toothpaste dispensers, soap holders and dishes, towels, toilet roll and towel holders/racks. Also includes washing accessories such as bathing sponges. Towels and anti-slip mats placed in the bath are also coded under P27-B02. Loofah, shower cap, toothbrush holder, bath mats, bathroom storage, bathroom bin, towel rail, bathroom caddy

# P28-B04 [2015]

#### **Toilets**

Includes flush-less toilets, such as chamber pots or urinals, hand tools for cleaning the toilet bowl, cover for toilet seat, and toilet seat specially adapted for children. Electrical details of toilets are coded under X27-L.

Hinge, toilet brush, toilet seat

### P28-B99 [2015]

#### Other sanitary equipment

Includes chairs/stools for restaurants.

# P28-C [2015]

### **Domestic cleaning and washing**

Electrical cleaning and washing appliances are coded under X27-D. All details of washing machines, dishwashers, tumble dryers, and vacuum cleaners are coded by X27-D01A, X27-D01B, X27-D02 and X27-D03, respectively.

Cleaning caddy

# P28-C01 [2015]

# **Equipment for cleaning windows**

Includes cloths, sponges, pads, and equipment for cleaning blinds.

Squeegee, wiper

# P28-C02 [2015]

# Equipment for cleaning floors, walls, carpets, and upholstery

Includes brooms and brushes, buckets, dustpans, and mops. Brushes for cleaning shoes are coded under P28-C04 only.

Upholstery/carpet beater

# P28-C03 [2015]

# **Equipment for cleaning/drying crockery**

Includes basins, draining boards, and equipment for polishing cutlery.

Sponge

# P28-C04 [2015]

# **Equipment for cleaning/polishing footwear**

Shoe brush

# P28-C05 [2017]

# **Equipment for cleaning/drying/ironing clothes**

Includes mechanical details only of clothes lines and ironing boards. Electrical details are coded under X27-L and X27-D09, respectively.

Clothes pegs, pedal washing machine

# P28-C99

[2015]

# Other specific cleaning or washing equipment

Sink plunger

# P28-M [2015]

# Manufacture of kitchen and sanitary equipment

This code should be used in conjunction with other P28 codes.

# P3: Health, Amusement

## P31: Diagnosis, surgery

From 2015, manual codes have been assigned for all mechanical details of diagnostic and surgical apparatus. Electrical details are covered by S05 class.

P31-A

[2015]

**Diagnosis or surgery apparatus** 

P31-A01

[2015]

# Surgical tools and instruments

Includes cutters e.g. scalpels; clamps and retractors; distractors and positioners; sealing and stapling devices; dilators, specula.

## P31-A05

[2015]

### **Diagnostic devices**

Includes measurement devices e.g. rulers, calipers; percussion instruments for tapping on a surface to determine the underlying structure; Auscultation devices e.g. stethoscopes.

Pleximeter

P31-A99

[2015]

# Other types of diagnosis or surgery apparatus and systems

For operating theatre and dental surgery equipment see P33-A10.

# P31-B

[2015]

# Storage and transport of diagnosis or surgery apparatus

Includes containers for storing and transporting surgical tools and equipment. See also Q31-Q34 codes.

P31-G

[2015]

Cleaning, maintenance/repair of diagnosis or surgery apparatus

P31-M

[2015]

Manufacture/Pre-use treatment of diagnosis or surgery components

P31-R

[2015]

Recycling of diagnosis or surgery components

# P32: Dentistry, bandages, veterinary, prosthesis

From 2015, manual codes have been assigned for all mechanical details of dentistry, bandages, veterinary, and prosthesis apparatus. Electrical details are covered by S05 class

P32-A [2015]

# Dentistry, veterinary, prosthesis apparatus and dressings

P32-A01 [2015]

# **Dentistry**

Includes mechanical aspects of dental tools and instruments, orthodontics, impressions. For dental chairs and accessories see P33-A10.

P32-A20 [2015]

### Veterinary

Surgical tools and instruments; supports, restraints and other auxiliary devices used during examination and surgery e.g. for holding animal's mouth open; treatment; reproduction or fertilization devices.

P32-A40 [2015]

#### **Prostheses**

Includes dental prostheses

P32-A40A [2015]

#### **Implantable**

Including stents for insertion in blood vessels.

P32-A40B [2015]

## Non-implantable

Includes artificial limbs.

P32-A50 [2015]

Eye and ear protection and/or treatment

P32-A60 [2015]

#### Bandages, dressings and first aid kits

Includes dispensers and auxiliary items. Also includes absorbent/antiseptic pads and swabs such as nappies, sanitary towels, diapers and tampons. Disposal of used dressings and bandages is coded by a combination of P34-W (medical waste disposal) and P34-A60.

P32-A99 [2015]

# Other apparatus and methods for dentistry, veterinary, prostheses

Includes dental auxiliary appliances (for dental chairs and work-stands see P33-A10). Also includes therapeutic heating devices, orthopaedic and contraceptive devices.

Hot-water bottle

P32-M [2015]

Manufacture/Pre-use treatment of dentistry, bandages, veterinary, prosthesis components

Includes coating of e.g. stents.

P32-R [2015]

Recycling of dentistry, bandages, veterinary, prosthesis components

# P33: Medical aids, oral administration

From 2015, manual codes have been assigned for all mechanical details of medical aids and oral administration apparatus. Electrical details are covered by S05 class.

P33-A [2015]

**Medical aids** 

P33-A01 [2015]

## **Patient transport**

Trolleys, wheelchairs, stretchers and other lifting devices, including those aspects as applied to vehicles such as ambulances.

P33-A02 [2015]

**Beds** 

P33-A03 [2015]

Hygiene and sanitary devices

Bed-pans

P33-A10 [2015]

# Other hospital and dental surgery equipment

Includes operating tables and dental chairs. Also includes trolleys for transporting medicines, food and other items.

P33-A20 [2015]

#### **Therapy**

Includes devices for massage, bathing and passive exercise.

Acupuncture

P33-A40 [2015]

**Funeral apparatus and accessories** 

P33-A50 [2015]

# Oral administration of medicines; Feeding devices

Includes feeding tubes, baby teething apparatus e.g. rings, feeding bottles. For syringes and subcutaneous, intra-vascular or intra-muscular devices see P34-A02.

P33-A99 [2015]

# Other types of medical aids and oral administration methods

Includes walking aids and crutches. Wrist band

P33-B [2015]

# Storage and transport

Includes containers for storing and transporting medical aids. See also Q31-Q34 codes.

P33-G [2015]

Cleaning, maintenance/repair of medical aids

P33-M [2015]

# Manufacture/Pre-use treatment of medical aids

Includes devices and methods for processing pharmaceutical products into physical forms suitable for oral administration.

P33-R [2015]

Recycling of medical aids

# P34: Sterilizing, syringes

From 2015, manual codes have been assigned for all mechanical details of sterilizing apparatus and syringes. Electrical details are covered by S05 class.

P34-A [2015]

Sterilization equipment, syringes

P34-A01 [2015]

# Sterilization and disinfection devices

For sterilization, disinfection, sanitizing and deodorizing of substances and materials including air, refuse, bandages and dressings (See P32-A60 for bandages per se), and contact lenses. Also includes sanitizing stations placed in public spaces to dispense e.g. antibacterial gel/wipes.

P34-A02 [2015]

# Syringes and other devices for introduction and removal of media from body

Syringes, needles, and irrigation devices; Inhalers; sprayers, atomizers and insufflators; subcutaneous, intra-vascular or intra-muscular devices; catheters and other drainage apparatus; applicators. Includes blood transfusion equipment. For oral administration devices and methods, see P33-A50.

P34-A10 [2015]

Anesthesia; relaxation

P34-A99 [2015]

Other types of sterilization equipment, syringes and introduction/removal devices

P34-G [2015]

Cleaning, maintenance/repair of sterilization equipment, syringes

P34-M [2015]

Manufacture/Pre-use treatment of sterilization equipment, syringes

P34-R [2015]

Recycling of sterilization equipment, syringes

# P34-W [2024]

### Medical waste disposal

Includes receptacles for clinical waste, such as used dressings, bandages, needles, sharps, etc. This code is to be used in conjunction with other P34 codes or P32 codes to specify the items to be disposed of, e.g. P34-A02 for needles, or P32-A60 for bandages. Constructional details of refuse receptacles are also coded under Q35-A01.

Needle disposing box

# P35: Life-saving, safety, firefighting, fire extinguishing and fire prevention

This class covers apparatus and methods for life saving and safety in a general sense and also for firefighting and fire extinguishing. For life saving and safety systems for specific purposes see the relevant class, for example water-based life-saving equipment such as lifebuoys is covered in Q24. From 2015 P35 manual codes have been assigned for all mechanical details of life saving, safety, firefighting and fire extinguishing. Electrical aspects are also covered in class X25. Fire alarms are not included and are covered by W05-B02 codes. Significant applications are indicated by assignment of P35-U codes in conjunction with other P35 codes as necessary.

# P35-A [2015]

# Type of life saving and safety systems

These codes are assigned to indicate the general type of life saving and safety system involved.

# P35-A01 [2015]

# Rescue equipment and methods

Covers equipment, and methods for using it, for rescuing people or animals from a dangerous situation such as a building during a fire, earthquake, etc. Water-based life-saving equipment such as lifebuoys and the like is covered by  $\Omega$ 24-X01 codes and equipment installed onboard an aircraft is covered by  $\Omega$ 25-B09 codes.

### P35-A01A [2015]

#### Hoists, winches, lifting equipment

Novel aspects of harnesses for supporting a person being rescued are also assigned P35-A03A.

Lowering, raising, winching, winding

# P35-A01E [2015]

#### Slides, chutes

Escape slides and similar emergency exit arrangements for aircraft are not included and are covered by Q25-B09E.

# P35-A01G [2015]

#### **Cushioning devices**

Includes use of devices providing a 'soft landing', e.g. for persons falling or jumping from a high point.

Cushion, inflatable, mat, pad

# P35-A01X [2015]

# Other types of rescue equipment or method

# P35-A03 [2015]

## Safety systems in general

These codes cover systems, protective clothing and other equipment for general safety purposes.

# P35-A03A [2015]

### Safety harnesses and belts

Includes harnesses for supporting workers, e.g. by anchoring to a building or other structure. Harnesses forming part of rescue equipment, e.g. to lift a person for escape purposes, are also assigned P35-A01A.

Builder, carabiner, construction worker, lineman, window cleaner

# P35-A03C [2015]

#### **Protective clothing**

P35-A03E

Includes helmets, masks, and the like to provide protection for humans and animals from adverse environments. Includes face coverings worn in public places (shops, banks, public transport, etc.) to protect the public against germs and viruses spread through coughing or sneezing. Face coverings are also coded under P21-F. Fireproof clothing is also assigned P35-C05. Arrangements for facilitating or enabling breathing are covered by P35-A05E which is also assigned as necessary. Systems and equipment for treating hazardous chemicals or biological agents to make them safe or to contain them are covered by P35-A03G.

# Environmental suit, hazmat suit, NBC suit

# Breathing equipment and protection against harmful gases

[2015]

Includes equipment for filtering gases hazardous to health of humans or animals and breathable gas supply systems providing e.g. oxygen or gas mixtures. Breathable gas supplies for medical purposes are not included and are covered by P34 codes. Covers equipment, and methods for removing or neutralizing the effects of hazardous gases in the air within a building, room, or other enclosed area. Electrical alarm systems warning of the presence of toxic gases are covered by W05-B07L codes and those warning of flammable or explosive gases by W05-B02A codes.

Chemical plant, filter, firefighter, mine, poisonous gas, rescue

# P35-A03E1 [2015]

## **Breathing masks**

Covers masks in the form of equipment carried by an individual and also those used in multiple-mask systems, e.g. on board an aircraft. From 2016 all other aspects of breathing equipment, installations and systems are covered by P35-A03E5. Includes masks and similar devices forming part of equipment protecting against harmful chemicals, e.g. protective clothing, which is also covered by P35-A03C. Masks with electrical communications equipment such as intercoms or portable transceivers are also assigned W01-C04A or W02-G02A1 respectively. Details of microphones, earphones and the like incorporated in masks are also assigned V06-V codes as appropriate.

Cartridge, crew radio, filter, interphone, walkie-talkie

# P35-A03E5 [2016]

# Breathing equipment, installations and systems

This code covers all aspects of breathing equipment and installations, e.g. oxygen generators, gas cylinders, hoses and pipes, except for masks and other devices fitting around the mouth and/or nose of the user which are covered by P35-A03E1. Includes equipment carried in backpack or other portable form and also installations in e.g. buildings, tunnels or vehicles, including those on-board an aircraft. Prior to 2016 these details were covered by P35-A03E or P35-A03E1 depending on novel aspects.

## P35-A03G [2015]

### **Protection against harmful chemicals**

Includes arrangements for making safe hazardous industrial chemicals and also chemical or biological warfare agents. Protective clothing and breathing equipment are not included and are respectively covered by P35-A03C and P35-A03E codes.

Biohazard, spillage, tanker, toxic waste

P35-A99 [2015]

Other types of life saving and safety systems

P35-C [2015]

# Type of firefighting, fire extinguishing or fire prevention equipment or method

The codes are assigned to indicate the general type of firefighting, fire extinguishing or fire prevention equipment or system involved.

P35-C01 [2015]

Fire extinguishing equipment and methods

#### P35-C01A [2015]

# Type of fire extinguishing material

P35-C01A codes are assigned to indicate in a general sense the type of fire extinguishing material used. When the material itself is novel P35-C01A8 is also applied, e.g. a novel chemical composition for extinguishing fires would be coded as P35-C01A2 and P35-C01A8.

P35-C01A1 [2015]

Carbon dioxide-based fire extinguishing CO<sub>2</sub>

P35-C01A2 [2015]

# Chemical-based fire extinguishing

Covers use of wet chemical-based extinguishing agents.

P35-C01A3 [2015]

Foam-based fire extinguishing

P35-C01A4 [2015]

Powder-based fire extinguishing

P35-C01A5 [2015]

### Water-based fire extinguishing

Includes water mist-based fire extinguishing systems.

P35-C01A8 [2015]

# **Novel materials for extinguishing fires**

This code is assigned in conjunction with a P35-C01A code to indicate the type of extinguishing material used. See also K01-A for novel materials and compositions for fire extinguishing.

P35-C01A9 [2015]

Other type of fire extinguishing material Sand

P35-C01C [2015]

Fire extinguishing equipment type

P35-C01C1 [2015]

Portable/hand-held extinguisher

P35-C01C3 [2015]

# Fixed installations and building-type extinguishing system

Covers permanently installed systems such as indoor sprinklers and outdoor installations such as fire hydrants. Fire alarms are not included and are covered by W05-B02 codes.

Bulb, fusible alloy, green bulb, red bulb, Wood's metal

# P35-C01C5 [2015]

## Mobile fire extinguisher

Covers fire extinguishing equipment or systems capable of being transported to the location of a fire, including extinguishers mounted on trolleys, aircraft, ships, trains, or land vehicles such as fire engines which are also covered in Q19-H02 or in X22-P10 if electrical aspects are involved. Fire extinguishing systems for putting out fires on-board vehicles themselves are covered by P35-C01C7 codes

Air tanker, crash tender, fire hose, fire train, fire truck, fireboat, forest fire, ladder, pump, turntable, waterbomber, wildfire

# P35-C01C7 [2015]

# Vehicle-type fire extinguishing system

Covers extinguishing equipment and systems for putting out fires in a vehicle itself. Vehicles used to transport extinguishing equipment to the location of a fire are covered by P35-C01C5.

On-board

### P35-C01C7A [2015]

# Aircraft and aerospace-type fire extinguishing system

This code covers on-board equipment, methods and systems for putting out fires on an aircraft or space vehicle, for which Q25-B09A and Q25-S06 are also respectively assigned, but does not include aerial firefighting aircraft, which are covered by P35-C01C5.

## P35-C01C7C [2015]

# Land vehicle-type fire extinguishing system

This code covers on-board equipment, methods and systems for putting out fires on land vehicles and does not include fire engines, which are covered by P35-C01C5.

### P35-C01C7E [2015]

# Ship-type fire extinguishing system

This code covers on-board equipment, methods and systems for putting out fires on ships, for which Q24-B09A is also assigned, but does not include fireboats, which are covered by P35-C01C5.

#### P35-C01C7F [2015]

#### Rail vehicle-type fire extinguishing system

This code covers on-board equipment, methods and systems for putting out fires on trains, for which Q21-J09 is also assigned, but does not include fire trains, which are covered by P35-C01C5.

#### P35-C01C9 [2015]

#### Other fire extinguishing equipment type

Beater, fire blanket, fire bucket

# P35-C03 [2016]

# Nozzles, hoses, pumps and delivery systems

Covers novel aspects of equipment for delivering or dispensing a fire-extinguishing agent.

## P35-C05 [2015]

# Fire prevention equipment and methods

Includes arrangements for containing or limiting the spread of fires, such as physical barriers, flame traps and the like, firefighting equipment other than extinguishers and also control of firefighting systems, electrical aspects of which are covered by X25-X05.

[2015]

Axe, fire doors

### P35-C99

Other types of firefighting, fire extinguishing or fire prevention equipment or method

#### P35-G [2015]

# Cleaning, maintenance/repair of life saving, safety, firefighting and fire extinguishing systems

This code is assigned with P35-A or P35-C codes as appropriate.

# P35-M [2015]

# Manufacture/pre-use treatment of life saving, safety, and firefighting/extinguishing components

Includes testing. This code is assigned with P35-A or P35-C codes as appropriate.

# P35-U [2015]

### **Applications**

These codes are assigned with P35-A or P35-C codes as appropriate to denote significant applications.

### P35-U01 [2015]

#### Domestic

Bathroom, bedroom, domestic appliance, fitted kitchen, home furnishings, household appliance, household product, living room

# P35-U02 [2015]

#### **Commercial**

Includes general commercial applications. Can be used alone or in conjunction with other specific applications.

Bar, business, café, commerce, commercial, department store, enterprise, hotel, office, restaurant, rest-room, washroom P35-U03 [2015]

**Vehicles** 

Includes all vehicles.

P35-U05 [2015]

**Agriculture; Farming** 

Arable, chickens, cows, crops, dairy, ducks, eggs, field, goats, greenhouse, harvest, irrigation, lambs, pigs, pigsty, planting, plantation, poultry, sheep

P35-U06 [2015]

Manufacturing plants

Factory, production line

P35-U07 [2015]

**Food industry** 

P35-U17 [2015]

**Civil Engineering; Construction; Buildings** 

P35-U18 [2015]

Mining

Coal, coalface, gallery, methane, seam, ventilation

P35-U20 [2015]

Waste disposal, waste treatment, pollution control and recycling

P35-U40 [2015]

**Industrial** 

This code is assigned for general industrial applications of life saving, safety, firefighting, fire extinguishing and fire prevention systems not covered elsewhere.

P35-U99 [2015]

Other specific applications

P35-X [2015]

Other aspects of life saving, safety, firefighting, fire extinguishing and fire prevention

## P36: Sports, games, toys, amusements

Covers saddlery from 201201, prior to 2012 this was classified as Q39.

# P36-A [2015]

# Type of sport and leisure activity

P36-A codes cover organized competitive sports and also analogous activities performed as a leisure pursuit or pastime. Electrical aspects of sports and leisure activities are covered by W04-X01 codes. Games which in general do not involve significant physical activity, e.g. indoor games, are covered by P36-C codes. Games involving throwing or hitting a ball with an implement such as a cue, e.g. billiards, are regarded as a sport.

## P36-A01 [2015]

# Sports using ball, puck, or shuttlecock

Badminton, baseball, basketball, billiards, bowling, bowls, cricket, croquet, curling, football, golf, hockey, petanque, pool, snooker, soccer, squash, rugby, table tennis, tennis, volleyball

# P36-A03 [2015]

# Athletics, cycling, racing, air and water based sports

Includes running on track, cross-country, or marathons, and sports based on jumping and throwing, e.g. high jump, javelin, shot-put etc. Heptathlon, horse riding, horseracing, marathon, motor racing, pentathlon, swimming, water skiing, snowboarding, skiing

# P36-A04 [2015]

#### **Combat-based sports**

Laser-simulated shooting is covered by W04-X01K4F

Boxing, martial arts, fencing, paintball, wrestling

### P36-A05 [2015]

### Archery, darts, shooting

This code covers archery in the sense of shooting at targets using longbow, crossbow, etc. Shooting animals while hunting is covered by P36-A07.

Bow, dart, dartboard, pistol, rifle, target

# P36-A06 [2015]

# Gymnastics, climbing and weightlifting

Covers rock climbing and mountaineering on natural features, and climbing walls and the like in indoor and outdoor sports facilities. Lifting of weights as part of general fitness training, i.e. 'weight training' is covered by P36-A08E.

Bar, dumbbell, lift, abseiling, crampons, harness, rope, alpine

# P36-A07 [2015]

## Fishing, hunting

This code covers fishing as a recreational or sporting activity only. Commercial fishing is not included and is covered by P14 in general and X25-N02 when electrical aspects are involved.

Angling, bait, bow, crossbow, decoy, float, line, rifle, rod, tracking

#### P36-A08 [2015]

# Sports equipment, sports facilities and sports training

These codes are assigned with other P36-A codes as appropriate.

# P36-A08A [2015]

#### Sports equipment and clothing

Includes items used by a player of a sport, e.g. horse racing, or a participant in leisure activities such as horse riding. See also P21-D for sportwear. Electrical details of sports equipment are coded under W04-X01E, and electrical details of clothing are coded under X27-A02B1.

Ball, bat, boots, bow, bowls, crampons, crossbow, cue, fishing rod, goggles, golf clubs, harness, kit, racquet, riding boots, running shoes, saddle, skateboard, skates, ski binding, skis, surfboard, training shoes, trampolines, wetsuit, whip

# P36-A08C [2015]

#### **Sports facilities**

Covers buildings, sports halls, pitches, sports grounds etc. Electrical details of sport facilities are coded under W04-X01F. Details of ice manufacture for e.g. ice rinks are coded under X27-F04.

AstroTurf®, arena, changing rooms, club, clubhouse, court, field, floodlights, goals, grass, gymnasium, ice rink, lockers, race course, race track, swimming pool, track

# P36-A08E [2015] Sports training and fitness training

This code is assigned with other P36-A codes as necessary i.e. training for specific sports is covered by P36-A08E together with the code for the particular sport. Inventions involving teaching of sports are covered by P85-A01N which is assigned with this code when both aspects are involved. Electrical aspects of sports training are covered by W04-X01A codes. Table tennis tables are also coded under P25-A01X.

Exercise bike, treadmill, table tennis

# P36-A99 [2015] Other aspects of sport and leisure

# P36-C [2015]

# Type of game

Electrical aspects of games are covered by W04-X02 codes, e.g. coin-operated games are covered by W04-X02A codes and video games by W04-X02C. Coin-operated games are also assigned T05-H05E.

# P36-C01 [2015]

#### **Board games**

Includes chess, checkers, draughts etc.

## P36-C03 [2015]

# Games involving tokens or pieces to be placed on a table or other flat surface

Includes dominoes and Mahjong.

# P36-C05 [2015]

# **Card games**

Inventions relating to card games played in a casino are also assigned P36-C09.

Bezique, blackjack, chemin-de-fer, clubs, deal, deck, diamonds, gin rummy, hearts, joker, Napoleon, pinochle, poker, rummy, shuffle, solitaire, spades, suit, trick, whist

# P36-C07 [2015]

### **Dice games**

Board or card games are covered by P36-C01 and P36-C05 respectively and this code is only assigned as well as those codes when the dice aspect is novel.

Die, face, marking, pips

# P36-C09 [2015]

### Casino games

Includes roulette. This code can be assigned with P36-C05 and P36-C07 respectively for casino games where the use of playing cards or dice is significant. P36-C09 also covers non-electrical aspects of coin- or token-operated 'amusement with prizes' ('AWP') games with spinning reels and the like. Coin-freed aspects of such games are covered by T05-H codes and electrical aspects by W04-X02A3.

Blackjack, chemin-de-fer, croupier, dealing shoe, deck, poker, roulette

### P36-C13 [2015]

# Games involving ball or balls confined by e.g. table.

This code includes pinball, bagatelle, ninepins etc. but not billiards, pool, snooker or table tennis, which are regarded as sports and covered by P36-A01.

Pachinko, table football, table hockey

# P36-C99 [2015]

## Other types of games

# P36-E [2015]

# Toys, playing equipment and novelty items

Electrical aspects of toys, playing equipment and novelty items are covered by W04-X03E codes.

# P36-E01 [2015]

#### Model vehicles

Includes model aircraft, boat, wheeled vehicle such as car or truck, racing track, train and train set, etc.

Model railway, model roadway

# P36-E03 [2015]

## **Construction toys and kits**

Includes toys comprising miniature bricks or basic mechanical elements which may be used to assemble model buildings, machines etc. and also kits of parts to assemble a specific model. Kits which can be made up into model vehicles are also assigned P36-E01.

Building set, construction set, self-assembly

### P36-E05 [2015]

### Dolls, stuffed toys, figures

Includes animated figures and puppets.

Character figure, knitted toy, marionette, plush toy, teddy bear, toy soldier

### P36-E07 [2015]

#### Outdoor toys and playing equipment

Includes skateboards, scooters and other ride-on vehicles for children, balls, slides, swings, for home/garden use and as playground equipment. Tree houses are also covered under Q46-B99.

Kite, merry-go-round, roller skates, roundabout, see-saw, tree house

## P36-E15 [2015]

## **Novelty items**

Includes tricks, humorous items such as jokes, collectible items etc. and complementary toys offered with fast-food meals or other products.

Cracker, favor, pennant, puzzle

#### P36-E99 [2015]

# Other aspects of toys, playing equipment and novelty items

# P36-F [2015]

# Entertainment and other venue-related equipment and systems

This code covers equipment and systems for use in venues for entertainment and similar purposes. Electrical aspects are covered by W04-X03G codes. Auditorium, cinema, concert hall, fairground, show ground, stage, theater, theme park

# P36-G [2015]

# Cleaning, maintenance/repair of sports, games, toys

This code is assigned with P36-A, P36-C, P36-E or P36-F codes as necessary.

# P36-M [2015]

# Manufacture/Pre-use treatment of sports, games, toys

This code is assigned with P36-A, P36-C, P36-E or P36-F codes as necessary.

# P36-X [2015]

Other aspects of sports, games, toys, amusements

# P4: Separating, Mixing

# P41: Crushing, centrifuging, separating solids, sorting

From 2015 manual codes have been assigned for all mechanical details of crushing, centrifuging, separating solids, and sorting. In this class the group codes P41-A, P41-E, P41-J and P41-K respectively refer to apparatus and methods for:
(i) crushing, pulverizing, disintegrating, and milling;

- (ii) separating solids (covered by P43 before 2015);
- (iii) centrifuging; and;
- (iv) sorting objects (covered by P43 before 2015).

To indicate novel constructional details suitable P41-T codes are also assigned and novel materials used in construction of apparatus are indicated by also assigning P41-T50. Materials processed or handled are indicated where possible in the respective code groups, otherwise by assigning P41-V codes with the code describing the equipment or process involved in the invention. Significant applications are indicated by assignment of P41-U codes.

# P41-A [2015]

# Crushing, pulverizing, disintegrating, milling

Although based on the use of similar processes the terms 'crushing' and 'milling' are used here as generally understood, e.g. 'milling' usually referring to production of smaller particles or powders and with regard to producing an output product with specific size or properties. For specific materials processed or handled search with P41-V codes. Milling of metals in the sense of surface cutting is not included and is covered in class P54. Crushing, pulverizing and disintegrating as part of a chemical engineering process is covered by class J02.

P41-A01 [2015]

Type of crushing equipment or process used

P41-A01A [2015]

Jaw crusher

Blake, Dodge, toggle, universal

P41-A01C [2015]

Cone crusher

Compound, multi-cylinder, Symons, single cylinder

P41-A01E [2015]

**Roll crusher** 

P41-A01G [2015]

**Gyratory crusher** 

Eccentric

P41-A01J [2015]

#### Hammer and impact crusher

Excludes mills such as hammer mills which are covered by P41-A03G.

Horizontal, vertical shaft impactor

P41-A01X [2015]

Other type of crushing equipment or process

P41-A03

Type of milling equipment or process used

Type of filling equipment of process used

[2015]

[2015]

P41-A03A Roller mill

P41-A03C [2015]

Disc mill

Buhrstone, flour mill, grist mill

P41-A03E [2015]

Ball mill/Tumbler mill

Cylinder, grinder, planetary, powder

P41-A03G [2015]

Hammer mill

P41-A03J [2015]

**Drum mill** 

P41-A03L [2015]

Stamp mill

P41-A03X [2015]

Other type of milling equipment or process

Includes jet mills.

P41-A04 [2015]

## Disintegrating based on cutting or tearing

Includes disintegrating using rotating or reciprocating knives, including shredders.

Cross-cut, paper shredder

P41-A05 [2015]

# External energy input for crushing, pulverizing, disintegrating, or milling

Includes driving of equipment using motors, engines, water or wind power and also secondary energy input using additional energy sources to facilitate the process, e.g. use of heating or ultrasonic energy to assist in breaking-up material. Novel electrical aspects are covered by X25-J.

Belt, chain, drive, gear, shaft

# P41-A07 [2015]

#### Pre-treatment of substances or materials

Novel arrangements for removing foreign bodies or unwanted materials from substances to be processed are covered by P41-T01C.

Tempering

P41-A07A [2015] Removing husks from e.g. grain Hulling

P41-A07X [2015]

Other pre-treatment of substances or materials

P41-A99 [2015]

Other aspects of crushing, pulverizing, disintegrating, milling

# P41-E [2015]

# **Separating solids**

P41-E codes cover the separation, e.g. in a stream, of solids from other solids and also from gases or liquids. Codes in this group are assigned together as necessary, e.g. dry separation of solid materials by means of screens or sieves is represented by P41-E01 and P41-E06; wet separation of solids involving pneumatic tables by P41-E03 and P41-E05. Novel details of apparatus for solid separation are indicated by assignment of an appropriate P41-T03 code with P41-E codes. Separation with the emphasis on sorting or grading is covered by P41-K codes. Separation as part of a chemical process such as evaporation, crystallization, solvent extraction, chromatography etc. is covered by class J01. Electrical aspects of separation are covered by X25-H codes.

# P41-E01 [2015]

#### Dry separation of solids

Covers separation of two kinds or sizes of solid material in a dry medium.

# P41-E03 [2015]

# Wet separation of solids and separation from gases

Covers separation of two kinds or sizes of solid material in a liquid medium and also separation of solids from liquids and from gases. Includes use of techniques such as filtering and (differential) sedimentation. Electrostatic precipitation of solid particles from a gas stream or cloud involving voltages applied from power supplies and the like is covered by X25-H02 codes.

#### P41-E05 [2015]

# Separating of solids using mechanical agitation

Includes use of pneumatic tables. This code is assigned with P41-E01 or P41-E03 codes as appropriate. Novel details of the agitating arrangement are also assigned P41-T03E.

# P41-E06 [2015]

## Separating solids based on size or weight

This code covers separation of solids based on size and weight where the solid materials are mixed together, including mixtures with liquids or gases. Sorting and grading of discrete objects, e.g. to separate them into distinct categories or in a 'pass/fail' test, is not included and is covered by P41-K codes.

# P41-E07 [2015]

# Separating solids using magnetic effects

Includes separation by magnetic/non-magnetic or paramagnetic/diamagnetic properties based on use of permanent magnets only. Magnetic separation using electromagnetism is covered by X25-H01.

# P41-E99 [2015] Other aspects of separating solids

#### P41-G [2015]

# Cleaning, maintenance or repair of crushing, pulverizing, disintegrating, milling, solid separation, centrifuging or sorting apparatus

This code covers novel aspects of cleaning, maintenance or repair of apparatus covered by P41-A, P41-E, P41-J and P41-K codes which are also assigned as appropriate.

#### P41-J [2015]

# Centrifuges and centrifuging; cyclone apparatus

This code covers novel centrifuges and their use in separating, mixing, or other processes and also cyclones and similar devices based on vortex flow. Novel electrical aspects of centrifuges are covered by X25-J. Centrifuges and processes involving centrifuging for chemical engineering are covered in class J01.

Cyclonic separation, dust, hydrocyclone, particle, rotor, vessel

# P41-K [2015]

# Sorting and grading objects

These codes cover the sorting and grading of discrete objects, e.g. to separate them into distinct categories or in a 'pass/fail' test, as opposed to separating continuous streams of material as covered by P41-E06 codes. Electrical aspects of sorting are covered by T05-K codes and X25-F06.

## P41-K01 [2015]

# Sorting and grading objects based on specific property

Novel aspects of measurement of properties such as dimensions or weight are covered by S02 codes.

### P41-K01A [2015]

# Sorting and grading objects based on dimensions

Area, circumference, diameter, length, size, thickness, volume, width

#### P41-K01C [2015]

Sorting and grading objects based on weight

Mass

### P41-K01E [2015]

# Sorting and grading objects based on density

Buoyancy, floating, sinking

# P41-K01X [2015]

Sorting and grading objects based on other specific property

P41-K05 [2015]

### Sorting mail

Electrical aspects of mail sorting are covered by T05-K02.

P41-K99 [2015]

Other sorting and grading of objects

# P41-M [2015]

# Manufacture and testing of crushing, pulverizing, disintegrating, milling, solid separation, centrifuging or sorting apparatus

This code covers novel aspects of manufacturing and testing of apparatus covered by P41-A, P41-E, P41-J and P41-K codes which are also assigned as appropriate.

# P41-T [2015]

# Constructional details of crushing, pulverizing, disintegrating, milling, solid separation, centrifuging or sorting apparatus

These codes are assigned with P41-A, P41-E, P41-J and P41-K codes which are also assigned as appropriate to denote the type of apparatus or process in which they are used. For example P41-A01A is assigned with P41-T01A for novel details of hoppers for jaw crushers.

# P41-T01 [2015]

# Constructional details of crushing, pulverizing, disintegrating, or milling apparatus

This code and its subdivisions are assigned to highlight novel aspects of the construction of crushing, pulverizing, disintegrating, or milling apparatus and are assigned with P41-A codes as appropriate.

# P41-T01A [2015]

# Feeding arrangements, hoppers

Covers novel details of apparatus for introducing material to be processed to a crusher, mill, etc.

### P41-T01C [2015]

# Removing foreign bodies or unwanted materials

Includes arrangements to remove metal objects from e.g. crushers or mills and safety measures. Hydraulic relief system

### P41-T01E [2015]

#### Casings, frameworks

This code covers the main structural aspects of crushing, milling and similar machines as specified by P41-A codes, rather than the parts performing the crushing, milling, etc.

Case, enclosure, housing

# P41-T01F [2015]

# **Crushing elements**

Covers details of the part of a crusher that performs the actual crushing process, such as jaws (with P41-A01A).

Cone, hammer, impactor, roller

# P41-T01H [2015]

### Milling elements

Covers details of the part of a mill that performs the actual milling process, such as a millstone (with P41-A03C).

Ball, bedstone, buhrstone, burrstone, cylinder, roller, runner stone

# P41-T01J [2015]

### Sizing elements

Covers elements used in crushers or mills to control the size of material produced, e.g. by adjustment of crusher or mill components or the use of sieves or screens for which P41-E06 is also assigned.

#### P41-T01X [2015]

Other constructional details of crushing, pulverizing, disintegrating, or milling apparatus

# P41-T03 [2015]

# Constructional details of apparatus for separating solids

These codes are assigned with P41-E codes as appropriate to denote the type of apparatus in which they are used. For example P41-T03E is assigned with P41-E05 for novel details of vibrating or agitating devices used in separation.

# P41-T03A [2015]

# Feeding arrangements, hoppers

Covers novel details of apparatus for introducing material to be processed to a solid material separator.

#### P41-T03C [2015]

#### Filters, screens, sieves

Covers novel details of filters, screens, or sieves. The general code for apparatus and processes using this technique, P41-E06, is also assigned.

#### P41-T03E [2015]

# Mechanical agitators or shakers

Includes pneumatic tables and similar devices.

# P41-T03G [2015]

#### **Magnetic elements**

This code covers novel details of permanent magnets only and is assigned with the general 'magnetic separation' code. Magnetic separation using electromagnets is covered by X25-H01.

#### P41-T03X [2015]

# Other constructional details of solid separation apparatus

# P41-T05 [2015]

# Constructional details of centrifuge and cyclone apparatus

This code and its subdivisions are assigned with P41-J to denote novel details of apparatus based on centrifuging or cyclones.

# P41-T05A [2015]

# **Feeding arrangements**

Covers novel details of apparatus for introducing material to be processed to a centrifuge.

Inlet, outlet, stream

P41-T05C [2015]

## Housing, casing

Lid, vessel

P41-T05E [2015]

Rotor, sample or substance holder

P41-T05G [2015]

#### **Drive mechanism**

Novel electrical details are covered by X25-J. *Belt drive, gear, planetary* 

### P41-T05X [2015]

# Other constructional details of centrifuge apparatus

#### P41-T07 [2015]

## **Constructional details of sorting apparatus**

This code and its subdivisions are assigned with P41-K codes to denote novel details of apparatus based on sorting and grading objects.

# P41-T07A [2015]

# Feeding arrangements

Covers novel details of apparatus for introducing objects to be sorted.

P41-T07C [2015]

Housing, casing

P41-T07E [2015]

#### Discriminating arrangements

Covers novel details of apparatus for distinguishing objects to be sorted, e.g. weighing apparatus for which P41-K01C and S02-D codes are also assigned.

# P41-T07G [2015]

# **Output arrangements**

Includes bins or other receptacles receiving sorted articles and packing arrangements.

### P41-T07X [2015]

# Other constructional details of sorting apparatus

# P41-T50 [2015]

#### Novel constructional material

This code is used in conjunction with other P41-T codes to indicate the use of a novel material in a machine or similar. Specific details of novel materials are represented by codes outside P41, such as M27 codes for steels or section A codes for plastics materials which are also applied as appropriate.

#### P41-T99 [2015]

Other constructional details of crushing, pulverizing, disintegrating, milling, solid separation, centrifuging or sorting apparatus

# P41-U [2015]

# Applications of crushing, pulverizing, disintegrating, milling, centrifuging or sorting apparatus

These codes are assigned as necessary to indicate significant applications of crushing, pulverizing, disintegrating, milling, centrifuging or sorting apparatus.

# P41-U01 [2015]

#### **Domestic**

Includes general or non-specific domestic applications. Can be used in conjunction with other specific codes as required.

Bathroom, bedroom, domestic appliance, fitted kitchen, home furnishings, household appliance, household product, living room

# P41-U02 [2015]

# Commercial

Includes general commercial applications. Can be used alone or in conjunction with other specific applications.

Bar, business, café, commerce, commercial, department store, enterprise, hotel, office, restaurant, rest-room, washroom

# P41-U03 [2015]

#### **Vehicles**

Includes land, air and space vehicles and watercraft.

# P41-U05 [2015]

#### Agriculture; Farming

Arable, chickens, cows, crops, dairy, ducks, eggs, field, goats, greenhouse, harvest, irrigation, lambs, pigs, pigsty, planting, plantation, poultry, sheep

# P41-U06 [2015]

#### Manufacturing plants

Factory, production line

# P41-U07 [2015]

# Food

Includes meat, fish, milk, dairy products and food processing in general as well as alcoholic and non-alcoholic beverages.

Baked goods, bakery, beer, biscuits, blast chill, bottling plant, brewery, butter, canned drinks, canned food, cheese, cider, corned beef, conveyor freezer, conveyor oven, cream, curing, distillery, dough, eggs, flash freezing, juice production, margarine, meat processing, mechanical recovery, pasteurizing, poultry, pressing, sterilizing, tinned food

# P41-U08 [2015]

### **Tobacco**

Cigar, cigarette, curing, drying, harvesting, planting

P41-U09 [2015]

# Packaging; Canning; Tinning; Bottling

Novel aspects of packaging are covered by codes in classes Q31 to Q34.

P41-U13 [2015]

Pharmaceutical; Medical

P41-U14 [2015]

Laboratory

P41-U17 [2015]

**Civil Engineering; Construction; Buildings** 

P41-U18 [2015]

Mining

P41-U20 [2015]

# Waste disposal, waste treatment, pollution control and recycling

Can be assigned with other specific codes as appropriate, e.g. P41-U03 for scrapping/crushing motor cars. Includes incineration of waste.

# P41-U99 [2015]

Other specific applications

# P41-V [2015] Materials processed or sorted

These codes are assigned to indicate that an invention is intended to process or handle specific materials. For materials used in the construction of apparatus covered in this class see P41-T50.

P41-V01	[2015]
Metals	
P41-V01A	[2015]
Iron	
P41-V01A1	[2015]
Cast Iron	
P41-V01B	[2015]
Aluminum	
P41-V01C	[2015]
Copper	
P41-V01D	[2015]
Lead	
P41-V01E	[2015]
Magnesium	
P41-V01F	[2015]
Zinc	
P41-V01G	[2015]

P41-V01P1	[2015]
Steel	
P41-V01P2	[2015]
Brass	

P41-V01X [2015]

Other types of metal

P41-V11 [2015]

Wood

Includes wood shavings or saw dust. *Timber* 

P41-V11A [2015]

**Fiberboards** 

P41-V12 [2015]

**Paper** 

P41-V13 [2015]

**Plastics** 

Covers processing or sorting of synthetic polymer materials. Novel aspects of such materials are represented by codes in section A.

P41-V14 [2015]

Glass

P41-V15 [2015]

Ceramic

P41-V20 [2015]

Concrete

P41-V22 [2015]

Stones; Rocks; Slate

Prior to 2016 crushing or milling of coal was covered by this code. From 2016 this topic is covered by P41-V28.

Boulder, ore

P41-V23 [2015]

**Bricks** 

P41-V28 [2016]

Coal, graphite

Prior to 2016 crushing of coal was covered by P41-V22.

P41-V50 [2015]

### **Composite materials**

This code can be used in combination with other P41-V codes to highlight the different components of the composite material.

P41-V60 [2015]

Agricultural produce

Arable, crops, field, greenhouse, harvest, irrigation, plant, plantation

P41-V60A [2015]

Grain

P41-V60C [2015]

#### Fruit or vegetables

Apples, bananas, beans, bilberries, blackberries, blueberries, cabbages, cauliflowers, courgette, gourds, grapes, legumes, lettuces, mangoes, marrows, nuts, parsnips, pears, peas, potatoes, raspberries, root-crops, strawberries, swedes, tomatoes, turnips, vegetables, yams

P41-V60X [2015]
Other agricultural produce

P41-V65 [2015]

Manufactured or processed foodstuffs

P41-V99 [2015]

Other materials processed

P41-X [2015]

Other aspects of crushing, centrifuging, separating solids, and sorting

# P42: Spraying, atomizing, coating, surface treatment and liquid application

From 2015 manual codes have been applied for mechanical aspects of apparatus and processes involving the handling of liquids and other flowing substances, e.g. for coating, surface treatment or other purposes.

# P42-A [2015]

# Type of spraying or atomizing apparatus

P42-A codes cover the type of apparatus for producing a spray, mist, jet etc. irrespective of its purpose and should be searched with P42-T for constructional details, and P42-U codes to link them to a specific application. Manufacture of apparatus for producing a spray, mist, jet etc. is covered by P42-M which is assigned with P42-A codes as appropriate. Liquid application arrangements involving direct contact between a surface to be coated and a liquid-carrying vessel or liquid-bearing element such as a roller are covered by P42-B codes. Details of spraying equipment for electrostatic coating are included as appropriate but electrical details are covered by X25-K01.

## P42-A01 [2015]

# Single nozzle or jet arrangements

Covers arrangements with a single aperture through which the flowing material passes.

#### P42-A03 [2015]

# Multiple nozzles or jet arrangements

Includes multiple nozzles or multiple apertures.

### P42-A03A [2015]

Spray nozzles or jets arranged in circular, spiral, rectangular or square pattern

Includes shower heads.

### P42-A03C [2015]

# Spray nozzles or jets arranged in linear pattern

Includes spray booms

Crop spray

#### P42-A05 [2015]

# Spray, jet or atomizing arrangements with variable characteristics

Covers arrangements involving variable characteristics of the nozzle, jet or other application arrangement itself and also variation in operation produced externally, e.g. by moving the whole apparatus, deflecting a jet, etc.

### P42-A99 [2015]

### Other aspects of spraying or atomizing

## P42-B [2015]

# Contact-based liquid application arrangements

Arrangements for applying liquids by means of spraying are covered by P42-A codes.

#### P42-B01 [2015

Involving immersion or passage through liquid bath

# P42-B03 [2015]

# Involving pouring or flowing of liquid over surface

Includes spin coating.

Spinner

P42-B05

[2015]

# Involving use of roller, brush or other liquid-bearing element

Includes use of spreaders.

P42-B99 [2015]

Other contact-based liquid application arrangements

#### P42-E [2016]

# Novel aspects of coating processes and related processes

P42-E codes are intended to focus on novelty in processes associated with applying coatings, whether equipment involved is novel or not.

#### P42-E01 [2016]

# **Novel coating processes**

All aspects of flocking are covered by P42-E05A which is assigned with P42-E01 as necessary.

#### P42-E03 [2016]

# Pre-treatment of surfaces to be coated and treatment of applied coatings

This code covers processes and methods for treating surfaces prior to coating and also processes and methods for treating a coating after it has been applied.

Baking, cleaning, degreasing, heating, smoothing

#### P42-E05 [2016]

# Processes for creating special textures or effects

This code covers processes and methods for creating a surface coating having specific properties.

Anti-adhesive, anti-corrosion, anti-friction, anti-slip, corrosion-proof, corrosion-resist, fine-textured, low-friction, lubricating, matt, matte, non-corrosive, rough-textured, rust-proof, rust-resist, texture

# P42-E05A [2016] Flocking

This code is assigned with P42-E01 to denote novel flocking processes.

Charge, electrostatic, fabric, fiber, particle, particulate, wallpaper

# P42-E99 [2016]

# Other aspects of coating and related processes

# P42-G [2015]

# Cleaning, maintenance/repair of spraying, atomizing, coating, surface treatment and liquid application apparatus

This code covers novel aspects of cleaning, maintenance and repair of apparatus covered by P42-A and P42-B codes which are also assigned as appropriate.

# P42-M [2015]

# Manufacture and testing of spraying, atomizing, coating, surface treatment and liquid application apparatus

This code covers manufacture and testing of apparatus covered by P42-A and P42-B codes which are also assigned as appropriate.

### P42-T [2015]

# Constructional details of spraying, atomizing, coating, surface treatment and liquid application apparatus

This code covers novel constructional aspects of apparatus covered by P42-A and P42-B codes which are also assigned as appropriate.

# P42-T01 [2015]

# Constructional details of arrangements for spraying, atomizing and directly applying fluids

These codes cover constructional details associated with the fluid atomizing, spraying, or liquid application apparatus itself. Arrangements for moving or modifying operation of spraying devices are covered by P42-T05 codes and details of housings and the like are covered by P42-T20.

### P42-T01A [2015]

# Constructional details of nozzles and spray heads

Includes shape, layout of spray head orifices, etc. as covered by P42-A codes. Arrangements for modifying the shape, form or direction of liquid spray or jet, whether by moving the whole spraying assembly or by the use of variable jets, are also assigned P42-T05A.

Aperture, shower head

#### P42-T01C

[2015]

# Constructional details of direct liquid application apparatus

Includes arrangements for pouring or otherwise transferring liquid to the surface being coated or treated, as covered by P42-B codes.

Brush, pad, roller, spout

#### P42-T01X

[2015]

Other constructional details of arrangements for spraying, atomizing and directly applying fluids

### P42-T03 [2015]

# Constructional details of baths or tanks for fluids

Includes containers for storing fluids and also for immersing surfaces to be treated or coated.

Bottle, reservoir, vat, vessel

#### P42-T05 [2015]

# Driving arrangements of spraying, atomizing, coating, surface treatment and liquid application apparatus

Covers constructional aspects of arrangements for moving or modifying operation of spraying, atomizing or direct liquid application devices, moving or agitating fluids, and moving surfaces to be coated or treated.

#### P42-T05A [2015]

# Driving or modifying operation of spraying, atomizing, and liquid application apparatus

Includes arrangements for varying operation by moving the spraying or atomizing head or the equipment as a whole, and also for changing part of the spraying or atomizing head e.g. to modify jet characteristics.

Angle, controllable, cross-section, deflect, variable

# P42-T05C [2015]

## **Driving fluids**

Includes pumps, compressors, etc., e.g. for pressurizing liquids and also arrangements for agitating or heating. Electrical aspects of spraying apparatus for electrostatic coating are covered by X25-K01.

Agitator, color changer, delivery control, gas, mixer, piston, pump, pressure, vibrate

# P42-T05E [2015]

# **Driving and holding workpieces**

Includes arrangements for moving the surface being coated or treated through the equipment or system.

Chain, conveyor, immersing, paint hanger, plunging

## P42-T05X [2015]

Other driving arrangements for spraying, atomizing, and liquid application apparatus

# P42-T20 [2015]

## Casings, frameworks and housings

Includes constructional details of enclosures and equipment as a whole.

Brace, bracket, drying booth, mounting, spray booth

# P42-T50 [2015]

### **Novel constructional material**

This code is used in conjunction with other P42-T codes to indicate the use of a novel material in a machine or similar. Specific details of novel materials are represented by codes outside P42, such as M27 codes for steels or section A codes for plastics materials which are also applied as appropriate.

# P42-T99 [2015]

Other constructional details of spraying, atomizing, coating, surface treatment and liquid application apparatus

# P42-U [2015]

# Applications of spraying, atomizing, coating, surface treatment and liquid application apparatus

These codes are assigned as necessary to indicate specific applications in conjunction with other P42 codes. In 'multiple use' cases the codes are not applied, or are only applied at a general level.

# P42-U01 [2015]

#### **Domestic**

Includes general or non-specific domestic applications. Can be used in conjunction with other specific codes as required.

Bathroom, bedroom, domestic appliance, fitted kitchen, home furnishings, household appliance, household product, living room

## P42-U02 [2015]

#### Commercial

Includes general commercial applications. Can be used alone or in conjunction with other specific applications.

Bar, business, café, commerce, commercial, department store, enterprise, hotel, office, restaurant, rest-room, washroom

## P42-U03 [2015]

#### **Vehicles**

Includes all land, air and space vehicles and also watercraft.

# P42-U05 [2015]

## **Agriculture; Farming**

Arable, chickens, cows, crops, dairy, ducks, eggs, field, forestry, goats, greenhouse, harvest, irrigation, lambs, logging, pigs, pigsty, planting, plantation, poultry, sheep

### P42-U06 [2015]

### Manufacturing plants

Factory, production line

### P42-U07 [2015]

### Food

Includes production of beverages such as soft and alcoholic drinks, as well as tea/coffee, processing of milk and dairy products, fish, meat and processed foods in general.

# P42-U08 [2015]

#### Tobacco

Cigar, cigarette, curing, drying, harvesting, planting

#### P42-U09 [2015]

# Packaging; Canning; Tinning; Bottling

Novel aspects of packaging are covered by codes in classes Q31 to Q34.

### P42-U13 [2015]

Pharmaceutical: Medical

P42-U14 [2015]

Laboratory

P42-U17 [2015]

**Civil Engineering; Construction; Buildings** 

P42-U19 [2015]

**Furniture** 

P42-U30 [2015]

## Sports, toys, entertainment and leisure

Includes sports equipment, sports stadiums, ice rinks, ski slopes, entertainment venues, leisure pursuits, games and toys. Specific details of inventions in these fields are covered by P36 codes in general and W04-X codes in the case of electrical aspects.

P42-U37 [2015]

Scented/therapeutic/insect repellent

P42-U40 [2015]

Industrial

Covers general or non-specific industrial applications not covered by other application codes.

P42-U41 [2015]

**General functional applications** 

P42-U41E [2015]

Insulating

P42-U41F [2015]

Waterproofing

P42-U41H [2015]

Coating

P42-U41H1 [2015]

Painting, lacquering, applying protective

coatings

P42-U50 [2015]

**Personal** 

P42-U99 [2015]

Other specific applications

P42-X [2015]

Other aspects of spraying, atomizing, coating, surface treatment and liquid application

# P43: Generating and using mechanical vibrations, cleaning, waste disposal

From 2015 manual codes have been applied for mechanical aspects of generation and use of mechanical vibrations, cleaning, and waste disposal. Prior to 2015 this class included separation of solids and sorting, now respectively covered by P41-E and P41-K codes.

# P43-A [2015]

# Generating and using mechanical vibrations

These codes cover the generation and use of mechanical vibrations for performing mechanical work and not for the purpose of generating audible sound. Audio transducers are covered by V06-V codes and sound production in general by P86 codes.

# P43-A01 [2015]

# Vibration generators

Electrical aspects of small-scale vibration generators are covered by V06-V04C and other V06 codes as appropriate. Large-scale (i.e. industrial) vibration generators with electrical aspects are covered by X25-L05.

## P43-A05 [2015]

# Coupling or transmitting mechanical vibrations

# P43-A99 [2015]

# Other aspects of generating and using mechanical vibrations

# P43-B [2015]

# Cleaning in general

See also under the specific item or substance being cleaned. P43-B01 codes and P43-B05 are assigned according to the form of the substance performing the actual cleaning. For example, a water tank for steam cleaning equipment is coded as P43-B01C and not P43-B01A. Dry cleaning (of textiles and garments) is not included and is covered by F03-J04 with electrical aspects also covered by X25-H09 (industrial scale) or X27-D09 (domestic scale).

#### P43-B01 [2015]

# Cleaning involving liquids, vapors or steam

# P43-B01A [2015]

# Cleaning involving liquids

Covers cleaning using liquid-phase materials only. The use of vapors, mists or aerosols of condensed fluid droplets is covered by P43-B01C.

Fluid, solution, solvent

### P43-B01C [2015]

## Cleaning involving vapors or steam

Includes steam cleaning and suspensions of e.g. fluid droplets in air.

Aerosol, droplet, mist, vapor

#### P43-B05

[2015]

## Cleaning involving air or gas flow

Includes use of gases or gas mixtures made up of substances normally existing in a gaseous state and also suction-based cleaning excluding domestic suction cleaners which are covered by X27-D04 codes. Cleaning using vaporized substances is covered by P43-B01C.

Air line, blast, canned air, compressed air

#### P43-B07

[2015]

# Cleaning involving external energy

Covers application of energy to the item or substance being cleaned to perform or expedite cleaning.

#### P43-B07A

[2015]

# Cleaning involving large-scale mechanical agitation

Agitate, shake, stir

#### P43-B07C

[2015]

# Cleaning involving sonic or ultrasonic energy

Electrical aspects of ultrasonic cleaning are covered by X25-H09A.

# P43-B07X

[2015]

### Cleaning involving other types of energy

Involves application of mechanical energy, e.g. in the form of impacts.

# P43-B08

[2015]

#### Measures to avoid the need for cleaning

Covers arrangements for confining dirt, dust, contaminants, etc. and also selection of surface characteristics to reduce adhesion of unwanted substances.

Contamination, contour, deposition, form, fouling, fumes, shape

#### P43-B99

[2015]

#### Other general cleaning

#### P43-E

[2015]

### **General solid waste disposal**

Dump, garbage, MSW, municipal solid waste, refuse, rubbish, tip, trash

# P43-E01 [2015]

## Solid waste disposal by burning

Novel aspects of apparatus for combustion are covered by Q73 codes.

Furnace, incinerator

#### P43-E03

[2015]

# Solid waste disposal by burying or dumping

Includes landfill disposal.

Bury, cover, compact

#### P43-E05

[2015]

# Solid waste disposal by treating or converting

Covers treatment of waste to reduce e.g. odor and conversion into useful product.

Deodorize, detoxify, make safe, recycle

#### P43-E99

[2015

# Other aspects of general solid waste disposal

# P43-G

[2015]

# Cleaning, maintenance/repair of apparatus for generating and using mechanical vibrations, cleaning or waste disposal

This code covers cleaning, maintenance or repair of apparatus or systems covered by P43-A, P43-B, P43E, and P43-J codes which are also assigned as appropriate.

Maintain, service, schedule

# P43-J

[2015]

#### Contaminated soil or ground treatment

Includes treatment of ground contamination to remove biohazards, toxins, and the like following chemical accidents or spillages or to reduce the effects of industrial pollution.

Reclamation

#### P43-M

[2015]

# Manufacture and testing of apparatus for generating and using mechanical vibrations, cleaning or waste disposal

This code covers manufacture of apparatus or systems covered by P43-A, P43-B, P43E, and P43-J codes which are also assigned as appropriate.

Build, evaluate, production line, QA, quality assurance

#### P43-T

[2015]

# Constructional details of mechanical vibration generators, cleaning and solid waste disposal apparatus

These codes are assigned with P43-A, P43-B, P43E, and P43-J codes which are also assigned as appropriate to denote the type of apparatus or process in which they are used. For example P43-A01 is assigned with P43-T01A for novel constructional details of driving arrangements for vibration generators. When novelty involves materials used in e.g. part of a machine, P43-T50 is also assigned.

#### P43-T01

[2015]

# Casings, housings and frames of mechanical vibration generators, cleaning and solid waste disposal apparatus

Case, enclosure, framework

#### P43-T05

[2015]

# Driving arrangements of mechanical vibration generators, cleaning and solid waste disposal apparatus

This code covers gearing and other mechanical aspects of equipment and machines. Novel electrical aspects are not specifically included and are covered by X25 codes and V06 or X11 codes for electric machine details.

Ball-race, bearing, clutch, crown-gear, drive-belt, gearbox, idler, lever, linkage, mechanical, mechanism, motor, pinion, pivot, pulley, rack-and-pinion, reciprocating, rotating, shaft, v-belt, worm-gear

### P43-T50

[2015]

#### **Novel constructional material**

This code is used in conjunction with other P43-T codes to indicate the use of a novel material in a machine or similar. Specific details of novel materials are represented by codes outside P43, such as M27 codes for steels or section A codes for plastics materials which are also applied as appropriate.

### P43-T99

[2015]

Other constructional details of mechanical vibration generators, cleaning and solid waste disposal apparatus

### P43-U

[2015]

# Applications of mechanical vibration generators, cleaning and solid waste disposal apparatus

These codes are assigned as necessary to indicate significant applications of apparatus for generating and using mechanical vibrations, cleaning, or waste disposal.

# P43-U01 [2015]

#### **Domestic**

Includes general or non-specific domestic applications. Can be used in conjunction with other specific codes as required.

# P43-U02 [2015]

#### Commercial

Includes general commercial applications. Can be used alone or in conjunction with other specific applications.

# P43-U03 [2015]

#### **Vehicles**

Includes all land, air and space vehicles and also watercraft.

P43-U05 [2015]

Agriculture; Farming

P43-U06 [2015]

Manufacturing plants

P43-U07 [2015]

Food

P43-U08 [2015]

**Tobacco industry** 

P43-U09 [2015]

# Packaging; Canning; Tinning; Bottling

Novel aspects of packaging are covered by codes in classes Q31 to Q34.

P43-U10 [2015]

Cooking and baking

P43-U13 [2015]

Pharmaceutical; Medical

P43-U14 [2015]

Laboratory

P43-U17 [2015]

**Civil Engineering; Construction; Buildings** 

P43-U18 [2015]

Mining

P43-U25 [2015]

Chemical engineering; Refinery/chemical

plant

P43-U26 [2015]

Metallurgy

# P43-U30 [2015]

# Sports, toys, entertainment and leisure

Includes sports equipment, sports stadiums, ice rinks, ski slopes, entertainment venues, leisure pursuits, games and toys. Specific details of inventions in these fields are covered by P36 codes in general and W04-X codes in the case of electrical aspects.

P43-U99

[2015]

Other specific applications

P43-X [2015]

Other generation and use of mechanical vibrations, cleaning, or waste disposal

# P5: Shaping metals

# P51: Metal Rolling, Drawing, Extruding

Electrical details of metal rolling, drawing and extruding are coded under X25-A02B and T06-D05A1 (control details).

General metal working where the technique is not specified is coded under P56-X.

# P51-A [2015]

# Metal rolling

Includes hot rolling, cold rolling, roll bending, roll forming, flat rolling, ring rolling, structural shape rolling and tube rolling.

Foil rolling

# P51-B [2015]

## **Metal drawing**

Includes sheet metal drawing and bar, tube and wire drawing. Electrical details of wire drawing are coded under X25-A02E.

Deep drawing

# P51-C [2015]

### Metal extruding

Includes hot, cold and warm extrusion.

Metal extrusion

# P51-G [2015]

# Maintenance and repair of rolling, drawing, extruding systems

Roll maintenance, de-scaling

# P51-R [2015]

# Recycling of rolling, drawing, extruding components

Electrical details of recycling systems are coded under X25-W04.

#### P51-T [2015]

# Constructional details of rolling, drawing, extruding systems

### P51-T01 [2015]

# Rolls; Rolling balance system

Includes backup rolls, work rolls, etc. Also includes roll mountings, arrangements to maintain correct position of rolls and roll changing devices.

Roller, rolling stand frame, interchanging rolls, overhead crane

# P51-T02 [2015]

## **Drive motors; Pinions; Gearing**

In-depth details of motors are covered by X11 codes.

Spindle

P51-T03 [2015]

Drums

Capstan

P51-T04 [2015]

**Grippers** 

P51-T05 [2015]

# Dies; Mandrels; Presses; Stocks

Includes draw bench. Also includes guides and supports of mandrels.

Die holder, extrusion press

#### P51-T20 [2015]

# **Control and safety arrangements**

Includes arrangements for freeing jammed rolls, preventing fracture of rolls or removing fumes. Electrical details are covered under T06-D05A1.

Breaker blocks, protection

# P51-T22 [2015]

#### **Cooling and lubrication arrangements**

This code can be used in conjunction with other P51-T codes, i.e. cooling arrangements of mandrels are coded under P51-T22 together with P51-T13. Includes cooling of finished workpieces.

Phosphate coating, cooling beds

#### P51-T25 [2015]

# Work feeding/guiding arrangements; Coiling

Includes arrangements for moving work between different stations/steps, turning over sheets, etc, arrangements for dealing with multi-layer sheets of metal, e.g. for separating the different sheets of metal after the rolling process, and for separating the work from the mandrel. Also includes arrangements for coiling metal wire or band.

# Carriage, drive

# P51-T99 [2015]

# Other constructional details of rolling, drawing, extruding systems

Includes arrangements for removing machining waste from the machine and storage of finished items.

Debris disposal, coilers, uncoilers, rams, plungers

P51-U [2015]

**Applications** 

P51-U03 [2015]

**Vehicles** 

Planes, cars, ships

P51-U40 [2015]

# **Industrial**

This code is applied for manufacture of industrial parts, such as blades, etc. Manufacture of vehicle parts are coded under P51-U03 only.

P51-U99 [2015]

Other specific applications

# P52: Metal Punching, Working and Forging

With the exception of metal punching, P52 codes cover metalworking processes where the workpiece is reshaped without adding or removing material.

Electrical details of metal forging are coded under X25-A02C and T06-D05A (control details), and electrical details of metal hammering, bending and punching are coded under X25-A02D and T06-D05A (control details).

# P52-A [2015]

#### **Preliminary treatment**

Includes preparation of metal stock. This code can be used in conjunction with P52-B, P52-C, or P52-D codes.

# P52-B [2015]

# **Metal punching**

Perforating, stabbing, piercing

P52-C [2015]

Metal

# forging/hammering/pressing/riveting

Forge furnace

P52-D [2015]

Metal working (excluding metal punching or forging)

P52-D01 [2015] Metal straightening/stretching

P52-D02 [2015]

#### Metal bending

Includes metal corrugating, metal coiling, flanging and edge-curling.

Twisting

P52-D03 [2015]

Stamping

P52-D04 [2015]

Spinning

P52-D05 [2015]

#### Metal drawing

Cold drawing, deep drawing

P52-D06 [2015]

#### Wire working

Includes wire coiling, bending, twisting, cutting, splitting, straining, etc.

# P52-D99 [2015]

### Other metal working processes

Includes flanging, etc. Also includes finishing details such as attaching head to a drawing-pin, and metal shaping using fluid pressure, shock waves, etc.

Chemical explosives, edge-curling, edgestrengthening, edge armoring

# P52-G [2015]

Maintenance and repair of punching, working and forging systems

# P52-R [2015]

# Recycling of punching, working and forging components

Electrical details of recycling systems are coded under X25-W04.

#### P52-T [2015]

# Constructional details of punching, working and forging systems

Constructional details of presses are also covered under P71, and constructional details of furnaces are also covered under Q77.

P52-T01 [2015]

**Bolster plates** 

P52-T02 [2015]

Dies; Die cushions

Die holder, die mounting

P52-T03 [2015]

Rams; Anvils; Hammers

P52-T04 [2015]

**Blank holders** 

Mounting

P52-T05 [2015]

Frames; Casing

Supports, feet

P52-T08 [2015]

**Mandrels** 

P52-T10 [2015]

**Burr prevention/removal arrangements** 

Shoulder prevention

P52-T20 [2015]

# **Control and safety arrangements**

Barrier guards, protection

# P52-T22 [2015]

# **Cooling and lubrication arrangements**

Includes cooling arrangements of finished workpieces.

Cooling beds

# P52-T25 [2015]

# Workpiece feeding/guiding arrangements

Includes feeding of wire.

# P52-T99 [2015]

# Other constructional details of punching, working and forging systems

 $Includes\ storage\ of\ finished\ items.$ 

Debris disposal

P52-U [2015]

**Applications** 

P52-U03 [2015]

**Vehicles** 

P52-U40 [2015]

#### Industrial

Manufacture of vehicle parts is coded in P52-U03 only. Also covers manufacture of tools, including garden tools, and locksmith items.

Propeller blade, turbine blade, nails, blacksmith, chain, key

P52-U50 [2015]

Personal

Hair pins

P52-U50A [2015]

**Jewellery** 

P52-U50B [2015]

**Haberdashery** 

P52-U99 [2015]

# Other specific applications

Includes manufacture of cutlery.

## P53: Metal Casting and Powder Metallurgy

# P53-A [2015]

# **Foundry Moulding**

Includes manufacture of moulds, cores and patterns. Details of cores/moulds per se are coded under P53-T02. Includes details for coating surfaces of mould / core / pattern and other finishing processes.

P53-B [2015]

**Metal Casting** 

P53-B01 [2015]

Types of metal casting

P53-B01A [2015]

**Continuous casting** 

P53-B01B [2015]

**Expendable mould casting** 

P53-B01B1 [2015]

Sand casting

P53-B01B2 [2015]

**Investment casting**

Die casting

P53-B01C9 [2015]

Other types of non-expendable mould casting

Centrifugal casting

P53-B01X [2015]

Other types of mould casting

P53-B04 [2015]

**Pre-casting treatment** 

# P53-B05 [2015]

## **Post-casting treatment**

Includes removing castings from moulds, cooling castings (see also P53-T25) and cutting-off surplus material.

# P53-C [2015]

#### **Powder Metallurgy**

Fiber reinforcement is coded in M22-H03D. Post treatment/impregnation is coded in M22-H03E. Composite layers and materials are coded in M22-H03F. Metal matrix composites are coded in M22-H03F1. Ceramic matrix composites are coded in M22-H03F2.

# P53-C01 [2015]

#### Powder manufacture

Powder manufacture is also coded in M22-H01.

P53-C02 [2015]

**Powder blending** 

#### P53-C03 [2015]

# Compacting and/or sintering

Compacting only is also coded in M22-H03A, sintering only is also coded in M22-H03B, and compacting and sintering is also coded in M22-H03C. Selective laser sintering is coded under X25-A08C3.

# P53-C99 [2015]

# Other powder metallurgy details

#### P53-G [2015]

Maintenance and repair of foundry moulding, metal casting and powder metallurgy systems

Includes removal of tundish skulls. Skimming

# P53-R [2015]

# Recycling of foundry moulding, metal casting and powder metallurgy components

Electrical details of recycling systems are coded under X25-W04.

# P53-T [2015]

Constructional details of foundry moulding, metal casting and powder metallurgy systems

# P53-T01 [2015]

# Constructional details of moulding machines

Includes details of the system conveying liquid material to the mould such as gating system, riser and riser aids, ladles and tundishes.

Mould table, flask, sprue, pouring cup, gates, runners

# P53-T02 [2015]

### Moulds, cores or patterns

Includes additives for e.g. separating the casting from the mould, protecting the casting, etc. Machines used to make the moulds, cores or patterns are coded under P53-T01.

Binding agents, grain structure

P53-T05 [2015]

**Lubrication details** 

P53-T20 [2015]

### Control and safety arrangements

Barrier guards, supervision

P53-T25 [2015]

# Cooling arrangements of finished workpieces

Cooling of cast workpieces are also coded under P53-B05.

Cooling beds

P53-T99 [2015]

# Other constructional details of metal casting and powder metallurgy systems

Includes storage of finished items.

Debris disposal

P53-V10E [2015]

Chalcogens (S, Se, Te)

P53-V10F [2015]

Silicates, glass, ceramics

P53-V10X [2015]
Other inorganic materials

P53-V11 [2015]

Composites with organic components, polymers

Includes metal/polymer composite materials, but not binders, lubricants or other auxiliaries.

# P54: Metal milling and other machining

P54 codes cover metal machining involving removal of material.

From 2015, electroworking details have been removed from P54 and are coded by X25 and X24-F (electric discharge machining). P54 remains searchable for electroworking for records prior to 2015.

General metal working where the technique is not specified is coded under P56-X.

P54-A	[2015]	
Turning		
P54-B	[2015]	
Boring and drilling		
P54-C	[2015]	
Milling

Planing; Slotting P54-D02		
Planing; Slotting P54-D02 Shearing P54-D03	[2015]	

# Filing; Rasping; Grinding Also includes abrading, honin

Also includes abrading, honing, lapping and sharpening of e.g. metal blades, razors or engine cylinders. Prior to 2021, grinding, filing and rasping of metal elements were coded by the combination of P61-A01 codes and P61-V26.

# P54-D06 [2021]

### **Polishing**; Burnishing

Prior to 2021, polishing and burnishing of metal elements were coded by the combination of P61-A03 and P61-V26.

Stropping, buffing

# P54-D99 [2015]

Other metal working involving removal of material (excluding turning, boring and milling)

Includes reaming bored holes.

# P54-E [2015]

Making gears or toothed racks
This code can be used in conjunction with other

P51 to P54 codes to highlight the method used.

P54-F [2015]

#### Thread cutting

This code can be used in conjunction with other P51 to P54 codes to highlight the method used. Includes cutting threads in screws, bolt heads and nuts.

# P54-G [2015]

# Maintenance and repair of milling and machining systems

Includes sharpening of saw teeth.

# P54-H [2015]

#### Small-scale/handheld machines

This code should be used in conjunction with P54-A, P54-B, P54-C or P54-D.

Watchmaker, portable

# P54-R [2015]

# Recycling of milling and machining components

Electrical details of recycling systems are coded under X25-W04.

# P54-T [2015]

Constructional details of milling and machining systems

P54-T01 [2015]

### Lathes

Includes lathes beds, headstocks and tailstocks.

# P54-T02 [2015]

# **Drives; Gears**

If part of a lathe, P54-T02 should be used together with P54-T01.

#### P54-T03 [2015]

#### Tools; Tool holders; Chucks; Mandrels

If part of a lathe, P54-T03 should be used together with P54-T01. Includes saw blades and arrangements for securing the tool in place.

Reamer, hacksaw, saw blade

P54-T05 [2015]

Frames; Casing Supports, feet

P54-T20 [2015]

**Control and safety arrangements** 

Barrier guard, safety guard, protection

P54-T22 [2015]

**Cooling and lubrication arrangements** 

P54-T25 [2015]

### Workpiece feeding/guiding arrangements

Also includes arrangements for ejecting finished workpiece.

P54-T99 [2015]

### Other constructional details of milling and machining systems

Debris disposal, scraping

P54-U	[2015]	
<b>Applications</b>

P54-U99	[2015]	
Other specific appli	ications	

#### P55: Welding and Soldering

From 2015, P55 manual codes have been assigned for mechanical details of soldering and non-electric welding. X24 codes should be used for electric welding, e.g. laser welding, arc welding, etc.

P55-A [2015]

#### **Pre-treatment**

This code should be used in conjunction with P55-B or P55-C for soldering/brazing or welding, respectively.

Preparation of surfaces, degreasing, oxides removal

P55-B [2015]

#### Soldering and brazing

See also X24-A codes.

P55-B01 [2015]

Soldering

P55-B02 [2015]

**Brazing** 

P55-B03 [2015]

Desoldering

Unsoldering

P55-C [2015]

#### Welding

Welding systems using electricity, such as arc welding, laser welding, ultrasonic welding, etc, are only coded under X24. Also includes details of scarfing two surfaces using flames.

P55-C01 [2015]

#### Gas welding/cutting

Includes gas cutting torches.

Gas flame welding, butane, propane

P55-C02 [2015]

#### Solid state welding

Includes cold pressure welding, diffusion welding, explosion welding, forge welding, friction welding, hot pressure welding and roll welding.

P55-C99 [2015]

#### Other types of welding

Includes exothermic welding.

P55-D [2015]

Soldering and welding media

P55-D01 [2015]

Solder, flux

Includes details of solder manufacture. See also X24-A01A.

P55-D03 [2015]

#### Welding rods and electrodes

Welding rods and electrodes feeders are coded under P55-T02B.

Wire

P55-D99 [2015]

Other soldering and welding media

P55-G [2015]

Repair and maintenance of soldering and welding systems

P55-R [2015]

Recycling of soldering and welding components

P55-T [2015]

# Tools; Protective equipment; Control; Feeder and Dispensers

Includes soldering/brazing and welding tools. (De)soldering irons are also coded under X24-A02A.

P55-T01 [2015]

#### Soldering torches; (De)soldering irons

Includes arrangements for guiding or supporting torches

Propane torch, soldering bit

P55-T02 [2015]

Feeders, dispensers and conveying systems

P55-T02A [2015]

Solder dispensers

Solder melting pan

P55-T02B [2015]

#### Welding rods and electrodes feeders

Details of welding rods and electrodes per se are coded under P55-D03.

#### P55-T02C [2015]

# Work conveying/supporting systems; Automatic welding systems

Includes arrangement for conveying work to be soldered/welded.

Driving mechanism, clamp

#### P55-T20 [2015]

# Control and safety arrangements; Protective equipment

Includes protective masks, goggles, etc. Includes details of fire protection (see also P35). From 2017, details of cooling and lubrication arrangements are coded under P55-T20 (previously coded under P55-T99).

Barrier guard, safety guard

#### P55-T99 [2015]

#### Other welding/soldering/brazing tools

Includes crocodile clips used as heat sinks, guides, cables and connectors. From 2017, details of cooling and lubrication arrangements are coded under P55-T20.

P55-U	[2015]	
<b>Applications</b>		
P55-U03	[2015]	
Vehicles		
P55-U17	[2015]	
Building, construction industry		
P55-U40	[2016]	

#### Industrial

Includes welding/brazing of pipes in air conditioning systems, in factory units, etc.

P55-U42	[2017]
Electronics	

Printed circuits

P55-U50 [2015]

**Personal items** 

P55-U50A [2015]

**Jewellery** 

P55-U99 [2015]

### Other specific applications

Includes details of specific structures made by soldering, welding or cutting, e.g. honeycomb structures.

# P56: Machine Tools; Post-treatment for metal working

Metal rolling, drawing and extruding are coded under P51. Metal punching, working and working are coded under P52. Metal casting and powder metallurgy are coded under P53. Metal milling and machining are coded under P54. Soldering and welding metal are coded under P55.

#### P56-A [2015]

#### Post-treatment for metal working

Includes treatment of finished surfaces/workpieces to improve resistance to wear or impact, etc. Knurling

#### P56-B [2015]

### Arrangements for setting precious stones to metal surfaces

Diamond, gemstone

#### P56-C [2015]

#### Copying

Includes methods and systems for copying directly from a master model.

#### P56-G [2015]

# General cleaning, maintenance/repair of machine tools

Includes restoring or reconditioning objects, such as repairing fractures or cracked metal parts.

#### P56-T [2015]

#### **Constructional details of machine tools**

Includes general details of machine tools. For specific applications, e.g. metal milling, metal rolling, etc, see P51 to P55 codes. Electrical details are coded under X25. Details of motors are coded under X11 and V06 for high power and low power, respectively.

### P56-T01 [2015]

#### Frames; Beds; Tool supports

Feet, casing, springs, tool holder

#### P56-T20 [2015]

#### Control, safety and cleaning arrangements

Includes protective covers, arrangements for preventing overload of tools, etc. Electric details are coded under X25 and T06 codes. Also includes cooling and lubrication arrangements, and cleaning arrangements for removing scrap from e.g. teeth of circular cutters, etc.

Control knobs, compensation, dust protection, splash guard

#### P56-T25 [2015]

### Workpiece holding/feeding/supporting arrangements

Includes arrangements for securing the workpiece in any desired position.

Clamps, index, guide

#### P56-T99 [2015]

#### Other details of machine tools

Includes equipment for storing tools when not in operation and combination of multiple metalworking machines.

P56-U	[2015]

P56-U99	[2015]	
Other specific applications		

### P56-X [2015]

# Unspecified metal working processes and systems

Includes general metal working where the technique is not specified.

### P6: Shaping non-metals

#### P61: Grinding and polishing of non-metals

From 2015, P61 has been subdivided to cover mechanical details of grinding and polishing equipment and processes. See also X25-A03C codes for electrical details. Shaping and working of metals are coded by P51 to P56 codes.

#### P61-A [2015]

#### Types of grinding and polishing systems

These codes are applied to highlight the general type of grinding/polishing machine/mechanism. Use with other P61 codes as appropriate.

#### P61-A01 [2015]

# Grinding, abrading, honing, lapping, sharpening

Prior to 2021, grinding, filing and rasping of metal elements were coded by the combination of P61-A01 codes and P61-V26. From 2021, these are now coded under P54-D05 only.

Sanding

P61-A01A [2015]

**Sharpening** 

P61-A01B [2015]

#### Honina

Includes honing of engine cylinders. See also Q51-A codes for IC engine details.

P61-A01C [2015]

Lapping

P61-A03 [2015]

#### Polishing, burnishing

Prior to 2021, polishing and burnishing of metal elements were coded by the combination of P61-A03 and P61-V26. From 2021, these are now coded under P54-D03 only.

Stropping, buffing

P61-A20 [2015]

**Grinding/polishing mechanism**Use with P61-A01 codes as appropriate.

P61-A20A [2015]

Rotary, e.g. using grinding/polishing discs

Angle grinder, rotary polisher

P61-A20B [2015]

Linear/reciprocating, e.g. using grinding/polishing belts

Belt sander

P61-A20C [2015]

Blasting with particulate material

P61-A20G [2015]

Portable grinding

P61-A99 [2015]

Other types of grinding and polishing systems

P61-F [2015]

# Measuring, indicating, controlling grinding/polishing equipment

Includes all control and monitoring details. Use with e.g. X25, T06 and S02 codes as appropriate.

#### P61-G [2015]

# Cleaning, dressing, maintenance/repair of grinding equipment

Includes cleaning of grinding/polishing equipment, dressing/conditioning of grinding surfaces, etc.

P61-M [2015]

# Manufacture of grinding and polishing apparatus/media

Includes manufacture of grinding/polishing machines and their parts.

P61-R [2015]

# Recycling of grinding and polishing components/media

Includes recovery and re-use or recycling of blast media, e.g. grit, soda.

P61-T [2015]

Constructional details of grinding and polishing systems

P61-T01 [2015]

Frames, beds, casings

Also see Q68 class.

P61-T02 [2015]

Headstocks; working spindles

#### P61-T03 [2015]

#### Work support, table, conveyor belts

Also see Q35-B for mechanical conveyors per se, and X25-F01 for electrical details.

Jigs

#### P61-T04 [2015]

#### **Drive devices**

Includes drive shafts, gearing, 90-degree drive adapters etc.

#### P61-T08 [2015]

#### Abrasion devices and media

Includes grinding/polishing discs, wheels and drums, grinding/polishing bands, and abrasion material blast devices and their media *Grinding pads, sanding belt, nozzle, impeller* 

P61-T10 [2015]

#### Safety devices

Includes protective guards.

#### P61-T12 [2015]

### **Dust extraction and suppression; Debris** collection

Includes devices for collecting/recovering materials resulting from grinding or polishing. Recycling of grinding and polishing media is covered by P61-R. *Dust cover* 

#### P61-T13 [2015]

#### **Cooling and lubricating equipment**

Includes cooling slots in grinding wheels as well as coolant/lubricant supply arrangements.

#### P61-T99 [2015]

### Other constructional details of grinding and polishing systems

### P61-U [2015]

#### **Applications**

See other P and Q classes for mechanical applications and S-X codes for electrical applications.

#### P61-U01 [2015]

#### **Domestic**

Includes general or non-specific domestic applications. Can be used in conjunction with other specific codes as required.

### P61-U03 [2015]

#### **Vehicles**

Includes motor vehicles, trains, boats and aircraft.

P61-U05 [2015] Agriculture; Farming; Logging

P61-U07 [2015]

#### Food

See D11-D14 codes for further details of foodstuffs.

P61-U08 [2015]

#### **Tobacco**

See P15 codes for details of tobacco per se.

#### P61-U13 [2015]

#### Pharmaceutical; Medical

See P3 codes for mechanical details of medical equipment.

#### P61-U17 [2015]

#### **Civil Engineering; Construction; Buildings**

Includes grinding of materials used in roads, railroads, waterways, canals, buildings. See Q4 codes for further details of civil engineering and construction.

Railway

#### P61-U18 [2015]

#### **Mining; Drilling**

See P61-V22 for grinding of ores, coal etc. See P61-A01A also for sharpening of drill bits.

#### P61-U19 [2015]

#### **Furniture**

Includes grinding and polishing of wood during cabinet making and furniture construction.

Chair, sofa, table, bed

#### P61-U20 [2015]

#### Waste disposal, waste treatment, recycling

Includes grinding materials for recycling. Can be assigned with other specific codes as appropriate, e.g. P61-U03 for scrapping/crushing motor cars.

### P61-U99 [2015]

Other specific applications

#### P61-V [2015

#### Materials ground or polished

#### P61-V11 [2015]

#### Wood

See X25-A10 for electrical details of wood working.

#### P61-V13 [2015]

#### Plastic; Composite; Rubber; Resin

See section A codes for polymers per se.

### P61-V15 [2015]

**Glass** 

See L01 codes for glass per se.

#### P61-V20 [2015]

#### Ceramic; Porcelain; Concrete

Includes grinding of tiles and bricks. See L02 codes for ceramics/cement per se.

#### P61-V22 [2015]

#### Stone; Rock; Ores; Slate, Minerals

Includes grinding of all rocks, stones, ores/minerals.

Granite, sandstone, coal, chalk, diamonds, sapphires, gemstones

### P61-V26\* [2015-2020]

#### **Metals**

\*This code is now discontinued and transferred to P54-D05 for grinding, honing and sharpening of metal elements, and P54-D06 for polishing and burnishing of metal elements. It remains searchable for records prior to 2021.

### P61-V99 [2015]

#### Other materials processed

#### P62: Hand tools, cutting

P62-A [2015]

Types of hand/portable power tools

P62-A01 [2015]

Pliers; tweezers

P62-A02 [2015]

Spanners; wrenches

Includes ring, open ended, ratchet wrenches and socket sets.

Torque wrench, spanner

P62-A03 [2015]

**Screwdrivers** 

Includes impact driver.

P62-A04 [2015]

Wire/strip fastening, connecting and tensioning tools

P62-A05 [2015]

#### Fastening/separating tools

Includes tools for fastening or connecting two or more parts together with or without deformation and for unfastening parts. For application of nails/staples see Q61-A06. Includes tools for inserting bearing races, cotter pins, bushes etc. and removing broken drill bits.

P62-A06 [2015]

#### Nailing and stapling tools

Includes hand-held stapling tools, and nail/staple punching, extracting and straightening tools. Includes tools for applying other fastening elements.

Nail gun, staple gun, stapler

P62-A07 [2015]

**Hammers** 

Includes all types of hammer.

Club hammer

P62-A08 [2015]

Chisels

P62-A75 [2015]

#### **Combination or multipurpose** hand/portable tools

Includes tools with multiple functions. Can be applied in conjunction with other individual tool types as required.

P62-A99 [2015]

Other hand/portable tools (except cutting)

[2015]

#### Hand cutting/perforating/punching tools

Includes tools for cutting, bevelling, grooving, slitting, punching, perforating, cutting-out, shaving.

P62-B01 [2015]

**Punching**; punches

Includes centre punches and other punching tools.

P62-B02 [2015]

**Perforating** 

P62-B04 [2015]

**Cutting-out; Stamping-out** 

Includes press-type tools.

P62-B05 [2015]

Knives

P62-B07 [2015]

Scissors; shears

Garden shears, pinking shears

P62-B08 [2015]

Clippers; shavers

P62-B09 [2015]

**Razors** 

P62-B10 [2015]

Axes; hatchets

P62-B50 [2015]

#### Severing/tearing devices

Includes arrangement for severing workpiece/material without cutting, e.g. by heating or squeezing.

P62-B99 [2015]

Other hand/portable cutting tools

P62-D [2015]

Workshop equipment; work holders; vices; clamps

P62-D01 [2015]

Work benches; stands; trestles; supports

Includes benches, tables, supports, jigs etc. on which workpiece is being machined/worked.

#### P62-D02 [2015]

#### Vices; clamps; gripping heads

Includes arrangements for gripping tools or workpieces. Includes magnetic and vacuum work holders.

Sash clamp, G-clamp, workpiece holder

### P62-D03 [2015]

#### Workpiece/material feeding

Includes arrangements for feeding workpiece being machined.

#### P62-D05 [2015]

**Tool storage** 

Includes tool storage boxes, racks, trays.

# P62-D08 [2015] Marking out or setting out work

Includes scribes.

### P62-D99 [2015]

#### Other workshop equipment

### P62-E [2015]

#### **Manipulators**

Includes mechanical details of manipulators. See also Q35-B. See X25-A03E for electrical details of manipulators.

#### P62-F [2015]

# Measuring, indicating, sensing, controlling hand/portable tools

Includes mechanical control elements and program control. See T06 for general electrical control and T01 for computer control as appropriate.

#### P62-G [2015]

### Cleaning, maintenance/repair of hand and cutting tools

Includes arrangements for cleaning, lubricating and sharpening tools. See P61-A01A for sharpening per se

Refurbishment

#### P62-M [2015]

# Manufacture/Pre-use treatment of hand and cutting tools

Includes equipment and methods of manufacturing the hand/cutting tool per se.

#### P62-T [2015]

### Constructional details of hand and cutting tools

#### P62-T01 [2015]

# Handles and handle attachment arrangements

#### P62-T02 [2015]

#### **Tool bits**

Includes screwdriver bits, wrench bits/sockets, and bit holders/chucks.

#### P62-T03 [2015]

Hammer heads

#### P62-T04 [2015]

#### **Drive arrangements**

Includes percussion arrangements, such as electromotors, electromagnetic drives, centrifugal and rotary drive arrangements, fluid pressure drives, e.g. using compressed air, IC engines or detonation of cartridge, and mechanical drives, such as ratchet mechanisms, cams, cranks, worms, gearing etc. Also includes joints, wrists and arms used in manipulators. See X25-A03 codes for electrical aspects of hand tools.

Drive mechanism

#### P62-T05 [2015]

#### **Noise/vibration dampers**

Includes vibration absorbing.

#### P62-T06 [2015]

#### **Dust/waste extraction**

Includes removal of waste material and dust.

#### P62-T07 [2015]

#### Safety devices

Includes guards and sheaths.

#### P62-T08 [2015]

#### Chambers

Includes chambers provided with manipulator devices or holes to allow working by hand.

#### P62-T10 [2015]

#### Heating and cooling arrangements

#### P62-T12 [2016]

#### **Cutting elements/blades**

Includes cutting surfaces and blades. Also see P62-B codes for type of cutting device.

Razor blade, cutter, knife

#### P62-T50 [2015]

#### **Novel constructional materials**

Novel materials only. Should be used in conjunction with other P62-T codes.

P62-T99 [2015]

Other constructional details

P62-U [2015]

**Applications** 

See S-X codes for electrical applications.

P62-U01 [2015]

**Domestic** 

Includes general or non-specific domestic applications. Can be used in conjunction with other specific codes as required.

P62-U02 [2015]

Commercial

Includes general commercial applications. Can be used alone or in conjunction with other specific applications.

P62-U03 [2015]

**Vehicles** 

Includes hand tools for assembling vehicles (see Q16-D codes also) or parts of vehicles.

P62-U05 [2015] Agriculture; Farming; Logging

Includes shears for shearing sheep and well as shears for cutting grass.

P62-U07 [2015]

Food

P62-U08 [2015]

Tobacco

P62-U13 [2015]

**Pharmaceutical; Medical** 

Includes fastening of wires/rods/bolts used in surgical applications.

P62-U17 [2015]

**Civil Engineering; Construction; Buildings** 

P62-U18 [2015]

Mining; Drilling

P62-U99 [2015] Other specific applications P62-V [2015]

Materials machined/cut

P62-V11 [2015]

Wood

See X25-A10 for electrical details of wood working/cutting.

P62-V12 [2015]

**Paper** 

P62-V13 [2015]
Plastic; Composite; Rubber; Resin

See section A codes for polymers per se.

P62-V15 [2015]

Glass

P62-V20 [2015]

Ceramic; Pottery; Porcelain; Concrete

P62-V22 [2015]

Stone; Rock; Ores; Slate, Minerals

Includes grinding of all rocks, stones, ores/minerals.

Sandstone, chalk, diamonds, sapphires, gemstones

P62-V31 [2015]

**Fabric: Leather** 

P62-V99 [2015]

Other materials processed

#### P63: Working, preserving wood

P63-A [2015]

# Types of wood working/preserving systems

Includes working and treating of bark, cane, cork, straw, reeds etc.

#### P63-A01 [2015]

#### De-barking; removing branches/twigs

Includes peeling of osier rods and stripping bark from tree trunks.

P63-A02 [2015]

**Splitting** 

P63-A03 [2015]

#### **Cutting**; sawing

Includes circular saws, gang saws, reciprocating saws, band saws, strap saws, chain saws, etc.

Saw wires, twisted saw strips, cylinder saws

#### P63-A05 [2015]

#### Planing; milling; sanding

See P61-A01 for grinding/sanding in general. *Grinding* 

P63-A08 [2015]

**Drilling** 

P63-A09 [2015]

Routing

P63-A10 [2015]

**Turning** 

Includes lathe to turn wood.

P63-A15 [2015]

#### **Joining**

Includes jointing, nailing, stapling, gluing and pressing.

Dovetails, mortises, tenons, dowels, biscuit

P63-A18 [2015]

#### Bending

Includes bending wood e.g. by steam or pressure.

#### P63-A30 [2015]

#### Wood treating/preserving

Includes staining, impregnating, dyeing, bleaching and dampening wood, reeds, cork etc.

#### P63-A99 [2015]

#### Other types of wood working/preserving systems

#### P63-G [2015]

# Cleaning, maintenance/repair of wood working/preserving systems

Includes arrangements for clearing sawdust and shavings from wood working tools. Includes sharpening of cutting blades and lubrication of tool drives. Includes cleaning of implements used to dye, varnish or stain workpieces.

#### P63-M [2015]

# Manufacture of wood working tools/workpieces

Includes methods of manufacturing wood working tools

#### P63-R [2015]

### Recycling/recovery of wood/timber; Use of waste material

Includes all processes for manufacturing wood wool, wood shaving/chips, wood fibers and wood powder / sawdust whether from waste wood/timber or not.

#### P63-T [2015]

# Constructional details of wood working and preserving systems

#### P63-T01 [2015]

#### Wood splitting tools

Includes wedges, knives, spreaders, chopping blocks etc. For splitting wood.

#### P63-T02 [2015]

#### Saw blades/cutting elements

Includes saw blades, chains, wires and toothed cylinders for all types of power and hand saws. Also includes saw blade tensioning arrangements.

Cutter blocks

#### P63-T03 [2015]

# Planes/Spokeshaves blades/blade adjusters

P63-T04 [2015]

#### **Sanding elements**

Includes wood sanding blocks.

#### P63-T05 [2015]

#### **Drive arrangements**

Includes drive shafts, gearings, worms.

### P63-T06 [2015]

**Braking arrangements** 

#### P63-T07 [2016]

#### **Drilling/honing/routing elements**

Includes auger/router bit and drill bits per se.

#### P63-T13 [2015]

### **Heating and cooling arrangements**

Includes hot tables for warming veneers.

P63-T14 [2015]

Lubricating arrangements

#### P63-T19 [2015]

# Fastener feeding, driving, bending arrangements

Includes feeding and inserting nails and staples.

#### P63-T20 [2015]

# Work benches; frames; pillars, workpiece guides; clamps

Includes guide fences and stops for saw mills or sawing machines, static and portable clamps, presses e.g. used to adhere veneer or form plywood, arrangements for feeding, loading, turning and conveying timber/wood and feed chains/rollers.

Work tables, stops, presses, workpiece feeders, G-clamp, sash clamp

#### P63-T99 [2015]

# Other constructional details of wood working/preserving systems

P63-U [2015]

**Applications** 

P63-U03 [2015]

**Vehicles** 

Includes wooden dashboards and other vehicle parts.

P63-U05 [2015]

Trees; Logging; Timber

Includes sustainable forest management.

P63-U08 [2015]

**Tobacco** 

Includes wooden pipes.

#### P63-U17 [2015]

#### **Civil Engineering; Construction; Buildings**

Includes recovery and reconditioning of railway sleepers. Also includes manufacture of wooden stairs, handrails. See Q4 codes for further details.

P63-U18 [2015]

**Mining; Drilling** 

Includes wooden mine props/supports.

P63-U19 [2015]

**Furniture** 

Includes manufacture of wooden chairs, tables, cupboards etc.

Sofa, bed

#### P63-U30 [2015]

#### Sports, toys, entertainment and leisure

Includes wooden bats and racquets, bowling pins etc. See P36 for sports equipment per se.

P63-U50 [2015]

Personal

Includes manufacture of wooden walking sticks and jewellery.

P63-U99 [2015]

Other specific applications

#### P64: Working cement, clay, stone

P64-A [2015]

Clay/Clay mixture production/processing

P64-A01 [2015]

#### Producing/processing clay suspensions

Includes production and processing of clay slurries and fluidic clay compositions, e.g. by blunging.

P64-A02 [2015]

### Producing/processing clay non-fluidic compositions

Includes homogenizing, comminuting and conditioning clay in non-fluidic condition.

P64-A99 [2015]

Other types of cement, clay, stone working systems

P64-C [2015]

Shaping clay/clay mixtures

P64-C01 [2015]

Casting

Includes centrifugal/rotational casting and slip casting.

P64-C02 [2015]

Moulding

Includes all types of moulding.

P64-C03 [2015]

#### Working shaped/moulded articles

Includes attaching handles and spouts as well as refinishing (corrugating, smoothing), removing burrs etc.

P64-C04 [2015]

#### Finishing shaped/moulded articles

Includes coating, glazing, curing, setting and hardening of moulded articles.

P64-C99 [2015]

Other cement/clay shaping

P64-E [2015]

Working stone/stone-like materials

P64-E01 [2015]

**Cutting**; splitting

Includes cutting stone into slabs, splitting slates etc.

P64-E03 [2015]

**Boring; drilling** 

P64-E05 [2015]

Turning; milling; planing

P64-E50 [2015]

**Working specific materials** 

P64-E50A [2015]

Stones; Rocks; Bricks; Concrete; Tiles

Includes working of granite, limestone, sandstone, chalk, bricks, tiles, concrete, pottery, mica, slate, schist etc.

P64-E50E [2015]

Gems; jewels; crystals

Includes precious stones.

P64-E50Z [2015]

Other specific materials

P64-E99 [2015]

Other stone working arrangements

P64-G [2015]

# Cleaning, maintenance/repair of cement, clay, stone working systems

Includes dressing milling discs and rollers. Also includes cleaning of clay/stone/cement machinery and produced articles.

P64-R [2015]

# Recycling/recovery of cement, clay, stone working components

Includes recycling of used clay/slip.

P64-T [2015]

Constructional details of cement, clay, pottery, stone working systems

P64-T01 [2015]

Moulds; cores; mandrels

Includes novel aspects of all types of mould, core or mandrels.

P64-T02 [2015]

Work/material

support/conveying/feeding/discharging

Includes feeding/discharging material as well as moving moulds on conveyor.

P64-T03 [2015]

**Cutting devices** 

Includes saws and chisels.

P64-T04 [2015]

**Drills; boring devices** 

Drill

P64-T05 [2015]

Turning/milling/grinding machines/devices

See also P61 for specific grinding/milling equipment in general.

P64-T10 [2015]

**Safety devices** 

Includes protective guards.

P64-T12 [2015]

**Dust extraction/suppression** 

P64-T13 [2015]

Heating; cooling; (de)humidifying

equipment

Includes means for heating or cooling material in mould.

P64-T99 [2015]

Other constructional details

### **P7: Pressing, Printing**

#### P71: Presses

Details of all types of presses and their operation and structure etc.

P71-A [2015]

**Press Type/Function** 

P71-A01 [2015]

**Types of presses** 

P71-A01A [2015]

#### Press brake; frame-type press

Includes C-frame presses, open-frame presses, open back inclinable presses and press brakes.

P71-A01B [2015]

**Horn press** 

P71-A01C [2015]

**Arch press** 

P71-A01D [2015]

Straight-side press

P71-A01E [2015]

**Turret press** 

Turret punch

P71-A01X [2015]
Other specific types of presses

Includes non defined press types and presses other than defined in A01A to A01F codes.

P71-A10 [2015]

Main press function

P71-A10A [2015]

#### Forming/Shaping

Includes using presses for bending, forming, drawing, cold-working, hot-working, seaming, stamping.

P71-A10C [2015]

Punching; blanking; broaching

Includes cutting shapes out of material, e.g. using blanking tool.

Broaching

P71-A10E [2015]

**Baling** 

Includes using baling press for e.g. waste paper.

#### P71-A10F [2015]

# Compacting/consolidating material, e.g. scrap material

Includes crushing for e.g. cars. Compacting press. *Car crusher* 

#### P71-A10H [2015]

#### Squeezing out liquids from materials

Squeezing-out liquid from liquid-containing material, e.g. juice from fruits, oil from oil-containing material, filtering, e.g. straining solids from liquids, using presses in combination with filtering elements expelling water from textile fabrics or laundry.

Fluid expel, oil expel, water expel

P71-A10X [2015]

Other specific press functions

### P71-B [2015]

#### **Press action**

Electrical details of presses are coded under X25.

#### P71-B01 [2015]

### Using press ram/platen

Includes presses using hydraulic/pneumatic drive, mechanical drive, levers, toggle mechanisms, screws, rack and pinion, and eccentric shafts, cams, cranks and knuckle joints.

Bramah press, chains, ropes

#### P71-B03 [2015]

#### **Using rotary press members**

Includes presses using rotary worms and screws, rotary rollers, rings and discs.

Rotary press, screw press

### P71-B99 [2015]

#### Using other press types/actions

Includes presses using deformable member, e.g. diaphragm, or endless steel bands used e.g. for producing chipboard.

Diaphragm press, filter press

P71-T [2015]

**Press construction** 

P71-T01 [2015]

#### Frames; Beds

Includes beds e.g. for solid-bed, open-bed and adjustable bed presses. Also includes supports and feet.

P71-T02 [2015]

**Bolster plates** 

P71-T03 [2015]

Platens; Rams; Anvils

P71-T05 [2015]

**Drive arrangements** 

Includes gears, brakes, clutches and flywheels.

P71-T07 [2015]

Dies; Die sets; Die shoes

Die cushions

P71-T08 [2015]

**Rollers: Screws** 

Includes pocketed rollers e.g. used to form tablets.

P71-T15 [2015]

Hydraulic and pneumatic systems

Includes press cylinders, pistons. *Cylinder* 

P71-T20 [2015]

**Control and safety arrangements** 

Includes measuring, indicating and controlling systems (mechanical details only).

Monitoring, safety

P71-T22 [2015]

Heating, cooling and lubrication arrangements

P71-T25 [2015]

Material feed/discharge/conveying

Includes blank holders.

P71-T50 [2015]

**Novel material details** 

Novel materials used for the press constructions only. Should be used in conjunction with other P71 codes as appropriate.

P71-T99 [2015]

Other constructional details

Includes press accessories such as knives, knife mountings, etc.

P71-U [2015]

**Application of Presses** 

Characterized by what the press is used for.

P71-U03 [2015]

**Vehicles** 

For scrapping/crushing motor cars, and other vehicles.

P71-U05 [2015]

**Agriculture; Farming** 

Includes arable farming, sowing and harvesting. See P71-A10E for baling.

Baler

P71-U06 [2015]

Manufacturing plants

Includes application of presses used in manufacturing plants.

P71-U07 [2015]

**Food industry** 

Includes food shaping, e.g. for shaping dough, and oil pressing.

Olive oil

P71-U11 [2015]

**Printing industry** 

Electrical details of printing presses are covered by S06-C codes.

P71-U13 [2015]

Pharmaceutical; Medical

P71-U13A [2015]

**Pharmaceutical** 

For tabletting pressing.

P71-U13B [2015]

Medical

Includes the use of presses for the medical industry.

P71-U20 [2015]

Waste disposal and recycling

Can be assigned with other specific codes as appropriate, e.g. P71-U03 for scrapping/crushing motor cars.

Biomass waste briquetting, wood waste for making fuel logs

P71-U99 [2015]

Other specific applications

Applications of presses for uses not mentioned above.

P71-V [2015]

Types of materials pressed

Characterized by the types of materials being pressed.

P71-V01 [2015]

Metals

### P71-V11 [2015]

Wood

E.g. for wood shaving or saw dust, forming chipboard.

Chipboard press

P71-V12 [2015]

Paper

P71-V13 [2015]

Plastic

P71-V99 [2015]
Other specific materials pressed

#### **P72: Working Paper**

Covers all paper working aspects, including the types of processing involved, apparatus used and types of paper articles worked.

#### P72-A [2015]

#### Paper working process and apparatus

This section covers all aspects of paper processing and apparatus.

#### P72-A01 [2015]

#### Folding or creasing

Covers all methods of folding or creasing paper for various paper processes.

Fold, crease

#### P72-A02 [2015]

#### **Shaping**

General shaping of paper or card.

#### P72-A03 [2015]

#### **Cutting or punching**

Any cutting aspects to do with working paper article. Includes perforating,

Slitting, trimming

#### P72-A04 [2015]

#### **Applying pressure**

Includes pressing or flattening of paper.

### P72-A05 [2015]

#### Applying heat or moisture

Any heating process to form paper or card product. Moistening/drying.

Heat process, heat treatment, moisten

#### P72-A06 [2015]

#### Bonding or attaching paper together

Using adhesives, taping, crimping etc. *Adhesive, crimping, bonding* 

#### P72-A07 [2015]

#### Deformation of paper or card

Covers methods for corrugating or embossing paper or card.

#### P72-A08 [2015]

#### Winding

E.g. for wound tubes or cones. See P72-B04. Winding, tube, cone

#### P72-A09 [2015]

#### Crêping paper

Includes forming Crêpe paper.

#### P72-A10 [2015]

#### Recycling

Includes adding products to the pulp, defibrating, or any other treatments for recycling.

Recycle

#### P72-A15 [2015]

#### Manufacturing equipment

Includes hand tools or machinery to produce paper articles.

#### P72-B [2015]

#### Types of paper articles and shapes

This section is characterized by types of the paper articles or structures produced.

#### P72-B01 [2015]

**Boxes** 

Includes cardboard boxes.

#### P72-B02 [2015]

#### Cartons

Includes paper cartons.

#### P72-B03 [2015]

Cups

Includes paper cups.

#### P72-B04 [2015]

#### **Tubes or cones**

Includes making tubes or cones or other wound shapes or cylinders from paper or card.

Paper tube, conical paper, paper cylinder

#### P72-B05 [2015]

#### **Envelopes**

Paper envelopes

#### P72-B06 [2015]

Bags

Paper bag

#### P72-B07 [2015]

#### Corrugated

Includes corrugated card.

### P72-B99 [2015]

### Other paper articles

Includes light shades, Chinese lanterns, labels or tags, honeycombed structures, cellular packaging articles etc.

Honeycombed

#### **P73: Layered Products**

Covers details of layered products including methods, apparatus used, application of producing layered products, and structure of layered products.

P73-A [2015]

Structure of layered product

P73-A01 [2015]

Characterized by shape

Includes tubular layered products

P73-A02 [2015]

**Characterized by structure** 

Includes flat, solid, ribbed, fibrous, cellular e.g. honeycombed, corrugated, etc.

P73-A03 [2015]

**Relationship between layers** 

Connections between each layer and separability. Joining similar or dissimilar materials.

P73-N [2015]

Methods and apparatus for producing layered products

P73-N01 [2015]

Methods for producing layered products

P73-N02 [2015]

Apparatus for producing layered products

P73-V [2015]

Layer materials

Characterized by type of material used in layered product.

P73-V01 [2015]

Metals

P73-V11 [2015]

Wood

P73-V12 [2015]

Paper; cardboard

P73-V13 [2015]

Plastic; cellulosic plastic substances

P73-V14 [2015]

Glass; glass fibers

P73-V15 [2015]

Ceramic; cement; plaster

P73-V16 [2015]

Rubber; Resin

P73-V19 [2015]

**Bituminous** 

P73-V30 [2015]

Mineral fiber

Rock wool

P73-V99 [2015]

Other specific materials

#### P74: Printing and lining machines

Covers all non-electrical aspects for printing and lining.

#### P74-A [2015]

#### Methods of printing characterized by type

These codes are for the methods of mechanical printing. The apparatus for printing is coded in P74-C. Electrical details of printing systems or electrical printing processes are coded under S06 class.

#### P74-A01 [2015]

#### **Press printing**

Includes letterpress printing, rotary press printing, offset press printing etc.

#### P74-A02 [2015]

#### Lithography

Covers all techniques using lithography. Offset lithography, offset printing

### P74-A03 [2015]

#### Intaglio

Covers all intaglio printing.

#### P74-A04 [2015]

#### Screen printing

Covers stencilling techniques.

Stencil, etymology, silkscreen, serigraphy, serigraph printing

#### P74-A10 [2015]

#### Other types of printing

Covers any types of mechanical printing not mentioned in P74-A01 to P74-A04.

#### P74-B [2015]

#### **Printing processes**

Covers specific or individual processes involved in various stages of printing.

#### P74-B01 [2015]

#### **Composition or typesetting**

Composing stick, typesetting

#### P74-B02 [2015]

#### **Imposition**

Includes forme preparation.

Forme

#### P74-B03 [2015]

#### **Printing surface preparation**

Covers all preparation for printing surface.

#### P74-B05 [2015]

#### Control aspects of printing

Covers all control aspects of all printing operations. Also covers safety aspects.

#### P74-C [2015]

#### Printing machinery and equipment

#### P74-C01 [2015]

### Apparatus used for composition

Includes details of, or accessories for, machines for mechanical composition. Includes all hand apparatus for composition e.g. chases, quoins, or galleys. Also covers machinery or mechanical apparatus for composing, e.g. moulding or casting apparatus, matrices etc. Does not include photographic or photo-electronic composing machines, these are covered in S06 class. Printing for record carriers is covered in T03 class. Chases, quoins, galleys, matrice

#### P74-C02 [2015]

#### **Printing machines or Presses**

Includes platen presses and cylinder presses. Details of presses are covered by P71 codes.

#### P74-C03 [2015]

#### **Rotary printing machines**

Includes rotary lithography, rotary intaglio or rotary press printing machines.

#### P74-C04 [2015]

#### **Screen printers**

Screen printing

# P74-C08 [2015] Inking arrangements or devices

Includes, inking units, ribbons, rollers, flat inking elements, troughs, reservoirs, pads, ducts etc.

#### P74-C09 [2015]

#### Media conveying/feeding arrangements

Covers all conveying or feeding apparatus for sheets through printing apparatus or machines. Includes grippers, pins, transfer drums etc. Paper feeding

#### P74-C10 [2015]

#### **Bronze printing machines**

Includes apparatus for bronze printing or for like operations.

### P74-C11 [2015]

Line printing machines

P74-C99 [2015]

### Other apparatus for printing

Includes cleaning arrangements, safety arrangements, smudging prevention devices etc.

#### P75: Typewriters, stamps, duplicators

P75-A [2015]

**Typewriters** 

P75-A01 [2015]

Casing; Framework

Includes supports, feet, dust excluders, etc.

P75-A02 [2015]

### **Keyboard arrangements; Hammers**

Includes locks, shift keys, key levers, key buttons, etc.

Tabulating, line spacing, character spacing, keys

P75-A03 [2015]

#### Media conveying

Includes sheet or web feeding. Details of ink ribbons feeding are coded under P75-A04 only. Rollers, holders, guides

#### P75-A04 [2015]

#### **Inking arrangements**

Includes ink ribbon feeding, correction bands and fluid.

Ribbon, ink rollers, ink discs, ink cartridges

P75-A05 [2015]

#### **Drive arrangements**

Includes gears, levers, sliding mechanisms, etc.

Mechanical power drives, fluid-pressure power
drives

P75-A06 [2015]

**Cooling arrangements** 

P75-A99 [2015]

#### Other typewriter details

Includes line counters, alarms when approaching end of line or end of sheet, etc.

P75-B [2015]

**Stamps** 

P75-B01 [2015]

#### **Handheld stamps**

Includes changeable characters, handles, details of stamping surfaces, stands, numbering devices, etc. Ink pads are coded under P75-B03 only. Also includes plier-like tools used for stamping e.g. train or cinema tickets, etc.

#### P75-B02 [2015]

#### Stamping machines

This code covers larger-size stamping machines where the media is held in place on/fed through the stamping machine. Includes details of sheet feeding, rollers, holders, guides, etc. Includes selection mechanism for successive stamping and numbering devices.

Ticket stamping machines

#### P75-B03 [2015]

#### Ink for stamps

Includes ink wells or reservoirs, ink ribbons or tapes, inking pads, etc.

### P75-B99 [2015]

#### Other types of stamps

Includes stamping using rollers with integral inksupply devices.

P75-D [2015]

**Duplicating or manifolding** 

P75-D01 [2015]

Using pressure-sensitive layers or intermediaries

Hectographic printing, carbon copying etc.

P75-D10 [2015]
Other types of duplicating

#### P76: Books, special printed matter

Includes aspects of book making and details of book structure or book features etc.

P76-A [2015]

**Book binding** 

P76-A01 [2015]

#### **Book binding methods**

Includes stitching, using clips, laces or ribbons, eyelets, applying glue or adhesive, collating or gathering of sheets, or binding using fingers, claws or ring-like elements. Also includes manufacturing bookbinding cases or covers.

Jacketing, casing, covering

P76-A02 [2015]

#### **Book binding tools or apparatus**

Includes hand tools or machinery.

P76-B [2015]

Book covers and page features

P76-B01 [2015]

#### **Book cover features**

Includes details of loose covers, hinges, locks or closures, ornamented covers, covers with column, line or heading marks or indicators, with means for holding books open, etc.

P76-B01A [2015]

#### Characterized by material

Characterized by material used for book covers.

P76-B02 [2015]

#### Page features and accessories

Includes book markers, leaf turners, form sets and calendar blocks.

P76-C [2015]

Special printed matter

P76-C01 [2015]

#### Newspapers or the like

Includes all printed new paper or the like matter.

P76-C02 [2015]

#### Post cards or the like

Includes greeting, menu, business or like cards; letter cards or letter-sheets.

P76-C09 [2015] Characterized by application

P76-C09A [2015]

### Information and security-bearing printed matter

Identity cards, passports, public transport or admission tickets, using data chips, bank notes, fingerprints, signatures, photographs, security threads, magnetic strips, diffraction gratings, watermarks, lottery tickets

P76-C09B [2015]

#### **Guilloche patterns**

Includes Guilloche patterns and other decorative printed matter of the like.

P76-C09C [2015]

Moiré effects

P76-C09D [2015]

### For use in medical treatment or therapy

Includes sterile or impregnated printed matter.

P76-C09E [2015]

**Perforations** 

P76-C09F [2015]

**Translucent or partly translucent parts** 

Windows

P76-C09M [2015]

**Comprising special materials** 

P76-C09M1 [2015]

**Liquid crystals** 

Printed matter that use liquid crystals.

P76-C09M2 [2015]

**Metallic materials** 

P76-C09M3 [2015]

**Special inks** 

P76-C09M4 [2015]

#### Absorbing or reflecting radiation

For absorbing or reflecting infra-red light, ultraviolet light, polarized light etc.

P76-C09X [2015]
Other specific applications

### P76-F [2023]

### **Filing and Folders**

Includes filing devices such as folders, portfolios, plastic pockets/wallets, document holders/wallets, magazine binders, collapsible file carry boxes, file dividers, etc. Filing cabinets are coded with office furniture under P25-C01A only.

#### P77: Writing, drawing appliances; Bureau /desk accessories

Covers all aspects of writing or drawing appliances. Includes inventions characterized by type, core material, constructional details and manufacture for writing or drawing appliances. From 2021, P77 also covers bureau / desk accessories.

P77-A		[2015]
Writing and	drawing	instruments

P77-A01 [2015]

Fountain pens

Includes nibs

Nib

P77-A02 [2015]

**Ballpoint pens** 

Rollerball pen

P77-A03 [2015]

**Felt-tip pens** 

Markers

P77-A04 [2015]

**Pencils** 

Includes propelling pencils and grease pencils. Pop-a-Point pencil, wax pencil, crayons

P77-A05 [2015]

Stylus

For use with e.g. touch screens.

P77-A99 [2015]

#### Writing instruments using other writingpoints

Using coreless tubular writing-points, magnetically active writing-points etc.

Ink brush, quill, reed pen

P77-B [2015]

#### Core materials for writing or drawing instruments

P77-B01 [2015]

Graphite

Includes leads for propelling pencils.

P77-B02 [2015]

#### Metallic writing-core

Can be used in combination with other core material type, e.g. metallic ink, metallic graphite

P77-B03	[2015]
Wax	
Crayons	
P77-B04	[2015]
Slate	[====]
P77-B05	[2015]
Chalk	
P77-B06	[2015]
Ink	[=0.0]
IIIK	

#### P77-D [2021]

#### **Bureau / desk accessories**

Includes devices for opening or closing envelopes, paperweights, drawing pins, pen holders, etc. Desk furniture per se is not covered by this code, see P25-A01A instead.

#### P77-M [2015]

#### Manufacture of pens and pencils

Includes manufacturing method and apparatus.

#### P77-T [2015]

#### Constructional details of writing or drawing instruments

These codes can be used in conjunction with other P77 codes.

#### P77-T01 [2015]

#### **Propelling and retracting mechanisms**

Includes springs, sliders, buttons, twisting mechanisms etc. for pens or pencils.

P77-T02 [2015]

Nibs

Includes nib holders.

P77-T03 [2015] Sheathings; Casing; Cap

Sheathing, casing or caps for all types of writing or drawing implements. Includes rubber placed at end of pencil, the wooden sheathing of a pencil, or plastic sheathing of pen media etc. Pen/pencil casings, or pen/pencil caps etc.

Clip

### P77-T04 [2015]

### Ink supply/storage; Pencil leads

Includes details of ink reservoirs, ink cartridges and ink pads. Also covers pencil lead storage or supply containers etc. Novel ink and pencil leads are also coded by P77-B06 and P77-B01, respectively. *Ink well* 

#### P77-T99 [2015]

# Other constructional details of writing or drawing instruments

Includes writing or drawing implements in combination with other items or devices, e.g. with torches, lighters, toys etc.

Ink blotter

#### P78: Decorative art

Covers all aspects of decorative art, including types of, and methods of producing decorative art, designs, materials used etc.

P78-A [2015]

Types of artistic processes

P78-A01 [2015]

**Sculpturing or modeling** 

P78-A02 [2015]

Guilloching

P78-A03 [2015]

Carving

P78-A04 [2015]

**Branding** 

P78-A05 [2015]

Inlaying

P78-A06 [2015]

**Embossing** 

P78-A07 [2015]

#### **Painting or drawing**

Includes techniques in artistic painting or drawing e.g. oil painting, water painting, pastel painting, relief painting etc.

#### P78-C [2015]

#### Methods for producing decorative effects

Includes: sculpturing, stamping, modeling or bending etc., applying different materials of different shapes and sizes, applying transfer pictures etc., engraving or etching methods, stamping or pressing or inlaying ornamental designs onto/into or inlaying surfaces, or any other methods for decorative or ornamental production.

#### P78-C01 [2015]

#### Paper hanging

Machines, apparatus, tools, or accessories therefore for applying adhesive, for applying the paper to the surface to be covered or finishing operations.

#### P78-M [2015]

### Machines, apparatus or tools for artistic work

Includes all machinery or tools for producing all artwork or decorative work. Including tools and apparatus or equipment used for: painting, sculpturing, carving, inlaying etc., surface treatment equipment, holders or containers etc.

P78-P [2015]

Materials for artistic work

P78-P01 [2015]

#### Paints and other colored materials

Includes any paint or other substance that is used to create artwork.

P78-P02 [2015]

#### Wood or wood composites

Includes any wood structure or material used for artwork.

P78-P03 [2015]

**Paper** 

Includes paper to create artwork, but does not include paper canvass (see P78-P06).

P78-P04 [2015]

Metals

Includes metals used for artwork.

P78-P05 [2015]

**Plastic** 

Includes any plastic materials used in artwork.

P78-P06 [2015]

#### Canvas or other base sheet material

Includes materials for any base for applying artwork to.

P78-P15 [2015]

Other materials used for artwork

P78-S [2015]

**Special designs** 

P78-S01 [2015]

#### **Imitations**

Covers imitation of pictures, e.g. oil paintings, mosaic or tarsia-work patterns, ceramic patterns, imitating three-dimensional effects, pearl effects, or mother-of-pearl effects.

P78-S01A [2015]

Metallic or oxidized metallic surfaces

P78-S01B [2015]

**Crystalline structures** 

P78-S01C [2015]

**Stone surfaces** 

Marble

P78-S01D [2015]

**Wood grain effects** 

P78-S01E [2015]

Horn, ivory, or meerschaum surfaces

P78-S01F [2015]

Leather or fur

Includes real or imitation leather designs or effects.

Faux leather, faux fur

P78-S02 [2015]

Characterized by irregular areas

Mottled patterns

P78-S03 [2015]

**Light effects** 

Including color effects.

# P8: Optics, Photography, General

#### P81: Optics

From 2015 P81 manual codes have been applied for details of optical elements. The optical elements covered in this class may form part of optical equipment or systems covered by other classes such as:

- (i) P82 for photographic apparatus;
- (ii) P84 for other photographic aspects, including apparatus for photographic processing, holography and lithography;
- (iii) S06 for electrical aspects of photography; and (iv) W04 for digital and video cameras and
- (iv) W04 for digital and video cameras ar electronic image projectors.

#### P81-A [2015]

# Types of optical element, system or apparatus

### P81-A01 [2015]

#### Lens and lens systems

Includes single lenses, multiple lenses/lens groups and variable refractive power lens/lens group. Biconcave, biconvex, concave, convex, fluid-filled, glass lens, negative meniscus, plano-concave, plano-convex, plastic lens, positive meniscus

### P81-A01A [2017]

#### Single lens

This code covers individual lenses. Single lenses having variable refractive power are also assigned P81-A01V1.

#### P81-A01C [2017]

#### **Multiple lens systems**

This code covers two or more lenses used together. Where the ability to vary overall refractive power by movement is important, P81-A01V5 is also assigned.

Eyepiece, lens group, telephoto lens, zoom lens

#### P81-A01V [2017]

#### Variable power lenses

This code and its subdivisions are assigned with P81-A01A or P81-A01C as necessary.

Focus, variable magnification

#### P81-A01V1 [2017]

# Individual lens with variable refractive power

This code, normally assigned with P81-A01A, covers lenses whose refractive power can be varied electrically or by physical deformation, i.e. changing shape. Lenses of this type for use in digital or video cameras are also assigned W04-M01C1E.

Fluid-filled lens, liquid crystal lens, ring electrodes

#### P81-A01V5 [2017]

#### Variable power lens groups

This code, normally assigned with P81-A01C, covers two or more conventional lenses used together and having the ability to vary overall refractive power by physical movement, e.g. varying separation.

Gearing, slide, varifocal lens

#### P81-A03 [2015]

#### Mirrors

Includes mirrors with multiple surfaces.

Plane mirror, polygonal mirror, reflex reflector

P81-A05	[2015]
---------	--------

**Filters** 

P81-A07 [2015]

Gratings

P81-A09 [2015]

#### **Light guides**

For details of light guides and optical fibers see V07-F codes.

P81-A11 [2015]

**Prisms** 

P81-A13 [2015]

Condensers

P81-A15 [2015]

#### **Polarizers**

Polarization gratings are also assigned P81-A07. Polarizers for optical fiber technology are also assigned V07-F02B. Polarized eyeglasses for 3D film or video projection viewing are also assigned P81-A50E1. The use of polarized eyeglasses for 3D TV viewing is covered by W03-A08E7E.

Circular, elliptical, left, right

#### P81-A50 [2015]

#### **Optical system function**

These codes are intended to indicate in a broad sense the main function of the novel optical element specified by other P81-A codes. In general more detail will be provided in the class referred to for the process or equipment in which the element is used. Application in a wider sense is indicated by assignment of P81-U codes.

#### P81-A50A [2015]

#### For viewing distant objects

Includes optical elements used in telescopes, sights and sighting tubes and binoculars.

Cassegrainian, catadioptric, Gregorian, Keplerian, monocular, Newtonian, opera glasses, reflecting, refracting

#### P81-A50C [2015]

#### For viewing nearby or close-up objects

Includes optical elements used in magnifiers and microscopes.

Magnifying glass

#### P81-A50E [2015]

# For projection and recording of images or patterns

#### P81-A50E1 [2015]

#### For displaying images or patterns

Includes optical elements used in projectors showing images or patterns on a screen or other surface. Electrical aspects of photographic projectors for slides or cine film are covered by S06-B06A and electronic display projectors based on the use of light valves, deformable mirror arrays or lasers are covered by W04-Q01 codes.

### P81-A50E3 [2015]

#### For lithography

Covers the use of optical elements in projection of images or patterns onto light-sensitive materials, e.g. for decorative design purposes or exposure of photoresist on a semiconductor wafer prior to etching. See U11-C04E codes for full details of photolithography for semiconductor device manufacture, and especially U11-C04E1A for optical elements and systems. Optical elements for recording images in photography are covered by P81-A50E5.

#### P81-A50E5 [2015]

#### For recording images in photography

Includes optical elements used in the recording of images in a camera and also projection printing onto photographic paper. Electrical aspects of filmbased cameras and projection printing apparatus are covered by S06-B codes and optical elements for video and digital cameras by W04-M01C codes.

#### P81-A50E9 [2015]

# For other projection and recording of images or patterns

#### P81-A50G [2015]

#### **Eyesight correction and protection**

Includes optical elements used in spectacles, sunglasses and contact lenses and also implantable lenses.

### P81-A50J [2015]

#### **Light control**

Includes control of light intensity, and also phase, polarization, color and direction, e.g. in optical scanning equipment. The 'light control' here is intended to be independent from the source of light itself and based on the use of filters, diffusers, and the like. Electro-optical control of these properties is covered by V07-K codes. Direct control of the intensity of light emitted by electrical light sources themselves, e.g. by varying voltage or current, is not included and is covered by X26-C codes in general and X26-H03C in the case of LED light sources.

#### P81-A50X [2015]

Other optical system function and optical apparatus

#### P81-A99 [2015]

Other type of optical element or system

#### P81-G [2015]

# Cleaning and maintenance of optical elements, systems or apparatus

This code covers novel aspects of cleaning and maintenance of apparatus covered by P81-A codes which are also assigned as appropriate.

Lens cleaner, polish, recondition, repair, service

#### P81-M [2015]

# Manufacture of optical elements, systems or apparatus

This code covers novel aspects of manufacturing and testing of apparatus covered by P81-A codes which are also assigned as appropriate.

Moulding, mounting, polishing

### P81-T [2015]

# Constructional details of optical elements, systems or apparatus

These codes are assigned with P81-A codes to indicate the novel aspects of optical elements, systems or apparatus.

#### P81-T01 [2015]

#### Housing, casing, frame, support

Includes mounting of lens, mirror, etc.

Aperture stop, internal construction

#### P81-T02 [2015]

#### Lens positioning systems

Includes arrangements for moving lenses, e.g. for changing focus or magnification, including control aspects.

Bearing, focus ring, slide

#### P81-T03 [2015]

#### **Protective coating**

Includes coatings to prevent unwanted effects such as reflection and also to protect from scratches and the like.

Anti-reflective, bloom, magnesium fluoride

#### P81-T50 [2015]

#### **Novel constructional material**

This code is used in conjunction with other P81-T codes to indicate the use of a novel material in an optical element or system. Specific details of novel materials are represented by codes outside P81, such as L01 codes for glass compositions or section A codes for plastics materials, which are also applied as appropriate.

#### P81-T99 [2015]

# Other aspects of optical element, system or apparatus construction

#### P81-U [2015]

#### **Applications**

These codes are intended to indicate in a broad sense the field of application of the novel optical element specified by P81-A codes and optical equipment using it as specified by P81-A50 codes.

#### P81-U01 [2015]

#### **Domestic**

Includes general or non-specific domestic applications. Can be used in conjunction with other specific codes as required.

#### P81-U02 [2015]

#### Commercial

Includes general commercial applications. Can be used alone or in conjunction with other specific applications.

#### P81-U03 [2015]

**Vehicles** 

Includes land, sea, air and space vehicles.

### P81-U13 [2015]

**Pharmaceutical**; Medical

P81-U14 [2015]

Laboratory

#### P81-U30 [2015]

#### Sports, toys, entertainment and leisure

Includes sports equipment, sports stadiums, entertainment venues, leisure applications, toys and games.

#### P81-U40 [2015]

#### Industrial

Covers general or non-specific industrial applications not covered by other application codes.

# P81-U41 [2015] General functional applications

### P81-U41D [2015]

#### Illuminating; Lighting

For specific details of optical elements for use in lighting applications see Q71-T codes and X26-D01 codes.

#### P81-U99 [2015]

Other specific applications

#### P81-X [2015]

Other aspects of optics

### P82: Photographic apparatus

P82-A [2015]

# Types of systems for taking or projecting photographic images

These codes can be used with other P82 codes as required.

P82-A01 [2015]

#### Photographic camera

Includes mechanical details of cameras. For video cameras see W04-M codes.

P82-A01A [2015]

Still camera

P82-A01C [2015]

Motion picture camera

Cine camera

P82-A02 [2015]

### Photographic projection; photograph viewers

Includes mechanical details of photograph projectors or viewers.

Projector

P82-A03 [2015]

#### Photographic printing

See G05 CPI manual codes for further details.

P82-A15 [2015]

Auxiliary photographic systems/operations

P82-A15A [2015]

#### Illuminating scene

Includes techniques for lighting the scene/object such as backlighting, forelighting, using diffusers/reflectors etc. See X26 codes for novel electric lighting per se.

Reflector, diffuser, floodlight

P82-A15C [2015]

#### Sound recording/reproduction

Includes adding of sound to film. See W04 codes for audio recording/reproduction per se.

Audio

riadio

P82-A99 [2015] Other photographic systems P82-B [2015]

**Special Photographic techniques** 

P82-B02 [2015]

#### **Color photography**

Includes color photographic techniques other than exposing a color film, such as by two, four or more color separation records or sequential/simultaneous recording/reproduction.

P82-B04 [2015]

Panoramic/wide screen/extended surface photography

P82-B06 [2015]

#### High speed photography

Includes equipment for capturing images at high speed.

P82-B08 [2015]

#### **Using non-optical waves**

Includes visual representation of images captured by other medium such as X-rays or ultrasonic waves.

P82-B99 [2015]

#### Other photographic techniques

Includes trick photography.

P82-F [2015]

# Measuring, indicating, sensing, controlling, testing of photographic apparatus

Includes focus and exposure control. See P82-T for novel exposure controlling diaphragms, filters and shutters and focus controlling drive components. Also includes testing of photographic equipment.

P82-G [2015]

# Cleaning, maintenance/repair of photographic apparatus

Includes cleaning of cameras and projectors.

P82-M [2015]

Manufacture of camera and projection apparatus/components

P82-R [2015]

# Recycling of photographic apparatus/components

Includes recycling of all photographic equipment and materials.

### P82-T [2015]

# Constructional details of photographic image taking/projecting/printing apparatus

Includes camera bodies, lenses, viewfinders, film winders, projectors, printing apparatus, projection apparatus etc. See S06 for electrical details of still picture cameras and projectors and W04-M codes for video cameras.

#### P82-T01 [2015]

# Exposing; Exposure making shutters; Diaphragms

Includes color photographic techniques other than exposing a color film, such as by two, four or more color separation records or sequential/simultaneous recording/reproduction.

#### P82-T03 [2015]

#### **Viewfinders; Focusing**

Includes focusing aids, optics, lenses and their adjustment.

P82-T05 [2015]

**Bodies; Housings** 

P82-T07 [2015]

Film handling

P82-T15 [2015]

**Printers; Printing** 

See S06 codes for further details of printers.

P82-T99 [2015]

Other constructional details of photographic image taking/projection/printing apparatus

#### P83: Photographic processes/compositions

#### P83-A [2015]

# Photographic photosensitive materials and compositions

See G06 CPI manual codes for further details of novel photographic compositions, agents and materials.

#### P83-B [2015]

Film packages; Wrapping materials for light-sensitive plates, films, or papers

Includes roll films.

#### P83-D [2015]

#### **Photographic processes**

See G06 CPI manual codes for further details.

### P83-D01 [2015]

#### **Multicolor processes**

Includes direct bleach-out processes, additive processes using color or lenticular screens, subtractive color and cinematographic processes and dye-inhibition processes. Also includes color processes using color-coupling substances.

#### P83-D03 [2015]

#### **Diffusion transfer processes**

Includes processes using substances transferred by diffusion consisting of inorganic compounds or of organo-metallic compounds derived from photosensitive noble metals.

#### P83-D05 [2015]

#### Stereo-photographic processes

Includes producing 3-D images, parallaxstereograms, vectographic images and anaglyphs.

#### P83-D99 [2015]

#### Other photographic processes

Includes retouching, varnishing, pasting, mounting, drying etc.

#### P83-R [2015]

# Recycling, regeneration or replenishment of photographic processing agents

Includes regeneration or replenishment of photosensitive material and removing emulsion from waste photographic material.

# P84: Other photographic

P84-A [2015]

Types of photographic system/process

P84-A01 [2015]

### **Photomechanical**

Photomechanical production of textured or patterned surfaces.

P84-A02 [2015]

Electrographic/electrophotographic

P84-A03 [2015]

Magnetographic

P84-A05 [2015]

### **Holography**

Includes holographic processes and apparatus for producing holographs. See V07 for further holographic details.

P84-A05A [2015]

### Using light, IR or UV waves

Includes production of holograms using optical waves.

P84-A05C [2015]

### Using ultrasonic, sonic or infrasonic waves

Includes production of holograms using sound waves.

P84-A05E [2015]

### Using other waves

Includes production of holograms using other waves while producing an optical image from them.

P84-A99 [2015]

Other photographic systems

P84-G [2015]

# Cleaning, maintenance/repair of photographic systems

Includes use of modular parts to enable maintenance of photographic apparatus.

P84-M [2015]

Manufacture of photomechanical, electrographic/electrophotographic, magnetographic etc. components and materials

P84-R [2015]

# Recycling of photographic materials components

Includes collection and recycling of waste toner.

P84-T [2015]

Photographic system construction/materials

P84-T01 [2015]

# Exposed photographic material processing apparatus

Includes containers, trays, clips, frames and darkroom equipment for treating exposed photographic material. Includes liquid and gas processing apparatus, diffusion development equipment and reversal processing apparatus.

P84-T02 [2015]

# **Photomechanical production apparatus**

Includes screens and exposure apparatus, color separation. Also includes originals for photomechanical production of textured or patterned surfaces. Includes masks, reticles, pellicles and mask positioning/registration.

Mask blanks

P84-T50 [2015]

### **Novel materials**

See E codes for further chemical aspects.

P84-T50A [2015]

# Image receiving materials; Photosensitive materials for photomechanical production

Includes photosensitive materials for photomechanical production.

P84-T50D [2015]

**Developers** 

P84-T50E [2015]

**Fixing agents** 

P84-T99 [2015]
Other photographic system details

# P85: Educational, cryptographic or advertising apparatus or systems

From 2015 manual codes have been applied for general details of educational, cryptographic or advertising apparatus and systems. Where use of electrical or electronic technologies is significant please refer to the following:

- (i) W04-W codes for educational equipment and systems.
- (ii) T01, W01, W02 and W04 codes for encryption, scrambling and concealment;
- (iii) W05-E codes for advertising.

### P85-A

# Types of educational apparatus or system, timetables and perpetual calendars

[2015]

When teaching aids involve the use of models P85-A05 is also assigned. Electrical aspects of educational apparatus and systems are covered by W04-W codes. General information systems such as maps, timetables and perpetual calendars are covered by P85-A50 codes.

### P85-A01 [2015]

# Educational apparatus or systems for specific purposes

Models for demonstration and illustration are covered by P85-A05.

Cards, charts

# P85-A01A [2015]

### Teaching shapes and spatial awareness

Includes blocks, construction toys with educational aspects. Construction toys are also assigned P36-F03.

Bricks, shape sorter

### P85-A01C [2015]

# **Teaching reading or writing**

Includes aids for learning the alphabet, recognizing letters and words, and for handwriting.

Braille, lipreading

# P85-A01E [2015]

# Teaching counting, arithmetic, mathematics

Abacus, blocks, counters

### P85-A01G [2015]

# Teaching science, medicine and dentistry

Includes aids for teaching botany, biology, chemistry, physics etc. and also veterinary medicine.

Atom, core, electron, neutron, nucleus, planetarium, proton, astronomy

# P85-A01J [2015]

# **Teaching music**

Metronome, practice

# P85-A01L [2015]

**Teaching languages** 

# P85-A01N [2015]

# Teaching sports, physical education

Covers games involving physical activity. Teaching of board games, card games and the like is covered by P85-A01P. Training for sports is covered by P36-A08E which may also be assigned as necessary. Electrical aspects of sports training are covered by W04-X01A codes.

PE, swimming

# P85-A01P [2015]

### Teaching game playing

Covers teaching of board games, card games and the like. Teaching of games involving physical activity, e.g. team sports, is covered by P85-A01N.

### P85-A01X [2015]

# Other educational apparatus or systems for specific purposes

Needlework, modelling

### P85-A05 [2015]

# Models for demonstration and illustration; simulations

Includes models of buildings, towns, geographical or geological features, living creatures, machines, vehicles, etc. See P85-A01 codes also to differentiate the specific field of teaching.

Cut-away view, engine, organ

# P85-A05A [2015]

### **Simulations**

Covers simulations for demonstrating a process or effect and also training simulators. Electrical aspects of training simulators are covered by W04-W07A and simulations for demonstration purposes by W04-W07C.

# P85-A07 [2015]

# Question and answer apparatus and systems

Electrical aspects of question and answer-type educational systems are covered by W04-W01.

### P85-A50 [2015]

# **General information presenting systems**

Covers timetables, perpetual calendars, town plans etc.

# P85-A50A [2015]

### **Timetables**

Covers timetables in e.g. printed form, for use on railways or other public transport systems and the like.

# P85-A50C [2015]

### **Perpetual calendars**

Covers calendars with movable discs, wheels, and the like for indicating the current date. Clocks and time-indicating devices in general are not included and are covered by S04 codes. Calendars involving tear-off sheets are covered in P76.

# P85-A50E [2015]

# Maps, guide, town plans and public information panels

The title of this code has been changed (2018) to indicate that public information boards and panels are included in addition to maps in general, maps of an immediate area such as town plans, and guides to places of interest. Timetables, e.g. for public transport, are covered by P85-A50A. Electrical aspects of these information-presenting items are covered by W04-W09. Displays and signs for advertising and commercial purposes are covered by P85-E01 codes and by W05-E03 codes if electrical.

### P85-A99 [2015]

# Other types of educational apparatus or system

### P85-C [2015]

# Types of cryptographic system

This code is intended for general arrangements for making a sequence of symbols (such as text characters) unintelligible, including the use of mechanical or electrical means. For specific information encryption, scrambling or concealment systems based on the use of electronics and computing techniques see the following:

- (i) T01-D01 for data encryption and decryption using computing techniques;
- (ii) W01-A05 codes for secret data communication;
- (iii) W02-F05A1 and W02-F10N1 codes for scrambling and encryption of video and TV signals;
- (iv) W02-L05 for general signal scrambling, including analogue signal scrambling;
- (iv) W04-F01L codes for encryption and scrambling in video recording;
- (v) W04-G01L codes for encryption and scrambling in audio recording.

### P85-E [2015]

# Types of advertising and displaying system

Electrical aspects of advertising and displays are covered by W05-E codes. Novel electronic displays are covered by U14 codes or W05-E codes, depending on technology. P85-E codes cover advertising with some visual element and also signs and labels in general. Use of electrical displays with computing equipment is covered by T04-H codes.

### P85-E01 [2015]

# Advertising and commercial signs, price labels

### P85-E01A [2015]

### Advertising signs and displays

Includes hoardings, billboards and the like.

# P85-E01C [2015]

### **General commercial signs**

Covers signs for shops or other businesses, including information on awnings, windows, etc.

### P85-E01E [2015]

# Signs involving movement

Includes signs moved by e.g. action of the wind. Electrically-moved advertising signs are covered by W05-E03A3.

# P85-E01G [2015]

### Advertising on other articles or items

Covers advertising on items used in e.g., restaurant or bar, such as glasses, napkins, ashtrays, promotional items, etc. And also advertising

information on vehicles.

# P85-E01J [2015]

# **Advertising in printed products**

Covers advertisements in newspapers, magazines or other publications.

# P85-E01L [2015]

### **Price tags and labels**

Covers labels attached to goods and also shelf labels and the like used in stores. Labels in general are covered by P85-E05. Electrical aspects such as antitheft tags are covered by W05-B01A2 codes and novel digital marking such as bar codes or RFID tags by T04 codes.

### P85-E01X [2015]

Other aspects of advertising and commercial signs

# P85-E03 [2015]

# Display cases and stands

Covers display equipment for advertising but also for general use in e.g. museums, etc.

### P85-E05 [2015]

### Labels in general

Covers labels and identifying tags in general, but not price tags or labels which are covered by P85-E01L.

### P85-E99 [2015]

Other types of advertising or displaying system

# P85-G [2015]

Cleaning, maintenance/repair of educational, cryptographic or advertising apparatus or systems

This code is assigned with P85-A, P85-C or P85-E codes as appropriate.

# P85-M [2015]

Manufacture of educational, cryptographic or advertising apparatus or systems

This code is assigned with P85-A, P85-C or P85-E codes as appropriate.

# P85-T [2015]

Constructional details of educational, cryptographic or advertising apparatus or systems

These codes are assigned with P85-A, P85-C or P85-E codes as appropriate.

P85-T01 [2015]

Housing, casing

P85-T05 [2015]

Internal constructional details

P85-T50 [2015]

**Novel constructional material** 

P85-T99 [2015]

Other constructional details of educational, cryptographic or advertising apparatus or systems

P85-X [2015]

Other aspects of educational, cryptographic or advertising apparatus or systems

### P86: Musical instruments, acoustics

From 2015 P86 manual codes have been applied for general and mechanical details of musical instruments and acoustic systems. Analysis and synthesis of speech and other sounds by electronic or computing devices is not included and is covered by W04-V codes. Electronic musical instruments and electrical aspects of musical instruments in general are covered by W04-U codes but common features or mechanical aspects are also covered by appropriate P86 codes. Music teaching is covered by P85-A01J and when specific to a particular type of instrument an appropriate P86-A code is also assigned.

# P86-A [2015]

# Types of musical instruments or musical accessory

### P86-A01 [2015]

# Musical instruments based on air or gas flow

Includes instruments operated by gases, gas mixtures such as air, or steam.

Aerophone

# P86-A01A [2015]

### Wind instruments

Covers instruments operated by a musician blowing into them. Instruments operated by flow of air or similar from a machine or hand-operated mechanism are covered by P86-A01C codes.

# P86-A01A1 [2015]

### Reed instruments

Covers instruments employing a reed in a mouthpiece that vibrates when the player blows into or across it.

Bagpipes, bassoon, clarinet, harmonica, mouth organ, oboe, saxophone

### P86-A01A3 [2015]

### Lip vibration instruments

Covers instruments in which the player's lips vibrate in a way analogous to a reed, such as trumpets or trombones.

Cornet, euphonium, French horn, horn, labrosone, tuba

### P86-A01A5 [2015]

### Air-reed instruments

Covers instruments in which sound is produced by a player blowing across an opening, such as flutes. Mechanical reed instruments are covered by P86-A01A1

Ocarina, panpipes, recorder

### P86-A01A9 [2015]

### Other wind instruments

Whistles are coded under P86-E01C5 only.

# P86-A01C [2015]

### **Organs**

Electronic organs are covered by W04-U codes. These codes cover instruments operated by flow of e.g. air produced mechanically, such as by blowers, bellows, pumps and the like. Instruments operated by air flow directly produced by the player blowing into them are regarded as 'wind instruments' and are covered by P86-A01A codes.

# P86-A01C1 [2015]

# **Reed organs**

Includes harmoniums, accordions, and concertinas. Bagpipes are regarded as being operated by the player's exhaled air and so are covered by P86-A01A1.

# P86-A01C3 [2015]

# Pipe organs

Church organ, steam organ

# P86-A01X [2015]

# Other musical instruments based on air or gas flow

### P86-A03 [2015]

### String instruments

Covers instruments based on vibration of a resonant string, whether struck, plucked or excited by other means, such as a bow.

Chordophone

# P86-A03A [2015]

# String instruments with keyboards

Covers instruments where depression of a key actuates a mechanism that strikes or plucks strings mounted on a soundboard or similar.

# P86-A03A1 [2015]

**Pianos** 

Pianoforte

# P86-A03A9 [2015]

### Other string instruments with keyboards

Includes harpsichords. Harps are regarded as instruments in which strings are plucked directly by the player and are thus covered by P86-A03E.

# P86-A03C [2015]

# String instruments normally played using a bow

Covers cello, violin etc. Bass, double bass, viola

### P86-A03E [2015]

# String instruments played by manually strumming, plucking or hitting strings

Includes instruments carried or supported by the player and those mounted on a support or stand, the strings being plucked or strummed by a player directly, using fingers, a plectrum or a hammer.

Banjo, guitar, harp, pedal steel guitar, zither

# P86-A05 [2015]

### **Percussion-based musical instruments**

Brushes, castanets, cow bell, cymbal, drum, drumsticks, hand bell, shaker, tambourine, timpani, triangle, xylophone

### P86-A30 [2015]

# Accessories for musical instruments and musical instrument playing

Case, music stand, tuning aid, tuning fork

# P86-A99 [2015]

Other types of musical instruments

# P86-E [2015]

Acoustic systems and sound-producing devices

### P86-E01 [2015]

# **Sound-producing devices**

Covers devices intended to produce sounds other than for musical purposes, e.g. for attracting attention or warning. Novel electrical aspects of such devices are covered by W05-A02A and electroacoustic transducers in general are covered by V06-V codes.

### P86-E01A [2015]

# Sound production by physical contact or impact

Includes percussion-based sound generation.

# P86-E01A1 [2015]

Bells, gongs, other resonating bodies

### P86-E01A5 [2015]

# Sound production by non-resonant bodies in contact

Includes rattles.

### P86-E01A9 [2015]

Other sound production by physical contact or impact

### P86-E01C [2015]

Sound production by air or gas flow

# P86-E01C1 [2015]

#### **Sirens**

Includes drive by motive device and also gas flow.

### P86-E01C3 [2015]

### Horns, klaxons

Covers sound generation using a vibrating diaphragm. Mechanical aspects of vehicle horns are covered by Q14-C04 and electrical aspects by X22-B03H.

# P86-E01C5 [2015]

### Whistles

Includes whistles producing sound beyond human audible range.

Dog whistle

# P86-E01C9 [2015]

Other sound production by air or gas flow

# P86-E01X [2015]

Other sound-producing devices

# P86-E05 [2015]

# Sound transmission, modification, and damping

These codes are intended to represent transmission, modification or damping of sound in a general sense. Codes elsewhere relating to specific equipment or applications should also be considered.

### P86-E05A [2015]

### Sound transmission

Includes acoustic coupling arrangements.

# P86-E05C [2015]

#### Sound modification

Covers use of passive resonators, acoustic lenses and reflectors and the like, e.g. to re-direct sound.

# P86-E05E [2015]

# Sound damping and masking

Covers passive systems, such as acoustic damping, use of absorbing materials, etc. Electronic systems for sound damping and masking, e.g. using interference effects and anti-phase sound, are covered by W04-V07 codes.

# P86-E05X [2015]

# Other aspects of sound transmission, modification, and damping

Includes acoustic impedance matching. For electrical impedance matching in general see U25-D05.

# P86-E99 [2015]

Other aspects of acoustic systems and sound-producing devices

### P86-G [2015]

# Cleaning, maintenance/repair of musical instruments or acoustic systems

This code is assigned with P86-A or P86-E codes as appropriate.

### P86-M [2015]

# Manufacture/Pre-use treatment of musical instruments or acoustic systems

This code is assigned with P86-A or P86-E codes as appropriate.

# P86-T [2015]

### **Constructional details**

These codes are assigned with P86-A or P86-E codes as appropriate and are intended to highlight specific novel aspects of musical instruments or acoustic systems and sound-producing devices.

### P86-T01 [2015]

Constructional details of musical instruments, acoustic systems and sound-producing devices

### P86-T01A [2015]

# Constructional details of devices generating sound

Covers devices producing the actual sound, such as reeds, strings, drum skins, etc. for musical instruments and e.g. a perforated disk in the case of a pneumatic siren.

Bridge, cavity, chamber

# P86-T01C [2015]

# Constructional details of devices controlling or modifying sound

Covers novel aspects of devices and systems for controlling sound, such as keyboards, stringtensioning devices, pedals etc. and automatic playing systems in the case of instruments and e.g. sound damping or directing devices in the case of acoustic systems and sound producing devices.

### P86-T01E [2015]

# Constructional details of musical instrument bodies and acoustic device housings

Covers construction of musical instruments, acoustic systems and sound producing devices as a whole, e.g. frames, outer casing, etc.

Lid, neck, soundbox

### P86-T01X [2015]

Other constructional details of musical instruments, acoustic systems and sound-producing devices

### P86-T50 [2015]

### **Novel constructional material**

This code is assigned in conjunction with other P86-T codes to indicate the specific aspect to which the material relates. Specific details of novel materials are represented by codes outside P86, such as M27 codes for steels or section A codes for plastics materials which are also applied as appropriate.

### P86-T99 [2015]

# Other constructional details of musical instruments and acoustic systems or devices

Includes constructional details of accessories for musical instruments and musical instrument playing, for which P86-A30 is also assigned.

# P86-X [2015]

Other aspects of musical instruments or acoustic systems

# **Q1 Vehicles in General**

# Q11: Wheels, Tyres, Connections

From 2006, manual codes have been assigned for all mechanical details of vehicle wheels, tyres and connections.

### Q11-A

### Wheels; Wheel assemblies

Includes novel aspects of vehicle wheels, including emergency space saver and spare wheels. This code can also be applied when the wheel assembly as a whole is being claimed and when no specific components of the wheel assembly are novel. Wheelend assembly

### Q11-A01

# Spoked wheels

Includes wheels with separable/replaceable spokes, nipples etc, such as bicycle wheels.

### Q11-A02

### Disc wheels

Includes wheels with single disc body, e.g. cast alloy wheels (with or without cut-outs to simulate spokes), and pressed steel disc wheels.

### Q11-A03

#### Rims

# Q11-A04

### Hubs

Includes hub bearing assemblies - see also Q62-G for more detail.

### Q11-A05

### **Axles**

Includes all axle details including quick release bicycle wheel axles.

### Q11-A06

### Wheel bearings

Also see Q62-G for specific bearing types. Tapered roller bearings

### Q11-A07

### Wheel covers

Includes covers for decorative or aerodynamic purposes.

Hub cap

### Q11-A08

### **Castors**

### Q11-A15

### **Traction increasing equipment**

Includes mechanical devices for increasing friction between wheel and the ground.

### Q11-A15A

### Lugs, spikes, snow chains etc.

Includes tyres with built-in or attachable spikes or chains removably fastenable to tyres.

### Q11-A15B

# Applying traction increasing material, e.g. sand

Includes dispensing particulate material, such as sand, in front of tyre path.

### Q11-A17

### Rail engaging arrangements

Includes wheels with flanged edges for engaging rails. See Q19-R02 for vehicles usable on road/rail, and possibly Q21 for railway vehicles per se.

### Q11-A19

# Wheel-axle combinations, e.g. wheel sets

Includes overall novel wheel/axle combination, e.g. the whole rear axle/wheel assembly used on a commercial lorry (also see Q19-C02).

### Q11-A20

### Wheel nuts/fastening elements

Includes wheel nuts and bolts and anti-theft locking wheel nuts (see also Q61-A codes). Also includes quick release wheel fastening elements. Spinner, skewer

### Q11-A28

# Wheel manufacture/ assembly/disassembly apparatus

Includes equipment for manufacturing and assembling/dismantling wheels, such as metal presses and casting equipment or jigs for enabling manual building of spoked wheels. For apparatus for (de)mounting wheel onto vehicle also see Q16-A02.

### Q11-A30

### Other wheel details

### Q11-B

**Tyres** 

### Q11-B01

Tyre type

### Q11-B01A

# Inflatable tyres

Can be used to highlight the fact that the tyre construction is applicable to a pneumatic tyre.

### Q11-B01A1

Inner tubes

### Q11-B01A3

### **Emergency or restricted use tyres**

Includes tyres that can be temporarily used in a damaged or deflated condition, e.g. using additional inflatable or non-inflatable supporting elements.

# Q11-B01A3A

### **Run-flat tyres**

Includes run-flat arrangements, e.g. by enabling folding of tyre side wall (see also Q11-B05).

### Q11-B01A5

# Folding tyres

See Q19-A01 for folding bicycle tyres, and e.g. Q11-B03 for Kevlar® beads per se.

### Q11-B01H

### **Heavy duty tyres**

Includes tyres used in general heavy duty applications. Can be used in conjunction with Q19 codes to further specify the type of heavy duty vehicle involved.

# Q11-B01S

### Solid tyres

Includes solid rubber tyres and tyres with a solid, e.g. foam material, insert.

# Q11-B01X

### Other tyre types

### Q11-B02

### **Valves**

See also Q66 codes for valves per se.

### Q11-B03

### **Beads**

Includes beads and other similar ply overlap arrangements for enabling tyre to seat on and be retained in wheel rim.

### Q11-B04

### Reinforcements or ply arrangements

Includes cross ply, reinforcing cords, layers, inlays

### Q11-B05

### Tyre sidewalls

Includes grooves and rib markings or coloured inlays, e.g. white walls.

### Q11-B06

### Tread bands, patterns and anti-skid inserts

Includes tread patterns, anti-skid inserts vulcanised into tyre and wear indicators.

### Q11-B15

# **Emergency/puncture repair arrangements**

Includes emergency use accessories such as tyre sealant sprays to temporarily repair tyre until it can be properly fixed/changed.

### Q11-B20

# Tyre manufacture, mounting and inspection

Includes all mechanical aspects of tyre manufacture such as vulcanising, or equipment for mounting of tyres on wheels (also see Q16-A02) or inspecting tyres. Also includes equipment for balancing wheels and associated balance weights (see also S02-J05 for static or dynamic balance testing per se).

# Q11-B30

### Other tyre details

Includes wheel tape used to cover spoke nipples to protect inner tube (see also Q19-A for bicycles). Also includes novel tyre materials and rubber compositions (see also relevant polymer section A indexing).

### Q11-C

### **Connections**

Includes assemblies between e.g. towing and towed vehicles.

# Q11-C01

# **Traction couplings or hitches**

Includes ball and socket hitches or bolt/shackle type hitches mounted on **towing** vehicle. For power take offs (PTOs) per se, e.g. used on agricultural tractors, see also Q19-G and Q13-C instead. Also includes fifth wheel traction couplings used on articulated lorries (see also Q19-C02). For electrical aspects such as 7pin electrics, see X22-X01A and V04-D codes instead.

Tractor-trailer

# Q11-C02

### Draw gear or towing devices

Includes e.g. V or Y shaped tubular frameworks and hitch arrangements forming part of **towed** vehicle. Also includes towing chains or ropes, and safety arrangements such as stabiliser bars fixed to towed vehicle for limiting sway of e.g. towed trailer/caravan.

# Q11-C05

# Fittings to facilitate pushing

### Q11-C07

# **Gangways for coupled vehicles**

Includes removable walkways between vehicles, e.g. between lorry cab and trailer.

# Q11-C09

# Other connection details

Includes damping arrangements for limiting vibration etc. between towing vehicle and towed assembly/trailer.

# Q12: Suspension

From 2006 Q12 covers all mechanical details of vehicle suspension systems. Prior to the introduction of Q12 manual codes in 2006, the Q12 class covered vehicle suspensions, heating, doors and screens.

### Q12-A

# Rigid suspensions; Rigid connection between axle and frame

### Q12-B

# **Resilient suspensions**

Includes independent resilient suspension for single wheels and resilient suspension for wheel sets or axles with inter-related movement, e.g. live axles.

#### Q12-B01

### **Spring arrangements**

Q12-B01A

Leaf

Q12-B01B

Coil

### Q12-B01C

**Torsion bar springs** 

### Q12-B01D

# Rubber springs

Includes elastomers.

### Q12-B01E

### Fluid springs

Includes hydraulic and air springs.

# Q12-B01F

### Combination of different spring types

Includes suspensions e.g. employing both coil springs and air springs.

# Q12-B02

### Vibration dampers; Shock absorbers

Damper

### Q12-B02A

### Mechanical damper

Includes coil springs used to provide a damping function.

### Q12-B02B

### Fluid damper

Includes hydraulic, pneumatic and quasi-fluid, i.e. having powdered medium, dampers.

### Q12-B02C

[2008]

### **Torsion damper**

Includes torsional damping arrangements.

### Q12-B02D

[2008]

### Rubber damper

Includes elastic material, e.g. rubber or elastomer dampers.

### Q12-B03

### Spring/damper combinations

Includes coil-over dampers. This code can be used in conjunction with other Q12-B codes to highlight the type of springs and dampers being used. Racing car. sports car

### Q12-B04

# Spring/damper characteristic adjustment; Vehicle ride height control

Includes control of air pressure within air springs. Also includes arrangements for adjusting caster/camber and toe-in/toe-out of vehicle wheels (see also Q12-B07 for suspension adjustment linkages per se).

Height control

### Q12-B06

### **Mountings; Brackets**

Includes suspension mounting arrangements such as bushes and brackets.

Nylon, poly, bush

### Q12-B07

### Suspension connections/linkages

Includes Panhard rods, Watt linkages, trailing arms, wishbones etc. Also includes upper and lower ball joints.

Double wishbones, outboard, inboard

### Q12-B09

### Roll/stability control arrangements

Includes mechanical anti-roll bars per se. *Stabiliser* 

### Q12-B15

### **Lubrication arrangements**

Oil, grease, nipple

# Q12-B16 [2022]

# Covers and protection for springs, dampers and suspension parts

Includes spring or shock covers for dust or weather protection.

# Q12-X

Other suspension details

# Q13: Powertrain/transmission, systems and their control

From 2006 Q13 covers all mechanical details of vehicle powertrains, transmission systems and their control. Prior to the introduction of Q13 manual codes in 2006, the Q13 class covered vehicle transmissions and controls, including propulsion unit mounting arrangements and fuel tanks.

### Q13-A

# Powertrain/Transmission systems and their control

For electrical aspects of transmission systems used in electric vehicles or motor vehicles, respectively see X21-A02A and X22-G codes only.

### Q13-A01

### **Transmission type**

### Q13-A01A

### **Automatic transmission**

Includes transmissions where gears are changed under load, so that power continues to be transmitted to drive wheels while shifting. Includes sun and planet gears, planet carriers etc.

### Q13-A01A1

### **Double clutch transmission**

Includes transmissions using two multiplate clutches arranged on drive side with next gear being preselected in transmission unit not currently transmitting power.

### Q13-A01C

### Continuously variable transmission (CVT)

Includes e.g. mechanical belt wrap transmissions. *Toroidal transmission* 

### Q13-A01E

### Semi-automatic

Includes manual transmissions where clutch is electronically disengaged during gear shifting, avoiding the need for a driver's clutch pedal. *Paddleshift, clutchless* 

### Q13-A01M

#### Manual transmission

Includes gearing and synchronisers, e.g. used to allow collar and gear to make frictional contact before dog teeth make contact to avoid the need for double declutching.

Synchromesh

### Q13-A01X

### Other transmission types

Includes derailleur type transmission assemblies used on bicycles (see also Q19-A). Also includes general hydrostatic transmission system (see Q13-A02 instead for hydraulic torque converters).

### Q13-A02

### **Torque converter**

Includes fluid coupling type torque converters used in multi-speed and automatic transmissions and lockup clutches used to lock the two halves of the converter together to eliminate slippage when the converter is up to speed. Also see Q13-A01A for automatic transmissions per se.

Hydrodynamic torque converter

### Q13-A03

### Clutch

Includes both wet and dry plate friction clutches. Also includes mechanical lock-up clutches used in e.g. torque converters (see also Q13-A02). Also includes clutch release bearings (see also Q62-G codes) and clutch pressure plates. Also includes flywheels (see also Q63-E02B) including dual mass flywheels prior to 2012. From 2012 flywheels are transferred to Q13-A04. Also see Q17-N for vibration reduction per se.

# Q13-A04 Flywheels

# [2012]

Includes mechanical details of all flywheels including dual mass flywheels (see also Q63-E02B). For vibration reduction per se see Q17-N.

### Q13-A05

### Retarder

Includes hydrodynamic retarders, including primary retarders fitted on drive input side, e.g. for low speed braking of buses, and secondary retarders fitted on drive output side, e.g. for higher speed or downhill braking of trucks.

### Q13-A07

#### **Drive shafts**

Includes prop shafts and half shafts. Also includes constant velocity joints and other connections (see also Q63-A codes).

CV joint, universal joint

### Q13-A09

### **Differentials**

Includes open and limited slip differentials (See Q13-A11 for 4WD diff locks). See also Q13-A11 for mechanical Torsen® differentials or viscous couplings used in all wheel drive off-road vehicles. LSD, open, diff, plate, Torsen®, viscous coupling, final drive unit, bevel gears

### Q13-A11

### All wheel drive

Includes both permanent and disengageable all wheel drive and four wheel drive systems. Includes viscous couplings, transfer cases and lockable differentials (see also Q13-A09). For electrical aspects of four or all wheel drive systems see X22-G05 instead, and for systems using intelligent brake application see X22-C02 codes.

AWD, 4WD, four-wheel drive, all-terrain, transfer case, Torsen (RTM) lock, viscous coupling, high-low range

### Q13-A15

### **Cranks**

Pedal arm

### Q13-A16

### **Pedals**

SPD, clipless

# Q13-A17 [2008]

# **Chainrings and sprockets**

Includes toothed chainrings and sprockets e.g. for bicycle (see also Q19-A).

### Q13-A18

### Chains/belts

Includes endless chains and belts.

### Q13-A20

# **Lubrication arrangements**

Includes oil seals and drain plugs e.g. for gearboxes or differentials.

# Q13-A22

### **Cooling arrangements**

Includes transmission oil coolers.

# Q13-A24 [2007]

### Gearing

Includes mechanical aspects of transmission gearing and gearboxes. Also covers gear locking or disabling mechanisms, e.g. for parking (also see Q18-A01P for parking brakes). See Q64-C for details of gearing in general.

Parking gear arrangements

# Q13-A26 [2008]

### **Mountings**

Includes gearbox, differential, drive train mounting arrangements and transmission noise control arrangements (see also Q17-N for noise reduction in general).

Bracket, rubber, bush

### Q13-A30

### Other transmission hardware

### Q13-B

# Powertrain/Transmission control arrangements

Includes gear levers per se and gear knobs. Also includes clutch control levers e.g. used on motorcycle (see also Q19-B) and mechanical/hydraulic clutch activation arrangements and clutch pedals.

Control

### Q13-C

# Auxiliary drives, e.g. from PTO, driven wheel

Includes power take-offs used on e.g. agricultural tractors (see also Q19-G). For mechanical aspects of hitches per se, see Q11-C01.

# Q13-X

# Other transmission details

Includes transaxles, i.e. where gearbox and differential etc. are combined into one unit.

#### O14: Vehicle Accessories

From 2006 Q14 covers all mechanical vehicle accessories. See X22-J instead for electrical vehicle accessories. Prior to the introduction of Q14 manual codes in 2006, the Q14 class covered electric propulsion and seating.

### Q14-A

**Seats: Saddles** 

Q14-A01 [2007]

### **Child seats**

Includes removable child seats, and child seats and booster cushions that are integral with vehicle seats. *ISOFIX* 

### O14-B

**Beds** 

### Q14-C

### **Safety devices**

For electrical aspects, see X22-J11 for general passenger safety devices.

### Q14-C01

### Safety belts; Body harnesses

See X22-J03B codes only for electrical aspects of seat belts.

Seatbelt

### Q14-C02

### Inflatable occupant restraints

Includes inflatable airbags, knee bolsters and side/curtain airbags. See X22-J07 only for electrical aspects of airbags.

SRS

### Q14-C02A [2008]

# For protecting specific occupant

The codes below are used to highlight whether a specific occupant is being protected. For e.g. curtain airbags designed to protect all vehicle occupants then no Q14-C02A codes need be applied.

Q14-C02A1 [2008]

For protecting driver

Q14-C02A2 [2008]

For protecting front seat passenger

Q14-C02A3 [2008]

For protecting rear seat passenger

Q14-C02C [2008]

### Specific inflatable restraint types

These codes can be applied to highlight specific types of inflatable occupant restraint.

Q14-C02C1 [2008]

Inflatable knee bolster

Q14-C02C2 [2008]

Side/curtain airbag

Q14-C02C3 [2008]

Dashboard/steering wheel mounted airbag

Q14-C02C4 [2008]

**Roof mounted airbag** 

### Q14-C03

### Visual signalling, e.g. reflectors

Includes optical signalling devices such as reflectors and e.g. posts mounted on bumper to highlight corner of vehicle for assisting parking or collision prevention. For reflectors built into vehicle light see X22-B and X26-D01A codes only.

### Q14-C04

# Audible signalling, e.g. horns

Includes mechanical devices only. See X22-B03H and W05 codes for electrical aspects of vehicle horns.

### Q14-C05

### Portable emergency signal devices

For portable illuminated signalling devices see X22-B03E and T07-X and possibly X26 or W05 codes only.

Warning triangle

### Q14-C06

### Crash bars, crash pads

See also Q19-A or Q19-B for bicycles and motorcycles respectively. Also includes side impact protection bars (also see Q17-A06 for doors). Includes flip-up rollover bars used in cabriolet vehicles (also see Q19-S).

### Q14-C07

### **Stabilisers**

Includes stabilisers used when learning to ride a bicycle (see also Q19-A). Also includes stabilisers and grounding members for construction vehicles (see also Q19-E). For suspension system stabiliser/anti-roll bars see Q12-B09 instead.

### Q14-C15

### **Pedestrian safety systems**

includes passive systems such as pedestrian friendly bonnets or deformable bumpers (see also Q17-A12).

### Q14-C16

# [2008]

# Vehicle specific clothing

Can be used for all mechanical aspects of vehicle specific clothing, including bicycle and motorcycle helmets, safety shoes and jackets with protective inserts.

### Q14-C20

# Other safety devices

Includes collision responsive collapsible steering columns (see also Q18-B01D5).

### Q14-D

# Anti-glare equipment; Sun shades; Visors; Curtains; Screens

For electrical aspects such as electrochromic window glass, see X22-X05.

# Q14-E

### Mirrors

See X22-J04 only for electrical aspects of vehicle mirrors.

Rear-view

#### Q14-F

### Luggage/item storage arrangements

### Q14-F01

### Interior compartments/fittings

Includes door pockets, cubby holes, cup holders etc. For kitchen cabinets etc, see Q14-X instead. AC Vent cup holder, fold-down tray

### Q14-F02

# Exterior fittings/racks e.g. for luggage/sports equipment

Includes panniers and cycle carriers. Also includes removable racks for carrying other equipment such as canoes. See Q15 codes for vehicles specifically designed to carry specific loads.

### 014-G

### **Sidecars**; Forecars

Also see Q19-B for motorcycles per se. *Motorcycle* 

### Q14-H

# **Anti-theft arrangements**

Includes steering column lock, steering wheel lock, locking wheel nuts (see also Q11-A15) and other mechanical anti-theft assemblies.

### Q14-H01

### Locks

Includes vehicle door lock assemblies. For electrical aspects of vehicle door locks see X22-D01 codes.

### Q14-I

### Steps, e.g. running boards

Includes lift arrangements, e.g. for disabled person. For disabled person aids used on disabled person-specific vehicles such as invalid carriages, see Q15-B13 also.

# Q14-J

### **Stands**

Includes on and off-board supports and holders and parking cycles (see also Q19-A). See X22-J20 for electrical details of cycle stands and supports for parking purposes, as well as T05 codes for parking fee charging details.

### Q14-K

### Mudguards; Chain guards; Weather guards

Includes bicycle mudguards (see also Q19-A) and waterproof car covers used when vehicle is parked to protect the whole vehicle or e.g. windscreen from frost.

### Q14-L

### Sanitation devices

Includes toilets and washing facilities. Also includes sewage and waste storage.

### Q14-M

# Heating/ventilating/air-conditioning systems

Includes mechanical aspects such as ducting and air directing nozzles. For electrical aspects see X22-J02 codes.

### Q14-N

# Windscreen wipers/washers

Includes all aspects of windscreen/window cleaning such as windscreen wiper blades, screen washers, windscreen scraper/sponge etc. For electrical aspects of vehicle windscreen wipers/washers see X22-J01.

### Q14-P

[2012]

### **Footrests**

Includes foot rest for supporting passenger's/driver's feet.

# Q14-R

[2013]

# Vehicle license plates

Includes mechanical details of vehicle number plates. See Q14-C03 also for novel reflectors and X22-B05 for illuminated number plates.

### Q14-T

[2024]

### Vehicle cabin equipment/furniture

Includes furniture such as desks, tables, stands etc. See Q14-A and Q14-B respectively for chairs and beds. Includes furniture that is reconfigurable for different uses such as office work or entertainment. See X22-J12 and X22-J13 for electrical office and entertainment devices per se. For kitchen and sanitation equipment see Q14-X.

Laptop stand

# Q14-X

### Other vehicle accessories

Includes removable aftermarket car mats. See Q17-A10 instead for permanent fixings and fixed interior trim/carpets. Also includes kitchen equipment used in caravan or camper van (see also Q19-F01 and Q19-F02 respectively).

Kitchen; kitchen sinks/worktops/equipment storage; cooker

# Q15: Transporting Special Loads

From 2006 manual codes have been applied to cover all mechanical arrangements for transporting special loads. Prior to 2006, the Q15 class covered these aspects.

### Q15-A

Vehicles for transporting special loads and modified to facilitate loading/unloading/consolidating

### Q15-A01

# Using tipping movement of load supporting surface

Includes dump trucks and tipper lorries (see also Q19-E for construction vehicles per se).

### Q15-A02

### Using endless chains and belts

Includes use of cargo (un)loading conveyor belts.

### Q15-A03

### **Using screw conveyors**

Includes used of screw conveyors e.g. to unload particulate material.

### Q15-A04

### **Using loading ramp**

Includes use of cargo bed that can be raised to an inclined position to assist unloading.

# Q15-A05

Using loading platform

### Q15-A06

**Using cranes** 

#### Q15-A07

**Using rollers** 

### Q15-A08

# Using vibrators or fluid in direct contact with load

See also V06-D for vibration generators, and X22 for electrical aspects of cargo handling arrangements.

### Q15-A15

# Other loading/unloading arrangements

### Q15-B

### Vehicle adapted to transport special loads

Also see Q19-C codes for further vehicle applications, e.g. Q19-C for commercial vehicles per se.

### Q15-B01

### For transporting prefabricated buildings

Includes vehicles or trailers specifically for transporting mobile homes.

### Q15-B02

# For transporting money or other valuables

Includes armoured cars.

### Q15-B03

# For transporting reels

Includes vehicle for transporting large cable or wire drums.

### Q15-B04

### For transporting animals/meat

Includes lorries or trailers for transporting live animals such as pigs, sheep or cows, or processed meat.

### Q15-B05

# For transporting refrigerated goods

Includes refrigerated lorries (see also Q19-C02). See also X27 for refrigeration systems per se.

### Q15-B06

# For transporting bottles

### Q15-B07

### Vehicle/crane transporter

Includes car transporter lorries.

# Q15-B08

### Tanker vehicles

Includes tanker lorries carrying fluids such as petrol, milk or chemicals.

### Q15-B09

# **Spraying vehicles**

### Q15-B10

# Vehicles with living accommodation

For caravans and mobile homes or camper vans per se, see Q19-F01 and Q19-F02 codes respectively.

# Q15-B11

# For transporting mixed concrete

Also see Q19-E for construction vehicles per se. *Concrete mixer* 

### Q15-B12

### For carrying long loads

# Q15-B13

# For transporting persons

Includes wheelchair lifting arrangements and other vehicle fittings specifically designed to adapt vehicle for solely transporting disabled persons, e.g. invalid carriages. For disabled person aids/accessories such as wheelchair lifts used on conventional vehicles see Q14-I instead. See Q19-H03 for ambulances per se. Electrical aspects of e.g. disabled person aids can be coded in X22-X and S05-K codes.

### Q15-B30

### Other vehicle adaptations/modifications

Includes vehicles specifically designed to carry other loads such as gas tanks/cylinders.

### Q15-C

# **On-board weighing arrangements**

Also see S02-D codes for weighing per se, and X22-X06K for electrical on-board vehicle weighing arrangements.

# Q15-D

### Securing of loads

Includes novel straps and tie-down assemblies for specific loads. Includes tarpaulins for covering lorry trailers (see also Q19-C02 and Q19-J) to prevent load from spilling.

### Q15-X

Other vehicles predominantly for carrying specific loads

# Q16: Vehicle servicing, maintenance, cleaning equipment, Vehicle design and manufacture

From 2006 Q16 covers all mechanical details of vehicle servicing, maintenance and cleaning equipment as well as vehicle design and manufacture. Prior to the introduction of Q16 manual codes in 2006, the Q16 class covered vehicle lighting and signalling. See X22-B codes for electrical details of lighting and signalling, and Q14-C03 and Q14-C04 codes for mechanical details of vehicle signalling. When a more specific code exists elsewhere, then Q16 codes are not required. For example, a wheel manufacturing apparatus can be adequately covered in Q11-A28 and does not require the application of a Q16-D code.

### Q16-A

# Vehicle servicing/maintenance/cleaning equipment

### Q16-A01

### Vehicle cleaning apparatus

See X25-H09C for electrical aspects of car washers.

### Q16-A02

# Servicing/repairing equipment

Includes all equipment/methods for servicing, maintaining and repairing vehicles. For electrical aspects of vehicle servicing equipment, see X22-X16. For off-board wheel balancer see S02-J codes and Q11-B20. Includes mechanical aspects of oil change/reconditioning apparatus and on-board systems that burn dirty oil in combustion chamber and replenish engine with clean oil. For electrical aspects see X22-A16.

### Q16-A03

# Vehicle supporting/lifting/manoeuvring apparatus

See X25-F05 codes for electrical aspects of e.g. vehicle engine hoists or drive-on ramps.

Axle stands, jack

### Q16-D

# Vehicle design/manufacture/assembly

This code is used to highlight a vehicle manufacturing aspect that cannot be covered elsewhere. For vehicle tyre manufacture see Q11-B20 instead. See T01 codes for electrical CAD/CAM systems.

# Q16-D01 [2007]

# Vehicle manufacture/assembly

See X25-X14 only for electrical aspects of industrial manufacturing/assembly equipment, and X25-F01 codes for e.g. conveyors per se.

### Q16-D01A

[2007]

# **Production line assembly equipment**

### Q16-D09

[2007]

### Vehicle design

See T01 codes for electrical CAD/CAM systems.

### Q16-R

# Vehicle salvaging; recycling

See X25-W04 for electrical aspects of vehicle/material recycling.

### Q16-X

Other vehicle servicing/manufacturing equipment not provided for

# Q17: Vehicle construction, Fittings, Propulsion arrangements

From 2006 Q17 covers all mechanical details of vehicle construction, fittings and propulsion arrangements. Prior to the introduction of Q17 manual codes in 2006, the Q17 class covered vehicle parts and fittings as well as servicing. See Q16-A02 instead of mechanical aspects of vehicle servicing or X22-X16 and X22-A16 for electrical aspects of vehicle/engine servicing. For mechanical details of vehicle engines also see Q51 codes.

### Q17-A

### Vehicle construction

### Q17-A01

# Under structures; Chassis; Subframe; Connections

Includes tubular spaceframe constructions. Also includes passenger protection arrangements such as crumple zones built into the chassis.

#### Q17-A02

# Superstructures; Superstructure sub units and connections

Includes side panels, door pillars, fixed roofs, floors etc.

### Q17-A03

# **Combined superstructure and frame; Monocoque**

Includes monocoques used in racing cars (see also Q19-F03).

# Q17-A04

### **Cycle frames**

Includes frames and forks used in cycles and motorcycles. Also See Q19-A for cycles, Q19-B for motorcycles and Q12 codes for novel details of suspension forks or rear suspension units. Also includes foldable bicycle frames.

Electric bike

# Q17-A05

### Streamlining arrangements

Includes spoilers and other valances or wind deflectors. For electrical aspects of exterior fittings such as speed responsive spoilers, see X22-X05 only.

### Q17-A06

### Doors; bonnets; tailgates

Includes mechanical aspects of openings such as doors, boots and bonnets. Gas struts are also coded in Q63-E01D for fluid springs. For electrical aspects such as electric sliding doors or electric door locks, instead see X22-X05 and X22-D01 codes respectively. Also includes side impact beams (see also Q14-C06 for crash bars per se).

### Q17-A07

### Windows

Includes window glass per se and mechanical winders for raising and lowering windows. See X22-H codes only for electrical aspects of power windows.

Windshield, windscreen

### Q17-A08

# Sunroof; Removable roof panels; Convertible soft top roof

For electrical aspects see X22-J08 only. Targa top, roadster

### Q17-A09

# **Sealing arrangements**

Includes rubber seals and other water-proofing arrangements.

Drainage channel, sealing strip

### Q17-A10

### **Body finishing arrangements**

Includes decorative trim elements such as external rubbing strips, all interior trim, and liners and covers for load compartments such as pick-up truck load beds. For car weatherproof covers used when vehicle is parked see Q14-K instead.

### Q17-A11

### **Dashboard: Instrumentation**

Includes plastic dashboard mouldings, mountings and clips. See X22-E only for electrical aspects of vehicle dashboards/instrumentation, and S02 codes for dials/displays.

### Q17-A12

### **Exterior fittings; Bumpers**

Includes bullbars and A-frames mounted on front of off-road vehicle.

### Q17-A13

# Spare wheel stowing, holding or mounting arrangements

### Q17-A14

# **Endless track arrangements**

Includes e.g. tank and bulldozer Caterpillar (RTM) tracks (see also Q19-D and Q19-E codes for military and construction vehicles per se). Also see Q19-X for unspecified type tracked vehicles.

### Q17-A15

### Air cushion vehicle equipment

See also Q19-R01 for air cushion vehicles per se. Includes inflatable skirts. Also see Q24 codes for hovercraft per se.

Hovercraft

### Q17-A20

# Other vehicle constructions/fittings

### Q17-E

### **Propulsion arrangements**

This code can be applied to highlight motor vehicle engine/motor application, especially novel internal details of internal combustion engines such as pistons (Q51-A03B), crankshafts (Q51-A03E) etc., though Q51 codes are the primary codes used to highlight novel internal combustion engines details per se. For novel engine parts that bolt onto the engine such as exhaust systems and intake manifolds see Q17-E15 instead. For electrical aspects of vehicle engines see X22-A codes only. For mechanical details of electric vehicles also see Q19-P and for electric motors used to propel electric/hybrid vehicles see X21-A07.

# Q17-E01

### **Engine/motor mounting arrangements**

Includes mechanical engine mountings (see also Q51-X) or motor mountings (see also X11-J07\*). Mechanical vibration reduction mountings can also be coded in Q17-N. For electrically controlled vibration reducing engine mountings see X22-A12 only.

Bush

### Q17-E02

### **Engine/motor cooling arrangements**

Includes radiators per se. For electrical aspects of engine cooling, such as electric water pumps, see X22-A10 only. For electric motor cooling see X11-J06\* as well as X21-A07 for electric vehicle motors per se.

Water, cooling, antifreeze

### Q17-E03

### **Engine/motor lubricating arrangements**

Includes e.g. sumps and oil pick up pipes. See X22-A09 for electrical IC engine oil pumps etc. See X11-J07A for lubricating motor bearings.

### Q17-E04

# **Fuel supply arrangements; Fuel tanks**

Includes tanks for storing petrol, diesel, hydrogen etc. For electrical fuel supply arrangements see X22-A02 codes and X22-A03A codes for corresponding control details.

Fuel, tank, carburettor

### Q17-E05

### **Propulsion unit control arrangements**

Includes e.g. throttle cables, accelerator pedals, hand controls etc. For electrical aspects such as electronic throttle controls and electric pedal details see X22-A03B and X22-X12 codes instead.

Control

### Q17-E09 [2009]

### **Exhaust systems**

Includes novel primaries, collectors and silencers of motor vehicle exhaust systems. See also Q51-J codes for IC engine exhausts per se. See X22-A07 for electrical aspects of vehicle exhaust systems.

### Q17-E15

### Other propulsion details

Includes engine heating/warming arrangements (see also Q51-L), e.g. using diverted exhaust gas. From 2009 novel mechanical aspects of vehicle exhaust systems have been transferred to Q51-E09.

### Q17-N

# Noise/Vibration/Harshness reduction arrangements

Includes all mechanical aspects associated with reducing noise, vibration and harshness within vehicle, such as use of sound deadening materials. This can be used in conjunction with other Q codes as appropriate, e.g. with Q12 for suspension based NVH reduction. For electrical NVH aspects see the relevant X22 codes such as X22-G03N for transmission based NVH reduction, X22-X08 for general passenger compartment noise reduction and X22-A12 for engine noise/vibration reduction. See Q51-J01 instead for vehicle exhaust silencers.

# Q17-X

Other vehicle construction; fittings, Propulsion arrangements not provided for

# Q18: Brake systems; Steering systems; Control

From 2006 Q18 covers all mechanical details of vehicle brake and steering systems and their control. Prior to the introduction of Q18 manual codes in 2006, the Q18 class only covered brake control systems. See X22-C02/X22-C05 codes for electrical details of vehicle braking and steering systems.

### Q18-A

# **Braking systems; Control**

For electrical aspects of braking systems, see X22-C02 codes only.

### Q18-A01

# **Braking system components**

These codes are applied to highlight specific novel components of the braking system, such as novel brake discs per se (Q18-A01A). If the braking system as a whole is novel, rather than a specific individual part of it, then apply Q18-A03 codes instead, e.g. Q18-A03A for novel disc brake assemblies.

### Q18-A01A

#### Discs

Includes novel brake discs per se.

### Q18-A01B

### Drums

Includes novel brake drums per se.

### Q18-A01C

### Pads and shoes

Includes novel brake pads and shoes and their materials.

### Q18-A01D

### **Callipers**

Includes novel hydraulic brake callipers and mechanical cable operated callipers.

4-pot, V, side-pull, cantilever

### Q18-A01E

### Cylinders/reservoirs, e.g. master cylinder

### Q18-A01F

#### **Valves**

### Q18-A01G

### **Brake force control**

Includes brake bias valves (also see Q18-A01E). Includes all systems and methods for adjusting braking force. See X22-C02C for electrical brake pressure control systems.

### Q18-A01H

### [2013]

### **General brake hydraulics**

Includes general hydraulic aspects of vehicle brakes such as brake pipes, hoses, hydraulic lines, clips etc.

### Q18-A01J

### [2007]

### Air brakes

Includes e.g. air compressor arrangements for compressing air used in brakes of heavy vehicle such as truck (see also Q19-C02). For novel reciprocating air compressors see also Q55-A.

### Q18-A01P

### [2007]

### **Parking brakes**

Includes mechanical details of hand brakes or foot actuated parking brakes. See also Q18-A07 codes for novel details of the parking brake actuating arrangement per se. Also includes parking brakes acting by locking vehicle transmission/drive (see also Q13-A24).

### Q18-A01X

# Other brake system components

# Q18-A03

#### **Brake assemblies**

These codes are only applied when the brake system as a whole is novel. For individual novel brake system components such as discs or callipers see the relevant Q18-A01 codes only.

### Q18-A03A

### Disc brake assemblies

### Q18-A03B

### **Drum brake assemblies**

# Q18-A03C

# Brake assemblies with braking member acting on periphery of drum or wheel rim

Includes bicycle cantilever brakes (see also Q19-A).

### Q18-A03P

# Brake systems controlled by backpedalling

Includes hub brakes and brakes built into bicycle (see also Q19-A) transmission utilising e.g. disks, drums, contacting coaxial cones, or expanding brake bushings, that are actuated upon backpedalling, See Q63-B05 for freewheels and freewheel clutches.

### Q18-A03X

# Other brake assemblies

### Q18-A05

# **Brake cooling arrangements**

### Q18-A07

# **Brake action initiating devices**

Includes mechanical driver actuated devices. For electrical aspects of brake actuation devices see X22-X12 and X22-C02 codes.

### Q18-A07A

#### Foot control

Includes brake pedal per se and after-market alloy drilled pedal pads or rubber covers. See X22-X12 only for electrical aspects of brake pedals. Foot pedal

### Q18-A07B

### Hand control (e.g. brake lever)

Includes brake levers (also see Q19-A for bicycles and Q19-B for motorcycles).

### Q18-A07C

### **Automatic brake initiation**

For electrical aspects of automatic brake initiation see X22-C02D codes only.

# Q18-A10

### Portable wheel chocks

Includes portable chocks e.g. for preventing vehicle from moving during servicing or wheel changing.

### Q18-A15

### **Brake safety devices; Monitoring**

Includes mechanical aspects of e.g. brake safety such as brake pad wear indicators (see also Q18-A01C).

### Q18-A30

### Other brake systems

Includes deployable braking parachutes. Also includes exhaust braking, e.g. used on dieselengined trucks (see also Q19-C02 and Q51-D03) for sustained slowing down long hills, to prevent overheating of mechanical friction brakes (also see Q51-J07 for exhaust systems per se).

### Q18-B

### Steering systems; Control

For electrical aspects of steering systems, see X22-C05 codes only.

### Q18-B01

### Steering controls

For electrical aspects of steering wheels, see X22-C05C codes only.

### Q18-B01A

# Hand wheels; Steering wheel

Includes steering wheels per se and covering elements. See Also Q14-C02 for steering wheel mounted airbags.

### Q18-B01B

### **Hand levers**

### Q18-B01C

### Handlebars; Grips; Stems

Includes handlebars, grips, stems, bar-ends etc. (also see Q19-A for bicycles and Q19-B for motorcycles per se).

### Q18-B01D

### Steering column

Includes column per se.

### Q18-B01D1

# Rake/reach adjustment mechanisms

Includes telescopic and tiltable steering columns to enable adjustment of driving position.

### Q18-B01D3

### Clamps

Includes steering column mounting clamps.

# Q18-B01D5

### [2008]

### Collapsible steering column

Includes steering columns designed to collapse during vehicle collision for safety purposes (see also Q14-C20 for driver safety).

### Q18-B01X

### Other steering controls

### Q18-B02

# Steering gears/racks

Includes steering racks and associated pinion gears.

### Q18-B02A

# **Mechanical type**

Includes steering arrangements utilising a mechanical rack/gear arrangement. If hydraulic power assistance is also used see Q18-B06C as well.

# Q18-B02B

### **Hydraulic type**

Includes systems using hydraulic piston/cylinder assemblies instead of a mechanical rack arrangement to displace steering arms. Also see Q18-B06C for hydraulic power steering.

### Q18-B03

# Steering linkages; Stub axles or their mounting

Includes universal joints, e.g. for interconnecting upper and lower steering columns, and tie rod ends.

### Q18-B06

# Power assisted steering systems

For electrical power assisted steering systems see X22-C05A codes only.

### Q18-B06A

# Mechanical, e.g. using power take-off

### Q18-B06C

### Fluid

Includes hydraulic power assistance.

### Q18-B07

# **Automatic steering control arrangements**

For electrical automatic steering systems see X22-C05B only.

# Q18-B09

# Other deflectable wheel steering apparatus

Includes passive four wheel steering (4WS) systems (see X22-C05A1 only for electrical 4WS systems).

### Q18-B12

# Steering non-deflectable wheels, i.e. endless tracks

Includes steering of tracked vehicles. (also see Q19-D for military tanks and Q19-E for bulldozers).

### Q18-B15

# Other steering arrangements not provided for

Includes other steering devices such as steerable skis for snow mobiles (see also Q19-F04).

# Q19: Vehicle applications

From 2006 Q19 covers vehicle applications. Prior to the introduction of Q19 manual codes in 2006, the Q19 class only covered air-cushion vehicles. From 2006, see Q19-R01 and Q24-P10 for air-cushion vehicles such as hovercraft.

### Q19-A

# **Cycles**

Includes bicycles, unicycles, tricycles, tandems, recumbent cycles. For electrical aspects or accessories for bicycles, see X22-P01 only.

### Q19-B

# **Motorcycles; Scooters; Mopeds**

See X22-P02 only for electrical aspects of motorcycles.

# Q19-C

### **Commercial vehicles**

See X22-P05 codes only for electrical aspects of commercial vehicles.

### Q19-C01

### **Bus/Coach**

See X22-P05A for electrical aspects of buses and coaches.

### Q19-C02

### Lorry/Truck

Includes tractor-trailer over-the-highway vehicles. See X22-P05B for electrical aspects of lorries. Articulated lorry, HGV

### Q19-C03

### Taxi

See X22-P05C for electrical aspects of taxis.

### Q19-C04

### Refuse collecting vehicle

See X22-P05X for electrical aspects of dust carts.

### Q19-C05

# Snow removing vehicle; Snow plough; Road cleaning vehicles

See X25-U05 for electrical aspects of road cleaning and X22-P05X e.g. for snow ploughs.

Road sweeper

### Q19-C06

### Forklift truck

See X25-F05A and X21-A01B or X22-P05F for electrical aspects of forklift trucks.

### Q19-C07

### Hearse

### Q19-C09

### Other commercial vehicles

Includes milk floats, pick-up trucks and commercial vans.

### Q19-D

# Military vehicles

Includes tanks, armoured personnel carriers etc. See W07 and possibly X22-P06 for electrical aspects of military vehicles.

### Q19-E

### **Construction vehicles**

Includes bulldozers, excavators and cranes. See X25-U (construction), X25-D01 (earth mover) and X22-P07 for electrical aspects. For unspecified use tracked vehicles see Q19-X instead.

### Q19-F

### **Recreational vehicles**

Includes MPVs (multipurpose vehicles), SUVs (sports utility vehicles), people carriers and quad bikes. See X22-P08 for electrical aspects of recreational vehicles.

RV

### Q19-F01

### Caravan; Trailer tent

### Q19-F02

### Camper van; Motorhome

For equipment adapting vehicle to provide living or sleeping accommodation see Q15-B10.

# Q19-F03

### Racing/sports cars; Go-carts

See Q22-C instead for children's push-along gokarts.

# Q19-F04

### **Snow mobile**

For sledges see Q22-C01 instead.

### Q19-G

### **Agricultural vehicles**

Includes tractors, combine harvesters and agricultural implements. See X22-P09/X22-X11 and X25-N codes for electrical aspects of agricultural vehicles per se.

### Q19-H

### **Emergency vehicles**

See X22-P10 only for electrical aspects of emergency vehicles.

# Q19-H01

Police car

### Q19-H02

Fire engine

### Q19-H03

**Ambulance** 

# Q19-J

### **Trailers**

See also Q19-C02 for articulated lorry trailers. For electrical aspects of trailers see X22-P11 only.

# Q19-L

### **Driverless/autonomous vehicles**

Includes mechanical details of vehicles that can drive themselves, such as novel interior design/seating/function that takes advantage of reduced need for conventional driver controls. See X22-P15 and X21-A01L for electrical details of autonomous motor vehicles and electric vehicles respectively.

### Q19-P

# Electric vehicles; fuel cell vehicles

Only mechanical aspects of electric vehicles are coded here. See the electrical X21 codes only, when the novelty is electrical in nature. *FCV* 

### Q19-Q

### **Hybrid vehicles**

Only includes mechanical aspects of hybrid vehicles.

### Q19-Q01

### **Hybrid-electric**

Includes series/parallel/mixed hybrid-electric and hybrid-fuel cell vehicles. See X22-P04 and X21-A01D codes only for hybrid electric vehicles where the novelty is electrical in nature.

### Q19-Q05

### **Hybrid-mechanical**

Includes hybrid-flywheel and hybrid-pneumatic vehicles.

### Q19-R

# Convertible vehicles (usable on/in different terrain)

### Q19-R01

# Amphibious vehicles; Air cushion vehicles, e.g. for transporting heavy loads over small distances

Includes hovercraft type vehicles. Also see  $\Omega$ 24-P10 and  $\Omega$ 24-P30 for mechanical aspects for marine hovercraft and amphibious vessels respectively, or W06-C codes for electrical aspects.

### Q19-R02

# Vehicles usable on road/rail

Includes motor vehicles with outriggers to allow travel on railway track. Also see Q21 for mechanical railway details, or X22-X and X23-A codes for electrical aspects.

### Q19-R03

### Vehicles convertible into aircraft

Also see Q25 for mechanical aspects of aircraft, or W06-B codes for electrical aspects.

### Q19-R09

# Other convertible vehicles usable in or on different media

### Q19-S

# [2007]

### Soft top/cabriolet vehicles

Includes vehicles that have a soft-top roof or a foldable hard roof, e.g. on coupe/convertible cars. See also Q17-A08 for novel convertible roofs per se. See Q14-C06 for flip-up rollover bars used cabriolet vehicles.

# Q19-X

### Other vehicle types

Includes unspecified use tracked vehicles (see Q17-A14 for endless track arrangements per se).

# **Q2 Special Vehicles**

### Q21: Railways

From 2006 manual codes have been assigned for all mechanical railway details. For electrical aspects of railways see X23 codes instead.

### Q21-A

# Railway track arrangements/construction

### Q21-A01

# Track construction per se

Includes mechanical aspects such as track rails and sleepers per se. Also includes track maintenance assemblies and maintenance vehicles. For track inspection, see Q21-C03I instead. Further includes mechanical details of track changing arrangements, track switches and crossings.

# Q21-A02

Railway stops fixed to permanent way; Track brakes; Sand tracks; Buffers

### Q21-A03

### Stations; Station equipment

Includes platform doors, turnstiles etc. See X23-A09A for electrical offboard/station aspects.

### Q21-A04

# Track/station based equipment for transferring passengers, articles or freight to or from train

Includes gangplank and ramp assemblies. For train mounted aspects, see Q21-J06 and Q21-J07 codes instead.

### Q21-A05

# Track based rail or wheel flange lubrication devices

### Q21-A06

**Turntables; Traversers** 

### Q21-A07

Shunting or short distance haulage devices

### Q21-A08

# Track mounted derailers; Apparatus for placing vehicles on track

Includes portable or fixed track mounted jacks and hoists for lifting rail cars. For train mounted lifting apparatus see  $\Omega21\text{-}M03$  instead.

# Q21-A12 [2010]

# **Bridges and tunnels**

(Q21-A15)

Includes constructional details of railway bridges and tunnels.

Viaduct

### Q21-A15

# Other railway track arrangements

### Q21-B

### Railway type

### Q21-B01

### **Elevated railways**

See also Q21-B02 for monorail systems.

### Q21-B01A

### With suspended vehicles

# Q21-B01B

### Without suspended vehicles

#### Q21-B02

### **Monorails**

See also Q21-B01 for elevated monorail systems.

### Q21-B03

# Rope/cable railways

Includes aerial runways. See also Q21-C01D1 for novel traction arrangements utilising cables, ropes or chains.

# Q21-B03A

### Tramway or funicular systems

Includes tramways or funiculars using rigid tracks and cable or chain traction. For trams per se see  $\Omega$ 21-C03G instead. For novel cable/chain traction assemblies see  $\Omega$ 21-C01D1 also.

### Q21-B03B

# Power-and-free systems

Includes overhead systems with suspended vehicles that can be engaged with drive train when powered or disengaged when in free unpowered or stopped mode. For power and free conveyors see Q35 class or X25-F codes if electrical.

### Q21-B03C

# Ski lift, sleigh lift or trackless systems with guided towing cables only

### Q21-B04

### Rack railways

### Q21-B05

# Sliding or levitation systems

### Q21-B05A

# **Magnetic suspension arrangements**

See X23-A01A4 and X12-C codes for electrical aspects of magnetic levitation systems and electroand super-conducting magnets per se.

### Q21-B06

### **Underground railways**

Also see Q21-A codes for constructional details of underground railway tunnels, platforms, stations etc.

Subway, metro

### Q21-B09

### Other railway types

Includes tunnel systems. Also see Q35 class for e.g. pneumatic tube conveying arrangements or X25-F codes for electrical conveying systems.

### Q21-C

### Locomotive/motor railcar type

These codes are applied to classify the locomotive type when the novelty being coded is mechanical. If the novelty is electrical in nature then see X23 and other EPI codes instead.

# Q21-C01

# Type of propulsion for locomotive or railcar

### Q21-C01A

Steam locomotives or railcars

### Q21-C01B

**Electric locomotives or railcars** 

### Q21-C01C

# IC engined or gas turbine engined locomotives or motor railcars

See also Q21-C01B for diesel-electric locomotives.

### Q21-C01D

Other propulsion systems for locomotives or motor railcars (e.g. with propulsion devices between or alongside rails, e.g. pneumatic systems)

### Q21-C01D1

# Tractive effort applied to cables or chains

See also Q21-B03 codes for e.g. funiculars.

### Q21-C01D2

Tractive effort applied to racks

### Q21-C01D3

Tractive effort applied or supplied by aerodynamic force or fluid reaction

### Q21-C03

### Type of carriage or wagon

These codes are intended to highlight specific types of carriage or wagon construction.

### Q21-C03A

### **Passenger carriages**

This code is mainly applied when the novelty relates to the carriage superstructure itself or fittings such as windows, doors or bulkheads etc. permanently mounted to/inside the carriage. Novel accessories such as seats used in a passenger carriage are not normally included here (see Q21-J03).

# Q21-C03B

### Wagons or vans

Includes freight wagons.

### Q21-C03C

### Tank wagons or carrying fluent materials

Includes tankers for carrying liquids.

### Q21-C03D

### **Hopper cars**

Includes e.g. wagons for carrying particulate material with dispensing openings at bottom of wagon.

# Q21-C03E

### **Tipping wagons**

### Q21-C03F

### Mine cars

See X25-D02 for electrical aspects of mining vehicles.

### Q21-C03G

# Tramway vehicles

The code is applied for novel trams per se. For cable/rope driven tram or funicular railways in general see Q21-B03A instead.

### Q21-C03H

### **Buffer cars**

### Q21-C03I

### **Railway inspection trolleys**

Includes all types of railway inspection vehicles. For novel track maintenance vehicles, also see Q21- A01.

### Q21-C03X

# Other railway vehicles

Includes rail vehicles convertible for use on road (see also  $\Omega$ 19-R02).

# Q21-D

# Rail vehicle construction; fittings; Underframes; Suspension; Transmissions

### Q21-D01

#### **Superstructures**

Includes wall panels, floors, bulkheads and roofs etc. For movable roof assemblies see Q21-D17 instead

### Q21-D02

### **Underframes**; Chassis

### Q21-D03

#### **Bogies**

Includes wheel/axle assemblies fastened to chassis.

### Q21-D04

# Connections between underframes and bogies, e.g. to allow relative movement

Includes suspension arrangements. See X23-A01C for electrical aspects of railway suspension systems.

### Q21-D05

# Adjustment of wheel axles or bogies when rounding curves

Includes e.g. passive carriage tilt control. See X23-A01C for railway train active suspension/carriage tilt control. Also includes arrangements for adjusting orientation/steering of wheels e.g. when rounding bend to reduce wheel flange and rail head wear.

### Q21-D06

### Axle boxes and their mounting

Includes wheel bearing arrangements inside axle

### Q21-D07

### Lubrication assembly for axle box

Includes lubrication arrangements and oil sumps for axle box wheel bearings.

### Q21-D08

# Arrangements to allow use on tracks of different width

Includes systems for adjusting wheel spacing to allow train to run on different gauge tracks.

#### Q21-D09

# **Derailment preventing equipment**

### Q21-D10

# Rail engaging elements, e.g. wheels or

Includes wheels and other assemblies for engaging tracks, overhead rails etc.

### Q21-D10A [2007]

### **Traction increasing equipment**

Includes dispensing of particulate material such as sand under train wheels on railway track to increase grip. See  $\Omega$ 21-F09 also, if sand is dispensed specifically to improve braking.

### Q21-D11

# Wheel guards; Bumpers; Obstruction removers

#### Q21-D12

### Couplings; Draught or buffering appliances

### Q21-D12A

### Couplings

Includes couplings between carriages.

### Q21-D12B

**Draw gears** 

### Q21-D12C

**Buffers** 

### Q21-D13

### **Transmission systems**

Includes power transmission arrangements.

Drive shaft, gearing

# Q21-D14

# Aerodynamic modifications to reduce air resistance

Includes spoilers and other wind deflectors, especially for high speed trains.

Q21-D15

**Doors** 

Q21-D16

Windows

Q21-D17

# **Movable roofs; Covers; Tarpaulins**

For fixed roofs see Q21-D01 for novel train superstructures.

### Q21-D25

# Other rail vehicle constructions, fittings

Includes constructions/fittings designed for safety purposes, such as fire resistant bulkheads (see also  $\Omega$ 21-D01). Accessories such as fire extinguishers are included in  $\Omega$ 21-J09 only.

# Q21-F

# **Brake systems**

See X23-A01B for electrical braking systems. Q18-A codes may also need to be applied when they provide a more detailed breakdown of the brake system.

### Q21-F01

### Braking arrangements acting on wheels

### Q21-F02

# Brakes with braking members co-operating with track

# Q21-F03

# Hydrostatic, hydrodynamic or aerodynamic brakes

Includes air brakes.

### Q21-F04

### Brake wear compensating mechanisms

Includes mechanical adjusters to compensate for brake pad wear.

### Q21-F05

### **Brake actuation mechanisms**

Includes brake actuating levers.

# Q21-F09

### Other braking arrangements

Includes other braking systems and brake system components

Brake pipes, clamps, clips, hoses

### Q21-J

### Rail vehicle accessories

See X23-A13 for electrical train accessories. Other Q14 codes may also need to be applied when a more detailed breakdown exists.

### Q21-J01

### Sleeping accommodation; Beds

See X27-A03 for electrical aspects of furniture per se.

### Q21-J02

# Heating; cooling; ventilating; airconditioning

Includes mechanical ducting and vents.

#### Q21-J03

**Seats** 

### Q21-J04

# **Sanitation arrangements**

Includes toilets and washing facilities.

### Q21-J05

### Steps

Includes all train mounted arrangements for assisting boarding of passengers such as fixed or movable steps, or wheelchair lifting or ramp assemblies etc.

### Q21-J06

# Cargo/luggage loading and unloading arrangements

Includes cargo loading ramps and hoists. For platform based cargo/passenger handling, see Q21-A04 instead.

# Q21-J07

# Cargo/luggage storing/securing arrangements

Includes cargo storage compartments and restraining devices such as luggage nets or straps.

[2007]

# Q21-J08

Railway safety systems

Includes systems for evacuating passengers from train during emergency and e.g. glass hammers mounted inside train. Also includes fire fighting equipment such as fire extinguishers. See Q21-D05 for train constructional features designed specifically for safety purposes such as fire-resistant bulkheads.

Fire-extinguisher, emergency, safety, escape slide, escape hatch

### Q21-J09

### Other rail vehicle accessories

Includes any other rail vehicle accessories that can not be coded elsewhere.

### Q21-M

# Locomotive servicing/maintenance; Cleaning; Train/track design and manufacture

For track maintenance equipment see  $\Omega 21$ -A01 instead. Track inspection vehicles are coded in  $\Omega 21$ -C03I only.

### Q21-M01

# Train cleaning apparatus

Includes equipment for washing the exterior of the train or train specific equipment for cleaning the inside of the train.

### Q21-M02

# Locomotive servicing equipment, e.g. filling locomotive with water or sand

Includes water columns and coal bunkers (see also Q21-C01A for steam locomotives). Also includes tools used during servicing and maintenance operations.

### Q21-M03

# Rail vehicle mounted locomotive supporting/lifting/manoeuvring apparatus (e.g. breakdown recovery train)

Includes train mounted cranes for manoeuvring train after derailment or accident. For track mounted equipment such as cranes and jack assemblies, see Q21-A08 instead.

### Q21-M05

# Train design/manufacture/assembly/refurbishment

See e.g. T01 codes for computer/CAD/CAM systems for train design and manufacture.

### Q21-M09

# Other locomotive servicing/manufacturing equipment not provided for

# Q21-N [2007]

# Noise/Vibration/Harshness reduction arrangements

Includes all aspects of reducing noise, vibration or harshness on-board railway train, and also offboard aspects such as track mounted arrangements for reducing noise from passing train (see also Q21-A15).

### Q21-S

### Safety and signalling equipment

For electrical aspects of railway safety or signalling see X23-B codes.

### Q21-S01

# Points and signalling

See X23-B03 for electrical aspects of points and signals and their operation.

#### Q21-S01A

# Points and scotch blocks and their operating devices

Includes locking mechanisms for points.

### Q21-S01C

# Signals and their operating devices

For warning signals used at level crossing to warn motorists, see Q21-S07C.

### Q21-S01C1

# Visible signals

Includes flags, semaphores and reflectors. See X23-B03 for electrical/illuminated signals.

### Q21-S01C2

### **Audible signals**

Includes pneumatic horns.

### Q21-S01C3

# Signalling indicators on train

### Q21-S01E

# Arrangement for interlocking between points and signals

See X23-B04A codes for electrical interlocking between points and signals.

### Q21-S05

### Train traffic control; Track/station blocking

Includes arrangements for dividing track into block sections so that multiple trains are not present in a signal block, to reduce the risk of collisions. See X23-B04C for electrical aspects of track/station blocking.

Anticollision

### Q21-S05A

# For controlling traffic in one direction only

One-way

# Q21-S05C

# For controlling traffic in two directions over same pair of rails

Includes e.g. using token system, tablets, staffs etc.

# Q21-S07

# Safety systems for rail/road crossing traffic

See X23-B05A and maybe T07-B05A for electrical aspects of railway crossing systems.

# Q21-S07A

# **Guards**; Gates

Includes mechanical gates and barriers per se.

# Q21-S07B

# **Operation of gates**

Includes actuating arrangements for opening and closing gates/barriers.

# Q21-S07C

# Warning devices for road traffic

See T07-A05A for electrical aspects of railway crossing road traffic warning systems.

# Q21-X

# Other locomotive aspects

Includes locomotive aspects that are not covered elsewhere.

#### Q22: Hand/Foot/Animal Drawn Vehicles

From 2006 Q22 covers all mechanical details of hand/foot and animal drawn vehicles such as carts, wheelchairs, sledges and horse-drawn carriages. Prior to the introduction of Q22 manual codes in 2006, the Q22 class covered hand and motor vehicles which included carts, sledges, steering systems/controls, vehicle under/super structures, trailers and vehicle design, manufacture and (dis)assembly.

#### Q22-A

#### Hand carts

#### Q22-A01

## With single axis carrying transport wheels

Includes wheelbarrows.

#### Q22-A02

## With more than one axis carrying transport wheels

Includes four-wheeled barrows and mechanical aspects of shopping trolleys (see X25-F05A for electrical aspects of shopping trolleys).

#### Q22-A03

#### **Accessories for hand carts**

Includes handle grips and brakes.

#### Q22-B

## **Carriages for children; Perambulators**

Pram, pushchair

#### Q22-B01

## With single wheel axis

### O22-B02

#### With more than one wheel axis

Includes three and four wheeled, twin axle pushchairs.

### Q22-B03

## Accessories for children's carriages/perambulators

Includes luggage racks, bottle holders etc.

#### Q22-C

## Other hand propelled vehicles

Includes unpowered children's go-karts.

#### Q22-C01

## Sledges/ice boats

Toboggan

#### Q22-C02

#### Wheelchairs

See S05-G02A for electrical aspects of wheelchairs, and X21-A01A and S05-K01 for electrical aspects of mobility vehicles.

#### Q22-C03

### [2007]

## Accessories for other hand propelled vehicles

Includes seats, handles, foot rests, etc.

#### Q22-D

## Land vehicles drawn by animals

Includes e.g. horse-drawn carts.

Sulky

#### Q22-M

### [2007]

## Foot propelled vehicles

Includes stand on scooters and skateboard type devices propelled by user's feet. See W04-X codes for electrical aspects of toy skateboards. See Q19-A instead for bicycles and P36 for novel roller skates or ice skates.

## Q22-X

[2007]

## Other carts/carriages/vehicles

## Q24: Ship; Waterborne Vessels; Related Equipment

From 2006 manual codes have been assigned for all mechanical ship, waterborne vessel and port details. For electrical aspects of ships see W06-C codes instead.

## Q24-A

## Ship construction; Fittings

#### Q24-A01

#### Hulls

Includes surfboard constructions.

#### Q24-A01A

## Hydrodynamic or hydrostatic features

Includes e.g. hydrofoils and hydroplanes. Also includes shock-wave/drag reducing bow assembly.

### Q24-A01B

**Hull shells** 

#### Q24-A01C

**Frames** 

#### Q24-A01D

#### Keels

Includes permanently fixed, non-movable keels.

#### Q24-A01D1

#### Movable/drop keels/centre boards

See Q24-E05A instead for movable rudders.

#### Q24-A01E

**Stern posts** 

#### Q24-A01G

Stems

## Q24-A01H

#### **Decks**

Includes flooring.

#### Q24-A01I

#### **Bulkheads**

Also see Q24-B09H for watertight arrangements for bulkheads.

## Q24-A01J

### Gratings

#### Q24-A01K

**Panellings; Linings** 

#### Q24-A01L

## Reinforcements for carrying localised loads

#### Q24-A01M

## Collapsible; foldable; inflatable hulls

Includes inflatable dinghy hull assemblies and cushions for hovercraft (see also Q24-P10).

#### Q24-A01N

## Ballasting; Self-bailing equipment; Scuppers

Includes bilge pumps.

#### Q24-A01P

#### Multiple hull arrangements

Includes catamaran twin hull and trimaran triple hull arrangements.

### Q24-A01X

[2007]

Other hull details

#### Q24-A03

Windows; Doors; Ports

#### Q24-A03A

**Windows; Port holes** 

## Q24-A03B

**Doors** 

## Q24-A03C

**Ports; Hatches** 

### Q24-A05

## Superstructures; Masts

Includes conning towers. See W06-A codes for radar installations and W02 codes for radio masts etc.

## Q24-A15

## Other ship construction; fittings

#### Q24-B

## Ship accessories

Includes mechanical aspects of shipboard lighting and signalling (see also X26 for lighting per se).

#### Q24-B01

Passenger/crew accommodating arrangements; Cabins; Galleys

#### Q24-B01A

## Furniture - vessel specific

Includes furniture specifically designed for marine/ship application, such as seats and beds etc.

#### Q24-B01C

#### Sanitation arrangements

#### Q24-B01C1

**Toilets** 

#### Q24-B01C2

## **Washing facilities; Showers**

See X27-A02A4 for electrical aspects of showers and wash basins, and X27-E03A for electrical aspects of water heating.

#### Q24-B02

## Load accommodating arrangements

#### Q24-B02A

## Load accommodating compartments

Includes e.g. movable/detachable decks, and storage tanks.

#### Q24-B02C

## Ship-board load handling arrangements

Includes e.g. derricks, cranes, winches, chutes, cableways, conveyors for loading/unloading.

## Q24-B02E [2007]

## Ship-board passenger handling arrangements

Includes ship-mounted extendable gang planks or platforms lowerable into the water or onto dry land to aid boarding or alighting of vessel. For shore mounted passenger handling arrangements see Q24-R03 instead.

## Q24-B03

#### Heating; Ventilating; Air-conditioning

Includes mechanical aspects only. See W06-C01C5 for electrical aspects of HVAC systems.

Duct, vent

#### Q24-B05

#### Instrumentation

Includes e.g. mechanical gauges, periscopes. See S02 codes for further details of instrumentation per se, and W06-B01B codes for electrical instrumentation details.

#### Q24-B07

## Desalination plants - fresh water production

#### Q24-B09

#### **Emergency/safety equipment**

Includes shipboard safety devices. For personal equipment such as life jackets and life rings, see Q24-X01A.

#### Q24-B09A

Fire fighting equipment

#### Q24-B09C

Life boat equipment

#### Q24-B09C1

Fastening or storage on deck

#### Q24-B09C2

#### **Deployment devices**

Includes e.g. hoists, davits, winches.

#### Q24-B09E

### Apparatus to control vessel attitude

Includes equipment to decrease roll, pitch or like unwanted vessel movement. Includes arrangements to reduce the risk of capsizing or sinking.

## Q24-B09E1

#### By improving stability

Includes use of e.g. ballast tanks.

#### Q24-B09E3

## By improving buoyancy

Includes use of e.g. buoyancy chambers.

#### Q24-B09G

## Anti-collision arrangements, e.g. feelers

#### Q24-B09H

#### Watertight arrangements

Includes e.g. watertight doors/bulkheads (see also Q24-A03B and Q24-A01I respectively).

### Q24-B09X

#### [2007]

## Other safety/emergency equipment/systems

Includes emergency escape equipment such as escape shaft in vessel, e.g. between sunken vessel and rescue vessel.

#### Q24-B10

## Waste water/Sewage treatment plants

See Q24-B01C for sanitation and toilet systems per se.

## Q24-B99 [2010]

Other ship accessories.

## Q24-C

## Tying-up; anchoring, towing/pushing equipment

#### Q24-C01

## **Mooring equipment**

For mooring against jetty, pier or other vessel.

#### Q24-C02

#### **Anchoring arrangements**

E.g. when using ground-engaging anchor.

#### Q24-C02A

**Anchors** 

#### O24-C03

**Boat hooks** 

### Q24-C04

**Towing/pushing equipment** 

## Q24-C05

## Ancillaries, e.g. chains; ropes; clamps; bollards; fairleads; hawsers

Includes ancillaries used for e.g. mooring, anchoring or tying up. Includes fenders used to protect side of ship's hull.

#### Q24-E

## Marine propulsion and steering

#### Q24-E01

### **Propulsive elements**

These codes describe the type of propulsion used on the ship and are only applied when the type of propulsion system has some bearing on the novelty.

### Q24-E01A

## Directly acting on water

Includes water jet propulsion (see Q24-P21 for jet-skis).

#### Q24-E01A1

#### Of rotary type

#### Q24-E01A1A

#### **Propellers**

Includes propellers per se and propeller driven vessels when the propulsion aspect is important.

#### Q24-E01A1C

#### Paddle wheels

Paddle steamer

#### Q24-E01A3

#### Of non-rotary type, e.g. flaps

Includes oars (see also Q24-E01G for muscle power).

#### Q24-E01C

#### Directly acting on air (e.g. for hovercraft)

Also see Q24-P10 for hovercraft per se, and Q24-P30 for swamp boats having large propeller acting on air.

#### **Q24-E01E**

## Directly acted on by wind (e.g. sails, Magnus effect)

Includes sails per se. See Q24-A05 for masts per se.

## Q24-E01G

#### Using muscle power

Includes use of e.g. oars, movable thwarts, foot rests, sculls.

#### Q24-E01X

## **Using other means**

Includes e.g. using water currents, e.g. tidal flow, or direct engagement with water bed.

#### Q24-E02

## **Propulsion power plant**

The codes in this section describe the type of propulsion used on the ship and are generally only applied when the type of propulsion has some bearing on the novelty.

## Q24-E02A

#### Using internal combustion engines

## Q24-E02A1

Outboard motors

#### Q24-E02A3

**Inboard motors** 

Q: Mechanical

#### Q24-E02B

## Using external combustion engine, e.g. gas turbine

For gas turbine engines per se, see also Q52 codes.

Q24-E02C

**Using steam** 

Q24-E02C1

**Using steam turbine** 

Q24-E02C3

Using positive displacement steam engine

Q24-E02D

Using hydraulic fluid motor

Q24-E02E

Using nuclear energy

Q24-E02F

Using land vehicle supported on vessel

Q24-E02G

Using land based animal/vehicle, e.g. horse

Q24-E02M [2008]

#### **Fuel supply arrangements**

Includes fuel tanks and associated pipework. For IC engine and gas turbine engine fuel supply aspects see Q51-H01 and Q52-C codes respectively.

Q24-E02X

[2007]

Other propulsion power plant

Q24-E03

**Transmission systems** 

Includes novel drive trains.

Q24-E03A

Gearing

Q24-E03C

Clutch

Q24-E03E

Drive shafts; propeller shafts; shaft tubes; seals etc.

Q24-E05

Steering arrangements

#### Q24-E05A

#### Steering by rudders

Includes rudder and tiller assemblies per se.

#### Q24-E05C

### Steering by propulsive elements

Includes systems changing direction of propeller

#### Q24-E05E

Steering/slowing by extensible flaps

#### Q24-E05G

#### Steering by deflecting propeller slipstream

Includes rudder type elements in propeller slipstream.

#### Q24-E05X

Other steering arrangements

## Q24-M

## Military equipment

See W07 codes for electrical aspects of military equipment and W06-C codes for electrical aspects of ships. See Q24-P30 for military vessel application.

### Q24-M01

Offensive equipment

#### Q24-M01A

#### **Guns and missile launchers**

See W07-E05 for electrical aspects of weapons launching systems. Also includes torpedo launchers.

#### Q24-M01B

Mine and depth charge launchers

#### Q24-M01E

Ammunition stores and handlers

## Q24-M03

#### **Defensive equipment**

Includes e.g. camouflage. For electrical aspects of active camouflage see W07-F03 instead.

#### Q24-M03A

#### Mine sweeping/clearing

E.g. using towed mechanical cables. For electrical aspects of mine detection/sweeping/clearing see e.g. W07-F05 and W06-C codes instead.

### Q24-N

[2007]

## Noise/Vibration / Harshness reduction arrangements

Includes all ship-board arrangements for reducing noise, vibration or harshness, e.g. use of sound-deadening material.

#### O24-P

Vessels or floating structures adapted for special purposes

Q24-P01

Pipe laying vessels

Q24-P02

Cable laying vessels

Q24-P03

Ice breakers

Q24-P04

## **Fishing vessels**

Includes small fishing boats and large commercial trawlers.

Q24-P05

**Barges or lighters** 

#### Q24-P06

## Environmental vessels, e.g. for collecting pollution from open water

Includes vessels adapted to clear up or contain environmental disasters such as oil spillages.

## Q24-P07

For transporting marine vessels

## Q24-P08

## Floating buildings, drilling platforms, workshops

Includes floating vessels normally designed to be static at a fixed location.

Q24-P09

**Canal boat** 

Q24-P10

Waterborne air cushion vehicle

Includes hovercraft.

Q24-P11

Submarines; submersible craft

Semi-submersible

#### Q24-P12

## Flying vessels

Includes airfoil boats and ground effect craft. See Q25-P04 for flying boats and sea planes.

#### Q24-P13

## Military vessels

Includes e.g. aircraft carriers, destroyers, frigates. For electrical aspects of military ships see W06-C and W07 codes respectively.

Q24-P14

**Ferries** 

Q24-P15

Tugs

Q24-P16

**Light ships** 

#### Q24-P17

## **Pontoons**

See Q24-R15 instead for ground-engaging piers/jetties.

Inflatable

#### Q24-P18

## **Buoys**

See W06-C07C for electrical aspects of buoys.

#### Q24-P19

**Rafts** 

Q24-P20

Canoes; Kayaks

#### Q24-P21

## Sports/pleasure equipment, e.g. surfboards, sailboards, water skis

Includes all recreational vessels such as small recreational boats (see also Q24-P22 for sailing boats), personal watercraft, jet-skis, surfboards etc. Boogie board, kite surfing, sail board

#### Q24-P22

[2010]

### Sailing boats

Includes all sail powered vessels such as sailing boats and yachts. See Q24-E01E for sail arrangements per se.

#### Q24-P24

[2008]

#### **Tanker vessels**

(Q24-P30)

Includes marine vessels that transport fluids such as crude oil, water, fuels etc.

#### Q24-P25

[2007]

#### **Commercial vessels**

(Q24-P30)

Includes general non-specific commercial ships. Use other Q25-P codes instead when a more specific commercial vessel is specified.

#### Q24-P28

[2007]

#### **Emergency services vessels**

(Q24-P30)

Includes coastguard vessels, police boats, fire tenders etc. For lifeboats and lifeboat equipment on-board e.g. ferry, see Q24-B09C (and Q24-P14 for ferry) also.

#### Q24-P30

#### Other special purpose vessels

Includes swamp boats and amphibious vessels (see also Q19-R01).

## Q24-R

#### Port, harbour, marina equipment

#### Q24-R01

**Dry-docks** 

#### Q24-R02

## Vessel launching/hauling-out

Includes slipways and boat hoists.

### Q24-R03

## Passenger handling equipment

Includes steps and other dockside passenger handling equipment.

### Q24-R05

#### Load/vehicle handling equipment

Includes vehicle loading ramps.

## Q24-R09

## Marine craft servicing and maintenance equipment

See W06-C07 for electrical aspects of ship maintenance

#### Q24-R10

#### Cleaning equipment

Includes hull scrapers.

#### Q24-R15

### Other ground/port based equipment

Includes piers and jetties (see also Q21-P17 for inflatable jetties/pontoons).

#### 024-X

## Other waterborne vessel details and related equipment

#### Q24-X01

Life saving in the water

### Q24-X01A

Life jackets; Vests; Buoyancy aids; Rings

#### Q24-X01B

**Shark screens; Nets** 

#### Q24-X04

**Diving equipment** 

#### Q24-X05

### Ship/boat manufacture

See W06-C08 for electrical aspects of ship manufacture. See Q51-M or Q52-M respectively for manufacture of IC and gas turbine engines used in ships.

#### Q24-X06

### Salvaging equipment

#### Q24-X07

### Ship design and testing

Includes e.g. using towing tanks or model basins for designing. See T01 codes for computerised (CAD) ship design.

### Q24-X11

## Boat trailers; other over-land boat transportation devices

See also Q19-J for trailers per se. For vehicles specifically designed to carry specific loads such as vehicles or boats, see Q15-B07.

### Q25: Aircraft: Aviation: Cosmonautics

From 2006 manual codes have been assigned for all mechanical aircraft, aviation and cosmonautic details. See Q25-S for cosmonautics per se and Q25-X for non-specific aircraft/spacecraft systems such as aircraft/spacecraft manufacture (Q25-X05). For electrical aspects of aircraft and space vehicles see W06-B codes instead.

#### Q25-A

## Aircraft construction; Fittings

#### Q25-A01

### **Fuselages**

Includes aircraft body construction and interior trim. Includes nose cones.

#### Q25-A01A

#### Air frames

Includes fuselage subframes/chassis.

#### Q25-A01C

#### **Decks**

Includes flooring.

#### Q25-A01E

**Bulkheads** 

#### Q25-A01G

Skins; panels; linings; insulation

## Q25-A02

Wings

#### Q25-A02A

Ribs; spars; stringers

#### Q25-A02C

Skins; panels

### Q25-A03

Windows; doors; hatches

#### Q25-A03A

Windows

#### Q25-A03A1

**Blinds** 

### Q25-A03C

**Doors** 

#### Q25-A03E

#### **Hatches**

#### Q25-A04

#### Stabilising/aerodynamic surfaces

Includes tail planes; nose planes; fins; nacelles. For control surfaces per se, such as moveable flaps and rudders, see Q25-C05 codes instead. For nose cones per se, see Q25-A01 instead.

#### Q25-A05

#### Undercarriages; alighting gear

#### Q25-A05A

#### Wheels assemblies

Includes aircraft wheels and tyres. For novel tyres etc. see also Q11 codes for a more detailed breakdown.

#### Q25-A05B

Skis; runners

#### Q25-A05C

#### Float assemblies

Includes buoyant floats for landing on water. See also Q25-P04 for sea planes per se.

#### Q25-A05F

#### Air cushion alighting gear

## Q25-A05G\* [2006-2007]

## Arrestor hooks, e.g. for use on aircraft carrier

\*This code is now discontinued and transferred to Q25-A07G. Q25-A05G remains searchable for patents from 200601-200682. Includes all arrangements for slowing or stopping aircraft, including air brake parachutes.

## Q25-A07 [2007]

## **Brake systems**

Includes mechanical brake system components such as novel brake pad friction materials.

#### Q25-A07A [2007]

#### Air brakes

Includes deployable air-brake parachutes.

## Q25-A07G

## Arrestor gear/hooks, e.g. for use on aircraft

[2007]

## **carrier**Includes hydraulic arrestor gear cooperating with

Includes hydraulic arrestor gear cooperating with arrestor hook for stopping military aircraft (see also Q25-P13) on board aircraft carrier. See Q25-A05G prior to 200701.

### Q25-A07X

[2007]

#### Other braking systems

#### Q25-B

#### Aircraft accessories

Includes aircraft lighting/signalling.

#### Q25-B01

## Passenger/crew accommodating arrangements; Cabins; Galleys

Includes mechanical aspects of kitchen equipment, e.g. food carts. Also includes retractable steps to assist boarding of crew/passengers.

#### Q25-B01A

## Furniture - aircraft specific

Includes e.g. aircraft specific tables, trays and seats, including ejector seats (see also Q25-M for military aircraft).

#### Q25-B01C

#### Sanitation arrangements

Includes waste water and sewage processing systems.

#### Q25-B01C1

**Toilets** 

## Q25-B01C2

Washing facilities; Showers

#### Q25-B02

## Load accommodating arrangements

## Q25-B02A

#### Load accommodating compartments/decks

Includes luggage and cargo holds and passenger compartment overhead storage compartments.

## Q25-B02C

## Aircraft-board load handling arrangements

Includes e.g. derricks, cranes, winches, chutes, cableways and conveyors for loading/unloading. See Q25-R05 for airport based load handling equipment.

#### Q25-B03

## Heating; Ventilating; Air-conditioning

Includes ducting etc. For electrical aspects of HVAC systems used in aircraft, see W06-B01C5 instead.

#### Q25-B04

## **De-icing arrangements**

Includes e.g. using ducted hot gas. For electrical de-icing arrangements see W06-B01C4 and X25-B codes for electrical heating per se.

#### Q25-B05

### Instrumentation (mechanical aspects)

For electrical aspects of aircraft instrumentation see W06-B01B and S02 codes.

#### Q25-B09

## On-board safety/emergency equipment

See W06-B01C8 for on-board electrical security systems e.g. to prevent hi-jacking.

#### Q25-B09A

#### Fire fighting equipment

Includes fire blankets and extinguishers used onboard aircraft.

#### O25-B09C

## **Emergency oxygen supplies**

See W06-B01C9 for electrical aspects of emergency oxygen supply systems.

#### Q25-B09E

## Escape slides (and other emergency exit arrangements)

Includes inflatable emergency slides. See also Q25-B01A for ejector seats.

### Q25-B09G

#### **Parachutes**

## Q25-B15

## Other aircraft accessories

E.g. includes dropping, releasing articles and liquids, e.g. to fight forest fire or for crop spraying (see X25-X05 and X25-N01B respectively for electrical aspects of fire-fighting and crop spraying).

#### Q25-C

## Aircraft propulsion and steering; attitude/altitude control

### Q25-C01

#### **Propulsive elements**

These codes describe the type of propulsive elements being used and are generally only applied when the type of propulsive elements has some bearing on novelty.

#### Q25-C01A

#### Directly acting on air

## Q25-C01A1

## **Rotary propellers**

See also Q25-C02B for turboprop external combustion engine propulsion. Also includes helicopter rotors (also see Q25-C05C if rotor control surface positioning/feathering is detailed). *Turboprop* 

#### Q25-C01A3

## Of non-rotary type, e.g. flappable wings

Also see Q25-P03 for ornithopters per se.

#### Q25-C01E

## Directly acted on by wind

Includes e.g. hang glider canopy.

### Q25-C01G

#### Using muscle power

Includes use of pedal power.

#### Q25-C01X

Using other means

#### Q25-C02

## **Propulsion power plant**

These codes describe the type of propulsion used on the aircraft and are generally only applied when the type of aircraft propulsion has some bearing on the novelty.

#### Q25-C02A

#### Using internal combustion engines

#### Q25-C02B

## Using external combustion engine

For gas turbine engines per se, see also Q52 codes. Gas turbine, RAMJET, SCRAMJET, turbojet, turboprop

#### Q25-C02G

## Using land based animal/vehicle

Includes e.g. using vehicle to tow glider during take-off.

## Q25-C02M [2007]

## **Fuel supply arrangements**

Includes fuel tanks and associated pipework. For gas turbine engine fuel supply aspects see Q52-C codes. Also includes mechanical aspects associated with in-flight refuelling.

### Q25-C02X

Other propulsion power plant

[2007]

#### Q25-C03

**Transmission systems** 

#### Q25-C03A

Gearing

#### Q25-C03C

#### Clutch

Includes novel drive trains.

#### Q25-C03E

Drive shafts; propeller shafts etc.

#### Q25-C05

Steering/attitude/altitude control arrangements; stabilisation

#### Q25-C05A

By rudders

#### Q25-C05C

## By flaps/control surfaces

Includes aerodynamic control surfaces and their control, e.g. flaps in aircraft wings.

## Q25-C05E

#### By propulsion plant

Includes use of e.g. tiltable turbine engines to achieve steering/attitude control.

## Q25-C05G

## Aircraft stabilisation

Includes e.g. transferring fuel to adjust trim, or ballast supply/discharge.

#### Q25-C05H

## Influencing air flow over aircraft surfaces

Includes boundary-layer flow control, and e.g. use of slots, ducts, porous or rough surfaces, magnus effect of shock wave generators to adjust air flow over aircraft surfaces. For use of flaps and other movable control surfaces to adjust air flow, see Q25-C05C instead, and for fixed aerodynamic assemblies such as tail or nose planes, see Q25-A04 instead.

#### Q25-M

## Military equipment

Respectively see W07 and W06-B codes for electrical aspects of military equipment and aircraft per se. Includes both offensive and defensive equipment. See Q25-P30 instead for military aircraft applications per se.

#### Q25-N

#### [2007]

## Noise/Vibration / Harshness reduction arrangements

Includes all aircraft-board arrangements for reducing noise, vibration or harshness, including use of sound deadening material.

#### Q25-P

## Aircraft adapted for special purposes

#### Q25-P01

Lighter-than-air aircraft

Q25-P01A

**Airship** 

Q25-P01B

**Balloon** 

Q25-P02

Rotorcraft; Helicopter

#### Q25-P03

## Ornithopter

Includes aircraft utilising a wing flapping motion.

## Q25-P04

### Sea plane

Includes amphibious aircraft and flying boats. Flying ground effect aircraft are coded in  $\Omega$ 24-P12 only.

Q25-P05

Glider

Q25-P06

Microlight

Q25-P07

Hang-gliders and para-gliders

#### Q25-P08

VTOL (Vertical-take-off and landing) aircraft

#### Q25-P09

#### Kites

#### Q25-P10

#### Convertible aircraft

Includes e.g. motor vehicle convertible into aircraft (see also Q19-R03).

## Q25-P13 [2007]

#### Military aircraft

For mechanical military equipment used onboard aircraft, see Q25-M. See W07 and W06-B codes for electrical aspects of military aircraft.

## Q25-P15 [2007]

#### **Unmanned aerial vehicles**

Includes mechanical aspects of UAVs and micro UAVs used for geophysical surveying or military reconnaissance, imaging etc.

## Q25-P25 [2007]

#### Commercial aircraft

(Q25-P30)

Includes general non-specific commercial aircraft.

#### Q25-P30

### Other special purpose aircraft

#### Q25-R

## Airport, ground or aircraft carrier equipment

#### Q25-R01

## Aircraft storage; Hangars

Includes moorings for airships.

## Q25-R02

#### Airfield/runway construction

Includes airfield construction methods and e.g. mechanical aspects of runway lighting.
Helipad/landing pad. (also see W06-B02E and X26).

#### Q25-R03

## Passenger handling equipment

Includes steps and aircraft stands.

#### Q25-R05

#### Load handling equipment

See Q25-B02 codes for aircraft mounted load handling equipment.

#### Q25-R07

## Aircraft launching/towing gear; Arresting gear

#### Q25-R09

Aircraft servicing and maintenance equipment

#### Q25-R10

**Cleaning equipment** 

#### Q25-R15

Other ground/aircraft carrier based equipment

#### Q25-S

## Space/cosmonautic vehicles/equipment

See W06-B03 instead for electrical aspects of space/cosmonautic vehicles. These codes are used in isolation and are not intended to be used in conjunction with other Q25 codes, except Q25-X codes for non-specific aircraft/spacecraft systems and equipment.

#### Q25-S01

#### Cosmonautic vehicle type

## Q25-S01A

#### **Artificial satellites; Space stations**

For satellite communication systems per se, see W02-C03B1 codes only.

#### Q25-S01B

**Space shuttles** 

#### Q25-S01C

**Space rockets** 

#### Q25-S01D

#### **Extra-terrestrial vehicles**

Moon buggy

## Q25-S02

#### **Navigation and position control**

Includes e.g. using jets, gyros, inertia, Earth's magnetic field, gravity gradient.

## Q25-S03

## Instrumentation

Includes mechanical aspects. See S02 for instrumentation in general and W06-B01B for electrical aspects of aircraft instrumentation.

#### Q25-S04

#### **Propulsion systems**

Includes solid rocket boosters (see also Q52-B03 for rocket engines per se).

#### Q25-S05

## Life support equipment

Includes mechanical aspects of heating and airconditioning equipment.

#### Q25-S06

## Protection/safety/emergency devices

Includes systems for protecting the space craft per se. For astronaut protecting space suits see Q25-X01 only.

#### Q25-S06A

**Protection against radiation** 

#### Q25-S06B

## Protection against meteorites/foreign bodies

#### Q25-S06C

### Thermal protection

Includes mechanical heat shields and tiles. Also includes thermal insulation on spacecraft to protect astronauts from extreme temperatures.

## Q25-S07

Crew/passenger accommodation

### Q25-S07A

Sanitation arrangements

#### Q25-S08

## Systems for re-entry into Earth's atmosphere; retarding/landing devices

Includes parachutes, space capsules.

#### Q25-S09

### Coupling/separating equipment

Includes docking equipment. Also includes couplings between vehicles or parts of them, e.g. between separable rocket stages or between solid rocket booster and space shuttle.

#### Q25-S10

## **Ground equipment**

Includes rocket launching tower.

## Q25-S11 [2007]

## Load accommodating arrangements

Includes cargo bays and storage compartments, as well as load handling arrangements such as arms used to launch satellites. See W06-B03 and X25-F or X25-A03E codes for electrical aspects of load handling/manipulating equipment.

## Q25-S15

## Other space/cosmonautic equipment

#### Q25-X

Other aircraft/cosmonautic details and related equipment

## Q25-X01

Flying suits; Space suits

#### Q25-X03

Parachute training equipment

#### O25-X04

**Astronaut training equipment; Simulators** 

## Q25-X05

#### Aircraft/spacecraft manufacture

Includes both aircraft and spacecraft manufacturing systems, and (dis)assembly equipment and methods. See W06-B08 for electrical aspects of aircraft or spacecraft manufacture. See Q51-M or Q52-M respectively for manufacture of IC and gas turbine engines used in aircraft.

## Q25-X07

## Aircraft design and testing

E.g. using wind tunnels.

# Q3 Conveying, Packaging, Storing

Q3 manual codes have been applied from 2012 to primarily allow mechanical details of packages and packaging equipment to be highlighted.

## Q31: Packaging processes and equipment

From 2012 Q31 has been redefined to cover codes that are intended to highlight the equipment/methods etc. used for packaging/labelling material/goods during primary and secondary packaging. The type of container/bottle being filled/labelled/closed etc., as well as the container material can be specified by assigning Q32 and Q33 codes, respectively. The type of product being packaged/bottled can also be highlighted by the assignment of Q34 codes. For novel details of the actual container/bottle or its closure see Q32 codes instead. Details of transit packaging are coded under Q32-T. Prior to 2012 Q31 remains searchable for packaging and labelling in general.

#### Q31-A

## Packaging, Liquid Handling

Packaging/packing/bottling details with electrical content are coded under X25-F03A codes.

#### Q31-A01

## Packaging equipment, methods and control

#### Q31-A01A

#### Filling, bottling

Includes filling by gravity flow, rotary feeders (screw and centrifugal type feeders), vibratory feeders, pressure, pneumatic means, e.g. suction, etc. Also includes equipment for assisting filling, such as funnels or nozzles for introducing the articles or materials into containers. Also includes details for feeding blanks to the filling machine, for opening container, e.g. box or bag, and maintaining it in position during filling. Electrical details of Filling/bottling plant and processes are coded in X25-F03A1

Canning, tinning

## Q31-A01A1

Filling, bottling equipment and apparatus

#### Q31-A01A3

Filling, bottling methods, processes and control

#### Q31-A01B

## Closing and sealing packages or bottles

Details of Modified-Atmosphere Packaging (MAP) equipment and processes, such as gas flushing and compensated vacuum that re-balance gases inside the package to e.g. reduce levels of oxygen and to replace gases with Nitrogen or CO2, are coded under Q31-A01B1A and Q31-A01B3A, respectively. *MAP, vacuum packaging* 

#### Q31-A01B1

Closing and sealing equipment and apparatus

#### Q31-A01B1A

MAP and Vacuum equipment and apparatus

## Q31-A01B3

Closing and sealing methods, processes and control

#### Q31-A01B3A

MAP and Vacuum methods, processes and control

#### Q31-A01C

Opening packages/bottles

#### Q31-A01C1

## Opening equipment and apparatus

Includes manual and powered opening devices, such as can openers and slotted keys. Bottle and can openers with electrical content are also coded under X27-B04.

Corkscrew, bottle opener, can/tin opener, churchkey

#### Q31-A01C3

Opening methods, processes and control

## Q31-A01E

### Wrapping/bundling

Includes details for orientating the articles, e.g. cigarettes, filled bottles, biscuits, before being placed in crates, boxes, etc.

#### Q31-A01E1

Wrapping

## Q31-A01E1A

Wrapping equipment and apparatus

#### Q31-A01E1B

## Wrapping methods, processes and control

#### Q31-A01E2

## **Bundling**

Includes details for placing bottles in crates. Banding, strapping, bale

#### Q31-A01E2A

**Bundling equipment and apparatus** 

#### Q31-A01E2B

**Bundling methods, processes and control** 

#### Q31-A02

## Unpacking/emptying equipment, methods and control

For dispensing measured amounts of liquid, see Q31-A03 instead.

#### Q31-A02A

Unpacking/emptying equipment and apparatus

#### Q31-A02B

## Unpacking/emptying methods, processes and control

#### Q31-A03

## Dispensing equipment, methods and control

Includes details for dispensing a liquid into a recipient, such as a spirit measure attached to a bottle of spirit, device for dispensing beverages on draught or for dispensing beverages in bottles. Details of containers with removable pouring or dispensing arrangements, such as spout, spray pump, are coded under Q32-D06C only, and details of packaging with integral dispensing arrangements are coded under Q32-D06B only. Dispensing equipment, method and control details with electrical content is coded under X25-F03B. Dispensers for domestic alcoholic beverages with electrical content are coded under X27-X02. Bottling in general is coded in Q31-A0A codes only. Spirit measure, bar optic

### Q31-A03A

## Liquid/semi-liquid transfer equipment, methods and control

Includes transfer of liquids from storage containers or reservoirs into vehicles or portable containers.

#### Q31-A03B

## Solid/particulates/powder transfer equipment, methods and control

Includes transfer of particulates from storage containers or reservoirs into vehicles or portable containers.

#### Q31-A05

## Cleaning/sterilising equipment, methods and control

Includes devices and methods for cleaning or sterilising cans/tins, bottles, etc., including concurrent cleaning and filling of cans/tins, bottles, etc.

Autoclave, pasteurisation

#### Q31-A99

## Other packaging equipment, methods and control

#### Q31-B

#### Labelling; Tagging

Labelling/tagging equipment and methods with electrical content, including labels and tags per se, are coded under X25-F03A3C.

#### Q31-B01

Labelling equipment and methods

#### Q31-B01A

Labelling equipment and apparatus

#### Q31-B01B

Labelling methods, processes and control

#### Q31-B02

#### Labels

Includes labels directly glued on a container, such as adhesive labels, wraparound labels, etc. Also includes labels attached to a container using e.g. a string, ribbon or elastic, such as swing tag labels. Also includes cardboard sleeves. Details of labels for tracking/tracing the packaging are also coded under Q32-D03A.

#### Q31-B02A

## Food labelling regulations and standards

#### Q31-C

## Manufacturing details

Includes manufacturing details of packaging plant as well as manufacture of packaging containers/bottles themselves. Q31-C should be used in conjunction with other Q32 codes to highlight the type of container or closure being manufactured, e.g. bottle, jar, lid, etc. Also see section A for novel polymer details such as A12-P for packaging applications and A11-B/C for details of forming, moulding and heat sealing of polymers. Also see section L01 for manufacture of glass items such as L01-L06 for packaging applications as well as e.g. L01-E for manufacturing hollow containers. Includes manufacturing details of external and internal packaging elements.

## Q31-R

## **Recycling details**

Includes recycling details of containers, lids/caps and transit packaging. Electrical details of recycling are coded under X25-W04.

## Q32: Container/Closure Types, Special packaging features and Transit packaging

From 2012 Q32 has been redefined to cover container and closure types and special features of containers/packaging. Q32 codes should be used in conjunction with Q31, Q33 and Q34 codes as appropriate. Manufacturing and recycling details are covered by Q31-C and Q31-R, respectively. Prior to 2012 Q32 remains searchable for containers in general.

#### Q32-A

#### **Container Type**

These codes are used to highlight the type of container that is either novel per se or used in the packaging/bottling system/method.

Q32-A01

**Bottles** 

Q32-A02

**Ampoules** 

Q32-A03

#### **Cartons**

Includes containers made from liquid packaging board such as juice boxes, milk cartons, etc.

Q32-A04

Jars

Q32-A05

Cans; Casks; Barrels; Drums

Q32-A05A

**Aerosol containers** 

Q32-A05B

**Drums**; Tanks

Tank containers are coded under Q32-A30 only.

Q32-A05C

Casks; Barrels

Q32-A06 [2018]

#### **Capsules; Cartridges**

Includes coffee capsules, and ink cartridges. Ink cartridges for printers are also coded under S06-G06A.

Beverage pods

Q32-A08

**Boxes**; Crates

Q32-A09

Trays; Racks

Includes drawer-and-shell containers.

Q32-A10

**Baskets** 

Q32-A15

Sacks; Bags; Pouches; Envelopes

Includes plastic compost bags and paper bags.

Q32-A15A

Reclosable/resealable

Includes resealable freezer bags and other airtight bags.

Re-sealable, air-tight, zip (RTM)

Q32-A16

**Collapsible tubes** 

Includes tubes for toothpaste or ointment.

Q32-A17

Blister packaging; Skin packaging

Q32-A18

Wrapping films; Film laminates; Shrink

packaging

Q32-A18A

Shrink packaging; Shrink wraps/films

For shrink wrapping of multiple packages, e.g. for transportation see Q32-T01C instead.

Q32-A20 [2014]

Cups

Q32-A30 [2021]

Large containers

Includes tank containers, cargo containers, bulk storage containers and shipping containers.

Tanktainer, silo

Q32-A99

Other container types

Bucket

#### Q32-B

#### Container or bottle construction

Details of transit packaging elements, such as corner protectors, air pillows or polystyrene peanuts, are coded under Q32-T codes only.

#### Q32-B01

#### Walls

Includes lines of weakness to facilitate the opening of the container.

#### Q32-B02

#### Partitions/dividers

#### Q32-B03

## Reinforcements; strengthening arrangements

#### Q32-B04

#### Foldable; erectable containers

Includes containers formed from blanks such as cardboard boxes (see also Q32-A08 and Q33-C).

#### Q32-B05

## **Collapsible containers**

Includes containers that can be collapsed when not storing product.

#### Q32-B06

#### Handles; carrying aids

#### Q32-B99

## Other constructional details

Includes linings, drip catchers, internal/external coatings, inspection windows, spacers between containers, label holders. Details of handles are coded under Q32-B06 only.

Label/coupon holders, legs

### Q32-C

## Closure details, e.g. lids/caps

Q32-C codes are intended to highlight the type/construction of the actual closure/lid etc. for the package itself.

#### Q32-C01

## Removable lids/caps

## Q32-C01A

#### **Threaded**

Screw cap, pushdown and turn cap

#### Q32-C01B

#### **Snap-action**

Includes push-on caps.

#### Q32-C01D

#### Deformable/breakable

Includes deformable ring pulls as well as lids with integrated pull tabs for food cans/tins that do not require a can opener. Also includes crown caps used on beer bottles and closures with lines of weakness designed to be broken. Stay tabs for beverage cans are coded under Q32-C02 only.

Crown cap, crown seal, pull-off bottle cap, ring-pull, tape tab, tear strip, tearable wire

#### Q32-C01G

## **Bungs and corks**

Includes rubber or plastic stoppers and corks for wine bottles. Wine bottle foils or capsules are coded under Q32-D11 instead. Includes closures arranged within necks or pouring openings or in discharge apertures.

#### Q32-C01H

#### Films and seals

Includes lidding films used to form a sealed layer on yogurts, margarine tubs, packs of delicatessen, etc. Also includes disc-like seals for bottle opening. For novel seals used in re-sealable bags also see Q32-A15A.

Aluminium foil liner/gasket

## Q32-C01X

## Other removable closures

#### Q32-C02

## Non-removable closures/lids/caps

Includes lids that are hinged or slideable and remain attached to container whether open or closed, such as stay tabs for beverage cans. Also includes details of closing arrangements for bags and sacks, e.g. adhesive flaps, strings, etc. Stay-on-tab, gable top

## Q32-C99

## Other closure details

Includes details to prevent idle rotation of the cap (to prevent gravity from rotating the cap downwards when contents are discharged from the container). Anti-fogging lid

#### Q32-D

#### Special packaging features

#### Q32-D01

## Packaging providing special environment

Includes packaging keeping goods at specific temperature, pressure, moisture level, or oxygen level, or using fungicides, antimicrobials and nanocomposites for longer shelf life, etc. Includes moisture absorbers, e.g. desiccants, oxygen scavengers/absorbers, and the use of thermochromic inks to indicate a change in temperature.

Insulation, sterile

#### Q32-D01A

## Modified atmosphere packaging (MAP)

Includes "breathable" films used in equilibrium modified atmosphere packaging that passively control the atmosphere inside the package to prolong the life of the packaged goods.

Vacuum packaging, EMAP

#### Q32-D01C

#### **Barriers**

Includes gas barriers, e.g. oxygen barriers, moisture barriers and bacterial barriers.

#### Q32-D01X

## Other packaging providing special environment

Includes corrosion inhibitors.

## Q32-D02

## Self-heating/self-cooling packaging

Includes active packaging to heat food without external heat source or power, typically using an exothermic chemical reaction, esp. for military ready-to-eat meals. Also includes cooling contents using endothermic reaction.

## Q32-D03

## Safety features

#### Q32-D03A

## Trackable/traceable packaging

RFID details per se, including constructional details, are coded by T04-K codes only, and electrical details of goods tracking are coded by X25-F11. This code is used to cover attachment details of e.g. RFID chip to the packaging. Also includes codes used in the food industry e.g. 'family farm codes' on meat products so consumers can learn the location of the farm where e.g. chickens, cows, etc were raised, and in the medical industry to avoid drug

counterfeiting. If the codes are printed on/attached to the label, also include Q31-B02. Also includes special labels dedicated to barcodes. Details of barcodes per se, barcode writing and reading are coded under T04-C02, T04-A02B and T04-A03B1, respectively.

Trace code

#### Q32-D03B

## Tamper resistant; preventing unauthorised removal/refilling; Anti-counterfeit features

Includes child resistant caps, and valves used for preventing refilling of containers.

**Tamperproof** 

#### Q32-D03C

## Tamper evident

Includes pop-up caps on jam jars and breakable seals across cap/lid.

Wax seal

#### Q32-D03X

## Other safety features

Anti-explosion

#### Q32-D05

## Containers storing two or more different products

Includes containers with internal partitions or multicompartment containers for storing 2 or more samples of the same product or two or more different products. Also see Q32-B02 for novel partitions/dividers used in containers.

## Q32-D06

#### Dispensing features

This code is used in conjunction with Q34-A and Q34-B to highlight the type of product dispensed, e.g. liquid/semi-liquid or solid/particulates. Equipment/method/control details for dispensing contents into a container, e.g. for dispensing beverages in bottles, are coded under Q31-A03 only.

#### Q32-D06A

#### Controlled/metered dose

Includes details for dispensing a controlled quantity, such as for nasal sprays or inhalers. This code can be used in conjunction with Q32-D06B or Q32-D06C to specify whether the dispenser is removable or integrated within the container.

Spirit measure, bar optic

#### Q32-D06B

## Containers with integral dispensing arrangements

Includes containers with built-in dispensing arrangements. Spouts etc. that can be removably attached to the container, e.g. screwed on spouts, are coded under Q32-D06C only. Ring-pulls, stay tabs and ring pull type removable tin tops are coded In Q32-C instead.

#### Q32-D06C

## Containers with removable pouring/dispensing arrangement

Includes lids with spouts, e.g. screw on spouts. If spout is integrated within the container, see Q32-D06B instead. Includes screw-on (see also Q32-C01A) sport caps for drinks bottles with lift/flip up top to allow drinking.

Spray pump

#### Q32-D06D

## Preventing loss of cap/lid

Includes pull-off caps that are fixed to closure by tether.

#### Q32-D07

## Closures/lids/caps with means for preventing re-filling

Includes containers with single-use closures such as one-way valves or closures that are destroyed upon opening.

#### Q32-D08

## Closures/lids/caps with means for pressure application

Includes wire arrangement for applying pressure to cork used on champagne bottles.

### Q32-D11

#### **Decorative features**

Includes wine bottle foils or capsules, as well as wax seals.

#### Q32-D12

#### **Protective features; Secondary covers**

Includes secondary covers used to protect main closure from e.g. dirt, such as plastic caps covering drinking spout (see also Q32-D06) or sports cap for bottle (see also Q32-A01).

Dust, dirt, contamination, protection

#### Q32-T

## **Transit Packaging**

These codes are intended to highlight package accessories, e.g. straps, wrappers, cardboard edges to be fitted to outside of package to protect it during shipment etc.

#### Q32-T01

#### **External packaging elements**

#### Q32-T01A

## Plugs, Sleeves, Caps for protecting/bundling of articles

Includes protectors for screw threads, corner protectors, and end caps.

#### Q32-T01B

## Flexible elongated elements

Includes straps and cable ties. Use of cable ties in electronic equipment wiring or in cable installations in general is covered by V04-T01A and X12-G04A2 respectively.

#### Q32-T01C

## Wrappers or flexible covers and wrapping machines

#### Q32-T01D

## Pallets and palletizing equipment

#### Q32-T02

#### Internal packaging elements

Includes partitions and inner packaging pieces used to separate, cushion, suspend and fill irregular spaces within a container. Includes chips or peanuts made of polystyrene or recycled products, air pillows, foam packaging such as expanded polystyrene foam, polyethylene foam or polyurethane foam, and corrugated board.

Partitions or dividers placed inside a container for separating 2 or more products stored in the same container are coded under Q32-B02 and Q32-D05 only.

Air pouches, bubble wrap (RTM), encapsulated air plastic sheeting, EPS, foam-in-place, kraft paper, loose fill, PE, PU

## Q33: Packaging container and closure materials

From 2012 Q33 has been redefined to highlight the material the container or closure is made of. Q33 codes should be used with Q31, Q32 and Q34 as appropriate. Prior to 2012 Q33 remains searchable for closures in general.

#### Q33-A

#### Glass

#### O33-B

## Plastic; Polymer; Polystyrene; Thermocol

Fiberglass, ABS, rubber, resin, acrylonitrilebutadiene-styrene, terpolymer

#### Q33-C

### Paper; Card; Cardboard

#### Q33-C01

#### Treated paper, card and cardboard

Includes foil-lined containers for e.g. fruit juices.

#### Q33-D

#### Metal

Includes aluminium foil.

## Q33-E

### Wood

#### Q33-F

## **Ceramic; Earthenware**

#### Q33-G

#### Microwaveable packaging

Includes food packaging specially made for use in a microwave. Includes metalized film (metalized polyethylene, polypropylene, PET) or metalized cardboard (so called crisping sleeve) used as a subset for cooking in a microwave oven, to help make food crisp and brown. See also X27-C01 for microwave cookware.

#### Q33-H

## Cloth; Fabric

Includes details of packaging made from terry cloth, linen, cotton, fleece, microfibers, etc.

#### Q33-J

## Green/sustainable packaging

#### Q33-J01

### Biodegradable packaging

Includes compostable packaging.

#### Q33-J02

#### Made from renewable sources

Includes packaging made from renewable sources such as corn starch, sugarcanes, and tapioca products including roots, chips or starch. Also includes packaging made from recycled materials. PLA, Polylactide, Poly(lactic) acid, pea starch, bioplastic, PHB

#### Q33-J03

## Recyclable packaging; Reuseable packaging

This code includes packaging made from recyclable materials that can be used again after processing (e.g. made of glass, metal, card and paper). Also includes packaging that can be cleaned and reused, e.g. milk bottles. Packaging made from recycled materials is coded under Q33-J02 only. Details of edible packaging are coded under Q33-J04 only.

#### Q33-J04

#### **Edible packaging**

#### Q33-J05

## Reduced/minimal packaging

This code includes packaging made using minimal materials, leading to reduced layers of packaging, lower mass (product to packaging ratio), lower volume, etc.

#### Q33-J06

## **Energy efficient packaging**

Includes packaging with low carbon footprint and/or using renewable energy.

#### Q33-J99

## Other environmental aspects of packaging

## Q33-X

## Other packaging container/closure material

## Q34: Types of goods packaged, bottled, bound, labelled, unpacked

From 2012 Q34 has been redefined to highlight the type of product being packaged/bottled etc. and should be used in conjunction with other Q31-Q33 codes as appropriate. Prior to 2012 Q34 remains searchable for packaging elements/types in general (now covered in general by Q32).

#### Q34-A

## Fluent solids; Powders; Dry particulates

This code is used in conjunction with other Q34 codes as appropriate.

#### Q34-B

## Liquids; Semi-liquids; Gas

This code is used in conjunction with other Q34 codes as appropriate.

Paste

#### Q34-C

## Food for human consumption

These codes can be used in conjunction with Q34-A and Q34-B to indicate whether the food product is a liquid or a solid.

#### Q34-C01

## Meats; Poultry; Fish

#### Q34-C01A

### Raw meats/poultry/fish

Includes packaging of meat mince, sausages, and marinated raw meats/poultry/fish.

Bacon

#### Q34-C01B

#### Processed meats/poultry/fish

Includes packaging of all smoked, cured and cooked meat products, including salamis, pates and hams. Ready meals made using meat, poultry and/or fish are also coded under Q34-C08A. Packaging of mince, sausages and marinated uncooked meats are coded under Q34-C01A only.

Delicatessen, fish pastes, sardines

### Q34-C02

## Vegetables; Fruits; Produce

Includes packaging of fresh and processed vegetables/fruits/etc, including pre-cut salads, diced carrots, peeled potatoes, tinned tomatoes, fruit compotes, etc.

#### Q34-C02A

#### **Vegetables**

Beans, soya, legumes, peanuts, garlic

#### Q34-C02B

#### **Fruits**

Includes packaging of dried fruits.

Raisins, fruit purees, fruit salads, olives

#### Q34-C02C

#### **Nuts and seeds**

Pecan, almond, cashew, sesame

#### Q34-C02X

### Other vegetables/fruits/produce

#### Q34-C03

#### Cereals

Includes packaging of grains, rice, flour, breakfast cereals, etc.

#### Q34-C04

#### **Dairy**

Includes packaging of fresh and processed dairy products, such as milkshakes, powdered eggs, etc.

### Q34-C04A

#### Milk; Yoghurt

Includes packaging of cream, ice cream, butter, milkshakes, etc. Also includes packaging of lactose-free milk

Powdered milk, UHT milk, buttermilk, baby milk

#### Q34-C04B

## Eggs

Dried eggs

## Q34-C04C

#### Cheese

## Q34-C04X

#### Other dairy products

#### Q34-C05

## **Bakery; Confectionery; Pasta**

Includes packaging of breads, cakes, biscuits, pasta, crisps and sweets.

Cookies, spaghetti, macaroni, rice, candies, chewing gum

#### Q34-C06

## **Condiments; Sauces; Sugars; Oils**

Salts

#### Q34-C06A

#### **Herbs**; Spices

Includes packaging of fresh, frozen and dried herbs. Herb pastes, such as basil or coriander pastes, are coded under both Q34-C06A and Q34-C06B. Packaging of mustard is coded under Q34-C06B only.

#### Q34-C06B

## Sauces; Soups; Pastes

Includes packaging of pasta sauces, curry pastes, sauce pouches, mayonnaise, tomato sauce, etc. Herb pastes, such as basil or coriander pastes, are coded under both Q34-C06A and Q34-C06B.

Tomato puree, dry sauce mix, mustard, marinade

#### Q34-C06C

#### **Oils; Vinegars**

Includes packaging of cooking oils, such as olive oil, sunflower oil. Also includes packaging of salad dressing.

Vinaigrette

#### Q34-C06D

### Sugar and sweeteners

Includes packaging of sugar cubes, loose sugar, syrups, but also sugar substitutes/artificial sweeteners.

Caramel, honey

#### Q34-C07

#### **Drinks and beverages**

This code does not include milk packaging, which is coded under Q34-C04A only.

#### Q34-C07A

#### Water and soft drinks

Includes packaging of still/sparkling water, fruit juices, squashes and concentrates.

Cordial

#### Q34-C07B

#### Tea and coffee

Includes packaging of ground and instant coffee, coffee beans, coffee machine pods, one-cup coffee filters, syrups (chicory), loose tea, tea bags and chocolate drinks. Also includes packaging of filter papers used in coffee makers.

#### Q34-C07C

## Alcoholic drinks

Beer, wine, whisky

## Q34-C08

#### Specialty foods and meals

#### Q34-C08A

#### Whole or partially prepared meals

Includes meal kits, and marinated uncooked meats.

Sushi, pizza, burger, ready-made sandwiches

#### Q34-C08B

## **Baby foods**

Includes packaging of powdered milk, long-life milk, food pouches, etc. Packaging of milk products is also coded under Q34-C04A.

#### Q34-C08C

## Food supplements and vitamins

Includes packaging of slimming milkshakes.

#### Q34-C08D

## Parenteral and enteral feeding

#### Q34-D

## Food for animal consumption and supplements

#### Q34-D01

#### **Animal food**

Includes packaging of pet food or livestock feed. Fodder, pet treats

## Q34-D02

## Animal supplements/health products

Includes packaging of vitamins, cod liver oil, animal grooming products, etc. Also includes packaging of animal health products, such flea products, ointments, etc. These are also coded under Q34-J01 for pharmaceuticals.

#### Q34-E

## **Textiles; Clothing; Garments; Shoes**

#### Q34-F

### Paper; Sheets; Magazines; Newspapers

Includes packaging details of toilet paper. Also coded under O.34-J.03.

### Q34-G

#### **Building/construction materials**

Includes packaging for tiles, bricks, windows, glass panels/sheets, etc. Also includes packaging for waste materials from building sites, such as rubbles. Packaging for asbestos is also coded under Q34-H99.

#### Q34-H

#### Hazardous and waste materials

Includes corrosive materials.

#### Q34-H01

#### **Chemicals: Fertilizers**

Insecticide, pesticide

#### Q34-H02

#### **Fuels: Oils**

Includes oil, such as machine or engine oil. Cooking oils are coded under Q34-C06C only.

Petroleum

#### Q34-H03

## Hospital waste/Bio-hazards

#### Q34-H04

#### Nuclear materials/Radioactive waste

Rods

### Q34-H05

#### [2015]

#### Household waste and garbage

Includes biodegradable and recyclable waste.

#### Q34-H99

#### Other hazardous materials

Asbestos, explosive materials, ammunitions, refrigerant, paint, poison, dead organisms/creatures

#### Q34-J

## Pharmaceuticals; Medical; Cosmetics; Cleaning products

#### Q34-J01

### **Pharmaceuticals**

Includes packaging of pharmaceuticals for internal and external usage. Includes packaging of food supplements, such as vitamins. Packaging of meal replacements and diet products, such as slimming milkshakes or soups, are coded under Q34-C08C only.

Medicine, tablets, ointment, inhaler, flea products

## Q34-J02

## Medical

Includes packaging of medical instruments such as needles, dressings, etc. Special carriers for e.g. human organs with integrated cooling systems are also coded under Q32-D01. Packaging of tablets and medicines are coded under Q34-J01 only.

LifePort®, sterile bandages, blood, medical packs/kits

#### Q34-J03

#### Cosmetics: Toiletries: Skincare

Packaging details of toilet paper is also coded under Q34-F.

Antibacterial hand gel, baby wipes, make-up, razor blades, shampoo, soap, sun lotion, toothpaste

#### Q34-J04

## **Cleaning products**

Does not include packaging of toiletries; these are coded under Q34-J03 only.

Antibacterial wipes, antibacterial spray, cleaning foam, cleaning wipes, washing up liquid, clothes conditioner

#### Q34-K

## Vehicle parts; Tyres; Machine parts; Tools

#### Q34-K01

## **Vehicle parts; Tyres**

Includes packaging details of parts for cars, airplanes, boats, trains, bikes, etc.

#### Q34-K02

## **Machine parts; Tools**

Includes packaging of gardening equipment, and welding electrodes. Also includes packaging of screws, nails, drill bits, etc.

#### Q34-L

## **Tobacco products**

Includes packaging of cigarettes, cigars, pipes etc. Includes packaging of filters and cigarette papers. Packaging of electronic cigarettes are coded under Q34-M02 only.

Cigarillos, blunt, corona, kretek, tobacco pouch, cigarette holder

#### Q34-M

#### **Electrical/electronic equipment/parts**

#### Q34-M01

#### White goods and kitchen appliances

Washing machine, microwave, cooker, blender, coffee maker, toaster, fridge

#### Q34-M02

## **Electronic goods**

Includes packaging of musical instruments, toys and sport equipment with electrical content e.g. keyboards, battery-operated toys, and electronic cigarettes. Packaging of musical instruments, toys and sport equipment are also coded under Q34-T. *LCD*, television, display, game console

#### Q34-M99

## Other electrical/electronic equipment/parts

Includes packaging of electrical beauty products (electric razors, massagers, etc.), batteries, solar/photovoltaic panels/cells, lightbulbs and tubes, gas/electricity/water meters, etc.

## Q34-N

Smart meter

### Household/domestic

Includes packaging of non-electrical items, such as crockery, furniture, cleaning accessories (e.g. cleaning mops, cloths, washing gloves, etc). Packaging of kitchen appliances, white goods (washing machines, microwaves, etc) and electrical beauty products is coded under Q34-M codes only. Packaging of household waste/garbage is coded under Q34-H05 only.

Watch, jewellery, clock

## Q34-T

#### Musical instruments; Toys; Sport

Packaging of musical instruments, toys and sport equipment with electrical content, e.g. keyboards, battery-operated toys, game consoles, are also coded under Q34-M02.

#### Q34-X

## Other specific goods

Includes packaging for stationery, plants, flower bulbs and seeds.

Pencils, pen erasers, staplers

## Q35: Refuse Collection; Conveyors

From 2012 manual codes have been assigned for all mechanical details of refuse collection and conveyors.

#### Q35-A

#### **Refuse Collection**

#### Q35-A01

#### **Refuse receptacles**

Includes cleaning/sterilizing equipment integrated with the refuse receptacle. Details of cleaning/sterilizing equipment including electrical details are coded under X25-H09. Receptacles for medical/clinical waste disposal, e.g. for used needles or bandages, are also coded under P34-W. Bin bag, dustbin, wheelie bin, dumpster, needle disposal bin

#### Q35-A02

#### Vehicles to collect refuse

Details of e.g. vehicle gears, motors, etc, are also coded under Q19. Includes details of front loaders, rear loaders and compactors. Includes cleaning/sterilizing equipment integrated with the vehicle. Details of cleaning/sterilizing equipment including electrical details are coded under X25-H09.

Garbage truck, trash/dump truck, grapple truck, bin wagon, dustcart, dustbin lorry, garbage scow

### Q35-A99

#### Other refuse collection details

## Q35-B

### **Conveyors**

Includes details of belts, gears, chutes, safety equipment, etc. Also includes lubricating and cleaning/sterilizing equipment. Details of cleaning/sterilizing equipment including electrical details are coded under X25-H09. Electrical details of conveyors, including control details, are coded under X25-F01 codes only. Details of elevators, escalators, lifts or moving walkways are coded under Q38-A only.

Roller conveyor

## **Q36: Handling Thin Materials**

From 2012 manual codes have been assigned for all mechanical details of thin material handling.

#### Q36-A

## Handling of piles

Includes supports and trays containing the piles of articles, device for feeding, separating, moving and orientating articles from piles, e.g. conveyor belts, grippers.

Feeder, gauge pin, feed table

#### Q36-B

## **Handling of webs**

Continuous sheets of metal, paper

## Q36-C

## Handling of thin materials

Fabric

#### Q36-D

## **Handling of filamentary materials**

Cable, string, wool

## Q36-E

## **General handling**

Includes details of delivering or advancing articles from a machine, collating articles, storing materials on e.g. reels, spindles, bobbins, etc, adjusting tension in material, driving gear, recirculation system, securing material to cores, etc. This code can be used in conjunction with other Q36 codes to specify the type of thin materials handled.

## Q37: Container Traffic (Pre-1984 Only)

## Q38: Hoisting; Lifting; Hauling; Trucks

From 2012 manual codes have been assigned for all mechanical details of hoisting, lifting, hauling and trucks.

## Q38-A

## Elevators, escalators, lifts, moving walkways

Details of conveyors are coded under Q35-B only. Electrical details of elevators, escalators, lifts and moving walkways, including control details, are coded under X25-F04 codes only.

Goods lift

#### Q38-B

## Cranes, capstans, winches, tackles, trucks

Includes mechanical details of cranes, capstans, hoists, winches, tackles, trucks and factory/robotic vehicles. See X25-F05 codes for electrical details of cranes, winches, trucks etc. For mechanical details of forklift trucks see Q19-C06.

Hoist, block and tackle

## Q39: Liquid handling, saddlery, upholstery

\*This class is now discontinued. Liquid handling has been transferred to Q31, saddlery has been transferred to P36 and upholstery has been transferred to P26. Q39 remains searchable for records prior to 2012

## **Q4: Buildings; Construction**

#### Q41: Road, rail, bridge construction

From 2015 manual codes have been assigned for all mechanical details of road, rail, and bridge construction.

Q41-A [2015]

**Bridges** 

Q41-A01 [2015]

**Types of bridges** 

Q41-A01A [2015]

Suspension or cable-stayed bridge

Q41-A01B [2015]

Arch-type bridge

Q41-A01C [2015]

Truss-type bridge

Q41-A01D [2015]

Movable, portable or floating bridges

Q41-A01F [2015]

**Bascule** 

Swing or drawbridges

Q41-A01X [2015]

Other specific types of bridges

Q41-A05 [2015]

**Constructional details of bridges** 

Q41-A05A [2015]

**Structural components** 

Q41-A05B [2015]

**Foundations** 

Q41-A05G [2015]

**Novel constructional materials** 

Q41-A10 [2015]

Safety equipment/components

Crash barriers

Q41-A20 [2015]

#### **Applications of bridges**

Details of the structure carried by the bridge.

Q41-A20A [2015]

**Road bridges** 

Q41-A20B [2015]

Rail bridges

Q41-A20C [2015]

**Pedestrian bridges** 

Q41-A20D [2015]

## **Waterway bridges**

Bridges carrying rivers or canals.

Q41-A20H [2015]

Aqueducts, pipelines bridges

Q41-A20X [2015]

## Other types of bridges and platforms

Includes helicopter landing stages and bridges carrying airport runways.

Q41-B [2015]

Roads

Q41-B05 [2015]

#### Structural components

Includes pre-fabricated units.

Q41-B10 [2017]

#### Safety equipment

Includes barricade, crash barrier, reflectors.

Safety, indication, warning, road divider

Q41-B50 [2015]

#### **Novel road materials**

Includes novel materials for road surfaces and road foundations.

Asphalt, concrete, composite, bituminous, gravel, stone, brick, aggregate

Q41-E [2015]

Railways

Q41-E01 [2015]

Types of railways

Q41-E01A [2015]

Passenger

Q41-E01B [2015]

Industrial/Freight

Q41-E01C [2015]

Monorail

Q41-E01D [2015]

Funicular
Cable-operated

Q41-E01E [2015]

**Underground/metro** 

Q41-E01F [2015]

**Magnetic levitation** 

Maglev

Q41-E01X [2015]

Other types of railways

Q41-E02 [2015]

## **Constructional details of railways**

Includes constructional details of rails, sleepers, foundations and track ballasts.

Q41-E10 [2015]

## Safety equipment/components

Crash barriers, buffers

Q41-F [2017]

## **Sound damping**

Includes sound damping or masking in roads, bridges and railways.

Noise barrier, vibration damping

Q41-G [2015]

Cleaning, Maintenance and Repair

Q41-M [2015]

Manufacture

## Q42: Hydraulic engineering, soil shifting and sewerage

From 2015 manual codes have been assigned for all mechanical details of hydraulic engineering and sewerage systems. (See also X25-D).

Q42-A [2015]

Hydraulic engineering and soil shifting

Q42-A01 [2015]

**Canals** 

For locks see Q42-A04.

Q42-A02 [2015]

Coastal defenses and control of watercourses

Q42-A02A [2015]

**Barrages, Weirs** 

Q42-A02B [2015]

**Dams** 

Q42-A02B2 [2015]

Water collection

Includes pipelines and aqueducts used to collect and divert water into reservoir.

Q42-A02C [2015]

Quays, docks

Q42-A02D [2015]

**Embankments, levees and sea-walls** 

Q42-A03 [2015]

Water-power

Q42-A04 [2015]

Locks, ship-lifts

Includes locks and ship-lifts used in canals and docks. See also Q24 codes.

Q42-A05 [2015]

Irrigation and drainage

Q42-A10 [2015]

Dredging, soil shifting, excavations and foundations

Includes bulkheads, piles and caissons. For mining see Q49 codes.

Q42-A11 [2023]

#### Prevention of soil erosion

Includes means of preventing soil degradation due to water, wind, animal. See Q42-A02 codes for coastal defenses and control of watercourses, such as barrages, embankments, levees, etc. Means of preventing soil erosion due to water in e.g. fields are also coded under P13-A06.

Q42-B [2015]

**Underground or underwater structures** 

Includes tunnels.

Q42-D [2015]

Water supply

Water supplies for human and animal consumption. For irrigation see Q42-A05.

Q42-D01 [2015]

**Pipelines and aqueducts** 

Q42-D03 [2015]

**Tanks** 

Q42-E [2015]

Sewerage

Q42-E01 [2015]

Pipelines, drains and sewers

Q42-E02 [2015]

Sewerage processing plants

Includes sewage processing/treatment. See X25-H03 and Chemistry codes such as D04 codes as required.

Q42-F [2015]

Sanitary equipment

See X27-L for electrical details of toilets.

WC

Q42-M [2015]

Manufacture

Includes manufacture of sewage treatment and sanitary equipment.

Q42-P [2021]

**Pumping station** 

Includes fuel and water supply station arrangement.

Q42-S [2021]

## Service/Cleaning/Maintenance

Includes water supply, sewage pipeline cleaning.

## Q43: General building constructions

From 2015 manual codes have been assigned for all mechanical details of general building constructions.

## Q43-A [2015]

#### Types of building structures

General building structures. For details e.g. walls, see relevant code sections.

### Q43-A01 [2015]

## Walls and partitions

Includes load-bearing and non-load-bearing walls and partitions within buildings.

Q43-A02	[2015]
---------	--------

**Roofs** 

Q43-A03 [2015]

**Ceilings** 

Includes fixed and removable e.g. false, ceilings.

Q43-A04 [2015]

**Floors** 

Q43-A05 [2015]

**Doors** 

Q43-A06 [2015]

Windows

Q43-A07 [2015]

#### Service and access structures

Structures associated with stairways, elevators, ducts, pipes.

## Q43-A08 [2020]

## **Bearings and connections**

Other general purpose structures within buildings. Also includes bearing-type supports and antivibration / anti-shock elements.

## Q43-A99 [2016]

## **General building insulation**

Pipe insulation

## Q43-D [2015]

#### **Light fittings**

Includes reflective natural light ducts/tubes. See also Q71 codes and X26 codes (for electrical details only).

## Q43-E [2017]

## Sound proofing

Includes sound proofing in walls, floors etc.

Damping, masking, noise suppression

#### Q43-F [2020]

#### Protection (other)

Includes protection against damp and pests by using e.g. impregnation of wood, ventilation.

## Q43-H [2021]

## Rain water harvesting systems

Include apartments, home water conservation aspects.

#### Q43-M [2015]

## Manufacture of building structures

## Q44: Structural elements

From 2015 manual codes have been assigned for all mechanical details of structural elements.

## Q44-A [2015]

## **Structural components**

Structural components of buildings. *Bricks* 

## Q44-A01 [2015]

## **Load-supporting components**

Includes joists, girders, trusses, lintels or transoms. For load-bearing walls see Q43-A01.

Q44-A01A	[2015]
----------	--------

**Girders** 

Q44-A01B [2015]

**Pillars** 

Q44-A01C [2015]

**Trusses** 

Q44-A01D [2015]

**Mullions** 

Q44-A01G [2015]

## **Reinforcement components**

Includes details of grouting sleeves. Connector, joint

Q44-A01X [2015]

## Other supporting structures

Includes underfloor supports, roof supports.

Q44-A10 [2015]

Sheets, panels

Q44-M [2015]

**Manufacture of structural elements** 

## Q45: Roofing, stairs, floors

From 2015 manual codes have been assigned for all mechanical details of roofing, stairs and floors.

Q45-A [2015]

#### **Coverings**

Includes covering materials and components for roofs, walls, ceilings and floors e.g. slates, tiles, mosaic, carpets, laminated flooring, wallpaper.

Q45-A01 [2015]

**Roof covering** 

Q45-A01A [2015]

Slates, tiles, ceramics

Q45-A01B [2015]

**Sheets** 

Includes roofing felt, polyethylene.

Q45-A01C [2015]

**Sealants** 

Includes using bitumen on flat roofs.

Q45-A02 [2015]

#### Living roof; Thatched roof

Roofs which are partially or completely covered with living vegetation e.g. grass, sedum, planted in a growing medium on top of a waterproof membrane.

Q45-B [2015]

**Drainage** 

Q45-D [2015]

**Tools and equipment** 

Q45-E [2015]

Stairways and ramps

Q45-E02 [2015]

**Balustrades and handrails** 

Banister

Q45-F [2015]

**Flooring** 

Q45-F02 [2015]

#### **False flooring**

For use in offices to allow routing of e.g. computerrelated cabling.

Q45-M [2015]

Manufacture

## Q46: Building aids, special structures, ladders

From 2015 manual codes have been assigned for all mechanical details of building aids, special structures and ladders.

Q46-A	[2015]	
<b>Building aids</b>		
Q46-A01	[2015]	
Scaffolds		
Q46-A02	[2015	
Falsework, forming	, shuttering	
Includes supports.		

Q46-A03 [2015]

Access

Includes ladders.

Ramps

Q46-A03A [2015]

Ladders

Q46-A04 [2015]

## Safety and protective arrangements

Includes structures and equipment used to protect persons working on buildings and to protect the buildings from damage by e.g. weather, dust etc.

#### Q46-A05 [2015]

## Material handling and building repair

Preparation of concrete, brick-laying equipment. Repair and cleaning of existing buildings.

Q46-A05A [2021]

**Building demolition** 

Q46-A05B [2021]

## **Building relocation / moving**

For transportation and relocation of an entire building.

Q46-B	[2015]
<b>Special Structures</b>	
Q46-B01 Homes	[2015]
Q46-B02	[2015]
Offices	

## Q46-B03 [2015]

## Shelters, kiosks

Buildings and structures which provide protection against e.g. earthquakes, war, climatic conditions. Includes bus stops and railway platform roofs.

Q46-B04 [2015]

Garages, vehicle storage

Q46-B05 [2015]

**Public buildings, institutions** 

Q46-B05B [2015]

#### **Medical institutions**

This code covers hospitals, infirmaries and other buildings used for medical applications e.g. doctor's or dental surgeries.

## Q46-B05C [2015]

## **Educational, reference**

This code covers schools, universities, libraries and museums.

#### Q46-B05D [2015]

#### Leisure and entertainment facilities

Includes sporting arenas, theatres, swimming pools, fitness centers.

Q46-B05F [2015]

**Shops and Hotels** 

Q46-B07 [2015]

**Industrial** 

Q46-B07A [2015]

**Power generation** 

Q46-B07C [2015]

Manufacturing

**Factories** 

Q46-B10 [2015]

**Towers, chimneys** 

Q46-B11 [2015]

Monuments, statues

Q46-B12 [2015]

#### **Enclosures, fences**

For gates and other openings in fences and barriers, see Q48-N.

Q46-B15 [2015]

Tents, marquees

Q46-B99 [2023]

Other special structures

Tree house

Q46-M [2015]

Manufacture of building aids, special structures and ladders

# Q47: Locks, window and door fittings

From 2015 manual codes have been assigned for all mechanical details of locks, window and door fittings.

Q47-A [2015]

Locks

Q47-A01 [2015]

**Pin and Tumbler** 

Q47-A02 [2015]

Cylinder

Q47-A05 [2015]

**Permutation** 

Includes 'combination' padlocks.

Q47-B [2015]

**Door and window fittings** 

Q47-B01 [2015]

Hinges, brakes

Q47-B02 [2015]

**Handles** 

Q47-B10 [2015]

**Fasteners** 

See Q61 for general fasteners.

Bolt

Q47-M [2015]

Manufacture of locks, windows and door

fittings

Q47-U [2015]

**Applications** 

Q47-U01 [2015]

**Domestic** 

Q47-U02 [2015]

**Commercial** 

Q47-U03 [2015]

**Vehicles** 

For automobile door locks see also Q14-H01.

Q47-U40 [2015]

Industrial

Q47-U55 [2015]

### Safe deposit and security

Includes safes and other secure storage facilities for use in e.g. banks.

### Q48: Blinds, shutters, doors and windows

From 2015 manual codes have been assigned for all mechanical details of blinds, shutters, doors and windows.

### Q48-A\*

[2015-2015]

#### Blinds and shutters

\*This code is now retired. It remains searchable and valid for records produced in 2015. From 2016 see  $\Omega$ 48-L.

Q48-B [2015]

**Door and window frames** 

Q48-D [2015]

Door leaves, window sashes

Q48-J [2015]

Ventilation and sealing

Q48-K [2015]

#### **Gates and turnstiles**

For allowing access through and over structures such as fences and barriers.

Stile

Q48-L [2015]

Screens, blinds, shutters and other protective devices

Q48-M [2015]

Manufacture of blinds, shutters, doors and windows

Includes manufacturing methods and apparatus.

Q48-P [2015]

**Primary function** 

Q48-P05 [2015]

# **Protection against specific conditions**

Includes doors or windows designed for protection against specific conditions.

Q48-P05A [2015]

Security

Protection against theft, vandalism or military action.

Q48-P05C [2015]

Fire

Protection against fire, heat or explosions.

Q48-P05E [2015]

Gas

Protection against dangerous gases.

Q48-P05H [2015]

**Radiation** 

Protection against harmful radiations.

### Q49: Mining

From 2015 manual codes have been assigned for all mechanical details of mining and quarrying apparatus. Electrical details of mining are covered by X25-D02 codes.

Q49-A [2015]

Mining and quarrying equipment

Q49-A01 [2015]

#### **Extraction equipment**

Includes details of conveyors for extracting mined materials, e.g. coal, from the mines. Non-electrical details of conveyors are coded under Q35-B, and electrical details of conveyors are covered by X25-F01 codes.

Q49-A01A [2015]

**Drilling machines** 

Q49-A01C [2015]

**Cutting machines** 

Q49-A01H [2015]

**Support structures** 

Q49-A10 [2015]

**Tools** 

Includes drill bits, drilling rods, pipes, casings and tubing.

Q49-B [2015]

Mining and quarrying methods

Q49-B01 [2015]

**Extraction methods** 

Q49-B01A [2015]

**Percussion drilling** 

Q49-B01B [2015]

**Rotary drilling** 

Q49-B01C [2015]

Cutting

Q49-B01D [2015]

Blasting

Q49-C [2015]

Mining and quarrying structures

Q49-C01 [2015]

Ventilation

Includes air filtering and dust removal.

Q49-C03 [2015]

Drainage

Q49-C05 [2015]

#### Safety and protective arrangements

Includes structures and equipment used to protect persons working in mines and quarries. Includes fire prevention and extinguishing. Details of fire prevention and extinguishing systems are also coded under P35.

Q49-C08 [2015]

Shafts

Q49-C09 [2015]

**Roofs and supports** 

Q49-E [2015]

Mining and quarrying locations

Q49-E01 [2015]

Surface, open-cast

Q49-E03 [2015]

**Underground** 

Q49-E05 [2015]

Underwater

Q49-H [2015]

Maintenance equipment; equipment and methods for removing tools from mines, boreholes or wells

Q49-V [2015]

Material being mined or quarried

Q49-V01 [2015]

Metals

Q49-V01A [2015]

Iron

Iron ore

Q49-V01B	[2015]
Aluminum	
Bauxite	
Q49-V01C	[2015]
Copper	
Q49-V01H	[2015]
Tin	
Q49-V01J	[2015]
Gold	
Q49-V22	[2015]
Stone	
Granite, marble	
Q49-V28	[2015]
Coal	
Q49-V31	[2015]
Precious stones	
Diamond	
Q49-V35	[2015]
Fluids; Slurry	

Includes sand slurry.

# Q5 Engines, Pumps, Compressors, Fluid Pressure Actuators

# Q51: Internal Combustion Engines; Reciprocating Engines; Rotary Engines

From 2006 Q51 covers all mechanical details of positive displacement combustion engines. Prior to the introduction of Q51 manual codes in 2006, the Q51 class covered machines and engines in general including positive displacement engines, steam engines/turbines, engine valves, cooling, lubrication and silencing. Also see Q17-E for vehicle internal combustion engine propulsion arrangements. For electrical aspects of motor vehicle engines see X22-A codes only.

#### Q51-A

# Reciprocating positive displacement engines

#### Q51-A01

#### **Engine type**

These codes are normally applied when the engine type has a direct bearing on the novelty.

#### Q51-A01A

With single cylinder

# Q51-A01B

#### With multiple cylinders

This code is only applied when it is especially important to highlight the fact that an engine has multiple cylinders, or when the whole multi-cylinder engine is being claimed and further Q51 codes might not be applied. It is normally assumed that an engine will have multiple cylinders unless otherwise specified. Includes, in-line 4, V5, straight/V6, V8, W10, V12 etc. engines.

#### Q51-A01C

With multiple pistons in same cylinder

#### Q51-A01D

With movable cylinders

#### Q51-A01E

With precombustion chambers

#### Q51-A01G

#### [2007]

### With variable compression ratio

Includes engines with arrangements for varying the compression ratio in use.

#### Q51-A01J

#### [2007]

#### **Two-stroke**

Includes IC engines operating in two-stroke cycle, e.g. for moped (see also Q19-B).

#### Q51-A01X

#### [2014]

### Other engine types

Includes variable cycle engines, e.g. capable of running in two-stroke mode at low speed and 4-stroke mode at higher speeds. IC engines operating in two-stroke cycle, e.g. for moped (see also Q19-B).

Variable-cycle

#### Q51-A03

#### **Component parts**

#### Q51-A03A

# Cylinders; Cylinder heads

See Q51-D for valves. Includes precombustion chambers per se (see also Q51-A01E).

#### Q51-A03B

#### **Pistons**

Includes pistons with charge flow guides, i.e. scoops in piston head for swirl control.

Swirl control

#### Q51-A03C

#### Seals; Gaskets; Piston rings

Includes oil control rings.

#### Q51-A03D

#### Casings; Crankcases; Cam/rocker covers

#### Q51-A03E

# Piston to output shaft connections; Connecting rods

Includes con rods connecting pistons to drive shaft. For connections from drive shaft to other transmission shafts or wheels, see Q62 codes. Includes crankshafts per se.

#### Q51-A03X

#### [2007]

### Other reciprocating engine components

#### Q51-B

# Rotary or oscillating piston engines

#### Q51-B01

# **Rotary combustion engines**

Includes four-stroke, Otto cycle Wankel engines.

#### Q51-B01A

With single rotor

#### Q51-B01B

With multiple rotors

#### Q51-B03

**Component parts** 

#### Q51-B03C

**Rotor seals** 

#### Q51-B03E

#### Connections between piston and casing

Includes drive arrangements for cooperating members, e.g. for rotary piston and casing.

#### Q51-B05

#### Oscillating/swing piston engines

See Q53-C for fluid driven oscillating piston engines.

Oscillating, swing, opposed piston

#### Q51-B05A

[2014]

#### Free piston engines

Includes free-piston or "crankless" IC engines. See also Q51-A01J for two-cycle operation.

Dual piston, free piston, oscillating-piston

### Q51-C

#### Gas-driven positive displacement engines

See Q53-A instead for positive displacement engines driven by liquid.

#### Q51-C01

# Open cycle hot gas positive displacement engines; Steam engines

Includes reciprocating steam engines. See Q52 instead for non-positive displacement steam turbines. Can be used in conjunction with other Q51 codes as appropriate, e.g. Q51-A03B for steam engine pistons.

#### Q51-C02

# Closed cycle hot gas positive displacement engines

I.e. positive displacement engines that are operated by expansion and contraction of a mass of working gas that is heated and cooled. See X25-X08 for electrical aspects of Stirling engines.

Closed cycle, heat, cool, Stirling engine

#### Q51-C05

[2007]

# Air/gas driven positive displacement engines

Includes IC engines driven by compressed air supply and not involving combustion.

#### Q51-D

# **Engine/fuel type**

See X22-A20 for electrical aspects of vehicle engine/fuel types.

#### Q51-D01

#### Petrol/gasoline

This code is not routinely assigned, since engines are assumed to be petrol unless otherwise stated.

#### Q51-D03

#### Diesel

#### Q51-D05

#### **Mixed fuels**

Includes engines running on dual fuels such as petrol/alcohol or diesel/LPG.

### Q51-D07

#### Single unconventional fuel

Includes engines running on e.g. alcohol or biofuels.

#### Q51-D07A

#### **Gaseous fuel**

Using LPG, natural gas, hydrogen.

#### Q51-D07C

#### **Bio-fuel; Alcohol**

Includes engines running on free fatty acid methyl ester (bio-diesel) or alcohol such as methanol or ethanol.

#### Q51-E

#### Valve gear; Valve drive arrangements

Includes 4-valve drives for IC engines. For electrical aspects of vehicle engine intake/exhaust valve gear see X22-A11 and X22-A03G codes instead.

#### Q51-E01

### Lift valves; Poppet valves

Includes valve guides.

#### Q51-E02

#### **Gate or sliding valves**

See also Q51-A01J for reed valves used in twostroke internal combustion engines.

#### Q51-E03

# Rotary or oscillating valve gear

#### Q51-E04

Steam engine valve gear

#### Q51-E05

# Valve drive arrangements; Valve adjustment/control; Cam control

Includes mechanical valve clearance adjusters for motor vehicle engines.

Hydraulic lash adjusters

#### Q51-E05A

#### Camshafts; Cams; Eccentrics

#### Q51-E05B

#### Tappets; Pushrods; Rocking arms etc.

Includes hydraulic lash adjusters. *Hydraulic tappet* 

#### Q51-E09

### Other valve gear

#### Q51-F

#### Lubrication

See X22-A10 for electrical aspects of vehicle engine lubrication, such as electric oil pumps. For oil pressure monitoring for motor vehicle engines, see X22-E01C.

#### Q51-F01

#### **Pressure Iubrication**

# Q51-F01A [2014]

# Dry sump systems

Includes dry sump lubrication systems and associated oil tanks and pipework.

Dry-sump

#### Q51-F02

#### Mixed with fuel and/or air

Two-stroke

#### Q51-F03

#### **Breathing/ventilating**

Includes crankcase breathing and cam cover breathing. Includes feeding of crankcase or cam cover air and any entrained oil back into induction system or to oil catch tank/filter.

#### Q51-F05

[2007]

Oil filters

#### Q51-G

#### Cooling

See Q51-H05A for turbocharger intercooling.

#### Q51-G01

#### Air cooling

Includes forced air feeding, i.e. fans.

#### Q51-G02

#### Liquid cooling

#### Q51-H

#### Charge feed i.e. fuel or air supply

For electrical fuel/air supply aspects of motor vehicle engines see X22-A02 and X22-A03 codes instead.

#### Q51-H01

#### **Fuel feed**

For electrical vehicle fuel pumps and fuel control see X22-A02D and X22-A03A codes respectively. See Q17-E04 for vehicle engine fuel supply.

#### Q51-H01A

#### Carburettion (carburettors)

See X22-A02C for electrical aspects of IC engine carburettors.

#### Q51-H01B

#### **Fuel injection**

Includes fuel systems using compressed air or mechanical control. Can also be applied to highlight novel mechanical aspects of EM fuel injection valves (also see X22-A02A codes for electrical fuel injection apparatus). See X22-A03A1 codes only for electric fuel injection control.

#### Q51-H01B1

#### Common rail arrangement

For electrical aspects of common rail injection systems see X22-A02A3.

#### Q51-H01C

#### **Fuel pump**

E.g. using compressed air or mechanically controlled fuel injection pump. See X22-A02D for electric fuel pumps and X22-A03A3 for electric fuel pump control. Includes gear pumps and rotary vane type pumps.

#### Q51-H01D

#### Fuel pressure regulator

Includes pressure relief valves.

#### Q51-H01F

#### **Fuel filter**

See X22-A02B for electrical aspects of fuel filters.

#### Q51-H01G

#### **Fuel treatment**

Includes e.g. fuel additive arrangements or water injection.

#### Q51-H01X

#### Other fuel systems

Includes fuel lines, hoses and pipework. Includes fuel heating arrangements. See X22-A02B for electrical fuel heaters. Also includes fuel cooling (see also Q51-G).

# Q51-H02 [2010]

#### **Fuel vapour recovery**

(Q51-H01X)

Includes mechanical details of fuel vapour recovery systems. See X22-A02E instead for electrical details of fuel vapour recovery systems.

#### Q51-H05

### Air intake systems

See X22-A03B for electrical aspects of air intake systems/throttles.

#### Q51-H05A

### Supercharging; Turbocharging

Respectively see X22-A14 and X22-A03C for electrical aspects of motor vehicle super/turbo chargers and their control. Includes intercoolers.

#### Q51-H05C

#### Throttle valve

Intake air control valves.

#### Q51-H05E

#### Intake flow swirl/turbulisation control

Includes mechanical arrangements for promoting mixing of air and fuel, e.g. using scoops in piston head (see also Q51-A03B).

#### Q51-H05F [2007]

#### Air filters

Includes disposable paper air intake filters and reusable foam filters.

#### Q51-I

#### **Ignition systems**

Includes ignition systems using e.g. application of direct heat, incandescence, friction, pyrophoric or catalytic ignition. See X22-A01 codes for electrical ignition systems.

#### Q51-J

#### **Exhaust systems; Pollution control**

See X22-A07and X22-A03J for electrical aspects of vehicle exhaust/emissions control systems. Also includes exhaust braking, e.g. for diesel engined truck (see also Q18-A30).

#### Q51-J01

#### Silencing systems

Includes use of resonance, sound absorbing materials or baffles. For electrical aspects of engine noise reduction see X22-A12 (including active noise suppression - possibly see W04-V07 also).

### Q51-J02

#### **Exhaust gas cleaning systems**

See X22-A07 or X22-A03J for electrical aspects of motor vehicle engine exhaust gas cleaning and pollution control. See X22-A05 and S03-E codes for vehicle exhaust gas sensors per se.

#### Q51-J02A

#### **Exhaust gas filters**

Includes e.g. diesel particulate filters (see also Q51-D03).

#### Q51-J02B

#### Catalytic cleaning; Catalytic converters

Includes catalyst materials and catalytic converters, construction. For electrical aspects see X22-A07 only.

### Q51-J02C

#### Inertial or centrifugal separators

#### Q51-J02D

### Secondary air/fluid supply

For electrical aspects of secondary air control used in motor vehicle exhausts, see X22-A03L.

#### Q51-J02E [2008]

### **Exhaust gas recirculation**

Includes mechanical aspects of exhaust gas recirculation arrangements. See X22-A07 for electrical aspects of EGR or X22-A03A2C for EGR control.

EGR

# Q51-J02F [2010]

#### **Exhaust heat recovery**

Includes recovery of heat of vehicle exhaust e.g. for passenger compartment heating. For electrical details of exhaust recovery systems see X22-A17.

#### Q51-J07 [2007]

### **Exhaust braking**

Includes exhaust brakes and exhaust brake control, e.g. used for slowing diesel-engined truck (see also Q19-C02 for trucks and Q51-D03 for diesel engines) when travelling down long hill, to avoid overheating mechanical friction brakes. Also see Q18-A30 for exhaust braking prior to 2007. See X22-A03B5 and/or X22-A09 instead for electrical aspects of vehicle exhaust/engine braking.

# Q51-K

#### Starting systems

For motor vehicle IC engine electrical starting see X22-A08, or X22-A04 for electric starter motors per se. Also see relevant X11 and X13 codes for motor hardware and control respectively.

#### Q51-K01

# Using muscle power

E.g. using hand cranks, pull cords and motorcycle kickstarts (see also Q19-B).

#### Q51-K02

#### Using mechanical power storage

E.g. using springs or inertia.

#### Q51-K03

#### Using auxiliary engines

#### Q51-K09

#### Other starting arrangements

Includes e.g. using explosive cartridges.

## Q51-L [2007]

# **Engine heating/warming apparatus/method**

(Q51-X)

Includes use of exhaust gas heat to warm engine/coolant. See X22-A15 for electrical details of engine warming.

### Q51-M [2007]

# Engine manufacture/assembly/disassembly

Includes manufacturing and assembly aspects of engine and engine components, not specifically for transportation applications such as motor vehicle, boat, aircraft - see relevant Q17 (with Q16-D), Q24 and Q25 codes respectively.

### Q51-N [2010]

#### Noise, vibration and harshness reduction

See also Q17-N and Q17-E codes for mechanical details of motor vehicle engine noise reduction. See X22-A12 for electrical details of vehicle engine noise and vibration reduction.

#### Q51-X

### Other engine details

Includes IC engine details not already covered, such as engine mountings (also see Q17-E01 for vehicle engine mountings).

# Q52: Reaction Engines; External Combustion; Gas Turbines; Rockets

From 2006 Q52 covers all mechanical details of non-positive displacement combustion engines such as turbine and rocket engines. Prior to the introduction of Q52 manual codes in 2006, the Q52 class covered both positive displacement and non-positive displacement engines/turbines and their control. For power generation gas turbines see X11-C01, for aircraft gas turbines engines see W06-B01 codes and for electrical aspects of gas turbines used in land vehicle propulsion see X22-P03.

#### Q52-A

#### Gas/steam turbine engines

See Q25-C02B for aircraft gas turbine engines per se.

#### Q52-A01

**Turbine engine type** 

Q52-A01A [2007]

**Turbojet engines** 

Q52-A01C [2006]

**Turbofan engines** 

Q52-A01E [2007]

**Turboprop engines** 

Q52-A01S [2007]

#### **Steam turbines**

Includes non-positive displacement steam turbines. See X11 codes for power generation steam turbines, and see Q51-C01 instead for reciprocating piston steam engines.

# Q52-A01X [2007]

### Other turbine engines

Includes engines that are capable of running on variable cycles.

Variable-cycle

#### Q52-A02

#### **Component parts**

#### Q52-A02A

#### Rotor and stator

Includes manufacturing methods. Includes rotor and stator blades.

#### Q52-A02B

#### **Combustion chamber**

Includes charge flow guidance and cooling.

#### Q52-A02C

#### Nozzles, Nacelles

Also see Q25-A04 for aircraft engine nacelles per se.

#### Q52-A02D

#### **Afterburner**

#### Q52-A03

# Intake/exhaust configuration; Intake heating/cooling

Includes air intake ducts and lips etc.

#### Q52-B

#### Non-turbine reaction engines

#### O52-B01

#### Pulse jet

Includes pulse jet engine where gaseous fuel/air mixture is combusted in pulses to generate propulsive effort which is a reaction to the rearward flow of hot gases.

Pulsejet, deflagration

#### Q52-B01A [2007]

#### **Pulse detonation engines**

Includes pulse wave detonation engines that detonate fuel rather than deflagrate it.

PDE, PWDE, deflagration-to-detonation transition, DDT, high speed, high altitude, supersonic, hypersonic

#### Q52-B02

#### Ram jet

# Q52-B03

#### **Rocket engines**

Includes solid fuel engine constructions. Also see Q25-S04 for spacecraft propulsion systems per se.

### Q52-B04

# Composite pulse, ram, rocket engine combinations

Includes composite pulse, ram, rocket engines. Also includes hybrid pulse detonation engines capable of operating in air-breathing and rocket modes.

#### Q52-C

### **Fuel supply systems**

Also see  $\Omega$ 25-C02B for aircraft jet engines and their fuel supply per se.

### Q52-C01

### **Fuel heating**

#### Q52-C02

### **Fuel supply control**

See W06-B01A5 for aircraft engine electrical fuel supply.

#### Q52-C03

**Fuel injection** 

# Q52-C09

[2007]

### Other fuel supply aspects

### Q52-D

#### Starting systems

Includes fluid or mechanical drives e.g. using cartridges or starter turbines.

#### Q52-E

# **Ignition systems**

See W06-B01C9 for electrical ignition systems for aircraft turbine engines.

#### Q52-F

#### Lubrication

### Q52-G

[2007]

### **Engine cooling**

Includes overall cooling of gas turbine/external combustion engines. For gas turbine intake charge air cooling see Q52-A03 instead.

### Q52-M

[2007]

### Engine manufacture/assembly/disassembly

Includes manufacturing/assembly/disassembly aspects of gas turbine engines. For manufacture of aircraft or ship gas turbine engines also see Q25-C02B and Q24-E02B respectively (and possibly Q25-X05 or Q24-X05 for aircraft and marine vessel manufacture per se).

### Q52-X

### Other engine details

# Q53: Positive Displacement Fluid Engines (i.e. driven by fluid)

From 2006 Q53 covers all mechanical details of positive displacement fluid engines (i.e. driven by fluid). Prior to the introduction of Q53 manual codes in 2006, the Q53 class covered jet engines and fuel supply systems.

# Q53-A

### **Reciprocating piston fluid engines**

See Q51-A codes for positive displacement reciprocating engines driven by gas.

### Q53-B

### **Rotary piston fluid engines**

See Q51-B codes for positive displacement engines driven by gas.  $\,$ 

# Q53-C

### Oscillating piston engines

See Q51-B05 for oscillating piston engines driven by gas.

#### Q53-G

### **Component parts**

Includes valve gear, pistons, cylinders seals.

#### Q53-X

# Other positive displacement fluid engines/machines

# Q54: Non-positive Displacement Fluid Engines (i.e. driven by fluid); Miscellaneous Motors and Machines for Producing Mechanical Power/Thrust

From 2006 Q54 covers all mechanical details of non-positive displacement fluid engines (i.e. driven by fluid). Prior to the introduction of Q54 manual codes in 2006, the Q54 class covered starting and ignition systems. See Q51-K, Q51-I and Q52-D, Q52-E for starting and ignition systems for positive and non-positive displacement engines respectively.

#### Q54-A

#### Water turbines

Prior to 2007, this code was used for impulse engines having transportation interest. From 2007 this code has been expanded to cover all water turbines.

[2007]

#### Q54-A01

# Impulse turbines

(Q54-A)

Includes turbines that use nozzles to change water's potential energy into kinetic energy, with resulting high velocity water jet made to impinge upon curved turbine blades which reverse the flow, with the resulting change of momentum or "impulse" causing a drive force on the blades. Mainly used in very high head applications.

Pelton, Turgo, Michell-Banki, crossflow, Ossberger turbine

#### Q54-A05 [2007]

#### **Reaction turbines**

(Q54-B)

Includes turbines that are encased or fully submerged and are acted upon by water which changes pressure as it moves through the turbine and gives up its energy. Mainly used in low and medium head applications.

Francis, Kaplan, propeller, bulb, tube, Straflo, Tyson, Water wheel

#### Q54-B\*

#### [2006-2007]

#### **Reaction type engines**

\*This code is now discontinued and transferred to Q54-A05 from 200701. Includes e.g. Francis turbines, propeller turbines and Kaplan turbines. See Q51-C02 for closed cycle turbine engines driven by gaseous medium.

#### Q54-C

# **Friction type engines**

Using non-bladed rotors, e.g. serrated.

#### Q54-D

#### **Endless chain type engines/machines**

#### Q54-E

**Spring motors** 

#### Q54-F

# **Gravity and inertia motors**

Includes flywheel energy storage.

#### Q54-G

# Producing mechanical energy from wind, i.e. wind motors

For wind turbines used to generate electrical power, see X15-B instead.

#### Q54-H

# Producing mechanical energy from geothermal or solar energy

#### Q54-I

# Producing mechanical energy from muscle power

Includes treadmills or horse mills.

### Q54-X

# Other non-positive displacement fluid engines/machines; other mechanical energy systems

Includes perpetua mobilia using hydrostatic thrust, or using liquid flow, e.g. swinging flap type. Also includes ocean thermal energy conversion, using pressure or thermal differences, etc. Also see X15 codes for non-fossil fuel electricity generation.

# Q55: Positive Displacement Fluid Machines/Pumps/Compressors (i.e. for driving fluid)

From 2006 Q55 covers all mechanical details of positive displacement fluid machines/pumps/compressors (i.e. for driving fluid). Prior to the introduction of Q55 manual codes in 2006, the Q55 class covered machines and engines for liquids.

### Q55-A

#### **Reciprocating piston fluid machines**

Includes reciprocating piston positive displacement pumps and compressors.

#### Q55-B

#### **Rotary piston fluid machines**

Includes rotary piston positive displacement pumps and compressors.

### Q55-C

#### Oscillating piston fluid machines

Includes oscillating piston positive displacement pumps and compressors.

#### Q55-D

# **Diaphragm operated fluid machines**

Includes diaphragm operated positive displacement pumps and compressors.

#### Q55-E

#### [2007]

# **Scroll fluid machines**

(Q55-X)

Includes positive displacement scroll compressors or scroll pumps using fixed and orbiting Archimedean spiral scrolls.

### Q55-G

#### **Component parts**

Includes valves, seals, rotors, casings.

# Q55-X

# Other positive displacement fluid machines

# Q56: Non-positive Displacement Fluid Machines/Pumps/Compression (i.e. for driving fluid)

From 2006 Q56 covers all mechanical details of non-positive displacement fluid machines/pumps/compressors (i.e. for driving fluid). Prior to the introduction of Q56 manual codes in 2006, the Q56 class covered pumps.

### Q56-A

### **Radial flow fluid machines**

Includes centrifugal pumps and helic-centrifugal pumps or compressors.

#### Q56-B

#### **Axial flow machines**

Includes e.g. non-positive displacement screw type pumps. For scroll pumps/compressors see Q54-E instead.

### Q56-C

Fluid machines pumping fluid by direct contact of another fluid or using inertia of fluids to be pumped

#### Q56-C01

### Jet pumps

Includes pumps in which fluid flow is induced by pressure drop caused by velocity of another fluid flow.

# Q56-C02

**Diffusion pumps** 

#### Q56-D

**Siphons** 

#### Q56-G

# **Component parts**

Includes shafts, bearings, rotors, casings, cooling strainers, cavitation reducers used in pumps or compressors.

#### Q56-X

# Other non-positive displacement machines/pumps/compressors

Includes e.g. hydraulic rams.

# Q57: Fluid Pressure Actuators; Hydraulic/Pneumatics in General

From 2006 manual codes have been assigned for all mechanical details of fluid pressure actuators and hydraulics/pneumatics in general.

# Q57-A

Telemotors; with movement proportional to pump output

### Q57-B

Servomotors; with position of output conforming to input

### Q57-C

**Combined servo and telemotors** 

# Q57-D

#### **Pyrotechnic actuators**

For motor vehicle safety systems such as vehicle airbags, see Q14-C02 only.

### Q57-E

#### **Component parts**

Includes valve gear, guide vanes etc. used in fluid pressure actuators or hydraulics in general.

# Q57-X

# Other fluid pressure actuators and fluid dynamic control aspects

Includes general devices for influencing the flow of fluids and also manufacture and testing of devices covered in Q57.

# **Q6 Engineering Elements**

#### Q61: Fastening Elements; Connections

E.g. for securing machine parts together. Includes both male (bolt) and female (nut) fastenings. These codes are normally only applied when the fastening itself is novel.

#### Q61-A

#### Threaded fasteners

#### Q61-A01

#### Nuts

For lock nuts see also Q61-A07A.

#### Q61-A03

#### **Bolts**

For torque limiting break bolts see also Q61-A07C.  $\it Male$ 

#### Q61-A05

Screws

#### Q61-A07

#### Special purpose fastener action

#### Q61-A07A

#### **Locking fasteners**

Includes nylon insert locknuts (see also Q61-A01).

#### Q61-A07C

# **Torque limiting**

Includes e.g. break bolts (see also Q61-A03).

#### Q61-A07E

#### **Self-tapping**

Includes self-tapping screws (see also Q61-A05).

### Q61-B

#### Friction grip fasteners

Includes clamps, clips and shrinkage connections.

#### Q61-C

### **Key type connections**

Includes bayonet connections.

#### Q61-D

#### Rivet connections

Includes peel type rivets and rivnuts (also see Q61-A01).

#### Q61-E

#### Nails, staples; Dowels

Includes dowel and plug type connections that are inserted or screwed into hole, with e.g. expanding bodies or tabs engaging hole or gripping reverse side of wall.

Wall plug, Rawlplug (RTM)

#### Q61-F

#### **Anti-tamper connections**

Includes snap off fastener head that snaps off when predetermined tightening torque is reached to leave behind shaped anti-tamper head.

#### Q61-G

#### **Deformable connections**

Includes e.g. split pins.

#### Q61-H

# Washers; Lock washers; Spring washers

### Q61-J

### [2016]

#### Stuck or welded connections

Includes use of glue or welds to press or connect parts together. Also includes welding of nuts/bolts to part (also see Q61-A codes).

Cold pressure welding, adhesive

### Q61-R

#### [2007]

#### **Fastener installation tools**

(Q61-X)

Includes tools used to install or remove fastening elements used in transportation applications such as mechanical compressed air driven rivet guns used in aircraft manufacture (see also  $\Omega$ 25-X05). This code can be used in conjunction with other  $\Omega$ 61 codes to specify the type of fastening being installed/removed.

#### Q61-X

# Other fastening elements

Includes hooks and eyes, suction cups etc. Also includes tenons and male/female groove connections.

### Q62: Shafts and Bearings

#### Q62-A

Flexible shafts

#### Q62-A01

For conveying rotary movement

#### Q62-A02

For conveying sliding movement

#### Q62-B

Rigid shafts

#### Q62-B01

#### **Crankshafts**

See Q19-A and Q13-A15 for cycle cranks.

#### Q62-B01A

[2016]

## Adjustable cranks

(Q62-B03)

Prior to 2016 this topic was covered by Q62-B03.

#### Q62-B02

#### **Eccentric shafts (including camshafts)**

See Q51-E05A for motor vehicle internal combustion engine camshafts.

# Q62-B03\*

[2006-2015]

#### **Adjustable cranks**

(Q62-B01A)

\*This code is now discontinued and has been transferred to Q62-B01A from 201601. It remains searchable for records prior to 2016.

#### Q62-C

#### Rigid connections, fixed joints

### Q62-D

#### Pivots, pivotal connections

Includes ball joints, trunnions, crank pins.

#### Q62-G

#### **Bearings**

Q62-G codes Include bearing elements and their races and also hydrodynamic bearings. From 2016 Q62-G08 is introduced for constructional details of bearings and also housings, caps, covers and mounting arrangements, and is assigned with other Q62-G codes to denote bearing type. Prior to 2016 these aspects were covered by other Q62-G codes or Q62-X as appropriate.

#### Q62-G01

#### Sliding contact bearings

Includes plain bearings e.g. used as crankshaft and connecting rod bearings in motor vehicle piston engines. See also Q51-A03E for crankshafts and con rods per se. Includes nylon self-lubricating bearings and fluid film bearings using a film of lubricant between sliding surfaces.

Bushing, babbit, journal bearing

#### Q62-G02

#### Rolling contact bearings

Anti-friction bearings

#### Q62-G02A

### **Ball bearings**

Includes bearings e.g. used to support a shaft or pulley. They can handle both axial and radial loads, though are usually used when the loading is fairly small.

#### Q62-G02A1

#### **Ball thrust bearings**

Includes ball bearings subjected to axial thrust loading, such as those used in bar stools or Lazy Susan (RTM) turntables. These cannot handle much radial load.

#### Q62-G02C

#### **Roller bearings**

Includes roller bearings used in conveyors where heavy radially loads need to be supported. Also includes needle roller bearings having small diameter cylinders designed to fit into tight spaces.

#### Q62-G02C1

### Tapered roller bearings

Includes motor vehicle wheel bearings subject to axial (cornering force) and radial (vehicle weight) loads. They are usually mounted in pairs facing opposite directions so that they can handle thrust in both directions.

#### Q62-G02C3

#### Roller thrust bearings

Includes bearings used in gearsets such as those found in car transmissions between gears, and between the housing and the rotating shafts. These are suitable for handling large axial/thrust loads.

#### Q62-G02E

#### **Giant bearings**

Includes giant (1.5m diameter) ball bearings used under buildings to provide earthquake protection, or giant roller bearings used to move very heavy objects (also see Q62-G02A and Q62-G02C respectively).

#### Q62-G03

#### **Magnetic bearings**

Includes magnetic bearings used in high speed applications such as flywheel energy storage systems, where the flywheel rotating in excess of 50000 rpm can float on a magnetic field created by the bearing.

#### Q62-G04

#### **Elastic bearings**

#### Q62-G05

#### **Combination bearings**

### Q62-G06 [2023]

#### Fluid bearings

Includes bearings where load is supported by a thin layer of rapidly moving pressurized liquid/gas between the bearing surfaces.

Hydrodynamic, hydrostatic, fluid dynamic bearings

#### Q62-G07

#### Bearing play adjustment

### Q62-G08 [2016]

#### Constructional details of bearings

Includes constructional details such as balls, rollers, bushes, linings, ball cages, raceways, housings, caps, covers and mounting arrangements. Prior to 2016 these aspects of bearings were included in  $\Omega62$ -G codes or  $\Omega62$ -X as appropriate.

#### Q62-G09

### **Cooling and lubricating arrangements**

## Q62-G99 [2016]

### Other bearing aspects

Includes load-reducing or equalizing arrangements. The use of magnetic force for load-reducing or equalizing is also covered by Q62-G03. Prior to 2016 constructional aspects of bearings were included in Q62-G or Q62-X as appropriate but from 2016 are covered by Q62-G08.

#### Q62-H [2016]

# Maintenance and servicing of shafts and bearings

Includes cleaning. Prior to 2016 maintenance, servicing and cleaning were covered by Q62-M and Q62-X as appropriate.

#### Q62-M

# Manufacturing and testing arrangements for shaft or bearings

For electrical metal grinding operations see X25-A03C2.

#### Q62-X

# Other shaft or bearing aspects not provided for

Includes arrangements to reduce the effects of centrifugal force. Prior to 2016 this code included mountings, housings, caps and covers for bearings which are now covered by Q62-G08.

# Q63: Couplings; Clutches; Brakes; Springs; Dampers

#### O63-A

#### **Couplings for transmitting rotary motion**

#### Q63-A01

#### For rigidly connecting shafts

#### Q63-A02\*

[2006-2015]

# Controlled movement coupling e.g. elastic couplings

\*This code is now discontinued. From 2016 all couplings allowing relative movement between the coupled members are coded in Q63-A03.

#### Q63-A03

# Controlled movement couplings; Slip, yielding, impulse couplings

Includes couplings that permit relative rotational movement between the connected parts during drive; couplings that slip on overload and couplings that alternately accelerate/decelerate driven member. Includes universal joints and constant velocity joints.

Elastic coupling, UJ, CV joint

#### Q63-A04

#### Fluid couplings

#### Q63-A05

# Quick acting/release couplings

#### Q63-B

#### **Clutches**

For motor vehicle clutches see Q13-A03, and for electrical aspects of vehicle powertrain hardware see X22-G01.

#### Q63-B01

# Interengaging clutches

I.e. clutches with interengaging parts.

#### Q63-B02

#### **Friction clutches**

Includes wedge action clutches and wet and dry plate friction clutches.

#### Q63-B03

# Fluid actuated clutches; Fluid transmission clutches

Includes hydraulically actuated clutches. See Q13-A03 for motor vehicle clutches.

#### O63-B04

#### Mechanically operated clutches

Includes cable actuation arrangements.

#### Q63-B05

Freewheel clutches, freewheels

#### Q63-B06

Multiple/combination clutches

#### O63-B09

Other clutch details

# Q63-D

#### **Brakes**

For vehicle brakes see Q18-A codes only. For electrical aspects of brakes or brake wear indicators see X22-C02 and X22-E02A respectively.

#### Q63-D01

#### **Drum brakes**

See Q18-A01B for motor vehicle brake drums.

#### Q63-D01A

Fluid actuated drum brakes

#### Q63-D01B

Mechanically actuated drum brakes

# Q63-D01E

#### **Drum brake components**

Includes drums, brake shoes.

#### Q63-D02

#### Disc brakes

See Q18-A01A for motor vehicle brake discs.

#### Q63-D02A

Fluid actuated disc brakes

#### Q63-D02B

#### Mechanically actuated disc brakes

For electrically actuated motor vehicle parking brake see X22-C02A.

# Q63-D02E

#### **Disc brake components**

Includes discs, brake pads, callipers.

Q63-D03

**Band brakes** 

Q63-D03A

Fluid actuated band brakes

Q63-D03B

Mechanically actuated band brakes

Q63-D03E

#### **Band brake components**

Includes wear surfaces and adjusters.

Q63-D09 [2007]

Other brake details

#### Q63-E

#### Springs; Shock absorbers; Dampers

See Q12-B codes for motor vehicle suspension spring/damper arrangements. See X22-M instead for electrical aspects of motor vehicle suspensions.

#### Q63-E01

#### **Springs**

See Q12-B01 for motor vehicle suspension spring arrangements.

Q63-E01A

**Coil springs** 

Q63-E01B

Leaf springs

Q63-E01C

**Cup springs** 

Q63-E01D

Fluid springs

Q63-E01E

**Magnetic springs** 

Q63-E01F

**Torsion springs** 

Q63-E01G

Elastic members e.g. elastomers

#### Q63-E01X

Other springs

#### Q63-E02

# Shock absorbers; Dampers; Vibration suppression

See Q12-B02 for motor vehicle suspension dampers arrangements. For electrical aspects of vehicle dampers, including ride height control see X22-M codes.

#### Q63-E02A

Using damping fluid

#### Q63-E02B

#### Using damping mass/inertia

Includes flywheels, counterweights.

#### Q63-E02C

Using friction

Q63-E02D [2008]

#### **Elastic dampers**

Includes rubber and elastic material dampers.

#### Q63-E02E [2008]

#### **Magnetic dampers**

Includes magnetic fluid dampers.

#### Q63-E02G

#### Shock absorber/damper components

Includes seals, oil ports, split rings etc.

#### Q63-E02X

### Other shock absorbers/dampers

Includes torsion dampers.

#### Q63-E05

### Spring/damper combinations

Includes coil over dampers. Also see Q19-F03 for racing car independent coil over dampers.

# Q64: Belts, Chains, Gearing

#### Q64-A

#### **Driving belts**

Includes IC engine timing belt (see also Q51-E05), and belt tensioning arrangements.

Cambelt, timing belt

Q64-A01

V-belts

Q64-A02

Ropes or cables

### Q64-A03

# Belt fastening and tensioning arrangements

Includes turnbuckles, clamps and belt tensioning arrangements (see Q51-E for IC engine timing belt tensioning arrangements).

Q64-A04

**Pulleys** 

Q64-B

**Chains** 

Q64-B01

#### **Driving chains**

Includes IC engine timing chain (see also Q51-E05).

Q64-B02

**Hauling chains** 

Q64-B03

# **Chain fastening arrangements**

Includes links, shackles, hooks.

Q64-B04

**Sprockets** 

Q64-C

Gearing

Q64-C01

# Mechanical gearing

Includes toothed gearing, helical gearing, ball or roller gearing.

Q64-C01A

Cams, cam followers

Q64-C01B

**Toothed members; Worms** 

Q64-C01C

#### **Friction members**

Includes friction discs and pulleys.

Q64-C01L

Lubrication/cooling arrangements

Q64-C03

Fluid gearing

Q64-C05

### **Gearing control**

Includes gear levers per se. For electrical aspects of motor vehicle transmission control see X22-G03 codes.

Q64-C09

[2007]

Other gearing details

#### Q64-D

### **Transmission linkages**

Includes cam transmissions, wobble plate transmissions.

# Q65: Pistons, Cylinders, Packing, Seals

These codes are not applied when other specific transportation related codes can be applied. For example, a novel cylinder used in an internal combustion engine can be coded in Q51-A03A, and does not require application of a Q65-B code.

#### Q65-A

#### **Pistons; Plungers**

See Q51-A03B only for pistons used in internal combustion engines.

### Q65-B

# **Cylinders**

Includes running faces and cylinder liners.

### Q65-C\*

# [2006-2007]

#### **Pressure vessels**

\*This code is now discontinued. From 200701 pressure vessels used for transportation purposes have been coded in Q69-B01 instead.

### Q65-D

# Seals; Packing

Includes piston rings and sealing and packing arrangements in general.

# Q65-X

# Other piston, cylinder and seal details

# Q66: Valves; Taps; Cocks; Vents

For electrical aspects of mechanical valves see X25-L01 codes. See Q51-E only for valve gear used in internal combustion engine.

### Q66-A

#### Lift valves

Includes cut-off apparatus with closure members having component of their opening/closing motion perpendicular to closing faces.

#### Q66-B

### **Gate or sliding valves**

Includes cut-off apparatus with closure members having a sliding movement along the seat for opening and closing.

Reed valve

### Q66-C

### **Diaphragm valves**

Includes cut off apparatus with closure member deformed but not moved bodily.

#### Q66-D

### **Rotary valves**

#### Q66-E

Multiway valves; Mixing valves and fittings incorporating them

#### Q66-F

Valve construction

#### Q66-F01

Valve members; Valve seats; Seals

#### Q66-F02

Valve housings; Casings

#### Q66-J

#### Valve actuation arrangements

Includes use of floats. See X25-L01A and V02-E02A1 for electromagnetically actuated solenoid valves.

#### Q66-P

# **Functional valve types**

### Q66-P01

**Check valves** 

### Q66-P02

Safety valves; Equalising valves

#### Q66-P03

#### Vent valves

Includes venting or aerating arrangements.

### Q66-P04

### Fluid delivery valves

Needle valve

#### Q66-X

# Other valve/vent/tap details

# **Q67: Pipes; Joints; Fittings**

For electrical aspects of large scale pipelines see X25-Y02.

### Q67-A

#### **Pipes; Hoses**

See Q18-A01X for vehicle brakes pipes/hoses per se.

#### Q67-A01

### **Rigid pipes**

Includes copper pipes.

### Q67-A02

### Flexible pipes

Includes rubber hoses.

#### Q67-A03

# Pipe laying and repair

Includes pipe cleaning (See X25-H09 and X25-Y02 for electrical aspects).

Blockage removal

### Q67-B

# Pipe connections; Joints and Seals

### Q67-B01

### Pipe connectors/joints

includes quick acting connectors, i.e. quick release/fastening, compression joints etc. Hose nipple, end fitting, branching

#### Q67-B02

#### **Seals**

Includes rubber seals and gaskets.

# Q67-C

#### Pipe accessories

Includes e.g. pipe supports and holders such as hose clips.

Clamps, cleats, brackets

# Q67-D

# [2016]

### Pipe protection

Includes protection against corrosion, incrustation, wear, fire, etc. Also includes heating or cooling details for preventing damage (e.g. freezing) of pipes.

Protective tubing, thermal insulation, vibration damping

#### Q67-X

# Other pipeline details

# **Q68: Other Engineering Elements**

#### Q68-A

#### Frames; Casings; Beds; Supports

#### Q68-A01

#### Frames; Casings

From 2007 the scope of this code has been expanded to include all frames or casings e.g. for reciprocating or rotary engines, e.g. to facilitate engine assembly (see also Q51-M). From 2007 portable frames are specifically coded in Q68-A01A.

### Q68-A01A [2007]

#### **Portable frames**

Includes wheeled frames. For trolley jacks etc., also see Q16-A03.

#### Q68-A02

#### **Beds**

Includes mounting of engines on foundations, e.g. for test purposes.

#### Q68-A03

### **Stands; Trestles; Supports**

Includes movable stands and trestles for supporting various articles/equipment in various locations or orientations.

**Brackets** 

# Q68-B [2018]

#### **Boards; Panels; Sheets**

Layered products are covered under P73.

### Q68-L [2007]

#### **General lubrication systems**

Includes generally applicable lubrication systems. For specific lubrication systems such as IC engine lubrication, vehicle transmission lubrication or vehicle suspension lubrication systems instead see Q51-F, Q13-A20 and Q12-B15 codes respectively. Also includes cleaning details of lubrication systems.

# Q68-S [2007]

# **General safety devices**

Includes generally applicable safety devices such as safety guards or screens or other systems e.g. requiring the use of both hands.

### Q68-X [2018]

### Other engineering elements

This code covers engineering elements not covered by any other Q61 to Q68 codes.

# Q69: Storing/Distributing Gas/Liquid

### Q69-A

### Variable capacity gas holders

### Q69-B

# Fixed capacity gas holders

For motor vehicle hydrogen/natural gas etc. fuel tanks see Q17-E04 only.

# Q69-B01

### **Pressure vessels**

Includes pressurised vehicle fuel tanks, e.g. containing LPG. See also Q69-B for fixed capacity fuel tanks.

### Q69-B02

Vessels not under pressure

#### Q69-C

Vessel filling method or apparatus

### Q69-D

Vessel discharging method or apparatus

### Q69-E

**Pipeline systems** 

# Q69-M [2016]

### Gas/liquid holder/tank manufacture

Includes methods and equipment for manufacturing tanks and holders for gas/liquid.

# Q69-T [2016]

# Gas/liquid tank constructional details and accessories

Includes tanks details, reinforcing elements, stands etc.

# Q69-X [2014]

# Other gas/liquid handling systems

Includes steam traps.

# **Q7: Lighting, Heating**

#### Q71: Lighting

All details of electric lighting or illumination obtained by unconventional sources like LED, EL devices are coded under X26.

Q71-A [2015]

Type of light source

Q71-A01 [2015]

**Electric lighting** 

All details of electric lighting are coded under X26.

Q71-A02 [2015]

**Non-electric lighting** 

Q71-A02A [2015]

Incandescence

Q71-A02B [2015]

Luminescence

Includes crystalloluminescence, bioluminescence, chemoluminescence, thermoluminescence, phosphorescence or fluorescence.

Q71-A02X [2015]

Other type of non-electric light sources

Q71-A50 [2015]

Combustible/Flammable material used

Q71-A50A [2015]

Oil

Q71-A50B [2015]

Gas

Q71-A50C [2015]

Kerosene

Paraffin lamp

Q71-A50D [2015]

Wax

Candle, rushlight

Q71-A50X [2015]

Other combustibles

Q71-G [2015]

Maintenance and repair of lighting devices

Q71-M [2015]

Manufacture/Pre-use treatment

Includes pre-treatment of candle wicks.

Mordanting

Q71-R [2015]

Recycling of components from lighting devices

Electrical details of recycling systems are coded under X25-W04.

Q71-T [2015]

**Constructional details** 

Q71-T01 [2015]

Shades/globes/bowls/covers

Q71-T02 [2015]

**Refractors**; Reflectors

See also V07 codes.

Lens

Q71-T03 [2015]

Light filters; Light screens; Diffusers; Light quides; Polarizer

See also V07 codes.

Q71-T04 [2015]

Container for combustible material (e.g. oil)

Q71-T06 [2015]

Ignition of combustible; Arrangement for controlling quantity of combustible used

Flint, permanent match, spark wheel, adjusting wheel

Q71-T07 [2015]

Protection from damage/draughts; Protection for user

Includes shock-absorbers, thermal insulation, flame-retardant solutions. Also includes gas-tight, water-tight arrangements and draughts insulation.

Windproof, lightning protection

Q71-T99 [2015]

Other constructional details

Includes modular construction, candle holders, wicks and stiffeners for candle wicks. Also includes fastenings and suspending/attaching arrangements (see X26-R for electric lighting), and cooling details.

Q71-U Applications	[2015]
Q71-U03 Vehicles	[2015]
Q71-U13 Medical	[2015]
Q71-U32 Torches/flares	[2015]
Q71-U33 Lanterns Hurricane lamp	[2015]
Q71-U34 Lighters	[2015]
Q71-U35 Table lamps/floor lan	[2015] nps
<b>Q71-U36 Wearable</b> Lightsticks, handlamp	[2015]
Q71-U37 Scented/therapeutic/	[2015] 'insect repellent

Q71-U45 [2015]

General area/location of use

Q71-U45A [2015]

**Outdoors** 

General outdoor use.

Gardens, waterways, camping, roads

Q71-U45C [2015]

**Indoors** 

General indoor use. Furniture, mirror, oven

Q71-U45E [2015]

**Underwater use** 

Q71-U99 [2015]

Other specific applications

Christmas decorations

#### Q72: Steam generation

Electric steam boilers are coded under X25-W02.

Q72-A [2015]

Steam generation - Heating method

#### Q72-A01 [2015]

#### Using heat content from hot heat carriers

This code includes the use of hot slag, hot residues, molten metal, hot liquid or hot vapor, etc. as heat transfer medium.

Iron blocks

Q72-A02 [2015]

#### **Using combustion**

Details of combustion processes are covered by Q73 codes.

# Q72-A03 [2015]

# Pre-heating details (pre-heaters)

Includes water and air preheating systems, and combination of exhaust-steam and smoke-gas preheaters. Also includes details of thermal deaeration of feed-water and accumulators arranged within combustion chambers, combined with steam accumulators or directly connected to boilers.

Smoke-gas preheaters, exhaust-steam preheaters, feed-water heaters, accumulator

#### Q72-A04 [2015]

#### Superheating of steam

Covers the use of hot flue gases from the furnace, radiations or heat generated by chemical reactions, etc, to superheat the steam.

Q72-A05 [2015]

#### **Control and safety systems**

Includes arrangements for regulating steam temperature and superheat temperature by regulating flue gas flow, by indirectly cooling or heating the superheated steam in auxiliary heat-exchangers, by using injected water sprays, etc. Also includes control details of water feed.

Water-level, regulator, vent

Q72-A99 [2015]

Using a different heating method

Q72-B [2015]

**Types of boilers** 

Q72-B01 [2015]

Fire-tube boilers

Q72-B02 [2015]

#### Water-tube boilers

Flash boiler

Q72-B03 [2017]

#### **Biomass boilers**

See Q73 for combustion systems and Q74 for heating systems.

# Q72-B04 [2015]

### Fluidized bed combustion boilers

Includes atmospheric fluidized bed combustion boilers, pressurized fluidized bed combustion boilers and atmospheric circulating fluidized bed combustion boilers.

FBC, AFBC, CFBC

# Q72-B05 [2015]

#### Stoker fired boilers

Includes boilers using spreader stokers and chairgrate or traveling-grate stokers.

#### Q72-B06 [2015]

#### **Pulverized fuel boilers**

Pulverized coal

Q72-B07 [2015]

#### Waste heat boilers

Heat recovery steam generator

Q72-B08 [2015]

Superheated steam boilers

#### Q72-B99 [2015]

#### Other types of boilers

Includes instantaneous boilers.

# Q72-G [2015]

# Maintenance and repair of steam generating apparatus

Self-cleaning, de-sludging

Q72-M [2017]

Manufacturing details of boilers

Q72-T [2015]

Constructional details of steam generating systems

Q72-T01 [2015]

**Drums; Headers** 

Q72-T02 [2015]

**Fireboxes** 

Q72-T04 [2015]

Flues or fire tubes; Water tubes

Includes details of linings, inserts, fittings for preventing burning-off of tube edges, attachments and supports.

Tube bundle

Q72-T05 [2015]

**Boiler support, frame and casing** 

Stay-bolt connections

Q72-T07 [2015]

Arrangements for facilitating fluid circulation (air, water, etc.)

Includes details of valves, pumps, compressors, nozzles, injectors and arrangements for inducing draughts.

Ventilating shafts, baffles, saddles, propellers

Q72-T09 [2015]

**Heat exchangers** 

See also Q78 codes for details of heat exchangers.

Q72-T10 [2015]

**Insulation details** 

Heat shield

Q72-T11 [2015]

Chimneys

Exhaust

Q72-T99 [2015]

Other constructional details of steam generating systems

Includes steam traps, economizer, etc.

Q72-U [2015]

**Applications** 

Q72-U01 [2015]

**Domestic** 

Facial steamer

Q72-U03 [2015]

Vehicles

Q72-U16 [2015]
Power engineering; Power plants;

**Electrical power generation** 

Q72-U40 [2018]

Industrial

Q72-U41 [2015]

Cleaning

Q72-U99 [2015]

Other specific applications

### Q73: Combustion apparatus and processes

Details of internal combustion engines are coded under Q51 only.

Electrical details of combustion are coded under X25-X13 (industrial combustion) and X27-G (domestic combustion).

### Q73-A [2015]

# Types of combustion apparatus and processes

# Q73-A01 [2015]

# Combustion systems using catalytic material

Includes details of catalytic material.

## Q73-A02 [2015]

#### Burners

This code can be used in conjunction with Q73-A15 codes to highlight the type of fuel used.

Wick burner, radiant gas burner, cutting torch, vortex burner

### Q73-A03 [2015]

#### Start-up details/techniques

Pre-treatment of fuel is coded under Q73-T05A.

#### Q73-A04 [2015]

# Fluidized bed combustion

Includes stationary beds, circulating fluidized beds, vibratory fluidized beds, transport/flash reactors and annular fluidized beds. Details of fluidized beds are also covered under J04-E07A and J04-X03A. FBC, bubbling bed, CFB, FR, AFB

#### Q73-A05 [2015]

#### **Cremation furnaces**

Details of furnaces are coded under Q77. *Incinerator* 

### Q73-A15 [2015]

**Fuel used** 

#### Q73-A15A [2015]

### Solid fuel combustion

Includes details of pulverulent fuels. Coal, charcoal, wood, powder

#### Q73-A15B [2015]

#### Liquid fuel combustion

Includes wick burners and blue-flame burners.

Oil, diesel, petrol, kerosene, biodiesel

#### Q73-A15C [2015]

#### Gaseous fuel combustion

Includes burners that use gas stored under pressure as a liquid. Includes pre-mix and non-pre-mix gas burners, radiant gas burners, inverter burners and welding/cutting torches.

Natural gas, propane, landfill gas

#### Q73-A15D [2015]

#### **Biomass fuel**

This code is to be used in conjunction with other Q73-A15 codes for solid biomass (together with Q73-A15A), biodiesel (together with Q73-15B), biogas (together with Q73-A15C) or on its own if the type is not specified.

Landfill gas, biofuel

# Q73-A15X [2015]

Other fuels

#### Q73-A99 [2015]

# Other types of combustion apparatus and processes

Includes systems for returning solid combustion residues or flue gasses to combustion chambers. Also includes explosive combustion chambers.

#### Q73-B [2015]

#### Combustion control/regulation

Electrical details of combustion control are coded under X25-X13 (industrial combustion) and X27-G02 (domestic combustion).

# Q73-B01 [2015]

# Control by regulating fuel supply

#### Q73-B02 [2015]

## Control by regulating air supply or draught

Includes the use of bellows, diaphragms, etc. Details of air inlet arrangements are coded under Q73-T02 codes.

Air flo, cyclone, vortex

#### Q73-B09 [2015]

Other arrangements for regulating or controlling combustion

#### Q73-G [2015]

# Maintenance and repair of combustion apparatus

Includes method and apparatus for cleaning all surfaces contaminated by combustion products or combustion residues. This includes removing ash, clinker or slag from combustion chambers, and removing solid residues from passages or chambers beyond the fire, e.g. from flues by soot blowers

Nozzle cleaning, grate cleaning, purging

# Q73-R [2015]

# Recycling of components from combustion apparatus

Electrical details of recycling systems are coded under X25-W04.

# Q73-T [2015]

# Constructional details of combustion systems

# Q73-T01 [2015]

#### **Burner construction**

Details of air supply in burners are also coded under Q73-T02. Includes layout of burners to obtain a specific type of flames, e.g. pencil or sheet flames, loop flames, impacting flames or rotating flames.

# Q73-T01A [2015]

#### Mounting/supports of burners

# Q73-T01C [2015]

#### **Nozzles for burners**

Cleaning of nozzles is also covered under Q73-G.

# Q73-T01X [2015]

#### Other details of burners

Includes evaporator, burner head, wick, flame spreader, etc.

# Q73-T02 [2015]

#### Details of air/gas supply/airflow

Includes details for supplying air or other noncombustible liquids or gases (e.g. oxygen or steam) to the combustion apparatus. Also includes firebridges and arrangements for inducing draughts, such as ventilating shafts.

Mixing tube, air inlet, fan, blower, baffle, deflector, valve, damper

#### Q73-T02A [2015]

### Chimneys/flues

Includes details of linings, jackets, casings, joints, inlet holes and doors.

Connection, mouths, cover, gas outlet

# Q73-T03 [2015]

#### Combustion chamber

Includes details of casings, doors, linings and walls. Also include supervision window for observation. Also includes details of multiple combustion chambers, such as details of separate secondary combustion chambers, where the combustion chambers are arranged in series or parallel to one another.

Crown, roof

# Q73-T04 [2015]

#### Grates

Cleaning of grates is also covered under Q73-G. Includes constructional details of grates with hollow or solid bars, double grates, inclined grates, revolving/rocking grates and travelling grates.

Basket grates, telescoping grates, dumping-grates, end fittings, bearer, frame, spacer, support, fire-bars

#### Q73-T05 [2015]

#### **Fuel system**

Nozzles for burners are coded under Q73-T01C only.

### Q73-T05A [2015]

#### Pre-treatment of fuel

Includes pre-treatment details before feeding fuel to combustion apparatus. Includes mixing solid fuel with a liquid, mixing two or more liquid fuels, or pre-heating fuel.

Slurry, emulsion

### Q73-T05B [2015]

#### **Fuel feed systems**

Includes feeding details by piston, screw, by gravity, or using spreader stokers with or without moving hoppers.

Air blast, pump, free fall

#### Q73-T05C [2015]

#### **Fuel nozzles**

Nozzles for burners are coded under Q73-T01C only.

#### Q73-T06 [2015]

**Filters** 

#### Q73-T07 [2015]

# Treatment and removal of combustion products

Includes devices for treating smoke or fumes, e.g. for removing noxious materials from smoke or fumes using purifier or traps.

Q73-T09 [2015]

**Cooling arrangements** 

Q73-T10 [2015]

#### Fluidized bed construction

Includes details of air inlets, fuel feeders for fluidized beds. Also includes devices for removing material from bed.

Grids

Q73-T11 [2015]

### Igniters/lighter construction

Electrical igniters and cigarette lighters are included in X27-G01 only. Extinguishing devices are coded under Q73-T12 only. Includes details of casing, friction wheel, fuel container, wicks, flint, etc. Includes mechanical ignition (using friction or shock effects), lighters containing fuel and ignition by a pilot flame.

Q73-T12 [2015]

### **Extinguishing devices**

Includes devices for blowing-out or snuffing candle flames. Igniters are coded under Q73-T11 codes only.

Q73-T20 [2015]

#### **Safety arrangements**

Includes protection from flashback and blowback, and safety systems e.g. in case of failure of gas supply. Cooling arrangements are coded under Q73-T09.

Q73-T99 [2015]

# Other constructional details of combustion apparatus

Includes soot blower.

Q73-U [2015]

**Applications** 

Q73-U01 [2016]

#### **Domestic**

Electric details of domestic combustion are coded under X27-G. Electrical details of gas cookers are coded under X27-C05.

Cooking stove, boiler

Q73-U07 [2015]

**Food industry** 

Q73-U20 [2015]

# Waste disposal, waste treatment and recycling

Includes cremation of human or animal carcasses. *Incineration* 

Q73-U26 [2015]

Metallurgy

Q73-U27 [2015]

**Boilers** 

Includes steam boilers.

Q73-U40 [2015]

Industrial

Includes drying (see also Q76 for drying details). Also includes welding or cutting torches.

Q73-U45 [2015]

**Underwater use** 

Q73-U99 [2015]

Other specific applications

### Q74: Heating, ranges and ventilating

Cooling and refrigerating details are coded under Q75. Electrical details of HVAC systems are coded by X27-E codes.

### Q74-A [2015]

# Types of heating, ranges and ventilating

# Q74-A01 [2015]

#### Stoves and ranges

Includes closed stoves, stoves with open fires, freestanding stoves and ranges, integrated stoves and ranges and combined stoves and ranges.

Fireplaces, charcoal brazier, camping stove, back-to-back stoves

#### Q74-A02 [2015]

# Space heating and ventilating; Water heating

Electrical details are coded under X27-E01. HVAC, climate control system

#### Q74-A02A [2015]

# Fluid heating systems

Includes water and/or air heating systems, fluid heating systems using heat pump and storage heating systems.

Combination boiler, combi

### Q74-A02B [2015]

#### Air conditioning systems

Electrical details of air conditioning systems are coded under X27-E01B. Includes air conditioning systems with additional air treatment, such as combined with humidifiers or dehumidifiers. Electrical details of air humidifying systems are coded under X27-E01B2.

### Q74-A02C [2015]

### Air humidifying/de-humidifying systems

Electrical details of air humidifying systems are coded under X27-E01B2 only.

Includes details of air humidifying systems by evaporation of water using heated or unheated wet elements, by forming water dispersion in air or by injection of steam in air.

#### Q74-A02E [2015]

#### **Ventilation systems**

Includes natural ventilation systems, i.e. not using any mechanical systems, and ventilation systems using forced flow, e.g. using fans placed on doors/windows.

## Q74-A02F [2015]

#### Air-cleaning and filtration systems

Air purifier

### Q74-A02G [2015]

#### Air curtains

Includes air currents used for screening.

# Q74-A02H [2015]

#### **Portable HVAC units**

This code is to be used in conjunction with other Q74-A02 codes.

Mobile, collapsible

#### Q74-A02J [2015]

#### **Fixed HVAC units**

This code is to be used in conjunction with other Q74-A02 code(s). Includes wall-mounted units, ceiling-mounted units, under-floor units and roof-mounted units.

Integrated

### Q74-A25 [2015]

#### **Fuel used**

This code is used in conjunction with other Q74-A codes.

#### Q74-A25A [2015]

#### Solid fuel

Coal, charcoal, wood, wood pellets, powder

#### Q74-A25B [2015]

#### Liquid fuel

Oil, diesel, petrol, kerosene, biodiesel

#### Q74-A25C [2015]

#### Gaseous fuel

Natural gas, propane, landfill gas

# Q74-A25D [2015]

#### **Biomass fuel**

This code is to be used in conjunction with other Q74-A25 codes for solid biomass (together with Q74-A25A), biodiesel (together with Q74-A25B), biogas (together with Q74-A25C) or on its own if the type is not specified.

Landfill gas, biofuel

# Q74-A25E [2015]

#### **Electrical power**

Heating and air-conditioning devices powered by electricity are coded under X27 and X25.

#### Q74-A25F [2015]

#### Solar power

See also X15-A codes.

Q74-A25X [2015]

# Other types of fuel

Geo-thermal power

Q74-G [2015]

Maintenance and repair of heating, ranges and ventilating systems/parts

Q74-H [2015

Use of heat/steam recovery

See also X15-H codes.

Q74-R [2015]

# Recycling of heating, ranges and ventilating systems/parts

Electric details of recycling systems are coded under X25-W04.

Q74-T [2015]

# Constructional details of heating, ranges and ventilating systems

Details of heat exchangers are coded under Q78.

Q74-T01 [2015]

# Air ducting/circulation systems

Includes diffusers, louvres, grilles, flaps, guide plates, vertical ducts, air handler, plenum, air outlet and intake vents, fan, blower, etc.

Ductwork, flue, turning vane, stac, flex, AH, plenum space

Q74-T02 [2015]

**Pipes** 

Includes refrigerant pipings. Pipeline attachments (clamps, etc.) are coded under Q67-C.

Q74-T03 [2015]

# Casings; Covers; Doors; Supports

Includes details of solar guards, snow guards and decorative panels. Also includes screens and fuel guards of stoves and ranges.

Camouflage, wall attachments, mountings, feet

Q74-T04 [2015]

# Fireboxes; Fire grates; Fire irons; Hearth; Fuel containers

Includes details of frame, hood and heat deflectors. Also includes details of fuel containers, such as hods for coal storage, and tools for handling e.g. coal, such as tongs or shovel.

Fire surround, shaker grate, fire tools, shovel, tongs, poker, brush, hopper, hopper plate, coal box

Q74-T07 [2015]

Burners

Includes details of burner cap, burner ring, LPG conversion kit, cast iron pan supports, etc.

Bunsen burner, burner assembly

Q74-T08 [2015]

**Compressors; Evaporators** 

Q74-T09 [2015]

**Filters** 

Noise filters are coded under Q74-T15 only. Includes air filters and water filters.

Q74-T10 [2015]

**Radiators** 

This code can be used in conjunction with Q74-T03 to cover details of door, casing, mountings, etc.

Q74-T11 [2015]

Water tanks

Includes drip trays.

Water cylinder

Q74-T15 [2015]

# Arrangements for vibration or noise suppression

Vibration isolator, noise filter, sound attenuator

Q74-T16 [2015]

**Insulation; Seals** 

Noise insulation is coded under Q74-T15. Draught shield

Q74-T20 [2015]

**Control or safety systems** 

Electrical details are coded under X27-E01B. Control knob, protective guard, fire resistant

Q74-T99 [2015]

#### Other constructional details

Includes arrangements for preventing condensation, tiles and tiles attachments. Shim liner

Q74-U [2015]

**Applications** 

Q74-U01 [2015]

**Domestic** 

See also Q74-U10 for cooking and baking. Barbeques, camping stove Q74-U02 [2015]

Commercial

Includes shops, offices, sport halls, theatres, schools and universities.

Shops, offices, sports halls, theatre

Q74-U03 [2015]

**Vehicles** 

Q74-U06 [2015]

**Manufacturing plants** 

Q74-U07 [2015]

**Food industry** 

Q74-U10 [2015]

Cooking and baking

This code can be used in conjunction with Q74-U01 or Q74-U40 for domestic and industrial cooking and baking, respectively.

Q74-U14 [2015]

**Laboratories** 

Q74-U40 [2015]

**Industrial** 

Covers industrial applications not covered by other application codes.

Q74-U99 [2015] Other specific applications

# Q75: Refrigeration and Liquefaction

From 2015, X27-F codes only cover refrigeration with substantial electrical content. All mechanical details are now covered under Q75. Details of air conditioning systems are coded under X27-E01B (electrical content) and Q74 (mechanical content).

# Q75-A [2015]

# Types of refrigeration systems

Electrical details of refrigeration systems are coded under X27-F02A. Refrigerant lubricants are coded under H08-D11 only.

# Q75-A01 [2015]

# Non-cyclic refrigeration systems

Includes ice boxes.

Cabinet

# Q75-A02 [2015] Cyclic refrigeration systems

# Q75-A02A [2015]

# **Compression systems**

Includes refrigeration systems with multi-stage compression, compression systems using Joule-Thompson effect, using multiple cooling stages, using Stirling cycle or using turbines. Also includes refrigeration systems using multiple evaporator circuits, multiple condenser circuits, with cascade operation, using 3He-4He dilution, etc. Cryocooler

# Q75-A02B [2015]

### **Sorption systems**

Includes continuous and non-continuous sorption systems. Also includes refrigeration systems using endothermic solution of salt, using desorption of hydrogen from a hybrid, etc.

# Q75-A02C [2015]

#### **Heat pumps**

Includes compression-type and sorption-type heat pumps. Electrical details of heat pumps are coded under X27-F02B.

Absorption heat pumps

#### Q75-A02H [2015]

# Systems using combination of operation modes

Includes compression-sorption systems. Also includes combined heating and refrigeration systems.

### Q75-A02X [2015]

# Other types of cyclic-refrigeration systems

Includes refrigeration systems using evaporation of refrigerant without recovery of vapor, or using waste heat.

# Q75-A03 [2018]

**Defrosting and de-icing** 

#### Q75-A20 [2015]

#### Refrigerant used

Details of refrigerant are also coded under J07-A08. Refrigerant lubricants are coded under H08-D11 and J07-A10 only.

Q75-A20A [2015]

HFC

Q75-A20B [2015]

**HCFC** 

Q75-A20C [2015]

CFC

Q75-A20X [2015]

Other refrigerants

Q75-A99 [2018]

Other refrigeration details

#### Q75-E [2015]

# Production, storage and distribution of ice

From 2015, X27-F04 covers ice manufacture only with substantial electrical details. Includes production of ice with or without refrigeration. Also includes production of artificial snow (e.g. for winter sports), and specialized tools used during production of ice.

Harvesting tools, saw, ice shaving, ice presses

# Q75-F [2015]

Liquefaction, solidification and separation of gases by pressure and cold treatment

#### Q75-G [2024]

# Maintenance and repair of refrigeration and liquefaction components

Includes manufacturing methods and apparatus.

# Q75-T [2015]

# Constructional details of refrigeration, liquefaction and solidification systems

Constructional details of motors are coded under V06.

# Q75-T01 [2015]

#### Compressors

Electrical details of compressors are coded under X27-F02C1.

# Q75-T02 [2015]

# **Absorbers; Adsorbers; Boilers**

Electrical details of absorbers and adsorbers are also coded under X27-F02C. Also includes analyzers and rectifiers.

# Q75-T03 [2015]

# **Evaporators; Condensers; Heat exchangers; Valves**

Includes cold exchangers, accumulators, sub-coolers, desuperheaters and superheaters. Details of heat exchangers are coded under Q78. Electrical details of evaporators and condensers are coded under X27-F02C.

Expansion valves

# Q75-T06 [2015]

# Housings; Walls; Handles; Shelves

Includes cabinets, seals and feet. Also includes special inserts for doors (e.g. for bottles), ice trays and egg trays for domestic fridges and details of interior light. Fridge lights are also covered by X27-F02C2 and Q71.

Door, tray

# Q75-T08 [2015]

### Water and ice dispensers

Details of ice generation are also covered by Q75-E codes. Electrical details of ice generation are coded under X27-F04.

# Q75-T09 [2015]

# Arrangements for circulating cooling fluids

Includes air intake filters.

Pipe

# Q75-T20 [2015]

#### **Control and safety systems**

Includes guards, protective plates, etc. Electrical details are coded under X27-F03.

Defrosting, frost prevention

# Q75-T99 [2015]

# Other constructional details of refrigeration systems

Includes arrangements for preventing or removing deposits or corrosion, arrangements for transporting items to be cooled, etc.

Q75-U [2015]

**Applications** 

Q75-U01 [2015]

#### **Domestic**

Includes free-standing and integrated appliances, and combined fridge-freezers.

Wine cooler

Q75-U03 [2015]

**Vehicles** 

Includes cars, trucks, airplanes, boats, etc.

Q75-U07 [2015]

**Food industry** 

Kimchi

Q75-U30 [2015]

#### Sports, toys, entertainment and leisure

Includes ice rinks, ski slopes, etc.

Q75-U40 [2015]

Industrial

Includes cold rooms.

Q75-U99 [2015]
Other specific applications

Q76: Drying

Electrical details of drying methods and apparatus are coded under X25-G.

Q76-A [2015]

Pre-treatment (to facilitate drying)

Q76-B [2015]

**Drying method** 

Q76-B01 [2015]

# **Drying using heat**

Includes drying methods using heat convection, heat conduction, radiation (e.g. from the sun) or using heat created within the materials/objects to be dried (e.g. by friction).

Spray-drying, fluidised drying

Q76-B02 [2015]

# **Drying without using heat**

Includes drying by evaporation/sublimation of moisture (e.g. in a vacuum), by centrifugal force or by pressure. Includes the use of a freezing step. Also includes drying by suction, or by contact with sorbent bodies.

Clothes press, mangle, wringer

Q76-B03 [2015]

Drying using a combination of heat and heat-free processes

Freeze-drying

Q76-G [2015]

Cleaning, maintenance and repair of drying machines

Includes testing, lubricating and oiling arrangements.

Q76-M [2015]

Manufacture of drying machines/Pre-use treatment

Pre-treatment of items to be dried (to facilitate drying) are coded under Q76-A only.

Q76-R [2015]

Recycling of drying parts/components

Q76-T [2015]

**Constructional details of drying machines** 

Q76-T01 [2015]

**Drums/Chambers** 

Q76-T03 [2015]

Arrangements for conveying materials/objects to dry

Includes fluidised beds, rollers and belts. Includes stirring devices.

Trays, racks

Q76-T04 [2015]

# Arrangement and control of air/gas supply

Includes details of gas used during the drying process (if different than air). Includes mechanical control details only. Also includes filters.

Humidity, temperature, pressure, flow

Q76-T06 [2015]

# **Heating/refrigerating arrangements**

Includes details of combustion heating (see also Q73 codes), and tubes containing heated fluids. Refrigeration details are also covered under Q75. Freezing coil

Q76-T08 [2015]

Ventilation/cooling details of drying machine

macnine

Q76-T99 [2015]

Other constructional details

Safety system

Q76-U [2015]

**Applications** 

Q76-U01 [2015]

Domestic

Airing cupboard, washing line

Q76-U13 [2015]

#### Pharmaceutical/Medical

Medicine, tablets, antibiotics, medical ingredients, additives, blood plasma

Q76-U21 [2015]

Characterized by specific type of materials to dry

Q76-U21A [2015]

For drying elongated/long materials

Fabrics, fibres, yarns

Q76-U21B [2015]

For drying loose materials

Granules, pellets, cubes

Q76-U21D [2015]

For drying gas

Natural gas

Q76-U21E [2015]

For drying food/plants

Q76-U21E1 [2015]

For drying food

Instant coffee, milk powder, coffee, tea, eggs, cereal, spices, flavorings

Q76-U21E2 [2015]

For drying plants

Tobacco, flowers

Q76-U40 [2015]

**Industrial** 

Combine harvester, paint pigments, ceramic materials, catalyst supports, microalgae, paper pulp

Q76-U99 [2015]

Other specific drying applications

# Q77: Furnaces, kilns, ovens, retorts

Furnaces, kilns, ovens and retorts are also coded under J09. Details of combustion processes are also covered under Q73 codes.

Q77-A [2015]

Type of furnaces/kilns/ovens/etc

Q77-A01 [2015]

#### **Vertical furnaces**

Includes vertical furnaces with multiple shafts/chambers.

Blast furnace

Q77-A02 [2015]

# Horizontal/slightly inclined furnaces

Includes details of rotary furnaces. Includes externally and internally heated furnaces, tiltable furnaces or furnaces with multiple chambers/drums.

Q77-A03 [2015]

# **Hearth-type furnaces**

Includes details of reverberatory-type furnaces. Includes furnaces with single chamber/hearth, multiple chambers/hearths or with movable working chamber/hearth.

Q77-A04 [2015]

# Muffle furnaces; Retort furnaces

Includes furnaces muffle furnaces and retort furnaces with multiple chambers.

Q77-A07 [2015]

Fluidized-bed furnaces

Q77-A99 [2015]

# Other type of furnaces, kilns, ovens or

Includes bell-type furnaces, furnaces with stationary charge but moving kiln sections, open/uncovered sintering apparatus, crucible/pot furnaces and tank furnaces.

Vacuum furnace

Q77-B	[2015]	
Fuel used		
Q77-B01 Coal	[2015]	
Q77-B02 Oil	[2015]	

Q77-B03 [2015]

Gas

Natural gas

Q77-B04 [2015]

Wood

Q77-B99 [2015]

Other fuels

077-D [2015]

Management of waste heat and exhaust

gases

Q77-G [2015]

Cleaning, maintenance and repair of furnaces, kilns, oven and retorts

Q77-R [2015]

# Recycling of furnaces, kilns, ovens and retorts parts

Electric details of recycling systems are coded under X25-W04.

Q77-T [2015]

Constructional details of furnaces, kilns, ovens and retorts

Q77-T01 [2015]

Drum; casing; lining; wall; roofs; dividers

Includes details of refractory bricks, partitions and doors. Also includes sealing arrangements.

Blanket, muffle

Q77-T02 [2015]

### Air blowers/tuyeres

Includes details of blower motors (see also X11 codes), filters and blower chambers.

Q77-T03 [2015]

**Burners** 

Includes details of floor-mounted, wall-mounted or roof-mounted burners.

Q77-T04 [2015]

Radiant coils/tubes

Q77-T05 [2015]

Arrangement for charging/discharging charge

Feeders, hoppers, screw feeders

Q77-T06 [2015]

**Heat exchangers** 

See Q78 codes for more details.

Q77-T07 [2015]

Flue-gas stack

Includes stack dampers. Also includes details to enhance stability in e.g. strong winds.

Damper blade

Q77-T08 [2015]

**Dust collectors; Soot blowers** 

Q77-T10 [2015]

**Cooling arrangements** 

Q77-T20 [2015]

**Control and safety arrangements** 

See also J09-B04.

Q77-T99 [2015]

# Other constructional details of furnaces, kilns, ovens and retorts

Includes details for corrosion protection, arrangement for forming or maintaining specific atmosphere within chamber, and tools for stirring molten materials.

Sightglass

Q77-U [2015]

**Applications** 

Q77-U14 [2015]

Laboratory

Laboratory furnace

Q77-U20 [2015]

# Waste disposal, waste treatment and recycling

Includes cremation of human and animal carcasses. *Incineration* 

Q77-U26 [2015]

Metallurgy

Q77-U40 [2023]

Industrial

Includes glass and ceramic manufacture.

Q77-U99 [2015]

Other specific applications

### Q78: Heat exchange

Heat exchangers used in refrigeration systems are also coded under Q75.

Q78-A [2015]

Types of heat exchangers

Q78-A01 [2015]

Steam or vapor condensers

Q78-A02 [2015]

Characterized by the fluid direction

Q78-A02A [2015]

**Parallel flow** 

Co-current

Q78-A02B [2015]

**Cross-flow** 

Q78-A02C [2015]

Counter-current

Q78-A02D [2015]

#### **Multi-pass arrangements**

Includes combination of parallel and counter flows.

# Q78-A03 [2015]

#### Indirect contact heat exchangers

Includes shell and tube heat exchangers, shell and tube heat exchangers, plate heat exchangers, compact heat exchangers, adiabatic wheel heat exchangers, dynamic scraped surface heat exchangers, regenerative heat exchangers and phase-change heat exchangers.

Surface condenser, U-tube heat exchanger, double pipe heat exchanger, plate tin heat exchanger, CHEs, plate and shell heat exchanger, intermediate flow

Q78-A04 [2015]

### **Direct-contact heat exchangers**

Includes direct-contact trickle coolers, such as cooling towers.

Q78-A05 [2015]

Heat exchangers using a combination of indirect and direct heat exchanging methods

Q78-G [2015]

# Cleaning, maintenance and repair of heat exchangers

Includes supports/frames for attaching cleaning appliances, masks delimiting areas to be cleaned, etc. Includes cleaning by distortion, by vibration, by flushing e.g. chemical solvents, by combustion processes.

Abrasive tools, cleaning brushers, scrapers, hammers, cutters, self-cleaning

Q78-M [2015]

Manufacture/Pre-use treatment of heat exchangers

Q78-R [2015]

#### Recycling of heat exchanger components

Electric details of recycling systems are coded under X25-W04.

Q78-T [2015]

Constructional details of heat exchangers

Q78-T01 [2015]

**Tubular elements** 

Q78-T03 [2015]

# Casings; Header boxes; Heat/flow reflectors

Includes plates and other arrangements for increasing/decreasing heat transfer, e.g. for promoting droplets formation, affecting the flow pattern, turbulent flow to reduce skin-effect, etc. *End plate, baffle plate, impeller* 

Q78-T04 [2015]

**Sealing arrangements** 

Q78-T20 [2015]

**Control and safety arrangements** 

Q78-T99 [2015]

# Other constructional details of heat exchangers

Includes arrangements for preventing the formation of deposits/corrosion, for collecting and removing condensate, and for removing ice/water (to prevent clogging by frost). Also includes arrangement for suppressing noise.

Filters

Q78-U [2015]

**Applications** 

Q78-U03 [2015]

**Vehicles** 

Q78-U07 [2015]

**Food industry** 

Includes dairy industry.

Q78-U16 [2015]

Power engineering; Power plants;

**Electrical power generation** 

Q78-U17 [2015]

Hydraulic engineering; Water

management/treatment; Sewerage

Q78-U25 [2015]

Chemical engineering; Refinery/chemical

plant

Q78-U40 [2015]

Other industrial applications (not covered

by other Q78-U codes)

Includes reboilers.

Q78-U41 [2015]

**Heating/Cooling** 

Includes cooling of electronic devices (see also V04 codes).

Q78-U41A [2015]

Refrigeration/HVAC

See also Q75 and X27 codes.

Q78-U99 [2015]

Other specific applications

# Q79: Weapons, ammunition, blasting

See also K03.

Q79-A [2015]

Type of weapons

Q79-A01 [2015]

### **Cold weapons**

This code is applied for weapons projecting missiles WITHOUT the use of explosive or combustible propellant charge.

Q79-A01A [2015]

**Blow guns** 

Tube

Q79-A01B [2015]

Sling weapons

Catapults, slingshots

Q79-A01C [2015]

Bow/crossbows

Includes long bows and compound bows.

Darts

Q79-A01D [2015]

### Thrusting or cutting weapons

Includes sabres, cutlasses, swords, epees, daggers, stilettos, lances, pikes and harpoons.

Q79-A01X [2015]

# Other cold weapons

Includes batons, truncheons, sticks, shillelaghs, bolas, knuckledusters, spring guns, liquid ejecting guns, such as water pistols, and compressed gas guns, such as air guns or steam guns.

Friction-wheel operated launcher, speargun, toy gun

Q79-A02 [2015]

**Firearms** 

Q79-A02A [2015]

**Pistols** 

Non-lethal guns such as flare pistols are coded under Q79-A02F only.

Revolvers

Q79-A02B [2015]

#### **Shoulder-fired firearms**

Rifles, carbines, shotguns, gyrojets

Q79-A02C [2015]

#### Machine guns

Includes automatic and semi-automatic machine guns.

Q79-A02D [2015]

### **Artillery guns**

Cannons, carronades, falconets, field guns, Howitzers

Q79-A02F [2015]

#### Non-lethal guns

Includes rescue equipment guns, riot control guns and alarm pistols. Also includes starting pistols, tranquiliser guns and paintball guns.

Flare guns, Lyle guns, Very pistol, Flash-ball

Q79-A02X [2015]

#### Other types of firearms

Harpoon guns

Q79-A03 [2015]

**Flamethrowers** 

Q79-A04 [2015]

#### Launchers

Mechanical details of missile launchers attached to a vehicle are coded under Q24-M01A. Includes rocket/torpedoes launchers.

Q79-A05 [2015]

# Mines, e.g. landmines

Includes anti-personnel mines and anti-vehicle mines. Also includes fragmentation mines, blast mines and naval mines.

Anti-tank mines

Q79-A06 [2015]

#### Missiles and hand grenades

Includes air-to-air missiles, air-to-surface missiles, surface-to-air missiles and surface-to-surface missiles. Also includes stun grenades, chemical and gas grenades, tear gas grenades, etc. Anti-missile systems are coded under Q79-H.

Molotov cocktails, warheads, rockets, torpedoes

Q79-A09 [2015]

#### Blasting

Includes controlled use of explosives for e.g. rock blasting, etc.

Q79-A99 [2015]

# Other types of weapons

Includes fictional guns, such as ray-guns.

# Q79-E [2015]

# Training/practice weapons and facilities

Includes shooting/firing ranges and archery targets. Can be used with other Q79 codes to specify type of weapon, e.g. archery targets are also coded under Q79-A01C. Also see P36-A05 for archery/shooting target practice.

Bobbing targets, moving targets, clay-pigeon targets, bullet catcher

# Q79-F [2015]

#### **Fireworks**

See also K04-C codes.

# Q79-F01 [2015]

# Shell/container, includes wrapping

# Q79-F02 [2015]

# Star pellets

Includes arrangement of star pellets within the shell for specific display.

Palm, round shell, willow, chrysanthemum

# Q79-F03 [2015]

# Bursting charge; Mortar/launching arrangements

Also includes details of fuse/time delay. Compressed air, gunpowder

# Q79-F99 [2015]

Other firework details

#### Q79-G [2015]

# Cleaning, maintenance and repair of weapons

Includes testing, lubricating and oiling arrangements.

Scrapers, cleaning rods

# Q79-H [2015]

# Protection for weapons, personnel or equipment; Armoured vehicles

Anti-missile

# Q79-H01 [2015]

# Protection for personnel; Protective clothing

Includes military specific clothing, eye/ear protection and head protection.

# Q79-H03 [2015]

# Protection for weapons or equipment (not vehicle)

Includes decoys.

#### Q79-H04 [2015]

#### **Armoured vehicles**

See also Q19-D.

#### Q79-M [2015]

Manufacture/Pre-use treatment of weapons

# Q79-S [2015]

# Recycling and decommissioning of weapons

Decommissioning details of ammunitions are also covered by K03-A04. Alterations so that a gun can no longer be fired are also covered under Q79-T02X.

# Q79-T [2015]

# Constructional details of weapons and ammunitions

Details of explosives are coded under K04. Constructional details of practice targets, such as archery targets, are coded under Q79-E codes only.

# Q79-T01 [2015]

### **Constructional details of weapons**

Protective clothing is covered under Q79-H01.

# Q79-T01A [2015]

# **Bows; Bowstrings**

Includes details of bow-string drawing or releasing devices, bow stringers, bow wax, arrow rests, guides and bow stabilisers/dampers. Archery targets are also included under Q79-E. Arrows per se are coded under Q79-T02B.

Limbs, risers, tillers, bow sights, necking points, bracing height gauges, darts

# Q79-T01B [2015]

# **Handles; Crossquards**

Also includes butts and butt plates. Stocks, recoil absorbing pads

# Q79-T01C [2015]

# **Blades; Folding blades**

Includes details of the folding mechanism. Also includes concealment details, such as for swordsticks and cane-swords.

Q: Mechanical

# Q79-T01D [2015]

#### Holders, sheath or scabbards

Includes details of storage such as gun bags, gun cases, bow cases, quivers, etc.

Gun slip, gun holster

# Q79-T01E [2015]

#### **Barrels**

Rifled bores, smoothbores

# Q79-T01F [2015]

# Magazines; Arrangements for feeding/loading projectiles

Includes details of pump-action mechanism or lever-action mechanism. Details of ammunitions are coded under Q79-T02.

Rocking lever

# Q79-T01G [2015]

# **Triggers and other ignition mechanisms**

# Q79-T01H [2015]

#### Aiming mechanisms

Includes b-pods and shooting sticks. Also includes mounting arrangements, e.g. gun mountings on a vehicle.

Iron sights, turrets, monopod, target acquisition, trajectory compensation

#### Q79-T01X [2015]

#### Other constructional details of weapons

Includes high seats, recoil pads. Also includes details of gunshot sound and smoke simulation, such as shock-sensitive explosive compounds. Cartridges blanks are included under Q79-T02A. Details of gun decommissioning are coded under Q79-S.

Silencer

#### Q79-T02 [2015]

#### Constructional details of ammunitions

Tracer ammunition

# Q79-T02A [2015]

#### Cartridges/shells

Includes details of cartridge blanks. *Rubber bullets* 

# Q79-T02B [2015]

# **Bullets/projectiles**

Includes arrows and arrowheads. Rubber bullets are coded under Q79-T02A.

Pellet

# Q79-T02C [2015]

# Propellants, primers (to ignite propellant) and detonators

Includes details of fuse mechanism, delay arrangement, booster and main charge.

Gunpowder

# Q79-T02F [2015]

#### Storage of ammunitions

Includes details of ammunition belts or bags and ammunition boxes. Details of magazines are coded under Q79-T01F.

# Q79-T02X [2015]

# Other constructional details of ammunitions

# Q79-T10 [2015]

# **Safety arrangements**

Includes latch and double-trigger system for guns, device for absorbing or damping detonation-wave during explosions or protecting the user whilst firing the gun, etc.

Blasting mat

#### Q79-T50 [2015]

# Novel constructional material (weapons and ammunitions)

Should be used in conjunction with other Q79-T codes to indicate material application.

Fiberglass, rubber, stone, thermoplastics, HMPE

# Q79-T99 [2015]

#### Other accessories

Shooting mats

Q79-U [2015]

**Applications** 

Q79-U03 [2015]

**Vehicles** 

Q79-U17 [2015]

# **Civil Engineering; Construction; Buildings**

Includes demolition of e.g. buildings, chimney stacks, using blasting.

Building implosion

# Q79-U30 [2015]

# Sports, toys, entertainment and leisure

Includes martial arts weapons, paintball, fireworks and fire performances.

Sparklers, Catherine Wheels, fire-breathing, fireeating, hunting

Q79-U31 [2015]

Self-defence; military

Anti-riot

Q79-U31A [2015]

Military

Includes replica firearms for training.

Q79-U31C [2015]

**Self-defence** 

Q79-U45 [2015]

**Underwater use** 

Q79-U99 [2015]

Other specific applications

# PART 1 Electrical Patents Index (EPI)

# **Section S: Instrumentation, Measuring and Testing**

S01: ELECTRICAL INSTRUMENTS	231
S02: Engineering Instrumenation	240
S03: SCIENTIFIC INSTRUMENTATION	257
S04: CLOCKS AND TIMERS	277
S05: ELECTRICAL MEDICAL EQUIPMENT	280
SOA: PRINTING AND PHOTOGRAPHY	292

#### **S01: Electrical Instruments**

This section is restricted to measurements of electrical properties and values. It does not include other methods such as optical inspection of electrical and electronic apparatus, for which codes for the device under test, together with the appropriate code, in e.g. \$03, should be used.

#### S01-A

# Current and volt meters with pointer display

Does not include those used to display other measured variables e.g. on vehicle dashboard. For details of pointer displays in measurement, see S02-K06A. For vehicle dashboard instrumentation, see S02-K06X and X22-E codes.

Ammeter, coil, moving coil

#### S01-B

# Integrating power or current meters

Includes meters with electromechanical and electronic integration, e.g. kilowatt-hour meter. See S01-D02 for instantaneous power measurement. See also X12-H04 codes.

Hour, watt, energy, utility, disc, security

# S01-B01 [1992]

#### Remote meter reading

Includes monitoring of meter per se. See also S02-K08A. See also X12-H04A.

### S01-B03 [1997]

# **Digital electricity meters**

(S01-B)

#### S01-B05 [1992]

# **Protection against tampering**

See also T05-H06 for coin, token, or card-freed systems. Includes local or remote indication of tampering.

Security, anti-fraud

# S01-C

# Instruments displaying waveforms or digital values

Transient

#### S01-C01

#### Cathode ray oscilloscopes

See V05-D codes for details of CRTs per se. Oscillograph, CRO, vertical, trigger, horizontal, storage, vector

#### S01-C09

# Other instruments displaying waveforms or digital values

Includes instruments with other display types.

#### S01-D

# Measuring electric variables

#### S01-D01

# **Currents or voltages**

#### S01-D01A

#### **Functions of currents or voltages**

Amplitude, average

# S01-D01A1 [1983]

# Effective values

Includes r.m.s values. Root mean square

### S01-D01A3 [1992]

#### **Peak detection**

Maximum, hold, sample and hold

# S01-D01A9 [1992]

#### Other functions of currents or voltages

# S01-D01B

#### Indicating presence or sign

Polarity, offset, comparator

#### S01-D01B1

# **Indicating presence**

#### S01-D01B5

#### **Thresholding**

Includes indication of zero-crossing point of AC waveform.

Level reference, hysteresis

#### S01-D01C

# Using AC/DC, current/pulse conversion, etc.

A-D and D-A converters per se are covered by U21-A codes.

# S01-D01C1 [1983]

# DC to AC, digital

# S01-D01C1A [1992]

#### DC to AC

Includes chopper circuit. See U24-G01A1 and U24-G02E for instrumentation chopper amplification circuits.

S01-D01C1B [1992]

**Digital** 

S01-D01C5 [1983]

AC to DC

Rectifier, bridge, detector, full-wave rectifier

S01-D01D [1992]

# 'Indirect' measurement techniques

Includes non-contact measurement techniques and those involving transformation into non-electric quantity.

S01-D01D1 [1992]

# Using inductive or magnetic measurement

Clamp ammeter

S01-D01D1A [1992]

# **Using current transformer**

See also V02-G01B and X12-C01, respectively for low and high power transformers per se.

Core, coil, primary, secondary, phase

S01-D01D3 [1992]

#### Using electrostatic effects

Includes capacitive measurement, CVTs, etc.

S01-D01D5 [1992]

# **Using optical transformation**

See also V07-K for light property such as polarisation varying in proportion to electric quantity.

Pockel's effect, Electrochromic, Faraday rotation

S01-D01D7 [1992]

#### Using particle beam

Includes measurement using e.g. electron beam probing circuit, and also measurement by deflection of beam. See also V05-F01 codes and V05-F08B.

S01-D01D9 [1992]

Other indirect current/voltage measurements

S01-D01X

Other current/voltage measurements

#### S01-D02

### Power, power factor or energy

Includes instantaneous power measurement. Integrating meters are covered by S01-B. Includes measurement of RF power (with S01-H05).

Thermocouple, heating effect, remote indication

#### S01-D03

#### Frequency; analysing frequency spectra

#### S01-D03A

# By conversion to amplitude or phase shift

Resonance, tuned circuit, integrato, frequency to voltage converter

#### S01-D03B

# By pulse counting

Clock, gate, digital frequency meter, bit rate

#### S01-D03C

# **Analysing frequency spectra**

S01-D03C1 [1992]

#### Frequency sweeping apparatus.

Includes 'spectrum analyser' and panoramic receivers. Measurement receivers per se are covered by W02-G03 codes, monitoring of transmission systems in general by W02-C05 codes and band scanning by U25-J01 codes.

#### S01-D03C3 [1992]

# **Fourier analysis**

See T01-J04B for implementation by data processing circuitry.

#### S01-D03C5 [1992]

# Distortion and harmonic content measurement

THD, total, distortion factor meter, nonlinear

S01-D03C9 [1992]

Other frequency spectra analysis

#### S01-D03X

Other frequency aspects

#### S01-D04

# Phase angle between voltages and currents

See U23-C for phase comparator per se. Lissajous figure

#### S01-D05

### LCR and impedance-based measurements

Codes in this section relate to the measurement of impedances per se (S01-D05B), resistance (S01-D05B1), impedance related measurements such as reflection coefficient (S01-D05B5), four terminal network characteristics (S01-D05C), and measurement of inductance, capacitance, quality factor etc (S01-D05A codes). For bridge measurements see S01-F01 also. For high-frequency measurement use S01-H05 also. For measurements on passive components, use S01-G12 codes also.

#### S01-D05A

# Inductance, capacitance, Q factor, loss factor, dielectric constant

[1992]

AC bridge

S01-D05A1

Inductance measurement

Self, mutual

S01-D05A3 [1992]

# Capacitance and dielectric constant measurement

Permittivity

S01-D05A5 [1992]

# **Quality/loss factor measurement**

Tan delta, loss angle, Q-factor, dissipation factor

### S01-D05B

# Resistance and reflection-based measurements

Includes general measurement of impedance. Measurement of resistance, or predominantly resistive impedance, is covered by S02-D05B1.

S01-D05B1 [1992]

Resistance measurement

S01-D05B5 [1992]

### **Reflection-based measurements**

For measurements on antenna feeder e.g. VSWR, gain etc, see W02-B08A1 also.

Reflectometer, time domain

S01-D05B5A [1992]

# **Characterising circuit**

Includes e.g. scattering parameter measurements. S-parameter

S01-D05B9 [1992]

Other 2-pole measurements

S01-D05C [1980]

### 4-pole characteristics

Includes measurement of 4-terminal network (i.e. 2-port network) characteristics such as attenuation, phase or amplitude as a function of frequency, Nyquist diagram, Bode plot, etc.

Gain, gain-bandwidth, insertion loss, roll-off, stability, transient response, transmission loss

#### S01-D06

# Pulse characteristics (individual pulses)

Measurement and monitoring of pulse trains are covered by U22-D03.

Duration, rise-time, fall-time, overshoot

S01-D07 [1992]

# **Electric and electromagnetic fields**

(S01-D09)

Measurement of magnetic field strength is covered by S01-E01 codes.

S01-D07A [1992]

#### **Electrostatic fields**

Includes measurement of point charges. See also S01-H02 for high voltage applications.

S01-D07A1 [1997]

**Using optical techniques** 

S01-D07B [1992]

# **Electromagnetic fields**

See also S01-H05 for RF field strength measurements.

S01-D07B1 [1992]

#### Antenna radiation diagram

See also S01-G08A5 and W02-B08A1.

S01-D07B3 [1997]

**Using optical techniques** 

S01-D08 [1992]

Modulation and noise

(S01-D09)

S01-D08A [1992]

# Modulation index or depth

See also S01-G08A1 and W02-G01 for transmitter testing. Modulators per se are coded in U23.

Cross-modulation, AM, FM, frequency, deviation, sideband

#### S01-D08B [1992]

#### Noise power; noise figure

See also S01-G08A3 and W02-G03 codes for receiver testing.

S-N, signal-to-noise, ratio

#### S01-D08B1 [1997]

# For electronic amplifier

(S01-D08B) See U24 codes

#### S01-D08B3 [1997]

# For optical amplifier

(S01-D08B)

See also S02-J04A1C and V07-K01C.

#### S01-D09

#### Other electrical variable measurements

Includes measurement of turns ratio and number of turns. (See also V02/X12).

Piezoelectric

#### S01-E

# Measuring magnetic variables

Resonance, free induction decay signal coil, NMR. field, nuclear, echo, spin echo, magnetometer, magnetise, Hall-effect, flow

# S01-E01

# Direction/ magnitude of magnetic field/ flux

Gradiometer, permanent

#### S01-E01A [1992]

# Using superconductive quantum interferometer

See also U14-F02B.

S01-E01A1 [1997]

DC squid

(S01-E01A)

S01-E01A3 [1997]

RF squid (S01-E01A)

S01-E01B [1992]

#### Using galvano-magnetic devices

Includes use of Hall-effect devices.

#### S01-E01B1 [1992]

#### Detector device per se

See also U12-B01A for Hall-effect devices.

### S01-E01C

[1992]

# **Using magneto-optical devices**

Includes use of Faraday Effect devices. See also V07-K03.

S01-E01C1

[1992]

Detector device per se

S01-E01D

[2005]

Using magnetoresistive devices

S01-E01D1

[2005]

Device per se

S01-E01X

[1992]

Other magnetic variable measurement (including magnetostrictive)

S01-E02

**Magnetic properties** 

#### S01-E02A

[1992]

# **Quantised spin properties**

See S03-C02F and S03-E07 codes. S01-J02 code is used for cooling arrangements.

S01-E02A1

[1997]

**NMR** 

(S01-E02A)

S01-E02A1A

[1997]

### Sample handling

(S01-E02A)

Includes spinning mechanism.

S01-E02A2

[1997]

MRI

(S01-E02A)

# S01-E02A2A Image enhancement

# [1997]

(S01-E02A)

Includes artefact suppression. See S05-D02B2 for medical application. See S03-E09X for contrast agents.

S01-E02A3

[1997]

# **Nuclear Quadrupole Resonance**

NQR

### S01-E02A4 [1997]

#### **ESR/EPR**

(S01-E02A)

Spin, paramagnetic, resonance, electron

#### S01-E02A8 [1997]

# Quantised spin measuring device details

(S01-E02A)

Refers to all devices within the scope of S01-E02A.

# S01-E02A8A [1997]

# **Coils and waveguides**

(S01-E02A)

Includes coils for RF excitation and detection. Does NOT include coils for generating magnetic fields, e.g. gradient coils. For coils generating magnetic fields, see S01-E02A8E. Also includes antennae. See also V02-F01G and X12-C codes.

#### S01-E02A8C [1997]

# Signal and image processing

(S01-E02A)

See T01-J04B for use of Fast Fourier Transform. *Fourier Transform* 

# S01-E02A8E [1997]

#### Magnets

(S01-E02A)

Includes coils for generating magnetic fields, e.g. gradient coils, electromagnets. See also V02-E codes.

Electromagnetic, superconducting

# S01-E02A8P [2005]

# **Pulse sequences**

Covers methods and apparatus which control the timing, shape and duration of the RF pulses.

# S01-E02A8Q [2005]

# **Control and operation**

Covers all systems for operation and control of NMR equipment other than RF pulses.

#### S01-E02A8X [1997]

# Other quantised spin properties measuring device details

(S01-E02A)

#### S01-E02A9 [1997]

#### Other quantised spin properties

(S01-E02A)

#### S01-E02X [1997]

#### Other magnetic properties

(S01-E02)

See S03-E11 for investigation of materials using magnetic variables.

Ferromagnetic, eddy, susceptibility, coercivity, excitation, permeability

#### S01-F

# Measurements involving comparison with a reference

Ratio, standard

#### S01-F01

# **AC or DC bridges**

See S01-D05 also for appropriate measurement. Resistance, capacitance, inductance, Wheatstone, transformer

# S01-F01A [1992]

# With transducer forming part of bridge

Includes Wheatstone bridge circuit with resistance strain gauge e.g. for force measurement (see also S02-F01C), or weighing (see also S02-D01B).

#### S01-F09

#### Other reference measurements

Polarity

# S01-G

# Testing electric properties; locating electric

See general scope note for S01 section. Includes power supply fault, energy quality, energy efficiency, etc.

# S01-G01

#### **Electronic circuits**

Covers measurements at nodes of circuits which may be discrete or integrated.

#### S01-G01A

#### **Digital circuits**

Includes logic tester/analyser.

VLSI, integrated, IC, ROM, EEPROM

# S01-G01A1

[1992]

# **Testing integrated circuits**

Measurements on IC regarded as functional block are covered by S01-G02B. Includes use of electron beam probe techniques (see also S01-D01D7), and boundary scan testing (see also S01-G01A5). For on-chip test circuits, see U11-F01D2, U13-C07 also.

S01-G01A3 [1992]

**Testing modules or cards** 

S01-G01A5 [1992]

Logic analyser

S01-G01A9 [1992]

Other digital circuit testing

S01-G01B

Printed circuit boards

See V04-R06 codes.

Contact, mount, probe, pin, PCB

S01-G01B1 [1987]

Bare PCB i.e. before component mounting

Tracks, continuity, short circuit

S01-G01B3 [1987]

**Assembled PCB, including ATE** 

See S01-H03 codes for probe details. Suction, board positioning, 'bed-of-nails', component

S01-G01C [1992]

**Analogue circuits** 

S01-G01C1 [1992]

**Analogue integrated circuits** 

See note for S01-G01A1.

S01-G01C3 [1992]

**Analogue circuit modules** 

S01-G01C9 [1992]

Other analogue circuit testing

S01-G01D [2006]

# Using external optical/ thermal/ other stimulation

Includes measurement where circuit is stimulated by external energy to induce voltage/current/ resistance change, which is then used for failure detection/ testing operation of circuit. For any subsequent non-contact measurement of voltages/currents, see also S01-D01D.

EBIC, OBIC, OBIRCH, voltage contrast

S01-G02

Tubes and semiconductor devices and display panels

Characteristic, curve, acceptance test

S01-G02A [1992]

**Tubes** 

See also V05-L07E1 codes and X26-A03 for tube and discharge lamp testing respectively. Valve, CRT

S01-G02B [1992]

Semiconductor devices

Codes in this section are used to denote testing of a semiconductor device as a "functional block" or "black box". See S01-G01A1 and S01-G01C1 for testing involving measurement of voltages and currents within the circuit itself.

Note, also includes unspecified electrical testing of semiconductor devices.

Bipolar, unipolar, FET, MOS, CMOS, integrated circuit, IC, transistor, thyristor, SCR, triac, diac, diode, rectifier, varactor

S01-G02B1 [1992]

At wafer or die level

See U11-F01D codes also. Defect, fault, mark, identify

S01-G02B5 [1992]

Completed (encapsulated) device

See also U11-F01C codes.

IC, integrated circuit, transistor, SCR, triac, diac, diode. rectifier. varactor

S01-G02C [2006]

**Display panels** 

Electrical measurements relating to display panels, e.g. LCD, PDP, FED, and associated circuitry. See also S02-J04A3A for LCD testing

S01-G03

Materials, for dielectric strength or breakdown voltage

Includes arc detection in general.

HV, discharge, withstand, tracking, arcing, insulator

S01-G04

Testing for short circuits, discontinuity and leakage

Cable core identifier, plug/socket connection tester, continuity tester

S01-G04A [1992]

Short circuit and leakage

S01-G04A1 [1992]

**Short circuit** 

S01-G04A5 [1992]

Leakage

S01-G04A5A [1992]

With preset threshold

S01-G04C [1992]

**Checking continuity** 

S01-G04C1 [1992]

Without resistance measurement

S01-G04C5 [1992]

With resistance measurement

S01-G04C5A [1992]

With pre-set threshold

#### S01-G05

#### Locating faults in cables or networks

Used for 'installed' cables and transmission lines. See also X12-G01C for power cables W02-C01D for communication cables.

Telecommunication, break point, capacitance

#### S01-G06 [1983]

#### **Batteries**

See X16-H also which includes non-electric testing, e.g. of specific gravity, not coded in S01-G06. Charge, terminal, accumulator, ampere-hour, capacity

S01-G06A [1992]

# Measurement of remaining battery capacity

Reserve, residual, discharge

S01-G07 [1983]

#### **Electrical machines**

See V06-M11 and X11-J codes also.

Winding, coil, phase, rotating, rotor, stator, motor, generator, dynamo, alternator, dynamoelectric

S01-G08 [1992]

# Radio equipment and related systems

(S01-G09)

See also W02-C05 and W02-G, and also relevant S01-D codes for specific electrical measurement aspect, e.g. from S01-D07 and S01-D08.

S01-G08A [1992]

#### **Testing methods for equipment**

The codes in this section are used when the method of testing is intended for a specific type of equipment.

S01-G08A1 [1992]

Transmitters, repeaters

S01-G08A3 [1992]

**Receivers** 

S01-G08A5 [1992]

Antennae

S01-G08A9 [1992]

Other equipment testing

S01-G08B [1992]

#### **Equipment for testing**

The codes in this section are used when the novelty resides in the test equipment itself.

S01-G08B1 [1992]

#### Signal sources

Includes signal generators, noise generators, etc.

S01-G08B3 [1992]

# **Equipment with measuring facility**

Includes e.g. RF power meter, noise-measuring receiver etc.

S01-G08B5 [1992]

#### Screening arrangements

Includes e.g. RF Faraday cage. See also S01-J02.

S01-G08B9 [1992]

Other radio test equipment

S01-G08C [1992]

# **Electromagnetic compatibility testing**

See S01-D08B for noise figure measurements and S01-G08B5 for Faraday cage measurements. Covers tolerance of circuits to EM interference and output interference of device to other devices (e.g. effect of electric motor on TV).

**EMC** 

#### S01-G09

#### Other electrical property tests

Includes non-specific aging testing.

# S01-G10 [1992]

#### Switches and switchgear

(S01-G09)

Includes circuit breaker and relay testing. See also V03 and X13 codes.

Contact, contactor, breaker, relay, reed

# S01-G12 [1992]

# **Passive components**

Use with S01-D05 codes as appropriate, e.g. for measurement of resistance of an inductor, search S01-D05B1 and S01-G12E5.

# S01-G12A [1992]

#### Resistors

See V01-A04H1 (or X12-A if power type) also.

# S01-G12C [1992]

#### **Capacitors**

See also V01-B01G7C (electrolytic), V01-B04C (non-electrolytic), or X12-B (power capacitors).

#### S01-G12E [1992]

#### **Inductive components**

See also V02-H codes for low power components and X12-C01D3.

S01-G12E1 [1992]

**Transformers** 

S01-G12E5 [1992]

Coils

S01-G13 [2011]

# Insulators

Testing of all electrical insulators.

#### S01-G14 [2006]

#### Wires or cables

See also relevant X12-G codes.

# S01-H

#### **Electrical instrument details (general)**

Non-electric, or non-specifically electric, instrument details are covered by S01-J codes.

# S01-H01 [1983]

# Testing, calibrating, monitoring and compensation

Also includes arrangements to prevent and/or indicate fraudulent use and for signalling faults. Reference, standard, setting-up, compare, monitor, self-check

# S01-H01A [1992]

#### Compensation

Includes compensation for e.g. noise effects, temperature variation etc. See also S02-K02 codes for compensation aspects of measurement systems in general.

### S01-H01A1

# **Noise reduction**

(S01-H01A)

S01-H01B [2005]

**Testing** 

S01-H01C [2005]

**Calibration** 

S01-H02 [1983]

### For high voltage/current networks

HV, power line

# S01-H03 [1983]

#### **Probes, contacts**

PCB, electronic circuits

# S01-H03A [1992]

### Multiple probe arrangement

Includes probe board, pin network, 'bed-of-nails' etc. See also S01-G01B for measurements on PCBs. Integrated circuit, IC, wafer, circuit board, card, automatic test equipment, ATE

# S01-H03B [1992]

# Single probe

Includes probe for e.g. multimeter, or oscilloscope. Test prod, clip, alligator, crocodile

#### S01-H04 [1997]

#### **Multimeters**

(S01-H09)

#### S01-H05 [1987]

#### For high-frequency measurements

Use with other codes where HF effects dictate measurement techniques. NMR and MRI are no longer coded in this section, see relevant S01-E02 codes.

Microwave, probe, RF, capacitance, inductance, skin effect, leakage

### S01-H07 [1992]

# **Processor-controlled instrument**

Includes computer control of operation. See also T01-J08A.

# S01-H07A [1992]

# Interfacing and remote control

Includes data transfer arrangement for multiple instrument systems. See T01-J08A and T01-C/T01-H codes also.

#### S01-H09 [1992]

# Other electrical instrument details

From 2009 power supply for instrumentation are coded in S01-J04 instead.

#### S01-J

# Instrument details (classes S01 to S03)

Codes in this section relate to non-electrical and electrical instruments.

# S01-J01

# Housing

Housings for electrical equipment in general are covered by V04-S codes.

Meter, lock, seal, case, wall, tamper, access, hinge, cover, enclosure

#### S01-J02

# Indicating elements, cooling, screening

See S03-A04 for cooling arrangement for optical measuring instruments.

Shielding, set-up, adjustment, standard, reference

# S01-J02A [1992]

### **Indicating elements**

Scale, meter, printer, display, read-out

# S01-J02C [2005]

Cooling, screening

# S01-J03 [2006]

#### Instrument manufacture

Includes all manufacturing of instrumentation included in S01, S02 or S03 classes. Search with apparatus or method codes in addition to this code for specific instrumentation manufacturing details.

# S01-J04 [2009]

# **Power supply**

Includes power supply for all instrumentation devices in S01, S02 and S03.

Voltage source, current source

# S01-J05 [2018]

# Cables, terminals

Includes wires, cables, terminals, etc, for all instrumentation devices in S01, S02 and S03. See also V04 codes.

Switching box

#### S01-J09

# Other instrument details (incl. vibration dampening)

Includes supports, arrangements adjusting position or attitude, compensating for effects of tilting.

Mount, vibration, insulation, installation, bracket

# **S02: Engineering Instrumentation**

#### S02-A

# Measuring, dimensions, angles, areas, contours, roughness

Codes in this section are applied in the hierarchy according to the primary method of measurement, e.g. a Vernier caliper using an electrical transducer to produce reading on a display would be coded under mechanical measurement.

#### S02-A01

#### Mechanical measurement

Slide, scale

#### S02-A01A

### Rules, micrometers, wheels

Tape, mark, edge

#### S02-A01B

#### Gauges (e.g. feeler-pin or thread gauges)

Caliper, feeler, probe, dial, tool, vernier

#### S02-A01C\*

# Measuring arrangements (for)

\*This code is now discontinued and transferred to S02-A10 together with S02-A01 from 201401. It remains searchable for records prior to 2014.

Position, configuration, curve, displacement, distance, dimension, height, shape

#### S02-A01C1\*

#### Diameter

\*This code is now discontinued and transferred to S02-A10A together with S02-A01 from 201401. It remains searchable for records prior to 2014. *Radius, circle* 

#### S02-A01C2\*

# Length, width, thickness

\*This code is now discontinued and transferred to S02-A10B together with S02-A01 from 201401. It remains searchable for records prior to 2014.

# S02-A01C3\*

# Spacing, depth, contour

\*This code is now discontinued and transferred to S02-A10B together with S02-A01 for spacing and depth, and S02-A10C together with S02-A01 for contour, from 201401. It remains searchable for records prior to 2014.

#### S02-A01C4\*

# Angles, alignment, position, area

\*This code is now discontinued and transferred to S02-A10D together with S02-A01 for angles, orientation and alignment, S02-A10C together with S02-A01 for area and S02-A10G2 together with S02-A01 for position from 201401. It remains searchable for records prior to 2014.

Includes measuring orientation.

#### S02-A01C5\*

# Roughness, deformation

\*This code is now discontinued and transferred to S02-A10E together with S02-A01 for roughness, S02-A10F together with S02-A01 for deformation from 201401. It remains searchable for records prior to 2014.

Surface, flat, smooth

#### S02-A01X

#### Other mechanical measurements

#### S02-A02

# Electrical or magnetic measuring arrangements

Transducer

#### S02-A02A\*

### Diameter, spacing

\*This code is now discontinued and transferred to S02-A10A together with S02-A02 for diameter and S02-A10B together with S02-A02 for spacing from 201401. It remains searchable for records prior to 2014.

Distance, displacement, gap, radius

# S02-A02B\*

#### Thickness of sheet or coating

\*This code is now discontinued and transferred to S02-A10B1 together with S02-A02 from 201401. It remains searchable for records prior to 2014. Capacitance, magnetic, eddy current, film

#### S02-A02C\*

# Length, width or thickness

\*This code is now discontinued and transferred to S02-A10B together with S02-A02 from 201401. It remains searchable for records prior to 2014.

#### S02-A02D\*

# **Deformation**

\*This code is now discontinued and transferred to S02-A10F together with S02-A02 from 201401. It remains searchable for records prior to 2014.

Strain gauge, distortion

#### S02-A02E\*

#### Depth, contour

\*This code is now discontinued and transferred to S02-A10B together with S02-A02 for depth and S02-A10C together with S02-A02 for contour from 201401. It remains searchable for records prior to 2014.

Curve, profile

#### S02-A02F\*

#### Angles, alignment, position

\*This code is now discontinued and transferred to S02-A10D together with S02-A02 for angles and alignment and S02-A10G2 together with S02-A02 for position from 201401. It remains searchable for records prior to 2014.

Includes measuring orientation.

#### S02-A02G\*

[1997-2013]

### Roughness

(S02-A02X)

\*This code is now discontinued and transferred to S02-A10E together with S02-A02 from 201401. It remains searchable for records prior to 2014. Smooth, surface

#### S02-A02X\*

# Other electrical or magnetic measuring arrangements

\*This code is now discontinued and transferred to S02-A10 together with S02-A02 from 201401. From 201401, details of area measurements are coded under S02-A10C together with S02-A02. S02-A02X remains searchable for records prior to 2014.

Includes area.

Surface, cross-section

### S02-A03

#### **Optical measurement**

Note - codes in this section cover disclosures where light is the primary means of measurement irrespective of subsequent treatment or processing, such as in CCTV system.

Beam, laser, reflect, grating

#### S02-A03A

#### Interferometers

Fabry-Perot

# S02-A03B\*

# Measuring arrangements (for)

\*This code is now discontinued and transferred to S02-A10 together with S02-A03 from 201401. It remains searchable for records prior to 2014.

#### S02-A03B1\*

#### Thickness of sheet, diameter, coating

\*This code is now discontinued and transferred to S02-A10B1 together with S02-A03 for thickness of sheet or coating, and S02-A10A together with S02-A03 for diameter from 201401. It remains searchable for records prior to 2014.

Radius, circle

#### S02-A03B2\*

# Length, width, thickness, spacing

\*This code is now discontinued and transferred to S02-A10B together with S02-A03 from 201401. It remains searchable for records prior to 2014. Distance, displacement

#### S02-A03B3\*

# Deformation, depth or contour

\*This code is now discontinued and transferred to S02-A10B together with S02-A03 for depth, S02-A10F together with S02-A03 for deformation, and S02-A10C together with S02-A03 for contour from 201401. It remains searchable for records prior to 2014.

Profile, curve, strain, irregularity, undulation

#### S02-A03B4\*

#### Angles, alignment, position

\*This code is now discontinued and transferred to S02-A10D together with S02-A03 for angles and orientation, and S02-A10G2 together with S02-A03 for position from 201401. It remains searchable for records prior to 2014.

Includes measurement of orientation, tapers or optical axes alignment.

3D position

# S02-A03B5\*

#### Area, roughness

\*This code is now discontinued and transferred to S02-A10C together with S02-A03 for area and S02-A10E together with S02-A03 for roughness from 201401. It remains searchable for records prior to 2014

Flat, smooth, surface, cross-section

#### S02-A04

#### Measuring arrangements using fluids

Inclination, liquid, spirit-level, bubble, pneumatic, hydraulic, air, gas

#### S02-A05

#### Measuring using radiation, sound

# S02-A05A [1983]

#### **Radiation**

Includes dimensional measurements using e.g. electron microscope.

### S02-A05A1 [1997]

# **Using microwaves**

(S02-A05A)

Includes use of terahertz radiation.

#### S02-A05A3 [1997]

# Using atomic or nuclear radiation

(S02-A05A)

Includes electrons, X-rays, gamma radiation etc. *X-ray, gamma ray* 

#### S02-A05B [1983]

#### Sound

See W06-A05 for sonar systems, S03-E08 or S05-D03 for materials testing or medical systems respectively.

Ultrasonic, echo, propagation time, round-trip

# S02-A05B1\* [1997-2001]

#### Diameter

(S02-A05B)

\*This code is now discontinued and transferred to S02-A05C1 together with S02-A05A/B between 2002 and 2013, and to S02-A10A together with S02-A05A/B from 201401, but remains searchable and valid for records from 1997 to 2001.

# S02-A05B2\* [1997-2001]

# Length, width, thickness

(S02-A05B)

\*This code is now discontinued and transferred to S02-A05C2 between 2002 and 2013, and to S02-A10B together with S02-A05A/B from 201401, but remains searchable and valid for records from 1997 to 2001.

# S02-A05B3\* [1997-2001]

# Deformation, depth, contour

(S02-A05B)

\*This code is now discontinued and transferred to S02-A05C3 between 2002 and 2013. From 201401, deformation measurements are coded under S02-A10F together with S02-A05A/B, depth under S02-A10B together with S02-A05A/B and contour under S02-A10C together with S02-A05A/B. S02-A05B3 remains searchable and valid for records from 1997 to 2001.

# S02-A05B4\* [1997-2001]

# Angles, alignment, position

(S02-A05B)

\*This code is now discontinued and transferred to S02-A05C4 between 2002 and 2013. From 201401, angle and alignment measurements are coded under S02-A10D together with S02-A05A/B, and position under S02-A10G2 together with S02-A05A/B. S02-A05B4 remains searchable and valid for records from 1997 to 2001.

#### S02-A05B5\*

[1997-2001]

### Area, roughness

(S02-A05B)

\*This code is now discontinued and transferred to S02-A05C5 between 2002 and 2013. From 201401, area measurements are coded under S02-A10C together with S02-A05A/B, and roughness under S02-A10E together with S02-A05A/B. S02-A05B5 remains searchable and valid for records from 1997 to 2001.

#### S02-A05B9\*

[1997-2001]

# Other dimensional measurement using sound

(S02-A05B)

\*This code is now discontinued and transferred to S02-A05C1 between 2002 and 2013, and to S02-A10X together with S02-A05A/B from 201401, but remains searchable and valid for records from 1997 to 2001.

#### S02-A05C\*

[2002-2013]

[2002-2013]

#### Measuring arrangements, (for)

\*This code is now discontinued and transferred to S02-A10 from 201401, but remains searchable and valid for records from 2002 to 2013.

Codes in this section are used with S02-A05A or S02-A05B codes to specify what is being measured.

#### S02-A05C1\*

### Thickness of sheet, diameter, coating

\*This code is now discontinued and transferred to S02-A10A for diameter, and S02-A10B1 for thickness of sheet or coating from 201401, but remains searchable and valid for records from 2002 to 2013.

Radius, circle

#### S02-A05C2\*

[2002-2013]

#### Length, width, thickness, gap, spacing

\*This code is now discontinued and transferred to S02-A10B from 201401, but remains searchable and valid for records from 2002 to 2013.

#### S02-A05C3\* [2002-2013]

#### Deformation, depth, contour

\*This code is now discontinued and transferred to S02-A10F for deformation, S02-A10B for depth, and S02-A10C for contour from 201401 but remains searchable and valid for records from 2002 to 2013.

#### S02-A05C4\*

[2002-2013]

#### Angles, alignment, position

\*This code is now discontinued and transferred to S02-A10D for angles and alignment, and S02-A10G2 for position from 201401 but remains searchable and valid for records from 2002 to 2013. Includes measurements of orientation.

#### S02-A05C5\*

[2002-2013]

#### Area, roughness

\*This code is now discontinued and transferred to S02-A10C for area, and S02-A10E for roughness from 201401 but remains searchable and valid for records from 2002 to 2013.

### S02-A05C9\*

[2002-2013]

# Other dimensional measurement using radiation, sound

\*This code is now discontinued and transferred to S02-A10X together with S02-A05A/B from 201401, but remains searchable and valid for records from 2002 to 2013.

#### S02-A06\*

[1992-2013]

#### Coordinate and position measurement

\*This code is now discontinued and transferred to S02-A10G from 201401, but remains searchable and valid for records from 1992 to 2013.

The emphasis is on relative measurement to any arbitrary coordinate system, e.g. Cartesian or Polar, rather than absolute measurement.

#### S02-A06A\*

[1992-2013]

#### **Coordinates**

\*This code is now discontinued and transferred to S02-A10G1 from 201401, but remains searchable and valid for records from 1992 to 2013.

#### S02-A06A1\*

[1992-2013]

### Mechanical

\*This code is now discontinued and transferred to S02-A10G1 together with S02-A01 from 201401, but remains searchable and valid for records from 1992 to 2013.

#### S02-A06A2\*

[1992-2013]

#### **Electrical/magnetic**

\*This code is now discontinued and transferred to S02-A10G1 together with S02-A02 from 201401, but remains searchable and valid for records from 1992 to 2013.

#### S02-A06A3\*

[1992-2013]

### **Optical**

\*This code is now discontinued and transferred to S02-A10G1 together with S02-A03 from 201401, but remains searchable and valid for records from 1992 to 2013.

#### S02-A06A9\*

[1992-2013]

# Other coordinate type measurement

\*This code is now discontinued and transferred to S02-A10G1 together with S02-A09 from 201401, but remains searchable and valid for records from 1992 to 2013.

#### S02-A06C\*

[1992-2013]

#### **Position**

\*This code is now discontinued and transferred to S02-A10G2 from 201401, but remains searchable and valid for records from 1992 to 2013. For determining location in space rather than orientation.

# S02-A06X\*

[1992-2013]

# Other relative measurement

\*This code is now discontinued and transferred to S02-A10G9 from 201401, but remains searchable and valid for records from 1992 to 2013.

# S02-A07

[1992]

### Calibration, compensation and testing

# S02-A08\*

[1992-2013]

# **Combination of measuring methods**

\*This code is now discontinued from 2014, but remains searchable and valid for records from 1992 to 2013. From 201401, a combination of S02-A01 to S02-A05 codes is used to highlight the use of more than one measuring method. When the measuring method is not specified, only S02-A10 codes are applied to highlight what is measured.

Codes in this section are used to indicate the use of one or more than one method from the preceding groups, e.g. electrical and optical measurement, or where the primary method of measurement is unclear.

# S02-A08A\* [1992-2013]

#### Thickness of sheet, diameter

\*This code is now discontinued and transferred to S02-A10A for diameter and S02-A10B1 for thickness of sheet from 201401, but remains searchable and valid for records from 1992 to 2013.

[1992-2013]

#### S02-A08B\*

# Length, width, spacing

\*This code is now discontinued and transferred to S02-A10B from 201401, but remains searchable and valid for records from 1992 to 2013.

# S02-A08C\* [1992-2013]

#### Deformation, depth or contour

\*This code is now discontinued and transferred to S02-A10F for deformation, S02-A10B for depth, and S02-A10C for contour from 201401 but remains searchable and valid for records from 2002 to 2013.

# S02-A08D\* [1992-2013]

# Angles, alignment, position

\*This code is now discontinued and transferred to S02-A10D for angles and alignment, and S02-A10G2 for position from 201401 but remains searchable and valid for records from 2002 to 2013. Includes measurements of axes, tapers, orientation, etc.

# S02-A08E\* [1992-2013]

# Area, roughness

\*This code is now discontinued and transferred to S02-A10C for area, and S02-A10E for roughness from 201401 but remains searchable and valid for records from 2002 to 2013.

# S02-A08X\* [1992-2013]

#### Other combined measuring

\*This code is now discontinued and transferred to S02-A10X from 201401, but remains searchable and valid for records from 1992 to 2013.

#### S02-A09

#### Other measuring methods

This code is applied for measuring methods that cannot be coded under S02-A01 to S02-A05 codes. When the measuring method is not specified, only S02-A10 codes should be applied to highlight what is being measured.

#### S02-A10 [2014]

#### Measuring arrangements (for)

Codes in this section are used to indicate what is being measured, and should be applied together with other S02-A codes to indicate the method of measurement.

#### S02-A10A [2014]

#### **Diameter**

(\$02-A01C1, \$02-A02A, \$02-A03B1, \$02-A05C1, \$02-A08A)

Radius, circle

# S02-A10B [2014]

# Length, Width, Thickness, Spacing, Depth

(\$02-A01C2, \$02-A01C3, \$02-A02A, \$02-A02C, \$02-A03B2, \$02-A05C2, \$02-A05C3, \$02-A08B, \$02-A08C)

Gap, clearance, displacement

# S02-A10B1 [2014]

# Thickness of sheet or coating

(S02-A02B, S02-A03B1, S02-A05C1, S02-A08A)

### S02-A10C [2014]

#### Contour, Area

(\$02-A01C3, \$02-A01C4, \$02-A02E, \$02-A02X, \$02-A03B3, \$02-A03B5, \$02-A05C3, \$02-A05C5, \$02-A08C, \$02-A08E)

Includes shape measurements.

Curvature, spherometer

# S02-A10D [2014]

# **Angles, Orientation, Alignment**

(\$02-A01C4, \$02-A02F, \$02-A03B4, \$02-A05C4, \$02-A08D)

# S02-A10D1 [2014]

#### **Angles, Orientation**

(S02-A01C4, S02-A02F, S02-A03B4, S02-A05C4, S02-A08D)

Inclination, taper

# S02-A10D2 [2014]

# **Alignment**

(S02-A01C4, S02-A02F, S02-A03B4, S02-A05C4, S02-A08D)

Perpendicularity

#### S02-A10E [2014]

#### Roughness

(S02-A01C5, S02-A02G, S02-A03B5, S02-A05C5, S02-A08E)

Flat, smooth

### S02-A10F [2014]

#### Deformation

(\$02-A01C5, \$02-A02D, \$02-A03B3, \$02-A05C3, \$02-A08C)

Mechanical strain gauge, resistance strain gauge, straightness

#### S02-A10G [2014]

#### **Coordinates, Position**

(S02-A06)

The emphasis is on relative measurement to any arbitrary coordinate system, e.g. Cartesian or Polar, rather than absolute measurement.

### S02-A10G1 [2014]

#### Coordinates

(S02-A06A)

# S02-A10G2 [2014]

### **Position**

(S02-A06C)

For determining location in space rather than orientation.

### S02-A10G9 [2014]

# Other relative measurements

(S02-A06X)

# S02-A10X [2014]

#### Other measuring arrangements

#### S02-B

#### Surveying and navigation

Position, scan, infrared, IR, laser optical

# S02-B01

# Measuring distances in line of sight; optical rangefinders

See W06-A06 for laser 'radar' systems. Rangefinders for photographic cameras are also coded in S06-B01A.

Range, light, beam, modulate, reflect, camera

#### S02-B01A [2005]

# Large scale position and location measurement

Includes mining and pipeline machinery position location. Does not include RADAR, GPS systems (see W06).

Co-ordinate measurement, displacement

#### S02-B02

# Measuring height; Leveling; Profile tracing

Includes leveling between separated points using e.g. direct/barometric/stradia/fly leveling. Also includes measuring distances transverse to line of sight and tracing profiles of land surfaces using e.g. a vehicle moving along the profile to be traced, or cavities (such as tunnels).

Surveyor's level, differential leveling

#### S02-B02A [2005]

# Measuring altitude

(S02-B02)

#### S02-B03

# Measuring inclination

Level, spirit, liquid, bubble, inclinometer, clinometer, angle, plumb, bob, slope, slant, gradient, grade

#### S02-B04

# Photographic surveying; open-water surveying

Includes electronic imaging surveillance from e.g. orbiting space vehicle. Electrical aspects of photographic cameras are covered by S06-B codes, video cameras by W04-M01 codes.

Photogrammetric, aerial, aircraft, satellite, map, plane, sea

#### S02-B05

# Measuring angles (incl. theodolites; sextants)

Angular, axis

#### S02-B05A [2005]

#### Measuring attitude and orientation

#### S02-B06

# **Compasses**

Electrical aspects of compasses are also coded in W06-A09.

Magnetic, magnetometer, elevation, azimuth, pole, vehicle

#### S02-B07

#### **Gyroscopes**

See also W06-A07 for electric/electro-optical details.

Gyro, rotating, angular, rate, axis

# S02-B07A

[1992]

#### With electric transducer

Coriolis, vibration

# S02-B07B [1992]

# **Using optical effects**

Includes Ring Laser Gyroscopes and optical fiber gyroscopes. See V08-A01A1 for Ring Laser Gyroscopes and V08-A codes for laser details. See V07-N01 or optical fiber gyroscopes specifically and V07-K codes for light control aspects.

Fiber-optic, Sagnac effect, RLG, beam, relativistic, counter-propagating

#### S02-B08

# **Navigational techniques**

See also W06-A codes. For systems specifically for aircraft, ships and land vehicles, see also W06-B01B1, W06-C01B and X22-E06 codes respectively. Road, display, indicate, route, map, moving map, update, coordinate

S02-B08A [1997]

# **Using radio**

(S02-B08)

S02-B08C [1997]

#### **Satellite**

(S02-B08)

See W06-A03A for Global positioning System. X22-E06B covers GPS as applied to vehicle navigation. GPS, Global Positioning System, NAVSTAR

# S02-B08E [1997]

#### Display and indication aspects

(S02-B08)

For novel visual display aspects see S02-K04C; for audio output, see S02-K04A and possibly also W04-V for speech synthesis; for haptic output, see S02-K04D.

# S02-B08G [1997]

### Computer/processor

(S02-B08)

Includes software. See also T01-J06B codes.

# S02-B08X [2005]

#### Other navigation techniques

(S02-B08)

Includes inertial and dead reckoning techniques.

### S02-B09

# Other surveying/navigation

Includes electrical aspects of telescopes.

#### S02-B10 [1992]

Testing, calibration and monitoring of surveying/navigation equipment (S02-B09)

# S02-B11 [1992]

# **Instrument combinations**

(S02-B09)

Includes measurement of two or more variables.

# S02-B12 [1992]

# Distance recording devices

(S02-B09)

# S02-B12A [1992]

#### For vehicles

Includes odometers. For electrical aspects see also X22. (Tachographs are coded in T05-G01 and X22-E05).

Hodometer, tachometer

#### S02-B12B [1992]

#### Non-vehicle travel recorder

Includes pedometers.

#### S02-C

Measuring volume, volume flow, mass flow or liquid level; metering by volume.

Meter, water, air, gas, fluid

# S02-C01

# Continuous volume/mass flow meters

Pressure, valve, pipe, rate, fuel, transducers

#### S02-C01A

#### Mechanical

#### S02-C01A1

# Using rotating vanes; using pressure/pressure difference measurement

Wheel, turbine, blade, Bernoulli, Venturi

#### S02-C01A9

# Other mechanical flow measurement (incl. dynamic effects)

Vortex, float, swirl, Karman

#### S02-C01B

Using electric, magnetic, wave propagation or thermal effect

S02-C01B1 [1983]

**Wave effects** 

Ultrasonic, Doppler, blood, velocity, acoustic, sonic, sound, medical

S02-C01B4 [1983]

**Electric or magnetic effects** 

Electromagnet, coil

S02-C01B7 [1983]

Thermal effects

Engine, IC, intake, heat

S02-C01B7A [1997]

Device per se

(S02-C01B7)

S02-C01B7C [1997]

Circuitry

(S02-C01B7)

S02-C01F [1992]

Mass flow meters

(S02-C01X)

Includes Coriolis flow meters.

S02-C01F1 [1997]

Air mass flow sensors

(S02-C01F)

S02-C01X

Other flow meters

Includes using camera to image fluid to determine flowrate.

S02-C02

Discontinuous volume flow meters, water and gas meters

Chamber, piston

S02-C02A [1997]

Water meter

(S02-C02)

Includes water meters using continuous flow measurement techniques.

S02-C02A1 [1997]

**Protection against tampering** 

(S02-C02)

S02-C02C [1997]

Gas meter

(S02-C02)

Includes gas meters using continuous flow measurement techniques.

[1997]

S02-C02C1

**Protection against tampering** 

(S02-C02)

S02-C03

Other vol. flow measurement (incl. compound meters, measuring relative flow)

Fuel, engine, IC

S02-C04

**Dispensers** 

Dose, pump, chamber, container, drink, supply

S02-C04A

With expanding or contracting measuring chambers

Piston, stroke

S02-C04B

With moving measuring chambers

S02-C04C

With stationary measuring chambers

Optic

S02-C04X

Other dispensers

S02-C05

Measuring volume, capacity; measuringvessels

Cup

S02-C06

**Level indicating** 

Tank, fuel, depth, gauge, height

S02-C06A

**Bv floats** 

Switch, magnet, reed

S02-C06A1 [1992]

Operating electrical switch or transducer

S02-C06A1A [1992]

**Operating switch** 

S02-C06A1B [1992]

#### **Operating transducer**

Covers arrangements with proportional output, e.g. resistance wiper blade.

S02-C06A5 [1992]

Non-electric system

S02-C06B

By measuring weight or pressure

S02-C06C

# By measuring variation of electrical properties of sensor

This code and its subdivisions are used for cases in which the substance being monitored directly modifies the electrical property concerned. See S02-C06A codes for float-operated systems.

Probe, electrode, resonance, oscillator

S02-C06C1 [1992]

**Resistive system** 

S02-C06C1A [1992]

**Combined with heater** 

S02-C06C3 [1992]

**Capacitive system** 

S02-C06C9 [1992]

Other sensor properties (e.g. inductive)

Inductance

S02-C06D

**Using wave propagation effects** 

Refraction, reflection, diffraction, interference

S02-C06D1 [1992]

Using optical frequencies (em)

Light, IR

S02-C06D3 [1992]

Using sonic or ultrasonic radiation

Echo

S02-C06D5 [1992]

Using radio frequencies (em)

For radar-type systems search with W06-A04H8. *Microwave, RF* 

S02-C06D9 [1992]

Other wave propagation level sensing

S02-C06X

### Other level indicating

Includes dip-sticks and observable marks or scales on transparent vessel. Also includes level indicating using measurement of temperature.

#### S02-C07

Testing, calibrating and compensation aspects of S02-C equipment

S02-D

Weighing

Scale, load, platform

S02-D01

Weighing apparatus

S02-D01A

**Balances** 

Beam, pan

S02-D01B

Using elastic materials

Strain, gauge, spring, extension

S02-D01X

Other weighing appts. details

Includes magnetic, electrostatic or fluid action balancing.

Liquid, hydraulic

S02-D02

Weighing appts. for special purposes

S02-D02A

Weighing continuous stream of material

Includes measurement of weight of material e.g. on conveyer belt.

Flow, grain, granular, powder, fluid

S02-D02B

Weighing batches

Check, automatic discharge

S02-D02C

Weighing sheets, wires, fluids, livestock, vehicles (e.g. aircraft), weighing during motion

Platform, weighbridge

# S02-D02D

### **Price-indicating balance**

Includes weighing at point-of-sale (see also T05-L01 codes).

[1992]

#### S02-D02X

# Other weighing appts. for special purposes.

Includes appts. for incorporation in vehicles and appts. for weighing people.

#### S02-D03

# Indicating/recording weight

Display, calculate, label, printer

#### S02-D07

[2014]

# Calibration, compensation and testing of weighing equipment

(S02-D09)

Includes monitoring details.

#### S02-D09

# Other weighing aspects

Includes details of weighing apparatus, e.g. bearings, beams. Since 201401, calibration, compensation and testing details of weighing equipment are coded under S02-D07 only.

# S02-E

# Measurement of mechanical vibrations

Includes measurement of sound intensity.

#### S02-E01

# Vibration measurement methods

Includes measuring reverberation time, propagation velocity, resonant frequency or sound impedance.

Acoustic, sound, transducer, speed

#### S02-E02

# Vibration detectors

Includes detectors in fluids, radiation-sensitive detectors; detecting capacitance or reluctance change

Piezoelectric, magnetostrictive, optical, fiber-optic

#### S02-E09

# Other measurement of mechanical vibrations

#### S02-F

Measuring force, torque, work, mechanical power or efficiency, fluid pressure or vacuum

# S02-F01

### **Measuring force**

Load, thrust

#### S02-F01A

Hydraulically/pneumatically; by deformation of gauges; by counter-balancing

#### S02-F01B

Using variations in vibration freq., magnetic properties, capacitance or inductance

Magnetostrictive, resonance, oscillator

#### S02-F01C

# Using electrical resistance strain gauges

Includes piezo-resistive devices. Load cell

# S02-F01E [1997]

#### Piezoelectric

(S02-F01X)

#### S02-F01G [1997]

#### **Optical**

(S02-F01X)

# S02-F01X

Other force measurement (including stress measurement)

#### S02-F02

# Measuring torque, work, mechanical power or efficiency

Motor, engine, brake, dynamometer, generator

#### S02-F03

# Applications and methods of measuring force

# S02-F03A

#### Linear force, tension

Includes e.g. muscular force, ski binding release force, tension in ropes, belts etc.

#### S02-F03B

### Torque, mechanical power, work

Includes, e.g. axial thrust in shaft, vehicle power, several components of force, torque on nut, testing brakes, force applied to control members, e.g. brake pedal, steering input etc.

Torque wrench, robot, manipulator, brake pedal force, steering input

#### S02-F03X

Testing, compensation and calibration; other

#### S02-F04

# Measuring fluid pressure or vacuum

Gas, air, liquid

#### S02-F04A

Measuring pressure mechanically (using)

#### S02-F04A1

Flexible tube- or bellows type gauges

Bourdon

#### S02-F04A2

# Flexible diaphragm- or capsule type gauges

Membrane, plate

# S02-F04A9

Other mechanical fluid pressure measurement (incl. piston or liquid-column gauges)

Manometer

### S02-F04B

Measuring pressure electrically or magnetically (incl. electrical or magnetic indication of mechanical sensor displacements) (using)

Transducer

### S02-F04B1

Potentiometers, strain gauges, piezoresistances

Resistor, extension

#### S02-F04B2

Piezoelectric devices; variations in inductance, capacitance, magnetic properties; movement of magnets; electrokinetic cells

Electrode, resonance, plate

#### S02-F04B3

[1992]

#### Semiconductor transducer

See also U12-B03E.

#### S02-F04C

# Measuring pressure differences, several pressures, inflation pressures

Includes measurement of tyre pressure. See S02-F04E for remote indication and X22-E02 for onboard electric systems.

Differential, vehicle, remote

# S02-F04C1

[1997]

#### Pressure differences

(S02-F04C)

#### S02-F04C1A

[1997]

# Inflation pressures

(S02-F04C)

# S02-F04C2

[2005]

# **Blood pressure**

(S02-F04C)

# S02-F04C3

[1997]

# **Several pressures**

(S02-F04C)

# S02-F04C3A

[1997]

#### **Partial pressures**

(S02-F04C)

See also S03-E03 if achieved electrochemically.

#### S02-F04D

Vacuum gauges; measuring rapid changes in pressure; engine energy or work indicators

# S02-F04D1

[1997]

### Vacuum gauges

(S02-F04D)

See also V05-K03 for ionisation pressure gauges, e.g. Penning gauges.

Pirani, Penning

#### S02-F04D3

[1997]

# Measuring rapid changes in pressure

(S02-F04D)

# S02-F04D3A [1997]

#### **Knock detection**

(S02-F04D)

See also S02-J01A for IC engine testing and X22-A05A for IC engine pre-ignition detector. Includes knock detection by means other than using pressure measurement.

Misfire

#### S02-F04E

# Protection against overload or environment; temperature compensation

#### S02-F04F\*

[1980-2013]

# Testing, calibration and compensation

\*This code is now discontinued and transferred to S02-F07 from 201401, but remains searchable and valid for records prior to 2014. Does not include temperature compensation, see S02-F04E.

#### S02-F04J

[1992]

# **Optical techniques**

Optical fiber, polarisation, birefringent

#### S02-F04X

#### Other pressure measurement

#### S02-F07

[2014]

# Calibration, compensation and testing

(S02-F04F)

This code can be used together with other S02-F codes to highlight the type of equipment used, e.g. for measuring blood pressure (S02-F04C2). Details of temperature compensation of equipment measuring fluid pressure or vacuum are coded under S02-F04E only.

Monitoring

#### S02-G

# Measuring speed, acceleration or shock

### S02-G01

#### Linear or angular velocity

Rotating, wheel, vehicle, shaft, speedometer

#### S02-G01A

### Optically

Includes angular velocity measurement using optical gyroscope.

Laser, light, gyro, beam, ring

# S02-G01B

# **Electrically or magnetically**

Generator, tacho, pulse, frequency

#### S02-G01B1

### Measuring angular velocity

Does **not** include measurement of angular velocity using electric gyroscope; see S02-G01X.

#### S02-G01B1A\*

[1992-2004]

#### With fixed sensor

\*This code is now discontinued, but remains searchable and valid for records from 1992 to 2004.

#### S02-G01B1B\*

[1992-2004]

#### With moving sensor

\*This code is now discontinued, but remains searchable and valid for records from 1992 to 2004.

#### S02-G01B2

[2005]

# Measuring linear velocity

# S02-G01B9

# Other electrical or magnetic velocity measurement

#### S02-G01D

[1997]

# **Doppler effect methods**

(S02-G01)

See also W06-A04A2 (RF radar), W06-A05 (sonic/ultrasonic techniques) and W06-A06 (optical techniques). S02-G02X covers Doppler methods for measuring speed of fluids.

# S02-G01X

#### Other (incl. mechanically)

Includes determination of time to travel fixed distance and measurement of angular velocity using electric gyroscope.

Gyroscope, vibration, Coriolis

### S02-G02

# Speed of fluids, or bodies relative to fluids (by)

Flow, gas, wind, anemometer, liquid

#### S02-G02A

# Measuring electric or thermal variable affected by the flow

Heat, bridge, cooling, hot-wire

# S02-G02B

# Measuring fluid force or pressure differences

Pitot tube

#### S02-G02X

Other measurement of speed of fluids, or bodies relative to fluids (incl. swirl flowmeter)

Ultrasonic, Doppler, vortex, acoustic

#### S02-G03

#### **Acceleration or shock**

Inertia, force, accelerometer

S02-G07 [1992]

Calibration, compensation and testing

(S02-G09)

S02-G07A [1992]

**Calibration** 

S02-G07C [1992]

**Compensation aspects** 

S02-G07E [1992]

Testing and monitoring

#### S02-G09

# Apparatus details and other speed-related measurement aspects

Includes constructional details of measuring devices.

#### S02-H

# Indicating/recording movement or direction of movement

Includes analysis of trajectories.

Range, motion analysis, golf swing

# S02-J

#### Testing machines, structures or appts.

Model, simulate, performance testing, testing during production

### S02-J01

**Engines** 

S02-J01A [1983]

# **IC** engines

Fuel-consumption, cylinder, pressure, injection, Diesel, valve, speed, knock

S02-J01A1 [1997]

# For aircraft

(S02-J01A)

Includes piston engines.

S02-J01C [1992]

Gas turbine engines

S02-J01C1 [1997]

# For aircraft

(S02-J01C)

Includes turbo-prop engines and ram jets. See W06-B01B5 for onboard testing of aircraft engines. Bypass ratio, turbofan, compressor, afterburn

S02-J01E [1992]

#### Steam turbines

See X11-A01X for steam turbine testing where steam turbine is specifically for electricity generation.

S02-J01F [2005]

Rocket motors and ion propulsion

(S02-J01X)

S02-J01X [1992]

Other engine types

#### S02-J02

#### **Vehicles**

Includes all vehicle types: aerospace, automotive and locomotive, etc.

Wheel, track, roll, balance, transmission

#### S02-J02A

# Tyre performance, suspension, steering, wheels

Surface, road, tread, hold, grip, angle, toe-in, shock absorber

S02-J02B [1992]

Braking

S02-J02E [1992]

#### **Electrical system**

See also S01-G01 for electrical test appts. See X22 codes for tests on vehicle electrical systems.

S02-J02F [1992]

**Crash/impact testing** 

S02-J02F1 [1992]

# Crash dummy

Anthropomorphic

#### S02-J02X

# Other vehicle tests (includes testing vehicle transmission)

Alignment, body, clutch, gearbox

#### S02-J03

# **Machine parts**

Friction, drag

S02-J03A [1983]

# Gearing, transmission, bearings

Shaft, tooth, torque, differential, ball race

S02-J03X [1992]
Other testing of machine parts

#### S02-J04

# Optical appts. (also optical testing)

Beam, image, reflect, pattern, scan, objective, focallength, mirror

S02-J04A [1992]

**Testing of optical apparatus** 

S02-J04A1 [1992]

Testing optical fiber and other guide structures

S02-J04A1A [1997]

# **Testing optical fiber**

(S02-J04A1)

See V07-J also.

S02-J04A1C [1997]

# **Testing optical amplifiers**

(S02-J04A1)

Includes optical fiber amplifiers. See also S01-D08B3 and V07-K01C.

S02-J04A1X [1997]

**Testing other guide structures** 

(S02-J04A1)

S02-J04A3 [1997]

# **Testing liquid crystals**

(S02-J04A9)

See also U14-K01A8.

Nematic, cholesteric

# S02-J04A3A [1997]

# **Testing LCDs**

(S02-J04A9)

See also U11-F01F and/or U11-F01D and U14-K01A8.

S02-J04A5 [1992]

Testing and measuring lenses and lens systems

S02-J04A9 [1992]

Testing other optical appts.

Prism, grating

S02-J04B [1992]

**Testing of specific optical apparatus** 

S02-J04B1 [1992]

Microscope

S02-J04B3 [1992]

# Fiberscopes and endoscopes

See also V07 codes for novel fiber-optic aspects. See also S05-D04 codes for medical applications, V07-N02 for optical fiber details and S06-B09 for photographic attachments. See W04-M01 for video camera equipment.

S02-J04B3A [1997]

**Fiberscope** 

(S02-J04B3)

S02-J04B3C [1997]

Endoscope

(S02-J04B3)

S02-J04B9 [1992]

Other optical appts.

# S02-J05

# Investigating static or dynamic balance

Rotor, rotating, motor, weight, bearing, moment of inertia and dynamic balance/unbalance sensor

#### S02-J06

# **Investigating fluid-tightness**

Leak, pipe, seal, pressure, air-tight, gas, hermetic, vacuum

#### S02-J06A

# By detecting leakage fluid

S02-J06A1 [1992]

**Electrically** 

S02-J06A3 [1992]

**Acoustic or ultrasonic detection** 

S02-J06A5 [1992]

**Using tracer substance** 

Radioactive, dye, fluorescent

S02-J06A7 [2006]

**Optical detection** 

Includes using camera, spectrometer. Prior to 2007, covered by S02-J06A9.

S02-J06A9 [1992]

Other leakage fluid detection methods

Liquid, bubble, submerged, immersion testing

S02-J06B

By measuring fluid loss/gain rate

Flow rate, pressure drop

S02-J06X

Other fluid tightness investigation

S02-J07

Aerodynamic or hydrodynamic testing

Electrical aspects of aircraft and ship testing are also coded in W06-B05 and W06-C05 respectively.

Flow, pressure, wind tunnel, aircraft, ship, tank, wave generator

S02-J08

Vibration or shock testing of structures

Impact, dynamic, oscillating

S02-J09

Other testing of machines, structures or

appts.

Includes testing during production, performance testing, and model-based simulation testing. See also T01-J15H for simulation of non-electronic systems.

S02-J10

[1992]

**Investigating elasticity of structures** 

(S02-J09)

Extension, strain, stress, Young's modulus

S02-K

Indicating or recording - general

S02-K01

Appts. indicating/recording function of variable, e.g. r.m.s., mean

Integrate, meter, data analysis, plotting best straight line, form factor, statistical methods, standard deviation, median, average, mean, least squares, regression

S02-K02

Appts. with compensating correcting/protection features

S02-K02A [1992]

Compensation/correction for transducer characteristics

Includes linearizing. *Linearity, law* 

S02-K02B [1992]

Compensation/correction for ambient variations

Includes compensation for variation of temperature. *Pressure* 

S02-K02B1 [1997]

**Temperature compensation** 

(S02-K02B)

S02-K02B3 [1997]

Pressure compensation

(S02-K02B)

S02-K02B9 [1997]

Other environmental compensations

(S02-K02B)

S02-K02C [1992]

Protection

Includes protection from overload, excess signal level etc.

S02-K02D [1992]

**Noise reduction** 

S02-K02X [1992]

Other aspects of compensation, correcting and protection

#### S02-K03

# Transferring or converting sensor output

Transducer, encode, analogue-digital, A-D

#### S02-K03A

**Electrically or magnetically** 

#### S02-K03A1

Influencing current/voltage capacitively or electrodynamically

S02-K03A1A [1992]

Electrodynamically

Tacho-dynamo

S02-K03A1C [1992]

Capacitively

S02-K03A2

Influencing current/voltage resistively or inductively

S02-K03A2A [1992]

Resistively

Potentiometer

S02-K03A2C [1992]

Inductively

LVDT, coil, movable armature

S02-K03A5 [1992]

Using magnetic effects

(S02-K03A9)

S02-K03A5A [1992]

Magnetoresistance

S02-K03A5C [1992]

Magnetostriction

S02-K03A5E [1992]

**Hall effect** 

S02-K03A5F [1997]

Magneto-optical

(S02-K03A, S02-K03B)

S02-K03A5X [1992]

Other magnetic effects

#### S02-K03A9

Other electrical or magnetic transfer

#### S02-K03B

# Optically

Light, fiber, fiber-optic, reflect, beam, intensity, interferometer, laser

S02-K03B1 [1992]

**Using fiber optics** 

See also V07-K10 codes.

S02-K03B9 [1992]

Other optical transference or conversion

#### S02-K03X

# Other (incl. using fluid or mechanically)

Covers use of piezoelectric transducer.

Pressure

#### S02-K04

# **Indicating measured values**

Alarm

S02-K04A [1992]

**Audible indication** 

S02-K04C [1992]

Visible indication

Display, LED, LCD

S02-K04G [1992]

Indicating threshold value

S02-K04D [2006]

# **Haptic indication**

Prior to 2007, covered by S02-K04X. See W05-A01A1 for general haptic annunciators and alarms.

Tactile feedback, vibrating indicator

S02-K04X [1992]

Other measured value indication

#### S02-K05

# **Recording measured values**

Includes memory details, pen recorders, line printers etc. See S06 codes for line printer details. Plot, position, writing, print, mark, paper, platen, X-Y, graphical

#### S02-K06

# Component parts of recording/indicating appts.

Line printers are only included when specifically for printing measured values. See S06 codes for line printer details.

#### S02-K06A

# Scales, dials, pointers

Instrument, display, indicia, markings

#### S02-K06B

# **Recording elements**

Print, ink, paper, mark

#### S02-K06B1

# Electric, magnetic, heated, optical, perforating elements

Electrode, beam, dot matrix, electrocardiogram

#### S02-K06B2

# Ink transfer recording elements

#### S02-K06X

# Other component parts of recording/indicating appts.

Includes vehicle dashboard instrumentation; see also X22-E codes.

[1992]

#### S02-K07

# Testing, calibration and monitoring

(S02-K09)

S02-K07 codes are only applied when the instrument used is unclear. Otherwise, specific calibration/testing codes from the relevant S02-A to S02-G sections should be applied instead, such as S02-B10 for testing and calibration of surveying and navigation equipment.

# S02-K07A [2005]

# **Testing and monitoring**

(S02-K07, S02-K09)

# S02-K07B [2005]

#### **Calibration**

(S02-K07)

# S02-K08 [1992]

#### Remote reading; tariff metering

(S02-K09)

# S02-K08A [1992]

#### Remote reading

See also S02-K08B for remote reading of e.g. gas, water (S02-C02 codes also), or electricity meters (S01-B01 also), and W05-D codes, e.g. W05-D04A5 for radio link or W05-D07G if for vehicles, which cover telemetry in general.

#### S02-K08B

[1992]

Tariff metering appts.

### S02-K09

# Other indicating or recording

From 201401, monitoring details are coded under S02-K07A. This code remains searchable and valid for monitoring details for records prior to 2014.

#### S03: Scientific Instrumentation

#### S03-A

# Measuring optical radiation (IR, visible and UV)

See also S03-E04 for appts. having provision for investigating material sample. Measurement performed on laser beam is also coded in V08-A06. Includes black body radiation source.

#### S03-A01

# **Photometry**

#### S03-A01A

# Photometry by comparison with reference light or electric value

#### S03-A01B

# Photometry using electric radiation detectors

Includes meters/sensors for measuring and/or detecting a light source, e.g. infrared detectors. See also U12-A02 codes.

Laser power meter

#### S03-A01B1

[1997]

# Photometry using photovoltaic detectors

(S03-A01B)

See also U12-A02A2 and X15-A02A codes. Photodiode, bandgap, depletion region, space charge, solar cell

#### S03-A01B3

[1997]

# Photometry using capacitive detectors

(S03-A01B)

Includes ferroelectric devices. For discrete ferroelectric devices, see V01-B02B9. For integrated ferroelectric devices, see also U12 codes, e.g. U12-C02F for capacitor and U12-D02A7 for transistor.

# S03-A01B5

[1997]

# Photometry using photoresistive detectors

(S03-A01B)

See also U12-A02B1.

Photoconductive

### S03-A01B7

[1997]

# Photometry using array of detectors

(S03-A01B)

See U13-A01X for focal plane array and W04-M01B5 for producing video image with optical radiation, and W04-M01E1A for producing video image with infrared radiation.

Mosaic

# S03-A01B9

[1997]

#### Other electric radiation detectors

(S03-A01B)

PMT, photomultiplier

#### S03-A01X

#### Other photometry aspects

Includes measuring e.g. visually, chemically etc., also general details.

### S03-A02

#### Spectrometry; colorimetry; polarimeters

See S03-E04 codes for more details. Spectroscope

#### S03-A02A

# Generating spectrum e.g. by prism or diffraction grating; measuring line intensity

Wavelength

#### S03-A02A1

[1997]

# Monochromators

(S03-A02A)

#### S03-A02B

# Absorption, double-beam, flicker or Raman spectrometry

#### S03-A02C

# Colorimetry; polarimeters

See also S03-E04B5.

Colour, filter, polarise, Nessler tube, polarisation, birefringence, refractive index

#### S03-A02F

[1997]

# Interferometric spectrometers

(S03-A02X)

Includes Fourier Transform spectrometers, e.g. FTIR spectrometer. For novel aspects of the interferometer, see S02-A03A. See T01-J04B1 for novel computing aspects of the Fourier Transform. *Golay detector* 

# S03-A02X

### Other spectral measurements

Includes atomic emission spectrometers (See also S03-E04D3) and spectroradiometers.

# S03-A03

# Pyrometry and IR temperature measurement

Infrared, temperature, pyrometer, pyroelectric, heatsensing, remote, bolometer, actinometer

#### S03-A04 [1997]

# Cooling arrangements for optical instruments

(S01-J02)

Covers all devices within the context of S03-A and S03-E04. Covers cooling arrangements for IR detectors. See S01-J02 for cooling arrangements for other measuring instruments.

Dewar

### S03-A05 [1992]

# Calibration/testing of optical instruments and compensation aspects

(S02-K02, S02-K09)

S03-A05A [1992]

**Testing of optical instruments** 

S03-A05C [1992]

**Calibration of optical instruments** 

S03-A05E [1992]

Compensation aspects of optical instruments

#### S03-A09

#### Other optical measurements

Measuring optical phase difference, degree of coherence, optical wavelength, velocity of light. *Interferometer, phase* 

### S03-B

## Thermometers and calorimeters

Covers temperature and heat quantity measurements.

### S03-B01

# **Thermometers**

Medical thermometers with electrical content are also coded in S05-D01E.

Fuse, catalyst

# S03-B01A

# **Thermoelectric**

Thermocouple, junction, Seebeck

#### S03-B01B

# Linear resistance e.g. platinum resistance thermometer

Resistor, film, wire

#### S03-B01C

# Other electric/magnetic type

Includes e.g. using semiconductor p-n junction, crystal resonator frequency, thermal noise of resistance or conductor. Also includes measurement by unspecified electric transducer. Thermo-electromotive

#### ..........

# Integrating or differentiating expansion or contraction e.g. mercury thermometer

Bimetal, alcohol, maximum-minimum

#### S03-B01E

S03-B01D

# Adaptations and novel measurements for specific purposes

Includes novel measurement of temperature where sensor is of unspecified type or unimportant.

S03-B01E1 [1992]

For aggressive environments

S03-B01E9 [1992]

Other adaptations of thermometers for specific purposes

S03-B01F [1983]

#### **Thermistors**

Thermistors per se are also coded in V01-A02A. Resistor, PTC, NTC, positive, negative, temperature coefficient

# S03-B01G [1992]

#### **Optical**

(S03-B01X)

Covers aspects where there is modification of some optical property, e.g. polarisation state or refractive index. Thermometers using colour changes, e.g. of liquid crystals or chemical indicators, are covered by S03-B01X. Pyrometry is covered by S03-A03.

Fiber-optic

# S03-B01H [1992]

**Testing, calibrating and compensation** (S03-B01X)

S03-B01H1 [1992]

**Testing of thermometers** 

S03-B01H3 [1992]

Calibration of thermometers

#### S03-B01H5 [1992]

### **Compensation aspects of thermometers**

# S03-B01K [1992]

# **Display of temperature**

(S02-K04, S03-B01)

Includes recording of temperature. See also S02-K04 and S03-B01.

Display, LED, LCD, record

#### S03-B01X

#### Other thermometers

Includes e.g. casings, measuring temp. using acoustic effect or colour change of liquid crystal/chemical indicator.

Ultrasonic, thermochromic

#### S03-B02

#### **Calorimeters**

Heat quantity measurement. Includes electrical measurement for domestic heating system, see also X27-E01A. Also includes calibration, testing and compensation of calorimeters. Calorimetry for investigation of sample properties is coded in S03-E01C.

Flow, thermal flux

#### S03-C

# Geophysics

Includes non-geophysical applications such as detecting presence of objects, e.g. using light barrier (S03-C08). (See also S03-C06). Well logging apparatus with electrical content is also coded in X25-E02.

#### S03-C01

# Seismology, seismic/acoustic prospecting

Seismic, exploration, log, prospecting, reflect, surveying, oil, gas

# S03-C01A

#### **Generating seismic waves**

Vibration, piston, generator, hydraulic, shear, explosive charge, pneumatic cannon

#### S03-C01B

# Detecting, transmission, or recording of seismic signals

Also includes transmitting seismic signals to recording apparatus (see also W05-D codes, e.g. mud pulse telemetry W05-D06M1). Towed hydrophone arrays are covered by S03-C01C1. *Geophone* 

#### S03-C01C

For water-covered areas; for well logging

# S03-C01C1 [1983]

#### For water-covered areas

Marine, streamer, tow, hydrophone

#### S03-C01C5

[1983]

# For well-logging

Borehole, formation, downhole

#### S03-C01X

Other seismology, seismic/acoustic prospecting (incl. processing seismic data)

#### S03-C02

# Electric, magnetic, em prospecting, measuring earth's magnetic field

Well-logging appts. is coded under respective prospecting type.

#### S03-C02A [1983]

#### With electric current

Electrode, probe, resistor

# S03-C02B [1983]

#### With magnetic/electric field

Includes measuring Earth's magnetic field and proximity sensors. For weapon detection at airports, see also \$03-C06 and W06-B02A1.

Coil, resonance, oscillator, pipe-finder, metal detector, magnetotelluric, terrestrial

# S03-C02F [1997]

# Using quantised spin properties

(S03-C02X)

# S03-C02F1 [1997]

#### **NMR**

(S03-C02X)

For NMR details per se, see S01-E02A1 and S03-E07C.

#### S03-C02F3 [1997]

#### MRI

(S03-C02X)

For MRI per se, see S01-E02A2 and S03-E07A.

# S03-C02F5

[1997]

#### **Nuclear Quadrupole Resonance**

(S03-C02X)

NQR

# S03-C02F9 [1997]

# Using other quantised spin properties phenomena

(S03-C02X) ESR. EPR

# S03-C02M [2022]

# **Geophysical muon imaging**

Includes use of cosmic ray muon radiography to investigate density distribution inside geological structures for mapping/imaging.

Muography, muon mapping, attenuation, flux, trajectory

#### S03-C02X [1983]

# Other electric, magnetic, em prospecting (incl. electromagnetic prospecting methods)

Antenna, borehole, RF, microwave

#### S03-C03

#### Prospecting using nuclear radiation

Gamma, neutron, X-ray

#### S03-C04

# Gravimetric or other prospecting; measuring gravitational field/waves

Gravity

#### S03-C04A [1997]

# **Optical prospecting**

(S03-C04)

Includes thermal prospecting. Does **NOT** include light barriers (see S03-C08 codes).

Thermal

#### S03-C05 [1992]

# Geophysical natural disaster prediction and detection

(S03-C09)

Includes e.g. earthquake, volcano and landslide prediction and detection techniques. See also S03-C01 codes for seismic detection apparatus per se. See W05-B08 codes for natural disaster alarm systems.

# S03-C06 [1997]

# Detecting presence of person or object

This code is used to differentiate between prospecting and presence detection and is technology non-specific. It will thus almost always be combined with another (usually S03-C) code: e.g. detecting presence of contraband using Nuclear Magnetic Resonance would be coded as S03-C02F1 and S03-C06. Includes also baggage inspection at airport (See also W06-B02A5) and pipeline detection (see also X25-Y02). See W05-B and W05-C for alarms in general.

Drugs, Narcotics, Explosives

# S03-C07 [2005]

# For non-seismic well-logging or open water prospecting

These codes are used to differentiate between well-logging, open water prospecting or presence detection and are technology non-specific. Thus, they will almost always be combined with other (usually S03-C) codes. For seismic well-logging or open water prospecting, see S03-C01C codes.

# S03-C07A [2005]

Non-seismic well-logging

S03-C07B [2005]

Non-seismic open water prospecting

# S03-C08 [1992]

# **Light barriers**

(S03-C09)

Packaged semiconductor light transmitting and receiving devices for light barriers are coded in U12-A02C2. Optical intruder detection is covered by W05-B01C2 codes.

Machine-operator protection

S03-C08A [1992]

**Construction details** 

S03-C08C [1992]

Circuitry

#### S03-C09

### Other geophysics

Includes mechanical well diameter measurement.

#### S03-C10 [1997]

# Testing, calibrating and compensation aspects of geophysics devices

(S03-C09)

Includes testing of geophones. For geophones per se, see S03-C01B codes.

#### S03-D

#### Meteorology

Includes weather houses, sunshine duration measurement, rainfall or precipitation gauges, windspeed.

Atmosphere, pollution, pressure, precipitation, rain, satellite, balloon, probe, ionospheric sounding

#### S03-D01

[1992]

# Wind speed and direction gauges

See also S02-G02 for anemometer details.

#### S03-D02

[1992]

# Detection of precipitation; Air humidity measurements

#### S03-D02A

[1992]

# Measuring rainfall

Precipitation, gauge

#### S03-D02B

[1992]

# Detecting presence of rain, snow, ice or fog

Smog measurements are coded under \$03-D06 only.

# S03-D02B1

[1992]

# For non-meteorological application

Includes detection for automatic actuation of vehicle windscreen wipers (See also X22-J01).

# S03-D02C

[2016]

# Air humidity measurements

See also S03-F09A.

#### S03-D03

[1992]

# **Atmospheric pressure measurements**

Fluid pressure measurements are covered by S02-F04 codes.

Barometers

# S03-D04

[1992]

# Air temperature measurements

Thermometers are covered by S03-B01 codes.

# S03-D05

[1992]

# Weather prediction systems, weather forecasting

Includes weather satellite and weather radar systems. Includes prediction of cyclones, thunderstorms, hurricanes, etc. See W06-A04H2 for weather radar, S02-B04 for satellite surveying of the earth. See also W05-B08 section for adverse weather alarms.

# S03-D06 [1992]

#### Pollution, fall-out measurements

Includes all environmental pollution measurement, e.g. marine, fresh water, air, soil, etc. For air quality per se, see S03-E14N codes.

Smog

# S03-D09 [1992]

# Other meteorology

Includes detection of atmospheric measurements for non-meteorological applications, and meteorological data processing. Also includes lightning strike detectors.

#### S03-E

# Investigating physical or chemicals properties of materials: methods and appts.

Electrical apparatus for medical purposes is also coded in S05-C if in-vitro, or S05-D01G/S05-D01L if in-vivo. Electrical exhaust sensors for internal combustion engines are also coded in X22-A05B.

#### S03-E01

# Thermal (by investigating)

#### S03-E01A

# Changes of state or phase; sintering; coefficient of expansion: thermal conductivity

Using melting or boiling points, distillation, sublimation, expansion, thermal conductivity.

#### S03-E01B

# Moisture content; flash-point, explosibility; presence of flaws

Includes e.g. psychrometry, dew point, humidity, hygrometry

### S03-E01B1 [1997]

# Thermal cycling

(S03-E01B)

Includes thermal test chambers for PCBs and integrated circuits. See also V04-R06 codes for PCB testing and U11-F01G for burn-in testing of integrated circuits. Includes thermal cycling of test pieces, such as might be carried out in a metallurgy laboratory. If the material under test is subjected, additionally, to a load, see also S03-F02B for time varying load and S03-F02C for fixed load.

Temperature excursion, PCB, semiconductor device, integrated circuit, coupon

# S03-E01B3 [1997]

### Flaw detection

(S03-E01B)

Includes detection of flaws using infra-red radiation. For flaw detection using visible or ultraviolet radiation, see S03-E04F2. Includes thermal imaging. *Defect* 

#### S03-E01C

#### **Calorimetry**

Includes e.g. combustion. Calorimeters per se are in S03-B02.

#### S03-E01E

#### [1992]

# **Emissivity determination and differential** thermal analysis

Includes acoustic thermography. For detecting flaws, see also S03-E01B3.

#### S03-E01X

### Other thermal investigation

#### S03-E02

# **Electrical (by investigation)**

Moist, liquid, flow, humidity

#### S03-E02A

# Resistance of solid absorbing or reacting with fluid

Includes e.g. semiconductor gas sensor.

Oxide, metal, film, moist, humidity, resistor, bridge, oxygen, semiconductor

#### S03-E02B

# Resistance of liquid or electrically heated body in material

Catalyst

#### S03-E02C

# Capacitance

Dielectric

#### S03-E02C1 [1997]

#### Moisture detection

(S03-E02C)

# S03-E02C3 [1997]

# Flaw or contamination detection

(S03-E02C)

# S03-E02C5 [1997]

# **Capacitance spectroscopy**

(S03-E02C)

Includes Deep Level Transient Spectroscopy, TSCAP and Admittance Spectroscopy. For measurements on semiconductor materials, see U11-F01A codes. For measurements on devices, see U11-F01C codes.

DLTS, deep level, impurity, trap, lifetime

S03-E02D [1992]

**Impedance** 

S03-E02F [1992]

# Using tunnel current and analogous effects

(S03-E02X)

Includes all scanning probe microscope types and all adaptations for measurement, e.g. measurement of electric or magnetic fields, photon excitation, capacitance and ionic conductance, in addition to other relevant instrumentation codes.

See also V05-F for novel microscope and manufacturing details and S02-A codes for novel cantilever displacement measurement.

For optical scanning tunnelling or near-field optical microscopes with tunnel current type probes, see additionally S02-J04B1 and S03-E04R.

Does NOT include use of scanning probe technology for patterning techniques or recording see V05-F05D and relevant T03-C and U11 codes. SPM, magnetic force, MFM, SNOM, shear-force microscopy

# S03-E02F1 [1997]

# Scanning tunnelling microscopes

(S03-E02F) STM

S03-E02F3 [1997]

# **Atomic force microscopes**

(S03-E02F) *AFM* 

#### S03-E02X

#### Other electrical investigation

Includes e.g. measuring Q-factor change on oscillating piezoelectric crystal resonator caused by deposition (see also S03-E12), investigating breakdown voltage (see also S01-G03), electrostatics.

## S03-E03

#### **Electrochemical**

For ion sensor FET see U12-D02A also. *Chemical* 

# S03-E03A

# Measuring deposition or liberation from electrolyte e.g. coulometric titration

Electrolytic, coulometer, titration, Karl Fischer

### S03-E03B

#### Measuring currents/voltages in voltaic cells

#### S03-E03B1

# Due to effects at electrodes; e.g. potentiometric titration

Includes vehicle lambda probes. Fuel, air, engine, exhaust

#### S03-E03B2

# Due to effects in the electrolyte; concentration cells

Includes electrochemical pH sensors. See also S03-F10. For non-electrochemical pH detection, see relevant S03-E04 and E09 codes, as well as S03-F10.

pH sensor

#### S03-E03B9

# Other measuring currents/voltages in voltaic cells

#### S03-E03C

# Containers, electrodes, membranes, partitions

Includes CHEMFETS, ISFETs and integrated circuits using these transducers (also coded in U12-D02A and U12-B03E for discrete devices, and U13-D02 for integrated circuit structure). Also includes electrolyte.

# S03-E03C1 [1997]

#### **Biosensors**

(S03-E03C) See also S03-E14H codes. *Membrane* 

# S03-E03E [1992]

# **Electrophoresis**

(S03-E03X)

Includes isoelectronic focussing. For detectors to identify substances separated by electrophoresis, see \$03-E09C7 codes.

Separation, gel, macromolecular, protein

### S03-E03X

# Other electrochemical investigation

Prior to 2005, included non-electrochemical pH measurement. After 2005, see S03-F10 only.

### S03-E04

#### Optical (by investigating)

See also S03-A02 codes.

Photometer, light, centrifuge

#### S03-E04A

#### **Colour; spectral properties**

Spectroscope, colour

#### S03-E04A1

# **Using photoelectric detection**

# S03-E04A4 [1992]

# Measurement using radiation at two wavelengths

Includes measurement of blood oxygen content using catheter (S05-D01G).

#### S03-E04A5 [1992]

# Wavelength dependent absorption

(S03-E04A9)

Includes atomic absorption spectrometers. See also S03-A02 codes.

# S03-E04A5A [1992]

# With light modulation

Includes photoacoustic absorption spectroscopy. *PAS* 

# S03-E04A5B [1997]

# Infrared spectroscopy

(S03-E04A5)

# S03-E04A5E [1997]

#### Visible/ultraviolet spectroscopy

(S03-E04A5)

UV, electronic transition, Hund's rules

#### S03-E04A5G [1997]

# **Gaseous phase**

(S03-E04A5)

"Gaseous phase" refers to the phase to which the radiation is applied. Includes, therefore, atomic absorption spectrometers. This code will nearly always be combined with at least one other S03-E04A5 code.

#### S03-E04A5L [1997]

# Liquid phase

(S03-E04A5)

"Liquid phase" refers to the phase to which the radiation is applied. This code will nearly always be combined with at least one other \$03-E04A5 code.

# S03-E04A5S [1997]

# Solid phase

(S03-E04A5)

"Solid phase" refers to the phase to which the radiation is applied. Includes Attenuated Total Reflectance Spectroscopy. This code will nearly always be combined with at least one other S03-E04A5 code.

ATR

#### S03-E04A9

#### Other spectral properties

#### S03-E04B

Reflection, refraction, transmission; dichroism; phase- or polarisation affecting properties

#### S03-E04B1

#### Transmission; specular reflectivity

# S03-E04B1A [1992]

#### **Transmission**

Includes non-dispersive gas analysis. Includes measurement by splitting light source into two paths, one for reference/control, one for test sample, and measuring relative absorption.

Turbidity, densitometer

#### S03-E04B1B [1992]

#### Specular reflectivity

Reflectance

# S03-E04B5 [1983]

# Refraction; phase; interference; dichroism; polarisation; diffraction

Polarise, refractometer, interferometer, ellipsometer, measuring refractive index

#### S03-E04B5A [2005]

#### Surface plasmon resonance

(S03-E04B5)

# S03-E04C

#### Scattering, diffuse reflection

Includes Rayleigh and Tyndall scattering. Also includes Optical Time Domain Reflectrometry (from 1992; previously coded in S03-E04B1).

OTDR

#### S03-E04C1

# In moving fluid; e.g. smoke detection

See W05-B02A1 also for smoke detecting fire alarm using scattering effects.

Suspension, particle, fire alarm, turbidity

#### S03-E04C2

In material in container

S03-E04C3 [1997]

# **Optical computerised tomography**

OCT, optical coherence tomography

#### S03-E04D

# Optical, electrical, mechanical or thermal excitation

Fluorescent, atomise, plasma, flame, photothermal, phosphorescence

S03-E04D1 [1992]

Raman scattering

S03-E04D3 [1997]

**Atomic emission spectrometer** 

(S03-E04D)

S03-E04D3A [1997]

**Inductively coupled** 

(S03-E04D)

#### S03-E04E

# Chemiluminescence; bioluminescence; observing effect on chemical indicator

React, luminescent, reagent

# S03-E04F

#### Jewels; Detecting flaws or contamination

See T04-D for automated visual inspection techniques. For systems using IR detection of thermal images S03-E01B takes precedence.

Inspect, reflect, semiconductor, mask, pcb, printed circuit board, recognition, visual, comparison

S03-E04F1 [1992]

**Detecting contamination or impurities** 

S03-E04F2 [1992]

Flaw detection

S03-E04F3 [1992]

**Optical examination of jewels** 

Gem, cut, facet

#### S03-E04G

#### Moving sheets

Paper, newspaper

#### S03-E04H

#### Moving fluids or granular solids

### S03-E04J [1997]

#### On-line measurements

Covers arrangements for use in a production line/manufacturing environment (see also X25 codes). S03-E04J will nearly always be combined with at least one other S03-E04 code.

#### S03-E04P [1992]

# Calibration/compensation/testing of optical measurement system

(S02-K02, S02-K09)

#### S03-E04R [1992]

# Optical microscopy

(S03-E04X)

See also S02-J04B1 for microscope appts.

# S03-E04R1 [2006]

#### **Confocal Microscopy**

Includes laser scanning microscopy. See also S03-E04D/E04E if used with fluorescent staining methods.

# S03-E04T [1997]

# **Using Fourier Analysis**

Includes use of Fast Fourier Transform (see also T01-J04B). This code will nearly always be combined with at least one other S03-E04 code. *FFT* 

#### S03-E04X

# Cuvettes; Imaging and other optical investigation

Includes automatic optical analysis apparatus (with S03-E15 codes), forming picture using TV camera.

#### S03-E05

# Using microwaves and other radio frequency waves

This code covers methods and apparatus for investigating physical or chemical properties of materials by means of microwaves and other radio waves, including microwave spectrometry and general terahertz radiation investigation. (TeraHertz imaging is covered by S03-E05E). For investigation using electromagnetic waves other than radio waves see S03-E04 codes (optical) and S03-E06 codes (X-rays, neutrons, electrons, etc.).

Investigating properties using electric and magnetic fields are covered by S03-E02 codes and S03-E11 codes respectively, and use of spin effects by S03-E07 codes.

Dipole moment, loss factor, moment of inertia, gas phase, radio frequency, RF, waveguide

S03-E05A [1997]

**Moisture detection** 

(S03-E05)

S03-E05C [1997]

Flaw detection

(S03-E05) Defect

S03-E05E [2005]

Terahertz radiation imaging

(S03-E05)

# S03-E06

# Using e.g. X-rays, neutrons, electrons

Includes use of ionizing or particle radiation for determining properties of a sample, e.g. patient x-ray diagnosis or scanning electron microscopy. For measurement of ionizing radiation intensity per se (x-ray, gamma ray, alpha, beta etc.), particle behaviour or electron beam current density, see S03-G codes.

Medical apparatus is also coded in S05-D codes. For luggage check see also S03-C03, S03-C06 and W06-B02A. Measurement of radioactive emission from sample injected into human body, e.g. scintography is not included (see S03-G02B3). Control of X-ray equipment in general is covered by V05-E02 codes. Includes use of gamma rays.

Tube, beam, radiate, radioactive

### S03-E06A

Measuring absorption

S03-E06A1 [1992]

Flaw detection

S03-E06A3 [1997]

**Moisture detection** 

(S03-E06)

# S03-E06B

#### Forming picture

Scan, tomography, scintillation, display, phosphor, stimulable sheet

# S03-E06B1 [1992]

#### Microscopes

See also V05-F codes for electron, ion and X-ray microscopes. Prior to 2005, included tunnelling microscopes - now only coded in S03-E02F codes. SEM. TEM. STEM

# S03-E06B3 [1992]

#### **Electronic imaging**

Includes use of e.g. video camera systems responsive to radiation, and stimulable-sheet phosphor imaging (see also S05-D02A5C for medical X-ray stimulable-sheet system and S06-K codes for aspects analogous to facsimile, especially S06-K99G).

S03-E06B3A [2005]

Computer tomography

S03-E06B5 [1992]

Photographic recording

S03-E06B9 [1992]

Other image-forming methods

#### S03-E06C

# Diffracting, reflecting, scattering e.g. backscattering radiation

Crystal structure, Compton

S03-E06C1 [1992]

Flaw detection

# S03-E06D

# By measuring secondary emission, e.g. X-ray fluorescence

Does not include fluoroscopy.

Auger electrons, photoelectric effect, X-ray spectrometer

S03-E06D1 [2005]

Flaw detection

S03-E06H [1992]

**Details of apparatus** 

S03-E06H1 [1992]

#### Radiation source

Includes control, e.g. source intensity control, dosage etc. For source positioning see S03-E06H4.

S03-E06H2 [2006]

#### **Detector positioning**

See S03-E06H5 codes for novel detection system per se.

S03-E06H3 [1992]

Specimen positioning

S03-E06H4 [2005]

Source positioning

S03-E06H5 [1992]

**Detection system** 

Includes e.g. cassettes.

S03-E06H5A [2005]

#### **Semiconductor detectors**

For measurement of ionizing radiation intensity using semiconductor detectors, see S03-G02B2G.

S03-E06H5B [2005]

#### **Scintillation detectors**

For measurement of ionizing radiation intensity using scintillation detectors see S03-G02B1.

S03-E06H5C [2005]

# Stimulable sheet phosphors

For novel stimulable sheet phosphors per se, see V05-M01C1. For novel stimulable phosphor readout systems, see S06-K99G and other S06-K codes as appropriate.

S03-E06H5D [2005]

#### Video systems

For novel X-ray video systems per se, see W04-M codes.

S03-E06H7 [1992]

Shielding, protection

S03-E06H9 [1992]

Other appts. details

S03-E06X

#### Other uses of X-rays, neutrons, electrons

Includes contrast agents for X-rays.

Contrast media

#### S03-E07

#### NMR, EPR or other spin effects

See S01-E02A codes. S03-C02F is used when the purpose is prospecting, together with S03-C06 if for contraband or intruder detection. For static and gradient field coils, see also X12-C and V02-F01G respectively and for coils in general see S01-E02A8A. For medical apparatus, see also S05-D02B codes.

Spin echo, tomography, axis

S03-E07A [1992]

MRI

See also S01-E02A2 codes. Contrast agents are coded in S03-E09X also.

S03-E07C [1997]

**NMR** 

(S03-E07)

Includes NMR spectroscopy. See also S01-E02A1 codes.

Nuclear Magnetic Resonance

S03-E07E [1997]

**ESR/EPR** 

(S03-E07)

See also S01-E02A4.

Electron spin resonance, paramagnetic, klystron

S03-E07G [1997]

# **Nuclear Quadrupole Resonance**

(S03-E07)

See also S01-E02A3. For contraband detection, see also S03-C02F5, and S03-C06 codes.  $\label{eq:contrabation}$ 

NQR

S03-E07X [1997]

### Other quantised spin measurements

(S03-E07)

See also S01-E02A9.

Cyclotron resonance

#### S03-E08

# Using sonic or ultrasonic vibrations

Includes vibrations which may be induced acoustically, thermally, optically, magnetically etc., but detected using acoustic apparatus. For photoacoustic spectroscopy where optical radiation is detected, see S03-E04A5A. For ultrasound generating transducers, see V06-V01N. For ultrasound "measurement" transducers, see V06-V04G codes. See S02-A05B codes for acoustic dimension measurement. For medical imaging see also S05-D03 codes and V06-V04K for transducers for specifically medical use.

Transducer, piezoelectric

#### S03-E08A

#### Flaw detection

Includes acoustic emission techniques, e.g. where a material is subjected to a mechanical stress and the acoustic output detected by a microphone. See S03-F02B and S03-F02C for tensile testing per se.

Crack, inspect, material, pipe, weld, non-destructive testing

# S03-E08C [1992]

#### **Specific property**

Covers investigation of a specific physical property by measurement of sonic or ultrasonic vibration. Includes e.g. analysing fluids; measuring attenuation, speed, density, frequency spectrum to characterise medium.

# S03-E08E [1997]

# **Imaging**

(S03-E08, S03-E08A)

E.g. using visualisation of interior, using Barkhausen effect.

# S03-E08G [1992]

# **Acoustic microscopes**

Covers acoustic microscopes per se.

#### S03-E08X

#### Other sonic or ultrasonic measurements

Includes construction details of ultrasonic equipment, e.g. probes and arrangements for orientation - see also V06. Measuring deposition on crystal resonator using variation in Q-factor or impedance is not included - see S03-E02X. Includes contrast agents.

Contrast media, UCA

#### S03-E09

#### Chemical methods

#### S03-E09A

Precipitation; Absorption; Adsorption

#### S03-E09B

**Ion-exchange; Catalysis; Combustion** *Catalyst* 

#### S03-E09C

# By chromatography e.g. column, plate

Gel, injection, flow, needle, capillary, vaporise

[1983]

#### S03-E09C1

**Gas chromatography** 

S03-E09C3 [1992]

Thin layer chromatography

### S03-E09C5 [1983]

Liquid and ion exchange chromatography

#### S03-E09C7 [1997]

# Chromatography and electrophoresis detectors

(S03-E09C)

From 2006, this code covers detectors to identify substances separated by electrophoresis. Electrophoresis per se is covered in S03-E03E.

#### S03-E09C7A [1997]

# Optical

(S03-E09C)

See also S03-A01B codes.

# S03-E09C7B [1997]

#### **Mass spectrometric**

(S03-E09C, S03-E10A)

For mass spectrometers, see S03-E10A and V05-J01 codes.

**GCMS** 

# S03-E09C7C [1997]

#### Thermal conductivity

(S03-E01A, S03-E09C)

For thermal conductivity measurements per se, see \$03-E01A.

Katharometer

#### S03-E09C7D [1997]

#### Ionisation

(S03-E09C)

Includes flame ionisation and photo-ionisation detectors.

S03-E09C7E [1997]

**Electron capture** 

(S03-E09C, S03-E03)

S03-E09C7F [1997]

**Electrochemical** 

(S03-E09C)

For electrochemical sensors generally see S03-E03 codes.

S03-E09C7X [1997]

Other chromatography detectors

(S03-E09C)

S03-E09D

Titration, micro-analysis

Karl Fischer, sample, end-point

S03-E09E

Chemical indicators

Reagent, strip, colour, chart, compare

S03-E09F [2005]

Immunoassay techniques and biological indicators

Includes all novel reagents and techniques. See also S03-E04D and S03-E04E for fluorescence detection and observation techniques. For radiopharmaceutical immunoassav indicators, see also S03-G02B9. For microarray and biochip techniques, see also S03-H01 codes. Prior to 2005 coded in S03-E14H4. From 2022, see also B11-C08N codes to highlight different biological testing methodologies. See also B11-C08E3, B11-C08N, C11-C08E3, C11-C08N and D05-H18B codes.

Antibody, assay, antigen, binding, ligand, fluorophore, monoclonal, conjugate, PCR testing, polymerase chain reaction testing, drug screening

S03-E09X

Other chemical investigation methods

Includes contrast agents for MRI (see S03-E07A also).

S03-E10

Investigating ionisation of gases or electric discharges

S03-E10A [1992]

For mass spectrometer or spectrograph

See also V05-J01 codes.

Ionise, smoke detector

S03-E10A1 [1997]

**Using magnetic sectors** 

(S03-E01A)

S03-E10A1A [1997]

**Double focussing mass spectrometers** 

(S03-E10A)

Nier-Johnson, Mattauch-Herzog

S03-E10A2 [1997]

**Tandem mass spectrometers** 

(S03-E10A) MS/MS, GCMS

S03-E10A3 [1997]

**Time-of-flight mass spectrometers** 

(S03-E10A)

Includes e.g. ion mobility spectrometers. Also includes Coaxial Impact Collision Ion Scattering Spectrometer.

TOF, GCMS, CAICISS

S03-E10A4 [1997]

**Secondary Ion Mass Spectrometers** 

(S03-E10A)

Includes spark source mass spectrometry and ion scattering spectrometry. For ESCA, Auger spectroscopy, electron microprobe see S03-E06D; for low energy electron diffraction, see S03-E06C. SIMS, duo-plasmatron, SSMS, ISS

S03-E10A5 [1997]

**Quadrupole mass analysers** 

(S03-E10A)

Includes ion trap mass spectrometers. **GCMS** 

S03-E10A6 [1997]

**Inductively coupled mass spectrometers** 

(S03-E10A) IC.P

S03-E10A7

[1997]

**Ion Cyclotron Resonance Mass Spectrometers** 

(S03-E10A)

Includes Fourier Transform Mass Spectrometers. ICR, FTMS

### S03-E10A8 [2002]

# **MALDI/SELDI** mass spectrometers

(S03-E10A)

For mass spectrometers with matrix assisted laser desorption ionisation source. See V05-J01E for novel ionising arrangements.

Matrix assisted laser desorption ionisation, surface enhanced laser desorption ionisation

# S03-E10B [2005]

**Energy spectrometers** 

# S03-E10C [1992]

# Investigating discharges per se

Includes, e.g. plasma processing endpoint detection through plasma colour change.

#### S03-E11

#### **Investigating magnetic variables**

Flux, Hall, diamagnetic, paramagnetic

#### S03-E11A [1983]

# Flaw detection (incl. eddy current)

Surface, inspect, fault, crack, weld, non-destructive testing

#### S03-E11C [1992]

### **Specific property**

Covers measurement of a specific physical property using investigation of magnetic variables, e.g. using saturation of remanence to investigate mechanical hardness (mechanical testing of hardness in general is covered by S03-F02A).

# S03-E11C1 [1997]

# **Contamination detection**

Debris

# S03-E11X [1992]

#### Other magnetic variable investigation

#### S03-E12

# Analysing by weighing; by measuring pressure/volume of gas

Balance, vapour pressure, gas sorption, adsorption, absorption

#### S03-E12A [1992]

# By analysing weight/ by weighing

Includes gravimetric analysis.

# S03-E12B [1992]

### Specific weight determination

# S03-E12C [2005]

# By measuring pressure/volume of gas

(S03-E12)

#### S03-E13

#### Sampling; specimen preparation

#### S03-E13A

#### Sampling solids

Microtome, cut, slide

#### S03-E13B

# Sampling liquid or fluent material

Also includes sampling of granular solids, e.g. sand, flour, salt etc.

Flow, water, liquid, powder

#### S03-E13B1

# Dippers, dredgers, suction or ejector devices

Pipette

#### S03-E13B2

# Intake at several levels; splitting samples; flowing or falling material sampling

### S03-E13B9

#### Other sampling liquid or fluent material

Includes sampling of suspensions from liquids, gases or other fluent materials, e.g. exhaust gas particulate sampling.

Aerosol

#### S03-E13C

# Sampling gases

### S03-E13D

# Preparing specimens for investigation

Centrifuge, filter, separate, freeze

# S03-E13D1 [1992]

#### For automatic analysers

See S03-E15 codes also. Includes preparation of many samples from one original which will be subjected to different test procedures.

#### S03-E13F [2006]

#### Sample holders, carriers or storage systems

Includes e.g. microscope slides, sample refrigerators, cuvettes, novel instrumentation-type glassware, e.g. test tube, petri dish. Note that general laboratory glassware is not included.

#### S03-E14

#### Investigation methods (for)

Codes in this section are used when testing methods or appts. are specifically intended for investigation of the material or substance concerned. Depending on the scope of the invention, codes for a specific testing method may also be assigned.

#### S03-E14A

# **Food, Pharmaceuticals and Cosmetics**

#### S03-E14A1 [1992]

# Drugs, medicines, pharmaceuticals

Electrical aspects of pharmaceuticals manufacture are covered by X25-P02. See also S05-C05. Capsule, tablet

# S03-E14A2 [2005]

#### Food and drink

Milk, meat, tobacco, alcohol

# S03-E14A3 [2005]

#### Cosmetics

#### S03-E14B

#### Water

See X25-H03 for electrical aspects of water and sewage treatment.

Sea, waste, effluent, pollution, process

#### S03-E14C

#### Metals

Electrical aspects of metallurgy are covered by X25-Q codes, and of working metals by X25-A codes, e.g. X25-A01 (casting).

Melt, cast, metallurgy, phase, assay

# S03-E14C1 [1992]

#### **Testing metallic electrodes**

For electrodes per se, see S03-E03.

# S03-E14C3 [1997]

# **Alloys**

(S03-E14C)

#### S03-E14C3A [1997]

#### Steel

(S03-E14C)

See X25-Q01 for electrical aspects of steel manufacture.

# S03-E14C3X [1997]

# Other alloys

(S03-E14C)

Brass, solder, bronze

#### S03-E14D

# Concrete, glass, ceramics, refractories, resins, plastics, rubber, leather, wood

Asphalt, chalcogenide

# S03-E14D1 [1983]

#### Concrete

Cement, strength, setting

# S03-E14D4 [1983]

#### Glass, ceramics, refractories

Electrical aspects of glass working are covered by X25-A05.

# S03-E14D7 [1983]

#### Resins, plastics, rubber, leather, wood

Electrical aspects of plastics working are covered by X25-A06, of rubber working by X25-A07.

#### S03-E14E

Fuels; Explosives; Soil

# S03-E14E1 [1992]

#### Fuels

Includes crude oil and oil-derived fuels, as well as coal, natural gas etc. Oils for lubrication are covered by S03-E14F.

Gas, liquid, hydrocarbon, crude, refine, LNG, LPG

### S03-E14E3 [1992]

#### **Explosives**

Blasting, detonate, pressure

# S03-E14E7 [1992]

# Soil

Rock, core, sample, groundwater recharge, minerals

#### S03-E14F

# Oils; Viscous liquids; Paints; Inks

Includes lubricating oils. Fuel oils are covered by S03-E14E1.

Lubricate, flow, cleaning products

#### S03-E14G

# Paper; textiles

See X25-T codes for electrical aspects of paper and textile manufacture.

Sheet, fabric, web, yarn, fiber, pulp

#### S03-E14H

# **Biological material**

For electrical aspects of biological material investigation see S05-C codes also where medical application stated.

Medical, clinical, forensic, diagnose

#### S03-E14H1

#### Blood

Coagulate, plasma, platelet, cell count

### S03-E14H2 [2005]

#### **Biological fluids**

(S03-E14H9)

Includes urine, semen, saliva, phlegm etc.

### S03-E14H3 [2005]

#### **Nucleic acids**

(S03-E14H)

Includes general DNA/RNA sequencing and tests for specific gene sequences, where there are no specific details. Where novel reagents are claimed, see also S03-E09F.

For microarray or biochip technology see also S03-H01A codes.

# S03-E14H4\* [1983-2004]

#### **Immunoassay**

\*This code is now discontinued and transferred to S03-E09F, but remains searchable and valid for records from 1983-2004.

Antibody, assay, antigen, monoclonal, conjugate, bonding, HIV, AIDS, hepatitis

#### S03-E14H5 [1992]

### **Enzymes, proteins and amino acids**

(S03-E14H9)

# S03-E14H6 [1992]

#### **Tissue samples**

(S03-E14H9)

# S03-E14H9

# Other biological material

Breath

# S03-E14J [1992]

#### **Plants**

Includes seeds, crops.

# S03-E14L [1992]

# Chemical and biological warfare agents

Includes detection. See S03-E09 for chemical detection techniques, S03-C06 for luggage or mail inspection methods or S03-H01 for lab-on-chip or biochip technology.

For electrical aspects of chemical or biological warfare detection see W07-F01 also.

#### S03-E14M [1992]

Herbicides; Pesticides

# S03-E14N [1992]

#### Air quality

Covers air quality, e.g. in workplace, hospitals and home. See S03-D06 also for pollution monitoring. Details of gas analysis and gas sensors are also coded under S03-E14P.

Breathable, pollution, contaminant

# S03-E14N1 [1997]

# In buildings

(S03-E14N)

#### S03-E14N3 [1997]

#### Clean room

(S03-E14N)

See U11-C15B for clean room used in semiconductor manufacture and T03-A02B9 for clean room used in magnetic record carrier manufacture.

Semiconductor, impurity

# S03-E14N9 [1997]

#### Other air quality measurements

(S03-E14N)

# S03-E14P [1997]

# Gas sensor; Gas analysis

Includes determining the components of a gas. See also S03-E02A and S03-E03 for electrical and electrochemical gas sensors, respectively. Details of air quality analysis (pollution) are coded under S03-E14N and S03-D06.

Gas detection

#### S03-E14P1 [1997]

### For combustion products

Carbon monoxide, sulphur dioxide, nitrogen dioxide

S03-E14P3

[1997]

For chemical reaction products

S03-E14P9

[1997]

# Gas sensor for other products

Livestock, poultry, SF6

S03-E14R

[2006]

#### Flame/combustion detector

Includes methods/apparatus for detection of flames or combustion, e.g. for fire alarm (see also W05), or industrial/domestic combustion equipment (see also X25-X13/ X27-G02). For pyrometric detection, see also S03-A03; for optical detection, e.g. UV, see S03-E04 codes.

#### S03-E14W

[2016]

#### **General industrial waste**

#### S03-E14X

#### Other

Dust

#### S03-E15

[1992]

# Automatic analysis equipment

Codes in this section are used with other S03-E codes depending on the specific nature of the equipment. For example use S03-E15 and S03-E14H codes for automatic biological material analysis apparatus.

### S03-E15A

[1992]

### **Control**

For computer control aspects see e.g. T01-J08A.

#### S03-F

# Investigation of physical or chemical properties of materials: specific properties

#### S03-F01

#### Density

Densimeter

# S03-F01A

# Investigation of density by immersion in fluid; from transmission of radiation; pressure difference

Includes measurement of density by cosmic ray muon tomography / radiography. From 2022, see S03-C02M for geophysical muon imaging. *Displacement, ultrasonic* 

#### S03-F01X

# Other density measurement

#### S03-F02

#### **Mechanical strength**

#### S03-F02A

#### **Hardness**

Load, indent, ball, bearing, Vickers, Rockwell, Mohs

#### S03-F02B

# Resistance to wear or heat; Machinability; Cutting ability

Includes applying time varying (cyclic) loading. If the sample is also subjected to temperature excursions, the code S03-E01B1 is additionally applied.

Abrasion, tool, bearing, erosion

#### S03-F02C

#### By applying steady tension or compression

If, in addition to steady tension or compression, the sample is subjected to temperature excursions, the code S03-E01B1 is also applied.

Tensile, stress, strain, fatigue

# S03-F02D

### By steady bending, twisting or shearing

Torque, shaft, flexure, axis

### S03-F02E

#### By applying impulsive forces

Impact, shock, frequency

#### S03-F02X

# Other mechanical strength measurement (incl. ductility, twisting and coiling properties)

### S03-F03

#### Flow properties

Includes viscometers.

Fluid, liquid, viscosity, thixotropic, Poiseuille's formula, Stokes' law, Ostwald, Newtonian fluid

#### S03-F03A

# By moving body in material

E.g. rising or falling speed, rotary bodies, rotational, damping effect.

Vibratory viscometer

# S03-F03X

### Other flow properties

Includes measuring flow of material e.g. through capillary tube.

Rheometer

#### S03-F04

# Diffusion effects; Surface or boundary effects

Includes e.g. measurement of wettability.

Surface tension, Ficks law, solder wettability

#### S03-F05

# Particle size; Sedimentation of suspensions

For blood, see S03-E14H1 also, and S05-C01 if electrical appts. is involved.

S03-F05A [1992]

**Sedimentation** 

S03-F05C [1992]

Particle size

Includes cytometry.

#### S03-F06

Concentration of suspensions; permeability, pore-volume or surface area of porous materials

S03-F06A [1983]

# Concentration of suspensions

Aerosol, Colloid, Emulsions, Slurry

S03-F06B [1983]

# Permeability, pore-volume or surface area of porous materials

Pressure, osmosis, porosity, filter, gas-mask, respirator

S03-F06C [1992]

#### **Particle counters**

Includes cytometry.

#### S03-F07

Weather-, light- and corrosion resistance

#### S03-F08

# **Coefficient of friction: Adhesion**

Surface, adhesives

# S03-F09

Moisture content (incl. hydrometers); detecting flaws or contamination

# S03-F09A [2005]

# General moisture detection / humidity measurements

Includes measurement of moisture e.g. mechanically, but not measurement using capacitance, microwaves or radiation absorption; for these cases see S03-E02C1, S03-E05A, S03-E06A3 respectively. Air humidity measurement used in meteorology is coded under S03-D02C. *Hyarometer* 

S03-F09B [2005]

**General flaw detection** 

S03-F09C [2006]

#### General contamination detection

Prior to 2007, covered by S03-F09B.

# S03-F10 [2005]

#### pH measurement

(S03-E03X)

See also S03-E03B2 for electrochemical methods, and S03-E09E and S03-E04E for chemical indicators. Prior to 200501, non-electrochemical pH measurement was coded in S03-E03X.

# S03-F11 [2014]

#### Non-destructive testing

This code is used to highlight the non-destructive aspect of the testing or analysis. This code can be applied with other S03-F codes to highlight the type of analysis/test done.

#### S03-F20

# Other physical or chemical properties

For sampling devices see S03-E13 codes. Growth measurement

#### S03-G

#### Measurement of nuclear or X-radiation

Codes in this section are concerned with novel methods and equipment for measuring radiation per se. For measurement on materials using radiation see S03-E06 codes, and for object detection/prospecting see S03-C codes, e.g. S03-C03.

Beta, gamma, particle, radioactive

#### S03-G01

# Recording/ processing movements of particles, measuring neutron radiation

Includes processing or analysis of tracks. Neutron dosimetry is also in S03-G02A.

Track

S03-G01A [1992]

# Recording/ processing movements of particles

Wilson cloud chamber, bubble, scintillation, track

S03-G01C [1992]

Measuring neutron radiation

S03-G01X [1992]

Other recording/ processing movements of particles, measuring neutron radiation

S03-G02

Measuring nuclear or X-radiation

S03-G02A

#### **Dosimeters; Integrating detectors**

Includes e.g. chemical, photographic, luminescent dosimetry, and arrangements integrating the output of an electrical detector.

Thermoluminescent, expose, film badge, TLD

#### S03-G02B

### Measuring intensity

Codes in this section are used for particular radiation detection arrangements.

Count, camera, discriminate

S03-G02B1

**Scintillation detectors** 

S03-G02B2

Counting-tubes, ionisation chambers; Cerenkov, semiconductor, resistance or secondary emission detectors

For tube type detectors see V05-H also.

S03-G02B2A [1992]

Counting tube (e.g. Geiger-Muller)

S03-G02B2C [1992]

Ionisation chamber

S03-G02B2E [1992]

Secondary emission detector

S03-G02B2G [1992]

Semiconductor detector

See U12-A03 also.

#### S03-G02B3 [1997]

# **Nuclear imaging**

(S03-G02B)

Covers all cases where a radiopharmaceutical is injected into the patient, e.g. in Positron Emission Tomography or Single Photon Emission Computed Tomography. See also S05-D02C. See U22-D02C for coincidence circuit for PET apparatus.

See S03-E06B codes for imaging using externally applied radiation, e.g. X-ray tomography.

SPECT, PET, Gamma camera, Anger camera, Compton camera

#### S03-G02B9

# Other nuclear radiation intensity measurement

Includes radioactive immunoassay techniques - see also S03-E09F.

Image, phosphor, scan, sheet

#### S03-G02C

Beam position/section; spatial/spectral distribution; polarisation, absorption cross section; half-life

# S03-G02C1 [1992]

#### **Beam measurements**

Covers position or section measurements. Faraday cup

S03-G02C1A [1992]

Beam polarisation

S03-G02C1C [1992]

#### Cross section

Beam area, absorption, barn

# S03-G02C3 [1992]

# **Radiation spectrometers**

Includes, e.g. X-ray or Mössbauer spectrometers. Note: This code is reserved for analysing nuclear radiation for the purest of reasons, e.g. at a nuclear power station or a nuclear research institute.

Using nuclear radiation (X-rays, neutrons, gamma rays etc.) to analyse material properties is covered by S03-E06 codes, e.g. S03-E06D.

# S03-G02C5 [1992]

# Half life measurements

Decay

S03-G05 [1992]

Calibration, testing and compensation aspects

# S03-H [2005]

# General scientific instrumentation technology details

These codes can be used with S01 and S02 instrumentation types, except for the S03-H03 codes. For testing, calibration or compensation, see relevant sections in S01 and S02.

# S03-H01 [2005]

# Lab on Chip and Microarray technology

These codes are used in combination with other S03 codes to denote specific technology types. For general automatic analysis equipment, see S03-E15. See also U13-D04 codes for semiconductor based technology. For instrumentation using electrochemical techniques, see S03-E03 codes. LOC, Lab-on-chip

# S03-H01A [2005]

# **Microarrays and Biochips**

(S03-E15)

See relevant S03 codes for detection type. See S03-E09F for Immunoassay techniques. Prior to 2005, see S03-E15.

DNA Chip, Protein Chip, GeneChip™

# S03-H01B [2005]

### Microfluidic instrumentation

#### S03-H02 [2005]

#### Micro/nanometre scale instrumentation

See also V06 codes for micro and nano-scale actuators/motors/sensors and U12-B03F codes for MEMS/NEMS technology in general.

#### S03-H02A [2005]

# Micrometre scale instrumentation

In general, covers instrumentation technology involving manipulation or manufacture at a scale of greater than 0.1 microns.

# S03-H02B [2005]

### Nanometre scale instrumentation

In general, covers instrumentation technology involving manipulation or manufacture beneath 0.1 microns, or 100 nanometres.

# S03-H03 [2005]

#### Testing, compensation and calibration

These codes are used to indicate general testing, calibration or compensation for S03 equipment. Note that some areas of S03 already have testing, calibration and compensation codes. Where these codes already exist, they take precedence over S03-H03, e.g. S03-A05 codes, S03-C10 and S03-E04P. Prior to 2005, see S02-K and S01-J02.

S03-H03A [2005]

**Testing** 

S03-H03B [2005]

Compensation

S03-H03C [2005]

Calibration

#### **S04: Clocks and Timers**

All aspects of clocks and watches are included, whether electrical or not.

#### S04-A

# Mechanical aspects of clocks and watches

# S04-A01

# Drive, geartrains, escapements, balances etc.

Includes clutch mechanisms, weights, chains, mainsprings etc.

Gear, wheel, pendulum, movement, pivot, adjust

#### S04-A02

#### **Time indication**

Hour, rotating, analogue, face, indicia, minute

#### S04-A02A

### Hands, dials, drums

Sundials are in S04-A09 only.

Face, disc, display, timepiece, concentric, ring

#### S04-A02B

# Day, date, tide or local time indicators

Calendar, display, zone, disc, window, world, month, ring, year

#### S04-A02X

#### Other (time indication)

Includes illumination, striking, alarms, ringing, etc. *Bell, chime, light* 

#### S04-A03

#### Winding; setting

Including clutch wheel and locking bar mechanisms.

Adjust, hand, spring, compress, pushbutton

#### S04-A04

#### Cases, glasses

Display, window

# S04-A04A

### Constructions

Includes watch straps and clock stands. Details of watch straps are also coded under P23-C02. Ring, seal, mount, housing, plastics, body, face, frame

### S04-A04A1 [1992]

#### **Anti-magnetic shielding**

#### S04-A04A2

#### Water-proofing

#### S04-A04B

#### Materials and manufacture

Glass, metal, titanium, alloy, nitride, aluminium, carbide, coating, deposit, film, jewel, bind

[1992]

#### S04-A05

### Frameworks, bearings, calipers

Plate, metal, plastics, rotor, spring, wheel

#### S04-A09

#### Other (mechanical aspects)

Includes combination of timepieces with other measuring instruments. Metronomes, sundials, hourglasses and other gravitational timepieces. *Dial, display, compass, magnetic* 

#### S04-B

# **Electrical aspects of clocks and watches**

Smartwatch devices are primarily classed as wearable computers (T01-M06A1D). See also S05-D01 codes for physiological measurements, and W04-X01A1 for performance-related measurements during sports or fitness training.

# S04-B01 [1983]

# Power supplies; electrical winding; motor driven time indication

Inverter, voltage, capacitor, control

#### S04-B01A [1983]

#### Power supplies; electrical winding

For batteries see X16, for solar cells see X15-A02, U12-A02A codes.

#### S04-B01B [1983]

#### Motor driven time indication

For stepper motors see also V06-M05. For motor control see also V06-N codes, e.g. V06-N01. Rotor, drive, stator, pulse, synchronous, pole, circuit, current, analogue, switch, gear, magnetic

#### S04-B02

# **Oscillators**

#### S04-B02A

#### Balances, pendulums, tuning forks

Drive, movement, spring

#### S04-B02B

#### Quartz

Crystal, piezoelectric, resonance, trimmer

#### S04-B02X

#### Other (oscillators)

Includes laser and maser oscillators (see also V08-A01A and V08-B) and atomic clocks. Atomic oscillators are covered by U23-A06 from 2016 (pre-2016 by U23-D02). Time and frequency standards are also coded in S04-C09.

Beam

#### S04-B03

# Timing chains; setting

Includes drive blocking and radio transmission aspects.

Display, counter, divider, memory, digital, microprocessor

#### S04-B04

### **Electronic displays**

# S04-B04A [1992]

# **Electro-optic displays**

Includes lamps, LEDs, LCDs etc.

Digital, liquid, indicate, segment, analogue,

# S04-B05

calendar, date

# Acoustical time indication; alarms

For combined radio/alarm appts. see also W03-G03A. Piezoelectric devices, buzzers etc. are in V06 also.

Signal, sound, frequency, tone

### S04-B05A [1992]

#### Musical animation

Nursery

#### S04-B06

# Master slave clocks and radio controlled setting

Radio and line transmission details of timing signals, drive mechanisms, pulse transmission systems etc. Signal, control, circuit, receive, adjust, phase, reference, standard time signal, MSF, WWV, DCF-77

S04-B07 [1992]

**Braille clock** 

Blind

S04-B08 [1992]

Motion clock, e.g. cuckoo or movable drum

# S04-B09 [1980]

#### Other (electrical aspects)

Includes casings and manufacture for electronic timepieces. Clocks/watches integral with gaming, cooking, medical etc. devices. All aspects of circuitry specifically for timepieces.

Memory, radio, dial, smartwatch

#### S04-C

#### **Timers**

Circuit, control, automatic, program

#### S04-C01

#### Time switches

If switch details are claimed, then see V03-C08 also. For cooking appliances see X27-C. For washing/drying appliances see X27-D.

Cam, set, circuit, domestic, drive, mechanism, contact, rotating, washing, cycle

#### S04-C02

#### Timer clocks

For cooking appliances see also X27-C. For audio/video appts. see also T03, W03, W04. Switch, set, interval, select

#### S04-C02A [1992]

#### Including time indicator or alarm

# S04-C02X [1992]

Other (timer clocks)

#### S04-C03

# Measuring unknown time intervals

For sports equipment see W04-X. Includes stopwatches.

Counter, period, start-stop, elapsed, oscillator, hand, second

# S04-C03A [1992]

### Measuring methods and equipment per se

S04-C03C [1992]

**Applications** 

#### S04-C03C1 [1992]

# Measuring electronic signals and pulse duration

See also S01-D06.

# S04-C03C2

[1992]

# Measuring duration of activities, operations, and events

See T05-G for specific monitoring of vehicles, machines, etc.

S04-C03X

[1992]

Other (time interval measurements)

S04-C07

[1992]

Colour change time indication, e.g. for perishable goods

#### S04-C09

# Other (timer aspects)

Includes time and frequency standards (see also S04-B02X) and also electronic metronomes and hour-glass type timers. For clocks using gravitational effects see S04-A09 also.

Frequency, standard, atomic, resonance, select, interval, program, pulse, stabilised, adjust, microprocessor, molecular, oscillator, count, delay

# S04-D

# Watchmakers' tools

Includes tweezers, eyepieces, measuring and calibrating appts., and relevant electronic test gear.

# S04-E

[1992]

# Time recording

Includes e.g. time clock for employees.

# **S05: Electrical Medical Equipment**

Electrical aspects only are included, except for documents with A61N IPC, which guarantees inclusion whether electrical or not.

#### S05-A

# **Therapy**

For treatment of abnormal cells/tissues etc. using non- or minimally invasive equipment, e.g. electrotherapy, magnetotherapy, radiation therapy, ultrasound therapy etc. See S05-B codes for corresponding surgical equipment, and S05-D codes for measurement of bioelectric currents.

Condition, treat, beauty, patient

#### S05-A01

# Heart pacemakers and defibrillators

Includes all aspects of electrical cardiovascular stimulation.

Cardiac, sense, implant, lead, pulse, atrium, control, tissue, ventricle, physiological, time

#### S05-A01A [1992]

#### **Pacemakers**

Includes general heart stimulation arrangements.

# S05-A01A1 [1992]

# **Demand pacemakers**

Includes pacemakers controlled by physiological parameter e.g. heart biopotential.

#### S05-A01A5 [1992]

# **Programming and control aspects**

Includes programmed control of pacemakers, e.g. using stored program. See T01-J06A for data processing in medical applications.

# S05-A01A5A [1997]

# Remote programming and control

(S05-A01A5)

Includes arrangements for programming and controlling operation from external source, e.g. for modifying version of control program.

# S05-A01B [1997]

### **Defibrillators**

(S05-A01)

Can be used for both internal and external defibrillators.

# S05-A01C [1997]

#### Power supplies and storage

(S05-A01)

Includes power supplies and storage for all implanted heart therapy equipment, and charge storage arrangements for defibrillators. See U24 codes for power supplies in general, and X16 codes for power storage aspects.

#### S05-A02

### **Electrodes and connecting leads**

Includes any apparatus attached to or through skin for purpose of applying electric field or current. If current application is also claimed then see also S05-A04.

Contact, lead, connect, conducting, implant, stimulating, flexible

# S05-A02A [1997]

#### For stimulation of heart

(S05-A02)

Covers electrodes used in conjunction with pacemaker or defibrillator.

# S05-A02B [1997]

#### For stimulation of nervous system

(S05-A02)

Covers electrodes used to apply current to muscles or nervous system for e.g. pain relief, i.e. TENS.

# S05-A03

# Radiation/Ultrasonic therapy (including magnetic fields)

Including optical, magnetic, X-ray irradiation, and protection from undesirable radiation.

Frequency, hyperthermia, beam, electromagnet, isotope

#### S05-A03A [1983]

# Optical radiation (including IR, UV and Laser)

Laser apparatus is in V08 also. For UV and sun-ray lamp apparatus see X27-A02A2 also. Lamps per se are also in X26. Radiation therapy using visible light is in S05-A03A9 only.

Ultraviolet, tan, lamp, cooling, lens, sun, beam

#### S05-A03A1 [1997]

#### Infrared

(S05-A03A)

Includes application of heat from Infrared source. See also S05-A05B for heat therapy in general.

#### S05-A03A2 [1997]

#### Laser

(S05-A03A)

Includes laser for cosmetic use, e.g. laser hair and tattoo removal.

#### S05-A03A3 [1997]

# **Ultraviolet**

(S05-A03A)

#### S05-A03A9 [1997]

# Other light, including visible light spectrum

(S05-A03)

#### S05-A03B [1997]

# **Electric fields therapy**

(S05-A03)

Includes application of static electricity and electric fields. From 2016, all RF-based therapy inventions are coded in S05-A03D. Prior to 2016, RF-based therapy inventions were coded in S05-A03B or S05-A03X depending on novel aspect.

# S05-A03C

### Sonic or ultrasonic therapy

(S05-A03)

See S05-B02 for ultrasonic surgical equipment e.g. lithotripsy, and S05-A05 for massage using ultrasound. Infra-sonic can also be coded here. For music therapy see S05-A09.

#### S05-A03D [1997]

# Microwave and other radio-frequency (RF) therapy

(S05-A03)

From 2016 includes all RF-based therapy. Prior to 2016, inventions were coded in S05-A03B or S05-A03X depending on novel aspect. See X25 for microwave heating.

#### S05-A03E [1997]

### **Magnetic fields**

(S05-A03)

Includes all aspects of magnetotherapy e.g. using magnetic fields produced by coils or permanent magnets, applied externally, or internally using implanted elements.

#### S05-A03E1 [2002]

### Magnetotherapy

(S05-A03)

Includes use of permanent magnets, e.g. traditional Chinese medicine.

#### S05-A03E2 [2002]

#### **Electromagnetic therapy**

#### S05-A03F [1997]

# **Using X-Rays**

(S05-A03)

See S05-D02 codes for X-Ray diagnostic equipment.

#### S05-A03X [1997]

#### Other radiation

(S05-A03)

Includes Gamma-ray therapy and particle irradiation therapy.

Brachytherapy

#### S05-A04 [1983]

# **Applying currents**

(S05-A09)

Electrodes per se are also in S05-A02. Includes all aspects of nerve, muscle and skin stimulation for e.g. pain relief, i.e. transcutaneous electrical nerve stimulation, and also depilation.

Pulse, frequency, implant, HF, muscle, regulate, ECT, TENS, depilation

#### S05-A04A [1992]

### **Iontophoresis**

See also S05-J02 for administering drugs through the skin.

#### S05-A05 [1983]

# Physical therapy, massage, acupuncture

(S05-A09, S05-X)

Not steam baths, saunas, etc. These are coded under S05-A09 and X27-E03A1 only. Includes massagers using ultrasound. See W04-X01A for sports training equipment. See X27-A02A2 for massage/vibrators.

Exercise, cycle, treadmill, vibration, heat, limb, movement, mechanical

#### S05-A05A [1997]

# Artificial respiration and cardiac assistance

(S05-A05)

For cardiac assistance and respiratory aids using e.g. heart massage, pumping and applied pressure etc. Applying electric currents for heart stimulation is coded in S05-A01. Respiratory aids using e.g. gas or air are coded in S05-G02E.

Pump, squeeze, pressure, cardiac wrap/harness

# S05-A05B [2002]

### Heat and cooling therapy

Therapy using direct application of heat. Also includes therapy using cooling techniques.

# S05-A05C [2005]

# Massage

Massage details for domestic items, such as beds, chairs, beauty treatment, etc. are also coded under X27-A02A2.

S05-A05D [2005]

**Acupuncture** 

S05-A05E [2007]

**Physical therapy** 

S05-A07 [1992]

# Eye exercise, strengthening defective eye muscles

Optical

#### S05-A09

# Other (e.g. speech therapy, relaxation therapy)

Includes electrical aspects of e.g. aromatherapy and homeopathy, steam baths, saunas etc., audio relaxation, deaf/dumb speech therapy, insomnia curing apparatus, air cleaners and filters.

#### S05-A10 [2006]

### Patient positioning for therapy

Used for cases where the novelty is in the positioning of a patient rather than in the therapeutic device itself.

#### S05-B

# Surgery

Surgical instruments, devices and equipment. See S05-A codes for therapeutic equipment. Anaesthesia apparatus is in S05-L. Diagnostic endoscopes are in S05-D04.

Instrument, shock, wave, tissue, pressure, coagulate, incision, cut, cauterisation

# S05-B01 [1992]

#### Using laser, IR, or UV

Includes all aspects of laser surgery. Light, optical, beam, focus

# S05-B02 [1992]

#### Using sonic or ultrasonic equipment

Includes extracorporeal shock-wave lithotripsy e.g. using ultrasonic waves. See V06 for details of ultrasonic transducers.

Lithotripsy, stone, concretion

# S05-B03 [1992]

# Using mechanical or electrical equipment

Includes electrosurgical apparatus and electrosurgical cauterisation instruments.

### S05-B04 [1992]

#### Monitoring during surgery

From 2006, S05-B04 codes cover monitoring during the complete surgery, including the patient (S05-B04B), the surgical instruments (S05-B04A1) and the surgical procedure per se (S05-B04A).

#### S05-B04A [1997]

# Monitoring of surgical apparatus/procedure

For monitoring status of surgical equipment during surgery, e.g. temperature of cauterisation appts., power used by ablation appts. etc. From 2006, also includes monitoring progress of surgical procedure itself, e.g. amount of tissue removed, status of tissue surrounding operation site etc. Also includes intraoperative imaging appts/methods.

#### S05-B04A1 [2006]

### Monitoring location of surgical instruments

(S05-B09)

Includes equipment for tracking the location of surgical instruments inserted into patient, and monitoring location of instruments in the operating theatre, e.g. instrument tags, swab counters etc. Prior to 2006 coded in S05-B04A.

Tagging, swab

#### S05-B04B [2006]

#### Monitoring patient during surgery

For monitoring vital signs, etc. of patient during surgery. Prior to 2006 coded in S05-B04.

#### S05-B05 [1997]

#### **Endoscopic surgery**

(S05-B09)

Includes apparatus for keyhole surgery. See S05-D04 for diagnostic endoscopes.

#### S05-B06 [2002]

#### Cryosurgery

Cryogenics

# S05-B07 [2005]

# Remote control and automated/robotic surgical systems

All aspects of automated / robotic systems used in surgical procedures including 5G wireless networkenabled telesurgery devices.

#### S05-B09

[1992]

#### Other (Surgical equipment)

Irrigation

#### S05-C

# Medical analysis of biological materials

S05-C codes cover electrical aspects only. See S03-E13 codes for sampling, S03-E14H codes for specific sample types and other relevant S03 codes for specific testing techniques. Includes polymerase chain reaction (PCR) testing for medical applications. See also B11-C08E3, B11-C08N, C11-C08E3, C11-C08N and D05-H18B codes.

Sample, cell, liquid, microscope, measure

#### S05-C01

#### **Blood**

See also S03-E14H1. Breathalysers are in S05-C09. Covers in-vitro testing.

Flow, fluid, monitor, test, coagulate, corpuscle

#### S05-C02 [1997]

#### **Biological fluids**

(S05-C09)

For medical analysis of biological fluids such as urine, semen, saliva, phlegm. See also S03-E14H9. *Urine* 

# S05-C03 [1997]

# **Biological tissues**

(S05-C09)

In-vitro analysis of tissue samples for detection of abnormal cells from e.g. biopsy. See also S03-E14H6.

Biopsy, culture, cell

# S05-C05 [1992]

# For testing medicine, drugs

See also S03-E14A1.

#### S05-C09

# Other (analysis of biological materials)

Includes breathalysers (see also S03-E14H9) and electrical DNA analysis (see also S03-E14H3).

Measure, chamber, fluid, test, assay, electrophoresis, DNA, ultrasonic

#### S05-D

#### **Electrical diagnosis**

#### S05-D01

#### Measuring and recording systems

For indicating and recording in general see also S02-K. For details of wearable computing / fitness sports training devices see also T01-M06A1D and W04-X01A1.

Electrode, data, display, monitor, physiological, process, image, probe, transducer

#### S05-D01A

#### For bioelectric currents

Including measuring neurological and nerve stimulation, electrodes, physiological testing and encephalographic apparatus.

Conducting, potential, brain, EEG, physiological

#### S05-D01A1

[1983]

# **Electrocardiographs**

ECG, EKG, signal, cardiac, heart, lead, tachycardia, bradycardia, fibrillation, QRS complex

# S05-D01A1A [1997]

#### **Electrodes**

(S05-D01A1)

Includes electrodes adapted for ECG measurements e.g. scalp, chest etc. Scalp, foetal monitoring, cardiography

#### S05-D01A2 [1997]

# **Neurological currents and signals**

(S05-D01A)

Includes measurement of neurological bioelectric currents and signals e.g. electroencephalography, electromyography, magnetoencephalography etc. *EMG*, *EEG*, *MEG*, *squid* 

# S05-D01A2A [1997]

#### **Electrodes**

(S05-D01A)

Electrodes for detecting bioelectric signals other than ECG, i.e. EEG, EMG e.g. needle electrodes.

# S05-D01B

#### For heart rate, blood pressure

Pressure measuring devices are also in S02-F04 codes for flow measuring see also S02-C. Includes vein and artery wall thickness and blockage measurement.

Catheter, pulse, ultrasonic

# S05-D01B1 [1983]

#### **Blood pressure or flow**

Sphygmomanometer, Korotkoff, cuff, Doppler, fluid, electro-arteriograph

### S05-D01B1A [1997]

# **Blood pressure**

(S05-D01B1)

# S05-D01B1B [1997]

#### **Blood flow**

(S05-D01B1)

Includes measurements of blood flow velocity and cardiac output.

Tracer, thermo-dilution, catheter

# S05-D01B5 [1983]

#### Heart rate, pulse

Measuring or recording pulse. See S05-A05 for exercise.

Cardiac, frequency, stethoscope

#### S05-D01C

### For lungs, body shape, or movement

# S05-D01C1 [1983]

### Lungs and respiration

Includes all aspects of breathing, exhaled air gas content and volume measurement.

See S05-C09 for breathalysing for e.g. alcohol or drug content.

Pressure, expire, inhale

# S05-D01C5 [1983]

#### **Body shape or movement**

Detecting, measuring or recording systems for testing shape, size and movement of body parts; e.g. bone and muscle strength and dimension measurements.

Position, limb, gait, posture

### S05-D01C5A [1992]

# Measurements for non-medical purposes

Includes fingerprint identification, driver alertness sensors and determining eye movements for use in controlling aircraft, etc.

Gaze

# S05-D01C7 [2020]

#### Sleep monitoring

For monitoring sleep patterns and other sleep parameters. Used in conjunction with other S05 codes depending on specific monitoring and measurement technologies.

#### S05-D01D

# Using electric currents or magnetic fields

Includes all aspects of electrical current, voltage, and frequency measurement not covered elsewhere in S05-D01. NMR diagnosis is in S05-D02B only. From 2006, audiometering is coded under S05-D01D2 only.

Electrode, sense, frequency, tone, ear, generator, skin, polygraph

[1997]

#### S05-D01D1

# **Body impedance measurements**

(S05-D01D)

# S05-D01D2 [2006]

### **Audiometering**

Hearing test

# S05-D01E [1992]

### For body temperature measurement

Thermometer

### S05-D01F [1992]

# For reflex and reaction measurement

#### S05-D01G [1992]

### In-vivo blood composition measurement

Includes in-vivo measurements of blood characteristics e.g. blood gas concentration, pH value, glucose monitoring.

Oximeter

### S05-D01H [1992]

# Stethoscopes

Instruments for auscultation. See V06 for acoustic transducers.

# S05-D01J [1997]

# Tissue, bone content and properties measurement

(S05-D01C5)

Includes measurement of bone density, bone mineral content, water, fat content and properties such as tissue elasticity etc. See S05-D01G for invivo blood composition measurement.

Bone marrow, bone mineral

# S05-D01K [2005]

# **Internal Pressure Measurement**

Blood pressure measurement is coded in S05-D01B1A only, and Intraocular pressure measurement is coded in S05-D05 only.

Cystometer

# S05-D01L [2006]

#### In-vivo fluid measurement

This code is for in-vivo measurement of bodily fluids other than blood. Includes spinal fluid, stomach acid, urine, sperm etc. For in-vivo blood measurement, see S05-D01G only.

Spinal fluid, stomach acid, urine, sperm

#### S05-D01X

#### Other (Psychotechnics)

Includes pain threshold sensing. *Psychotechnics, mental state* 

#### S05-D02

# **Radiation diagnosis**

See S03-E06 codes for analysis by radiation in general. See S05-A codes for therapeutic equipment using radiation e.g. X-Rays. For nuclear or X-radiation measurement see also S03-G02 codes. Video cameras/signal generation - see also W04-M01F.

Image, phosphor, stimulable sheet, light, radiographic, read-out, tomography, scintillation

#### S05-D02A

# **Using X-rays**

Radiographic, support, dental, image, source

# S05-D02A1 [1983]

### **Tomography**

Computer, source, beam, CAT, CT, project

#### S05-D02A3 [1983]

## Generating X-rays; protection

Includes equipment for protection from radiation and safety aspects. See V05-E codes for X-ray tubes and control in general.

Voltage, beam, source, anode, radiographic, cathode

# S05-D02A5 [1983]

# Recording; analysing

Film, light, video, intensify, radiate, radiographic, display, ray, cassette

# S05-D02A5A [1992]

#### **Photographic**

Electrical aspects of film cartridge and developing apparatus are also coded in S06.

# S05-D02A5B [1992]

#### Video

For X-ray TV system see also W04-M01F, and V05-D for tube aspects.

Fluoroscopy, feature

#### S05-D02A5C [1992]

#### Stimulable sheet phosphor

See also S06-K99G and S03-E06B3. See also V05-M01C codes for image storage screens.

#### S05-D02A5D [2002]

#### Other detectors

Includes, for example, photon detectors.

# S05-D02A5E [1992]

### **Processing of recorded image**

Includes all aspects of processing recorded X-ray image for e.g. storage, enhancement, analysis, enlargement, rotation etc. See T01-J10 codes for image processing using digital computers, and T01-J06A for data processing systems for medical applications.

### S05-D02A6 [1992]

X-ray table, positioning

#### S05-D02A6A [1997]

Positioning X-ray source

#### S05-D02A6B [1997]

**Positioning X-ray detector** 

### S05-D02A7 [2006]

#### X-ray contrast media

See also S03-E09X for contrast agents.

# S05-D02B [1992]

#### **NMR** diagnosis

(S05-D02X)

# S05-D02B1 [1992]

# NMR equipment, magnet, RF pulse generator

See also S01-E02A and S03-E07 codes for MRI/NMR measurements in general.

[1992]

#### S05-D02B2

#### Image processing, analysing

Includes processing of recorded image for e.g. enhancement, enlargement, analysis etc. See T01-J10 codes for image processing, and T01-J06A for medical data processing systems.

# S05-D02B3 [1992]

#### MRI contrast media

See also S03-E09X for contrast agents.

#### S05-D02B4 [2006]

### Adaptations for MRI compatibility

Adaptations to electrical medical appts. for use in MRI environment or for mitigating unwanted effects due to MRI procedures, e.g. shielding for implanted devices.

# S05-D02C [1992]

# **Using nuclear radiation**

Covers cases in which radiopharmaceutical is injected into patient. Includes gamma camera, SPECT and PET. See also S03-G02B3.

#### S05-D02E [1992]

# Patient table, patient positioning

Operating tables specifically for scanning are in S05-D02E only, not S05-G.

#### S05-D02X

# Other (radiation diagnosis, e.g. optical)

Includes use of radiation e.g. thermal, optical, microwave radiation for investigating physical or chemical properties. Includes lamp, laser, UV, Infrared equipment.

Resonance, radiate, spin, echo, frequency phase, IR, UV, light

#### S05-D03

### Ultrasonic diagnosis

See S03-E08 codes for sonic and ultrasonic testing in general.

Ultrasound, image, linear scan, sector scan, echo, frequency, probe, acoustic, tissue, blood

# S05-D03A [1992]

#### **Transducers**

Includes general transducer aspects. See also V06. *Piezoelectric* 

# S05-D03A1 [1992]

# **Device details**

Acoustic, ultrasonic diagnostic transducers, magnetostrictive, electrostrictive, crystal, ceramic

# S05-D03A2 [1992]

# **Arrangements of transducers**

Includes transducer arrangements for transmission and reception of ultrasonic waves, e.g. array.

Ultrasonic transducer array

# S05-D03B [1992]

### **Equipment other than transducers**

# S05-D03C [2006]

#### Ultrasound contrast media

See also S03-E09X for contrast agents.

#### S05-D03E [1992]

## Image processing and analysing

For processing recorded image for e.g. enhancement, storage and analysis. See T01-J10 for image processing in general, and T01-J06A for medical data processing systems.

# S05-D04 [1983]

# **Endoscopes**

(S05-D09)

For endoscopic surgical equipment see S05-B05. See also S02-J04B3C and V07-N02 for optical fiber details.

Light, optical fiber, image, illuminate, reflect, laser, arthroscope, laparoscope, colonoscope

#### S05-D04A [1997]

#### Control aspects

(S05-D04)

Covers arrangements for controlling movement and positioning of endoscopes within body.

Endoscope positioning, endoscope control

# S05-D04B [1997]

#### **Imaging aspects**

(S05-D04)

Includes equipment for capturing image of internal organs/cavities, e.g. video camera, CCD, ultrasound etc. See W04-M01 codes for video camera equipment.

#### S05-D05 [1992]

# Eye testing, examination

(S05-D09)

Includes all arrangements for examining the eye for diagnostic purposes; e.g. determining cornea shape, examining eye fundus, measuring cornea curvature, intraocular pressure measurement, testing astigmatism, glaucoma etc. Detecting eye movements for controlling e.g. photographic camera, aircraft etc. is coded in S05-D01C5A.

Intraocular pressure, cornea, astigmatism, ophthalmoscope, ophthalmic, eye photography, gonioscope, glaucoma, patient chair

# S05-D06 [1997]

### **Diagnostic information systems**

Includes computer systems designed to aid in patient diagnosis e.g. expert systems and diagnostic databases. See T01-J16A for expert systems in general, and T01-J06A1 for medical information systems.

Information system, medical diagnostic database, medical expert system

#### S05-D06A [2005]

# **Telediagnosis**

Includes systems for patient diagnosis where patient and medical expert are in different geographical locations e.g. where patient's image, measurements etc. are transferred via internet, wireless telephone. N.B. Used for initial diagnosis of the patient only. For everyday monitoring of patients from remote locations, see S05-G02B2A.

### S05-D07 [1997]

# **Diagnostic displays and monitors**

Includes equipment for displaying diagnostic information, e.g. radiation images. See T04-H for visual display units, W05-E codes for general display arrangements, and W03 for television displays.

Terminal, monitoring, diagnostic display

#### S05-D08

[2005]

### **General diagnostic processing**

#### S05-D08A

[2005]

#### **General image processing**

Can be applied either when type of image isn't mentioned or when it isn't important.

#### S05-D08B

[2005]

# **General data processing**

Can be applied either when type of data isn't mentioned or when it isn't important.

#### S05-D09

#### Other electrical diagnosis

Including aspects of diagnosis associated with pregnancy e.g. conception, sex and ovulation determination. Includes measurements associated with nutritional management systems, e.g. diet planners, calorie counters.

Foetus, ovulation, gender, conception

#### S05-E

#### **Dentistry**

Electric toothbrushes are covered by X27-A02A3A only. For sterilising apparatus see also S05-G. Anaesthesia is also in S05-L.

Optical, motor, handpiece, tooth, grip, X-ray

#### S05-E01

[1992]

# **Dental surgery and treatment apparatus**

Includes apparatus for dental surgery and general dental treatment.

#### S05-E02

[1992]

# Peripherals, e.g. lamp or chair

Light

#### S05-E03

[1997]

# Diagnostic equipment and measurement e.g. X-rays

(S05-E)

Includes all electrical equipment for dental diagnosis and measurement. Includes initial electrical measurements for dental prosthetics design. See S05-D02 for radiation diagnosis in general.

#### S05-F

[1983]

#### **Prostheses**

Implant, artificial, larynx, nerve, stimulating, tactile

#### S05-F01

[1992]

#### Hearing aids

Includes only implanted hearing aids.(See W04-Y codes for all aspects of implanted and non-implanted hearing aids).

Ear, cochlea, deaf, sound

#### S05-F02

[1992]

#### Internal incontinence devices

#### S05-F03

[1992]

#### Arm or leg prostheses

Limb

#### S05-F04

[1992]

# **Artificial heart pumps**

Includes permanent artificial hearts only. Blood pumping and treatment circuits for use during surgery, and therapy e.g. dialysis, are coded in S05-H. Heart pacemakers are coded in S05-A01A codes only. Heart pump motors are also coded in X25-L03A.

### S05-F05 [1997]

#### Artificial aids for eyesight

Corneal implant, artificial eyes, contact lens

S05-F09 [1992]

### Other (prostheses)

Includes medical splints and face masks.

# S05-F10 [2024]

#### **Design of prosthetic devices**

Includes details for designing a prosthesis tailored to the patient's physical needs and lifestyle. See also T01-J15X for computer/software-based design, and T01-J06A for medical applications. This code is to be used with other S05-F codes to specify the type of prostheses designed, e.g. S05-F03 for arm/leg prostheses. Manufacturing details of prostheses are coded under P32-M.

Custom prosthetics

### S05-G [1983]

# Medical and Digital Health systems, hospital equipment, sterilization equipment

(S05-X)

For dentistry equipment see S05-E also.

#### S05-G01 [1992]

#### Sterilising

Includes electrical equipment for sterilising or disinfecting medical equipment only. For sterilization of medical waste before disposal see S05-W. For non-medical sterilisation or disinfection see X27.

#### S05-G01A [1992]

#### Using mechanical cleaning, or chemicals

Includes ultrasonic vibrations and disinfectant.

# S05-G01B [1992]

#### Using heat, radiation, or electricity

Sterilisation using hot gases, plasma or microwave radiation etc.

Ultraviolet, microwave, hot gas, steam

#### S05-G02 [1992]

# Medical and Digital Health systems, hospital equipment

Includes medical and healthcare IT systems. Also includes patient monitoring and life support systems, and equipment for use in operating theatres, doctor and dentist surgeries and ambulances.

Incubators, patient transport

### S05-G02A [1992]

#### For moving patients (includes wheelchairs)

Electric wheelchairs may also be coded as electric vehicles in X21, depending on claimed content.

Stretcher, trolley

# S05-G02B [1992]

#### Beds, nursing equipment

Monitor

#### S05-G02B1 [1997]

# Patient beds

(S05-G02B)

Includes beds configured for medical use; e.g. with adjustable frame, patient lifting apparatus, tiltable axes etc.

### S05-G02B2 [1997]

#### **Patient monitoring**

(S05-G02B)

Includes monitoring equipment for use by nurses for observation and long-term monitoring of e.g. unconscious patients in intensive care unit, ward etc. to determine change in condition, e.g. heart attack.

ITU, patient monitor

#### S05-G02B2A [1997]

# Monitoring patients from remote location

(S05-G02B)

Includes equipment for monitoring patients who are at home or other location remote from the hospital.

#### S05-G02B2B [1997]

#### Portable hospital equipment

Includes monitoring equipment for use in e.g. ambulance and equipment which may be carried easily by a person.

Ambulance equipment, portable patient monitor

#### S05-G02B3 [1997]

Life support systems

### S05-G02B3A [2002]

**Incubators for infants** 

# S05-G02C [1992]

#### Operating theatre equipment

Operating tables specifically for radiation diagnosis go in S05-D02E only.

# S05-G02D [1992]

#### **Nurse call systems**

See also W05-A, and W01-C04 codes for intercoms.

# S05-G02E [1997]

### Respiratory aids using gas

(S05-G02)

Includes devices for assisting respiratory system using gas, e.g. ventilators, inhalators etc., and monitoring mixture of supplied gas. See S05-A05A for assistance of respiration by e.g. mechanical/electrical means. See S05-D01C1 for aspects of breathing, exhaled air gas content and volume measurement.

Ventilator, breathing aid, inhalator

#### S05-G02F [2006]

#### Tissue and fluid extraction equipment

Electrical novelty in equipment used to withdraw fluids and tissue, e.g. for testing, therapy.

#### S05-G02G [1992]

#### **Medical IT systems**

See also relevant T01 codes for computing aspects. Hospital asset management, inventory

# S05-G02G1 [1997]

#### Patient's medical records

(S05-G02G)

For patient record storage and administration in e.g. hospital. See T01-J05B for database aspects. *Electronic patient record, EPR* 

#### S05-G02G2 [1997]

#### **Health care administration**

(S05-G02G)

Includes health administration and insurance processing systems. See T01-J05A2 for administration using computers in general. Health care scheduling, health insurance, health cover

#### S05-G02G3 [2005]

# Data transfer/storage methods and apparatus

(S05-G02G)

Includes all aspects of data transfer between medical equipment, from equipment to central database or from remote location to medical centre. Includes encryption, image compression, access control, network or database details, etc.

# S05-G02G4 [2006]

#### **Treatment planning systems**

This code is used for systems such as radiotherapy planning systems, wherein for example the size, shape and location of a tumour are used to calculate the most effective positioning and intensity of X-ray generators. Can be used with S05-A or S05-B codes if system is integral with therapeutic or surgical apparatus.

# S05-G02G5 [2020]

#### Pharmacovigilance systems

Control, analysis and management of systems for recording and analyzing data associated with pharmacovigilance, clinical trials, drug screening etc.

#### S05-G02G9 [2005]

# Other medical IT systems methods/apparatus

(S05-G02G)

Includes medical surveys, population screening etc.

### S05-G02H [2021]

#### Nursing trolleys, carts

Electrical details of trolleys and similar equipment used in hospitals.

# S05-G02X [2012]

### Other hospital equipment

Includes special equipment used in hospital bathrooms, such as baths for patients with lower body bone fractures or whole body bone fractures. Includes equipment used outside hospitals e.g. at doctor surgeries etc. (equipment used in dental surgeries is coded under S05-E02 only) and electrical aspects of wearable devices, hospital clothing and household medical equipment. Gynaecological lamp, RFID belts

# S05-H [1983]

#### Dialysis; pumping

(S05-X)

Permanent artificial hearts are coded in S05-F04 only, even if pumping aspects are claimed. Includes all aspects of filtering. Electrical aspects of pumps are also coded in X25-L03A.

Blood, flow, fluid, valve, piston, chamber, hemodialysis, liquid, monitor, kidney

### S05-H01 [1997]

#### Dialysis and blood treatment circuits

(S05-H)

Covers all aspects of blood treatment; blood oxygenators, filtering, artificial kidneys, dialysis systems etc.

Haemofiltration, diafiltration, oxygenator, blood treatment, peritoneal

# S05-H02 [1997]

# **Blood pumping systems**

(S05-H)

Transfusion, blood pump, circulatory assistance

# S05-J [1983]

#### Infusion

Includes all electrical aspects of syringes and intravenous fluid administering and control apparatus. For anaesthetic administration control see S05-L also.

Pump, reservoir, drug, valve, volume, deliver, meter, chamber, implant, membrane

S05-J01 [1992]

Fluids

Liquid, flow

S05-J01A [1992]

### Monitoring of intravenous fluid delivery

# S05-J02 [1992]

# **Drugs through skin**

Delivery of drugs for anaesthesia is coded in S05-L02. See also S05-A04A for iontophoresis.

S05-K [1992]

# Aids for handicapped people (e.g. Braille devices)

(S05-X)

Blind, obstacle detection

S05-K01 [1997]

#### **Mobility aids**

Invalid vehicle, vehicle access, invalid mobility

# S05-L [1992]

# Anaesthesia

(S05-X)

### S05-L01 [1997]

# **Gas delivery systems**

(S05-L)

#### S05-L02 [1997]

# Intravenous or intramuscular delivery systems

(S05-L)

Local anaesthesia, relaxation, analgesia

# S05-M [1992]

#### Electrical drug storage and dosing

(S05-X)

Manufacturing details of medicines, tablets, etc. are not coded under S05-M, but under X25-P02 (electrical details only).

#### S05-M01 [1997]

#### **Drug delivery systems**

(S05-M)

Drug dosing, drug delivery, dispenser

# S05-M02 [1997]

### Monitoring medication compliance

(S05-M

Arrangements for indicating time for taking medicine, programmed dispensers, monitoring medicines taken etc.

Regime, pill counter, timer

# S05-M03 [1997]

# **Drug storage systems**

(S05-M)

Includes storage facilities for drugs, etc. in hospitals, doctors' surgeries.

#### S05-M04 [1997]

# Ventilator systems with medication

(S05-M)

See S05-G02E for respiratory aids e.g. ventilators.  ${\it Inhaler}$ 

#### S05-M05 [2019]

# Pharmaceutical dispensing and delivery systems

Includes dispensing and delivery of medical prescriptions within hospitals and other pharmacies. *Pharmacy, Dispensary* 

# S05-P [1997]

#### **Medical simulation systems**

For medical education using training and simulation aids, i.e. for training in medical procedures e.g. surgical, therapeutic, analysis, nursing etc. See W04-W07 for simulator systems, training and demonstration, T01-J15H for simulation of non-electronic systems, and T01-J06A for data processing in medicine. See also P85-A codes, in particular P85-A01G, for non-electrical aspects. *Medical education, medical simulation, medical training* 

# S05-V [2006]

#### Veterinary

This code is to highlight veterinary application and can be used in conjunction with other S05 codes which highlight novelty. See also X25-N02 codes. Prior to Jan 2007 these were coded in S05-X. *Veterinary* 

# S05-W [2015]

#### Medical waste management

Sterilization of medical waste before disposal. For sterilising or disinfecting medical equipment only see S05-G01. Includes recycling aspects. See also X25-W01 and X27-D.

### S05-X

### Miscellaneous

From 2007, veterinary applications are coded under S05-V only. Includes teaching, transplanting, atomising and enuresis detection. For teaching involving training and simulations aids, see also S05-P

Air, respiration, valve, flow, patient, infant, pressure, gas

### S05-Y [2005]

#### Additional medical device details

# S05-Y01 [2005]

# Testing and monitoring of medical equipment and systems

Includes methods and apparatus for alerting an operator when an abnormality occurs in an electrical medical apparatus.

S05-Y02 [2005]

Nano/micro scale medical devices

S05-Y03 [2005]
Implantable medical devices

S05-Y04 [20 Ingestible medical devices

# S05-Y05 [2006]

# Control, monitoring and communication of internal devices

[2005]

Includes e.g. magnetic control of ingestible devices, remote monitoring of implanted devices etc. Can be used in conjunction with specific device codes. See also W05-D codes for remote control, communication and monitoring apparatus per se.

# S05-Y07 [2019]

# Manufacture of medical equipment

Includes manufacturing of diagnostic and surgical equipment.

#### **S06: Printing and Photography**

### S06-A\*

[1980-2009]

# Electrography, electrophotography, magnetography

\*This code is now discontinued, see S06-D to K. Includes electrical and non-electrical aspects. Copier, copy, image, photocopier

#### S06-A01\*

[1980-2009]

### **Recording members**

\*This code is now discontinued, see S06-E01.

Layer, charge, conducting, image, surface, acceptor, compound, donor, dope

#### S06-A01A\*

[1980-2009]

# **Photoconductive layers**

\*This code is now discontinued, see S06-E01A. Includes all types of charge-generating layers and photosensitive paper.

Hydrazone, photoreceiver, accept

#### S06-A01A1\*

[1980-2009]

#### **Organic photoconductive layers**

\*This code is now discontinued, see S06-E01A1. *Cyclic, polycyclic, heterocyclic, quinone* 

#### S06-A01A2\*

[1980-2009]

# Inorganic photoconductive layers

\*This code is now discontinued, see S06-E01A2. Amorphous, silicon, selenium, carry, dope, surface, oxide, polycrystalline

#### S06-A01A3\*

[1980-2009]

#### Sensitisers; binding materials

\*This code is now discontinued, see S06-E01A3. Dye, composition, photosensitiser, organic, oxidative potential

#### S06-A01A4\*

[2007-2009]

#### **Treatment of recording members**

\*This code is now discontinued, see S06-E01A4. Includes application of a lubricant to the surface of the drum, etc.

#### S06-A01A9\*

[1980-2009]

### Other (photoconductive layer aspects)

\*This code is now discontinued, see S06-E01A9. Includes aspects of photoconductive belt/drum not covered by other S06 codes.

#### S06-A01B\*

[1980-2009]

#### Carriers; intermediate or cover layers

\*This code is now discontinued, see S06-E01B. Sensitive, image, amorphorous, coating, drum, base layer, protective layer.

#### S06-A01D\*

[1997-2009]

# Manufacture of recording members for magneto-, electro(photo)-graphy

\*This code is now discontinued, see S06-E01C. Includes deposition of layers on drum. Depositing

#### S06-A01D1\*

[1997-2009]

# Apparatus used for manufacturing of recording members for magneto-, electro(photo)-graphy

\*This code is now discontinued, see S06-E01C1.

#### S06-A01F\*

[1997-2009]

#### **Temperature control**

\*This code is now discontinued, see S06-E01D. For warming up photoconductor layers on drum or belt up to normal working operation temperature.

Heater

# S06-A01X\*

[1980-2009]

#### Other (Recording members)

\*This code is now discontinued, see S06-E01X. Includes thermoplastic and photoelectric layers, paper treatment and manufacture, see S06-C02 codes for lithographic plate manufacture. Image, electrostatic, surface, copy, substrate, polymer

#### S06-A02\*

[1980-2009]

#### Sensitising

\*This code is now discontinued, see S06-E02. *Electrode, surface, electrostatic* 

#### S06-A02A\*

[1997-2009]

#### Corona charger

\*This code is now discontinued, see S06-E02A. Includes all aspects of corona discharge. If corona ring or loop is claimed, then also coded in X12-F04. Discharge, electrode, grid, scorotron, corotron, dicorotron

#### S06-A02B\*

[1997-2009]

#### Contact charger

\*This code is now discontinued, see S06-E02B. *Roller, brush* 

#### S06-A03\*

#### **Exposing**

\*This code is now discontinued, see S06-D/E03. Includes aspects of platen movement, copying station or unit holding original document, lens/mirror systems and drum and belt drive details.

#### S06-A03A\*

[1983-2009]

[1980-2009]

#### Frame scanning

\*This code is now discontinued, see S06-D01A. Includes slit and full frame scanning.

#### S06-A03B\*

[1983-2009]

#### Line (i.e. raster) scanning

\*This code is now discontinued, see S06-D01B. Raster output scanner Laser, modulate, polygonal, mirror

#### S06-A03C\*

[1983-2009]

# Synchronisation; changing magnification

\*This code is now discontinued, see S06-D10A. Includes all aspects of magnification/reduction lens systems.

Size, variable, enlarge, ratio, paper, select, adjust

#### S06-A03D\*

[1992-2009]

#### Optical elements, e.g. lenses

\*This code is now discontinued, see S06-D03/E03B Mirror

#### S06-A03E\*

[1992-2009]

# Light source driver (e.g. biassing)

\*This code is now discontinued, see S06-D02A/E03A1.

Illuminate, biassing

#### S06-A03E1\*

[1997-2009]

# Light source per-se

\*This code is now discontinued, see S06-D02/E03A. Includes lamps (see also X26) and e.g. laser (see also U12/V08).

Lamp, LED

#### S06-A03F\*

[1992-2009]

#### **Driving system and construction**

\*This code is now discontinued, see S06-D04/E03C. Includes mountings for optical system *Glass, feed, position* 

#### S06-A03F1\*

[1997-2009]

# **Document feeder**

\*This code is now discontinued, see S06-D04B. Original, sheet, page, contact glass

#### S06-A03G\*

[1992-2009]

#### Image reading appt.

\*This code is now discontinued, see S06-D. Includes electronic image acquisition scanner, raster input scanner.

Read

#### S06-A03G1\*

[1997-2009]

#### Image sensor

\*This code is now discontinued, see S06-D05. Electronic image CCD pick-up element of line type and of matrix type.

CCD

#### S06-A03G3\*

[1997-2009]

# **Determining details of original document**

\*This code is now discontinued, see S06-D06. Density and size measurement, color, page width/length, see also S02-A03B2 for length/width/thickness measurements.

#### S06-A03H\*

[1992-2009]

# Magnetographic and non-light exposure

\*This code is now discontinued, see S06-D09.

#### S06-A03X\*

[1992-2009]

#### Other (Exposing)

\*This code is now discontinued, see S06-D09. Includes thermal and X-ray (electroradiography) exposure.

Electroradiography, X-ray

#### S06-A04\*

[1980-2009]

#### **Developing**

\*This code is now discontinued, see S06-E04. Includes copy density and darkness control and brush or magnetic applicator details

Bias, contrast, replenishment

# S06-A04A\*

[1980-2009]

#### **Using solid developer**

\*This code is now discontinued, see S06-E04A. *Powder particles* 

#### S06-A04A1\*

[1992-2009]

# Dry toner supply and storage e.g. reservoir

\*This code is now discontinued, see S06-E04C. Toner supply from container, tank, hopper to developer chamber

#### S06-A04A1A\*

[1992-2009]

#### **Toner level detector**

\*This code is now discontinued, see S06-K07B1.

### S06-A04A1B\* [2002-2009]

#### **Toner density detector**

\*This code is now discontinued, see S06-K07B2. *Refill* 

# S06-A04A2\* [1992-2009]

# **Toner application**

\*This code is now discontinued, see S06-E04C. Includes application by magnetic brush arrangement, scavangeless.

#### S06-A04A9\* [1992-2009]

### Other (using solid developer)

\*This code is now discontinued, see S06-E04.

# S06-A04B\* [1980-2009]

# Using liquid developer

\*This code is now discontinued, see S06-E04B. Flow, fluid, suspension

#### S06-A04C\* [1980-2009]

### **Developer materials**

\*This code is now discontinued, see S06-E04. Codes in this section cover materials per se and their manufacture only. Includes toner details for electrophotographic facsimile and laser printer.

Compound, particle, cellulose, composition, copolymer, disperse, dry, magnetic

# S06-A04C1\* [1980-2009]

#### **Powder**

\*This code is now discontinued, see S06-E04A1. Charge, resin, binder, component, polymer, coating

#### S06-A04C2\* [1980-2009]

#### Liauid

\*This code is now discontinued, see S06-E04B1. Suspension, polymer, resin, solvent, acid, aqueous, dispersion

#### S06-A04C5\* [1997-2009]

#### Manufacture and manufacturing appt.

\*This code is now discontinued, see S06-E04D.

# \$06-A04C9\* [1997-2009]

#### Other (developer materials)

\*This code is now discontinued, see S06-E04X. *Cyan, ester, solution, aerosol* 

# S06-A04X\* [1997-2009]

# Other (developing)

\*This code is now discontinued, see S06-E04X. Storing waste toner for disposal.

# S06-A05\* [1980-2009]

#### **Transferring images**

\*This code is now discontinued, see \$06-E05. Includes removal of recording sheet from drum after transfer.

Surface, receive, separate, contact, dielectric

# S06-A05A\* [1997-2009]

#### Corona charger

\*This code is now discontinued, see S06-E05A. Includes all aspects of corona discharge. If corona ring or loop is claimed, then also coded in X12-F04. *Discharge* 

#### S06-A05A1\* [2002-2009]

# Corona charger transfer of toner

\*This code is now discontinued, see S06-E05A1. Discharge

# S06-A05A2\* [2002-2009]

# Corona charger separation of paper

\*This code is now discontinued, see S06-E05A2. *Discharge* 

# S06-A05B\* [1997-2009]

# Contact type charger

\*This code is now discontinued, see S06-E05B. *Transfer roller, blade, belt* 

# S06-A05B1\* [2002-2009]

#### Transfer roller or belt, toner transfer details

\*This code is now discontinued, see S06-E05B1.

#### S06-A05B2\* [2002-2009]

# Transfer roller or belt, paper separation details

\*This code is now discontinued, see S06-E05B2.

#### S06-A05C\* [1997-2009]

#### Intermediate belt/drum

\*This code is now discontinued, see S06-E05C.

# S06-A05D\* [2008-2009]

#### Care of transfer appts.

\*This code is now discontinued, see S06-E05D. For lubrication of transfer roller, belt, intermediate roller or belt.

Lubricant

# S06-A06\* [1980-2009]

#### **Fixing**

\*This code is now discontinued, see S06-E06. Flash

# S06-A06A\* [1992-2009]

# Heat and pressure application

\*This code is now discontinued, see S06-E06A. If heater aspects are claimed see X25-B codes also. *Fuse* 

# S06-A06B\* [1992-2009]

#### Roll and roll driving

\*This code is now discontinued, see S06-E06B1. Includes clearing jams in fixing system.

Roller

#### S06-A06B1\*

[1997-2009]

#### Belt and belt driving

\*This code is now discontinued, see S06-E06B2.

#### S06-A06C\*

[1992-2009]

#### **Fuser oil composition and application**

\*This code is now discontinued, see S06-E06C.

#### S06-A06C1\*

[1992-2009]

### **Fuser oil composition**

\*This code is now discontinued, see S06-E06C1.

#### S06-A06D\*

[1997-2009]

#### Lustre control

\*This code is now discontinued, see S06-E06D. *Heating, gloss, pre-heating* 

# S06-A06P\*

[2008-2009]

#### **Pre-fixing**

\*This code is now discontinued, see S06-E06P. E.g. for reducing the moisture content of the transfer material to increase its rigidity.

#### S06-A06X\*

[1992-2009]

#### Other (fixing)

\*This code is now discontinued, see S06-E06X. Cooling

#### S06-A07\*

[1980-2009]

# **Multi-processing stations**

\*This code is now discontinued, see S06-E. This code is used when the system or process as a whole is claimed rather than any specific aspect.

Processor cartridge

#### S06-A07A\*

[1997-2009]

# **Drive system for several imaging stations**

\*This code is now discontinued, see S06-E. Driving linked colour stations

# S06-A08\* [1980-2009]

# Using magnetic patterns or thermoplastic layers

\*This code is now discontinued, see S06-E07. Includes all aspects of magnetography. Magnetic printer head details may also have T03-A03 codes assigned, depending on content.

Latent, heat, permeable, field, deformation

#### S06-A09\*

[1980-2009]

#### **Electrography not using charge patterns**

\*This code is now discontinued, see \$06-E08. Includes electrophoresis.

Polymer, deform, electrostatic, field, impact, magnetic, paper

#### S06-A10\*

[1980-2009]

# Cleaning, residual charge elimination etc.

\*This code is now discontinued, see S06-K06. Includes corona discharge, scrapers, ozone gas removal and charge-unifying drum exposure. Develop, light, residue, dust, roll, collect, filter

#### S06-A10A\*

[1992-2009]

#### Toner removal

\*This code is now discontinued, see S06-K06C. Involves removal of toner.

Surface, brush, lube block

### S06-A10A1\*

[1992-2009]

#### Using blade

\*This code is now discontinued, see S06-K06C1. Scraper

### S06-A10B\*

[1992-2009]

#### Charge removal and ozone removal

\*This code is now discontinued, see S06-K06B. Drum, discharge

#### S06-A10C\*

[1997-2009]

# Returning toner for re-use

\*This code is now discontinued, see S06-K06C2. *Recycle* 

#### S06-A10D\*

[2007-2009]

# Transfer of toner to collection or waste container

\*This code is now discontinued, see S06-K06C3. Covers mechanism for transferring toner to the collection or waste container for later removal and recycling outside the copier.

# S06-A10E\* [2007-2009]

#### Removal of other material, e.g. dust

\*This code is now discontinued, see S06-K06D. Includes details of air cleaning systems. If cleaned air is expelled outside the copier, see also X27-E01B2 (electrical aspects only).

#### S06-A11\* [1980-2009]

#### **Multicolour systems**

\*This code is now discontinued, see S06-K01. Used for any aspect of colour system, with other codes as appropriate.

Dye, pigment, tint

# S06-A11A\* [1992-2009]

#### **Full colour**

\*This code is now discontinued, see S06-K01A. Four colour, magenta, cyan, yellow, black

# S06-A11B\* [1992-2009]

# Two colour, highlighting

\*This code is now discontinued, see S06-K01B. *Red* 

# S06-A12\* [1983-2009]

#### Sheet handling/feeding

\*This code is now discontinued, see S06-K02. Includes all mechanisms for transporting sheet through copier, collators and sorters.

Paper, document, roller, guide, position, side, belt, detect, platen, path

#### S06-A12A\* [1983-2009]

#### Multicopies; duplex

\*This code is now discontinued, see S06-K02A. *Reverse, double, invert* 

# S06-A12B\* [1983-2009]

#### For different paper sizes

\*This code is now discontinued, see S06-K02B. For feeding paper of different lengths and thickness.

# S06-A12C\* [1992-2009]

#### **Collators and sorters**

\*This code is now discontinued, see S06-K02C. Includes feeding paper containing classified info to a locked tray. Includes paper stores. Stack, tray

# S06-A12D\* [2002-2009]

# Paper skew detection, skew correction, clearing jams

\*This code is now discontinued, see S06-K02D.

# S06-A12E\* [1997-2009]

#### Sheet decurling

\*This code is now discontinued, see \$06-K02E.

#### S06-A12F\*

[2008-2009]

# **Duplex sheet feed**

\*This code is now discontinued.

# S06-A14\* [1987-2009]

Control, monitoring, warning devices

\*This code is now discontinued, see S06-K07. Includes operating status display (for display control circuitry see T04-H codes), mode selection devices,

microprocessor details (see also T01-J codes, e.g. T01-J08A), and recording inhibiting devices.

# S06-A14A\* [1992-2009]

#### User input and display

\*This code is now discontinued, see S06-K07A1. Includes mode selection keys, etc. *Indicate* 

# S06-A14B\* [1992-2009]

# Monitoring and error detection

\*This code is now discontinued, see S06-K07B. Fault, reset

#### S06-A14C\* [1992-2009]

#### Control of copier operation

\*This code is now discontinued, see S06-K07A. Covers general details of control system.

#### S06-A14D\* [1997-2009]

#### **Power supply control**

\*This code is now discontinued, see S06-K07A2.

#### S06-A14E\* [1997-2009]

#### Remote monitoring and control

\*This code is now discontinued, see S06-K07C1. *Billing* 

# S06-A14F\* [2005-2009]

# Management of confidential/secure documents, e.g. prevention of illegal copying

\*This code is now discontinued, see S06-K07A3. Preventing illegal copying of banknotes, securities and private documents, recognising copy prevention marks on documents, output to authorised operator. See also T01/T04 for image processing aspects and T05-J for testing of securities, banknotes, etc.

# S06-A15\* [2002-2009]

#### **Electrophotographic copier rollers**

\*This code is now discontinued, see S06-K03H. General constructional details of rollers.

#### S06-A16\*

[1987-2009]

# **Electronic copier**

\*This code is now discontinued, see S06-K07.

#### S06-A16A\*

[1992-2009]

# Digital copier, editing copier

\*This code is now discontinued, see S06-K07A4. Includes picture processing and modification aspects of otherwise conventional appt.

#### S06-A16B\*

[1992-2009]

# Systems with non-electrophotographic input or output arrangements

\*This code is now discontinued, see S06-K99B a together with S06-F/G/H/J codes. Includes systems with CCD sensor input, and thermal output.

#### S06-A16C\*

[1997-2009]

# Systems with electrophotographic and non-electrophotographic output

\*This code is now discontinued, see S06-K99B a together with S06-F/G/H/J codes.

#### S06-A17\*

[1997-2009]

#### **Recycling Systems**

\*This code is now discontinued, see S06-K04. From 2005 covers all aspects of recycling. See also X25-W04 for electrical aspects of recycling systems in general.

# S06-A17A\*

[2005-2009]

# **Paper Recycling**

\*This code is now discontinued, see S06-K04A. For removing toner from recording paper to enable reuse of paper.

Paper

#### S06-A17B\*

[2005-2009]

### **Toner Recycling**

\*This code is now discontinued, see S06-K04B together with appropriate S06-E04 codes.

# S06-A17C\*

[2005-2009]

# **Component Recycling**

\*This code is now discontinued, see S06-K04C. See also V04/X12 for recycling electrical components.

#### S06-A18\*

[1992-2009]

#### Finishing apparatus

\*This code is now discontinued, see \$06-K05.

#### S06-A18A\*

[1997-2009]

# Stapling, binding, paper cutting, paper punching, paper folding

\*This code is now discontinued, see S06-K05A. Includes bookbinding/stapling/cutting/punching devices situated inside the copier or separate bookbinding/stapling/cutting/punching machines attached to the copier.

#### S06-A18B\*

[2006-2009]

#### Laminating

\*This code is now discontinued, see S06-K05B. Laminating, protective layer

#### S06-A18C\*

[2008-2009]

#### **Shredding**

\*This code is now discontinued, see S06-K05C. Includes immediate shredding directly after scanning.

# S06-A18D\*

[2008-2009]

# Attachment or printing of copy prevention marks to document to prevent forgery

\*This code is now discontinued, see S06-K05D. Includes applying a magnetic wire, RFID tag, etc., as part of the printing process. If attaching a RFID tag, see also T04-K codes. Details on watermarking also coded under T01.

# S06-A19\*

[1992-2009]

#### Construction

\*This code is now discontinued, see S06-K03. Includes details of machine casing, framework, etc., and also internal mounting arrangements of components and modules

# S06-A19A\*

[1997-2009]

#### Paper holders

\*This code is now discontinued, see S06-K03B. *Container, storage* 

#### S06-A19A1\*

[1997-2009]

#### Cassettes

\*This code is now discontinued, see S06-K03B1. For holding paper sheets before being fed for copying onto.

Container

# S06-A19A2\* [1997-2009]

#### Trays, bins

\*This code is now discontinued, see S06-K03B2. For receiving documents or copy paper sheets after copying operation, duplex intermediate tray.

#### S06-A19B\* [1997-2009]

#### Ventilation and humidifying mechanisms

\*This code is now discontinued, see S06-K03C.

#### S06-A19C\* [1997-2009]

#### Frames, casings, bearings

\*This code is now discontinued, see S06-K03D.

#### S06-A19D\* [2007-2009]

# Manufacture and manufacturing apparatus

\*This code is now discontinued, see S06-K03E. Covers manufacturing method and apparatus for the manufacture of copier elements.

### S06-A19E\* [2008-2009]

# Packaging for electrography, electrophotography and magnetography

\*This code is now discontinued, see V04-X together with S06-K99 codes.

#### S06-A20\* [1980-2009]

# Other (electrography, electrophotography, magnetography)

\*This code is now discontinued, see S06-E09. Includes forming electrostatic latent image as initial stage in data acquisition for e.g. audio and video systems, e.g. still picture camera with electrostatic latent image production (see also T03 and W04). Includes electrophotographic displays (see W05-E codes also), recycling other than paper and ink, non-copy-able documents, etc.

Display, light

### S06-B

#### **Photography**

Electrical aspects only are included. Video and electronic still-picture cameras are covered by W04-M01 codes.

Image, optical, instant-picture, SLR, disc, roll, cartridge, film

#### S06-B01

#### Focussing; indicating

Lens, automatic, adjust, reflect, drive, intensity, light, display

#### S06-B01A [1983]

#### Focus detection; rangefinders

Rangefinders combined with surveying navigating appt. are coded in S02-B01. (See W06-A codes for radar and analogous systems.)

Position, distance, beam, drive, element, IR, infrared, ultrasonic, UV, ultraviolet

#### S06-B01B [1983]

### Lens positioning; indicating

Includes all aspects of positioning motors (see also V06), viewfinder display details and film data marking appt.

Focal, alarm

#### S06-B01B1 [1992]

#### Lens positioning, driving

Length, barrel, zoom, correcting focus

#### S06-B01B2 [1992]

#### Film data marking

Information, record, print, time, date

#### S06-B01B2A [1997]

### **Optically**

LED

#### S06-B01B2B [1997]

#### Magnetically

Magnetic marking see also T03 codes Magnetic head

# S06-B01C [1997]

#### Viewfinder display

LCD

#### S06-B01E [1997]

# Eye gaze direction detection

Detects pupil of eye for controlling direction of line for auto-focussing or line of view. See S05-D01C5A for eye ball position detection.

#### S06-B02

#### Camera exposure control

Automatic, lens, manual, speed

#### S06-B02A

# **Light metering**

See also S03-A01 codes.

Intensity, compensate, bright, photometry

#### S06-B02B

# Exposure time and aperture evaluation and setting

Includes evaluation using film speed/sensitivity information.

# S06-B02B1 [1997]

# Reading data from film/film cartridge

Using pre-set data on film or cartridge to automatically set camera. Reading magnetic marking see T04 and T03 codes also. *DX code* 

#### S06-B02B2 [1997]

#### Aperture/shutter speed setting

Includes manual input for pre-setting aperture size or shutter speed.

#### S06-B02C

#### Shutter and aperture control

Includes remote actuation.

Electromagnet, magnet, motor, drive, blade, diaphragm, mechanism, open, time

#### S06-B02C1 [1992]

#### Remote actuation

See W05-D04 codes for optical or radio controlled system.

#### S06-B02C5 [1992]

#### **Actuation using timer delay**

See also S04-C01.

#### S06-B02E [1997]

#### Camera shake detection/correction

For sensing movement due to user of camera in order to perform compensation e.g. optically using lens or to warn user of excessive movement or to prevent photo-taking operation.

Movement sensing

#### S06-B03

#### Flash units

Part of camera, lamps, tubes, reflectors, fittings, and operating circuits are coded in X26 also.

Illuminate, pulse, strobe, gun, trigger, charge, built-in

#### S06-B03A [1983]

### **Electronic**

Covers discharge tube flash units, xenon discharge tube, capacitor discharge circuit.

Capacitor discharge, xenon lamp

### S06-B03A1 [2002]

# **Pre-light emission**

Pre-light emission before discharge of flash to prevent red eye. See only W04-M01H codes if for digital camera.

#### S06-B03B [1983]

#### Non-electronic

Covers incandescent lamp flash units.

### S06-B04 [1983]

#### Film processing

Electrical aspects of developing exposed film, exposing photographic paper, scanning negative, developing exposed film and paper. Includes electrical aspects of X-ray film processing. Does not include electrical aspects of film manufacture or details of film material.

Image, colour, print, expose, negative, positive, copy, dark-room

#### S06-B04A [1983]

#### Photographic printing appts.

Electrical aspects of printer for wet developing of photographic film or paper to produce photographic print. Control and monitoring of process. For positive or negative scanning to provide digital image to computer and computer output appt. see S06-B06B. For printing from digital camera see also W04 esp. W04-D10, for non-wet printing see S06-E to S06-K codes.

Frame, original, scan filter, magnify, reduce, colour output on microfilm

# S06-B04A1 [1992]

### Copiers using microcapsule sheets

Cylith, cycolour

### S06-B04A2 [2005]

#### Processing exposed film

Electrical aspects of developing, fixing, washing and drying negative.

#### S06-B04A3 [2005]

#### **Processing developed negatives**

Electrical aspects of processing developed negative to produce photographic prints.

Enlarging, exposing, rinsing, fixing, washing, drying

#### S06-B04A5\* [1992-2004]

### Control and monitoring of printing station

\*This code is now discontinued and transferred to S06-B04A2 for film/slide processing, including control and monitoring details and S06-B04A3 for print/slide making, as well as control and monitoring details and modification of exposure based on e.g. negative characteristics.

Correct, auto-exposure, contrast measurement, density

#### S06-B04B [1983]

# Photographic film manufacture

Includes electrical aspects of photographic film manufacture only. See S06-B04A2 for developing exposed film and electrical aspects of chemical, thermal development and S06-B04A3 for developing photographic paper and electrical aspects of chemical, thermal development.

Develop, electrolytic, solution, emulsion, heat, dry, flow, fluid, liquid, mix, roll, silver, agitate, recovery, halide

# S06-B04C [1997]

#### Film order processing

Mini-lab, direct plate exposure

#### S06-B04E [1997]

# Photographic film or paper feeding (not in camera)

Convey, feed

#### S06-B05

# Cinematography

Includes cinema equipment and projectors. for motion picture film, telecine machine. Magnetic and video recording are covered by T03 and W04.

Cine, picture, motion, sound, track, record, tape, frame, television, telecine, reel, synchronising, screen

#### S06-B06 [1983]

# Projectors, viewers (incl. microform)

Video projectors are covered by W04-Q01 codes and only coded in S06-B06 if they are either a permanent part of a photographic projector, or intended for use as an overhead projector transparency. For projector synchronisation with audio/video recording appts. see W04-K01 also. *Transparency, cassette, frame* 

#### S06-B06A [1992]

#### **Projectors**

Display, slide, screen, reel

### S06-B06B [1992]

#### Film scanners and viewers

Scanning positive or negative to provide digital image to computer, printer, self service kiosk etc.

#### S06-B06C [1992]

#### Microfilm apparatus

Read, fiche, microfiche

# S06-B08 [1983]

#### Other camera electrics

Includes e.g. motorised control for instant-picture camera, eyepiece lamps, microprocessor control of camera and/or lens etc, mode selection control. Remote control is covered by \$06-B02C1.

Control, drive, data, transmission

#### S06-B08A [1992]

#### Film winding in camera

Reel, perforation detection

# S06-B08B [1997]

# Film loading detection

For determining correct cartridge loading and film feed.

# S06-B08C [1997]

#### **Power source details**

Includes storage compartments for battery and detection of battery voltage level. See also X16 for battery details, if measuring battery level see X16 and S01. See U24 for power supply details. *Battery* 

### S06-B09

#### Other (photography)

Includes electrical aspects of X-ray photography (processing is also coded in S06-B04 codes).

Radiate, beam, colour, cassette, medical, tomography, photobooth, separate flash units and lighting units, photothermography

#### S06-C

#### **Printing**

Includes electrical aspects of presses, rotary machines etc. but **not** character and line printers, printers as computer peripherals, which are covered by S06-D to K codes. For textile printing see also X25-T.

Colour, image, scan, picture

#### S06-C01

# Photoelectronic composing; controlling composing machines

Pre-press proofing, colour proofing. Character, select, text, space, graphic, laser, font, phototypeset, typeset

#### S06-C02

#### Plate production; colour separations

Imagesetter, platesetter, computer to plate, electrophotographic plates per se are coded in S06-A01X.

Tone, beam, half, night, pixel, reproduce, lithography, flat-bed scanner, drum, gravure

#### S06-C02A [1992]

Plate production

# S06-C02A1 [2006]

# Computer to plate manufacture

Covers all aspects of direct plate manufacture and production from computer original without intermediate stages. See also T01 for computer design aspects.

CTP, computer-to-plate

# S06-C02B [1992]

#### **Colour separation**

#### S06-C03

#### Printing, press control

Control of flexographic, offset lithographic, screen printing, gravure, printing processes, etc.

Machine, plate, rotating, cylinder, sheet, roll, ink, offset, lithography, stencil printer

# S06-C03A [1992]

#### **Control**

Control system for plate loading, sheet feeding, wash-up, damping, inking and registering, etc.

# S06-C04 [2008]

#### Media conveying details

Includes electrical details of media, e.g. paper or web, conveying in printer, e.g. offset printer.

# S06-C05 [2002]

# **Print finishing equipment**

Novel electrical aspects of sheet/batch collators, folders, booklet makers, binders, perforator, scorer, numberer

Staple, sheet separation, stack, bind, feed

#### S06-C09

#### Other (printing)

For textile printing see also X25-T.

#### S06-D

### [2010]

#### Scanning Systems

Previously coded as S06-A03, W02-J01, W02-J02A. Includes aspects of platen movement, copying station or unit holding original document, lens/mirror systems, drum and belt drive details and scanning drive (See also V07-K05). See also U14-H01B for thin film image sensor, U13-A01 and U13-A02 for circuitry and CCD. Details of scanners that are not part of an image forming device (e.g. flat bed scanners) are coded in T04-M only.

#### S06-D01 [2010]

**Scanning Type** 

#### S06-D01A [2010]

#### Frame Scanning

Previously coded as S06-A03A. Includes slit and full frame scanning.

#### S06-D01B [2010]

# Raster/Line Scanning

Previously coded as S06-A03B. Raster output scanner

Laser, modulate, polygonal, mirror

# S06-D02 [2010]

#### **Light Source**

Previously coded as S06-A03E1. Lamps (see also X26) and e.g. laser (see also U12/V08). Lamp, LED

#### S06-D02A [2010]

# **Light Source Driving**

Previously coded as S06-A03E. *Illuminate, biassing* 

### S06-D03 [2010]

#### **Optical Elements**

Previously coded as S06-A03D, W02-J01A. See also S06-D01 if specific to type of exposure.

Polygonal

### S06-D04 [2010]

### **Drive System and Construction**

Previously coded as S06-A03F, W02-J01B. Includes mountings for optical system. See also V06 codes for motor details.

Glass, feed, position

# S06-D04A [2010]

### Position detection and adjustment

Previously coded as W02-J01C. Includes control and error compensation of scanning velocity and position.

#### S06-D04B [2010]

#### **Document feeder in scanning system**

Previously coded as S06-A03F1. Feeding of paper through the copier other than through the scanning arrangements are coded under S06-K02

Original, sheet, page, contact glass

#### S06-D05 [2010]

#### Sensors

Previously coded as S06-A03G1, W02-J02A1. Electronic image CCD pick-up element of line type and of matrix type.

CCD, photoelectric detector, thin film image sensor, multi-element array

### S06-D05A [2010]

### Integral reading circuitry

Previously coded as W02-J02A1A.

# S06-D06 [2010]

#### **Determining details of original document**

Previously coded as S06-A03G3. Density and size measurement, color, page width/length, see also S02-A10B for length/width/thickness measurements.

# S06-D09 [2010]

#### Non-light exposure

Previously coded as S06-A03H, S06-A03X. Includes thermal and X-ray (electroradiography) exposure. *Electroradiography, X-ray* 

#### S06-D10 [2010]

# **Combined scanning and printing arrangements**

# S06-D10A [2010]

#### Synchronising, changing magnification

Previously coded as S06-A03C. If synchronisation with sheet feeding is involved, then S06-K02 codes are also assigned. Includes all aspects of magnification/reduction lens systems.

Size, variable, enlarge, ratio, paper, select, adjust

#### S06-E [2010]

### **Electrophotographic Image Production**

Previously coded as S06-A, T04-G04, W02-J02B2.

# S06-E01 [2010]

#### **Recording members**

Previously coded as S06-A01, T04-G04C. Drum driving aspects are coded in S06-E03 codes only. Includes photosenstive paper, photoconductive belt, drum, etc. Toner is coded under S06-E04 only. Constructional details are also coded under S06-K03.

Layer, charge, conducting, image, surface, acceptor, compound, donor, dope, photoconductor, belt

# S06-E01A [2010]

#### **Photoconductive layers**

Previously coded as S06-A01A. Includes all types of charge-generating layers and photosensitive paper. Also cross reference with T04-G04C for photosensitive materials for optical printer.

Hydrazone, photoreceiver, accept

#### S06-E01A1 [2010]

#### Organic

Previously coded as S06-A01A1.

Cyclic, polycyclic, heterocyclic, quinone

#### S06-E01A2 [2010]

#### Inorganic

Previously coded as S06-A01A2.

Amorphous, silicon, selenium, carry, dope, surface, oxide, polycrystalline

#### S06-E01A3 [2010]

#### Sensitiser; binding materials

Previously coded as S06-A01A3.

Dye, composition, photosensitiser, organic, oxidative potential

### S06-E01A4 [2010]

#### **Treatment of recording members**

Previously coded as S06-A01A4. Includes application of a lubricant to the surface of the drum, etc.

#### S06-E01A9 [2010]

# Other (photoconductive layer aspects)

Previously coded as S06-A01A9. Includes aspects of photoconductive belt/drum not covered by other S06-E01A codes.

# S06-E01B [2010]

#### Carriers; intermediate or cover layers

Previously coded as S06-A01B.

Sensitive, image, amorphorous, coating, drum, base layer, protective layer.

#### S06-E01C [2010]

#### Manufacture

Previously coded as S06-A01D. Includes deposition of layers on drum.

Depositing

#### S06-E01C1 [2010]

#### Manufacturing apparatus

Previously coded as S06-A01D1.

#### S06-E01D [2010]

#### **Temperature control**

Previously coded as S06-A01F. For warming up photoconductor layers on drum or belt up to normal working operation temperature. The control aspect is also coded by S06-K07A1. See also X25-B codes for details of electric heating.

Heater

# S06-E01X [2010]

#### Other (recording members)

Previously coded as S06-A01X. Includes thermoplastic and photoelectric layers, paper treatment and manufacture, see S06-C02 codes for lithographic plate manufacture. Electric details of paper manufacture is also coded under X25-T09A. Image, electrostatic, surface, copy, substrate, polymer

#### S06-E02 [2010]

#### Sensitising

Previously coded as S06-A02. Desensitisers for removing residual charge are coded in S06-K06. *Electrode, surface, electrostatic* 

# S06-E02A [2010]

#### Corona charger

Previously coded as S06-A02A. Includes all aspects of corona discharge. If corona ring or loop is claimed, then also coded in X12-F04.

Discharge, electrode, grid, scorotron, corotron, dicorotron

#### S06-E02B [2010]

#### Contact charger

Previously coded as S06-A02B. *Roller, brush* 

#### S06-E03 [2010]

#### **Exposure**

Previously coded as S06-A03. See also S06-D for combined scanning and printing arrangements.

#### S06-E03A [2010]

#### **Light Source (for exposure)**

Previously coded as S06-A03E1, T04-G04B. See X26 for lamp details, for LED heads see also U12-A01A3 or U12-A01A6.

Lamp, LED

### S06-E03A1 [2010]

#### **Light Source Driving (for exposure)**

Previously coded as S06-A03E. *Illuminate, biassing* 

### S06-E03A2 [2010]

# Light source type - LED

Previously coded as W02-J02B2A.

#### S06-E03A3 [2010]

# **Light source type - Laser**

Previously coded as W02-J02B2B.

#### S06-E03B [2010]

#### **Optical Elements**

Previously coded as S06-A03D, T04-G04A1. *Polygonal, galvanometer* 

#### S06-E03C [2010]

#### **Drive System and Construction**

Previously coded as S06-A03F, T04-G04A2. Includes mountings for optical system. Details of sheet feeding are coded under S06-K02 codes. See also V06 codes for motor details.

Scan

### S06-E03C1 [2010]

# Position detection and adjustment

# S06-E04 [2010]

### Developing

Previously coded as S06-A04. Includes copy density and darkness control and brush or magnetic applicator details. For removal of developer from drum see S06-K06. For colour developer, see also S06-K01 codes. See also S06-K07B1A and S06-K07B1B for level detection and density detection of developing agent respectively. Inkjet inks and thermal ink ribbons are not coded here, but are coded by S06-G04 and S06-H02 respectively.

Bias, contrast, replenishment

### S06-E04A [2010]

#### Using solid developer

Previously coded as S06-A04A. *Powder particles* 

### S06-E04A1 [2010]

#### **Composition of solid developer**

Previously coded as S06-A04C1.

Charge, resin, binder, component, polymer

#### S06-E04B [2010]

#### Using liquid developer

Previously coded as S06-A04B. *Flow, fluid, suspension* 

#### S06-E04B1 [2010]

# **Composition of liquid developer**

Previously coded as S06-A04C2.

Suspension, polymer, resin, solvent, acid, aqueous, dispersion

# S06-E04C [2010]

# **Developer application**

Previously coded as S06-A04A2. Includes application by magnetic brush arrangement, scavangeless.

#### S06-E04D [2010]

### Manufacture of developer agent

Previously coded as S06-A04C5.

### S06-E04E [2010]

# Toner supply and storage

Previously coded as S06-A04A1. Toner supply from container, tank, hopper to developer.

#### S06-E04X [2010]

#### Other developing and developer materials

Previously coded as S06-A04C9, S06-A04X.

#### S06-E05 [2010]

#### Transferring images

Previously coded as S05-A05. Includes removal of recording sheet from drum after transfer.

Surface, receive, separate, contact, dielectric

### S06-E05A [2010]

#### Corona charger

Previously coded as S06-A05A. Includes all aspects of corona discharge. If corona ring or loop is claimed, then also coded in X12-F04.

Discharge

#### S06-E05A1 [2010]

#### Corona charger - transfer of developer

Previously coded as S06-A05A1.

#### S06-E05A2 [2010]

#### Corona charger - separation of paper

Previously coded as S06-A05A2.

#### S06-E05B [2010]

### Contact type charger

Previously coded as S05-A05B. Transfer roller, blade, belt

# S06-E05B1 [2010]

# Contact type charger - transfer of developer

Previously coded as S06-A05B1.

## S06-E05B2 [2010]

# Contact type charger - separation of paper

Previously coded as S06-A05B2.

#### S06-E05C [2010]

#### Intermediate belt/drum

Previously coded as S06-A05C.

### S06-E05D [2010]

#### Care of transfer apparatus

Previously coded as S06-A05D. For lubrication of transfer roller, belt, intermediate roller or belt. Lubricant

#### S06-E06 [2010]

# **Fixing**

Previously coded as S06-A06. *Flash* 

# S06-E06A [2010]

#### Heat and pressure application

Previously coded as S06-A06A. If heater aspects are claimed see X25-B codes also.

#### S06-E06B [2010]

#### Fuser mechanism and driving

# S06-E06B1 [2010]

# **Fuser roller**

Previously coded as S06-A06B. See also S06-K03H for constructional details of rollers.

Roller

S06-E06B2 [2010]

**Fuser belt** 

Previously coded as S06-A06B1.

S06-E06C [2010]

**Fuser oil** 

Previously coded as S06-A06C.

S06-E06C1 [2010]

**Fuser oil composition** 

Previously coded as S06-A06C1.

S06-E06D [2010]

**Lustre control** 

Previously coded as S06-A06D. *Heating, gloss, pre-heating* 

S06-E06P [2010]

**Pre-fixing** 

Previously coded as S06-A06P. E.g. for reducing the moisture content of the transfer material to increase its rigidity.

S06-E06X [2010]

Other fixing details

Previously coded as S06-A06X. *Cooling* 

S06-E07 [2010]

# Using magnetic patterns or thermoplastic layers

Previously coded as S06-A08, T04-G09. Includes all aspects of magnetography. Magnetic printer head details may also have T03-A03 codes assigned, depending on content. Includes magnetic line printers used as computer peripherals.

Latent, heat, permeable, field, deformation

S06-E08 [2010]

#### **Electrography not using charge patterns**

Previously coded as S06-A09. Includes electrophoresis.

Polymer, deform, electrostatic, field, impact, magnetic, paper

S06-F [2010]

### **Impact Image Production**

Previously coded as T04-G01. Includes mechanical action. Electromagnet and solenoid drive aspects are coded in V02-E02A also.

Armature, coil

S06-F01 [2010]

**Dot Printer** 

Previously coded as T04-G01A. *Matrix, pin, wire, needle* 

S06-F02 [2010]

**Using Type** 

Previously coded as T04-G01B. Self contained typewriters are in S06-K99A.

Select, hammer, daisy-wheel, disc, step, font, typeface, golf-ball

S06-F03 [2010]

Ribbon

Previously coded as T04-G01C. Includes printer ribbon re-inking.

Ink, cassette

S06-G [2010]

**Ink-Jet Image Production** 

Previously coded as T04-G02, W02-J02B3. Liquid, dye, nozzle, resin, water, channel, drop, pressure, reservoir, eject, electrode, pulse

S06-G01 [2010]

**Drop-on-demand** 

Previously coded as T04-G02A.

Thermal ink-jet, bubble, piezoelectric, ultrasound

S06-G02 [2010]

Selective drop deflection

Previously coded as T04-G02B.

Charge, electrode, stream, gutter, continuous

S06-G03 [2010]

**Printhead details** 

Previously coded as T04-G02A1, T04-G02B1, W02-J02B5. Search together with S06-K03 for constructional and manufacturing details. See also S06-G01 or S06-G02 to highlight the type of inkjet system. See also S06-K06A for printhead cleaning. Details of piezoelectric elements for inkjet printheads are also coded under V06-M06D.

S06-G04 [2010]

Inkjet ink

Previously coded as T04-G02C.

#### S06-G05 [2010]

#### **Recording Media**

Previously coded as T04-G02E. Includes media composition and manufacture. Includes pre-print application of liquid (not ink) to paper/ pre-treatment of paper for ink jet printing. See also X25-T09A for electrical details of paper manufacture.

Paper, fabrics, OHP sheet, recording pattern of LCD screen

### S06-G06 [2010]

# Ink Chamber/Cartridge

Previously coded as T04-G02G. See also S06-K03 for chamber construction. Search together with S06-G03 for combined chamber and printhead details. See also S06-K07B1A and S06-K07B1B for level detection and density detection of inkjet ink respectively.

# S06-G06A [2010]

#### Refilling of ink cartridge

Previously coded as T04-G02F.

#### S06-G07 [2010]

# Post ink application processing

Previously coded as T04-G02H. Includes processes for treating ink after application using e.g. heat or UV light.

# \$06-G10 [2010]

### Applications of ink-jet printing technology

Previously coded as T04-G02J. Covers printing on non-paper-like media e.g. CD (see also T03). Includes textile printing (see also X25-T04D), Manufacturing LCD screens and filters (see also U14). 3D / 4D printing and other industrial applications using inkjet technology (see also X25-A08).

## S06-H [2010]

#### **Thermal Image Production**

Previously coded as T04-G03, W02-J02B1. Includes thermal ink compositions and heat sensitive paper and ribbons. For photo-thermography, see also S06-E04.

Transfer, thermosensitive, resistive elements, thermal transfer ink ribbon

# S06-H01 [2010]

# Using thermally sensitive paper

Previously coded as T04-G03A.

#### S06-H01A [2010]

#### Composition of heat-sensitive layer

Previously coded as T04-G03A1.

# S06-H02 [2010]

#### Using thermal ribbon

Previously coded as T04-G03B. Includes use of thermal transfer sheets.

Cartridge

#### S06-H02A [2010]

#### Thermal ink composition

Previously coded as T04-G03B1. Includes composition and manufacture of thermal ink. If colour ink, see also S06-K01. Ink for inkjet printer is only coded under S06-G02C.

Dye

#### S06-H03 [2010]

#### Printhead details for thermal printer

Previously coded as T04-G03C. See also S06-K06A for printhead cleaning. For thin-film resistor heads see also U14 codes, e.g. U14-H01B.

#### S06-J [2010]

# Electrode (e.g. electrosensitive/erosive) Image Production

Previously coded as T04-G05.

#### S06-K [2010]

#### **Image Production Units features**

Covers features common to all printer types such as paper feeding and control systems.

#### S06-K01 [2010]

#### Colour system

Previously coded as S06-A11, T04-G04, W02-J07. Used for any aspect of colour system, with other codes as appropriate.

Dye, pigment, tint

#### S06-K01A [2010]

#### **Full colour**

Previously coded as S06-A11A.

Colour, magenta, cyan, yellow, black, CMY, CMYB, RGB

#### S06-K01B [2010]

# Two colour, highlighting

Previously coded as S06-A11B.

#### S06-K02 [2010]

### Media feeding, e.g. sheet feeding

Previously coded as S06-A12, T04-G06A, W02-J05A. Includes all mechanisms for transporting sheet through copier, collators and sorters. For feeding of an original document through a scanner, see S06-D04B only. Constructional details of sheet feeding mechanisms are coded under S06-K03 codes.

Paper roll, paper tray, document holder

# S06-K02A [2010]

#### Multicopies; duplex

Previously coded as S06-A12A. *Reverse, double, invert* 

#### S06-K02B [2010]

# For different paper size, clearing jams, skew correction

Previously coded as S06-A12B. For feeding paper of different lengths and thickness. Paper skew detection is coded by S06-K02D.

### S06-K02C [2010]

#### Collators and sorters

Previously coded as S06-A12C. Feeding paper containing classified info to a locked tray. See T04-J codes for feeding outside printing unit.

#### S06-K02D [2010]

# Paper skew detection

Previously coded as S06-A12D. Paper skew correction is coded by S06-K02B. For clearing jams in fixing system see also S06-E06.

#### S06-K02E [2010]

#### **Sheet decurling**

Previously coded as S06-A12E.

#### S06-K03 [2010]

#### Construction

Previously coded as S06-A19, T04-G11, W02-J05, W02-J06. Includes details of machine casing, framework, etc., and also internal mounting arrangements of components and modules.

#### S06-K03A [2010]

#### Carriage/Motor aspects

Previously coded as T04-G06. Includes all carriage systems not coded elsewhere. Constructional details of motors are covered by V06 codes.

#### S06-K03B [2010]

#### **Paper Holders**

Previously coded as S06-A19A. *Container, storage* 

#### S06-K03B1 [2010]

#### Cassettes

Previously coded as S06-A19A1. For holding paper sheets before being fed for copying onto.

#### S06-K03B2 [2010]

#### Trays, bins

Previously coded as S06-A19A2. For receiving documents or copy paper sheets after copying operation, duplex intermediate tray

#### S06-K03C [2010]

# Cooling, ventilation & humidifying mechanisms

Previously coded as S06-A19B. Fan

### S06-K03D [2010]

### Frames, cases, bearing

Previously coded as S06-A19C.

#### S06-K03E [2010]

#### Manufacture and manufacturing apparatus

Previously coded as S06-A19D. Covers manufacturing method and apparatus for the manufacture of elements.

#### S06-K03F [2010]

### **Connectors, circuitry**

Previously coded as W02-J05C.

#### S06-K03G [2010]

#### **Power supply**

Previously coded as W02-J06. Includes mains and battery supplies for all types of units including portable systems. Control aspect of power supplies are coded by S06-K07A2 only. Also includes protection circuits. See U24-D, U24-E, U24-F and U24-X codes.

Surge, overload, back-up

#### S06-K03H [2010]

#### Rollers

Previously coded as S06-A15. General constructional details of rollers. See also S06-E05B for transfer roller or S06-E06B1 for fuser roller.

#### S06-K04 [2010]

#### Recycling

Previously coded as S06-A17, T04-G11B, W02-J05D. See also X25-W04 for electrical aspects of recycling systems in general.

#### S06-K04A [2010]

#### Paper recycling

Previously coded as A06-A17A. For removing toner from recording paper to enable re-use of paper.

#### S06-K04B [2010]

#### Recording agents recycling

Previously coded as S06-A17B.

### S06-K04C [2010]

#### Components recycling

Previously coded as S06-A17C. See also V04/X12 for recycling electrical components.

### S06-K05 [2010]

# **Finishing**

Previously coded as S06-A18, T04-G06B, W02-J05B. For collators and sorters see S06-K02C.

#### S06-K05A [2010]

# Stapling, binding, cutting, punching, folding

Previously coded as S06-A18A. Includes bookbinding/stapling/cutting/punching devices situated inside the copier or separate bookbinding/stapling/cutting/punching machines attached to the copier.

# S06-K05B [2010]

#### Laminating

Previously coded as S06-A18B. Laminating, protective layer

### S06-K05C [2010]

# Shredding

Previously coded as S06-A18C, T04-G06S. Includes immediate shredding directly after scanning/printing.

# S06-K05D [2010]

# Attachment of anti-copy mark

Previously coded as S06-A18D. Includes applying a magnetic wire, RFID tag, etc., as part of the printing process. If attaching a RFID tag, see also T04-K codes. Detection of copy prevention marks on documents are also coded under S06-K07A3. Details on watermarking also coded under T01.

#### S06-K06 [2010]

#### **Cleaning/Recording Agent Removal**

Previously coded as S06-A10, T04-G02D. Covers mechanism for transferring toner to the collection or waste container for later removal and recycling outside the copier. For details of toner or ink recycling, see S06-K04B.

### S06-K06A [2010]

#### **Printhead cleaning**

#### S06-K06B [2010]

#### Charge and ozone removal

Previously coded as S06-A10B. Drum, discharge

# S06-K06C [2010]

#### Removing excess developer agent

Previously coded as S06-A10A. Involves removal of toner

# S06-K06C1 [2010]

#### **Using blade**

Previously coded as S06-A10A1. *Scraper, doctor blade* 

#### S06-K06C2 [2010]

# Returning toner / ink for re-use

Previously coded as S06-A10C.

#### S06-K06C3 [2010]

# Transfer of developing agent to waste container

Previously coded as S06-A10D. Covers mechanism for transferring developing agent to the collection or waste container for later removal and recycling outside the printer/copier/facsimile. See S06-K06C2 when the toner is recycled within the copier for immediate re-use. See S06-K04B for details of recording agents recycling.

#### S06-K06D [2010]

#### Removing dust, etc. from components

Previously coded as S06-A10E. Includes details of air cleaning systems. If cleaned air is expelled outside the copier, see also X27-E01B2 (electrical aspects only). Constructional details of ventilation and humidifying mechanisms are also coded by S06-K03C.

#### S06-K07 [2010]

#### **Communication and Control**

Previously coded as S06-A14, S06-A16, T04-G10, W02-J03, W02-J08. Includes operating status display (for display control circuitry see T04-H codes), mode selection devices, microprocessor details (see also T01-J codes, e.g. T01-J08A), and recording inhibiting devices. Does not include motors and solenoids for carriage and platen movement.

#### S06-K07A [2010]

#### **General control systems**

Previously coded as S06-A14C, T04-G10A, W02-J03A7.

### S06-K07A1 [2010]

### User input and display

Previously coded as S06-A14A, T04-G10A1, W02-J03A4. Includes mode selection keys, etc Operator warning device, mode setting, touchscreen

#### S06-K07A2 [2010]

#### **Power supply control**

Previously coded as S06-A14D.

#### S06-K07A3 [2010]

# Management of confidential/secure documents

Previously coded as S06-A14F, T04-G10F, W02-J11. Preventing illegal copying of banknotes, securities and private documents, recognising copy prevention marks on documents, output to authorised operator. See also T01/T04 for image processing aspects and T05-J for testing of securities, banknotes, etc. Attachment of anti-copy mark, e.g. a RFID, is also coded under S06-K05D. Secrecy details during communication, such as transmission data encoding, password, data encryption, etc., are also coded by S06-K07C7.

#### S06-K07A4 [2010]

#### Image processing

Previously coded as S06-A16A, W02-J03A1, W02-J03A2. Includes details of digital copiers. See also

Picture signal amplifier, halftone screening, edge enhancement, noise or error suppression

#### S06-K07A4A [2010]

# **Compensation for acquisition aspects**

Previously coded as W02-J03A1A. Shading compensation

#### S06-K07A4B [2010]

# Changing magnification, composing and electronic layout control

Previously coded as W02-J03A2A, W02-J03A2B.

# S06-K07A4C [2010]

#### Image outputting

Previously coded as W02-J03A3. Includes systems for generating previews of image before sending (using e.g. a facsimile) or printing. Details of user display is also coded by S06-K07A1.

#### S06-K07A4D [2010]

# Compression/bandwidth reduction

Previously coded as W02-J03B. See U21-A05 codes for coding in general, W04-P01A codes for TV signal compression, and W02-G04A codes for bandwidth reduction in general.

# S06-K07A5 [2010]

#### Copy sheet counting

Previously coded as W02-J03A7A.

# S06-K07B [2010]

#### **Monitoring systems**

Previously coded as S06-A14B, T04-G10G, W02-J03A5. Covers monitoring systems of the device, monitoring of the communication system is S06-K07C6 only.

# S06-K07B1 [2010]

# Monitoring of recording agent Refill

#### S06-K07B1A [2010]

# **Recording agent level detection**

Previously coded as S06-A04A1A.

#### S06-K07B1B [2010]

# Recording agent density detection

Previously coded as S06-A04A1B.

#### S06-K07C [2010]

#### Communication

Previously coded as W02-J03C, W02-J08. Includes input-output arrangements, telephone interface and secrecy systems (with W02-L). Search W01-C05B1 and W01-C01H for telephone aspects also. For ISDN aspects see W01-C05B7. For LAN aspects see W01-A06 codes.

# S06-K07C1 [2010]

#### Remote control/monitoring

Previously coded as S06-A14E, T04-G10E. Search together with S06-K07A and S06-K07B codes as applicable.

#### S06-K07C1A [2010]

#### Print Job/Queue

Previously coded as T04-G10E1.

### S06-K07C2 [2010]

# Interfacing

Previously coded as T04-G10C.

# S06-K07C2A [2010]

#### Telephone interfacing

Previously coded as W02-J03C7. Includes combined facsimile-telephone. See W01-C01P4. Also W01-C05B3H.

### S06-K07C2B [2010]

# **Network interfacing**

Previously coded as W02-J08A. Includes aspects of printers with built in print server.

#### S06-K07C2C [2010]

#### ISDN interfacing

Previously coded as W02-J08C. Also W01-C05B7 codes for general aspects of ISDN.

#### S06-K07C2D [2010]

#### **Computer interfacing**

Previously coded as W02-J03C8. See also T01-C03B code.

# S06-K07C3 [2010]

#### Signal processing

Previously coded as W02-J03C1.

# S06-K07C4 [2010]

# **Determining and setting transmission**

Previously coded as W02-J03C2. Includes detecting type of receiving station (e.g. G3, G4).

Autodialler, modem

#### S06-K07C5 [2010]

#### **Reception details**

Previously coded as W02-J03C5.

Automatic answering

### S06-K07C6 [2010]

# Monitoring and error checking

Previously coded as W02-J03C3.

# S06-K07C7 [2010]

#### Secrecy/Authentication

Previously coded as W02-J03C6. Includes transmission data encoding, password, data encryption. Management of confidential/secure documents are also coded by S06-K07A3.

# S06-K99 [2010]

# **Machine Type**

The machine type codes cover the application of a patent for a particular function. Patents that describe multiple applications will not be covered (except MFP).

# S06-K99A [2010]

#### Self-contained printing machine

Self-contained typewriters, label printers, independent units, hand held printing devices.

S06-K99B [2010]
-----------------

Copier

S06-K99C [2010]

**Printer** 

Printer peripherals for use with a computer.

S06-K99D [2010]

Fax

S06-K99E [2011]

**Plotters** 

Previously coded as T04-H02.

# S06-K99F [2010]

#### Multifunctional peripheral

Includes patents describing the combination of two or more other machine types.

MFP

#### S06-K99F1 [2010]

# Multifunctional peripheral including fax application

Previously coded as W02-J07.

# S06-K99G [2010]

#### **Analogous systems**

Previously coded as W02-J10. For medical stimulable sheet phosphor systems see also S05-D02A5C. For electronic blackboard (previously coded in W02-J09) see also W04-W05.

# S06-K99X [2010]

# Other (printer types)

Previously coded as T04-G09. Includes Braille printers, (see S05-K, T04-X for other Braille aspects), electronic pen recorders. Magnetic printers are coded under S06-E07 only.

# **Section T: Computing and Control**

T01: DIGITAL COMPUTERS	313
T02: Analogue and Hybrid Computers	346
T03: Data Recording	347
T04: Computer Peripheral Equipment	385
T05: Counting, Checking, Vending, ATM and POS Systems	397
T06: Process and Machine Control	403
T07: Traffic Control Systems	410

### **T01: Digital Computers**

#### T01-A

#### **Mechanical digital computers**

Align, calculate, register, interlock

#### T01-B

#### Fluid-pressure digital computers

Pneumatic, hydraulic, valve

#### T01-C

#### Input/output arrangements

Covers specific input arrangements for transferring data to be processed into a form which is capable of being handled by a computer. See T01-H for information transfer. Peripheral devices per se are in T04. See U21 for electronic switching.

Port

#### T01-C01

# For record carriers (e.g. magnetic tape)

Includes buffering. See T01-C07C1 for smart card interface.

Card, disc, drive, reader, SCSI (small computer system interface), PCAT, SASD

### T01-C01A [1997]

#### To/from DASD

Includes details of all defined standards, e.g. ATA, SATA, SCSI, iSCSI, IDE.

Floppy disc, hard disc, CD-ROM

#### T01-C01C [1997]

#### To/from semiconductor memory

See also U14-A codes. Flash memory

#### T01-C02

#### For manual input device

Mechanical switches are coded in V03, and electronic switch details in U21.

Coordinate, enter, key, touch, matrix

# T01-C02A [1987]

# **Keyboard interface**

Alphanumeric code generation, key stroke detector

### T01-C02A1 [1992]

#### In co-operation with display

Includes keys used in conjunction with icons or instructions displayed on the screen such as help keys, cursor control keys and function select keys. Details of icons used for program management are coded in T01-J12D.

#### T01-C02A9

[1992]

#### Other (optoelectronic keyboard)

Opto-electronic keyboard

#### T01-C02B

[1987]

#### Position-digital value converters

Digitiser, co-ordinate

#### T01-C02B1

# In cooperation with display

See also T01-J12 for GUI/HCI, and T01-J12B for GUI windows.

#### T01-C02B1A\*

[1992-2001]

#### For mouse

\*This code is now discontinued, see T04-F02B1 from 2002. Includes use of mouse to 'pull down' icon functions and windows. See also T01-J12B for windows in general.

# T01-C02B1B\*

[1992-2001]

#### For joystick

\*This code is now discontinued, see T04-F02B3 from 2002. Includes interfaces and code translators for joysticks. See T01-P02 and W04-X02 codes also, if used for computer/arcade games.

# T01-C02B1C\*

[1992-1996]

# For light pen

\*This code is now discontinued. See T01-C02B1H from 1997-2001 and T04-F02A1 from 2002.

# T01-C02B1D\*

[1992-2001]

# Virtual keyboards and touch screens

\*This code is now discontinued, see T04-F02A2 from 2002. Includes interfaces and 'key' / position code translation. Also includes finger-operated mouse.

#### T01-C02B1E\*

[1997-2001]

# Three-dimensional space signal input/output

\*This code is now discontinued, see T04-F02B from 2002. Includes virtual reality handsets/sensor, gloves (see W04-V07E codes also).

### T01-C02B1G\* [1997-2001]

#### **Tracker ball**

\*This code is now discontinued, see T04-F02B5 from 2002.

# T01-C02B1H\* [1997-2001]

#### Pen input

\*This code is now discontinued, see T04-F02A1 from 2002. Includes input by inductive or capacitive pen, light pen and touch pen. For pen sensing details, see T04 and U21.

#### T01-C02B1J\*

[1997-2001]

#### Finger-shaped or hand input

\*This code is now discontinued, see T04-F02B from 2002. Devices which use relative movement of finger or hand as input to processor.

Thimble

#### T01-C02B9\*

[1992-2001]

#### Other (position-digital value converters)

\*This code is now discontinued, see T04-F02B from 2002.

#### T01-C03

#### Data exchange with distant stations

Bus, transmit, receive, terminal, link, line receiver

# T01-C03A [1992]

# Arrangements for interfacing with networks

Transmitting information between computers via communication medium. Including LAN and WAN interfacing details of computer networks. See T01-H07 for inter-computer communication and T01-M02 for multiprocessing structure. For bus arbitration and cycling arrangements see T01-H05B. Also includes computer peripheral network connections, but see also appropriate code for specific peripheral e.g. T01-C05A1.

ARPANET (advanced research project agency network), binding

# T01-C03B

[1992]

#### **Data communication**

Includes telephone interfaces and modems. RS-232 (Recommended Standard 232), RS-485, RS-422, RS-423

### T01-C03C [1997]

#### Wireless link

Connection between/to devices, for connection to peripheral (e.g. printer) see T01-C07C3 instead. Includes, satellite, radio, infra-red, etc. interfaces for accessing a network. See also W01-A06C3 and W01-A06C4.

#### T01-C03C1

[1997]

## Broadcast radio/television signal input

TV card

#### T01-C04

#### **Output to displays**

Video, colour, graphics, character, monitor, colour/intensity

#### T01-C04A

#### For CRTs

Monitor, VDU

#### T01-C04B

### For display panels

Flexible display monitors are coded under T04-H03N. Details of general foldable/bendable displays are coded under W05-E05F.

Matrix, LCD, gas discharge, plasma, hologram, flexible panel, foldable panel

### T01-C04C

[1997]

# **LED display**

(T01-C04)

# T01-C04D

[1997]

#### Display processing

(T01-C04)

Graphics card

#### T01-C04X

#### Other

Update, Bitmap

#### T01-C05

# Output to printers (incl. plotters, typewriters)

Character, font, format, graphic, line, text, ink-jet, impact, thermal, X-Y, chart

# T01-C05A To printer

[1992]

For '3D/4D printing' technology such as Fused Deposition Modelling (FDM) see T01-J07B3.

Ink-jet, impact, thermal, laser

T01-C05A1 [1997]

To/from networked/shared printers

T01-C05B [1992]

To plotter

X-Y, chart

T01-C06 [1992]

#### Scanning

(T01-C09)

Bar code reading and character recognition, such as OCR, are covered by T04-A03B1 and T04-D04 codes respectively. Hand scanners for computer input are coded in T04-M02. This code is used for computer interfacing details only.

OCR, bar codes

T01-C06A [2012]

#### To/from networked/shared scanner

Covers the scanners that share with the network Remote scanner

T01-C07 [1992]

#### Interconnections (subsystems)

Includes general aspects not specific to interfaced devices such as input/output and data communications. See T01-H05A for I/O controllers and processors, and T01-L09 for physical structures.

T01-C07A [1992]

#### Asynchronous/Synchronous operation

Covers interfaces characterised by communication mode. See T01-H07B for bus protocol details. USART (sync/async receiver/transmitter), start-stop bit, flip-flop

T01-C07B [1992]

#### Fiber optics

Also coded in V07.

T01-C07C [1992]

#### **Interfaces**

Includes backplanes, cables, chip carriers and plugboard/card/overlay motherboards. See also T01-L02 and V04 for hardware details, and T01-L09 for wiring and connectors.

Current loop, EIA, interrupt, DMA/program controlled, slave, adaptor card, latch-chip, SCSI

T01-C07C1 [1992]

Smart card reader interface

T01-C07C2 [1992]

#### **Buffers**

Includes structure e.g. shift registers, re-circulating, and buffer/interface function such as rate control.

T01-C07C3 [1997]

# Non-wired connection between peripheral and computer

Includes radio and optical signal transfer between computer and peripheral. Remote control of computer.

Free space, wireless, infrared

T01-C07C4 [1997]

# Serial ports, parallel ports, serial-parallel conversion

Centronics (RTM), USB

T01-C07C4A [2005]

#### Serial interface with additional features

Additional features such as power supply. See also T01-H07, T01-H05B for bus transfer and T01-L01/3 for connector details. See also V04 codes.

USB, universal serial bus interface, hot swap, plug and play, firewire, IEEE 1394, i-link®

T01-C07C5 [1997]

# Using standard interfaces or expansion cards

See T01-C11 for PCMCIA cards per se. *PCI. PCI-X*.

T01-C07D [1992]

### Topology

Covers wiring arrangements and connections to interface including power arrangements. Includes interface buses and point-to-point connection. See T01-H07A for bus structures.

T01-C08 [1992]

# Digital input/output using sampling of analog signals

Analog to digital converter

T01-C08A [1992]

# Speech recognition/synthesis input/output

(T01-C09)

See also W04-V codes for sound wave analysis/synthesis, speech to text, text to speech and T01-J18 for speech/audio processing.

Telephone, output, sound

T01-C08B [1997]

#### Measurement signal input

See also T01-J07A for data acquisition applications.

T01-C09

Other

T01-C10 [1997]

#### Non-manual human input

(T01-C09)

Includes eye input, foot input and neurological input to computer.

T01-C11 [1997]

#### **PCMCIA** cards

See also T04 and U11.

#### T01-D

#### **Data conversion**

See U21-A for coding and code conversion in general.

#### T01-D01 [1992]

### **Data encryption and Decryption**

Includes private and public key encryption. See W01-A05 codes for data communications aspects. DES. RSA

T01-D01A [2002]

#### **Encryption algorithm**

For encoding a plain text message using number of division using ki dimensional vector on a finite field. *Polynomial, primary number* 

#### T01-D02 [1992]

#### Coding and information theory

Includes data compaction/compression, formal communication models, and non-secret encoding systems. Image compression prior to 1997 - see also T01-J10A1. T01-J10B, now indexed in T01-J10D

Lempel-Ziv, sliding window, Huffman, holotropic, fractal coding

#### T01-D02A [2005]

#### Watermarking

See also T01-J10D for image watermarking and W04 for audio/visual watermarking.

Stenanography

T01-D03 [1992]

# Shifting

Includes justifying, scaling and normalising.

T01-D04 [2005]

#### **Data flow speed conversion**

Pre 2005 see T01-D09.

T01-D09 [1992]

#### Other

From 2005 see T01-D04 for data flow speed conversion.

#### T01-E

#### **Data processing**

Instruction, masking, bit manipulation

#### T01-E01

# Sorting, selecting, merging or comparing data

Algorithm, key, routine, sequence generator, word, bit stream manufacture

# T01-E01A [1992]

#### Sorting

Includes grouping data records, rearranging, and re-recording.

Software Boolean logic operation

#### T01-E01B [1992]

#### **Selectina**

Includes special character detection.

#### T01-E01C [1992]

#### Comparing

Includes merging.

### T01-E02

# Computation using only denominational number representation

Digital processing using binary, ternary etc. number systems.

Arithmetic, binary, decimal, exponent, floatingpoint, integer, logic, mantissa, operand, fixed point, coded decimal

### T01-E02A

#### Adding, subtracting

Addend, carry, even, subtrahend, sum

#### T01-E02B

#### Multiplying, dividing

Multiplication, multiplier, product

#### T01-E02C [1997]

# **Logic processing**

See U21-C for logic circuits.

T01-E02D [1997]

**ALU** 

#### T01-E02X

#### Other (incl. evaluating functions)

Approximation, interpolation, complex numbers, logarithm, root, square

#### T01-E03

# Computation using digital nondenominational representation

Integration, differentiation, increment, pulse, proportional, multiplier, divider, P-modulo arithmetic

#### T01-E04

# Comparing digital values; random number generators

See also T01-J15 for chaos modelling. Pseudo random binary sequence (PRBS), comparator, hashing

T01-E05 [1992]

# Novel data processing technology

(T01-E09)

T01-E05A [1992]

#### **Optical/Electro-optical**

See also T01-M06D and T02-A03 for analogue optical computing and T02-B for hybrid arrangements. Pure optical, electro-optical components are found in V07-K06.

SLM (spatial light modulators), SLR (spatial light rebroadcasters)

### T01-E05B [1992]

### **Neuronal configurations**

Neural networks in general are covered by T01-J16C1. See T02-A04A5 for analog neural networks.

#### T01-E05C [1992]

#### **Superconducting elements**

Superconducting computing systems are covered by T01-M06E. See also U14-F02B.

T01-E05D [1992]

Biocomputer

T01-E05Q [2005]

#### **Quantum Computing**

Using quantum theory for processing. Prior to 2005 see T01-E05X. For Quantum processor architecture see T01-M06Q.

T01-E05X [1992]

Other novel data processing technology

T01-E09

Other

#### T01-F

# **Program control**

Software

#### T01-F01

#### Microprogramming

T01-F01A [1987]

#### **Enhancement of operating speed**

Includes use of several micro-control devices operating in parallel.

Score boarding

T01-F01B [1992]

Loading

T01-F01B1 [1997]

# Firmware microprogramming

See T01-S01A for disclosure of firmware code.

# T01-F01C [1992]

#### **Address formation**

Includes address formation of next microinstruction selection.

#### T01-F02

# Interrupt, multi-programming, multitasking, software interrupts

Covers supporting and keeping track of operations of multiplicity of users who are running numerous concurrent processes.

Access, multi-port, multi-task, request, poll, queuing control

# T01-F02A [1992]

#### Task transfer initiation

Covers multiple task sequencing and selection. Initiating and controlling task operations and use of system resources.

T01-F02A1 [1997]

Interrupt handling/processing

T01-F02B [1992]

#### Saving or restoring of program or task

Covers program control blocks and multiple register set usage.

T01-F02C [1992]

#### **Task interaction**

Includes multiprocessor transaction management protocol and allocation of resources to processes, load balancing and scheduling.

Lock-out avoidance, IPC

T01-F02C1 [1997]

**Synchronisation** 

Multimedia

T01-F02C2 [1997]

**Resource allocation** 

T01-F02C3 [2006]

**Multi-thread** 

The ability of an operating system to execute different parts of a program simultaneously.

T01-F02C4 [2007]

**Data transfer between applications** 

T01-F03

**Execution of machine instructions** 

Fetch, instruction, nodes, pipeline, pre-fetch

T01-F03A [1987]

Address formation of next instruction, branching, access of instruction operand

T01-F03B [1987]

Concurrent instruction execution, pipeline, look-ahead

Low level parallel mechanisms, RISC

T01-F03B1 [1997]

**Pipelining** 

T01-F03C [1997]

Instruction decoding

T01-F04 [1987]

Subprogram execution

(T01-F09)

T01-F05 [1987]

Arrangements for executing specific programs and system management software

(T01-F09)

Includes operating systems, supervisors, executives and monitors.

Debug, edit, execute, state-machine

T01-F05A [1992]

# High level language and language processors

Binary Compilers and Assemblers for e.g. operating system compilation. Use of Application Programming Interface (API), Dynamic Link Libraries (DLLs) during program execution. From 2007, for use of API during software development see T01-J20B1, and for Compilers and Assemblers used in software development, see T01-J20B1.

Cobol, Fortran, Pascal, Lisp, C, C++, Java®

T01-F05B

[1992]

# Booting/initialisation and recovery

(T01-G05A)

Includes reconfiguration, retry, checkpointing and restoring.

Start-up

T01-F05B1

[1997]

Resetting

T01-F05B2 [1997]

#### Configuring

Boot-up and program loading. Hot configuration. Version management of software e.g. BIOS firmware. For version management of software code see T01-F05F or T01-J20B2 during development. For Installation and/or updating of software involving transmission over network see T01-N02B1E. For network security software updates see T01-N02B3.

Plug and play

T01-F05B3

[1997]

# Sleeping and waking, power-up/down, halting

Includes Power Management

T01-F05C

[1992]

#### Interactive support programs

Includes time share control.

T01-F05D

[1992]

Job entry system programs

T01-F05E

[1992]

# Data handling programs and storage management

Includes allocation/deallocation strategies, distributed memories, segmentation, storage hierarchies and swapping. See also T01-E01 and T01-J05B.

BIOS, Kernel, utilities, file management, up/down loading, share seize mechanisms

T01-F05E1 [2008]

Middleware

T01-F05F [2007]

**Software version management** 

T01-F05G [1997]

# **Operating systems and virtual systems**

Machine emulation including network operating systems.

MS-DOS, Unix, OS/2, Novell NetWare, Windows NT, LINIX

T01-F05G3 [1997]

#### Virtual systems

Includes shells and interfaces created by OS and emulation of terminal types by OS software.

Bourne-shell, utilities

### T01-F05G5 [1997]

#### **System management**

Includes user privilege set-up; security - see T01-J12C, usage monitoring see - T01-G05C, T01-G11; file management - see T01-F05E.

T01-F05G5A [2006]

Screen savers

T01-F05G7 [2006]

### Real time clock

Covers updating and management of real time system clock.

T01-F06 [1992]

#### **Program control arrangements**

(T01-F09)

Covers program arrangements were instructions are pre-programmed before processing is carried out. See T01-M05 for architecture. Non-numerical controllers per se are covered by T06-A04B. For disclosure of firmware see T01-S01A. See also U21 for logic devices.

PLD, PLC, EEPROM

T01-F07 [1992]

#### **Object based systems**

Links, AKO, ISA, object-oriented programming (OOP), object-oriented database (OODB)

T01-F09

Other

#### T01-G

#### Error detection/correction; monitoring

Software debug systems are covered by T01-J20.

#### T01-G01

#### Using redundancy in data representation

See also U21-A06 for error correction/ detection circuitry, and W01-A01 codes for data transmission aspects.

#### T01-G01A [1992]

#### Using checking codes

Error correction words (ECW), Error correction codes (ECC), Hamming distance

#### T01-G01A1 [1992]

**Using parity** 

#### T01-G02

#### Testing hardware during idle time

Includes integrated circuits with on-chip testing circuitry. See also S01-G01A, U11-F01D2, U13-C07, U14-D.

Diagnose, check-bit, routine, sub-routine, program, signature analysis

#### T01-G02A [1987]

### **Defective hardware location subsystems**

#### T01-G02A1 [1987]

#### On integrated circuit

Includes LSSD (level sensitive scan design). See also U13-C07.

# T01-G02A2 [1992]

#### System/field testing

Includes Computer Aided Test (CAT) system comprising of microcomputer/computer to aid testing of processor/CPU based systems or appts. See also T01-J07B for quality control

# T01-G02A2A [1992]

### **Automatic Testing Equipment (ATE)**

See also T01-J08F for system test other than processor systems.

### T01-G02A2B [1992]

#### **Built in testing**

Includes scanpath, signature and boundary analysis. *Built in block operation (BILBO)* 

# T01-G02A2C [1992]

#### By comparison

Includes comparing with known 'good' cards or appts.; redundancy in registers and comparing results in both; and signature analysis.

Goldcard, Signature analysis

#### T01-G02A2D [1992]

#### Test programs and algorithms

Includes software for generating test patterns and/or collecting results and analysing faults. Also software controlling test procedures or appts.

#### T01-G02B [1992]

### **Marginal testing**

Includes preventative maintenance and safety margins.

#### T01-G03

# Using redundancy in operation or hardware

Redundant processors - see T01-G05B from 1997. Passive fault masking, active fault masking, backward error recovery, single event upset (SEU) prevention, RAID

#### T01-G04 [2014]

#### **Computer vibrating testing**

Includes testing computer assemblies for resistance to the effects of mechanical vibration and shock. See also S02-E (Measurement of mechanical vibrations).

#### T01-G05 [1987]

#### Fail-safe and monitoring systems

(T01-G09)

Includes appts. for error recovery and monitoring during operation of processor or processing system for reliable operation of hardware or software. See T06-A08 also for control system applications and T01-J20 for software debug and test.

Fail, fail-safe, fault-tolerant

#### T01-G05A [1987]

# Watchdog monitoring / Ensuring proper program flow

Includes halting of operation of all processing within computing system upon detection of error. See also T01-F05B for booting/initialisation and recovery from 1992.

Rollback, halting operation, freeze

### T01-G05B [1987]

#### **Using additional processors**

Includes redundant processor techniques (see T01-G03 for non-processor redundancy).

#### T01-G05C

[1992]

# Monitoring

(T01-G09)

Includes patterns, pulse trains and error processing.

#### T01-G05C1

[1992]

# Recording or statistical evaluation of computer activity

(T01-G09)

# T01-G06 [1992]

#### Logic simulation

(T01-G09)

Includes simulation machine/processor executing logic simulation, and logic models; and several simulation processors working in parallel. See also T01-J15A3 for electrical/electronic circuit emulation in CAD systems; T01-F05G3 for machine emulation. Event driven, levelized

#### T01-G06A

[1992]

#### Compiled code

LCC (levelized compiled code)

#### T01-G06B

[1992]

# Table driven

Using look-up tables to model logic functions.

#### T01-G06C

[1992]

### Hardware accelerators

(T01-G09)

Includes use of hardware for certain functions of simulation in cooperation with software to reduce load on processor to speed up process.

#### T01-G07

[1992]

#### **Fault simulation**

(T01-G09)

Includes introduction of known faults and monitoring/analysing effect such as stuck-at-one and stuck-at-zero techniques.

#### T01-G07A

[1992]

#### **Test sequence generation**

Includes test vector compression.

# T01-G07X

[1992]

# Other

### T01-G08 [1992]

#### **Computer Diagnostics**

(T01-G09)

Includes fault location, file/diagnostic dictionary software, remote diagnostic (see also T01-N codes), fault masking and fault documentation. See T01-J08F for diagnostic of non-computer equipment.

# T01-G08A [1997]

### **Systems support**

Includes systems support repository, help system. For AI based expert system support, see also T01-I16A

#### T01-G09

#### Other

From 1992 see T01-J20C for software debug systems; T01-G05C for monitoring of computer systems; T01-G06 for logic simulation systems; T01-G07 for fault simulation systems; and T01-G08 for diagnostic systems.

#### T01-G11 [1997]

# Measurement of non-processing parameters of computer systems

(T01-G05C, T01-G09)

Includes smoke or fire detection (see W05-B02 codes also), alarm generation, power/spike failure in computer systems. See also T01-G05C for processor related monitoring. See T01-J08F for computer testing and monitoring of non-computer equipment.

# T01-G11A [1997]

#### **Power supply**

Includes measurement and control of external power supply to computer. See T01-L01 for computer power supplies and T01-G05A.

#### T01-G11B [1997]

#### Temperature measurement and control

Includes measuring temperature/humidity of computer surroundings to maintain optimum operating conditions. See also T01-G05A.

#### T01-G11C [1997]

# User monitoring, e.g. tiredness

Includes measuring muscle tiredness, time of continuous use (see also T01-G05C), harmful screen emissions.

RSI

### T01-G11F [2012]

#### Fan speed measurement and control

Covers measuring the speed of the fan and controlling the speed depends on the CPU usage

#### T01-G11X [2005]

# Other measurement of non-processor parameters

#### T01-H

# Data storage and memory, interconnection, data transfer

See U14-A for semiconductor memories per se, and T03 for data storage and recording by relative movement between head and record carrier.

#### T01-H01

# Interconnections to random access memory, addressing and memory allocation, memory systems and architectures

Harvard architecture

#### T01-H01A

### **Module Addressing Technique**

Shadowing, memory allocation table, look ahead addressing

[1987]

### T01-H01B [1987]

# Memory storage components, hardware, or use of

Includes data layers, data logging memory cards and cassettes. See T04-K for smart cards per se. See also T01-H01C for unauthorised copying or memory protection (e.g. for disk or ROM). For physical construction of record carriers, see U14 for semiconductor memories and T03 for disks and tapes etc.

#### T01-H01B1\* [1992-2004]

# Dynamic recording by relative movement between recording head and storage medium (disk, drum, tape etc.)

\*This code is now discontinued. See T01-H01B4, T01-H01B5 and T01-H01B6 from 2005. File server, disk, drum, tape

# T01-H01B1A\*

[1997-2004]

#### Storage Arrays

\*This code is now discontinued. See T01-H01B7 from 2005.

RAID

# T01-H01B2\* [1992-2004]

# Optical, magneto-optical computer memory

\*This code is now discontinued. See T01-H01B4/5/6 from 2005

Hologram, CD-ROM, DVD

#### T01-H01B3 [1992]

#### Semiconductor / solid state memory

Includes semiconductor, bubble, capacitor, card, core, and RAM. See also U14-A codes.

RAM, ROM, DRAM, EPROM, EEPROM, flash memory

### T01-H01B3A [1992]

### **Memory card**

Search together with other T01-H01B3 codes for type, see also T04-K. for removable memory. MMC, SD, CF, Memory Stick

#### T01-H01B3B [2005]

#### **Static Magnetic Memories**

Covers solid state magnetic memories. MRAM

#### T01-H01B3C [2005]

#### **Static Optical Memories**

Covers solid state optical memories.

#### T01-H01B3D [2006]

# Non-volatile electronic semiconductors memories

Flash memories, see also T01-H01B3A flash memory cards.

#### T01-H01B4 [2005]

#### **Dynamic Magnetic**

Includes Hard Disks, floppy disks.

# T01-H01B5 [2005]

#### **Dynamic Magneto-Optical**

Mini-disc

### T01-H01B6 [2005]

### **Dynamic Optical**

For CD, CD-ROM, DVD.

# T01-H01B6A [2005]

### Volume Read e.g. Holographic

For use of media that is read by passing a light beam through (not off) the material such as holographic storage.

### T01-H01B7 [2005]

#### **Storage Arrays**

Also code under memory type, see also T01-G03 for redundant storage areas, e.g. RAID. See T01-H01B1A prior to 2005.

#### T01-H01B9 [2005]

# Others (including all non-semiconductor static memories)

#### T01-H01C [1987]

# Memory/Storage Protection Arrangement/method

For data back-up/protection see T01-G and T01-F05E.

# T01-H01C1\* [1992-2005]

# **Smart card fraud protection**

\*This code is now discontinued. See T04-K04 from 2006.

#### T01-H01C2 [1992]

Illegal memory access prevention

#### T01-H01C3 [1992]

# For prevention of memory loss including refresh

See also U14-A03B4A. Prevention of memory loss due to defective memory.

#### T01-H01C4 [1992]

Other

# T01-H01D [1987]

# Stacks and Registers

Covers fast-access temporary storage locations within CPU. Dual port memory is covered by T01-H03D from 1992.

### T01-H01X [1987]

#### Other

Includes high performance storage units (HPSU). BICPU (bimemory independent CPU)

# T01-H02\* [1987-1991]

#### Virtual memory, cache stores

\*This code is now discontinued. See T01-H03A from 1992.

### T01-H03 [1992]

# **Memory type**

(T01-H02, T01-H09)

# T01-H03A [1992]

# Cache memory, virtual memory and hierarchical memory

Includes use of small, high speed buffer, virtual and hierarchical memories. Includes address translation (see also T01-H01A). Prior to 1992 covered by T01-H02, now discontinued. Network Caching is covered by T01-N01D4 from 2005.

Ageing

# T01-H03B [1992]

## **Associative memory**

Includes content addressable and parallel searching.

### T01-H03C [1992]

# Interleaved memory and mass storage

Includes secondary memory. Expanded memory unit

# T01-H03D [1992]

## Sequential access and shared memories

(T01-H09)

Includes common shared bus, multiport, crossbar switching memories (Dual port memory was coded in T01-H01D prior to 1992).

Dual port memory, video RAM

# T01-H03X [1992]

Other

Primary

#### T01-H05 [1987]

# Computer peripheral control / General request handling/ Bus Accessing

## T01-H05A [1987]

#### **Program control for computer peripherals**

See also T03 for data storage controllers for dynamic recording, e.g. T03-A10 codes (magnetic), T03-B08 (optical) and T03-D01E5 (magneto-optical).

Channel processor

# T01-H05B [1987]

# **Handling requests**

For interconnection or data transfer. See also W01-A03A for general data communication access systems.

Access

# T01-H05B1 [1992]

#### For access to memory bus

Includes priority.

# T01-H05B2 [1992]

### For access to input/output bus

Includes polling, interrupt, burst mode, DMA, cycle steal.

# T01-H05B3 [1992]

#### For access to common bus or bus system

Includes centralised access control, request, token, time dependant, slot and contention.

# T01-H05B4 [1997]

#### Local bus systems

(T01-H05B, T01-H05B2, T01-H05B3) *PCI, VL-bus* 

### T01-H07 [1987]

# Information transfer / Bus structures

(T01-H09)

Search T01-C03 also for data exchange interfacing with distant stations, and W01-A for digital transmission in general.

# T01-H07A [1987]

#### **Bus structures**

See also T01-C07D for bus interface.

# T01-H07A1 [1992]

### **Type**

Includes common/parallel, plural and variable width/speed buses.

#### T01-H07A2 [1992]

### Control

Includes centralised, decentralised control.

#### T01-H07A9 [1992]

Other

# T01-H07B [1987]

#### **Bus transfer protocols**

See W01-A03A also for control of access to transmission path.

Handshaking, synchronous, asynchronous, conversion

# T01-H07C\* [1992-2001]

#### Information transfer

(T01-H09)

\*This code is now discontinued, see T01-N and W01-A from 2002. Includes computer network management, routing and communication control. See also T01-J08C and W01-A for communication in general. See also T01-C03B for computer interface for communication via modem.

Inter-operability, open systems, GroupWare, CSCW

# T01-H07C1\* [1992-2001]

#### **Electronic mail**

\*This code is now discontinued, see T01-N01C and W01-A06E1, W01-A06G2, W01-A06X from 2002. Voice mail in telephone system coded in W01-C02B7C. See also W01-A06E1, W01-A06G2, W01-A06X.

Computerised voice mail

# T01-H07C3\* [1997-2001]

# **Data / Media Transfer Applications**

\*This code is now discontinued, see T01-N01D from 2002. Includes downloading file from remote site (FTP).

# T01-H07C3A\* [1997-2001]

#### Audio, sound transfer

\*This code is now discontinued, see T01-N01D1A from 2002.

Internet radio

# T01-H07C3B\* [1997-2001]

# Computerised video and image file transfer

\*This code is now discontinued, see T01-N01D1B from 2002. Includes computerised video conferencing.

JPEG, MPEG

# T01-H07C3C\* [1997-2001]

## **Electronic document transfer**

\*This code is now discontinued, see T01-N01D2 from 2002. For intranet and internet documentation and web page transfer.

WWW, TCP/IP

# T01-H07C3D\* [1997-2001]

#### Multimedia transfer

(T01-J09)

\*This code is now discontinued, see T01-N01D1 from 2002. Combination of text, data, image, sound, or computer programs. Audio/video aspects of multimedia systems are also assigned W04-K10.

# T01-H07C3E\* [1997-2001]

# Running / executing software from remote site or server

\*This code is now discontinued, see T01-N01D3 from 2002.

Applet, Java

# T01-H07C5\* [1987-2001]

# Distributed and networked computer communication

\*This code is now discontinued, see T01-N02 from 2002.

## T01-H07C5A\* [1997-2001]

# Computer network control, monitoring and management

\*This code is now discontinued, see T01-N02 from 2002. See T01-J08C for communication controllers and W01-A06 for data transmission systems in general.

# T01-H07C5C\* [1997-2001]

# Data transfer over private network, intranet transfer

\*This code is now discontinued, see T01-N02A2A from 2002. Data and file transfer within single computer network.

# T01-H07C5E\* [1997-2001]

#### Over public network, internet transfer

\*This code is now discontinued, see T01-N02A2B from 2002. Data and file transfer between networks. Includes on-line systems.

PSTN, TCP/IP, gateway

#### T01-H07C5S\* [1997-2001]

#### Using server

\*This code is now discontinued, see T01-N02A2C. *Print server* 

# T01-H07C7 [1997]

### Local inter-processor data transfer

Inter-processor communication in multiprocessor computer.

# T01-H07C7C [1997]

### **Connections**

Non-bus interconnections.

Matrix, circuit-switched

#### T01-H07P\* [1997-2001]

# **Computer communication protocols**

(T01-H07C)

\*This code is now discontinued, see T01-N02A from 2002. See T01-H07C prior to 1997, T01-J12C for computer security and T01-D01 for encryption. Bus transfer protocols are found in T01-H07B.

# T01-H08 [1992]

# **Multiprocessor memory management**

(T01-H09)

See also T01-M02 for multiprocessor systems and details. See also T01-J05B4 (DBMS) for locking. Distributed system, parallel-processor, single instruction multiple data (SIMD)

#### T01-H09

Other

#### T01-J

#### **Data processing systems**

Routine

#### T01-J01

#### **Desk and pocket calculators**

See also T01-M06A1 where no processing details mentioned.

# T01-J02\* [1980-1991]

## **Multi-processor systems**

\*This code is now discontinued, see T01-M02 from 1992.

# T01-J02A\* [1987-1991]

#### Distributed

\*This code is now discontinued, see T01-M02A from 1992.

#### T01-J02B\* [1987-1991]

## Co-operating processor

\*This code is now discontinued, see T01-M02B from 1992.

# T01-J02C\* [1987-1991]

# Array/parallel

\*This code is now discontinued, see T01-M02C from 1992.

#### T01-J03

#### For evaluating statistical data

See also T01-J04B2 for correlation. *Histogram* 

#### T01-J04

# For function synthesis/ analysis or equation solving

#### T01-J04A [1983]

### For solving equations

Differential, polynomial, linear programming

#### T01-J04B [1983]

For correlation or transformation, e.g. Fourier, Walsh, etc.

# T01-J04B1 [1992]

#### Transformation function

Includes Walsh, Fourier and multi-dimensional transforms.

FT, FFT, S-transform

#### T01-J04B2 [1992]

#### **Correlation function**

Includes digital filtering, array and convolution. Digital filters in general are coded in T01-J08B and U22-G01 codes. See also T01-J03 for statistical analysis using correlation.

#### T01-J04C [1992]

#### Matrix or vector computation

Includes complex numbers.

# T01-J04D [1992]

# **Function evaluation by approximation**

# T01-J04E [2005]

# **Mathematical Modelling**

See also T01-J15H for simulation systems involving mathematical models.

Chaos theory

#### T01-J05

# For administration, commerce or information retrieval

#### T01-J05A [1987]

# Non-Specific Administration, business and commercial Tool

See T05-L codes also for EFT, point-of-sale and automatic teller machines. From 2002 see T01-N01A for on-line business systems.

Cash, cash-transaction, point-of-sale, meter, postage, management

# T01-J05A1 [1992]

## Financial/Monetary

Includes banking, billing, Point of Sale (POS), and metering.

#### T01-J05A2 [1992]

# **Administration and Management Tools**

Includes management, resource allocation, business, education, government, marketing and law. Also includes decision support, MIS, stock control, workflow control and project management.

#### T01-J05A2A [2002]

#### **Business Models**

Includes business to public administration relationship models, problem solving/identifying solutions, requirements, and end-to-end thread, see T01-N01A2 for Internet Business models and T01-J05A2 prior to 2002.

# T01-J05A2B [2002]

# **Workflow Management**

Includes execution and automation of a business process, see T01-J05A2 prior to 2002.

### T01-J05A2C [2002]

#### **Data Analysis**

Includes assessing the financial health of a company, processing of market data to predict the future demand of a product/service, surveying and polling in order to obtain data, cost model and TCO, see T01-J05A2 prior to 2002.

### T01-J05A2D [2002]

# **Inventory Monitoring/Management**

Includes cash register/terminal maintaining or updating a record of goods, see T01-J05A2 prior to 2002.

# T01-J05A2E [2002]

### **Insurance and Risk Analysis**

Includes processing and assessing insurance claims, evaluation of risk factors in a loan determination, see T01-J05A2 prior to 2002.

#### T01-J05A2F [2002]

# Investment portfolio selection, planning analysis and trading

This code covers evaluation of securities or other types of investments, and trading in commodities and securities, see T01-J05A prior to 2002.

# T01-J05A2G [2005]

# Intellectual Property and Copyright management

See T01-N01A2G for on-line systems. See also W04 for audio/video aspects.

#### T01-J05A2H [2005]

### **Personnel Management**

Includes internal business administration, health and safety, employment tribunal, organisation chart, people performance management, payroll, pensions, benefits, recruitment, career development, etc. See T01-N01A2H for online personnel management.

# Peoplesoft ™, OrgPlus ™

# T01-J05A2L [2007]

#### **Legal and Regulatory**

Includes legal services such as litigation and contracts as well as accountability and compliance with government regulations.

# T01-J05A2M [2011]

## **Marketing and Advertising**

Includes all off-line advertising and marketing aspects.

#### T01-J05A2N [2024]

# Business processes related to the Transportation industry

Includes vehicle sharing, ride hailing, etc. Details of vehicle rental, hiring and sharing systems are also coded under X22-U for motor vehicles and X21-U for electric vehicles.

# T01-J05A3 [2005]

#### **Tools for Government**

This code is intended for electronic public administration and management tools used by governmental bodies or agencies to implement government-to-citizen (G2C), government-to-business (G2B) and/or government-to-government (G2G) service(s). Includes commerce, voting/election, immigration, law enforcement, licensing, taxation, records management etc. See T01-N01A3 for on-line systems and T05-F for voting.

IRS, legislation, ID, social services, Citizenship

# T01-J05A4 [2024]

# Information processing for Agriculture, Fishing, Forestry and Mining

Includes information analysis or data storage related aspects of analysis on agriculture, fishing, forestry, mining.

# T01-J05B [1987]

## Data storage and retrieval, databases

Includes directory structures, filing, and storage, See T01-J10 also for image and pictorial data storage and accessing. For data recording see appropriate T03, W04 codes.

Database, file, directory, storage

#### T01-J05B1 [1992]

# **Content analysis and indexing**

Includes abstracting, linguistic processing, and thesauri.

T01-J05B2 [1992]

#### Storage

Includes directory, file organisation and record classification.

T01-J05B2A [1997]

Image filing/archiving

T01-J05B2B [1997]

# Data and directory structures

Includes hashing, tree structures.

T01-J05B2C [2007]

Metadata

T01-J05B3 [1992]

# Search and retrieval

Includes algorithms for reducing time required for searching large data bases e.g. clustering, query formulation, searching and selecting, Presentation of results. For on-line searching see T01-N03A2.

T01-J05B4 [1992]

#### **Database**

Includes current awareness, information networks, question-answering, fact retrieval, database.

T01-J05B4A [1997]

### Distributed databases, blockchains

Includes distributed ledger systems such as Blockchain.

T01-J05B4B [1997]

Relational database

T01-J05B4C [1997]

**Object-Oriented database** 

T01-J05B4D [1997]

**Deductive database** 

T01-J05B4F [1997]

Image and video databases

T01-J05B4M [1997]

#### **Database Management**

Includes database updating, version control, concurrency and access control.

T01-J05B4P [1997]

#### **Database Applications**

For database software applications or systems that use databases.

T01-J05B9 [1992]

Other

Data bank sharing, library automation

T01-J05C [1997]

Information analysis

T01-J06

Medical equipment and information systems

T01-J06A [1983]

#### Medical

See also S05 codes for electrical medical equipment in general. For initial diagnostic, S05-D06A. For continuous monitoring, S05-G02B2A. From 2005 see T01-N01E for on-line systems. For non-medical biological processing see T01-J13A only.

Diagnose, patient, biological, medical

# T01-J06A1 [1997]

#### **Medical information systems**

See also S05-G02G. For medical records, S05-G02G1. For administration including appointments, S05-G02G2. From 2005 see T01-N01E1 for on-line systems.

T01-J06B\* [1983-2001]

## For vehicle or missile guidance

\*This code is now discontinued, see T01-J07D from 2002, See X22-E06 for land vehicle on-board systems and W06-B01B1 and W06-C01B1 for aircraft and ship based systems. Navigation in general is covered by S02-B and W06-A codes.

Aircraft, flight, navigation, map, guide, course, track following, collision avoidance

# T01-J06B1\* [1997-2001]

## **Geographical Information Systems**

\*This code is now discontinued, see T01-J07D3A from 2002. For map generation see T01-J10C2A GPS

# T01-J07 [1983]

# For industrial process control

(T01-J09)

Manufacture, parameter, factory automation (FA)

# T01-J07A [1987]

#### Data collection/acquisition

See W05-D codes for measurement and control signal transmission systems.

Process variable, nuclear physics, meteorology

# T01-J07A1 [1997]

## Portable data input devices

See T01-M06A1 for portable computers.

# T01-J07A3 [1997]

# Multiple sensor data acquisition

# T01-J07B [1992]

# Computer control of manufacturing/industrial machines and Quality Control (QC)

Includes Computer-Aided Manufacture (CAM) and computerized robotics/mechatronics. See T01-J16 for Artificial Intelligence (AI), Fuzzy Logic, and Neural Network aspects. See also T06-A, T06-D and X25-A codes.

CAM, industrial robot, Industry 4.0

# T01-J07B1 [1997]

**Quality control** 

#### T01-J07B2 [2005]

#### Semiconductor manufacture control

This code covers aspects of semiconductor manufacture and cleaning processes. See also U11-C (especially U11-C15C).

# T01-J07B3 [2016]

# 3D / 4D printing / additive manufacturing

Includes control of machines used for 3D / 4D printing / additive manufacturing technologies such as Solid Freeform Fabrication (SFF), stereolithography, Laminated Object Manufacturing (LOM), and Fused Deposition Modelling (FDM). See also X25-A08 codes. For computer control and interfacing with printing devices such as inkjet or laser printers and plotters, see T01-C05.

# T01-J07C\* [1992-2001]

## Vehicle microprocessor systems

\*This code is now discontinued, see T01-J07D1 from 2002. Includes aerospace, shipping. See also T01-J06B and T06-B01 for vehicle guidance. See also X22 codes.

Heating system control

# T01-J07C1\* [1992-2001]

#### **Transmission**

\*This code is now discontinued, see T01-J07D1A from 2002. See also X22-G01 for vehicle transmission systems per se.

## T01-J07C2\* [1992-2001]

### **Multiplex control system**

\*This code is now discontinued, see T01-J07D1B from 2002. Vehicle multiplex systems per se are covered by X22-K, and signal transfer aspects in W05-D02 and W05-D07D.

#### T01-J07D [2002]

# Vehicle/Aircraft/Missile process control systems

(T01-J06B)

Includes microprocessor systems for aircraft, vehicles, and missiles. See X22 and W06 for aircraft and ship based systems. Navigation in general is covered by S02-B and W06-A codes.

Aircraft, flight

# T01-J07D1 [2002]

### Vehicle microprocessor systems

(T01-J07C)

Includes aerospace, shipping. See also T01-J06B (pre-2002), T01-J07D3 and T06-B01 for vehicle guidance. See also X22 codes and T01-J07C1 prior to 2002.

Heating system control

#### T01-J07D1A [2002]

#### **Transmission**

(T01-J07C1)

See also X22-G01 for vehicle transmission systems and T01-J07C2 prior 2002.

#### T01-J07D1B [2002]

# **Multiplex control systems**

(T01-J07C2)

Vehicle multiplex systems per se are covered by X22-K, and signal transfer aspects in W05-D02 and W05-D07D. See also T01-J07C2 prior 2002.

# T01-J07D3 [2002]

# For guidance

(T01-J06B)

See X22-E06 for land vehicle on-board systems and W06-B01B1 and W06-C01B1 for aircraft and ship based systems. Navigation in general is covered by S02-B and W06-A codes. Also see T01-J06B1 prior 2002

Aircraft, flight, navigation, map, guide, course, track following, collision avoidance

# T01-J07D3A [2002]

# **Geographical Information Systems**

(T01-J06B1)

For map generation see T01-J10C2A. *GPS* 

# T01-J08 [1983]

#### For electrical equipment

(T01-J09)

Computer-control, component, frequency, test, digital signal processors, DSP

#### T01-J08A [1992]

# **Equipment support processing**

This code is intended to highlight that a device uses a processing system when nothing is particularly novel about the processing system. Some applications have specific codes in T01 e.g. T01-J07D for vehicles or T01-J07B for industrial machinery, which should always be used in preference to this code. This does not apply to the sub-levels of this code (i.e. T01-J07D1 and T01-J08A2 could be used together to show a vehicle microprocessor system based around a DSP). *Microprocessor based system, ASIC* 

#### T01-J08A1 [1997]

Using external, general purpose computer e.g. Personal Computer

# T01-J08A2 [1997]

### **Using Digital Signal Processors**

Covers processor converting analogue signals to digital. See also U22-G codes.

DSP

# T01-J08A3 [2011]

#### For game machine

Includes all processing aspects of integrated game devices/machines. See also T05-H05E and W04-X02.

Pachinko machines, Arcade games, pinball game machines, etc

# T01-J08B [1992]

#### **Digital filters**

Corresponding math function in T01-J04B2. See also U22-G01 codes.

### T01-J08C [1992]

#### Communication controller

See T01-H07 for inter computer communication.

#### T01-J08F [1997]

# Testing or monitoring of equipment function and parameters

See T01-G for microprocessor and computer testing.

# T01-J08F1 [2006] Performance and data logging

T01-J08X [1992]

Other

T01-J09\* [1980-2011]

#### Other

\*This code is now discontinued. Includes multimedia up to 1996, see T01-J30 from 1997.

## T01-J10 [1987]

# For image processing

(T01-J09)

See also T04-D for image recognition and preprocessing, and under application in e.g. W04-P codes for video processing, respectively. Control of photographic film cameras is found in T01-J08A and S06-B.

## T01-J10A [1987]

**Image acquisition** 

T01-J10A1\* [1992-1996]

## **Data compression**

\*This code is now discontinued. See T01-J10D from 1997. Codes remain valid before 1997; see also T01-D02, T01-J10B for image compression prior to 1997.

# T01-J10A2 [1992]

#### Image memory management

Covers use of memory system for processing in conjunction with a data presentation/computer graphics system e.g. manipulating the address or contents of image or text information stored in memory. For display memory organisation and structure for storing an image and manipulating image data between the display memory and the display system see T01-C04. See also T01-J05B for information storage and retrieval.

#### T01-J10B [1987]

# **Image processing**

Covers digital image processing arrangements using a personal/mobile computer, e.g. image enhancement, analysis, objects processing, optical character recognition (OCR), edge detection, facsimile, and video. If processing is in peripheral or other device then see T04-D. T04-D07 can be applied to highlight applications. (T01-J10 and T04-D are only used together when the novelty does not describe how/when the processing is carried out). *Pel, pixel* 

## T01-J10B1 [1992]

### Image enhancement

Includes use of histogram, deblurring, noise filtering, edge detection, scratch removal and geometric correction.

#### T01-J10B2 [1992]

# **Image analysis**

Includes determination of characteristic parameters and scene analysis.

#### T01-J10B2A [2002]

#### For recognition

Includes character and image recognition, OCR, and object recognition.

Pattern recognition, mark recognition

T01-J10B3 [1992]

**Object processing** 

T01-J10B3A [1997]

Object enlargement, reduction and rotation

T01-J10B3B [1997]

Object colour processing and colour system conversion

T01-J10C [1987]

#### Image generation

Graphics, function generator, fractal image generation

T01-J10C1 [1992]

**Generating graphs** 

T01-J10C2 [1992]

Generating shapes, curves, lines

T01-J10C3 [1992]

#### In text

Includes form filling and format. Processing ideographic/pictographic languages and characters. Font generation and manipulation. *Graphic character representation* 

# T01-J10C4 [1992]

#### 3-dimensional

Includes solid modelling, mesh, surface determination, tessellation, voxel, and shading.

#### T01-J10C4A [1997]

### Virtual reality

Generating and displaying of virtual reality images.

T01-J10C4B [1997]

Computer tomography

T01-J10C5 [1992]

Stored modelling data, animation and graphic packages

Texture mapping

T01-J10C7 [1997]

# **Composite image formation**

Combining two or more objects or images.

T01-J10C9 [1992]

#### Other

'Painting systems'

#### T01-J10D [1997]

#### Image digitisation/coding/compression

See T01-J10A1 and T01-J10B prior to 1997. See also T01-D02.

# T01-J10E [1997]

#### **Image storage**

(T01-J05B, T01-J10A2)

Image filing and archiving. See T01-J10A2 for image memory management. See also T01-J05B2A for image filing, and T01-J05B4F for image and video databases. Also includes video storage.

# T01-J10G [1992]

# **Applications**

Includes film, TV, tomography, robotic eye, facsimile, automatic focussing image processing.

# T01-J10X [1992]

#### Other

See T01-H07C3B between 1997 and 2002. See T01-N01D1B post 2002.

#### T01-J11 [1992]

#### **Productivity Tools and Applications**

Includes WYSIWYG, typesetting and editing.

# T01-J11A [1992]

Word processing (WP)

#### T01-J11A1 [1997]

Spelling/dictionary, grammar-checking, parsing

#### T01-J11B [1992]

# Desk top publishing (DTP)

(T01-J09)

Ventura®, PageMaker®, QuarkXpress®

#### T01-J11C [1997]

#### **Electronic and intranet documentation**

See T01-N03B2 for on-line aspects.

# T01-J11C1 [1997]

# Using Mark-up languages and navigating documents using hypertext

Includes page description languages. HTML, SGML, XML

#### T01-J11C2 [1997]

**Help documentation** 

#### T01-J11C3 [2007]

# Parsing markup language documents

# T01-J11D [1997]

# **Document delivery system and office automation**

#### T01-J11E [2005]

#### **Presentation Software**

Presentation software, includes multimedia presentation software, see also T01-J30 and W04-W.

PowerPoint ®

# T01-J11F [2005]

# Organiser/scheduler

See also T01-J05A2B for business schedule organising. See T01-N03A3 for networked aspects. *Calendar* 

## T01-J11G [1997]

**Spreadsheets** 

#### T01-J12 [1992]

# Program management, GUI/WIMPS/HCI

Covers software and processing aspect of interactive operator interface windows applications security, and pull down menus.

### T01-J12A [1992]

**Prompting** 

#### T01-J12B [1992]

#### Window/split screen

Includes menu driven system where options are presented for selection by user. See also T01-C02 for means of selection.

Menu driven, front of screen

#### T01-J12B1 [1997]

# User interface management system

#### T01-J12C [1992]

#### Security

(T01-X)

Preventing unauthorised access to files and processing systems such as anti-hacking and copy protection; electronic security systems for computers. See also T01-H01C2 for illegal memory access prevention.

#### T01-J12C1 [2006]

#### **Authentication**

See also W04-V04A3 for voice authentication.

[2006]

# T01-J12C1A

## **Using Password**

Covers password systems for gaining access to computer system. See T01-N02B1B for network based password systems.

# T01-J12C1B [2006]

#### **Using Biometrics**

Covers biometric systems for gaining access to computer system. See T01-N02B1H for network based biometric systems. See also T04-D07F for biometric image recognition and S05-D01C5A for measuring systems.

# T01-J12C2 [2006] Security System Administration

# T01-J12D [1992]

## Icons, Widgets

Covers use of graphic object displayed as a symbolic reference for a process or file which may be selected by user. Includes cursor and pointer manipulation. See also T01-J10C.

## T01-J13 [2005]

# Scientific analysis

Processing systems used to support scientific analysis. See S03 for analysis acquisition systems.

# T01-J13A [2005]

# **Biological analysis**

Biological analysis includes DNA analysis and other biological systems. See also T01-J06A for medical applications.

# T01-J14 [1992]

## Language translation

See T01-J16C3 for intelligent natural language processing.

#### T01-J15 [1987]

# Computer-aided design (CAD) and simulation

Includes computer modeling and simulators. See also T01-J10C for image generation, and T01-E04 for random number generation. For Computeraided manufacturing (CAM) see T01-J07B.

Netlist, net library

#### T01-J15A [1987]

# Design and simulation of electrical circuits and hardware

See also U11 or V04. Includes CAD systems for mask design.

T01-J15A1 [1987]

Logic circuit, CPU design

T01-J15A2 [1987]

Wiring layout, PCB's, integrated circuits

# T01-J15A3 [1992]

# Computer simulation of electrical and electronic circuits

(T01-J15A1)

Includes use of graph models, petri net and analog modelling.

GPSS, SPICE, VHDL, Computer timing analysis

## T01-J15A4 [1992]

## **Network design**

Includes positioning and routing.

#### T01-J15B [1997]

#### **Design verification**

Includes fault finding techniques.

## T01-J15H [1997]

## Simulation of non-electronic systems

Includes simulation of e.g. thermodynamics and weather systems, and also includes electrical systems not covered by T01-J15A/B codes. See also T01-J04E for mathematical modeling.

# T01-J15X [1987]

# **CAD for non-electronic applications**

Computer-aided design (CAD) for all applications (including electrical systems) not covered by T01-J15A/B codes.

### T01-J16 [1992]

#### Artificial intelligence (AI)

(T01-J09)

Covers knowledge processing, inexact reasoning e.g. fuzzy logic.

Chatbot

# T01-J16A [1992]

# **Expert systems**

Comprising a system of an integrated collection of facts and relationships, including knowledge base and table searching, question and answering. Includes knowledge base, rule base and table searching.

Teiresias, rulebase

#### T01-J16B [1992]

#### **Fuzzy logic systems**

Includes circuits for performing logic with more than two levels e.g. non-binary or analog logic systems. See also T02-A04B6 for hardware details, and U21-C03B1B for logic circuits. For implementation details search appropriate codes, e.g. X22-A03K for vehicle engine control using fuzzy logic.

# T01-J16C [1992]

## **Knowledge processing**

Forward chaining

# T01-J16C1 [1992]

#### **Neural networks**

Includes the use of parallel distributed processing elements constructed in hardware or simulated in software. For implementation details search appropriate codes, e.g. T06-A05A for neural network based control systems. For analogue aspects and implementations see T02-A04A5. SPANN (sequence processing artificial neural network)

# T01-J16C2 [1992]

# Learning

Includes use of a specific method or system to adjust the rules, i.e. connection weights, e.g. concept learning algorithm.

#### T01-J16C3 [1992]

# Natural and pictorial language processing

Includes where presentation of data to the user includes non-verbal representations or symbol, or statements in standard English language syntax. Non intelligent language translation is covered by T01-J14.

Semantics, abstracting concepts, phrases

# T01-J16C4 [1992]

# **Genetic algorithms**

Includes creating new solutions by dividing and splicing the old and determining the fitness of the new. Also includes artificial life. Duplicating the laws of nature e.g. inheritance and evolution.

## T01-J16C6 [1997]

#### Intelligent searching

Includes heuristics, hill climbing, depth first and breadth first searching, simulated annealing, travelling salesman etc.

T01-J16C9 [1992]

Other Al

T01-J17 [1992]

#### **Digital function generators**

(T01-X)

Trigonometric, Look-up table

# T01-J18 [1997]

## Computer processing for speech/audio

(T01-C08A, T01-J08, T01-J09)

# T01-J20 [1987]

#### Software development

Covers only software programming techniques and production / compilation / debug aids. For software implementations search T01-J, T01-N codes e.g. T01-J12B for windowing software, T01-N03B for Internet constructional software. For program code patents see T01-S.

#### T01-J20A [1992]

### **Programming techniques**

Includes functional, automatic, computergenerated, concurrent, sequential, object-oriented, procedural and network programming. For Object-based systems see T01-F07. For Object-oriented database see T01-J05B4C.

Object orientated programming (OOP), architecture neutral/dependent distribution format (ANDF),(ADDF)

#### T01-J20B [1992]

# Software Development Tools, Systems Analysis

Languages, methodologies, Development environment, Systems analysis.

Structured, top-down, work bench SSADM

## T01-J20B1 [1997]

### Software Development Kit

Integrated Development Environment.
Programming Tools. API for software development only. For use of API in program execution see T01-F05A. Program Compilers and Assemblers.
Software source code libraries. For dynamic link libraries (DLLs) see T01-F05A.

# API, code libraries, code text editors T01-J20B2 [1997]

# **Systems Analysis, Documentation**

Systems Analysis and Design, Specifications, Source code development version management. From 2007, for version management of other software e.g. BIOS, embedded software, application package, network security software see T01-F05B2, T01-N02B1E, T01-N02B3 as appropriate.

# T01-J20B2A [1997]

## **Software registration and Anti-piracy**

For incorporation of Software registration and Anti-Piracy coding mechanisms at development stage of software. See T01-J20X before 1997. See T01-J05A2G, T01-N01A2G for Intellectual Property and Copyright management.

Software protection

# T01-J20C [1992]

# Software Test, Verification, Debug, Optimization

(T01-G09)

Software test, verification and debug within and without Integrated Development Environment. Test data generation. Quality Assurance. Optimization of source code. Software simulation.

Beta-testing, debug, test case simulation

### T01-J20D [1992]

# Anti-Virus and Security program development

Development of Anti-Virus, Anti-Spyware programs. Analysis of Virus signatures. From 2007, see T01-N02B3 for applications of Anti-Virus software.

Virus signature analysis

# T01-J20X [1992]

#### Other software details

For Software copyright protection see T01-J20B2 from 1997 - 2006, and T01-J20B2A from 2007.

# T01-J21 [2006]

# Non-vehicle navigation

For vehicle guidance see T01-J07D3, covers all other guidance systems. See also S02-B08.

# T01-J21A [2006]

# **Geographical information systems**

Includes updating or displaying geographical information.

# T01-J21B [2006]

#### **Position fixing**

Processing details used to fix position of user, see also W01/W02 for communication system position fixing and W06 for position fixing in general.

# T01-J21C [2006]

**Route planning** 

## T01-J30 [1997]

## **Multimedia computer systems**

For details of media systems see W03-G03C1. See T01-J09, T01-J10 prior to 1997.

# T01-J30A [2002]

#### **Educational aids**

Includes use of multimedia systems for education and training purposes, CAI, tuition support systems, and student. Educational equipment is also assigned W04-W codes, also see T01-P01 prior to 2002. From 2005 see T01-N01B codes for on-line systems.

# T01-J30B [2002]

#### For computer games

See W04-X02C for video games, and T01-J10C for image generation aspects, see T01-P02A prior to 2002.

# T01-J30B1 [2002]

# For toys and novelties

See T01-P02 prior to 2002.

# T01-J30C [2005]

### **Media Players**

Includes computer-based media players that are not browser based for playing CDs, DVD's (see also T01-H01B), videos and audio files. See also T01-N03A1B for on-line systems and W04 for media.

Windows® Media Player, iTunes®

#### T01-J30D [2005]

# Computer processing for sports and training equipment

Covers use of digital computing in sports and exercise equipment. See also W04.

# T01-J30E [2006]

E-book reader software

#### T01-J30F [2006]

### Image/Video/Audio editing software

See T01-J12 for GUI aspects and W04 for details of image/video/audio being edited.

#### T01-J31 [2011]

# Computer processing for physically handicapped persons

Includes processing equipment for blind, dumb etc.

# T01-J40 [1997]

# Virtual reality systems

(T01-J10C4, T01-J10C9)

#### T01-J40A [2002]

#### **Games**

(T01-J10C4, T01-J10C9, T01-J40) Search T01-J40 together with T01-P02A to prior to 2002.

# T01-J40B [2002]

## **Training/Sports Aids Equipment**

(T01-P02B, T01-J40)

See also W04-X01 codes for electrical aspects of sports equipment in general, search T01-J40 together with T01-P02B to prior to 2002.

# T01-J40C [2006]

## **Augmented reality systems**

Combining virtual reality displays with real world views allowing a user to see both at the same time. See also T01-J10C codes for image generation aspects. See also W04-W07E codes for virtual reality in general, as well other W04 codes for virtual reality and display aspects, e.g. W04-Q01K for head up displays.

# T01-J40D [2022]

## Mixed reality systems

This code covers details of devices or systems which are used for merging of real world and virtual world environments.

#### T01-J45 [2012]

# For evaluating software application or package

Covers evaluating the performance and load testing of a software application using a framework or by a CPLI

# T01-J50 [2012]

#### **Trial period software**

Includes software intended to be used for a defined period of time, search together other T01-J or T01-N codes for type of software

# T01-K [1983]

## Clock signal generation/distribution

(T01-X)

See also U22 codes for clock generators and distributors, e.g. U22-A04A2 and U22-D06 respectively.

Oscillator, synchronisation, timing

# T01-K01 [1997]

# Varying clock rate/frequency

(T01-K)

Clock generators with variable or programmable frequency, e.g. for slowing/increasing clock frequency.

Programmable frequency, variable clock rate

# T01-L [1987]

# Computer equipment details

(T01-X)

#### T01-L01 [1987]

#### Power supplies, stand-by arrangements

Mains supply are covered by U24-D and E and X12-H and J. See X16 for battery systems and X15 for solar power/renewable resources.

Back-up, automatic switching, regulator, stabiliser

### T01-L01A [2005]

#### **Primary power supply**

Note that for portable devices the battery is the primary power source and would be coded here (as well as T01-M06A1).

#### T01-L01B [2005]

### **Back-up power supply**

UPS, battery back up

# T01-L01C [2011]

# **Solar power supply**

See also X125 for details of solar power system.

#### T01-L01D [2021]

#### Wireless power charging

See also U24-H02 for general low power noncontact power distribution aspects and X12-H01E for higher power levels. Non-contact battery charging in general is covered by X16-G03.

# T01-L02 [1987]

# **Constructional details**

See V04-T for constructional details of electronic appts. in general.

Stand, support

# T01-L02A [1997]

## **Cooling and ventilation**

(T01-L02)

Includes electrical and mechanical cooling and ventilation systems for computer equipment, including data centre facilities. See also T01-G11B for temperature measurement and control aspects, and V04-T03 for electronic equipment cooling and heating arrangements in general.

## T01-L02B [1997]

# Housing

(T01-L02)

Includes peripheral installations in computer housings e.g. internal drives, trackballs etc. See also V04-S codes.

Housing, casing, cabinet

# T01-L02C [1997]

# **PCB** mounting

(T01-L02)

For mounting of PCBs in computer housing and devices being mounted on the PCB. See V04-T02 for PCB racking.

Racking, PCB, mounting

## T01-L02D [1997]

# **EM** shielding

(T01-L02)

See V04-U for EMI shielding.

# T01-L02E [2002]

#### **Prevention of theft**

Includes devices which prevent the theft of computer equipment.

# T01-L02F [2006]

# Computer system acoustic noise reduction

Includes noise reduction for forced cooling (e.g. fans and liquid cooling pumps etc).

#### T01-L02G [2011]

# **Shock-proof and absorption**

Includes proofing against earthquakes, etc. Search together with other T01-L codes as appropriate (e.g. T01-L02B for shock absorber in housing)

#### T01-L03 [2005]

#### Connectors, cables and wiring

Includes cables, wiring, etc. for computers. Prior to 2005 see T01-L09. See also V04 (particularly V04-M30E) and X12.

Connector, computer cable, wiring

# T01-L09 [1987]

#### Other

From 2005 see T01-L03 for connectors.

# T01-M [1992]

# Computer/processing architecture

These codes are used for novel architectures, and in conjunction with other T01 codes as additional descriptive detail or as a more general description. See T02 for analogue or hybrid systems. For computer systems using redundancy, see T01-G03 and T01-G05B codes.

## T01-M01 [1992]

## Single processor computer units

Covers processor arrangements where instructions are received from an external source. See T01-M05 for pre-programmed architectures.

Microprocessor, CPU

# T01-M02 [1992]

## **Multiprocessor systems**

(T01-J02)

Covers use of multiple processors to process logically- or functionally-divided jobs or tasks, and to execute programs or program segments concurrently, asynchronously or simultaneously. Multi-tasking is covered by T01-F02 codes.

Master-slave

#### T01-M02A [1992]

#### Distributed

(T01-J02A)

Covers use of separate computers that are linked through communications network to process task/job.

Plain, true, distributed

## T01-M02A1 [1992]

## Computer networks

Computer network interfacing is covered by T01-C03A. Inter-computer communication is covered by T01-H07C. See also W01-A06 codes for network details and networks in general.

LAN, WAN

## T01-M02A1A [1997]

#### **Network-only computers**

(T01-M02A1)

Includes computers designed to operate using software accessed via a network e.g. Internet. Internet, network computer, network terminal

# T01-M02A1B [1997]

#### **Client-server systems**

(T01-M02A)

Covers architecture details of Client-Server systems. Computer networks in general are covered by W01-A06 codes. Data communication within Client-Server Networks are covered by T01-N02A2C. Use of servers is coded in T01-N02A3C.

Client-server, back-end, front-end

#### T01-M02A1C [1997]

#### Internetworking

Covers architectural details of internetworking systems such as the Internet, 'Internet-of-Things', WANs and the associated interconnection details. See also W01-A06B7 for Internets, W01-A06G for interconnection details and T01-N02A2 for communication details.

Internet, intranet, WAN, LAN

# T01-M02B [1992]

# Cooperative

(T01-J02B)

# T01-M02C [1992]

## Parallel/array

(T01-J02C)

Computer architectures designed to carry out multiple arithmetic operations simultaneously or concurrently.

Systolic, hypercube

#### T01-M02C1 [1992]

# Characterised by instruction/data relationship

Architectures classified by the presence of single or multiple streams of instructions and data.

SIMD (single instruction multiple data), SISD (single instruction single data), MIMD (multiple instruction multiple data), MISD (multiple instruction single data)

### T01-M02C2 [1992]

#### Pipeline/vector computers

Instruction pipelining is covered by T01-F03B.

# T01-M02C3 [2005]

# **Superscalar computers**

For processors that execute multiple scalar operations in parallel. Includes Very Long Instruction Word processors. See T01-M02C prior to 2005

VLIW, 2nd Generation RISC, Trace Scheduling

# T01-M02D [1997]

# Master-slave systems

(T01-M02) Master-slave

# T01-M03 [1992]

#### Data/demand driven

Architectures for executing only executable code components required to provide requested data.

# T01-M04 [1992]

#### **Reduced instruction set computers**

See T01-F03B for pipelined execution of machine instructions.

RISC

## T01-M05 [1992]

## **General microcomputing architectures**

(T01-J)

Covers processor arrangements where instructions are pre-programmed or hardwired into the processor before processing is carried out. See also T01-F06 for program arrangements.

**ASIC** 

## T01-M06 [1992]

#### Characterised by type

#### T01-M06A [1992]

#### Mini/micro/PC

(T01-X)

Covers personal computers. For use as descriptive code with other T01 codes.

#### T01-M06A1 [1992]

#### **Portable**

Includes laptop, notebook, hand-held and calculator. For processing aspect of calculator see also T01-J01.

# T01-M06A1A [1997]

### Hand-held; Tablet computers

(T01-M06A1)

For mobile telephones with computer functionality see W01. Pre-1997, search T01-J01, T01-J05, T01-J09, T01-M06A1.

iPad™

# T01-M06A1B [1997]

## **Docking stations**

(T01-M06A)

# T01-M06A1C [2006]

#### E-book reader hardware

Hardware specifically for displaying E-books. Includes details of screens, controls and design intended to simulate a conventional paper book. See also T01-N01B5 for online aspects, U14 for novel display aspects T01-M06A1A, T01-L02B, V04 for novel casings.

E-book reader

# T01-M06A1D [2006]

# Wearable computers

Includes 'smartwatches' and other computer devices used for applications such as fitness tracking and health monitoring. For physiological measurements search with S05-D01 codes and for performance-related measurements during sports or fitness training search with W04-X01A1.

# T01-M06A3 [1997]

#### **Desktop/mini-tower**

(T01-M06A)

#### T01-M06A5 [2006]

#### Consoles

This code covers computer systems designed as one self-contained unit, e.g. video game console.

#### T01-M06A9 [1992]

# Other (personal computer types)

## T01-M06B [1992]

### **Mainframes**

(T01-X)

Covers systems handling large base of time-sharing terminal users.

### T01-M06C [1992]

#### **Supercomputers**

(T01-X)

# T01-M06D [1992]

# **Optical systems**

See also T01-E05A for digital optical processing elements, and T02-A03 for analogue and hybrid optical processing elements.

# T01-M06E [1992]

#### **Superconductor systems**

(T01-X)

See also T01-E05C for superconducting elements. See also U14-F02 codes.

# T01-M06Q [2005]

#### **Quantum Systems**

Using quantum devices for processing. Prior to 2005 see T01-M06C/X. See T01-E05Q for processing systems using quantum mechanics. *Quantum well gate* 

# T01-M06S [2005]

#### Servers

Covers architecture and construction of servers. Use of servers in computer networks is covered in T01-N02A3C, client-server systems communications in T01-N02A2C and architecture of client-server systems in T01-M02A1B. Constructional details are also coded in T01-L section.

# T01-M06X [1992]

Other (computer types)

# T01-M09 [1992]

#### Other (inc. virtual machines)

Virtual machines are also coded in T01-F05. See also T01-F05G3 for virtual systems, and T01-F02 for multiprogramming.

Emulation

#### T01-N [2002]

# Internet and information transfer

(T01-H07C)

# T01-N01 [2002]

### **Applications**

Documents describing specific applications of network communication and Internet systems.

# T01-N01A [2002]

#### Financial/Business

Includes Internet banking, billing, point of sale (POS) and metering, see T01-J05A1 and T01-H07C5E prior to 2002.

# T01-N01A1 [2002]

#### Financial technology systems

Includes 'FinTech', cryptocurrency, electronic payment systems e.g. Near-Field Communication (NFC), Internet banking, billing, point of sale (POS) and metering (T01-J05A1 and T01-H07C5E prior to 2002). See also T05-L for POS systems in general. FinTech, bitcoin, altcoin, Ethereum, electronic funds transfer (EFT), digital wallet

# T01-N01A2 [2002]

#### **Internet Business models**

Includes Business Models for the Internet, See T01-J05A and T01-H07C5E prior 2002, and T01-J05A2 for non-Internet related Business models.

#### T01-N01A2A [2002]

# E-shop, e-auction, e-mall, and e-services

Includes On-line ordering, transactions of goods and services, and virtual market place, See T01-J05A together with T01-H07C5E prior to 2002. *On-line shopping, auction, e-commerce* 

## T01-N01A2B [2002]

## **E-procurement**

Includes seeking suppliers, electronic tendering. See T01-J05A2 together with T01-H07C5E prior to 2002.

## T01-N01A2C [2002]

## **Advertising and Marketing**

Includes network based systems such as web marketing, common marketing, consumer buying habits, feedback and banner advertising. See also T01-N01A1 and T05-L02 if involving financial incentives (coupons) and W05-E03E for display aspects.

# T01-N01A2D [2002]

#### Social media / virtual communities

Includes social media discussion forums and message posting. See also T01-N03A1C for messaging applications. Prior to 2002 see T01-J05A and T01-H07C5E.

Facebook™, Twitter™

## T01-N01A2E [2002]

# Value chain service providers and Integrators

Includes logistics, production management, web based shipping support, web hosting and integrated on-line management.

# T01-N01A2F [2002]

# **Information Brokerage**

Includes financial advice, consultancy, stock/commodities/futures market monitoring/trading (see also T01-N01A1 and T05-L02 for trading). See T01-J05A2 with T01-H07C5E prior to 2002.

On-line broker

# T01-N01A2G [2005]

# On-line Intellectual Property (IP) and Copyright management

See T01-J05A2G for off-line systems including protecting copyright of downloaded files. See also W04 for audio/video aspects.

#### T01-N01A2H [2005]

#### **On-line Personnel Management**

Includes internal business administration, performance management, payroll, pensions, benefits, recruitment, career development, etc. See T01-J05A2H for offline personnel management.

#### T01-N01A2J [2005]

# On-line insurance and risk analysis

Includes on-line processing and assessing insurance claims, evaluation of risk factors in a loan determination.

### T01-N01A2L [2007]

# **Legal and Regulatory**

Includes legal services e.g. litigation, contracts, accountability and compliance with government regulations.

# T01-N01A2M [2010]

### Carbon trading

Covers emissions trading, pre-2010 see T01-N01A2F.

Cap and trade, Kyoto protocol

# T01-N01A3 [2005]

#### **E-Government**

For network-based electronic public administration and management tools used by governmental bodies or agencies to implement government-to-citizen (G2C), government-to-business (G2B) and/or government-to-government (G2G) service(s). Includes commerce, e-voting, immigration, law enforcement, licensing, taxation, records management, environmental, social and governance (ESG), sustainable development goals (SDG) etc. See T01-J05A3 for off-line systems and T05-F for voting.

E-Gov, G2C, G2B, G2G, ESG, SDG, E-voting

## T01-N01A4 [2007]

#### On-line non-profit organization

Includes charities.

#### T01-N01B [2002]

# Education, information and entertainment

From 2005 includes on-line educational systems. Prior to 2002 see T01-H07C together with T01-H07C5E.

# T01-N01B1 [2002]

#### Gaming

Includes network, on-line gaming, cloud gaming and on-line gambling (see also T01-N01A1, T01-N01D3, T05-L02 and W04). See T01-H07C3B, T01-H07C3D and T01-H07C5E prior to 2002. See T01-J30 for off-line systems.

Internet gaming, MUD, multi user dungeon, MMOG, MMORPG, massive multi-user on-line game

## T01-N01B2 [2002]

#### **Chat rooms**

See T01-H07C3D together with T01-H07C5E prior 2002.

# T01-N01B3 [2005]

#### **On-line Education**

Covers Educational systems using a computer network and use of computer networks in an educational environment. See T01-J30A together with T01-N01D prior to 2005. See also T01-N01A2D for virtual classrooms, etc.

## T01-N01B3A [2005]

## Remote examination/testing

# T01-N01B4 [2005]

#### **News systems**

Covers on-line systems for news updates including e-mail subscription services (together with T01-N01C).

#### T01-N01B5 [2006]

#### E-books

Documents describing E-book (electronic book) per say including file format aspects see also T01-N01A2G for copyright control aspects T01-J11C for electronic documents in general.

E-book. Electronic book

# T01-N01B9 [2002]

# Other internet education, information and entertainment

# T01-N01C [2002]

#### E-mail

Includes electronic mail for use by computer systems connected to a network. Facsimile services are covered by S06 codes, telex systems by W02 codes and message switched networks by W01-A codes. See also W01-A06E1, W01-A06G2, and W01-A06X.

Computerised voice mail

# T01-N01D [2002]

#### **Data Transfer**

Includes downloading file from remote site (FTP). See T01-H07C3 and T01-H07C5E prior to 2002.

### T01-N01D1 [2002]

#### Multimedia

(T01-J09, T01-H07C3D)

Combination of text, data, image, sound, or computer programs. Audio/video aspects of multimedia systems are also assigned W04-K10. See T01-H07C3D prior to 2002.

## T01-N01D1A [2002]

# Audio, sound transfer

See T01-H07C3A prior to 2002. *Internet radio* 

# T01-N01D1B [2002]

## Video and Image transfer

(T01-H07C3B)

Includes computerised video conferencing. See T01-H07C3B and T01-H07C5E prior to 2002. See also W01-A06E1A for data conferencing and broadcasting and W02-F01E3 interactive Internet broadcasting.

JPEG, MPEG

#### T01-N01D2 [2002]

#### File Transfer

(T01-H07C3C)

For transfer of files other than multimedia. Includes downloading non-internet executable programs, as well as web page transfer. Includes the transfer of Instant Message (IM) data between users in real time.

WWW, URL

#### T01-N01D3 [2002]

#### From remote site or server

(T01-H07C3E)

Includes networks where applications are run on server under the control of a client system. See T01-H07C3E prior to 2002.

Applet, Java, thin-client

# T01-N01D3A [2012]

# Cloud computing services

Includes network systems where applications are run using a virtual system from remote locations, such as Software as a Service (SaaS), Infrastructure as a Service (IaaS).

Cloud Computing, Citrix <sup>®</sup>, Virtualization, Virtual Desktop

# T01-N01D4 [2005]

#### **Network File Caching**

For storage of regularly accessed files such as web graphics. See also T01-N02A3C for server based caching, T01-N03A1 for browser based caching, see also T01-H03A before 2005.

# T01-N01D5 [2006]

Multicasting

# T01-N01E [2005]

#### **On-line Medicine**

See also S05 codes for electrical medical equipment in general. For initial diagnostic, S05-D06A. For continuing monitoring, S05-G02B2A. From 2005 see T01-N01E for on-line systems. For drug delivery/ordering systems see also T01-N01A2 codes.

#### T01-N01E1 [2005]

### **On-line Medical information systems**

See also S05-G02G. For medical records, S05-G02G1. For administration including appointments, S05-G02G2.

### T01-N01F [2017]

## **Internet of Things**

Interconnection / Internetworking of computers, devices and systems used in applications such as home automation (see also X27-V), smart grids. For cellular IoT technology such as 5G wireless network-based systems see W05-D06 codes.

# T01-N02 [2002]

# **Communications and Control**

(T01-H07C5A)

See T01-H07C3A prior to 2002.

See T01-J08C for communication controllers and W01-A06 for data transmission systems in general

# T01-N02A [2002]

## Communication

Includes computer communications within a network.

# T01-N02A1 [2002]

# **Communication Protocol**

(T01-H07P, T01-H07C)

Covers novel aspects of TCP/IP and novel uses of other protocol types for transfer over a network. See also W01-A06F for protocols in general and W01-A06F2 for network protocols. See T01-H07P prior to 2002, T01-H07C prior to 1997. Bus transfer protocols are found in T01-H07B.

# T01-N02A1A [2005]

#### Addressing

Covers network addressing as opposed to routing. For setting and determining destination of packets, not route that they will travel. Includes Domain Name System (DNS), network identification and Universal Resource Locators (URLs). See also W01-A06F2.

IP address

# T01-N02A1B [2005]

## Ad-hoc network systems

Includes setting up dynamic networks. See also under application, e.g. T01-N01B2 for chat rooms, T01-N01A2C for advertising. See also W01 for network codes, e.g. W01-A06C4A for Bluetooth network or W01-A07H2A for Bluetooth interface. ProximityMail<sup>TM</sup>, BluePing<sup>TM</sup>, 'on the fly' wireless network, relay area network, RAN, localised community messaging network.

# T01-N02A2 [2002]

#### **Network Communication**

(T01-H07C5A, T01-H07P)

For communications between computers in a network, see T01-H07C5A and T01-H07P prior to 2002.

### T01-N02A2A [2002]

#### LAN

(T01-H07C5C)

Includes computer communication over a private network i.e. interconnected distributed communities of computer based data terminals within a single building or a localised group of buildings. See T01-H07C5C prior to 2002, and also see W01.

Intranet, local area network

# T01-N02A2B [2002]

#### WAN

(T01-H07C5E)

Includes computer communication over a public network i.e. networks which link computers, data terminals or Local Area Networks which are physically located in different locations or establishments, also see T01-H07C5E prior to 2002 and see W01.

Internet, wide area network, Gateway, PSTN, TCP/IP

#### T01-N02A2C [2002]

# **Client/Server systems**

(T01-H07C5S)

Includes computer communication using a client/server relationship, see T01-H07C5S prior to 2002.

# T01-N02A2D [2005]

#### SAN

Code covers storage area networks. See also T01-H01B codes for storage media type, T01-N02B codes for access and W01-A06B5B for network aspects.

#### T01-N02A2E [2005]

#### Peer-to-peer networks

Covers network communication between stations without using a central server. See also W01-A06B8C and W01-A06E2B.

Viral network, p2p

## T01-N02A2X [2002]

### Other Network communication system

Includes other types of computer communications not already covered in T01-N02A2.

## T01-N02A3 [2002]

#### **Hardware**

Includes physical hardware such as computers and servers used for accessing a network, see T01-H07C5S prior to 2002.

#### T01-N02A3A [2002]

# Dedicated systems for accessing the Internet e.g. set top box

Includes systems designed specifically for accessing the Internet, also see W04.

## T01-N02A3B [2002]

### Computer based routing

(T01-H07C5A)

Includes routing and management of network traffic, also see W01 and see T01-H07C5A prior to 2002.

#### T01-N02A3C [2002]

#### Servers

Includes processing performed on the server and claimed server devices, see T01-M06S for architecture and construction (along with T01-L). See T01-H07C5S prior to 2002.

## T01-N02B [2002]

#### Control

Includes control of computer software.

# T01-N02B1 [2002]

#### **Access and Control**

Includes control of access to file and folders. *Permissions, access control list, ISP* 

# T01-N02B1A [2002]

## File management and access, databases

Includes watermarking (see also T01-D02A from 2005), hashing e.g. for blockchain / distributed ledger systems (see also T01-E04) and digital certificates for file authentication. See also T01-N01D (for file transfer) and T01-J05B (for data storage and retrieval, databases).

Hash values, digital certificates

## T01-N02B1B [2002]

# **User Privileges/Password systems**

Includes access file/folders and restricted areas using a password, see T01-J12C prior to 2002. Security, login, Permissions, access control list

# T01-N02B1C [2005]

# **Unsolicited Advertising Protection**

Includes spam and pop up protection, see also T01-N01C for e-mail.

Spyware, adware, browser hijack

# T01-N02B1D [2005]

#### **Firewalls**

Includes devices or software for controlling access to network data or resources from external network connections and for controlling access to external network resources or data by internal network clients.

Firewall, intrusion detection, port forwarding, port blocking, NAT, Stateful packet inspection

# T01-N02B1E [2006]

# **Network operating system management**

Management of network operating systems. Installation and/or updating of software involving transmission over network. For network security software updates see T01-N02B3.

Automatic software updates

T01-N02B1F [2006]

Internet portals

T01-N02B1G [2006]

Internet gateway

# T01-N02B1H [2006]

### **Biometric authentication**

Covers biometric authentication for computer networks. See T01-J12C1B for off-line systems. See also T04-D07F for biometric image recognition and S05-D01C5A for measurement systems.

# T01-N02B2 [2002]

## Monitoring

Includes monitoring computer/network communications and hardware. Prior to 2002 see T01-H07C5A.

#### T01-N02B2A [2002]

#### **User monitoring**

Includes monitoring user(s) activity on computers and networks.

Cookie

#### T01-N02B2B [2002]

#### System and Fault monitoring

Includes monitoring systems which are used to monitor computer hardware operation, log events, report failures also, on-line(internet-based) monitoring and on-line diagnosis of any electronic system, see T01-H07C5A prior to 2002. For monitoring of electrical appliances over the internet see T01-N01D and W05.

Event monitor, system log, event viewer

#### T01-N02B2C [2005]

## **Transmitted content analysis**

Monitoring contents of transmitted files, including emails

Packet sniffing, chat room monitoring

# T01-N02B3 [2006]

#### Network security, anti-malware

Anti-Virus, Anti-Spyware Software applications. Testing server security and setting updates for security programs. For security program update via network transmission see T01-N02B1E. Before 2007 see T01-J20D for Anti-Virus software applications.

Anti-Virus, Anti-Spyware, Trojan, Worm, Hacking

# T01-N02B5 [2006]

#### Web site management

Incorporation of multimedia content in websites. Changing content viewed by different visitors to site.

# T01-N03 [2002]

#### **Internet Software**

Search together with T01-S03.

# T01-N03A [2002]

#### **User Applications**

# T01-N03A1 [2002]

#### Browsers, apps

Includes browsers and other applications (apps) which enable users to interface with internet content. See T01-J12B prior to 2002. See T01-J12B1 for user interface management details.

Internet Explorer<sup>TM</sup>, Netscape<sup>TM</sup>, Safari<sup>®</sup>, Chrome<sup>®</sup>

### T01-N03A1A [2002]

# **Content management/Parental control**

Includes controlling the content viewed using a browser.

Net nanny

# T01-N03A1B [2002]

# Media players

Includes software which allows multimedia content/information to be viewed/played. Real player $^{\text{TM}}$ 

# T01-N03A1C [2002]

# Messaging/chat applications

Includes pop-up messaging/chat windows. See also T01-N01A2D for social media in general.

WhatsApp™, ICQ, emoji

#### T01-N03A2 [2002]

#### **Search Engines and Searching**

Pre-2002, search with T01-J05B3 and T01-H07C5E.

#### T01-N03A3 [2005]

# Meeting co-ordination and organiser/calendar applications

Covers applications to arrange meetings with groups of people through software. Covers a personal calendar application linked to an email program. See T01-J11E for off-line see also T01-N01C email.

Microsoft Outlook®, MS Teams®, Lotus Notes®

# T01-N03B [2002]

#### **Constructional Software**

Includes software used to design websites / webpages.

## T01-N03B1 [2002]

#### Internet executable programs

Includes executable programs e.g. applets, which enable viewing of content. Covers only novel aspects - see T01-N01D3 or T01-N03A1 for applications.

Applet, Flash™, Java bean

# T01-N03B2 [2002]

## Mark up languages

Includes page description language used in creating, editing, and navigating electronic documents, see T01-J11C1 prior to 2002.

Hypertext. HTML. XML

## T01-N03B2A [2002]

#### **Editors**

Includes editors used to edit mark-up language e.g. Microsoft® FrontPage.

# T01-N03B2B [2007]

# Parsing markup language documents

# T01-N03B3 [2005]

## **Scripting Languages**

Covers patents concerned with web based scripting languages which are neither compiled nor mark-up languages.

PHP, ASP, JavaScript, PERL, CGI

# T01-N03B4 [2005]

#### Format conversion

Covers conversion of media from one network standard to another one. Includes converting e-mail (T01-N01C) to e.g. Facsimile (S06) or SMS (W01), also includes converting web browser formats such as SGML, XML and HTML (T01-N03B2).

#### T01-P\*

[1992-2001]

# Computer educational aids and toys

(T01-X)

\*This code is now discontinued, see T01-J30 and T01-J40 from 2002.

# T01-P01\* [1992-2001]

#### **Educational**

\*This code is now discontinued, see T01-J30A from 2002. Includes use of computers for education and training purposes, question and answer systems, computer aided instruction, CAI, tuition support systems, student testing and computerised marking systems (see also T04 codes). Educational equipment is also assigned W04-W codes.

# T01-P02\* [1992-2001]

#### Toys, games and novelties

\*This code is now discontinued, see T01-J30B1 from 2002. Covers all computer games and computerised toys. See W04-X codes for electrical aspects of games and amusements.

# T01-P02A\* [1997-2001]

#### Computer video games

(T01-P02)

\*This code is now discontinued, see T01-J30B and T01-J40A from 2002. See W04-X02C for video games, and T01-J10C for image generation aspects.

# T01-P02B\* [1997-2001]

# **Sports equipment**

(T01-P02)

\*This code is now discontinued, see T01-J40B from 2002. See also W04-X01 codes for electrical aspects of sports equipment in general.

# T01-S [1997]

#### Software content

These codes are used to indicate documents that have a significant software content, and which contain either a program listing, or in which software is used. T01-S codes are used in conjunction with other T01 codes to indicate software aspects.

# T01-S01 [1997]

#### Software listings

Software in the form of a program listing.

# T01-S01A [1997]

# Machine-oriented low-level languages

(101-5

Documents containing listings written in e.g. binary, machine, assembler and firmware languages.

# T01-S01B [1997]

#### **High-level languages**

(T01-S)

Documents containing source code written in high level language, e.g. C, C++, Java, Visual Basic, Python, Swift etc.

## T01-S01C [1997]

#### **Pseudo-code and Algorithms**

(T01-S)

Documents in which algorithms, rather than software is disclosed.

# T01-S02 [1997]

# Software patents

Covers documents in which an invention is described and claimed in terms of software, but in which no program listing is included.

# T01-S03 [1997]

# **Claimed software products**

Claimed products based on software, and stored on e.g. CD-ROM, in which the use of a computer program or software components is stated in an independent claim.

# T01-X

# Miscellaneous

# **T02: Analogue and Hybrid Computers**

# T02-A

# **Analogue computers**

#### T02-A01

#### **Hand-manipulated**

Slide-rule, linear, circular

#### T02-A02

#### Mechanical or fluid-pressure computers

Pneumatic, hydraulic, gearing

#### T02-A03

# Using optical or electro-optical, elements

See also T02-B and T01-E05A. Optical components per se are found in V07.

Transform, correlation, acoustic-optical

# T02-A03A [1992]

# **Implementations**

Includes diffraction grating and Fourier analysis implemented using optical elements.

#### T02-A03B [1992]

#### **Optical computers**

Digital optical computers are coded in T01-M06D and digital components in T01-E05A.

#### T02-A04

# **Electric or magnetic computers**

# T02-A04A

#### **Applications**

Modelling, simulation

## T02-A04A1

# Economics, statistics, electric equipment, structures

### T02-A04A5 [1992]

#### Neuronal

(T02-A04A9)

Neural networks are also coded in T01-J16C1 and digital neural elements in T01-E05B.

# T02-A04A9

#### Other (applications)

#### T02-A04B

# **Processing**

Operational amplifier

#### T02-A04B1

# **Multiplication or division**

#### T02-A04B2

## Integration or differentiation

Integrator

## T02-A04B2A [1992]

#### Convolution

SAW convolver

#### T02-A04B3

# Evaluating polynomials, roots, exponentials, discontinuous functions

Square-root, exponent, logarithm, tangent, cotangent, sine, cosine, trigonometry

#### T02-A04B4

## **Arbitrary function generation**

#### T02-A04B5

# Interpolation, extrapolation, equation solving

#### T02-A04B6 [1992]

## **Fuzzy Logic**

(T02-A04B9)

See also T01-J16B and U21-C03B1B.

## T02-A04B9

# Other (incl. optimisation or addition)

Includes correlation transforms, (coded in T02-A04B1, T02-A04B2 prior to 8701).

# T02-A04X

## Other (incl. programming)

#### T02-B

#### Hybrid computing arrangements

See also T02-A03 and T01-E05A for use of optical components.

### T03: Data Recording

This class covers dynamic recording systems, i.e. those based on relative movement between record carrier and transducer. Record carriers themselves are included irrespective of application and are covered in T03 alone. Mechanical aspects of carrier driving and head positioning are also included in T03 for all applications, but W04 codes are assigned as well to indicate intended use for audio/video recording. All other aspects of audio and video recording, such as circuitry and signal processing, are covered in W04 only. Static stores themselves are coded in U14 and computer storage systems using them in T01-H codes. Abstract storage systems (e.g. software for controlling storage) that do not contain any details of physical recording equipment, such as methods for backing up computer data, are covered in T01 and are not coded in T03. Bar-coding is not covered in T03, being covered by T04-A03B1.

In class T03, recording technologies are split into 'group' (5 character) codes covering four main areas :

T03-A - magnetic recording, e.g. 'hard disk drives', but also including floppy disks, magnetic tapes, cards and tickets.

T03-B - optical recording, e.g. optical disks such as 'CD' and 'DVD', optical cards and tapes also being included.

T03-C - capacitive recording, electron beam recording and 'tunnel current' recording.

T03-D -'combination' recording, i.e. recording using two (or more) of the above methods, e.g. magneto-optical recording such as ''MiniDiscs ® but also including electro-optical recording and other technologies.

Apart from the above codes, the other code groups in T03 are independent of 'recording technology' and can be assigned alone - when inventions are broadly applicable - or in conjunction with the technology codes to convey more detail. For example, within the T03-F disk drive codes, T03-F02C1 represents a novel drive motor. In the T03-A codes specific to magnetic recording T03-A08A1C is assigned for any aspect of hard disk drives. Thus a novel disk drive motor for an HDD is coded as T03-A08A1C and T03-F02C1.

## T03-A

#### Magnetic recording/reproduction

'Combination' recording involving magnetic methods such as magneto-optical, is not included see T03-D01 codes.

#### T03-A01

#### **Record carriers**

Includes materials for cards with magnetic strip - see T04-C01 also. Magnetic record carriers per se are coded in T03 only, even if audio-video application is stated. For records prior to 2002 carriers with containers (e.g. tape cassettes) are also coded in W04 when application to audio or video recording is stated or implied.

#### T03-A01A

# **Magnetic layers**

Prior to 2007 all magnetic materials and films are also coded in V02-A01 and V02-B01 codes respectively. From 2007 V02-B01 has been discontinued while V02-A01 codes are only applied for magnetic materials of general application. Therefore V02 is no longer routinely assigned for magnetic recording media and heads with the exception of nanostructures, which are coded in V02-B04.

Particle, bind, ferromagnetic, film, coating, layer

# T03-A01A1

# [1987]

#### Magnetic materials

Includes composition and physical details of materials.

# T03-A01A1A

# [1992]

## Metal and alloy compositions

Prior to 2007 this topic was also coded in V02-A01A2. This topic is no longer coded V02. Chromium, cobalt, iron, nickel

# T03-A01A1C

#### [1992]

#### Non-metallic compositions

Includes ferrite materials. Prior to 2007 this topic was also coded in V02-A01B2.

Oxide, ferrous, ferric, gamma

# T03-A01A1E

#### [1992]

#### **Physical details**

Covers details such as e.g. size or shape of magnetic particles themselves - details of physical properties of magnetic layer as a whole are covered by T03-A01A8.

Acicular, diameter, needle

# T03-A01A3 [1987]

#### **Binder materials**

Includes composition, physical details and manufacture.

Resin, polyurethane, PVC, polymer, copolymer

#### T03-A01A5 [1992]

# Additional non-magnetic material in magnetic layer

Includes lubricant (see also T03-A01B5 codes).

#### T03-A01A6 [1992]

# **Multilayer magnetic coatings**

Layer arrangements of carrier as a whole are covered by T03-A01F.

# T03-A01A6A [2006]

# **Exchange coupling systems**

# T03-A01A7 [1992]

# Complete magnetic layer formula

See also T03-A01A which will continue to be used for cases where precise details cannot be identified. *Recipe, formulation, composition* 

## T03-A01A8 [1992]

### Physical details of magnetic layer

Details of magnetic materials per se are covered by T03-A01A1 codes.

#### T03-A01A8A [1997]

# Physical and chemical details of magnetic layer

Covers thickness, hardness, etc. and also inventions specifying low level of, or absence of, certain elements.

Hardness, HB, HR, HV, durability, roughness, film

#### T03-A01A8C [1997]

# Magnetic property details of magnetic layer

Covers details such as specific coercivity, Curie point etc.

#### T03-A01A9 [1992]

Other magnetic layer details

## T03-A01B

# Base layers; protective coatings

Film, surface, protect, substrate, lubricate, organic

#### T03-A01B1 [1987]

#### Base layers, substrates

# T03-A01B1A [1992]

#### **Substrates**

Polyester, polyethylene, terephthalate, resin, glass, aluminium, titanium, alloy

#### T03-A01B1B [1992]

## **Base layers**

Covers layers applied to substrate before magnetic layer is deposited.

Under-layer

#### T03-A01B1X [1992]

# Other layers below magnetic layers

Indicates layers between magnetic layers, normally used with T03-A01A6, which indicates multilayer magnetic coatings.

Intermediate

## T03-A01B3 [1987]

#### **Backing layers**

Covers layers on opposite side of substrate to magnetic film.

Back-coating layer, reverse

#### T03-A01B5 [1987]

## Protective coating and lubricating layers

T03-A01B5B takes precedence over T03-A01B5A if the position of the lubricating layer is not disclosed or determinable.

Film, anti-abrasion, slide, friction

# T03-A01B5A [1992]

# Lubricating layers part of magnetic layers See T03-A01A5 also.

#### T03-A01B5B [1992]

# Lubricating layer separate from magnetic layers

Covers layer subsequently applied to carrier surface.

Disk

#### T03-A01B5C [1992]

#### Protective coating layers

Antistatic layers are covered by T03-A01B5D. Anti-corrosion, nitride

#### T03-A01B5D [1992]

#### **Antistatic layers and materials**

For antistatic measures and materials in general see X25-S codes.

Charge, triboelectric, conductive dispersion, carbon black

# T03-A01B5X [1992]

# Other layers above magnetic layer

Includes 'parking area' e.g. for CSS operation of a hard disk (T03-A01C1A). See also T03-A01G.

Contact-start-stop, zone

# T03-A01B7 [2008]

## Heat transfer layers

This code covers heat transfer layers chiefly for thermo-assisted magnetic record carriers, for which T03-A01T is also assigned.

Thermal, laser, heating, spot

#### T03-A01C

## Characterised by form

Codes in this section are applied to indicate the type of carrier only and are used in conjunction with other T03-A01 codes as appropriate. To distinguish recording apparatus in general by carrier type, see T03-N codes.

T03-A01C1 [1987]

Disk

T03-A01C1A [1992]

Hard disk

Covers disk with rigid substrate. Stack, cylinder, bulk store

T03-A01C1C [1992]

Flexible disk

Covers floppy disks.

T03-A01C3 [1987]

**Tape** 

T03-A01C3A [1992]

For helical scan recording

T03-A01C5 [1992]

Card

(T03-M01)

See T04 also for card carriers of 'magnetic strip' type.

T03-A01C7 [1992]

Drum

T03-A01C8 [1992]

# Characterised by intended application

Codes in this section are only used if the carrier is specified (not necessarily claimed) to be primarily for a specific purpose.

T03-A01C8A [1992]

**Audio recording** 

T03-A01C8B [1992]

# Video recording

VTR, camera-recorder, camcorder, electronic still picture camera, Mavica

## T03-A01C8C [1992]

## Computer data recording

This code is **not** used for hard disks, the assumption being made that such carriers are chiefly intended for this purpose.

T03-A01C8X [1992]

Other recording applications

T03-A01C9 [1992]

## Other magnetic carriers

Includes work piece adapted to store limited amount of data e.g. for identification purposes. This code, when assigned with T03-M02 indicates photographic film with an integral magnetic carrier. (See also S06-B codes).

#### T03-A01D [1987]

## Vertical recording medium

This code is used with other T03-A01 codes as appropriate.

Perpendicular, thickness direction

## T03-A01E [1992]

#### Superconducting magnetic record carriers

This code is used with other T03-A01 codes as appropriate. See T03-A06K for other aspects of using superconductors in magnetic recording. General aspects of recording using superconductors (other than in magnetic recording) are covered by T03-C07. Superconductive devices and materials in general are covered by U14-F codes. (X12-D06 codes are assigned for high-power aspects of superconductors).

# T03-A01F [1992]

#### Layer arrangements

(T03-A01X)

This code deals with emphasis on sequence of layers without particular reference to any one layer. Multilayer magnetic coatings are covered by T03-A01A6.

# T03-A01G [1992]

# Additional recording area and physical recording format

(T03-A01X)

This code covers the physical arrangement of the record carrier into separate areas, either for dedicated (e.g. servo tracks) or general use. Recording formatting on a physically continuous recording surface is covered by T03-A06F1.

Hard sectoring, index, format, pre-format, reference

[1992]

## T03-A01G1

# Separate magnetic tracks

(T03-A01X)

# T03-A01G3 [2008]

# Carrier with discrete magnetic recording areas

Includes magnetic carrier with patterned magnetic layer, such as nano-imprinted type. For hard disk carriers search with T03-A01C1A and other T03-A01 codes as appropriate. Manufacture of such carriers is covered by T03-A02G3 and other T03-A02 codes as appropriate.

Pattern, depression, pit

# T03-A01G5 [1992]

# Using other recording method

(T03-A01X)

Covers the use of non-magnetic storage, e.g. a magnetic carrier with an optical or capacitive servo track.

# T03-A01H [1992]

## Leader

(T03-A01X)

Includes compositions, details of optical transparency, etc. See T03-E05A5 for leader-sensing mode control in tape drives.

Colour, light, transmission, autostop

## T03-A01R [2006]

# Recycling and destroying magnetic carrier

This code is used for recycling and destroying of **magnetic** record carriers only. Recycling and destroying of optical carriers is covered by T03-B01R and of magneto-optical carriers by T03-D01R. Where an invention is applicable to recycling or destruction of several types of carrier or the type is not disclosed the general code T03-H02R is assigned instead. For recycling of recording or playing equipment see V04-X01C.

# T03-A01T [2008]

# Thermo-assisted magnetic record carrier

Covers magnetic carriers which are locally heated to facilitate high-density recording. Equipment using this type of recording is assigned T03-A06N1 codes, (T03-A06M codes from 2007-2012), and other T03 codes as appropriate.

HAMR, heat assisted magnetic recording

#### T03-A01X

### Other magnetic carrier details

Marking, cinefilm magnetic soundtrack

#### T03-A02

#### **Record carrier manufacture**

For manufacture restricted to a specific type of carrier, search with T03-A02E codes.

## T03-A02A [1987]

## Applying magnetic film to substrate

Includes apparatus (with T03-A02D1) and methods for liquid deposition, sputtering, evaporation, and other techniques. Prior to 2007 see V02-H02 codes also for magnetic film application. Therefore V02 is no longer routinely assigned for manufacture of magnetic recording media with the exception of nanostructures, which are coded in V02-H02G. Manufacturing processes other than magnetic layer deposition are covered by T03-A02B codes. (See note for T03-A02B8).

Vapour deposition, vacuum deposition, plating, coating

#### T03-A02A1 [1992]

# Coating by liquid method, including plating

Prior to 2007 magnetic film deposition by plating was also coded in V02-H02C.

Electrolytic, electroless, spray, dip

#### T03-A02A3 [1992]

# Coating by sputtering, vapour deposition

Vacuum

# T03-A02A3A [1992]

#### Sputtering

Prior to 2007 this topic was coded in V02-H02B as well. Sputtering apparatus of general application is also coded in X25-A04 and V05-F codes.

#### T03-A02A3B [1992]

#### Vapour deposition

Heat, vessel, evaporate

# T03-A02A3X [1992]

#### Other

Includes techniques such as plasma spraying. Flame, jet

# T03-A02A5 [1992]

# **Treatment of deposited layer**

# T03-A02A5A [1992]

### **During deposition**

Includes e.g. magnetic orientation. *Field, orient, direction* 

#### T03-A02A5C [1992]

### After deposition

Includes e.g. heat treatment.

Drying

## T03-A02B [1992]

# Substrate and non-magnetic layer processing

Codes in this section are used to describe manufacturing processes (or equipment when used with T03-A02D codes) other than for magnetic layer deposition, which is covered by T03-A02A.

## T03-A02B1 [1992]

# Manufacture of substrate and base layers

# T03-A02B1A [1992]

#### Manufacture of substrate per se

Includes shaping, stamping etc. but **not** manufacture of substrate material, which is covered by T03-A01B1A. Prior to 1997, this code covered texturing and polishing of substrates (chiefly for hard disks, in which case T03-A02E1A is also assigned). From 1997 these topics are transferred to T03-A02B1C and T03-A02B1D. Both codes are assumed to relate to substrates, unless T03-A02B1B is also assigned to indicate base layer treatment. *Moulding, rolling, punching, extruding, stretching* 

# T03-A02B1B [1992]

#### Base layer application and treatment

Covers manufacture and deposition of base layers prior to magnetic layer deposition. Manufacture of base layer materials per se is covered by T03-A01B1B.

# T03-A02B1C [1997]

# **Polishing**

(T03-A02B1A)

It is assumed that this code relates to substrates unless T03-A02B1B is also assigned to indicate base-layer treatment.

# T03-A02B1D [1997]

#### **Texturing**

It is assumed that this code relates to substrates, unless T03-A02B1B is also assigned to indicate base-layer treatment.

CSS, flying height, slider, roughness

#### T03-A02B3

## **Backing layer manufacture**

Covers production of back-coat layers, but **not** materials manufacture which is covered by T03-A01B3.

[1992]

# T03-A02B5 [1992]

# Protective and lubricating layer manufacture

Covers deposition of layers only, for compositions see T03-A01B5 codes.

# T03-A02B7 [1992]

#### Additional manufacturing processes

Covers manufacturing steps carried out after basic carrier manufacture, e.g. cleaning, tape slitting (previously coded in T03-A02 and T03-M02), etc., but not loading into carrier case which is covered by T03-H01 codes. Equipment performing these processes is coded in T03-A02D3.

Post-treatment

# T03-A02B8 [1992]

## Multistep manufacturing processes

This code is used for inventions covering a number of manufacturing steps without apparent emphasis on any one, and therefore takes precedence over T03-A02A codes if magnetic layer deposition is mentioned as only one of several process steps.

#### T03-A02B8A [1992]

# Multistep manufacturing process for whole carrier

This code is used for inventions describing the complete manufacturing process only.

#### T03-A02B9 [1992]

#### Other manufacturing processes

Includes packing and shipping of manufactured carrier. Also includes writing of servo tracks during manufacture.

#### T03-A02C [1992]

# Quality control, testing (methods and equipment)

QC, evaluate, inspect

T03-A02C1 [1992]

# **Checking manufacturing process**

Monitoring, control, instrumentation

T03-A02C5 [1992]

# Checking finished or partially finished carrier

Flaw, inspection, testing, still-picture, contact-stopstart. CSS. lifetime

#### T03-A02C5A [1992]

# Using optical or other inspection

See also appropriate code in S03, e.g. S03-E04F2, which covers optical flaw detection.

Chemical, corrosion, humidity, heat, wear, exfoliation, abrasion, durability, asperity

T03-A02C5B [1992]

# By test recording

Error, bit error rate, BER, check

T03-A02D [1992]

Manufacturing equipment

T03-A02D1 [1992]

#### For manufacture of carrier per se

This code is used with other T03-A02 codes as appropriate, to indicate specific purpose. For example, use T03-A02A codes with T03-A02D1 for equipment used to apply magnetic layer to the carrier substrate; for general aspects of equipment for magnetic disk manufacture use T03-A02D1 with T03-A02E1.

# T03-A02D3 [1992]

## For subsequent processing

Includes equipment for treatment carried out after manufacture of carrier per se, e.g. slitting of tape (previously coded in T03-A02 and T03-M02), and general handling aspects.

Stack, wind, conveyor, feed

T03-A02D5 [1992]

For bulk storage, e.g. pancake

Reel, drum

T03-A02E [1992]

#### Characterised by type of carrier

Codes in this section are used (with other manufacturing codes as appropriate) to indicate the type of carrier being manufactured only. Prior to 1992 use T03-N codes.

T03-A02E1	[1992]
-----------	--------

Disk

T03-A02E1A [1992]

Hard disk

Drum

T03-A02E9 [1992]

Other magnetic carrier

T03-A02G [2008]

# Manufacture of carrier with separate recording areas

Includes manufacture of magnetic carrier not having magnetic recording film over the whole area.

# T03-A02G1 [2008]

# Manufacture of carrier with separate magnetic recording tracks

Includes manufacture of magnetic carrier with separate magnetic track regions. For hard disk carriers search with T03-A02E1A and other T03-A02 codes as appropriate.

#### T03-A02G3 [2008]

# Manufacture of carrier with discrete magnetic recording areas

Includes manufacture of magnetic carrier with patterned magnetic layer, such as nano-imprinted type.

Pattern, depression, pit, stamper

#### T03-A02G5 [2008]

# Manufacture of carrier including nonmagnetic recording areas

Includes manufacture of magnetic carrier with separate recording area using other technology, such as optical, for which T03-B codes are also assigned. Magneto-optical record carriers are not included here, being covered by T03-D01A8 codes.

#### T03-A03

#### Heads

Prior to 2007 see also V02-A02 codes for magnetic materials. Prior to 2002 if audio/video application is indicated see also W04-B02A. For erase heads search with T03-A06E1. From 2002 heads for audio/visual recording are no longer coded in W04-B02. Audio/visual applications are indicated by W04-B10, W04-B12, W04-B14 and W04-B16 codes. Field, transducer, coil, flux, bias, inductance, yoke,

#### T03-A03A

## Heads with multiple active gaps

core, ferromagnetic, pick-up, read, write

Multichannel, multitrack, film, glass, erase

T03-A03A1 [1992]

For operation on same track

T03-A03A5 [1992]

# For operation on different tracks

For array type heads T03-A03A7 takes precedence. *Stereophonic, DCC* 

T03-A03A7 [1992]

#### Array-type multiple head

Matrix

#### T03-A03B

# Other inductive head structures

This code is used for inductive head structures not catered for by other T03-A03 codes which take precedence, or when precise detail cannot be determined.

#### T03-A03C

#### Flux-sensitive heads

Includes magneto-resistive aspects (covered in T03-A03C3).

Read-only

T03-A03C1 [1992]

#### Combined with write head

Composite, disk drive

## T03-A03C3 [1992]

#### Using magnetoresistive material

All heads with thin film construction are additionally coded in T03-A03E. For biasing arrangements see T03-A03J9 also. Magnetoresistive elements used in non-head devices such as MRAM are coded in U12-B01B. Prior to 2007 thin film heads were also coded in V02-B03 but this code is now discontinued.

# T03-A03C3A [1997]

# Using giant magnetoresistance (GMR) effect

GMR, spin valve, Barkhausen

#### T03-A03C3C [2005]

# **Tunnel junction magnetoresistive head**

See also T03-A03C3A for tunnel junction giant magnetoresistive head.

T03-A03C3G [2006]

**Ballistic magnetoresistive head** 

T03-A03C3X [2006]

Other magnetoresistive head types

Colossal

T03-A03C5 [1992]

Using semiconductor-type device

See also U12-B01 codes.

Hall effect

T03-A03C9 [2005]

Flux sensitive head details

T03-A03C9A [2005]

**Magnetic layers** 

Pinned layer, free layer

T03-A03C9C [2005]

#### Spacer layer

Includes conductive non-magnetic layer between magnetic layers.

T03-A03C9E [2005]

# **Tunnel barrier layer**

Includes insulating non-magnetic layer between magnetic layers.

T03-A03C9G [2005]

Exchange layer

Anti-ferromagnetic

T03-A03C9J [2005]

#### Shielding layer

Used for internal shielding layers of magnetoresistive heads only. For other shielding aspects see T03-A03J7A.

T03-A03C9L [2005]

#### Layer arrangements

Covers emphasis on sequence of layers without particular reference to any one layer.

# T03-A03C9N [2005]

#### **Biasing arrangements**

Circuitry for biasing magnetic heads is covered in T03-A06G.

T03-A03C9X [2005]

Other

T03-A03D [1987]

## **Vertical recording heads**

This code is used with other T03-A03 codes as appropriate.

Perpendicular

# T03-A03E [1987]

#### Thin film heads

Assumed to be for inductive type head structures unless applied in conjunction with T03-A03C codes. This code is intended for magnetic heads wholly of film-circuit type construction, i.e. including thin film coil windings (for details of which search with T03-A03J5). Magnetic heads in which only the core and related magnetic circuit components are of thin film construction are not included. Cores for such heads are covered by T03-A03J1C, and for thin film circuit type heads by T03-A03J1E. Metal-in-gap heads are covered by T03-A03F codes. Prior to 2007 magnetic film details of 'thin film' heads of both types were also coded in V02-B03, which has now been discontinued. For film circuits in general, see U14-H codes, which are not assigned for thin film magnetic heads.

## T03-A03E1 [2006]

#### **Lead layers**

Covers layer arrangements for internal head connections. External head connections are covered in T03-A05C8.

T03-A03F [1992]

#### Metal-in-gap heads

MIG

T03-A03F1 [1992]

# **Gap-filling material**

Details of gap materials and structure for magnetic heads in general are covered by T03-A03J3C.

### T03-A03J [1992]

#### **General magnetic head details**

Covers details of inductive type heads. For details of magnetoresistive heads see T03-A03C9 codes. Codes in this section are used alone or in conjunction with other T03-A03 codes as appropriate.

# T03-A03J1 [1992]

#### **Head cores**

Carrier-contacting surfaces, including pole-pieces, are covered by T03-A03J3.

#### T03-A03J1A [1997]

#### **Magnetic material composition**

Prior to 2007 see also V02-A02 codes for further details of materials.

#### T03-A03J1C [1997]

## Thin film cores (for non-film head)

This code relates to magnetic heads with film-type cores, other parts of the head, such as windings, being of conventional construction. Prior to 2007 see also V02-B codes, especially V02-B03. From 2007 these codes are discontinued. Heads which are entirely of film circuit construction are covered by T03-A03E, their cores being covered by T03-A03J1E. Metal-in-gap heads are covered by T03-A03F codes.

# T03-A03J1E [1997]

#### Thin film head cores

This code is intended for core details of magnetic heads which are entirely of film circuit type construction, also coded in T03-A03E. See T03-A03J1C for magnetic film cores for otherwise conventional heads. (Prior to 2007 V02-B03 is also assigned for all aspects of thin magnetic films used for heads).

# T03-A03J3 [1992]

# **Carrier-interfacing surface**

Covers mechanical aspects and magnetic details such as pole pieces, but **not** cores, which are covered by T03-A03J1.

### T03-A03J3A [1992]

#### Pole pieces

Includes flux guides. Details of cores are covered in T03-A03J1.

# T03-A03J3C [1992]

#### Gap details

Metal-in-gap head details are covered by T03-A03F codes.

# T03-A03J3E [1992]

# **Head face**

Covers mechanical aspects of carrier-contacting surface surrounding active part of head, such as shape, friction-reduction, etc.

Hardness, roughness, smooth, projection, asperity

# T03-A03J3J [2007]

# **Heating device**

(T03-A03J9)

Covers arrangements for hearing carrier-interfacing surface of head to control fly height. Also coded in T03-A05C1. Arrangements for thermo-assisted magnetic recording (where portion of carrier is heated as part of the recording process) are not coded here, being covered in T03-A06M instead.

#### T03-A03J5 [1992]

# Windings

HF coils in general are covered by V02-F01 codes. Prior to 2007 HF coils for magnetic heads were also coded in V02-F05, which has now been discontinued.

## T03-A03J7 [1992]

### Casing, shielding, substrates

From 1997 codes in this section include substrates, previously covered in T03-A03J9.

#### T03-A03J7A [1997]

Casing and external shielding

### T03-A03J7C [1997]

#### Internal shielding layers

Includes shielding layers within film-type heads (see T03-A03E). For shielding layers within magnetoresistive heads see T03-A03C9J.

## T03-A03J7E [1997]

### **Substrate**

(T03-A03J9)

# T03-A03J8 [2006]

# **Internal head connections**

See T03-A03E1 for internal head connections for thin-film heads (e.g. magnetoresistive or inductive heads). External head connections are covered in T03-A05C8.

# T03-A03J9 [1992]

#### Other general head details

Prior to 1997 this code included head substrates, now covered by T03-A03J7E and prior to 2005 also included biasing arrangements for magnetoresistive heads which are now covered in T03-A03C9N. Circuitry for biasing magnetic heads is covered in T03-A06G.

#### T03-A04

# Head manufacture, testing, demagnetisation, cleaning

# T03-A04A [1987]

#### Manufacture, testing

Prior to 2007 see also V02-H codes and V02-H05. From 2007 manufacture and testing of magnetic heads is covered in T03 only.

T03-A04A1 [1992]

**Head manufacture** 

T03-A04A1A [1992]

**Assembly** 

T03-A04A1B [1992]

Film deposition

T03-A04A1C [1992]

**Coil winding** 

T03-A04A1D [1992]

## **Casing manufacture**

Includes manufacture of shield and mounting arrangements.

# T03-A04A1E [1992]

# **Mechanical or chemical treatment**

Includes e.g. burnishing, etching etc.

### T03-A04A5 [1992]

## **Head testing**

Includes test recording and non-electrical testing and inspection methods (also coded in e.g. \$03).

### T03-A04B [1987]

# Demagnetisation, cleaning

See V02-D for demagnetisation in general. *Abrasion* 

#### T03-A04B1 [1992]

#### **Demagnetising magnetic heads**

Degaussing, coil, solenoid, decay

# T03-A04B3 [1992]

# Cleaning magnetic heads

Cleaning of record carriers and of recording equipment in general is covered by T03-H02B and T03-H02C respectively.

Aerosol, cartridge

# T03-A04B3A [1992]

#### Cleaning compositions

Solvent

#### T03-A04B3B [1992]

#### **Dummy carrier for cleaning**

Includes cleaning cassettes, floppy disks adapted for cleaning, etc.

Cleaning tape

### T03-A04B3C [1992]

**Brush** 

#### T03-A05

### Head mounting and positioning

For records prior to 2002 audio/video head mounting and positioning is also coded in W04-B03. From 2002 W04-B03 is no longer used, audio/visual applications being indicated by W04-B10, W04-B12, W04-B14 and W04-B16 codes.

Drive, motor, stepper, track, control, rotating, read, write, slide, carriage

#### T03-A05A

# Azimuth correction, track centering, alignment maintenance

Error detection, angle, pitch

#### T03-A05A1 [1987]

# Dynamic adjustment, i.e. dependent on recorded signals.

Includes use of piezoelectric elements for head deflection.

Control, pilot

# T03-A05A1A [1992]

### **Head adjusting element**

See also V06-M06D for piezoelectric actuator. Includes shape memory alloy elements with self heating or auxiliary heater.

SMA, bimorph

#### T03-A05A1B [1997]

# Head position adjustment based on maximum read signal level

Covers dynamic arrangements positioning head for optimum output, without necessarily using dedicated servo information for track following (covered by T03-A05A1C).

Peak, maximise

# T03-A05A1C [1992]

# Track-following system, servo

For combined track accessing and following servo system see T03-A05B1A which is used as the default 'servo' code for magnetic recording and takes precedence over this code. For track following servos in general see T03-G02C1. For layout of servo tracks on magnetic carriers see T03-A06F codes. Details of physically separate servo tracks (magnetic and non-magnetic) created during formation of magnetic layer on carrier are covered in T03-A01G.

# T03-A05A1D [1992]

## Speed control for moving head

Covers rotary-head speed control. See T03-E03A7 for helical scan tape speed control.

### T03-A05A1E [2008]

## Head positioning for dual actuator systems

Includes control of a secondary actuator, e.g. on the main head arm of a disk drive, for fine positioning. For details of head adjusting elements per se see T03-A05A1A.

Piezoelectric

# T03-A05A1G [2005]

#### Using non-magnetic servo information

Includes use of optical servo tracks.

# T03-A05A1X [1992]

## Other dynamic adjustment

#### T03-A05A3 [1992]

# Adjustment not dependent on recorded signal alignment, setting up

Includes temp. compensation and manual adjustment of e.g. azimuth. See T03-K07 codes for testing also.

Screw, spring, pitch

# T03-A05B [1992]

### **Track selection**

(T03-A05X)

Covers arrangements to position head over desired track.

### T03-A05B1 [1992]

# By recorded signal

(T03-A05X)

Includes track accessing servo. See T03-G02B1 for track accessing servos in general.

Index, count, track crossing

# T03-A05B1A [1992]

#### Switching to track following servo action

This code is used as the default 'servo' code for magnetic recording. Inventions specific to track following servos only for magnetic recording are covered by T03-A05A1C.

# T03-A05C [1992]

## **Head support structure**

(T03-A05X)

Includes details of head to medium interface such as air bearing, contouring, gimbal, suspension and load arm. Use with T03-A05F codes for disks.

## T03-A05C1 [1992]

# For head-to-carrier spacing adjustment

(T03-A05X) Raise, lift, lower

# T03-A05C1A [1992]

Slider

(T03-A05X)

#### T03-A05C3 [1992]

### **Head support arm**

(T03-A05X)

Covers details of arm per se such as shape, mounting etc.

Swage

#### T03-A05C3A [2007]

# **Dual actuator systems**

(T03-A05X)

Covers arrangements for mounting a secondary actuator on main head arm for fine positioning. For details of head adjusting elements per se and positioning methods see T03-A05A1A codes.

# T03-A05C5 [1992]

#### **Motor drive**

(T03-A05X)

Includes motors per se - see V06-M codes also. See T03-A05D7 for helical-scan head motor drive. Bearings

T03-A05C5A [1992]

**Rotary drive** 

T03-A05C5C [1992]

Linear drive

# T03-A05C8 [2005]

#### Connections to read/write head

Includes wiring formed on head support arm. Prior to 2005 this was covered by T03-A05C3 and T03-A06C.

#### T03-A05D [1992]

# Specific head positioning details for helical-scan tape

(T03-A05X)

T03-A05D1 [1992]

Layout of heads, i.e. disposition

(T03-A05X)

# T03-A05D3 [1992]

## Signal coupling arrangements

(T03-A05X)

Codes in this section are concerned with signal transfer between the rotating heads and stationary part of equipment.

# T03-A05D3A [1992]

## Inductive, e.g. transformer

(T03-A05X)

See V02-F02 codes also.

### T03-A05D3C [1992]

Optical

(T03-A05X)

# T03-A05D3E [1992]

# **Radio frequency**

(T03-A05X)

## T03-A05D3G [1992]

Brushes

(T03-A05X)

See V04-L01 codes also.

# T03-A05D3X [1992]

#### Other rotary signal coupling

(T03-A05X)

# T03-A05D5 [1992]

# Rotary head drum

(T03-A05X)

Covers details of head drum per se, such as shape, materials, etc.

# T03-A05D7 [1992]

## Rotary head motor drive

(T03-A05X)

Includes motor per se. Motor-driven positioning for non-rotary heads in general is covered by T03-A05C5 codes.

#### T03-A05E [1992]

# Head positioning for longitudinallyscanned tape

#### T03-A05F [1992]

#### Head positioning for disk

Codes in this section are used either alone or with other T03-A05 codes, if the use of T03-A05F codes conveys additional information. See also T03-A08 codes, now assigned for all aspects of magnetic recording equipment. Prior to 1997, T03-A05F codes may be used to discriminate equipment type when head positioning is involved.

#### T03-A05F1 [1992]

# Non-contacting during operation

Hard disk, stack, CSS

# T03-A05F5 [1992]

## **Contacting during operation**

Floppy, flexible, diskette

# T03-A05G [2005]

#### Parking, latching arrangements

Includes load-unload ramps in hard disk drives, for which T03-A08A1C is also assigned. Prior to 2005 this topic was covered by T03-A05X. *LUL* 

# T03-A05X

# Other head positioning aspects

#### T03-A06

# Recording, reproducing or erasing methods/circuits

See T03-P codes for signal processing for recording in general, and W04-F and W04-G01 codes for video and audio recording signal processing in general.

# T03-A06A

# Direct, FM, PM or boundary displacement analogue recording

Frequency, phase, modulate, pulse

#### T03-A06B

# Other analogue recording

#### T03-A06C

#### **Digital recording**

Code, decode, pulse, bit, mark, space

#### T03-A06C1

[1992]

## Recording/write circuitry

## T03-A06C3 [1992]

## **Read circuitry**

Sense, threshold, peak

# T03-A06D [1992]

# Equalisation

(T03-A06X)

#### T03-A06E [1992]

# **Erasing**

(T03-A06X) Coil, magnet

## T03-A06E1 [1992]

# In equipment

(T03-A06X) Oscillator, head

# T03-A06E3 [1992]

#### Bulk

(T03-A06X)

See V02-D for demagnetising in general. Prior to 1992 T03-H02 was used for bulk erasure.

### T03-A06F [1992]

#### **Format**

(T03-A06X)

Covers signals recorded as magnetic information on carrier only. See T03-A01G codes for physical aspects of record carrier formatting, e.g. hard sectoring. See W04-B01A codes for formatting aspects relevant to audio/video recording.

#### T03-A06F1 [1992]

## Track layout

(T03-A06X)

# T03-A06G [1992]

#### Biasing

(T03-A06X)

Arrangements for biasing magneto-resistive heads are covered in T03-A03C9N (prior to 2005 this was covered in T03-A03J9).

## T03-A06H [1992]

### Skew correction, timebase correction

(T03-A06X)

See W04-F02B and W04-G01 codes for video and audio recording aspects.

#### T03-A06K [1992]

#### Superconductive magnetic recording

See T03-A01E for superconductive magnetic record carriers per se.

#### T03-A06M\* [2005-2012]

## Thermo-assisted magnetic recording

\*This code is now discontinued. Prior to 2013 it was used to indicate localised heating, usually by a laser, of an area on a magnetic record carrier to be written on. From 2013 this technology is transferred to T03-A06N1 within the category of energy-assisted magnetic recording.

#### T03-A06M1\* [2007-2012]

## Thermo-assisted magnetic recording methods

\*This code is now discontinued. Prior to 2013 it was used to indicate recording methods using heat assistance. From 2013 this technology is transferred to T03-A06N1A within the category of energy-assisted magnetic recording.

## T03-A06M3\* [2007-2012]

## **Heat source**

\*This code is now discontinued. Prior to 2013 it was used to indicate novel aspects of the heat source for heat-assisted recording. (Also covered in V08 for novel details of lasers and U12 for semiconductor lasers). From 2013 this technology is transferred to T03-A06N1C within the category of energy-assisted magnetic recording.

## T03-A06M5\* [2007-2012]

#### **Optical system**

\*This code is now discontinued. Prior to 2013 it was used to indicate novel aspects of the optical system for heat-assisted magnetic recording. From 2013 this technology is transferred to T03-A06N1E within the category of energy-assisted magnetic recording.

#### T03-A06N [2013]

## **Energy-assisted magnetic recording**

This code and its subdivisions cover the use of a separate energy source to enable writing to a magnetic record carrier using a lower magnetic field strength, i.e. to lower the coercivity of a storage bit while it is being written. The technology is assumed to apply to vertical/perpendicular recording and the general code for that topic, T03-A06V, is **not** normally assigned for energy-assisted magnetic recording. For application to hard disk drives search with T03-A08A1C. Note that magneto-optical recording is **not** included and is covered by T03-D01 codes.

### T03-A06N1 [2013]

## Thermo-assisted magnetic recording

Covers thermo-assisted ('heat-assisted') magnetic recording. Between 2005 and 2012 this topic was covered by T03-A06M codes.

HAMR

## T03-A06N1A [2013]

## Thermo-assisted magnetic recording methods

Covers thermo-assisted ('heat-assisted') magnetic recording methods. Between 2005 and 2012 this topic was covered by T03-A06M1 codes.

#### T03-A06N1C [2013]

## Heat source for thermo-assisted magnetic recording

This code covers novel aspects of the heat source for heat-assisted recording, e.g. a laser. (Also covered in V08 for novel details of lasers and U12 for semiconductor lasers). Prior to 2013 this technology was covered by T03-A06M3.

#### T03-A06N1E [2013]

## Optical system for thermo-assisted magnetic recording

This code covers novel aspects of the optical system for heat-assisted recording. Prior to 2013 this topic was covered by T03-A06M5.

Lens, near-field optics, solid immersion

#### T03-A06N3 [2013]

## Microwave-assisted magnetic recording

Search with T03-A03 codes for magnetic head details, e.g. T03-A03C3A for heads based on giant magnetoresistance effect or T03-A03C3C for tunnel junction magnetoresistive heads. From 2014 oscillators based on spin transport electronics effects are also assigned U23-A05.

GMR, MAMR, oscillating field, spin torque oscillator, STO, TMR

#### T03-A06N3A [2013]

## Microwave-assisted magnetic recording methods

#### T03-A06N9 [2013]

## Other energy-assisted magnetic recording

Covers the use of a separate energy source, other than heat or microwave energy, to lower storage bit coercivity during writing.

#### T03-A06V [2007]

#### **Vertical recording**

This code is used for highlighting the relevance of vertical recording methods where neither a novel vertical recording medium or novel vertical recording head is involved. Novel vertical recording media and heads are not routinely coded here, being covered by T03-A01D and T03-A03D respectively. Note that energy-assisted magnetic recording (as covered from 2013 by T03-A06N codes) is assumed to involve use of vertical/perpendicular magnetic recording and so T03-A06V is **not** routinely assigned for that topic.

#### T03-A06X

#### Other recording circuitry and methods

## T03-A07 [1987]

### Re-recording

(T03-A09)

Prior to 2006 this section included write/erase protection. From 2006 hardware aspects of write/erase protection for all types of recording are transferred to T03-H07 while signal format and signal processing methods are covered solely in T03-P07. T03-A codes are now used in addition to T03-H07 or T03-P07 codes to indicate applicability to magnetic recording.

Copy, master, duplicate

## T03-A07A\* [1992-2005]

### Preventing overwriting, erasure or copying

\*This code is now discontinued. See T01-H01C and T01-J12C for computing aspects.

## T03-A07A1\* [1992-2005]

#### Preventing accidental loss of data

\*This code is now discontinued.

### T03-A07A1A\* [1992-2005]

## By hardware detail, e.g. erase tab etc.

\*This code is now discontinued. Prior to 2006 the code was used with T03-N03 for tape cassette systems and with T03-N01 for disks.

#### T03-A07A1B\* [1992-2005]

### By signal format, by recorded data

\*This code is now discontinued. See T03-P07 for general non-magnetic recording signal processing aspects of data erasure or copying prevention. Pilot, inhibit

## T03-A07A3\* [1992-2005]

## Preventing unauthorised deliberate access or copying

\*This code is now discontinued.

## T03-A07A3A\* [1992-2005]

## By hardware detail, e.g. disk drive lock

\*This code is now discontinued.

## T03-A07A3B\* [1992-2005]

## By signal format

\*This code is now discontinued.

#### T03-A07B [1992]

#### Copying; re-recording

Covers authorised copying of magnetic recordings.

## T03-A07B1 [1992]

## Duplication of pre-recorded information at post mfg. stage, e.g. time code carrier

Includes servo track writing post manufacture, e.g. in hard disk drive. Duplication of whole carrier information is covered by T03-A07B3 codes.

Pre-formatting, servo, index, SMPTE

### T03-A07B3 [1992]

**Duplication from one carrier to another** 

## T03-A07B3A [1992]

Making many copies from one master

#### T03-A07B9 [1992]

Other copying, re-recording

## T03-A08 [1992]

#### **Magnetic drive**

Codes in this section are used with either T03-E or T03-F codes as appropriate to indicate carrier positioning aspects. Portable standalone drives are also coded in T04-P. Prior to 1997, these codes were used to indicate these aspects only, but are now widened in scope to be applied for any novel aspect of magnetic drives which would be included in T03. To further discriminate the type of equipment concerned, codes from the T03-N section should be used where T03-A08 codes are not sufficiently specific.

T03-A08A [1992]

#### Disk drive

See T03-F codes also.

T03-A08A1 [1992]

#### Single disk drive module

From 2012 T03-A08A1G is introduced for portable hard disk drives that are used for external storage. Hard disk drives of normal form factor for use within computers, servers, etc., are covered by T03-A08A1C and card-type or similar small form factor drives are covered by T03-A08A1E. In 2002 the title of T03-A08A1 was amended to better reflect its intended coverage of single units which may drive one or more magnetic disks. Storage systems based on multiple magnetic disk drive modules used together are covered by T03-A08A5 codes.

T03-A08A1A [1992]

Floppy disk drive

T03-A08A1C [1992]

## Hard disk drive

This code is used as the default reference for a 'hard disk drive'. Card type, or similar small form factor magnetic disk drives used within equipment are covered by T03-A08A1E and external hard disk drives by T03-A08A1G (from 2012), both of which are assigned instead of T03-A08A1C. Please note that since T03 codes cover dynamic recording systems only, SSDs and similar solid-state replacements for hard disk drives are not assigned this code and are instead covered by T01-H01B3 codes.

## T03-A08A1E [1997]

## Card type, small form factor magnetic disk drive

This code covers compact and/or thin drives, assumed to be of hard disk type unless other codes indicate otherwise, that are mounted inside the equipment using the stored data. Portable hard disk drives that are external to the computer or other equipment with which they are used are covered by T03-A08A1G.

**PCMIA** 

## T03-A08A1G [2012]

#### Portable hard disk drive

This code covers hard disk drives that are self-contained and used as external drives, e.g. for connection to a PC via a USB or similar interface. T04-P is also assigned for external computer storage disk drives. Standard hard disk drives and compact drives of e.g. card-type that are mounted inside equipment are covered by T03-A08A1C and T03-A08A1E respectively.

Back-up, desk-top, external storage

## T03-A08A5 [1992]

#### Multiple disk drive modules

From 2002 the title of this code has been amended to better reflect its intended coverage of multiple disk drive units (assumed to be for hard disks unless T03-A08A1A also assigned).

Stack

## T03-A08A5A [1997]

#### RAID system

Redundant array inexpensive disks

#### T03-A08C [1992]

#### Card drive

See T03-F and T04-A03A/T04-J codes also.

## T03-A08E [1992]

#### **Tape drive**

See also T03-E codes. This code is intended solely for drives intended for computer storage applications, e.g. tape streamers. It is **not** applied for details of audio or video tape recorders.

## T03-A08M [2007]

## Multiple head actuator type drive

Drives with multiple heads mounted in a fixed relationship with respect to each other are not routinely coded here.

T03-A09

Other

T03-A10 [1992]

Interfacing with magnetic recorder

T03-A10A [1997]

Interfacing hardware

Includes plugs, sockets, cables etc.

T03-A10C [1997]

Interface circuitry

T03-A10E [1997]

**Control aspects** 

See T01-C01 and T01-H01 codes also. Use with T03-A08A5A for RAID aspects.

T03-A10E1 [1997]

**Data transfer aspects** 

T03-A10E3 [1997]

**Control of storage** 

Includes file allocation, etc.

FAT

#### T03-B

## **Optical recording/reproduction**

For records prior to 2002 audio/video applications are assigned W04-C codes also. From 2002 carriers and head/record carrier driving aspects of audio/video optical recording are **no longer** coded in W04. For audio/video applications of optical recording drives see W04-C10 codes. Hard formatting aspects specific to audio/video recording are also covered in W04-C01F while signal formatting aspects are covered in W04-C05. Optical reading/writing circuitry is coded in W04-C06.

These codes are **not** used for cinematography per se (S06-B05), but optical soundtrack systems are included. 'Combination' optical recording, e.g. magneto-optical (T03-D01 codes), is **not** assigned T03-B codes unless stated to be applicable to optical recording also.

Disk, storage, compact, laser, beam, light

#### T03-B01

#### Record carriers and their manufacture

For records prior to 2002 all aspects of record carriers per se are assigned W04-C01 codes also, irrespective of stated application. From 2002 W04-C01 codes are no longer used. Codes for carrier type (T03-B01D section) are assigned when possible, to indicate this aspect only. (Prior to 1992 use T03-N codes). From 2002 T03-B01D codes can be used to indicate audio/video carrier applications. From 1997, T03-B01H is used for layer arrangements without particular reference to any one (previously assigned the general T03-B01 code).

T03-B01A [1987]

**Substrates** 

Mould, transparent

T03-B01A1 [1992]

Compositions

Includes glues, resins used for bonding multiple substrates.

PMMA, polycarbonate, resin

T03-B01A5 [1992]

Structure; shape

T03-B01A5A [1992]

**Double substrate** 

Double-sided, dual-substrate

T03-B01B [1987]

Light sensitive layers

Photo-sensitive, photochromic, contrast, reflection, pit

T03-B01B1 [1992]

Light sensitive materials

Spiropyran

T03-B01B1A [1992]

Light absorbing materials

Includes IR-absorbing compounds.

T03-B01B5 [1992]

## Characterised by recording process

Codes in this section are only assigned when some aspect of the light sensitive layer is novel, **not** to routinely indicate carrier type, which is catered for by T03-B01D codes.

## T03-B01B5A [1992]

#### **Ablation**

Covers methods involving depletion of material, such as hole burning.

Ablative, evaporation, metal film, surface tension

## T03-B01B5C [1992]

#### **Deformation**

Includes formation of bubbles.

Polymer, metal, bi-layer, gas, scatter

## T03-B01B5E [1992]

#### Interaction

Includes alloying or segregation of material. Exothermic, chemical reaction, alloy, separate, crystallisation, bi-layer

## T03--B01B5G [1992]

#### **Phase transition**

Includes change between crystalline and amorphous states.

Phase-change, liquid crystal

#### T03-B01B5J [1992]

#### **Combination of methods**

Includes use of more than one recording mechanism for multilevel recording of data. From 1997, multiple light sensitive layer arrangements and (single) layers sensitive to more than one wavelength, previously coded here, are respectively transferred to T03-B01B5N and T03-B01B5P.

High density, tri-level

#### T03-B01B5L [1992]

#### **Reversible process**

See T03-B01D8 for rewritable optical carrier in general.

Erasable, rewritable, photochromic

## T03-B01B5N [1997]

#### Multiple light-sensitive layer

(T03-B01B5J)

## T03-B01B5P [1997]

## Layer sensitive to different light wavelengths

(T03-B01B5J)

#### T03-B01B5X [1992]

## Other recording processes

## T03-B01C [1987]

#### Protective layers, (anti-) reflective layers

Coating, film

#### T03-B01C1 [1992]

#### Internal reflective or antireflective layers

This code takes precedence over T03-B01C3 and is used for indeterminate cases.

## T03-B01C3 [1992]

#### **External reflective or antireflective layers**

#### T03-B01C5 [1992]

#### Protective (ext.) layers

Anti-abrasion, scratch-resistant, antistatic

## T03-B01C7 [1992]

## Protection subsequently applied to carrier

Includes plastic air-occlusion film applied to surface of compact disk.

## T03-B01C8 [2007]

## **Labelling layers**

(T03-B01C9)

Includes optical and thermo sensitive layers for recording human readable information as well as layers suitable for printing e.g. by ink jet (see S06-G codes). Layers for recording data are covered in T03-B01B and are not coded here.

#### T03-B01C9 [1992]

Other

## T03-B01D [1992]

#### Record carrier type

Codes in this section are used in conjunction with either those for features of carriers per se, or those for manufacture, to indicate the type of the carrier only.

#### T03-B01D1 [1992]

Disk

#### T03-B01D1A [2002]

#### For audio/video storage

(W04-C01)

## T03-B01D3 [1992]

## Card

Includes cards with circular tracks and centre-hole to allow recording/playback in optical disk recorder.

## T03-B01D3A [2002]

## For audio/video storage

(W04-C01)

## T03-B01D4 [2006]

#### **Super resolution carrier**

Includes layer arrangements on carrier, e.g. mask layers, to increase resolution beyond wavelength of read/write laser. Super resolution arrangements involving optical components of head are covered in T03-B02B6 and are not coded here.

Super RENS, Super Resolution Near Field Structure

T03-B01D5 [1992]

**Tape** 

T03-B01D5A [2002]

For audio/video storage

(W04-C01)

## T03-B01D6 [1997]

#### **Multilayer carriers**

Includes double-substrate arrangements (also assigned T03-B01A5A) and carriers with multiple light sensitive layers on one substrate (see also T03-B01B5N).

## T03-B01D7 [1992]

## Non-erasable carrier

This code is only used when this aspect of the carrier is stated, and not merely instead of T03-B01D8. Search in conjunction with T03-B01D8 for hybrid carrier arrangements with erasable and nonerasable areas.

Direct read after write, DRAW, write once read many times, WORM, compact disk, CD

T03-B01D7A [1997]

Read only

Includes CD-ROM.

T03-B01D7C [1997]

**WORM** 

Covers carrier enabling writing, but not erasing. *Archive* 

T03-B01D8 [1992]

#### **Erasable and rewritable carrier**

For details of recording layers see T03-B01B5L. Search in conjunction with T03-B01D7 for hybrid carrier arrangements with erasable and nonerasable areas.

## T03-B01E [1992]

#### Manufacture

Use with T03-B01D codes to indicate manufacture of a particular type of carrier.

T03-B01E1 [1992]

**Equipment** 

T03-B01E1A [1992]

#### Stamper

From 1997, this code will be used to cover stampers per se only -see note for T03-B01E3E.

Press, punch, form, substrate, roll, sheet

## T03-B01E1B [1992]

#### **Coating equipment**

Covers equipment for applying any type of layer to substrate.

Evaporate, coat, deposit, spray, sputter, vacuum, vapor

## T03-B01E1M [2006]

## **Mastering equipment**

Includes equipment for writing to glass master and performing other mastering processes. See V05 codes for novel aspects of electron beam writing equipment.

Electron beam writer

## T03-B01E3 [1997]

### Characterised by process

Codes in this section are used with other T03-B01E codes as appropriate to provide additional information on the processes involved in an invention.

#### T03-B01E3A [1997]

## Fabrication and recording of master

Includes production of master from raw material and also process of recording data on it which carriers will finally store.

Glass, cut, tape master, hard disk, subcode

## T03-B01E3C [1997]

## Production of intermediate copies

Includes production of 'metal master' and 'metal mother'.

Plating, sputtering, coating

#### T03-B01E3E

### Production of stamper per se

Stampers per se, and materials for them, are coded in T03-B01E1A. From 1997, their manufacture will be described by use of T03-B01E3E together with T03-B01E1 or T03-B01E5 as appropriate. (Prior to 1997, T03-B01E1A itself was used with either 'apparatus' or 'method' codes).

## T03-B01E3G [1997]

#### **Pressing**

Includes bonding of multiple substrates and setting resins as well as sheet stamping methods. See T03-B01E3X for punching hole in substrate after pressing.

Injection moulding

### T03-B01E3J [1997]

## **Applying coatings after pressing**

Includes labelling where label is part of carrier (also coded in T03-H02A1A and X25-F08 when there are significant electrical details). Chiefly covers application of reflective and protective films after pressing process. T03-B01E1B will continue to be assigned (in addition to T03-B01E3J) where novel coating equipment is involved.

## T03-B01E3L [2011]

#### Polishing and cleaning

This code covers polishing and cleaning of an optical recording medium or a stamper or similar (e.g. with T03-B01E3E) **as part of a manufacturing process**. Polishing, cleaning or reconditioning of already-manufactured optical carriers by a user is **not** included and is covered by T03-H02B with T03-B01D codes assigned also as appropriate to denote the form of the carrier, e.g. T03-B01D1 for disk cleaning or scratch repair.

#### T03-B01E3P [1997]

### **Packing and shipment**

Includes placing CDs in 'jewel boxes' ('jewel boxes' per se and their manufacture are covered by T03-L01A1), labelling, etc. Electrical details of packing and labelling of carrier containers are also assigned X25-F codes.

#### T03-B01E3S [2002]

#### Multistep manufacturing process

This code is used for inventions covering a number of manufacturing steps without apparent emphasis on any one.

#### T03-B01E3X [1997]

## Other optical carrier manufacturing processes

T03-B01E5 [1992]

**Methods** 

T03-B01E7 [1992]

Testing, monitoring

T03-B01E7A [1992]

## Of manufacturing process

Instrumentation, check, measure

T03-B01E7B [1992]

Of carrier during manufacture

T03-B01E7C [1992]

#### Of complete carrier

Includes test recording and inspection by e.g. optical testing methods.

## T03-B01F [1992]

## **Recording format**

Covers physical aspects only such as groove/land structure and other aspects fixed at time of disk manufacture, as well as geometry of recordable and non-recordable pits. See T03-B05 for signal aspects of recording formats, including spatial arrangement of data on carrier and between carrier layers.

Sector, servo, index

#### T03-B01F1 [1992]

#### To increase storage density

Capacity, data

## T03-B01F1A [2007]

#### Multivalue data formats

Includes recording marks that are able to contain several pieces of information by using variations in length, width or depth, to store data values with base greater than two.

T03-B01F5 [1997]

Details of grooves, pits, etc.

T03-B01F5A [1997]

#### Relating to tracking

Track following and accessing is covered in T03-B02A3 codes, also assigned where appropriate.

## T03-B01H [1997]

#### Layer arrangements

Covers details of sequence layers making up record carrier without specific reference to any one layer.

## T03-B01R [2006]

## Recycling and destroying optical carrier

This code is used for recycling and destroying of **optical** record carriers only. Recycling and destroying of magnetic carriers is covered by T03-A01R and of magneto-optical carriers by T03-D01R. Where an invention is applicable to recycling or destruction of several types of carrier or the type is not disclosed the general code T03-H02R is assigned instead. For recycling of recording or playing equipment see V04-X01C.

#### T03-B02

## Heads and head/light source positioning

## T03-B02A [1987]

## Positioning, focusing

Codes in this section cover both lens positioning for focusing, and positioning of the head as a whole for track selection and alignment.

#### T03-B02A1 [1992]

## Lens positioning for focusing

Positioning of the head moving across the carrier is covered by T03-B02A3 codes.

#### T03-B02A1A [1992]

#### Drive element per se

Includes voice coil motor. (See V06-M04 also). *VCM* 

### T03-B02A1C [1992]

#### Focus detection and control

Includes focus servo arrangements. Feedback, error, lens, position

## T03-B02A3 [1992]

## **Head positioning**

Covers positioning of head as a whole, for track selection or following, **not** focusing, which is covered by T03-B02A1 codes.

## T03-B02A3A [1992]

#### Drive element per se

Includes linear motor. (See V06-M06B also). *Coil, pulse, step* 

#### T03-B02A3B [1992]

### Movable mounting structures

Includes rail assembly allowing head movement. *Guide, slide* 

## T03-B02A3C [1992]

#### Track selection and access

Includes track-accessing servo arrangements. (For track access servo in general, see T03-G02B1 codes).

Index, seek, kick pulse, step, initialise

#### T03-B02A3D [1992]

#### Track following

Includes track-following servo arrangements. (For track-following servos in general see T03-G02C1).

Alignment, feedback, off-track, shift, compensate, tilt

## T03-B02A3E [1992]

#### Interchangeable servo system

Includes track accessing servo switching to track following mode. This code takes precedence over T03-B02A3C and T03-B02A3D.

#### T03-B02A4 [2005]

#### **Tilt correction**

Covers arrangements involving movement of lens or using other optical systems e.g. liquid crystal element. Search in conjunction with T03-B06 codes for compensation by signal processing.

#### T03-B02A5 [1992]

#### **Compensation system**

Includes arrangements compensating for temperature change or vibration, in either focus or track access/following system.

Shift, disturbance, distortion, jitter

## T03-B02A7 [1992]

#### Light source control

Includes control of bias circuit for semiconductor laser (see also U12-A01B4 and corresponding codes in V08).

Monitor, current, feedback, LED, photodiode, APD sensor

#### T03-B02A8 [1997]

## Using multiple heads, head positioning for double-sided disk

From 2007 this code has been expanded to include multiple head systems not exclusively used for double-sided disks. Previously this code covered only head positioning for double-sided disks.

## T03-B02A8A [2007]

## Head positioning for double-sided disk

All general aspects of multiple head drives are also covered in T03-B10M. Includes dual-head systems and arrangements for single head to move to other side of disk. Search using T03-B02A8 for all records prior to 2007.

T03-B02A8C [2007]

Reading multiple formats

T03-B02A8E [2007]

Increasing access speed

T03-B02A8G [2007]

Simultaneous reading of multiple tracks

T03-B02B [1992]

Head

The codes in this group cover constructional aspects of optical heads per se. Head positioning is covered by T03-B02A codes.

T03-B02B1 [1992]

#### **Light source**

This code covers novel light sources themselves, such as laser diodes, specific details of which are covered by U12-A01B codes and also codes in V08. It does not refer to assemblies including the light source and associated optical elements external to it which are covered by T03-B02B if no specific detail is given, or by other T03-B02B subdivisions as appropriate. Light sources are normally assigned T03-B02B1 only but in cases of specific application to reading or writing, subdivision codes are assigned instead. Frequency doubling or other multiplying optical arrangements are covered by T03-B02B7E (coded as T03-B02B1 and T03-B02B7 prior to 1997). Light source control aspects are coded in T03-B02A7.

LED, laser, solid, gas

T03-B02B1A [1992]

For recording

Writing, erasing, overwrite

T03-B02B1B [1992]

For reading

T03-B02B3 [1992]

Photodetector for focus and read

Photodiode, diode, APD, quadrant, sensor

T03-B02B5 [1992]

Lenses

T03-B02B6 [1997]

#### 'Super-resolution' optical aspects

Aperture, Rayleigh, wavelength, refraction

T03-B02B7

[1992]

## **Optical systems, optical elements**

Includes other optical elements e.g. lightguides for transferring reading or writing light, (see V07-F01 codes for novel aspects). Lenses are covered by T03-B02B5. 'Super-resolution' optical aspects are indicated by assignment of T03-B02B6 with T03-B02B5 or T03-B02B7 codes as appropriate.

T03-B02B7A

[1997]

Beam splitter

Prism

T03-B02B7C

[1997]

**Polarising arrangements** 

T03-B02B7E

[1997]

## **Harmonic generators**

(T03-B02B1, T03-B02B7)

Covers arrangements effectively reducing wavelength of recording or reading light.

T03-B02B7G

[2005]

[1992]

**Diffraction gratings** 

T03-B02B7M [2006]

#### Multiple optical path

Includes systems for reading different types of optical disk.

#### T03-B02B8

## Optical recording head cleaning, head manufacture, head testing

From 2012 the scope of this code has been expanded to include manufacture and testing of optical heads, respectively covered by subdivisions T03-B02B8C and T03-B02B8E, in addition to optical head cleaning, for which T03-B02B8A is now the main code. Note that T03-B02B8 codes refer to the optical head itself, as defined by T03-B02B codes, and not head positioning aspects as covered by T03-B02A codes. Prior to 2012 T03-B02B8 covered only arrangements for cleaning sources, detectors, and optical system with cleaning of e.g. an optical disk player lens by a dummy carrier being covered by T03-B02B8A. From 2012 T03-B02B8A is used as a general reference for head cleaning. Cleaning of recording equipment in general is covered by T03-H02C.

## T03-B02B8A [1992]

## Optical recording head cleaning, including use of dummy carriers

From 2012 the scope of this code has been expanded to cover general arrangements for cleaning optical recording and playback heads, such as lens cleaners, in addition to its previous coverage of dummy carriers for cleaning. Prior to 2012, T03-B02B8A was used for cleaning using dummy carriers such as cleaning disks and T03-B02B8 served as a general 'optical head cleaning' code. (Prior to 1992 T03-B02 and T03-H02 were assigned for optical head cleaning).

Wipe, pad, brush, solvent, lens

## T03-B02B8C [2012]

## Optical recording head manufacture

Between 2006 and 2011 search T03-B02B codes with T03-M08 (general manufacturing code) for optical recording head manufacture. From 2012 T03-M08 is no longer assigned for this topic.

## T03-B02B8E [2012]

## **Optical recording head testing**

Between 1992 and 2011 search T03-B02B codes with T03-K07 codes (general testing code) for optical recording head testing. From 2012 T03-K07 codes are no longer assigned for this topic. When optical testing is involved codes in e.g. S02-J04 or S03-E04 subgroups are also assigned as appropriate.

#### T03-B02C [1992]

## Static carrier reading and writing system

Covers arrangements for reading or writing where relative movement of light source/sensor with respect to recording medium does not involve physical movement of either record carrier or a head apparatus. Instead relative movement takes place, for instance, by optical beam scanning with electro-optical or electromechanical scanning, or use of an switched optical array. Does not cover optical static stores, which are covered by U14-A02 codes.

## T03-B03\* [1992-2004]

## **Record carrier positioning**

\*This code is now discontinued and from 2005 novel aspects of optical record carrier positioning are assigned the appropriate T03-B10 code in conjunction with T03-F or T03-E codes.

#### T03-B03A\* [1992-2004]

#### For disks

\*This code is now discontinued. Prior to 2005 T03-N01 was also assigned and T03-F codes were applied for specific details.

## T03-B03C\* [1992-2004]

#### For cards

\*This code is now discontinued Prior to 2005 T03-N05 was also assigned and also T03-F codes for specific details. Codes in T04, e.g. T04-A03B and T04-J are assigned for this topic.

### T03-B03E\* [1992-2004]

#### For tape

\*This code is now discontinued Prior to 2005 T03-N02 and/or T03-N03 or T03-N04 were also assigned along with T03-E codes, which are still assigned for specific tape drive details.

#### T03-B05 [1992]

## Signal recording format and methods

## T03-B05A [2005]

## **Recording methods**

Includes arrangements for recording label information using data recording equipment on visible light sensitive layer. For this topic see also T03-H02A.

### T03-B05A1 [2005]

#### **Optimisation methods**

Includes use of test recording area. Use with appropriate code, e.g. T03-B02A7 for controlling light source power.

## T03-B05F [2005]

#### **Format**

Covers arrangement of data only, physical aspects such as hard sectoring of data, are covered by T03-B01F. Index signal recording and related aspects are also in T03-J01 codes.

Constant, angular, linear, velocity, CAV, CLV

#### T03-B05F1 [2007]

## Data arrangement within recording layers

Covers two dimensional data layout.

## T03-B05F5 [2007]

## Data arrangement between recording layers

Covers arrangement of different data types between different layers, e.g. layer used for interactive data such as Java info in Blu-Ray disks.

#### T03-B05F9 [2007]

#### Other data arrangements

## T03-B05K [2005]

## Determining format or type of carrier inserted

E.g. distinguishing between CD and DVD or between CD-R and CD-RW in drive capable of handling multiple formats.

#### T03-B06 [1992]

## Reading/writing circuitry

This code is used with T03-P codes when signal processing aspects are involved.

Laser, diode

T03-B06A [1992]

Writing

T03-B06C [1992]

Reading

T03-B07 [2007]

#### Re-recording, duplication

(T03-B01E3X, T03-B05A)

Includes equipment and methods for duplicating optical carriers by recording on writable media. Production of optical carriers by pressing is covered in T03-B01E and is not coded here.

#### T03-B08 [1992]

## Interfacing with optical recording equipment

#### T03-B09

## Other optical recording/reproduction aspects

Includes editing/recording techniques esp. for optical recording, track flaw detection, noise elimination etc., when not relevant to other T03-B codes.

## T03-B10 [2005]

### **Optical drive**

Portable standalone drives are also coded in T04-P. From 2005 optical drives are coded in this section in accordance with carrier type and are no longer assigned a corresponding T03-N code. Prior to 2002 optical drives are coded in T03-N as appropriate and W04-C10. From 2002 W04-C10 codes are applied only for audio/video recording applications and therefore between 2002 and 2005 optical drives with no audio/video aspect were assigned a T03-N code in conjunction with the appropriate T03-B codes to denote novel aspects.

## T03-B10A [2005]

#### Disk drive

CD, CD-ROM, CD-R, CD-RW, DVD, DVD-ROM, DVD-R, DVD-RW, DVD-RAM, DVD+R, DVD+RW, HD-DVD, BD-ROM, BD-R, BD-RE, BluRay, UMD

#### T03-B10A1 [2005]

#### Multilayer disk

From 2002 to 2005 drives for optical disk with multiple recording layers, e.g. DVD-9, DVD-10 and DVD-18 formats, are assigned W04-C10A2 where the invention has significant audio/video recording aspects. From 2005 W04-C10A2 is no longer used and all multi-layer aspects of drives are coded here. Optical disk drives for audio/video recording which are also used for recording other data formats are coded in W04-C10A3A.

T03-B10C [2005]

**Card drive** 

T03-B10E [2005]

**Tape drive** 

T03-B10M [2007]

Multiple head type drive

### T03-B12 [2005]

## Holographic recording

This code is applied in conjunction with other T03-B codes to denote the relevant aspect. Prior to 2005 holographic recording was assigned T03-C09 as well as in T03-B codes.

#### T03-C

## Other dynamic recording/reproducing methods

Audio/video applications are coded in W04-D codes also. For records prior to 2002, where application to audio/video recording is **not** stated, only capacitive record carriers and recording equipment are routinely assigned W04 codes also (in W04-D section). From 2002 W04-D codes are only applied where audio/video applications are specifically mentioned. For static stores see U14-A codes.

### T03-C01 [1992]

#### Capacitive

Includes ferro-electric probe storage.

PVC, carbon, conductive, lubricant, stylus, diamond, shank, antistatic

## T03-C03 [1992]

## Using electron beam

See also V05-F08C3 and other V05-F codes for equipment aspects, as appropriate.

## T03-C05 [1992]

## **Using tunnelling effects**

See also V05-F08C3 and V05-F01A5, and other V05-F codes for equipment aspects, as appropriate.

#### T03-C05A [1997]

## Record carriers and their manufacture

## T03-C07 [1992]

## Using superconductive element

See T03-A01E for superconducting magnetic record carriers, and T03-A06K for superconductive magnetic recording systems. Superconductive materials and devices in general are coded in U14-F codes, (X12-D06 codes are assigned for high-power electrical aspects of superconductors).

## T03-C09 [1992]

#### Other recording methods

#### T03-D

## Recording/reproducing using combination of methods

Audio/video applications are assigned in W04-D codes also.

## T03-D01 [1987]

### Magneto-optical recording

T03-D01 codes cover recording intended to be read as changes in reflected light due to the Kerr effect and not recording based on temporary lowering of coercivity by a heat source that is read magnetically, as in heat-assisted magnetic recording (covered by T03-A06N1). Prior to 2002 all aspects of magneto-optical recording were assigned W04-D codes. From 2002 carriers and mechanical aspects of magneto-optical recording are no longer coded in W04. Carriers intended specifically for audio/video recording are coded in T03-D01A1K. Audio/video applications of magnetic-optical recording drives are assigned W04-D20 codes. Inventions are assigned T03-D01 codes when specific reference is made to magnetooptical recording. However, it should be noted that T03-B should be considered also for general aspects, such as optical systems, which may also be relevant to magneto-optical recording, and to allow for cases where the magneto-optical aspect cannot be ascertained.

Photomagnetic, Kerr effect, disk, substrate, film, rare earth, amorphous, optomagnetic

## T03-D01A [1992]

#### **Record carriers**

Prior to 1997, this code included disclosures dealing with a sequence of layers without emphasis on any specific one. This subject matter is now transferred to T03-D01A4.

### T03-D01A1 [1992]

#### **Carrier type**

Codes in this section are used to indicate carrier type for both novel carrier details and novel manufacturing aspects. For these aspects, T03-N codes are **not** assigned from 1992.

T03-D01A1A	[	1992]

Disk

T03-D01A1C [1992]

Card

T03-D01A1E [1992]

Tape

T03-D01A1K [2002]

For audio/video recording

T03-D01A2 [1992]

**Substrate** 

T03-D01A3 [1992]

## Reflective, antireflective, and dielectric layers

The title of this code has been expanded to reflect the previous inclusion of dielectric layers, now covered by T03-D01A3E.

T03-D01A3A [1992]

**Antireflective layer** 

T03-D01A3C [1992]

**Reflective layer** 

T03-D01A3E [1997]

#### **Dielectric lavers**

This code is mainly intended for layers internal to the carrier. Spacing layers between two magnetic layers are covered by T03-D01A5G. External protective layers are covered by T03-D01A7 codes.

## T03-D01A4 [1997]

### Layer arrangements in general

This code is used for inventions where structures involving several layers are claimed, without particular emphasis on any one. See other T03-D01A codes for novel details of specific layers.

T03-D01A5 [1992]

#### **Magnetic layers**

See V02-A01 codes for magnetic compositions also, and V02-B01 for magnetic film in general.

T03-D01A5A [1992]

**Recording layers** 

T03-D01A5C [1992]

Reference layers

T03-D01A5E [1997]

#### **Exchange coupling system**

(T03-D01A5A, T03-D01A5C)

T03-D01A5G [1997]

#### Spacing layers

Covers layers consisting of metallic or non-metallic material separating two magnetic layers. Dielectric layers in general are covered by T03-D01A3E.

#### T03-D01A5J [2005]

## **Domain wall displacement system**

Covers systems which transfer high density recorded marks from memory/recording layer to displacement/reproduction layer via switching layer through exchange coupling force, then causing exchange coupling force to disappear through heating and shifting domain wall in reproduction layer to increase size of mark so as to allow reading by standard wavelength laser.

Memory layer, switching layer, displacement layer, control layer, reading layer, magnetically amplifying magneto optical system (MAMOS)

T03-D01A7 [1992]

Overcoat layer

T03-D01A7A [1992]

Lubrication aspects of overcoat layer

T03-D01A8 [1992]

#### Record carrier manufacture and testing

Prior to 2002 this aspect was also coded in W04-D01A1, irrespective of application. From 2002 W04-D01A1 is no longer used. Use T03-D01A1 codes to discriminate carrier type (T03-N codes not assigned from 1992).

T03-D01A8A [1992]

Substrate manufacture

T03-D01A8C [1992]

Reflective layer deposition

## T03-D01A8E [1992]

#### **Magnetic layer deposition**

Also coded in V02-H02 codes for novel aspects of equipment or process. Magnetic layer deposition for purely magnetic record carriers is covered by T03-A02A codes.

T03-D01A8G [1997]

Overcoat and lubricating layer deposition

T03-D01A8J [1992]

#### **Carrier testing**

For non-recording testing aspects see S02/S03 codes, e.g. S03-E04F2 for optical flaw testing.

## T03-D01A9 [2005]

#### **Recording format**

Covers physical aspects only, e.g. details of grooves and pits. See T03-D01E7 for signal aspects of recording format.

#### T03-D01B\* [1992-2004]

#### **Record carrier positioning**

\*This code is now discontinued. From 2005 novel aspects of magneto-optical record carrier positioning are assigned T03-F or T03-E codes in conjunction with the appropriate T03-D01K code.

#### T03-D01B1\* [1992-2004]

#### For disks

\*This code is now discontinued. Prior to 2005 T03-N01 was also assigned along with T03-F codes for specific details.

#### T03-D01B5\* [1992-2004]

## For tape

\*This code is now discontinued. Prior to 2005 T03-N02 and/or T03-N03 or T03-N04 were also assigned. See T03-E codes for tape drive details.

T03-D01C [1992]

**Optical head details** 

T03-D01C1 [1992]

## **Optical elements**

Includes light guides (see V07-F01 codes also).

T03-D01C1A [1992]

Lenses

T03-D01C1C [1992]

Beam splitter, polarizer

T03-D01C1E [1997]

'Super-resolution' optics

Numerical aperture, NA, Rayleigh, refraction

T03-D01C1G [1997]

**Harmonic generator** 

Covers arrangements effectively reducing wavelength of recording or reading light.

T03-D01C3 [1992]

**Light source** 

See U12 and V08 codes as appropriate for details of lasers and their control.

T03-D01C3A [1992]

**Light source control** 

T03-D01C5 [1997]

**Photodetector** 

See U12-A02B codes for semiconductor device respects.

Photodiode, diode, APD, quadrant, sensor

T03-D01D [1992]

**Optical head positioning** 

T03-D01D1 [1992]

**Focusing** 

T03-D01D1A [1992]

**Focus servo** 

T03-D01D1C [1992]

**Motor drive** 

Includes voice-coil motors and their control. See also V06-M04 and V06-N codes.

T03-D01D3 [1992]

Track selection and accessing

Includes motor drive for head positioning. See also V06-M and V06-N codes as appropriate.

T03-D01D3A [1992]

Track accessing servo

Track access servo systems in general are covered by T03-G02B1.

T03-D01D3C [1992]

Switching to track following servo action

T03-D01D5 [1992]

**Track following** 

T03-D01D5A [1992]

Track following servo

Track following servo systems in general are covered by T03-G02C1.

T03-D01D7 [1992]

Motor drive for track selection and following

Includes motor per se and also drive circuitry not specifically part of track access or track following servo systems, these being covered by T03-D01D3A and T03-D01D5A respectively.

T03-D01E [1992]

Erasing, rewriting, writing, interfacing methods and circuits

The title of this code has been expanded to reflect its wider use since 1992 to include reading and writing circuitry (now covered by T03-D01E3 codes) and interfacing aspects (T03-D01E5 codes).

T03-D01E1 [1992]

**Erasing/rewriting methods** 

Includes methods intended to reduce access time.

T03-D01E1A [1992]

Reducing unnecessary erasure

Includes monitoring of unrecorded areas to allocate data accordingly.

T03-D01E3 [1997]

Writing and reading circuitry

See also T03-P codes where broader signal processing aspects are involved.

T03-D01E3A [1997]

Writing

T03-D01E3C [1997]

Reading

T03-D01E5 [1997]

Interfacing aspects

Includes actual interfacing circuits and also storage control aspects, e.g. file allocation, etc. See also T01-H codes for computer storage systems. *FAT* 

T03-D01E7 [2005]

Signal recording format, methods

T03-D01E9 [1997]

Other magneto-optical recorder aspects

T03-D01F [1992]

**Magnetic system** 

T03-D01F1 [1992]

## **Magnetic head**

Includes manufacture of head (see V02-H05 also). Magnetic heads for purely magnetic recording are covered by T03-A03 codes.

## T03-D01F1A [1992]

#### **Head movement**

Covers spacing/movement of head relative to disk surface. Optical head positioning is covered by T03-D01D codes.

#### T03-D01F3 [1992]

#### Bias magnet, initialisation system

Novel permanent magnets are also coded in V02-E01, electromagnets in V02-E02 codes.

## T03-D01F3A [1992]

#### Position adjustment

Includes movement towards disk surface.

#### T03-D01H [1992]

## **Recording method**

Codes indicating recording method are assigned to indicate equipment type, and thus may be used with any other T03-D01 code provided the type of recording is disclosed.

## T03-D01H1 [1992]

#### **Magnetic field modulation**

Covers systems with constant intensity (unmodulated) light beam.

## T03-D01H5 [1992]

#### **Light beam modulation**

Covers systems with constant (unmodulated) magnetic field.

## T03-D01K [2005]

#### Magneto-optical drive

Portable standalone drives are also coded in T04-P. From 2005 magneto-optical drives are coded in this section in accordance with carrier type and are no longer assigned a corresponding T03-N code. Prior to 2002 magneto-optical drives are coded in T03-N as appropriate and W04-D20. From 2002 W04-D10 codes are applied only for audio/video recording applications and therefore between 2002 and 2005 optical drives with no audio/video aspect were assigned a T03-N code in conjunction with the appropriate T03-D01 codes to denote novel aspects.

T03-D01K1 [2005]

Disk drive

T03-D01K3 [2005]

**Card drive** 

T03-D01K5 [2005]

Tape drive

T03-D01R [2006]

## Recycling and destroying magneto-optical carrier

This code is used for recycling and destroying of magneto-optical record carriers only. Recycling and destroying of magnetic carriers is covered by T03-A01R and of optical carriers by T03-B01R. Where an invention is applicable to recycling or destruction of several types of carrier or the type is not disclosed the general code T03-H02R is assigned instead. For recycling of recording or playing equipment see V04-X01C.

#### T03-D03 [1992]

### **Electro-optical recording**

Includes photorefractive ferroelectric carrier system with e.g. static electric field and modulated light beam. For details of head and carrier positioning see T03-E, T03-F, and T03-G codes, as appropriate.

#### T03-D03A [1992]

#### Record carriers and their manufacture

Prior to 2002 W04-D01A codes were also applied. From 2002 W04-D01A codes are no longer used.

#### T03-D09 [1992]

## Other combination recording methods

## T03-E

#### **Tape (filament) transport**

For records prior to 2002 tape transport for audio/video recording was also coded in W04-B04B or W04-E02B. From 2002 tape transport aspects are no longer covered in these equivalent codes in W04, but are assigned W04-B10A or W04-B12A as appropriate if specific to video or audio tape recorders respectively. T03-N codes are assigned as appropriate to indicate equipment type.

Motor, rotor, drive, belt, gear, tape deck

#### T03-E01

## Spools; cassette changing; loading; threading

Spools within cassette housings are coded in T03-H01B, or T03-H01C only. Winding tape onto spools during manufacture is covered by T03-H codes only. Includes retention of cassette/spool in position during recording/playback.

Engage, guide, cam, gear, eject

T03-E01A [1992]

**Spools** 

Hub, reel, flange, leader

T03-E01B [1992]

Cassette changing

Load, eject, slot, slide, carriage

T03-E01B1 [1992]

Changing/ejecting mechanism within apparatus

T03-E01B1A [1992]

**Cassette door** 

Flap, damping, spring

T03-E01B5 [1992]

### **External feeding apparatus**

From 2006 external tape feeding for library systems is no longer included here, being covered by T03-Q01 and T03-Q07A. Prior to 2006 search with T03-E01B5 and T03-Q01 for external feeding arrangements for tape libraries.

#### T03-E01B7 [1992]

#### Handling different sized cassettes

Cassette adaptors per se (e.g. for enabling insertion of small cassette into standard machine) are covered by T03-H01B6.

T03-E01C [1992]

Looping, threading

T03-E01C1 [1992]

#### For helical scan tape

Includes arrangement to withdraw loop of tape from cassettes. Also coded in T03-N02 and T03-N03. Prior to 2002 audio/video applications of this technology were also assigned W04-B04B7A which is discontinued from 2002 and thus no longer assigned.

#### T03-E02

#### Other tape guidance

Includes capstan and rotary head guides, vacuum arrangements and pressure pads.

#### T03-E03

## Controlling, regulating or indicating speed

T03-E03A [1992]

**Speed control** 

Servo, feedback

T03-E03A1 [1992]

By measurement of carrier speed

Tachometer, pulse counting

T03-E03A5 [1992]

By recorded data

T03-E03A7 [1992]

#### In conjunction with helical-scan head

See also T03-A05A1D for helical scan head speed control, also coded in T03-N02.

#### T03-E04

## Tape tension control; speed changing; reversing

Fast forward, rewind, selector, motor

#### T03-E05

#### Control of operating mode

For records prior to 2002 audio/video applications are coded in W04-B04B5 codes. From 2002 these codes are no longer assigned.

Select, switch, function, play, rewind, fast forward, display, pause, cue, autostop, solenoid

T03-E05A [1992]

Based on sensed carrier features e.g. autostop

T03-E05A1 [1992]

Sensing recorded data

T03-E05A3 [1992]

Sensing tape tension

T03-E05A5 [1992]

## Sensing non-magnetic feature on tape e.g.

Includes optical detection. (Leader per se is covered by T03-A01H and T03-A01C3).

Light transmission, transparent

## T03-E05A7 [1992]

## Sensing speed of carrier

Includes detection of drop in speed, e.g. at end of tape, to halt operation.

## T03-E05A9 [1992]

## Other control based on sensed carrier features

### T03-E05B [1992]

#### Manual control

Includes operating controls, keys, switches, etc. *Pushbutton* 

#### T03-E05C [1992]

#### Remote control

See W04-E04A for remote control specific to audio or video recording.

Optical, IR, ultrasonic, radio, wire

#### T03-E06

## **Driving spools**

Includes motor, gearing and pulley systems, torque adjustment.

Reel, belt, tension, friction

#### T03-E06A [1992]

#### Motor

This code is used as a general code for tape drive system motors.

#### T03-E07

## **Driving tape**

Includes capstan/pinch roller systems.

### T03-E08

#### Other driving arrangements

Includes braking arrangements. Spool rotation preventing devices within cassettes are covered by T03-H01B7A

Clutch, reel, torque

## T03-F

#### Disk, drum, etc. drive and positioning

This section deals mainly with disk drive arrangements (general), but also covers analogous systems for card, drum, or other carriers. (For convenience the term 'disk' is used below). Search with T03-N codes to discriminate type of equipment, and with specific codes from other sections, e.g. T03-A08, T03-B03, etc.

Motor, floppy, hard, card, drum, cylinder

#### T03-F01

#### Automatic disk changing

Includes all types of loading/ejection mechanism where disk is not placed in final recording/reproducing. Position by hand. Load. arm. cartridge. eiect. feed

[1992]

#### T03-F01A

## Loading mechanism and drive

Includes disk tray.

#### T03-F01A1 [1992]

## Disk shutter opener

Disk cartridge shutters per se are covered by T03-H01A5. Includes arrangements to extract disk from cartridge within drive for playback/reproduction.

Pin. tab. lever

## T03-F01A5 [1992]

#### **Ejection system**

This code covers arrangements peculiar to the ejection of carriers, and **not** merely part of the reciprocating system for loading/unloading, which is covered by T03-F01A.

## T03-F01A7 [1997]

## Handling different disk size or type

## T03-F01B [1992]

## Disk positioning and centering

Hub, locate

#### T03-F01C [1992]

### Disk changing control system

Monitor, controller, circuit

#### T03-F01D [1992]

#### Manual loading of carrier

## T03-F01E [1992]

## Loading from carousel container for several carriers

Covers arrangements enabling simultaneous loading of several carriers, which are then played or recorded on, sequentially or non-sequentially. 'Internal' jukebox arrangements are covered by T03-F01F1. Carousel container per se is covered by T03-H01A2.

## T03-F01F [1992]

## Automatic feeding of single carrier from e.g. stack

## T03-F01F1 [1992]

## Feeding from stack within recording apparatus

Includes jukebox systems. Feeding systems from external stack (apart from library systems) are covered by T03-F01F5. Library systems are covered by T03-Q codes.

#### T03-F01F5 [1992]

## Feeding from stack or system external to equipment per se

From 2006 library systems are no longer included here, being covered by T03-Q codes.

## T03-F01X [1992]

## Other feeding arrangements

#### T03-F02

## Driving; control of drive and operating function; other

Motor details are coded in V06.

## T03-F02A [1992]

#### **Drive control**

Covers circuitry supervising and monitoring operation. Aspects specific to disk changing are covered by T03-F01C. See V06-N codes for motor control circuits.

T03-F02A1 [1992]

Speed control

T03-F02A5 [2005]

**Motor tilt control** 

T03-F02C [1992]

#### **Drive components**

Covers only those mechanical or electromechanical elements concerned with driving carrier.

#### T03-F02C1 [1992]

#### **Drive motor**

See V06-M codes also for motor details. Spindle motor

## T03-F02C3 [1992]

#### Turntable, spindle, bearings, disk clamping

## T03-F02C3A [1997]

## **Disk clamping arrangements**

(T03-F01B, T03-F02C3)

Covers arrangements to clamp disk onto shaft. Clamp arrangements for drive braking are covered by T03-F02C5.

## T03-F02C3C [1997]

**Bearings** 

T03-F02C5 [1992]

#### **Braking arrangements**

Arrangements to fix disk(s) on driving shaft are covered by T03-F02C3.

## T03-F02E [1992]

#### Carrier pressure arrangements

Includes arrangement to press floppy disk against magnetic head.

#### T03-F02G [1992]

#### Ventilation, cooling, air filters

Includes fans, heatsinks, etc. Cooling of electronic equipment in general is covered by V04-T03 codes.

## T03-F02G1 [1992]

## Air filters and particle/contaminant trapping

Air filters of general application are covered by T03-H02C. Prior to 1992 see T03-F02 and T03-H02. Includes the use of coatings etc. inside a drive to adsorb contaminants e.g. in an HDD (with T03-A08A1C).

## T03-F02J [1992]

## **Multi-carrier type drives**

This code is used with other T03-F codes as appropriate and covers arrangements specific to driving several carriers simultaneously.

## T03-F02L\* [1992-2004]

## Casings, constructional details

\*This code is now discontinued and since 2005 codes in this section are no longer used. Constructional aspects of disk drives are now assigned T03-L05 codes in conjunction with T03-A08A, T03-B08A or T03-D01K1 as appropriate, or in conjunction with T03-N01 for general cases.

#### T03-F02L1\* [1997-2004]

#### Casings, housings

\*This code is now discontinued.

#### T03-F02L5\* [1997-2004]

#### Internal construction

\*This code is now discontinued.

## T03-F02X [1992]

#### Other disk drive details

Includes internal connectors, e.g. between drive assembly and PCB. Prior to 2005 this code included external interfacing connectors, which are now covered in T03-M07. Includes arrangements for lubricating carriers within disk drives. For lubricating arrangements for motor bearings see T03-F02C3C along with V06.

#### T03-G

#### **General head arrangements**

To be used where appts. is non-specific or common to several types of recording. For specific applications see the relevant code group, e.g. T03-A05 for magnetic, and T03-B02A for optical recording.

Disk, drive, arm, carriage, position, motor, mount, rotating, transducer, align, stepper, slide, pick-up

#### T03-G01

## For adjusting head/record carrier spacing

Air, bearing, lower, pressure, raise

#### T03-G02

## For track selecting/aligning

Covers mechanical and electromechanical arrangements.

T03-G02A [1992]

**Head position actuator** 

T03-G02A1 [1992]

**Drive motor** 

See V06-M codes for details of motor per se.

T03-G02A5 [1992]

Mounting, support

Includes support arms, bearings etc.

T03-G02B [1992]

**Track selection** 

T03-G02B1 [1992]

Track access servo

T03-G02B1A [1992]

Switching to track following action

T03-G02C [1992]

**Track alignment** 

T03-G02C1 [1992]

Automatic alignment, track following servo

## T03-G02C5 [1992]

#### Manual alignment; setting up

For testing aspects see T03-K07 codes also.

#### T03-G02E [1992]

## Preventing servo crosstalk or unwanted interaction

Includes arrangements to prevent crosstalk between e.g. track following servo and focus servo in optical or magneto-optical disk systems, (see T03-B and T03-D01 codes also as appropriate).

#### T03-G09

## Other head arrangements

Includes other head locking/positioning appts. and head/carrier pressure maintaining appts.

#### T03-H

#### Record carriers and accessories in general

#### T03-H01

#### **Containers**

Codes in this section relate to containers, casings, sleeves etc. in which record carrier is driven. Storage containers in which the carrier is removed for playing are covered by T03-L01 codes. Sleeve, cover, cartridge, housing material, fabric,

#### T03-H01A

fiber

#### For disks

Prior to 2002 disk containers for audio/visual recording applications were also coded in W04-E02A1. From 2002 these codes are no longer used and T03-H01A6K is applied for disk containers specifically intended for audio/visual recording. (G11B-023)

Floppy, hard, compact, envelope, jacket, fold, flexible

## T03-H01A1 [1992]

#### **Materials**

Covers composition of container.

## T03-H01A2 [1992]

### For multiple disk container

Includes carousel arrangement in which carriers can be driven for recording or reproduction. See T03-F01E also for carousel-changing aspects.

T03-H01A3 [1992]

Structure

T03-H01A4 [1997]

Liner for disk container

T03-H01A5 [1992]

#### Protective arrangement, e.g. shutter

Disk drive arrangements for opening shutters are coded in T03-F01A1.

T03-H01A6 [1992]

Disk type

T03-H01A6A [1992]

Magnetic

T03-H01A6B [1992]

**Optical** 

T03-H01A6C [1992]

**Capacitive** 

T03-H01A6D [1992]

**Magneto-optical** 

T03-H01A6K [2002]

For audio/video recording

(W04-E02A1)

T03-H01A6X [1992]

Other disk type

T03-H01A7 [1992]

Disk hub

T03-H01A8 [1992]

### Manufacture and assembly

Covers manufacture of component parts of container and mounting carrier inside it.

T03-H01A9 [1992]

Other disk container details

#### T03-H01B

#### Cassettes for end-to-end webs/filaments

Prior to 2002 this topic was also coded in W04-B04B1 and W04-E02B1. From 2002 these codes are no longer used and audio/visual applications are indicated using T03-H01B4. Cassettes are assumed to be for magnetic tape unless other codes indicate otherwise.

Tape, guide, insert, reel, spool, end, leader

T03-H01B1 [1992]

**Materials** 

Polycarbonate, plastics

T03-H01B3 [1992]

#### Construction

Covers shape, internal arrangement of component parts, etc.

T03-H01B4 [2002]

## For audio/video recording

(W04-B04B1 and W04-E02B1)

T03-H01B5 [1992]

#### Protective arrangement e.g. tape cover

Search with T03-N02 for helical scan cassettes.

T03-H01B6 [1992]

### Cassette adaptor

Arrangements in a recorder to allow loading of different sized cassettes are covered by T03-E01B7.

T03-H01B7 [1992]

## Spools, spool locks

Spools not part of a cassette are covered by T03-E01A.

T03-H01B7A [1992]

#### **Spool locks**

Preventing spool rotation by tape drive components (e.g. brakes) is covered by T03-E08.

T03-H01B8 [1992]

## Loading with tape, manufacture of cassette per se

Includes manufacture and assembly of cassette.

T03-H01B8A [1992]

## Loading cassette with tape

Includes arrangements for cutting tape and attaching leader, gripper or buckle etc. For novel gripper or buckle arrangements per se, see T03-H01B9.

Pancake

T03-H01B8C [1992]

#### Manufacture of cassette per se

Includes moulding of cassette halves.

T03-H01B9 [1992]

#### Other end-to-end cassette details

Includes labels (with T03-H02A1A). Includes attachments to tape leader for gripping etc.

#### T03-H01C

#### Cassettes for endless webs/filaments

Loop, continuous, spool, message recorder, telephone answering, announcement

#### T03-H01X

#### Other container details

#### T03-H02

#### Record carriers, cleaning

Magnetic head cleaning is covered by T03-A04B codes only.

Disk, tape, cassette, head, compact, housing, cartridge, filter, fluid

#### T03-H02A [1992]

## General aspects of carriers, including labels

Prior to 2002 labels for audio/video recording carriers and cassettes were coded in W04-E03A. From 2002 this code is no longer used and audio/video applications of labels are coded in T03-H02A8. Includes labels applied to carrier itself and to housing, e.g. cassette case, jewel box, etc.

[1997]

#### T03-H02A1

#### Labels and authentication marks

#### T03-H02A1A [1997]

#### **Labels**

Includes labels applied to carrier itself and to housing, e.g. cassette case, jewel box. For labelling during manufacture of optical media see T03-B01E codes and X25-F08 (if there are significant electrical details).

## T03-H02A1C [1997]

#### **Authentication markings for record carrier**

Includes both human-readable and machine-readable markings, such as bar coding (see T04-A and T04-C codes also). Identification of counterfeit recordings by added signals is **not** included being covered in T03-P07C, and for audio and video recording in W04-G01L3 and W04-F01L3 respectively.

#### T03-H02A3 [2002]

## Integrated circuit storing carrier information

This code is intended for ICs incorporated in record carriers to act as e.g. 'electronic labels', with the possibility of reading contents information, or similar, either by recording equipment itself, or by an accessory system.

#### T03-H02A8

## For audio/video recording

(W04-E03A)

### T03-H02B [1992]

#### Cleaning of carriers

This code is used to highlight the cleaning or reconditioning of record carriers by an end user and **not** as a step in a manufacturing process. For cleaning, re-conditioning and similar processes as part of record carrier manufacture see codes for manufacture of the particular carrier type, e.g. T03-A02 codes for magnetic carriers, T03-B01E3L and other T03-B01E codes for optical carriers, or T03-D01A8 codes for magneto-optical carriers.

[2002]

#### T03-H02C [1992]

## Cleaning equipment, including air filters

Air filters specifically designed for disk drives are coded in T03-F02G1 only. Prior to 1992 search T03-F02 and T03-H02. Cleaning of magnetic and optical heads is not included and is respectively covered by T03-A04B3 codes and T03-B02B8 codes (from 1992).

### T03-H02R [2006]

## General carrier recycling and destroying arrangements

This code is used for recycling and destroying of record carriers in general, i.e. where the invention is applicable to several types of carrier or the type is not disclosed. It is **not** assigned when recycling or destroying of a **specific** type of carrier is involved, for which T03-A01R (magnetic carriers), T03-B01R (optical carriers) or T03-D01R (magneto-optical carriers) is assigned. For recycling of recording or playing equipment see V04-X01C.

## T03-H07 [2006]

#### Preventing overwriting, erasure or copying

Covers hardware-based methods of write/erase protection, e.g. erase tab, disk-drive lock. See T03-P07 for erasure/ copy prevention using signal formats/signal processing.

#### T03-H07A [2006]

Preventing accidental loss of data

### T03-H07C [2006]

Preventing unauthorised deliberate access or copying

#### T03-H09

## Other record carrier and accessory aspects

Including spool manufacture, tape winders/rewinders and disk-sleeve insertion appts.

#### T03-J

## Indexing; synchronising; measuring tape travel

This section includes codes for counters, gap inserting, cue recording, and carrier storage marking/indication. Labels for carriers are covered by T03-H02A1A. For audio/video applications see W04-H and W04-K codes also.

Pulse, code, position, track, time, counter, indicate, display

T03-J01 [1992]

Index signal recording and detection

T03-J01A [1992]

Time code

**SMPTE** 

T03-J01C [1997]

## Indexing information relating to carrier contents

Includes 'table of contents' information, recorded separately or interleaved with main recorded information, but usually by same recording process in either case. Labels providing such information in human-readable form are covered by T03-H02A1A. TOC

#### T03-J01C1 [1997]

## User-recordable contents index information

Includes 'user table of contents' information, and thus implies use of recordable, rather than 'read-only' carriers.

UTOC

T03-J01E [2006]

**Error management information** 

T03-J03 [1992]

**Synchronising** 

T03-J03A [1997]

## Synchronising data with carrier speed or head position

Codes in this section cover both control of carrier speed based on data rate, and modification of data rate based on head or carrier drive aspects. Details of clock circuits and systems are in T03-J03C.

CAV, CLV, angular, linear, wobble

## T03-J03A1 [1997]

## Controlling carrier speed based on recording data rate

See also T03-E03A5 and T03-F02A1 for tape and disk drive aspects respectively. Arrangements modifying data rate based on carrier speed or position of head on carrier, e.g. differing linear velocity along radius of a disk, are covered by T03-J03A3 and T03-J03A5 respectively.

#### T03-J03A3 [1997]

## Modifying data rate based on carrier speed

Covers arrangements to modify data rate based on measured speed of carrier.

## T03-J03A5 [1997]

## Modifying data rate based on head position

Includes arrangements to modify data rate based on change in linear velocity of tracks on a disk along its radius.

## T03-J03C [1997]

## **Clock system details**

See appropriate codes in e.g. U22 and U23 for actual oscillator and clock extraction circuits. *Phase, PLL* 

## T03-J03C1 [1997]

#### Clock generation and recording

Crystal, resonator, feedback, ring

#### T03-J03C5 [1997]

#### **Clock recovery**

This code is intended for read circuitry establishing a clock signal from recorded data itself.

## T03-J05 [1992]

## Measuring carrier travel

#### T03-J05A [1992]

## Measuring tape travel

Includes tape counters. Search with T03-E05A1 for arrangement for stopping e.g. in response to gaps in recorded information.

Automatic music search system, AMSS, display

### T03-K

#### Editing; monitoring

Includes dubbing, splicing, displays, disk speed monitoring, etc. For audio/video applications see W04-H and W04-J codes also. See T03-P01A for digital recording error correction.

Control, check, monitoring

T03-K01 [1992]

**Editing, splicing tape** 

Dubbing

T03-K01A [1992]

**Splicing** 

Tape, join, repair, bond

T03-K03 [1992]

**Operation displays** 

VU, volume unit, meter, mode, indicate

T03-K05 [1992]

Recording equipment control and circuits (general)

Includes control systems compensating for ageing effects, temperature change, etc.

T03-K05A [1992]

**Adaptive control systems** 

T03-K07 [1992]

**Recording equipment testing** 

Electronic circuitry testing in general is covered by S01-G01 codes.

T03-K07A [1992]

#### **Testing during manufacture**

From 2012 T03-K07 codes are no longer assigned for optical recording head testing. See T03-B02B8E. *Production line, evaluate, reject* 

T03-K07C [1992]

#### Complete equipment testing

Includes self-test facilities and performance testing of finished equipment.

Test tape, test disk, error check

T03-K07E [2006]

### **Detecting carrier defect**

Covers arrangements to protect drive from damage. For detection of defects using BER measurements search along with T03-P01A.

Arrangements to store information concerning the location of carrier errors, e.g. bad sectors, in order to speed up read and write processes are not coded here, being covered in T03-P01A and T03-J01E instead. Prior to 2006 this topic was covered in T03-P01A and T03-J01C.

T03-K09 [1992]

Other monitoring details

#### T03-L

#### **Recording housings**

Codes in this section relate to storage housings for record carriers, and also constructional details of recording equipment.

Disk, cassette, storage, magnetic, tape, floppy, cover, lock, support, case, compact, compartment, stack

### T03-L01 [1987]

## Cases and storage racks or boxes for record carriers

T03-L01 codes relate to casings and housings for record carriers, from which the carriers can be removed, and are not assigned for casings and housings of equipment, which are covered by T03-L05A. T03-L01 codes cover cassette boxes, racks, storage boxes for floppy disks, hard disks, tape reels etc. but not casings inserted into recording equipment in which the carrier is driven during recording/playing process (covered by T03-H01 codes). Prior to 2002, record carrier containers for optical recording carriers and other carriers specifically used for audio / video recording were also assigned W04-L01 codes. From 2002 these codes are no longer used and T03-L01K codes are used to indicate the type of carrier that the container is used for, and where appropriate, its application.

T03-L01A [1992]

## **Record carrier containers**

Includes packaging aspects, e.g. shipping containers.

T03-L01A1 [1992]

For disks

Compact, CD case, sleeve

T03-L01A3 [1992]

For tape

Search with T03-N03 for cassettes, and also T03-N02 for helical scan cassettes.

Video rental

T03-L01C [1992]

## Storage racks and cases

Includes arrangements for home or office use, mounting in car, etc., and also display stands for use in e.g. shop.

Retail, store

T03-L01C1 [1992]

For disks

Floppy, computer, data, file, box

T03-L01C3 [1992]

#### For tape

T03-N02, T03-N03 are also assigned as appropriate.

Spool, reel, cassette, drawer, rack, box

T03-L01K [2002]

**Carrier type** 

T03-L01K1 [2002]

Magnetic

T03-L01K3 [2002]

**Optical** 

T03-L01K5 [2002]

Magneto-optical

T03-L01K8 [2002]

For audio/video recording

(W04-L01)

T03-L01N [2007]

## Novelty housings, containers, combined with other article

Covers record carrier containers used for additional function. Includes record carrier cases and racks combined with other article, e.g. drinks can. Use in conjunction with other T03-L codes to indicate type of container.

T03-L05 [1987]

## For recording equipment; constructional details of recording equipment

T03-L05 codes relate to recording equipment per se and mounting details. T03-L01 codes are only assigned in addition when e.g. a storage rack is an integral part of an automatic feed system. (For library systems T03-Q codes are also assigned plus T03-E/T03-F as appropriate).

Housings/constructional details specific to audio/visual recording equipment is also coded in W04-L05.

Mount

T03-L05A [1987]

Cabinets, casings, stands

T03-L05B [1987]

#### Construction

Includes mounting of components, internal layout, cooling etc. See V04-T for constructional details of electronic appts. in general.

## T03-L05N [2005]

## Noise and vibration reduction using constructional techniques

This code covers constructional arrangements to reduce acoustic noise and vibration generated by the recording and reproducing equipment itself. Arrangements to reduce electrical noise in recorded or reproduced signals are covered by T03-P05.

## T03-L05S [2005]

## Shock absorbing and damping

This code covers constructional arrangements to reduce the effects of externally-applied shocks and vibration on the recording and reproducing equipment. Arrangements to reduce acoustic noise and vibration produced by the recording or reproducing equipment itself are covered by T03-L05N.

T03-M [1983]

General

#### T03-M01

#### For flat record carriers

This code was used to indicate card-type carrier systems prior to 1992. From 1992, T03-N05 will be assigned instead.

Card, strip

## T03-M02

#### For web and other record carriers

Prior to 1992, this code was chiefly used to indicate certain magnetic tape manufacturing processes (with T03-A02), such as slitting. From 1992 these are covered by T03-A02B7 and T03-A02E3, and T03-M02 is now mainly used for non-standard web carriers such as photographic film with e.g. magnetic recording aspects, (also assigned T03-A01C9).

Tape

T03-M05 [2005]

Power supply details

T03-M07 [2005]

#### Interfacing, connectors

Covers external interfacing and connectors e.g. between drive and other equipment, only. Interfacing for magnetic drives and optical drives is covered in T03-A10 and T03-B08 respectively, and is not coded here. See V04 codes also.

## T03-M08 [2006]

## General equipment manufacturing details

This code covers the manufacture of recording and playback equipment in general and is not assigned where more specific codes are available, such as T03-A04A1 codes for magnetic head manufacture and (from 2012) T03-B02B8C for optical head manufacture. T03-M08 is not assigned for manufacture of 'bought-in' components used in recording equipment, or for record carrier manufacture which is covered by specific codes in e.g. T03-A02 (magnetic carriers), T03-B01E (optical carriers), T03-C (capacitive and other carriers), T03-D01A8 (magneto-optical carriers), T03-D03A (electro-optical carriers) and T03-D09 (other 'combined method' carriers).

#### T03-M09

## Other general recording aspects

## T03-N [1983]

## **Recorder types**

Notes:

- (1) Codes in this section are applied to indicate equipment type only, and do not themselves indicate novel features;
- (2) It is not intended that the codes be used in isolation, but rather to restrict the scope of other T03 codes:
- (3) From 1992, T03-N codes have not been assigned to record carriers per se which can be assigned codes from the following sections: T03-A01C, T03-A02E, T03-B01D, T03-D01A1;
- (4) Prior to 2005 T03-N codes were assigned to all inventions involving a record carrier drive used for a given type of record carrier. From 2005 codes in this section will be only be applied where the recording method, e.g. magnetic. optical etc. is unknown or the invention is of a general nature. T03-A08, T03-B08 and T03-D01K codes are applied for inventions involving a particular method of recording;
- (5) Carriers in casings (e.g. cassettes, diskettes as covered by T03-H codes) are also assigned T03-N codes.

T03-N01

Disk

T03-N02

**Helical scan** 

T03-N03

Cassette

#### T03-N04

Reel-to-reel

T03-N05 [1992]

#### Card recorder

(T03-M01)

See also T04 and T05-H02 codes for card-freed systems.

T03-N06 [1997]

#### **Drum recorder**

Magnetic

T03-P [1987]

## Signal processing for recording (general)

Codes in this section may be used in conjunction with other T03 codes, or alone. For audio applications see W04-G01A also, and for video recording see W04-F codes.

T03-P01 [1987]

**Digital recording** 

T03-P01A [1987]

#### **Error detection**

See U21-A06 for error detection in coding systems in general.

Decode, code, block, interleave, Reed Solomon, cyclic, correct, memory

## T03-P01B [1992]

#### **Compression and decompression codes**

See T01-D02 for computer application of data compression and U21-A05A2 in general.

Compaction

## T03-P01D [2005]

## Equalisation, thresholding and digital signal processing

Covers signal processing circuitry for detection and reading of signals. Can be used in conjunction with T03-A06C3 and T03-B06C for specific application to magnetic and optical recording respectively. Prior to 2007 inventions specific to magnetic or optical read circuitry were assigned T03-A06C3 or T03-B06C only. See also U22-G codes for digital signal processing.

### T03-P01F [1997]

## **Formatting aspects**

Formatting aspects of magnetic record carriers, with emphasis on layout of tracks, are covered by T03-A06F codes.

T03-P02 [1987]

**Analogue** 

Demodulate, AM, FM, PM

T03-P05 [1992]

#### **Noise reduction**

This code covers arrangements to reduce electrical noise in recording or reproducing signals. Error detection and correction in digital recording is covered by T03-P01A. Reduction of acoustic noise (sound energy) generated by the equipment is not included and is covered by T03-L05N.

T03-P07 [1992]

## Signal processing to restrict or monitor access, writing, erasing or copying

W04-F01L and W04-G01L codes cover analogous arrangements specifically for audio and video recording and in these cases T03-P07 codes are not assigned. Prevention of overwriting, erasing or copying using hardware techniques, for all types of recording, is covered in T03-H07. Prior to 2006 T03-A07 codes covered anti-copying aspects specific to magnetic recording.

T03-P07A [1997]

Signal processing to prevent unauthorised access or copying

T03-P07C [1997]

Signal processing to identify occurrence of copying

T03-Q [1992]

#### **Library systems**

Covers systems for bulk storage of data, especially with automated retrieval.

T03-Q01 [1992]

#### Tape storage

Covers magnetic tape storage, unless additional codes indicate otherwise.

T03-Q05 [1992]

Disk storage

T03-Q05A [1992]

Magnetic disk library

T03-Q05C [1992]

**Optical disk library** 

T03-Q05E [1992]

**Magneto-optical disk library** 

T03-Q05X [1992]

Other disk library

T03-Q07 [2006]

## General aspects of recording media library

From 2006 this section covers all media library loading mechanisms and control systems. Previously this topic was covered in T03-E01B5 and T03-F01 for tape and disk systems respectively.

T03-Q07A [2006]

Loading mechanism and drive

T03-Q07B [2006]

Media changing control system

### T03-S [2005]

## Use of data recording apparatus for non-recording applications

Use in conjunction with T03-B01D1 for articles incorporating optical disks, e.g. clocks, drinks coasters. Also for using storage media for holding biological/chemical samples, testing/instrumentation aspects are also coded in S03.

## **T04: Computer Peripheral Equipment**

#### T04-A

#### Using digitally marked record carriers

Read, card, data, print, sense, code, document, mark, encode, bar codes

#### T04-A01

## Punched card or tape punches and readers

Optical, hole, punch hole, aperture

#### T04-A02

## Other digital marking (writing)

Includes credit or security card marking. Digitally marked cards per se are covered by T04-C codes. Writing to IC cards is covered by T04-K02. Includes erasure of markings.

[1992]

#### T04-A02A

## **Electrostatic or magnetic**

## T04-A02B [1992]

## Digital marking to be read using light (incl. IR.UV)

Includes bar code marking, two-dimensional bar code marking.

#### T04-A02X [1992]

#### Other writing

## T04-A03

## Other digital mark sensing (reading)

Reading of IC cards is covered by T04-K02. *Head, pick-up, sweep* 

#### T04-A03A

## By detecting electrostatic or magnetic field change

Strip

#### T04-A03B

#### Using light (incl. IR, UV)

Optical, beam, illuminate, laser, lens, reflect

## T04-A03B1 [1992]

#### Bar code reading

Search with T05-L01C for point of sale application, T01-C06 for computer interfacing and T04-M02 for hand-held bar-code scanner.

UPC, POS, two-dimensional code

#### T04-A03B9

## Other reading with light

Concealed data

#### T04-A03X

#### Other reading

Contact, key, electrode, acoustic, ultrasound

#### T04-A05

[2005]

[1992]

## **Card feeding apparatus**

Card feeding details for digitally marked record carrier. See T04-A03 for reading aspects.

#### T04-B

## Verifying correctness of digital marking

Covers checking and monitoring of marking e.g. for alignment, **not** routine reading to determine authorisation, etc. Includes error detection.

#### T04-C

## Digitally marked record carriers

Includes physical aspects, material, shape, etc. Covers only carriers with digital markings, digitally marked ID on items. 'Smart' cards are in T04-K01. Includes punched paper cards or tape (punches/readers are in T04-A01) see also T05-H02C5.

Identify, code

#### T04-C01 [1992]

#### Magnetic

Magnetic carriers are also assigned T03-A codes, or T03-A02 codes for manufacture, cross reference with T05-H02C5A.

Strip, card

## T04-C02 [1992]

### Using light (incl. IR, UV)

Cross reference to V07 hologram, T05-D card/badge access, T05-H cash payment, T05-C fare registering.

Optical, hologram, bar code

## T04-C09 [1992]

## Other record carriers

Includes electrostatic cards, inductive cards and remote sensing.

#### T04-D

## Character and signal pattern recognition

For data processing aspects of image acquisition and processing devices e.g. analysis, image detection, scanning, optical character recognition, camera, e.g. recognition for edge detection in peripheral. (T01-J10 and T04-D are only used together when the novelty does not describe how/when the processing is carried out). See also X25 codes, e.g. X25-A03E for robot manipulators. If novelty is in camera then see W04.

Image, detect, camera, digital, identify, scan, optical, video, facsimile, line, pixel, analysis

#### T04-D01

#### Using characters containing code marks

Used for system where character conveys additional information, e.g. in stroke width, or magnetic ink character recognition systems.

MICR

#### T04-D02

#### Image acquisition

Scanning, reader, image pick-up, TV camera, alignment, CCD camera

#### T04-D02A [1992]

## Mechanical and optical aspects of image acquisition

Lens, focus

## T04-D02B [1992]

#### Circuitry, processing of image acquisition

Processing within pick-up device, else coded in image processing see T01-J10 codes.

#### T04-D03

## Image pre-processing for image recognition

Image pre-processing before recognition processing, cross reference to T01-J10B2 for image processing/image analysis.

Filtering, quantising, compression, expansion, enhancement, contour, sensing

## T04-D03A [1992]

#### **Noise reduction**

Noise reduction done in peripheral unit.

## T04-D03B [1992]

## Edge recognition and determining orientation

Alignment

#### T04-D04

#### Recognition

Includes OCR (optical character recognition) and fingerprint identification, (see S05-D01C5A also). For speech recognition, see W04-V codes only. Scanner-computer interface details are coded in T01-C06.

Compare, reference, digital, memory, match

#### T04-D05

[1992]

#### Monitoring and error detection

(T04-D09)

Covers monitoring of parts of recognition system only. Using pattern recognition to detect errors in a pattern is in T04-D07A.

Fault detection

## T04-D07

## **Applications of recognition techniques**

See also under application. *Inspection* 

#### T04-D07A

[1992]

[1992]

## **Detecting defect in pattern**

Errors in the recognition system itself are covered by T04-D05. Flaw detection, also see S03-E. Includes comparison with original pattern e.g. PCB, workpieces, valuable papers etc. Cross reference to U11 for checking circuit/wiring layout, see also T01-J15A2.

#### T04-D07B

[1992]

#### Sorting objects by type

Includes quality pass-fail tests based on e.g. colour. See also T05-K and X25-F06 for sorting. Select

#### T04-D07B1

[1992]

## Using patterns specifically applied as identification marks

Label

## T04-D07C

[1992]

Identification of item

#### T04-D07D

[1992]

**Detecting movement or position** 

#### T04-D07D1

[1992]

#### **Detecting movement**

## T04-D07D3 [2011]

## **Detecting dimensions**

Covers uses of recognition system to determine dimensions of an object, e.g. height, length, etc. See also S02-A03. Details of 3D scanners are coded under T04-M05 only.

T04-D07D5 [1992]

Detecting position or orientation

T04-D07E [1992]

## Hand written character recognition

Cross reference to T04-F04 input of handwritten characters.

T04-D07F [2006]

#### **Biometrics**

For image recognition relating to fingerprint recognition. See T04-D04 only prior to 2006. See also T05-D01B for entry/exit registers based on human characteristics. See also S05-D01C5A where novel detection systems are included.

T04-D07F1 [2006]

**Facial recognition** 

T04-D07F1A [2007]

#### Eye detection

Includes iris recognition, for red eye detection see also W04.

T04-D07F2 [2006]

## **Fingerprint recognition**

Includes palm recognition.

T04-D07F9 [2007]

Other biometrics

T04-D07K [1992]

Using non-visible light images (e.g. IR, UV)

T04-D07X [1992]

Other recognition applications

T04-D08 [1992]

Colour systems

T04-D09

Other recognition aspects

#### T04-E

### **Graph reading**

Includes curve followers and devices for converting position of manually operated writing or tracing member into an electrical signal. Light pens, joysticks, etc. are covered by T04-F02 codes. See T01-C02 codes for computer interfacing of manual input interfacing systems and T01-C06 for scanner interfacing.

Position, tablet, coordinate, optical, digital, screen, matrix, point

#### T04-F

## Manual input arrangements for computers and computer controlled equipment

Only used if input devices details are given. Covers manual or other physical input arrangements. Covers input for computer controlled devices. Includes keyboards/keypads, trackpads and touchscreens for personal digital assistants (PDAs), handheld video games, handheld GPS systems, etc. See T01-C02 codes for interface to computer. Position, select, switch, contact, digital, touch, coordinate

## T04-F01 [1983]

#### Keyboards and keypads

For typewriter keyboards, see also S06-K. For switch and key actuation aspects, see V03-C01, cross reference T01-C02A for keyboard interface. Virtual keyboards are coded in T01-C02B1 only. Details of keypads for mobile phones are coded under W01-C01B8 only. If use of keypad/keyboard is not precise, no T04-F code is applied, but V03 codes instead.

Layout

T04-F01A [1992]

Control, circuitry

T04-F01A1 [1992]

#### **Key operation circuitry**

Including scanning. See also U21-B02C.

## T04-F01A5 [1992]

## **Key coding aspects**

See also U21-A05D codes for key coding aspects. Foreign, function key

## T04-F01B [1992]

## Construction

Cross reference to V03 for constructional details. Key, membrane, pushbutton, pressure, casing, housing

## T04-F02 [1983]

## **Analogue-based positional input devices**

This code includes computer input-type devices which operate on absolute or relative positional movement-based inputs.

Control, video game, indicate, matrix

## T04-F02A [1992]

## **Based on absolute position**

Devices which provide input based on the particular position pressed or touched by the device user. *X-Y. coordinate* 

## T04-F02A1 [1992]

## **Light pens**

Optical, light pointer, laser pointer

#### T04-F02A2 [1992]

#### **Touchscreens**

Details of touch sensors are coded under U21-B02C. Constructional details of the touchscreen are also coded under T04-F02C. Details of touchscreens for mobile phones are coded under W01-C01B8H only, details of touchscreens for digital cameras and camcorders are coded under W04-M01D3E instead, and details of touchscreens for printers and copiers are coded under S06-K07A1 only.

#### T04-F02A5 [1992]

#### Manual input pad and stylus

Includes details of digitiser tablet, graphic interface and touch pad.

Pen, matrix

#### T04-F02B [1992]

#### **Based on relative position**

Devices which provide input based on the relative position of the device with respect to a cursor or pointer on the display.

#### T04-F02B1 [1992]

## Mouse and other mouse-type input device

Mouse-type input devices including wired and wireless mice, click-and-point devices used in conjunction with presentation software, and combinations of the various device types. Details of laser pointers are also coded under T04-F02A1.

Wireless presenter, clicker, laser pointer

## T04-F02B1A [2005]

## Optical mouse or mouse-type input device

Mouse-type devices which use optical sensors instead of roller balls or wheels.

## T04-F02B2 [2005]

#### **Track Pads**

Touch pad used as mouse input e.g. on laptop computer.

#### T04-F02B3 [1992]

## Joysticks, gamepads

Includes input devices used for gaming machines, e.g. joypad, driving wheel, etc. that are used in place of joystick. Three-dimensional input devices, such as virtual reality gloves, are coded under T04-F02B7.

## T04-F02B3A\* [2002-2006]

## Force feedback for joystick

\*This code is now discontinued. From 2007 see T04-F03.

Pen. matrix

## T04-F02B5 [1992]

**Track balls** 

## T04-F02B7 [2002]

#### Three dimensional input

Includes power gloves, virtual reality gloves, 3-D input with strain gauges, virtual reality and acceleration measurements used as input e.g. tilt sensor used to scroll display on a PDA.

Glove, Wiimote®, Wii remote®, VR glove

#### T04-F02C [2005]

# Construction, manufacturing and testing details of analogue-based positional input devices

Includes mechanical details, manufacture and manufacturing apparatus. See also codes for type (e.g. T04-F02B1 for mouse, etc.). See T04-L01/L05 prior to 2005.

#### T04-F03 [2007]

#### Haptic feedback for manual input devices

Previous to 2007 see T04-F02B3A.

#### T04-F04 [1992]

#### Input of hand written characters

## T04-F05\* [1992-1996]

## Hand scanners for computer input

\*This code is now discontinued but remains searchable and valid for records from 1992 to 1996. From 1997 see T04-M02. See also S06 codes. Scanner computer interfacing details are covered by T01-C06 and image acquisition details are covered by T01-J10A codes.

## T04-F06 [2007]

#### Miscellaneous input devices

motor, head, record, word-processor

Includes buttons and foot pads for input. See also V03 or U21 for details of device.

#### T04-G\*

[1980-2009]

#### **Printers**

\*This code is now discontinued. See S06-D to K. Press/plate-type printers are in S06-C only. Includes all aspects of individual character and line printers. (Computer output interface details are in T01). Drive, feed, roll, copy, character, line, carriage,

## T04-G01\*

[1980-2009]

#### **Impact**

\*This code is now discontinued. See S06-F from 2010. Includes mechanical action. Electromagnet and solenoid drive aspects are coded in V02-E02A also.

Armature, coil

#### T04-G01A\*

[1983-2009]

#### **Dot printers**

\*This code is now discontinued. See S06-F01 from 2010

Matrix, pin, wire, needle

#### T04-G01B\*

[1983-2009]

#### **Using type**

\*This code is now discontinued. See S06-F02 from 2010.

Select, hammer, daisy-wheel, disc, step, font, typeface, golf-ball

## T04-G01C\*

[1992-2009]

#### Ribbon

\*This code is now discontinued. See S06-F03 from 2010.

Ink, cassette

#### T04-G02\*

[1980-2009]

#### Ink-jet

\*This code is now discontinued. See S06-G from 2010.

Liquid, dye, nozzle, resin, water, channel, drop, pressure, reservoir, eject, electrode, pulse

## T04-G02A\*

[1983-2009]

#### **Drop-on-demand**

\*This code is now discontinued. See S06-G01 from 2010.

Thermal ink-jet, bubble, piezoelectric, ultrasound

## T04-G02A1\* [2002-2009]

## Print head for ink jet drop-on-demand printer

\*This code is now discontinued. See S06-G03 from 2010.

Thermal ink-jet, bubble, piezoelectric, ultrasound

#### T04-G02B\*

[1983-2009]

#### Selective drop deflection

\*This code is now discontinued. See S06-G02 from 2010.

Charge, electrode, stream, gutter, continuous

## T04-G02B1\*

[2002-2009]

## Print head for selective drop deflection printer

\*This code is now discontinued. See S06-G03 from 2010.

Charge, electrode, stream, gutter, continuous

#### T04-G02C\*

[1992-2009]

#### Ink

\*This code is now discontinued. See S06-G04 from 2010.

#### T04-G02D\*

[2002-2009]

## Inkjet head cleaning and general maintenance of printhead

\*This code is now discontinued. See S06-K06 from 2010.

#### T04-G02E\*

[1997-2009]

## **Recording media**

\*This code is now discontinued. See S06-G05 from 2010. Includes pre-print application of liquid (not ink) to paper/ pre-treatment of paper for ink jet printing. See also X25-T09A for electrical details of paper manufacture.

Paper, fabrics, OHP sheet, recording pattern of LCD screen

#### T04-G02F\*

[2002-2009]

## Refilling of ink cartridge

\*This code is now discontinued. See S06-G06A from 2010.

#### T04-G02G\*

[2005-2009]

#### Ink Chamber

\*This code is now discontinued. See S06-G06 from 2010.

## T04-G02H\* [2005-2009]

## Post ink application processing

\*This code is now discontinued. See S06-G07 from 2010. Includes processes for treating ink after application using e.g. heat or UV light.

#### T04-G02J\* [2005-2009]

## Applications of ink-jet printing technology

\*This code is now discontinued. See S06-G10 from 2010. Covers printing on non-paper-like media, e.g. CD (see also T03). Includes textile printing (see also X25-T04D), 3-D printing and other industrial applications using inkjet technology. Manufacturing LCD screens and filters (see also U14).

#### T04-G03\*

[1983-2009]

#### **Thermal**

\*This code is now discontinued. See S06-H from 2010. Includes thermal ink compositions and heat sensitive paper and ribbons.

Transfer, thermosensitive

#### T04-G03A\*

[1992-2009]

#### Using thermally-sensitive paper

\*This code is now discontinued. See S06-H01 from 2010.

#### T04-G03A1\*

[1992-2009]

## Composition of heat-sensitive layer

\*This code is now discontinued. See S06-H01A from 2010.

## T04-G03B\*

[1992-2009]

#### Using thermal ribbon

\*This code is now discontinued. See S06-H02 from 2010. Includes use of thermal transfer sheets. Cartridge

## T04-G03B1\*

[1992-2009]

#### Thermal ink composition

\*This code is now discontinued. See S06-H02A from 2010. Includes composition and manufacture of thermal ink.

Dye

## T04-G03C\*

[1992-2009]

#### Printhead details for thermal printer

\*This code is now discontinued. See S06-H03 from 2010. For thin-film resistor heads see also U14 codes, e.g. U14-H01B.

Printhead

#### T04-G04\*

[1983-2009]

#### Optical (incl. laser)

\*This code is now discontinued. See S06-E from 2010. For line projection onto photosensitive medium which is then electrophotographically developed. If light deflection or modulation aspects are claimed, then see V07-K codes also.

Toner, laser

#### T04-G04A\*

[1992-2009]

#### Optical system, and driving system

\*This code is now discontinued. See S06-E03 from 2010.

#### T04-G04A1\*

[1992-2009]

## Optics (e.g. lenses and mirrors)

\*This code is now discontinued. See S06-E03B from 2010.

Polygonal, galvanometer

#### T04-G04A2\*

[1992-2009]

## Driving system

\*This code is now discontinued. See S06-E03C from 2010. See also V06 codes for motor details. Scan

#### T04-G04B\*

[1992-2009]

#### Printhead details, including light source

\*This code is now discontinued. See S06-E03A from 2010. For LED heads see also U12-A01A3 or U12-A01A6.

Array, LED, shutter

#### T04-G04C\*

[1992-2009]

#### Photosensitive materials

\*This code is now discontinued. See \$06-E01 from 2010. Includes photosenstive paper, photoconductive belt, drum, etc.

Photoconductor, belt, sheet

#### T04-G05\*

[1983-2009]

#### Electrode (e.g. electrosensitive/erosive)

\*This code is now discontinued. See S06-J from 2010. Electrostatic printing using any means other than light for charging. For electrographic details (e.g. developing), see also S06-A codes. If not specifically for printing, see also S02-K.

Electrostatic, dielectric, electrochromic, stylus

## T04-G06\* [1983-2009]

## Sheet breadth control, carriage drive for sheet control

\*This code is now discontinued. See S06-K03A from 2010. Includes solenoids and motors, but not control circuitry.

Position, step, margin, tabulate, space, nip

#### T04-G06A\*

[1992-2009]

## Media feeding

\*This code is now discontinued. See S06-K02 from 2010.

Line feed, paper

#### T04-G06B\*

[2005-2009]

## Finishing apparatus

\*This code is now discontinued. See S06-K05 from 2010.

Includes stapling, binding, laminating, etc. See also S06-C05 for industrial process. For devices independent of printer see T04-J02.

#### T04-G06C\*

[2006-2009]

### **Transferring image**

\*This code is now discontinued. See S06-K05 from 2010. E.g. in ink jet printer - jetting onto substrate and then transfer to final substrate.

## T04-G06S\*

[2008-2009]

#### **Shredding**

\*This code is now discontinued. See S06-K05C from 2010. Includes details of shredder integrated into printer, e.g. for automatically shredding confidential paper after paper jam.

#### T04-G07\*

[1992-2009]

## **Colour printing**

\*This code is now discontinued. See S06-K01 from 2010.

**CMYK** 

#### T04-G08\*

[1992-2009]

## Self-contained typewriters and printing devices

\*This code is now discontinued. See S06-K99A from 2010. Includes details of label printers, independent units, and hand held printing devices.

#### T04-G09\*

[1980-2009]

## Other printer types

\*This code is now discontinued. See S06-K from 2010. Includes magnetic and Braille printers (see S05-K, T04-X for other Braille aspects), electronic pen recorders.

#### T04-G10\*

[1992-2009]

### **Control systems for printers**

\*This code is now discontinued. See S06-K07 from 2010. Does not include motors and solenoids for carriage and platen.

#### T04-G10A\*

[1992-2009]

#### Internal control

\*This code is now discontinued. See S06-K07A from 2010. Includes control circuitry, power management.

#### T04-G10A1\*

[2005-2009]

### User input and display

\*This code is now discontinued. See S06-K07A1 from 2010. Includes mode selection keys, etc.

#### T04-G10C\*

[1992-2009]

#### Interface

\*This code is now discontinued. See S06-K07C2 from 2010. Also coded in T01-C05A. Serial, parallel, Centronics, RS232

#### T04-G10E\*

[1992-2009]

#### **Control from outside printer**

\*This code is now discontinued. See S06-K07C1 from 2010. See T01-C05A for output to printer, T01-H05A for print drivers and T01-J08F for diagnostic aspects of any peripheral equipment. Network printers will also require other T01 codes.

## T04-G10E1\*

[2005-2009]

## **Print Job/Queue**

Network printer, print driver

\*This code is now discontinued. See S06-K07C1A from 2010. See also T01-C05A/T01-C05A1 for output to printer and T01-H05A for print drivers.

## T04-G10F\*

[2006-2009]

# Management of confidential / secure documents, e.g. prevention of illegal copying

\*This code is now discontinued. See S06-K07A3 from 2010. Prevention of illegal printing of private documents, etc, recognizing or printing copy prevention mark on documents, output to authorised operator. See also T01 for image processing aspects, and T05-J for testing of securities, banknotes, etc.

## T04-G10G\*

[2007-2009]

### Monitoring of printing

\*This code is now discontinued. See S06-K07B from 2010.

## T04-G11\* [2005-2009]

#### **General Construction**

\*This code is now discontinued. See S06-K03 from 2010.

#### T04-G11A\* [2005-2009]

## Construction and manufacturing details of printer

\*This code is now discontinued. See S06-K03 from 2010. Includes mechanical details, manufacture and manufacturing apparatus. See T04-L01/L05 prior to 2005.

## T04-G11B\* [2005-2009]

## **Recycling Systems**

\*This code is now discontinued. See S06-K04 from 2010. See also X25-W04 for electrical aspects of recycling systems in general.

## T04-H

## Visual display units

Includes displays for computer related equipment such as for laptops and PDA's (personal digital assistants) and portable game consoles (e.g. Nintendo DSTM, Nintendo SwitchTM, Sony PSPTM). For signal processing aspects e.g. contrast control, white balance control etc, see also W03 codes. Screen, video, cursor, terminal, processor, VDU, graphic, line, monitor

#### T04-H01

#### **CRT control arrangements**

For CRT per se see V05-D codes. CRT TV display aspects are covered by W03-A08A codes. Image, deflect, raster, pixel

#### T04-H01A

#### For single beam tubes

## T04-H01A1 [1983]

#### Character and stroke generators

Pattern, vector

#### T04-H01B

## For storage, colour or other tubes

Beam index, beam penetration

## T04-H01B1 [1992]

#### Colour

## T04-H02 [1985-2010]

#### Plotters\*

\*This code is now discontinued. See S06-K99E from 2011. For computer interface per se see T01-C05B also.

Record, pen, drive, motor, X-Y, chart, curve, draw, mark

#### T04-H03

## **Arrangements for other visual indicators**

Includes LED, LCD element drive arrangements. Display arrangements in general are in W05-E codes also. Plasma displays per se are coded in V05-A codes also.

Gas discharge, optical, panel, number, alphanumeric, character, symbol

#### T04-H03A [1983]

## For single character

Seven segment, decoder, segment

## T04-H03B [1983]

## For several characters, e.g. matrix

From 2005 all display types (except LED) will not be coded in this section without novel details of the matrix array.

Row, column, driver, address

### T04-H03C [1992]

#### Characterised by type

#### T04-H03C1 [1992]

#### LED

See also U12-A01A.

## T04-H03C1A\* [1997-2010]

#### **Driver circuitry**

\*This code is now discontinued, see T04-H03F together with T04-H03C1 from 2010. See also U12-A01A5B for array or U12-A01A5A for single LED.

#### T04-H03C2 [1992]

#### LCD

See also U14-K01.

Liquid crystal, ferroelectric, anti-ferroelectric, deformed helical ferroelectric

#### T04-H03C2A\* [1997-2009]

#### **Driver circuitry**

\*This code is now discontinued. See T04-H03F together with T04-H03C2 from 2010. See also U14-K01A3.

## T04-H03C3 [1992]

#### **Electroluminescent**

See also U14-J03.

## T04-H03C3A\* [1997-2009]

#### **Driver circuitry**

\*This code is now discontinued. See T04-H03F together with T04-H03C3 from 2010. See also U14-J03.

## T04-H03C4 [1992]

## Plasma display panel

See also V05 codes.

## T04-H03C4A\* [1997-2009]

#### **Driver circuitry**

\*This code is now discontinued. See T04-H03F together with T04-H03C4 from 2010. See also V05-A01G.

## T04-H03C5 [2002]

Field emission display

## T04-H03C5A\* [2002-2009]

## Field emission display driver circuitry

\*This code is now discontinued. See T04-H03F together with T04-H03C5 from 2010. See also V05.

## T04-H03C6 [2002]

## **Digital micromirror display**

See also V07 for mirror control.

## T04-H03C6A\* [2002-2009]

## Digital micromirror display driver circuitry

\*This code is now discontinued. See T04-H03F together with T04-H03C6 from 2010.

## T04-H03C7 [2006]

## **Electrophoretic display**

Based on electrophoresis effect, microencapsulated EPD, partition-type EPD, charged particle display, electrochromatic display, electrostatic display.

## T04-H03C7A\* [2006-2009]

## **Electrophoretic display driver circuitry**

\*This code is now discontinued. See T04-H03F together with T04-H03C3 from 2010.

## T04-H03C8 [2007]

#### Interference based MEMS display

See also U12-B03F1 and V06-M06G.

#### T04-H03C9 [1992]

## Other display types

Includes Braille type displays (Braille printers are coded under S06-K99X).

Head mounted display

#### T04-H03D [1992]

## **Back lighting for displays**

See also X26-U04A.

## T04-H03E [2005]

## **Projectors**

See also W04-Q01 for novel projector details, projectors don't receive any other T04-H codes.

### T04-H03F [2010]

## **Driver circuitry**

Search together with other T04-H02 codes as appropriate to denote application of driver circuitry.

## T04-H03M [2008]

**Multi-display systems** 

#### T04-H03N [2023]

### Flexible display monitors

This code covers constructional aspects of flexible panel of computer displays/ monitors. Details of general foldable/bendable displays are coded under W05-E05F.

#### T04-H04 [2005]

## Construction, manufacturing and testing details of display

Covers display housings, casings, stands, supports, wiring components, etc. previously coded in T04-L. Does not include details of the display elements per se which are covered by the relevant class (e.g. U14 for LCD). Search with other T04-H codes for display types. Packaging of computer displays is coded under Q34-M02.

## T04-H06 [2007] Stereoscopic and 3D displays

## T04-J

## Conveying record carriers between independent stations

Including computer paper perforation and sprocket details, collators and sorting appt. For digitally marked record carriers see T04-A05 from 2005. See also S06-C05 and X25-F02A.

Guide, position, web, card, document

## T04-J01 [1992]

## Media feeding

See S06-K for paper feeding in printer, T04-K02C1 for smart card feeding, and T04-A05 for card feeding.

Transport, path

T04-J02 [1992]

## Collating, sorting

Sort, staple

T04-K [1987]

## Smart media e.g. cards incorporating integrated circuit memory etc.

Includes reading aspects. Constructional details are coded in U11/U14 as appropriate. See also under application (T05, W05, W06 or X25). For protective coatings see V04-R03E. See also X25-F08 if details of the actual attachment of the tag (e.g. RFID tag) to an item.

IC, memory, contactless, smart paper

#### T04-K01 [1992]

#### **Smart media details**

Includes all construction aspects of smart media. *Key, IC* 

## T04-K01A [2006]

## Circuitry, inc. encapsulation

For construction and manufacturing of the circuitry aspects of smart media. See also U11, U14 and V04 for details.

#### T04-K01B [2006]

#### **General construction details**

For all aspects of smart media construction/manufacture except circuitry which is coded in T04-K01A.

## T04-K01C [2007]

#### **Antenna**

See also W02-B codes for aerials, V04-Q for PCB details and U13 for integrated circuit details.

#### T04-K02 [1992]

#### Reading and writing aspects

Including smart card feed/conveying. See also T01-H01B3A. See also W02-C02G7 (near-field radio) or W02-G05 (transponder) for non-contact details.

PCMCIA, contact, non-contact

## T04-K02A [2006]

#### Contact

## T04-K02B [2006]

#### Non-contact

Covers non-contact reading/writing, physical details of the non-contact system only should be covered in K01 and/or K03. For example the construction of the antenna in a transponder is T04-K01C and T04-K03B and would not be included here unless a communication aspect is also described. See also W02-C02G7 (smart cards) and W02-G05 codes (transponders and tags).

## T04-K02C [2006]

#### Reading/Writing apparatus

Covers all aspects of the apparatus used to read from or write to smart media, rather than the media itself.

## T04-K02C1 [2006]

## Feeding mechanisms

Prior to 2006 see T04-J.

## T04-K02C2 [2007]

## Constructional details of card reader / writer

Includes non-electrical constructional details such as housing and mountings. Details of circuits, connectors, interfaces, etc. go under T04-K02C.

#### T04-K02C3 [2010]

#### Control, circuitry of card reader/writer

## T04-K03 [2006]

## Media type

Codes used to highlight the type of media used. Search together with other T04-K codes as required.

T04-K03A	[2006]
----------	--------

**Smart card** 

T04-K03B [2006]

RFID/transponder

T04-K03C [2006]

Paper/cardboard

T04-K03D [2006]

Memory card/stick

T04-K03D1 [2006]

**USB Memory stick** 

#### T04-K04 [2006]

#### Security

All security aspects including physical protection of the hardware, encryption (see also T01-D01) and fraud protection (previously coded T01-H01C1).

#### T04-K05 [2012]

#### **Testing smart media**

For security aspects see T04-K04

#### T04-L [1987]

## Constructional details of peripheral and ancillary equipment

(T04-X)

Includes construction of peripheral equipment not covered by T04-F01B, T04-F02C, S06-K or T04-H04. Computer housing and constructional details are covered by T01-L02. See also V04-T and V04-S.

## T04-L01 [1987]

#### Casings, cabinets of peripheral equipment

Includes details of housing, stand, support. Furniture aspects of 'electronic office' are coded in T04-L07 from 1992.

Adjust, position, angle, stand, hinges

#### T04-L02 [2005]

## Power supply arrangements for peripheral equipment

See also U24 and X12.

## T04-L05 [1987]

#### **General constructional details**

Includes mounting of PCB's, components, leads, rails, leverage system, etc.

#### T04-L07 [1992]

### Furniture aspects of 'electronic office'

(T04-L01)

Includes furniture aspects. See also T01-L02 for furniture specifically for computer.

Desk, cable, chair, flooring

### T04-L08 [2012]

## Cleaning of computer and peripheral devices; Computer room air cleaning

Includes cleaning details of internal and external components of computer and peripheral equipment. Use in conjunction with other T04 codes to highlight the type of computer equipment. Also includes devices used for removing dust in a computer rooms or laboratories. Electric details of clean rooms are also covered by X25-S01, and electric details of air cleaners are also covered by X27-E01B2. Measurements of air quality in clean rooms are coded by S03-E14N3.

Dust proof, HEPA filter

#### T04-L09 [1987]

### Other peripheral accessories etc.

Includes details of mouse mat, arm rest, theft alarm (see also W05 codes) or document stand.
Packaging of peripheral equipment is coded under Q34-M02.

Filter, screen, antistatic, theft alarm, mouse mats, arm rest, attachments, protective cover

#### T04-M [1992]

## (Digitiser) Scanner for computer input

(W02-J)

See S06-D only from 2010 for scanning arrangements for image forming devices.

#### T04-M01 [1997]

#### 2D scanner, incl. flatbed scanner

See also T04-D codes for image processing aspects, S06 as appropriate, and T01-C06 for computer interfacing details. Details of 3D / 4D printing technology are also coded under X25-A08.

### T04-M02 [1997]

## Hand-held scanner

(T04-F04)

Includes hand-held bar-code scanner (see also T04-A03B1). Pre-1997, hand scanners for computer input were coded under T04-F05 (now discontinued). Details of 3D / 4D printing technology are also coded under X25-A08.

#### T04-M03 [2010]

## Construction and manufacturing details of scanners

Includes details of casing, framework and internal mounting arrangements of components and modules. Details of 3D / 4D printing technology are also coded under X25-A08.

Frames, glass, sheet, PCB

### T04-M04 [2010]

#### **Control circuitry of scanners**

Includes internal control and power management. Details of 3D / 4D printing technology are also coded under X25-A08.

[2016]

Control, circuit, power supply

### T04-M05

#### 3D scanner

Details of 3D / 4D printing technology are also coded under X25-A08.

## T04-N [2012]

### **Audio input/output**

Includes speakers, headphones and microphones specifically for computer applications.

## T04-P [1997]

#### **Drives for computer input**

External drive unit, see also T03.

### T04-X

#### Miscellaneous

Includes card case/wallet (see also T03), office automation, cleaning appt. for computer peripherals, computer equipment for handicapped people (see also S05-K, and for Braille printer see also S06-K99X), and maintenance equipment, shedder, electric stapler and general packaging specifically for office equipment. Details of packaging for office equipment such as keyboards, staplers, etc are also coded under Q34-M02, and electrical stationary such as electric staplers are also coded under X27-A02C.

## T05: Counting, Checking, Vending, ATM and POS Systems

#### T05-A

### **Counting objects**

Counting of coins or banknotes is covered by T05-L07. Vehicle counting is covered by T07-A01C.

#### T05-A01

### On conveyor

For electrical conveyor aspects see X25-F01 codes. *Production line, manufacture, process, monitor* 

#### T05-A02

### In stack or randomly distributed

Sheet, card, lamina, pile

#### T05-B

## **Counting mechanisms**

Includes mechanical, electromechanical, and electronic arrangements. These codes are **not** used for counting circuits in general, which are covered by U21-D codes. T05-B codes are used for counting devices per se which may be used to count objects, events, units of distance travelled, etc. For some non-electronic applications see:

- (1) T05-A codes for object counting
- (2) T05-G codes for registering/indicating
- (3) T05-L09 for currency counting
- (4) S02-B12 for distance recorders and pedometers. Wheel, disc, register, pin, reset, restore

#### T05-B01

#### Counters with additional facilities

Includes arrangements for performing an operation at predetermined count. For tape recorder see T03-J05A and W04-H03 also.

#### T05-C

## Ticket-issuing, fare-registering, franking appts.

For electrical printing aspects see S06 codes also. *Meter, memory, transport, vehicle* 

#### T05-C01 [1992]

#### Ticket and receipt issuing

Includes label printing devices. See T05-H codes as appropriate for payment-operated systems and T05-K02 for mail delivery. See S06 for printing aspects.

Bill, invoice, slip, cut, separate, pass, toll, mark, perforate

## T05-C03 [1992]

## Fare registering

Includes taximeters (see also T05-G01 and X22-E05 for electrical aspects) and charge indicating aspects of vehicle toll systems (see T05-C01 for ticket issuing aspects and T05-D02 for monitoring aspects).

Distance, time, rate

#### T05-C05 [1992]

#### Franking appts.

Includes all aspects of franking equipment, such as registering of credit, security, and control. See also T01 codes e.g. T01-J05A1 for financial data processing systems, and S02-D codes for weighing. Sorting of mail is **not** included - see T05-K02.

Postage, meter, rate, reset, verify, stamp

#### T05-D

#### Individual entry or exit registers

Includes systems for control and recording of access. See W05-B01 codes for intruder alarm aspects and X25-M codes for locks.

Identify, pass, code, enter, security, authorise, door, gate, checkpoint

#### T05-D01 [1992]

#### For personnel control

Turnstiles per se are coded in T05-D01X. Restricted area, banking, lobby, automatic teller/transaction machine, ATM

### T05-D01A [1992]

#### With record carrier

See T05-H02 codes as appropriate for card-freed aspects in payment-based systems, see T04 for record carry types and W02-G for transponders. Includes checking/validating ticket or pre-paid card Data, optical, magnetic, barcode, record, carrier, transponder, token

#### T05-D01A1 [2005]

#### With portable electronic device

Covers the use of a mobile device, e.g. PDA or mobile phone as the record carrier. See also W05-D08C and W05-D06G for remote control aspects.

## T05-D01B [1992]

#### With human characteristic detection

Includes e.g. finger or palm-print analysis by pattern recognition (see S05-D01C5A and T04-D codes also), and voice recognition (see W04-V codes also). Recognise, ID, face, feature, retina, voiceprint

### T05-D01X [1992]

#### Other

Includes turnstiles per se, toll-gate, barrier control, adjustable entry gate and structural details.

Stadium, arena

## T05-D02 [1992]

#### For vehicles

Includes toll systems, automatic fee charging system while entering/exiting motorway. See also T05-C01 and T05-C03 respectively for ticket/card issuing and charge indicating aspects. For automatic vehicle identification see T07-A03. See W02-C and W05-D for communication aspects.

#### T05-E

#### Checking occurrence of condition

Includes pass/fail test in e.g. production line manufacturing process. Also for lottery or bingo games. Audible or visible signalling for industrial aspects refer to W05-A.

Identify, compare, inspect, authorisation, entry

#### T05-F

## Voting and lottery appts; generating random numbers

See T01-E04 for digital random number generators, and U22-A01A for random pulse generators.

Game, select, display, bingo, card, ticket, ballot, cast, majority, register, betting

## T05-G

#### Registering/indicating

Display, record, register, measure, indicate, monitor, check

#### T05-G01

#### Vehicle working

Includes on-board distance and operation recording equipment which is also coded in X22 when electrical. For taximeters see also X22-E05 (fare-indicating aspects are also covered by T05-C03). For tachographs see also X22-E05, and S02-K05/S02-K06 codes for chart recorder details, T01-H01B3 codes for electronic data storage in memory modules.

Tachograph, fuel, speed, tacho-generator, taximeter

#### T05-G02

#### Machine working

Includes systems and apparatus monitoring the operation of a single machine or a group of machines, e.g. in a manufacturing environment. For computer-aided manufacturing aspects see T01-J07B also.

Safety, press, tool, factory, automation, FA, CAM, QC, quality control, idle time, down time

#### T05-G02A [1992]

#### For maintenance

Includes operation cycle counters and logging arrangements to determine maintenance intervals, remaining lifetime, etc.

Log, maintain, repair, recondition

#### T05-G02B [1992]

#### **Production line process monitoring**

Remote monitoring of measured values in general is covered by W05-D codes.

Work-area, workstation, track, conveyor, materials handling, truck

### T05-G02B1 [1992]

### Using record carrier attached to workpiece

Includes arrangements to identify workpiece, manufactured item, etc., using e.g. barcode, magnetic label, or other passive record carrier (See T04 codes also, e.g. T04-A03B1 for optical barcode reading). Transponder systems are covered by T05-G02B1A

Ferromagnetic, magnetise, electrostatic, light, IR, UV, visible, human-readable, pattern recognition

#### T05-G02B1A [1992]

#### **Transponder interrogation systems**

Covers systems using an electronic 'tag' attached to workpiece, manufactured item, etc., which can be interrogated by a central station, or equipment at a particular workstation. Interrogation-based systems of this type are also coded in W06-A04B5, and details of transponders per se in W02-G05 codes.

#### T05-G03

#### Time of events

Time measurement in general is covered in S04. This code is used for arrangements to monitor both the time at which events occur and also their duration (see S04-C03 and S04-E codes also). It includes timing for sporting events (see W04-X01 codes for electrical aspects) e.g. lap time recording systems, start and finish times, etc., and also registering systems for employee attendance, time and motion study, etc.

Clock, clock in, period, elapsed time, night watchman, security, patrol, race, photo-finish. trigger, actuate, work study

#### T05-G03A [1992]

### Parking meter

See T05-H codes also for coin- or card payment aspects. Parking control systems are covered by T07-F.

Vehicle, bay, credit, reset

### T05-H

#### Coin-, token-, or card-freed appts

This section deals with direct or indirect paymentbased arrangements for dispensing, or providing services. Dispensina involvina volume measurement is covered by S02-C04 codes. Documents are assigned T05-H codes either by virtue of G07F IPC, which may involve inventions without electrical aspects, or based on their electrical content. In the latter case, X25-F03 codes may also be assigned e.g. X25-F03B1 for food/drink vending machines. T05-H codes may be assigned for any payment-based provision of goods or services, and hence codes for the particular application should also be searched.

Vending, slot, dispense, cash, denomination, insert, automat, unattended

#### T05-H01

### Coin-actuated mechanisms; interlocks

Includes mechanical and electrical systems. See T05-H03 for coin testing/sorting aspects. Lock, release, activate, chute, lever, switch

#### T05-H02

## Equipment actuated by objects other than

Codes in this section are used with other T05-H codes as appropriate.

#### [1992] T05-H02A

#### Actuated by banknote

#### [1992] T05-H02B

### Actuated by token

#### T05-H02C [1992]

#### Actuated by record carrier

Includes card-operated systems e.g. with data stored in magnetic strip or electronically. See also T04, e.g. T04-A03 codes. Card

#### T05-H02C1

#### [1992]

#### Using dedicated record carrier

Includes e.g. telephone card, pre-paid card not usable for other purposes. (See also T05-H05C and W01-C07A codes).

#### T05-H02C3

#### [1992]

## Using non-dedicated record carrier

Includes use of credit/debit banking card and multipurpose pre-paid card.

#### Charge, account

#### T05-H02C5

#### [1992]

### Characterised by type of carrier

Codes in this section are used to indicate system type only, and not necessarily novel aspects.

## T05-H02C5A

Magnetic card

#### [1992]

See T04-C01 also for card per se, and T04-A03A for reading aspects.

#### T05-H02C5B

#### [1992]

### **Optical card**

See T04-C02 also for card per se, and T04-A03B codes for reading aspects.

#### T05-H02C5C

#### [1992]

#### Smart card, IC card

Integrated circuit memory cards per se are coded in T04-K01. For reading/writing aspects see T04-K02 and T01-H01B3A also. For non-contact type see also W02.

#### T05-H02C5X

#### [1992]

## Other types of carrier

## T05-H02D

## [2005] **Actuated by Mobile Device**

#### For equipment actuated by fund or credit transfer from mobile telephone devices or portable computing devices, via e.g. cellular phone network, Internet, Bluetooth® or local wireless network, See W01-C and T01-N01A1 and T01-M06A1, T05-L02 codes.

## T05-H02E [1992]

## Reverse vending, e.g. for returnable container

Includes arrangement returning deposit on receipt of one or more containers. Returnable-deposit systems for supermarket trolleys are covered by T05-H05A1.

Recycle, returnable, carton, box, bottle, can, crusher, deposit

## T05-H02X [1992]

Other

#### T05-H03

## Coin testing or sorting appts. combined with coin-freed appts.

Includes analogous testing arrangements for tokenor banknote-freed systems. Includes change giving mechanism. See also codes in S03 for e.g. optical, magnetic testing etc. and T04-D codes for pattern recognition aspects.

Select, reject, validate

#### T05-H04

### Apparatus dispensing discrete articles

Includes packaged items such as canned beverages, but arrangements dispensing liquids into cups are covered by T05-H06.

Select, storage, vending, cigarette, confectionery, newspaper, contraceptive, ticket

### T05-H04A [1992]

## Involving heating/cooking

See also X25-F03B1 and X27-C for cooking aspects. Payment-freed cooking/heating apparatus for food supplied by customer is covered by T05-H05. For patents involving heating and cooling, only T05-H04 is applied.

Microwave, IR, grill, conveyor, oven, meal

#### T05-H04B [2011]

## Involving cooling/freezing

For patents involving heating and cooling, only T05-H04 is applied. See also X27-F for refrigeration.

#### T05-H05

Appts. for hiring articles, coin-freed facilities, and services

## T05-H05A [1992]

## **Article hiring apparatus**

Video, tape-cassette, sports equipment

### T05-H05A1 [1992]

## Returning payment or part payment on return of article

Includes supermarket trolley with coin-freed lock. (Reverse vending encouraging return of containers is covered by T05-H02E).

Deposit, unlock, chain, free

#### T05-H05C [1992]

## Payment-freed provision of services

Includes payment of parking meters (see T05-G03A also) and public telephones (see W01-C07A codes also). Automatic banking machines are coded in T05-H02 codes for card/note accepting aspects and in T05-L03 codes.

Prepayment, call box, left luggage, locker, launderette, washing machine, dryer, lighting, illumination, toilet, commentary, cable TV subscription, car wash

#### T05-H05E [1992]

## Payment-freed amusement and entertainment systems

See W04-X02A also for electrical aspects of gaming machines and W04-X03A1 also for jukeboxes. See also T01-J30B for video game machines.

Gambling, prize, reward, award, win, lose, skill, AWP, amusement-with-prizes, slot machine, pinball, pachinko

#### T05-H06

## Apparatus dispensing fluids, granular material or electricity

Includes quantity and tariff adjustment. Meter rental charges. Electricity consumption meters are also assigned S01-B codes. Dispensing of canned drinks is covered by T05-H04.

Beverage, sachet, ingredients, powder, mix, liquid, meter, pump, water

## T05-H08 [1992]

## General details of vending and analogous apparatus

Codes in this section are used alone, or with other T05-H codes as appropriate.

## T05-H08A [1992]

## **Constructional details**

Housing, mounting, casing, support, reinforce, door, access, lock, maintain, refill, cashbox

## T05-H08C [1992]

#### **Control systems**

See also T01 where significant control aspects are included.

Microprocessor, computer, logic, monitor, fault, alarm. antitheft

## T05-H08C1 [2005]

#### **Control from outside unit**

Covers control, management and monitoring of payment freed devices from an external unit such as a central server. Includes inventory monitoring for vending machines (see also T01-J05A2D), control of multiple gambling machines in casino (see also W04-X02A8).

Microprocessor, computer, logic, monitor, fault, alarm, antitheft

#### T05-J

#### **Testing coins or valuable papers**

Testing of coins or banknotes in e.g. vending machines is covered by T05-H03.

Banknote, denomination, value, counterfeit, currency, reject, validate

#### T05-K

### Sorting and delivering

See X25-F06 also for electrical aspects of sorting in general.

Conveyor, select, separate, divert, channel, grade, evaluate, compare

#### T05-K01 [1983]

#### **Coins and tokens**

See T05-H03 for coin-sorting aspects of coin-freed apparatus. Includes change giving apparatus and coin wrapping (see T05-L09 also).

### T05-K02 [1983]

#### Valuable papers (including mail)

Franking equipment is covered by T05-C05. Banknote, dispense, bank, note, sheet, feed, envelope, letter, post, postcode

### T05-K05 [1992]

Objects on conveyor, and manufactured objects

T05-K09 [1992]

Other

#### T05-L

## Point-of-sale equipment, EFT, and other currency handling systems

Cash, bill, note, coin, banking, reject, refund, dispense

#### T05-L01 [1992]

#### Point of sale equipment

Checkout antitheft alarms are coded in W05 only, e.g. W05-B01A codes.

POS, shop, store, retail

### T05-L01A [1992]

#### **Cash register**

See also T01-J05A1 for processing aspects. ECR, till drawer, key, lock, receipt, paper roll, printer,

### T05-L01B [1992]

display, calculate, processor

#### Card reader

Includes credit/debit card reading system. See also T05-H02D codes and T05-L02 for electronic funds transfer aspects.

EFT, EFTPOS, wipe, swipe, terminal, validate

#### T05-L01C [1992]

#### Product code reader

For both checkout and inventory purposes. Scan, laser, polygon, mirror, orient, decode, format, check, portable, data terminal

## T05-L01C1 [2006]

#### Using bar code

See also T04-A03B1 for bar code reading in general.

## T05-L01C3 [2006]

### Using mobile electronic device

Contactless payments using smartphone or other mobile device incorporating RFID/transponder technology. See also T04-K and W02 for RFID/transponders in general.

Digital wallet

### T05-L01C9 [2006]

#### Other

Includes image recognition of item (see T04-D).

#### T05-L01D [1992]

### Data transfer and network aspects

Includes networks linking cash registers and central computer. See also T01 and W01-A06 codes.

LAN, WAN, local area, wide area, bus, loop, ring, interconnect, interface

## T05-L01E [2005]

#### **POS Weighing Scales**

See T05-L01X prior to 2005. See also S02 for weighing apparatus in general. Scales, weigh

### T05-L01F [2005]

## **Electronically Addressed shelf edge** display

Coded as T05-L01X prior to 2005.

T05-L01H [2006]

**POS** printers

T05-L01X [1992]

## Other POS equipment or systems

Conveyor, automatic packing, price

T05-L02 [1992]

#### **Electronic payments**

Includes Electronic Funds Transfer (EFT) and digital wallet systems. See T01-N01A1 for Computer/Internet aspects and W01-C05B3C for telephone line data transmission aspects.

### T05-L03 [1992]

#### Cash dispensing and depositing machines

Includes automatic teller machines. Bank, terminal, banknote, card, ATM

## T05-L03A [1992]

## **Cash-handling aspects**

See T05-K02 for banknote sorting/delivering in general.

T05-L03A1 [1992]

**Cash-receiving** 

Deposit, envelope

T05-L03A5 [1992]

**Cash dispensing** 

T05-L03C [1992]

### Security and control

See T05-H02 codes for card operated access system details, and T05-D01 codes for control of access to enclosure.

Lobby

### T05-L03C1 [1992]

#### **General control system**

Includes display arrangements and selection keys. *Microprocessor, computer, controller, program* 

### T05-L03C5 [1992]

#### Security system aspects

Authorise, validate, personal identification number, PIN

### T05-L03E [1992]

#### **Constructional details**

Includes internal details such as component mounting, and also housing, reinforcement, etc. Casing, support, bezel, escutcheon, display filter

#### T05-L05 [1992]

## Cashboxes, strongboxes, safes, moneyboxes

See W05-B01 codes for theft/burglar alarms.

#### T05-L05A [1992]

## Strongboxes, safes

Lock, combination, tumbler, time delay, release

### T05-L05B [1992]

Personal moneybox, coin holders

## T05-L07 [1992]

Coin and note counting

#### T05-L09 [1992]

#### Other

Coin wrapping, minting

#### T06: Process and Machine Control

These codes cover general or unspecified control systems and methods. T06 codes are often applied due to the presence of guaranteed G05B (T06-A codes) and G05D (T06-B codes) IPCs, as well as G05G (T06-C codes), as long as there is some electrical content for the latter. In the absence of a guaranteed G05B or G05D IPC, if the control is "specific", then T06 codes are not normally applied. For example, non-specific or general torque control will be coded in T06-B12, but if the patent details control of electric motor torque, e.g. for a motor vehicle power steering system, then T06 codes will not be applied (unless there is e.g. a G05D-017 IPC assigned), because the control can be much more accurately highlighted by applying specific V06-N (motor torque control) and X22-C05A (vehicle power steering) codes.

#### T06-A

#### **General control systems**

This code is used for systems for regulating specific variables which are more generally applicable.

#### T06-A01

#### **Comparing elements**

Includes electric analogue and digital comparators. General electronic comparators are coded in U22-A04D5.

Error detectors

#### T06-A02

## Anti-hunting and internal feedback arrangements

Includes electric and fluidic anti-hunting measures; electric and fluidic feedback to obtain proportional, integral and differential characteristics. See also T06-A06A9 for PID control per se.

PI. PD. PID

### T06-A03

## Obtaining smooth (dis)engagement of automatic control; safety arrangements

Includes both electric and fluidic arrangements.

#### T06-A04

#### **Programme-control systems**

### T06-A04A

## **Numerical controllers**

NC

#### T06-A04A1

## Using measuring device

#### T06-A04A2

## Characterised by computer; with central computer controlling several NC machines

See T01-F06 for CNC-related microprocessing. CNC, computerised numerical controller

#### T06-A04A2A

[1997]

### **Total factory control**

For central factory control not using NC systems, see T06-A04B7.

FA, DNC, Direct/distributed numerical controller

#### T06-A04A3

[1997]

## Positioning or contouring control systems

Also includes tool centring, measuring workpiece for machining, backlash and other types of error compensation, and control of velocity, etc.

#### T06-A04A4

[1997]

## Machine data input and handling arrangements

Includes NC systems where form of data input is the characterising feature e.g. manual data input, generating data from the drawing, or using design data from a CAD/CAM system. Also includes reading, buffering or conversion of data.

#### T06-A04A5

[1997]

## Using tool path interpolation

#### T06-A04A6

[1997]

## Monitoring and safety systems

See also T06-A03 and T06-A08 for general safety and monitoring systems, respectively.

#### T06-A04A9

#### Other numerical controller aspects

Includes open loop systems.

### T06-A04B

Non-numerical

## T06-A04B1

[1997]

## Sequence or logic controller

Also includes programmable logic controllers. See also T01-F06 for program control arrangements e.g. using stored programs, such as in PLC, for control of computer peripheral. For general safety and monitoring systems, see T06-A03 and T06-A08, respectively.

PLC, relay ladder, graph set processing

#### T06-A04B3

[1997]

## Fluidic control systems

### T06-A04B5 [1997]

### Recording and playback/teaching systems

## T06-A04B7 [1997]

### **Total central control of factory**

For central factory control using NC systems, see T06-A04A2A.

FMS, Flexible manufacturing system, CIM, computer integrated manufacturing, multi-machine control, IMS, integrated manufacturing system

#### T06-A05

## Adaptive (optimum) control systems

## T06-A05A [1992]

## **Artificial Intelligence-based systems**

Includes expert-, rule-, or knowledge-based systems. See also T01-J16 codes.

Al, KBE, rule acquisition, inference engine, neural network, heuristic rules

### T06-A05A1 [1992]

### **Fuzzy control**

See also T01-J16B.

#### T06-A05C [2007]

#### **Using algorithms**

Includes adaptive control systems using algorithms to optimise system performance. E.g. includes control algorithms used in washing machines (see also X27-D01A5) to optimise wash cycle based on sensed parameters such as weight of clothes, temperature etc.

#### T06-A06

#### **Automatic controllers**

#### T06-A06A

**Electric** 

#### T06-A06A1

#### (Dis)continuous controllers

#### T06-A06A1A [1992]

## Continuous

(T06-A06A3)

Output of controller is continuous function of deviation from desired value. See T06-A06A3 for records from 1983 to 1991.

## T06-A06A1D [1992]

#### Discontinuous

(T06-A06A5)

Output of controller is discontinuous function of deviation from desired value e.g. two or multi-step controllers. See T06-A06A5 for records from 1983 to 1991.

#### T06-A06A2

## With output pulse-train signal; with multiple inputs and outputs

Includes systems where the output of controller is pulse-height, -width, or frequency-modulated; multiple inputs obtained from more than one sensor and outputs applied to more than one correcting element.

## T06-A06A3\* [1983-1991]

#### **Continuous**

\*This code is now discontinued and transferred to T06-A06A1A from 1992 onwards to indicate its proper hierarchical relationship to T06-A06A1. It is still searchable and valid for records of 1983 to 1991.

## T06-A06A5\* [1983-1991]

#### **Discontinuous**

\*This code is now discontinued and transferred to T06-A06A1D from 1992 onwards to indicate its proper hierarchical relationship to T06-A06A1. It is still searchable and valid for records of 1983 to 1991.

#### T06-A06A9

#### Other electric automatic controllers

Includes arrangements to obtain PID and proportional, integral, or differential characteristics.

#### T06-A06B

### Pneumatic or hydraulic only

#### T06-A07

## Computer controlled systems; systems using models

#### T06-A07A [1992]

#### **Computer-controlled systems**

This code is used together with other codes only if substantial computing details are disclosed. For example, CNC machine tool motor control systems would be coded only in T06-A04A. See also T01-J07B for the computing aspects of industrial process controllers.

CAE, CAI, CAM

T06-A07A1

Distributed control systems

T06-A07B

[1992]

[1992]

Systems using models

T06-A08

Testing and monitoring control systems

T06-A10

[1992]

Sampled-variable control systems (T06-A20)

T06-A11

[1997]

## Control systems-related (data) communications arrangements

(T06-A20)

See also W01-A06 codes for data communications in general. RF type communications are in W02 and transmission systems for measurement and control systems are covered by W05-D codes. Only used when 'control' data is being communicated.

MAP

#### T06-A20

#### Other general control systems aspects

Includes open-loop automatic control systems; general constructional details of controllers e.g. control boards or racks for electronic controllers (see V04-T codes for electronic equipment constructional features).

#### T06-B

#### Control of non-electric variables

Includes normally documents with the G05D IPC, or those with substantial electrical content but **no** relevant provision elsewhere in EPI, e.g. flow control. Does **not** cover automotive vehicle controllers like torque (see X22-A03D instead), etc. unless G05D is applied.

T06-B codes are primarily applied with regard to the final variable being controlled, though in some cases, an intermediate variable being controlled may also be coded, if deemed helpful. For example: in a system controlling the flow of fluid by varying the speed of a pump, T06-B04 will be the code normally applied to highlight the desired flow control aspect (if a G05D IPC is assigned or no specific application is detailed), and in most cases the intermediate speed control aspect (T06-B09) will not need to be coded.

#### T06-B01

## Vehicle position, course, altitude or attitude

For aircraft flight controllers, see W06-B01A5.

#### T06-B01A

#### Position or course in two dimensions

Includes vehicles using near-field transmission system e.g. having buried conductors in floor etc. (see W02-C02 also).

Steering, tracking, robotic vehicles, navigation

## T06-B01B

### Altitude or attitude; target seeking control

See W07-A codes also for missile guidance. Aircraft, flight, satellite

#### T06-B01X

## Other vehicle position/course control

Includes 3-dimensional position or course control.

#### T06-B02

Position or direction

#### T06-B02A

Without feedback

#### T06-B02B

With feedback

#### T06-B03

**Material dimensions** 

#### T06-B04

**Flow** 

#### T06-B04A

Without auxiliary power

#### T06-B04B

**Using electric means** 

#### T06-B04X

Other flow controller

## T06-B05

Level

#### T06-B06

Chemical or physico-chemical variables

#### T06-B07

#### Humidity; viscosity; light intensity

Only used for general or non-specific control systems. For illumination control/light dimming see X26-C codes only, for controlling light intensity of display see appropriate U14, W05 etc. display codes only, and for humidifiers per se see X27-E01B2 only.

T06-B08

Ratio

T06-B08A

Of two or more fluid flows

T06-B08A1

**Electrical** 

T06-B08A9

Other ratio control with(out) auxiliary power

T06-B08X

Other ratio control

T06-B09

Speed; acceleration

T06-B09A

Without auxiliary power; with auxiliary non-electric power

T06-B09B

**Using electric means** 

T06-B10

Mechanical force or stress

T06-B11

Fluid/Gas pressure

T06-B11A

Without auxiliary power

T06-B11X

Other fluid pressure control

T06-B12

Torque; mechanical power; mechanical oscillations

#### T06-B13

#### **Temperature**

Control of electric heaters is in X25-B04, central heating control in X27-E01A.

**Thermostats** 

#### T06-B13A

Without auxiliary power

T06-B13B

**Using electric means** 

T06-B13B1

Using elements with temp. dependent electric or magnetic properties

T06-B13B2

With auxiliary heater

T06-B13B9

Other electric temperature control

T06-B13X

Other temperature control

T06-B14

Several variables simultaneously

T06-B20

## Other non-electric variables' control

Includes simultaneous control of electric and non-electric variables.

### T06-C

#### Mechanical control devices or systems

Included in EPI only if application is for electrical systems or devices.

### T06-C01

#### Controlling and controlled members

Includes knobs for switches or variable resistors, etc. See V03-B09, V01-A03.

T06-C02

**Limiting movement** 

T06-C03

Manually operated mechanisms

T06-C03A

With single controlled member

#### T06-C03B

### With several controlled members

#### T06-C09

## Other mechanical control devices or systems

### T06-D

#### **Applications**

In general, relates to items in X25, which should also be searched.

#### T06-D01

#### **Agriculture**

### T06-D01A [1983]

#### Soil working, sowing, harvesting

See also X25-N01A for electrical equipment. Tractor, depth, plough, harvester, agricultural vehicles

#### T06-D01B [1983]

#### Irrigating, fertilising, culture

See also X25-N01B for electrical equipment. Sprinklers

## T06-D01C [1987]

#### **Livestock industry**

Includes feeding, milking, and enclosure heating and air conditioning. See also X25-N02. Feeding control

#### T06-D02

## Food, pharmaceuticals and tobacco processing

See also X25-P.

#### T06-D02A [1987]

#### **Pharmaceuticals**

See also X25-P02.

Drugs, medicines

## T06-D02B [2011]

### **Tobacco**

Includes control of tobacco processing plant.

#### T06-D02C [2014]

#### Food

Includes control of food processing plant.

#### T06-D03

### **Textile and paper manufacture**

## T06-D03A [1983]

### Paper and cardboard making

See also X25-T09.

### T06-D03B [1983]

#### Fiber, yarn, etc. manufacture

See also X25-T04A.

Spinning, winding, twisting, combing, carding, tension-control

#### T06-D03C [1983]

#### **Fabric manufacture**

See also X25-T04B codes.

Looms, knitting machines, wefting machines, warping machines, weaving, textile manufacture

#### T06-D03D [1983]

#### Sewing machine/Embroidery machines

See also X25-T04C.

Embroidery

#### T06-D04

## Separating; crushing; mixing, sorting

See also X25-J for crushing and mixing. Also includes shredder.

## T06-D04A [2020]

Sorting

#### T06-D05

Metal working; casting

#### T06-D05A [1983]

Metal working

### T06-D05A1 [1987]

## Shaping; rolling; hammering; bending; punching

Includes shaping of materials (excluding cutting), e.g. rolling (see also X25-A02B), bending, punching and hammering (see also X25-A02D), and extruding.

#### T06-D05A2 [2011]

#### **Pressing**

(T06-D20)

See also X25-A02A for presses per se.

Press

### T06-D05B [1983]

## Casting

See also X25-A01.

#### T06-D06

#### Machine tool control

Control of portable power driven screw or nut setting.

#### T06-D06A [2019]

#### **Riveting control**

See also X25-A03R and X25-A03F for riveter control. See T06-D20 prior to 2018.

#### T06-D07

## Grinding; polishing; cutting; drilling; manipulators

#### T06-D07A [1983]

## Milling; grinding; polishing

See also X25-A03C codes as appropriate. Abrading, honing, lapping, planing, sanding, burnishing, blasting

### T06-D07B [1983]

## **Manipulators**

Also see X25-A03E. See T06-D08F and X25-F05A instead for autonomous and robotic vehicles. *Robots* 

#### T06-D07C [2011]

## Turning; boring; drilling; cutting

Also see X25-A03A and X25-A03B codes as appropriate.

Sawing, trimming, grooving, lathe

#### T06-D08

## Conveying, lifting, hauling, handling materials

#### T06-D08A

#### Web-advancing

Includes strip and coil handling. Also see X25-F02 for web/strip/coil handling per se. Includes cable winding aspects. Also see X12-D07X or X12-G10 for cable winding machine and cable drums/reels. Sheets, roll, paper, filaments

#### T06-D08B

## Article feeding; tension regulating

#### T06-D08C

#### Conveyors

See also X25-F01A for control details of conveyors. Belts, transporting goods, shelving and retrieving, locating, addressing

#### T06-D08D

#### Lifts

See also X25-F04A for control details of lifts. Elevators, car call control, escalators, cabins, cages

#### T06-D08E

## Cranes, load engaging equipment, soil shifters

Hoists, excavators, winches

#### T06-D08F [1987]

#### Trucks, goods or robotic vehicles

Includes goods conveying vehicle control (see also X25-F05A codes).

Robotic vehicles, autonomous vehicles, trucks, fork lift trucks, trolleys

#### T06-D08X

## Other material handling control systems

## T06-D09 [1983]

#### Metallurgy

See also X25-A codes for metal working, and X25-Q codes for iron and steel manufacture, furnace control (see X25-X13 also), heat treatment etc.

#### T06-D10 [1983]

#### **Chemical processing**

## T06-D11 [1987]

### Mining

(T06-D20)

See also X25-D02 for mining. *Conveyors, machines* 

## T06-D12

## Earth drilling; Well production

(T06-D20)

Includes oil, gas and water wells drilling. Drilling for building construction is **not** covered. See also X25-E01 for drilling equipment. Also see H01 codes. *Boreholes* 

[1987]

## T06-D13 [1987]

#### **Plastics**

(T06-D20)

See also X25-A06 for plastic working per se. *Extruding, injecting, moulding* 

## T06-D14 [2011]

### Rubber

(T06-D20)

Includes control of rubber processing and tyre manufacturing plant. See also X25-A07 for rubber working per se.

### T06-D15 [2014]

## Packaging/filling/dispenser/bottling/labeling

Includes control of packaging/dispensing machines.

## T06-D16 [2017]

Wood

Includes all processing and manufacturing aspects of wood.

## T06-D17 [2022]

## 3D / 4D / 5D printing; Additive manufacturing

See also X25-A08 codes.

## T06-D18 [2022]

**Spraying; Coating** 

See also X25-K for spraying and coating equipment. *Paint spraying* 

## T06-D20 [1997]

## Other applications of control systems

Includes drying (see X25-G), etc. From 2011 control of presses is transferred to T06-D05A2. From 2019 control of riveting machines is transferred to T06-D06A (see also X25-A03R).

#### **T07: Traffic Control Systems**

Traffic control systems specifically for rail, air/marine transport are not included, and are covered by X23 and W06 codes respectively. Some offboard roadside aspect or traffic control centre must be present to be coded in T07. Purely onboard motor vehicle aspects are coded in X22 only.

#### T07-A

## Determining road vehicle position, speed or flow

## T07-A01 [1992]

#### Monitoring flow of traffic

Includes measurement of number of vehicles passing within fixed time period.

Congestion, volume, closed-circuit TV, CCTV, survey, cable, pressure, detect

## T07-A01A [1992]

## Measuring speed of traffic

Includes measurement of average speed.

## T07-A01A1 [1992]

#### Measuring individual vehicle speed

Includes police speed trap using e.g. radar, laser, etc. (For driver countermeasures see X22-E08 and W06-A04E3C).

Gun, check, readout

### T07-A01B [1997]

#### **Detecting presence of vehicle**

This code is for detecting the presence of a vehicle in a known local position, e.g. using cameras or inductive loops embedded in roadway that detect change in magnetic field caused by presence of the vehicle. For detecting the presence of vehicles specifically for traffic signal control, e.g. traffic light control, see T07-C03A only. For detecting free parking space see T07-F also. For systems detecting an unknown geographic location of the vehicle see T07-A05 codes instead.

Video camera

#### T07-A01B1 [1997]

#### Detecting 'wrong way' travel

Use with T07-E codes also.

#### T07-A01C [1992]

#### Vehicle counting

See also T07-F for counting number of vehicles entering car park.

## T07-A01D [2002]

#### Vehicle classification system

Includes classification of vehicle type, e.g. car, lorry, motorbike, and e.g. monitoring of vehicle height. Includes optical systems in which light beam is interrupted when high vehicle such as truck passes by.

Classify, vehicle type, height sensing

#### T07-A03 [19

## Identifying and recording individual vehicle information

## T07-A03A [1997]

#### **Transponder interrogation**

Transponder interrogation systems for vehicle identification in general are covered by T04-K03B, T04-K02 and W06-A04B1 codes and W02-G05 codes for novel RF details.

RFID, transponder, tag

#### T07-A03A1\* [1997-2001]

#### For tolls or other charging systems

\*This code is now discontinued; the transponder aspect is now transferred to T07-A03A and the toll aspect is transferred to T07-A03E from 2002 onwards. T07-A03A1 remains searchable for records between 1997 and 2001.

### T07-A03C [1997]

#### **Recording images**

Includes systems triggered by detecting vehicle speeding, or travelling through stop signal.

Automatic camera, number, offence, violation

### T07-A03C1 [1997]

#### By photography

Electrical aspects of photography are also assigned and are coded in S06-B, especially S06-B02 codes.

### T07-A03C5 [1997]

#### By video systems

Closed circuit TV systems are assigned W02-F01 codes. See W04-M01 codes for details of video cameras.

CCTV, VCR, tape, playback

#### T07-A03C5A [1997]

## With pattern recognition of licence plate information

See T04-D codes also.

## T07-A03E [2002]

### Toll and charging arrangements

Transponder aspects for transmission of data between toll booth and vehicle are coded in T07-A03A also. See T05-D02 also and T05-C03 for charge indicating aspects. See X22-X07 also for onboard vehicle aspects such as windscreen mounted transponder.

Transponder, card, debit, toll

#### T07-A05 [1992]

## Monitoring position of vehicle

This code is for monitoring the geographic position of a vehicle. For position monitoring in conjunction with mobile radio systems see W02-C03C codes (e.g. W02-C03C1E). For T07-A05 to be applied there needs to be some offboard or roadside aspect. Purely onboard vehicle position determination is coded in X22-E06 instead, as well as e.g. S02-B08C and W06-A03A5C if GPS is used for the position fixing. For systems detecting the position or rather presence of a vehicle at a known point on the road, see T07-A01B instead, or T07-C03A if the aim of the presence detection is for road traffic signal control.

Location, city, zone, district, road, street, plan, moving map, destination

#### T07-A05A [1992]

## Monitoring position of scheduled vehicle e.g. bus

Includes systems for monitoring position of buses or other vehicles such as delivery vehicles following a set route or travelling between specific destinations, e.g. to allow off-board controller to monitor vehicle progress. See also T07-A05L for display of vehicle position to controller. See also X22-P05A and other appropriate X22 codes for on-board bus details.

## T07-A05A1\* [1992-2006]

#### Displaying information to passenger

\*This code is now discontinued and transferred to T07-A05D and T07-A05S. T07-A05A1 remains searchable for records from 1992-2006.

Time, interval, indication, boarding, alighting

#### T07-A05A3\* [1992-2001]

#### Displaying information to controller

\*This code is now discontinued; the display to central controller aspect is transferred to T07-A05B and the application to scheduled vehicles is covered by T07-A05A. T07-A05A3 remains searchable for records between 1992 and 2001.

Central station, route

## T07-A05B [2002]

#### Displaying information to controller

Includes informing central station of vehicle position, e.g. to allow controller to monitor vehicle progress and alter vehicle schedule if required (see also T07-A05S). See also X22-E06F for updating vehicle navigation display.

Central station, route

#### T07-A05C [1992]

## Displaying information to driver

Includes arrangements indicating position of vehicle to driver, e.g. using roadside beacons or other roadside based navigational systems. Systems transmitting actual control signals affecting vehicle steering for example, are covered by T07-D01 (and X22-C05B for automatic steering details). See also X22-E06F and S02-B08 codes. Includes use of offboard traffic centre to inform driver of best route to destination, e.g. due to traffic congestion, i.e. to reduce processing requirements of on-board navigation system. T07-G01 may also need to be applied for indication of traffic congestion. *CD-ROM* 

## T07-A05D [2007]

### Displaying information to passenger

(X22-A05A1)

Includes systems for informing passenger of current position of bus or taxi or its expected arrival time. Includes display of vehicle position on hand-held device, in-bus display or on off-board bus stop display.

#### T07-A05U [2007]

## Monitoring position of un-scheduled vehicle e.g. taxi

(X22-A05)

Includes systems for monitoring position of taxis, e.g. to allow dispatcher to efficiently dispatch taxis to most appropriate pick-up points. See also T07-A05L for display of taxi position to controller, T07-A05N for display of pick-up point to taxi driver, and T07-A05J for informing passenger of current taxi location and expected arrival time. See X22-P05C and other appropriate X22 codes for on-board taxi details.

#### T07-B

## Traffic signals and road signs

The codes in this section relate to equipment providing both variable traffic instructions and fixed information.

Display, road, warning, optical, reflect, sign, emergency, light

T07-B01 [1992]

Signal details

T07-B01A [1992]

#### **Light source**

Only includes novel light sources/bulbs etc. per se. See X26 for lamps and U12-A01A codes for LEDs. Lampholders are coded in T07-B01B.

Incandescent, discharge, bulb, fluorescent, light emitting diode, LED, HID

T07-B01B [1992]

#### Reflectors, filters, lenses, fittings

Includes holders for lamps or other light source.

T07-B01C [1992]

## **Constructional details**

Casing, mounting, cable, harness, seal, post, street furniture

T07-B05 [1992]

### Signal type

Codes in this section are used to indicate signal type either alone, in conjunction with T07-B01 codes, or with T07-C codes.

T07-B05A [1992]

#### Traffic intersection control

Includes standard 'traffic lights' and pedestrian crossing systems.

T07-B05A1 [1992]

#### Portable, temporary unit

Includes portable display used at traffic intersection. For movable displays used in other situations see T07-B05G only.

Road works, repairs, one-way, alternate, single line, battery

T07-B05A5 [1992]

#### Indicating elapsed time

Includes indication of time before next signal change.

Period, warning, fuel saving, pollution

T07-B05C [1992]

## Variable information display

Includes matrix displays e.g. indicating temporary speed limit, motorway lane closure, etc.

T07-B05E [1992]

#### Fixed display

Includes illuminated direction signs.

### T07-B05G [2002]

#### Movable display

Includes portable or temporary displays, e.g. mounted on movable trailer, and used at roadworks along motorway to inform drivers of temporary speed limit or lane closures. Portable displays used for traffic intersection signalling such as temporary traffic lights are coded in T07-B05A1 only.

## T07-B07 [2002]

## Traffic signals and road signs with ancillary signalling

Includes roadside transmitters, e.g. incorporated in road sign to transmit radio position signal or speed limit signal to vehicle. See also T07-D03 if vehicle speed is automatically controlled.

Radio transmitter, beacon, speed limit notification

### T07-C

#### Controlling traffic signals

For control of a particular type of signal search with T07-B05 codes (except T07-B05E).

#### T07-C01 [1992]

#### **Control circuitry**

Computer, microprocessor, sequential, program, logic, clock, time

## T07-C03 [1992]

### Switch and detector arrangements

Includes manual switch for e.g. pedestrian crossing. See also V03 codes for novel mechanical switches per se.

Pushbutton

#### T07-C03A [1992]

#### **Detecting presence of vehicle**

Includes using inductive loops below road surface (also coded in S03-C02B) to detect vehicle presence and then control traffic signal. For vehicle presence detection not associated with traffic signal control see T07-A01B only.

Sense, pressure, magnetic field

## T07-C05 [1992]

#### Monitoring and alarms

Includes safety measures to prevent signal conflict, warning of signal lamp failure, etc.

## T07-C07 [1992]

#### Over-ride control system

Includes emergency services vehicle priority system. See also X22 and e.g. W05-D codes for wireless remote control.

#### T07-D

#### Vehicle guidance and control systems

Includes offboard systems that effect automatic control or guidance of land vehicle.

Car

### T07-D01 [2002]

#### Vehicle guidance systems

This code covers arrangements controlling vehicle travel direction in road traffic or off-road traffic system, normally where there is some traffic contention aspect, e.g. to prevent collisions. (See T06-B01A, X22-C05B and W02-C02 codes for inductive loop and radiating cable guidance systems also. For materials handling vehicles, see X25-F05A codes). Systems providing navigational information only, without automatic guidance control, are covered by T07-A05C and also included in X22-E06 codes for onboard aspects, and in S02-B08. Information processing aspects of vehicle guidance irrespectively are covered by T01-J07D codes.

Position, road, track, cable, near field, automatic steering

### T07-D03 [2002]

### Vehicle automatic control systems

Includes automatic regulation of vehicle speed in response to signal transmitted from roadside transmitter. See also T07-B07 if transmitter is incorporated into road sign. X22-A03B and X22-C02D codes may also need to be applied for automatic vehicle speed and braking control. Speed limit enforcement, speed control, automatic braking, by-wire

#### Т07-Е

### **Anti-collision systems**

See X22-J05 codes for self-contained on-board road vehicle systems, which are **not** coded here, and W06-A codes for 'radar' types, e.g. W06-A04H1

Ultrasonic, light, beam, distance, receive, transmit, rear, indicate, safety, warning, obstacle

#### T07-E01 [1992]

### Warning of or preventing collision

Includes warning of insufficient vehicle spacing.

## T07-E05 [1992]

### Warning of unsafe vehicle position

Includes warning of deviation from lane using some road based apparatus such as passive radar reflector or transponder embedded in road. Excludes on-board vehicle optical detection of painted white line.

White line, pattern, stud

#### T07-F

## Parking control systems

Includes indication of occupancy of parking spaces (see T07-A01B also for vehicle presence detector and T07-A01C for vehicle counting) and vehicle access control and direction of vehicle to parking space. See also T05-D codes for barrier/access control aspects per se. See X25-U02 only for vehicle handling/lifting/storing via powered equipment in multi-storey car park. Parking meters are not included-see T05-G03A.

Time, display, vehicle, car, card, fee, ticket, charge

### T07-G [1992]

## Informing driver of traffic, road and weather conditions

From 1997, the scope of this code has been widened to include warning of traffic congestion. Includes use of radio broadcasting or telephone information services. See W01-C05 codes for telephone aspects, W02 codes for radio systems (especially W02-E01B5 for RDS-based systems) and W05 for signalling in general. T07-B codes may be relevant also for signalling aspects.

## T07-G01 [1997]

## Informing driver of traffic congestion

Includes use of roadside display to inform driver of delays or transmission of information directly to onboard vehicle display (see also X22-E11). For systems also displaying alternative route to driver to avoid congestion, also see T07-A05C and X22-E06F codes.

Accident, road works, lane closure, traffic jam, diversion, signal failure, alternative route

### T07-G02 [2013]

#### Informing driver of road surface conditions

Includes informing driver of temporary road surface, resurfacing works, pot holes, raised ironwork etc. For warning of road flooding etc. see T07-G05 instead. If the monitoring system is located on the road, X25-U05 should also be applied. If the monitoring system is mounted on the vehicle, see X22 only.

## T07-G05 [1997]

## Adverse weather condition monitoring and warning

For warning driver of severe weather such as flooding so that alternative route can be used. See S03-D codes for meteorological aspects also.

Visibility, fog, mist, temperature, frost, ice, black ice, flood

## T07-H [2002]

### Intelligent highway systems

Includes general details of intelligent roadways, such as roadside infrastructure, e.g. beacons or transponders beside or embedded in road, to assist with automatic vehicle steering (see also T07-D01) or vehicle separation distance control (see also T07-D03). For vehicle control via a central traffic centre, see T07-A05 codes instead. See X21-K and X22-K codes for motor vehicle and electric vehicle to infrastructure communications and connectivity. *V2I, C-V2I* 

## T07-M [2012]

## Traffic administration and traffic modelling/design

Includes traffic planning and designing. Also see T01-J05A for administration or T01-J15X for computer design and modelling.

### T07-X

### Other electrical traffic control aspects

Includes illuminated road studs and lane markings, and electrically height adjustable road bumps. Includes warning triangle placed on road by vehicle driver, e.g. to guide emergency vehicle to accident site. See also X22-B03.

Cats eye, speed bump, warning triangle

## **Section U: Semiconductors and Electronic Circuitry**

U11: SEMICONDUCTOR MATERIALS AND PROCESSES	416
U12: DISCRETE DEVICES	446
U13: Integrated Circuits	456
U14: Memories, Film and Hybrid Circuits	461
U21: LOGIC CIRCUITS, ELECTRONIC SWITCHING AND CODING	474
U22: Pulse Generation and Manipulation	485
U23: Oscillation and Modulation	493
U24: Amplifier and Low Power Supplies	500
U25: IMPEDANCE NETWORKS AND TUNING	512

#### **U11: Semiconductor Materials and Processes**

U11 covers processing, packaging, assembly, testing and handling of the devices in U12 to U14, but note that aspects of manufacture specific to certain devices can be found in U12 and U14, under codes for LEDs, lasers, solar cells, thick film and hybrid circuits. Liquid crystal layer manufacture is included in U14-K01A1. Chip carrier, multilayer substrate circuit board and chip-on-substrate technologies are coded under integrated circuit packaging in U11-D01A, and hybrid circuits in U14-H03 and U14-H04.

#### U11-A

#### **Materials**

See U11-B03, U11-C01J, U12-B03C, U12-E01 and X12-D01C for chemical details of produced crystals, structures and organic semiconductors.

#### U11-A01

#### Semiconductor materials, dopants

Includes preparation of semiconductor material from precursors, refining and purification, new semiconductor material. For solar cell material see also appropriate code in U12-A02A2.

#### U11-A01A [1992]

#### Silicon

Silane, fluoride, chloride

## U11-A01A1 [1997]

#### **Porous silicon**

(U11-A01A) LED

#### U11-A01B [1992]

### **AIII-BV** compounds

Includes complex ternary and quaternary compounds.

Gallium arsenide, gallium phosphide, indium phosphide, gallium aluminium arsenide, gallium indium arsenide, gallium nitride, cubic boron nitride, arsinogalanes

#### U11-A01C [1992]

#### **All-BVI** compounds

Includes complex ternary and quaternary compounds.

Mercury sulphide, cadmium mercury telluride, zinc sulphide, mercury selenide, zinc selenide, cadmium selenide, cadmium telluride, cadmium sulphide

## U11-A01D [1992]

## Group IV elements and their compounds (except elemental silicon)

Silicon carbide, diamond, germanium

#### U11-A01F

## **Organic semiconductor materials**

U11-A01M

[1992]

[1992]

**Dopants** 

U11-A01X [1992]

#### Other semiconductor materials

Includes materials not covered by U11-A01A to U11-A01F codes, e.g. AIV-BVI group, AI-BIII-CVI group, AII-BIV-CV group semiconductors.

Lead sulphide, lead telluride, chalcopyrite compounds, copper indium sulphide, copper gallium selenide, chalcogenide compounds, zinc tin arsenide, cadmium germanium arsenide

#### U11-A02

## Piezoelectric, electrostrictive, magnetostrictive materials

Materials for transducers are also coded in V06-V. Includes electrets of organic materials which exhibit piezoelectric and pyroelectric properties. Also includes Ferroelectric materials

Lead, titanate, zirconate, titanium, zirconium, bismuth, permalloy, lead scandium tantalate, polyvinyl fluoride, polyvinyl chloride, polyacrylonitride

#### U11-A03

#### Liquid crystal, electrochromic materials

#### U11-A03A

[1992]

## Liquid crystal material, compounds, additives

See also V07-K10A.

Chiral, ester, phenyl, smectic, cholesteric, nematic, twisted nematic, cyano, hydroxy, mesogenic, polymer dispersed LC, PDLC, polymer network LC, halo-acetylene derivates, phenyldioxanes, ferroelectric LC

### U11-A03C [1992]

#### **Electrochromic materials**

For details regarding electrochromic display (structures, circuits) see U14-K02 codes.

#### U11-A04

### **Magnetic materials**

Magnetic materials in general are coded in V02-A. *Iron, garnet, alloy, oxide* 

#### U11-A05

#### Thick and thin film materials

Includes conductive pastes and inks, thick film resistive compositions (see also V01-A02C1). For general thick film aspects see U14-H02.

Vehicle, solvent, frit, powder, paste

#### U11-A05A [1987]

#### **Screen print solders**

Gold, silver, glass frit inks

## U11-A05B [1987]

#### Substrate materials

Includes novel composite material, new materials for multilayer ceramic substrate (see also U14-H03B1), materials for other hybrid circuit substrate (see also U14-H03C). For general integrated circuit substrate see also U11-D01A.

#### U11-A06 [1983]

## Resists for semiconductor device manufacture

(U11-A09)

Includes photosensitivity increasing substances. See V04-R01A for resists used in PCB manufacture. Apparatus for coating, processing photoresist are covered by U11-C04A1 codes.

Photolithography, photosensitive, positive, negative

#### U11-A06A [1992]

## Organic resist for semiconductor device manufacture

Quinonediazides, phenol resin

## U11-A06B [1992]

#### **Inorganic resist**

Germanium selenide, amorphous silicon

## U11-A07 [1983]

### **Encapsulants, sealants**

(U11-A09)

See V04-S01A for compounds used to encapsulate complete modules, circuit boards etc.

Resin, epoxy, coating, powder, cure, harden, glass, polythylene terephthalate

## U11-A08 [1992]

## Insulating, conductive materials

### U11-A08A [1992]

#### Insulating materials for dielectric layer

Includes preparation of material from precursors, any other aspect relating to layer structure or deposition being covered by the appropriate codes U11-C05A or U11-C05B.

[1992]

[1992]

#### U11-A08A1

## Organic insulating material for semiconductor manufacture

(U11-A05A)

Polyquinoxalines, polyquinozalones, polybenzoxazoles, polimide crosslinking agents

#### U11-A08A2

## Inorganic insulating material for semiconductor manufacture

(U11-C05B5, U11-C05B7)

Prior to 1992, coded in U11-A09 and/or U11-C05B5, or U11-C05B6, or U11-C05B7.

#### U11-A08B [1992]

## Conductive materials for semiconductor manufacture

(U11-A09, U11-D03A1, U11-D03B)

Includes metals, alloys for e.g. electrodes, wires, interconnections, lead frames. See also appropriate code in U11-D to identify use of respective metal or alloy, e.g. U11-D03A1 for beam leads, U11-D03B for interconnections, electrodes.

## U11-A08B1 [2005]

Organic conductive materials for semiconductor manufacture

#### U11-A08B2 [2005]

## Inorganic conductive materials for semiconductor manufacture

(U11-A09, U11-D03A1, U11-D03B)

#### U11-A09

## Other materials for semiconductor manufacture

Includes resins not used as encapsulants or sealants.

Adhesives

#### U11-A10 [1992]

## Abrasives, polishers, cleaners, etchants used in semiconductor manufacture

(U11-A09)

Includes materials used in mechanical and/or chemical treatment. Resist strippers are also coded here. See also U11-C06A1, U11-C07A1, or U11-C07B as appropriate.

## U11-A11 [1992]

## **Developers for microlithography**

(U11-A09, U11-C04A1)

#### U11-A12 [1997]

#### Gases for semiconductor technology

(U11-A09)

For reactive processing gases see also U11-A13. Argon, nitrogen, helium, ozone

#### U11-A13 [2005]

## Precursors for deposition process in semiconductor manufacture

(U11-A09)

Includes reactive gases, liquid and solid precursors.

### U11-A14 [2006]

#### Nano-structural materials

Use in conjunction with other U11-A codes to indicate type of material. For conductive nanostructural materials in general, see also X12 codes.

#### U11-A15 [1992]

#### **Electroluminescent materials**

(U11-A09, U14-J)

Also includes other novel luminescent materials used in semiconductor devices, e.g. phosphors, photoluminescent and fluorescent materials. See U14-J codes for electroluminescent devices and displays (structure, circuits, manufacture).

#### U11-A15A [2002]

#### Inorganic electroluminescent materials

#### U11-A15B [2002]

#### **Organic electroluminescent materials**

Includes polymeric and organometallic complexes.

## U11-A16 [2007]

### Immersion lithography fluid

See U11-C04K codes for immersion lithography apparatus and method.

#### U11-B

#### **Bulk crystal growth**

Includes methods of growing monocrystals of silicon, germanium and other homogeneous materials except those covered by subclass U11-B03 below. See U11-C01J1 for epitaxy and U11-C01H for liquid phase deposition on substrate.

Single crystal, monocrystalline, polycrystalline

### U11-B01 [1983]

## Pulling from melt crystal growth for semiconductor manufacture

Includes Czochralski method.

CZ pull, boules, liquid encapsulated Czochralski, LFC

#### U11-B02 [1987]

Zone refining, other

#### U11-B02A [1992]

## Zone refining crystal growth for semiconductor manufacture

Includes floating zone method.

Zone melting

### U11-B02B [1997]

### Crystal growth from melt in crucible

(U11-B02X) Bridgman

#### U11-B02C [2002]

### Spherical crystal growth methods

Includes e.g. droplet method. For spherical ICs see U13-D06.

### U11-B02X [1992]

## Other crystal growth methods for semiconductor manufacture

Includes vertical, horizontal gradient freeze method, floating fluidised bed method. For ribbon techniques, edge defined film growth, see U11-B04.

### U11-B03 [1987]

## Characterised by crystal material and crystallographic orientation

Includes chemical techniques rather than apparatus details. This code is usually used in conjunction with other codes, whenever crystallographic structure is emphasised.

Oriented films

#### U11-B03A [1992]

#### **Bulk crystal growth of AIII-BV compounds**

Includes complex ternary and quaternary compounds.

Gallium arsenide, gallium phosphide, indium phosphide, gallium aluminium arsenide, gallium indium arsenide, gallium nitride, cubic boron nitride

## U11-B03B [1992]

## **Bulk crystal growth of All-BVI compounds**

Includes complex ternary and quaternary compounds.

Mercury sulphide, cadmium mercury telluride, zinc sulphide, mercury selenide, zinc selenide, cadmium selenide, cadmium telluride, cadmium sulphide

### U11-B03C [1992]

## **Bulk crystal growth of AIV elements and their compounds**

Excludes elemental silicon.

Carbon, germanium, silicon carbide

#### U11-B03X [1992]

## Bulk crystal growth of other semiconductor compounds

Includes bulk growth of elemental silicon crystal, or bulk growth of any other semiconductor material not mentioned in U11-B05 section.

#### U11-B04 [1987]

# Ribbon techniques, pulling/casting from melt for semiconductor device manufacture

Includes edge-defined film-fed crystal growth process, forming dendritic web e.g. for photovoltaic applications.

EFG, monocrystal, polycrystal

### U11-B05 [2002]

### Apparatus details for crystal growth

U11-B05A [2002]

Crucibles, crystal holders

U11-B05B [2002]

#### Crystal pulling mechanisms

Includes pulling-rods, pull-seeds etc.

## U11-B05C [2002]

Heating/cooling arrangements for growth vessel, crucible

#### U11-C

## Substrate processing for semiconductor device manufacture

In U11-C, each sub-group (-C01, -C02, -C03 etc.) covers a distinct category of processing e.g. deposition, doping, heat treatment etc. and is further divided to indicate techniques used for a particular device or technology, such as FET or gallium arsenide. For example, electrode manufacture for gallium arsenide devices is coded

in U11-C05E(-1 or -2) and U11-C05F3; in another example, forming smoothing insulating layer over interconnection structure is coded in U11-C05B9 and U11-C05D1. Aspects regarding processing apparatus are covered by U11-C09 codes.

#### U11-C01

## Deposition of active materials (e.g. semiconductors)

U11-C01A to U11-C01H are applied for deposition using specified apparatus, with details about apparatus covered by U11-C09 codes. U11-C01J codes are used to indicate details of substrates or the nature of deposited active layers. Note that U11-C01J1 is used only when epitaxy is emphasised as an important aspect of the invention. For methods which imply epitaxial deposition e.g. molecular beam epitaxy, liquid phase epitaxy, U11-C01J1 is not used.

#### U11-C01A

#### Physical deposition of semiconductor layer

### U11-C01A1 [1987]

## Thermal evaporation for deposition of semiconductor layer

Arc evaporation, thermal vacuum evaporation using e.g. resistive heating, or inductive (RF) heating.

#### U11-C01A2 [1987]

## Molecular beam, atomic beam, ion beam deposition of semiconductor layer

Includes cluster ion beam deposition. For reactive ion beam deposition see U11-C01B.

MBE

#### U11-C01A3 [1997]

## **Sputtering deposition of semiconductor layer**

(U11-C01A9)

Includes deposition by glow/RF discharge, magnetron sputtering. Prior to 1997 sputtering was covered in U11-C01A9.

## U11-C01A9 [1987]

#### Other methods of physical deposition

Includes also laser ablation.

#### U11-C01B

## Chemical vapour deposition of semiconductor layer

For apparatus see U11-C09B and in case of plasma enhanced CVD and electron cyclotron resonance CVD, U11-C09C. Also includes reactive ion beam deposition and seeded crystallisation deposition techniques. Prior to 199201 for PECVD see U11-C01A9 and U11-C01B. Also cover Vapour phase epitaxy (VPE).

CVD, low pressure, LPCVD, PECVD, photochemical, PhCVD, atmospheric pressure, APCVD, ECRCVD, hot filament, HFCVD, metal-organic, MOCVD, organometallic, OMCVD

#### U11-C01B1

[1987]

## Beam/mask assisted CVD of semiconductor layer

Using beam/mask defining areas of localised reactive deposition.

Laser assisted, LACVD

#### U11-C01C

[1987]

#### Large surface area deposition

E.g. physical or chemical vapour deposition for solar cells (see also U12-A02A3), semiconductor memories arrays (see also U11-C18B5).

Roll to roll, continuously moving web, continuous belt

#### U11-C01D

[1987]

## Other methods of deposition of semiconductor layer

(U11-C01X)

### U11-C01F

[1992]

#### Langmuir Blodgett method

(U11-C01D)

Mono-molecular films

#### U11-C01H

[1992]

## Liquid phase deposition of semiconductor layer

(U11-C01D)

Includes sliding or sloping position liquid phase epitaxy, electrophoresis, atomised films, conversion of insulating layer (e.g. oxide) into semiconductor by immersion into solution.

LPE

#### U11-C01J

[1987]

## Nature/structure/material/composition of active layers

When method of deposition is specified, U11-C01J codes are used in conjunction with codes above (-C01A,-C01B, etc.).

#### U11-C01J1

[1987]

#### **Epitaxial growth of semiconductor layer**

Only used when epitaxy is emphasised as essential for method of deposition or structure described. For epitaxy by seeded crystallisation see also U11-C01B and U11-C01J8. This code is **not** used for methods of deposition which imply epitaxy e.g. molecular beam epitaxy, liquid phase epitaxy. Single crystal layer, atomic layer epitaxy, ALE

#### U11-C01J2

[1987]

## Semiconductor amorphous/polycrystalline film

Includes specific crystalline form e.g. HSG, spherical grain.

Thin film

#### U11-C01J3

[1987]

## Deposition of semiconductor layers other than silicon

### U11-C01J3A

[1992]

#### **Deposition of AIII-BV compound layer**

Includes complex ternary and quaternary compounds.

Gallium arsenide, gallium phosphide, indium phosphide, gallium aluminium arsenide, gallium indium arsenide, gallium nitride, cubic boron nitride

#### U11-C01J3B

[1992]

### **Deposition of AII-BVI compound layer**

Includes complex ternary and quaternary compounds.

Mercury sulphide, cadmium mercury telluride, zinc sulphide, mercury selenide, zinc selenide, cadmium selenide, cadmium telluride, cadmium sulphide

#### U11-C01J4

[1987]

Deposition of other inorganic semiconductor material layers

#### U11-C01J4A

[1997]

## Deposition of group IV element/compound layer

(U11-C01J4)

Silicon carbide, diamond, germanium

#### U11-C01J5

[1987]

#### Polymer, organic film structures

Macromolecular

#### U11-C01J6

[1987]

Heterojunction, superlattice structures, quantum wells, wires, boxes manufacture

#### U11-C01J6A

[2006]

#### Strained layers and their manufacture

Manufacture of strained layers to enhance material properties such as charge-carrier mobility. For device with strained layer structure see also U12-F01B1A.

Strained silicon, strained-layer super lattice, strained layer, relaxed layer, SLS

#### U11-C01J7\*

[1987-1996]

## Other active layers, electroluminescent, ferroelectric

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 1996. Includes layers e.g. for bubble memories, SAW devices. For electroluminescent layer deposition see also U14-J01. For ferroelectric layer deposition e.g. for capacitor manufacture, see U11-C05G1B and U11-C05B codes.

#### U11-C01J8

[1987]

#### Characterised by substrate details

E.g. for solar cells, thin films, rugged, trenched substrate, three-dimensional structures with layers built up to include isolation regions. Includes deposition with lattice adaptation on substrate being crystalline insulating material or semiconductor material, also deposition on substrate with particular geometry e.g. grooves, holes. For selective, lateral epitaxy by seeded crystallisation see also U11-C01B and U11-C01J1. Covers also separation of epitaxial device layers (see also U11-C01J1) from substrates on which they are grown (see also U11-C04D1).

Sandwich wafer

## U11-C01J8A

[1997]

#### Substrate bonding

(U11-C01X)

Covers bonding of semiconductor layers to insulation or semiconductor substrate, forming protection film on back of wafer to prevent autodoping, (previously coded in U11-C01X). For silicon on insulator structures see also U11-C08A6. *SOI* 

#### U11-C01J8B

[1997]

### Preventing lattice mismatch

(U11-C01J8)

Includes forming buffer layer for lattice compatibility.

#### U11-C01X

#### Other aspects of deposition

Covers deposition using vibrating substrate, e.g. in liquid phase deposition (see also U11-C01H), etc.

#### U11-C02

## Doping for semiconductor device manufacture

For introducing impurities (dopant) during growth or deposition of material, U11-C02 should be used in conjunction with appropriate codes in U11-B or U11-C. Codes in this sub-class should be used in conjunction which each other. For example, ion implantation of gallium arsenide layers for MESFET using beams oriented at a certain angle is coded in U11-C02B2, U11-C02J1A and U11-C02J6 (if structure of device is novel, or in order to identify type of device, U12 codes will be also used).

#### U11-C02A

## Diffusion, apparatus and associated techniques

## U11-C02A1

[1987]

## **Diffusion apparatus**

Electrical aspects of diffusion furnaces are also covered by X25-C codes.

#### U11-C02A2

[1987]

## Diffusion techniques, dopant layer structures

Used only if special conditions for dopant diffusion or structures are emphasised, e.g. using masks for edge diffusion or under slanted angle. Includes diffusion from solid or gaseous phase dopant source in contact with semiconductor surface.

#### U11-C02B

## Ion implantation, apparatus and associated techniques

Ion injection, ion bombardment

#### U11-C02B1

[1987]

## Ion implantation apparatus

For novel aspects of ion beam apparatus, see also V05-F05A7C.

Ion source, ion beam generator, focussing, deflection, control, processing chamber

## U11-C02B2 [1987]

#### Ion implantation techniques

Used only if special ion implantation conditions are emphasised, e.g. using masks, implantation at certain angle between ion beam and surface plane or crystal planes (to avoid channelling), etc. *Recoil implantation* 

#### U11-C02J

Doping aspects relating to substrate, structures, layers, devices being processed

#### U11-C02J1 [1987]

Doping non-silicon semiconductor substrate

## U11-C02J1A [1992]

#### **Doping AllI-BV compounds**

Includes complex ternary and quaternary compounds

Gallium arsenide, gallium phosphide, indium phosphide, gallium aluminium arsenide, gallium indium arsenide, gallium nitride, cubic boron nitride

#### U11-C02J1B [1992]

### **Doping All-BVI compounds**

Includes complex ternary and quaternary compounds.

Mercury sulphide, cadmium mercury telluride, zinc sulphide, mercury selenide, zinc selenide, cadmium selenide, cadmium telluride, cadmium sulphide

## U11-C02J1C [1992]

#### Doping AIV elements and their compounds

Germanium, diamond, silicon carbide

#### U11-C02J1X [1992]

Doping other semiconductor materials

#### U11-C02J2 [1987]

**Doping heterojunction structures** 

## U11-C02J3 [1987]

## Doping non-semiconductor layers, insulators, polymers

Includes e.g. implanting wiring surface prior to patterning in order to prevent formation of hillocks (see also U11-C05D3, U11-D03B2).

Macromolecular

### U11-C02J4 [1987]

#### Other techniques and apparatus

Includes doping aspects using wave or particle treatment. Includes alloying of doping materials with semiconductor body.

Radiation-enhanced diffusion

## U11-C02J5 [1987]

### Doping for bipolar device manufacture

Includes doping of electrode regions, formation of buried layers.

Shallow junction

#### U11-C02J6 [1987]

## **Doping for FET manufacture**

Includes doping of electrode regions e.g. using gate electrode as mask for forming source and drain.

Channel stop implants, LDD

#### U11-C02J7 [1987]

## Doping for other semiconductor device manufacture

Capacitor, LED, solar cells

### U11-C02X\* [1988-1996]

#### Other doping

\*This code is now discontinued, but remains searchable and valid for records from 1988 to 1996. See U11-C02J4 from 1997 for alloying aspects.

#### U11-C03

## Heat, electrical, radiation treatment of semiconductor body; Apparatus

Codes from U11-C03B to U11-C03D, representing various treatment techniques, are used in conjunction with U11-C03J1 to U11-C03J3 codes for structures, and/or U11-C03J8 codes for specific materials

## U11-C03A [1987]

### Heat, radiation, furnace treatment

Includes temperature control systems and apparatus for semiconductor manufacture, or substrate in vacuum processing apparatus, e.g. sputtering, CVD or etching apparatus (see also appropriate codes in U11-C09). Electrical aspects of furnaces are covered by X25-C codes.

Heater, temp, control, IR, lamp

U11-C03B [1987]

### Electron/ion beam treatment of semiconductor

For apparatus, see also V05-F05A codes.

U11-C03C [1987]

## Other type of treatment of semiconductor

Plasma, hydrogen plasma, electrical pulse, mechanical pulse

U11-C03D [1992]

Laser treatment of semiconductor

(U11-C03C)

U11-C03E [1997]

#### **Radiation treatment of semiconductor**

(U11-C03B, U11-C03C)

Includes bombardment with wave or particle radiation.

Radioactive pulse

U11-C03J [1987]

Nature of process/techniques, structure/material being treated

U11-C03J1 [1987]

Recrystallising semiconductor layer

(H01L-021/324)

U11-C03J2 [1987]

Annealing, defect control, gettering of semiconductor

U11-C03J2A [1992]

Annealing semiconductor layer

Rapid thermal annealing, RTA

U11-C03J2B [1992]

## Gettering, defect control of semiconductor

Includes introducing internal imperfections, strained layers and methods for external gettering e.g. honing, sandblasting, backside damage. Covers also deep level dopants for lifetime carrier control, killer dopant (see also U11-C02 codes where doping techniques or structures are novel). Intrinsic gettering, bulk micro defects

U11-C03J3 [1987]

### Blanket treatment of semiconductor

E.g. forming punch through implants to reduce short-channel effects in submicron CMOS (see also U11-C02B2, U11-C02J6).

U11-C03J4 [1987]

Heat/radiation treatment for very large surface area

E.g. for solar cell.

U11-C03J5

[1987]

Beam treatment of localised areas on surface

U11-C03J6 [1987]

Semiconductor heat/radiation treatment using masks, structures on substrate

U11-C03J7 [1987]

# Producing localised depth profile, and other structures by semiconductor treatment

Includes e.g. potential barrier diffusion region below deep contact diffusion to suppress software errors produced by radiation (see also appropriate U11-C02 codes and U14-A11), inhibiting dopant diffusion in semiconductor (e.g. silicon) by using preamorphising agent (e.g. germanium) to create shallow junction with lateral containment (see also U11-C02 codes).

U11-C03J8 [1992]

Heat/radiation treatment of non-silicon semiconductor material

U11-C03J8A [1992]

#### **Heat/radiation treating AIII-BV compounds**

Includes complex ternary and quaternary compounds.

Gallium arsenide, gallium phosphide, indium phosphide, gallium aluminium arsenide, gallium indium arsenide, gallium nitride, cubic boron nitride

U11-C03J8B [1992]

#### **Heat/radiation treating All-BVI compounds**

Includes complex ternary and quaternary compounds.

Mercury sulphide, cadmium mercury telluride, zinc sulphide, mercury sulphide, zinc selenide, cadmium selenide, cadmium telluride, cadmium sulphide

U11-C03J8C [1992]

## Heat/radiation treating AIV elements and their compounds

Diamond, silicon carbide

### U11-C03J8X

[1992]

Heat/radiation treating of other semiconductor materials

#### U11-C04

## Lithography (photo-, beam-, etc.), masks, techniques, exposure and alignment

The following codes are no longer applied but remain valid for records prior to 199201: U11-C04A2, U11-C04A3, U11-C04A4, U11-C04A5, U11-C04C1.

#### U11-C04A

[1983]

Resist processing, mask manufacture and inspection, and exposure control in microlithography

(G03F-007)

#### U11-C04A1

[1987]

## Cleaning, rinsing, spin coating, developing, inspection for microlithography

From 1992 all cleaning processes not related to microlithography are covered by U11-C06A1B.

#### U11-C04A1A

[1992]

## Wafer preparation for resist coating

Includes cleaning, rinsing, drying, baking, priming or silylating.

#### U11-C04A1B

[1992]

## Wafer coating with resist for microlithography

Includes forming 'charge-up' preventing layer on top of resist.

Spin coating

#### U11-C04A1C [1992]

## Developing, resist stripping (wet process) for microlithography

For developer materials see U11-A11.

#### U11-C04A1D

[1992]

## Plasma oxidising or ashing for microlithography

Includes resist selective removal by e.g. laser, ion beam. For apparatus, see U11-C09C.

### U11-C04A1E

[1992]

## Testing, measurement and Inspection of mask for microlithography

For inspection of lithographic layers see also U11-F01B code. For all other measurement, testing or inspection for microlithography see also U11-F01 and S02/S03 codes as appropriate.

#### U11-C04A1F

[2005]

#### Resist processing

Includes all post wafer coating processes to prepare resist on wafer for lithographic exposure.

Hard bake, soft bake, surface treatment, hydrophilization, solvent evaporation

#### U11-C04A1H

[1997]

## Anti-reflective layers for microlithography

See also U11-C04E1.

#### U11-C04A2\*

[1987-1991]

#### **Optical masks**

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 1991. From 1992 see U11-C04E2.

Shielding layer

### U11-C04A3\*

[1987-1991]

## X-ray masks

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 1991. From 1992 see U11-C04H2.

#### U11-C04A4\*

[1987-1991]

#### Other masks

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 1991. Includes masks e.g. for sputter apparatus. From 1992 see U11-C04F2, U11-C04G2.

## U11-C04A5\*

[1987-1991]

## Electron/particle beam apparatus

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 1991. From 1992 see U11-C04F1 for electron beam apparatus, and U11-C04G1 for ion beam apparatus.

#### U11-C04A6

[1987]

### Control of exposure apparatus

From 1992 this code is used in conjunction with U11-C04E1 for control of optical exposure light source (e.g. laser, lamp), or with U11-C04F1 for control of electron beam apparatus, or with U11-C04G1 for control of ion beam apparatus, or with U11-C04H1 for control of X-ray apparatus.

## U11-C04A7 [2005]

## Other lithographic aspects for microlithography

Includes e.g. biological process. For Micro- and Nano imprint lithography from 2005 see U11-C04J codes.

U11-C04B [1983]

**Alignment** 

U11-C04B1 [1987]

Producing alignment marks on substrate, mask and mark details

U11-C04B2 [1987]

## Mark detection and position control signal generation in microlithography

See also S02-A03 codes for optical systems, in particular S02-A10D2 for checking of alignment. *Optical recognition, through-the-lens, TTL* 

U11-C04B3 [1987]

## Alignment for beam equipment in microlithography

(H01L-021/027, G03F-007/20)

U11-C04C [1983]

**Exposure for microlithography** 

U11-C04C1\* [1987-1991]

#### **Exposure source details**

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 1991. From 1992 see U11-C04 (-E1,-F1,-G1,-H1) codes, as appropriate for type of exposure source used in lithographic process.

### U11-C04C2 [1987]

#### Focussing control for exposure apparatus

This code is used in conjunction with other U11-C04 (-E1,-F1,-G1,-H1) codes, depending on type of exposure source used, e.g. lens focussing in laser microlithographic system is coded in U11-C04C2 and U11-C04E1.

Optical system adjustment, lens positioning

#### U11-C04C3 [1987]

## Vertical alignment and tilt control for exposure apparatus

Through-the-lens, TTL

### U11-C04C4 [2002]

#### Reticle and stage drive mechanisms

This code is used in conjunction with other U11-C04 (-E1,-F1,-G1,-H1) codes, depending on type of exposure source used.

Step-and-repeat, wafer stepper scan.

#### U11-C04C5 [2005]

## Vibration control and compensation for microlithography

Includes e.g. reaction frames, balance mass, and mounts.

## U11-C04D [1987]

## Masking techniques for microlithography

Relates to lithographic structures on semiconductor or active layer. Until 200701 includes e.g. lift-off, sequences of masking and etching techniques to produce patterned structures on integrated circuit, and masking techniques used in non-microlithographic steps of semiconductor manufacture. From 200701 see U11-C06C for all non-microlithographic masking, along with other relevant codes, e.g. U11-C05D3 for masking techniques applied to interconnection manufacture, U11-C07D1 for masks used in etching fine details, U11-C18D and U14-K01A1C for masks used in optical filter manufacture. for LCD, etc. Pattern transfer, Dissolving mask

#### U11-C04D1 [1987]

## Conformal masks, lift-off techniques for microlithography

#### U11-C04D2 [1987]

## Non-mask fine line width production for microlithography

Includes e.g. use of holograms, diffraction grating, phase segregation of metals.

Two beam interference exposure

#### U11-C04E [1992]

## Photolithography for semiconductor manufacture

## U11-C04E1 [1992]

## Apparatus and method for photolithography

(U11-C04C, U11-C04C1)

Includes exposure using optical and non-ionising ultraviolet radiation (for exposure using ionising ultraviolet radiation e.g. EUV see U11-C04H codes). For control and focusing aspects see also U11-C04A6 and U11-C04C2 respectively. Includes e.g. exposing peripheral portion of wafer.

Laser, UV, lamp, stepper, light source, projection, dummy wafer

### U11-C04E1A [2005]

## Optical elements and systems for photolithography

Includes individual lenses and mirrors as well as multiple lens/mirror systems, and other non-electrical optical elements for beam focus.

#### U11-C04E2 [1992]

## **Optical masks for photolithography**

(U11-C04C2)

Includes mask repair, pellicle protection, case holders for masks (see also U11-F02), mask inspection.

Phase shifting, photomask, reticle

## U11-C04F [1992]

## Electron beam lithography for semiconductor manufacture

#### U11-C04F1 [1992]

## Apparatus and method for electron beam lithography

(U11-C05A5, U11-C04C, U11-C04A6)

For control and focusing aspects see also U11-C04A6 and U11-C04C2 respectively. Includes methods of avoiding 'charge up' of resist. See V05-F codes for novel details of apparatus and methods of apparatus monitoring, operation and control. Beam modulation, electrodes

### U11-C04F2 [1992]

## Masks for electron beam lithography

(U11-C04A4)

Also see V05-F codes for novel electron beam lithography masks.

Stencil mask

#### U11-C04G [1992]

## Ion beam lithography for semiconductor manufacture

### U11-C04G1 [1992]

## Apparatus and method for ion beam lithography

For control and focusing aspects see also U11-C04A6 and U11-C04C2 respectively. See V05-F codes for novel details of apparatus and methods of apparatus monitoring, operation and control.

#### U11-C04G2 [1992]

#### Masks for ion beam lithography

(U11-C04A4)

Also see V05-F codes for novel ion beam lithography masks.

Stencil mask

## U11-C04H [1992]

## X-ray lithography for semiconductor manufacture

Roentgen

### U11-C04H1 [1992]

## Apparatus and method for X-ray lithography

(U11-C04C, U11-C04C1)

Includes exposure using X-ray, soft X-ray and ionising ultraviolet radiation (for exposure using non-ionising ultraviolet radiation e.g. DUV see U11-C04E codes). For control and confinement aspects see also U11-C04A6 and U11-C04C2 respectively. See V05-E and V05-F codes for novel details of apparatus and methods of monitoring, operation and control.

Extreme ultraviolet, EUV

#### U11-C04H2 [1992]

### X-ray masks

(U11-C04A3)

Also see V05-E08 codes and V05-F codes for novel X-ray, soft X-ray and EUV lithography masks.

#### U11-C04J [2005]

## Imprint lithography for semiconductor manufacture

Includes use of stamps and presses to form pattern.

Soft lithography

#### U11-C04J1 [2005]

Stamp design and manufacture

#### U11-C04J2 [2005]

**Process methods and control** 

## U11-C04K [2005]

#### **Immersion Lithography**

Includes all apparatus and methods for exposure through a liquid. See other U11-C04 codes for type of exposure source used. For immersion fluid composition see U11-A16.

### U11-C04K1 [2007]

#### Fluid management apparatus

Includes all apparatus associated with handling, processing and delivering fluids for immersion lithography.

## U11-C04K2 [2007]

#### Fluid management methods

Includes all methods and processes for fluid manipulation, including measurement and monitoring aspects (see also appropriate S02 and S03 codes)

#### U11-C05

#### **Layer formation**

Includes insulating, passivating and conductive layers.

#### U11-C05A

### **Organic insulating layer formation**

Prior to 1992 this code included new materials as well as methods and structures related to organic insulating layer. From 1992 see U11-A08A1 for new materials. See also other relevant codes, e.g. U11-C05B9 when organic layer is used for planarising interconnection structures, U14-H03A1 or U14-H03A4B4 when used for packaging mountings or multichip interconnect.

#### U11-C05A1 [1987]

#### Combined with organic materials

#### U11-C05B

#### Inorganic insulating layer deposition

U11-C05B1 to U11-C05B4 are used where apparatus and associated techniques are emphasised (see also U11-C09 codes for apparatus details); U11-C05B5 to U11-C05B8 are used for type of deposited material and substrate; e.g. CVD of a silicon dioxide layer on gallium arsenide substrate is coded in U11-C05B2, U11-C05B7 and U11-C05B8. For novel materials see U11-A08A2.

#### U11-C05B1 [1983]

## Chemical reaction of semiconductor substrate for insulating layer formation

E.g. oxide, nitride.

Oxidation, thermal oxidation, anodic oxidation, nitridation

### U11-C05B2 [1987]

## Insulating layer deposition using physical/chemical vapour apparatus

For apparatus details see also U11-C09 codes.

#### U11-C05B3

[1987]

## Localised deposition of insulating layer

Includes e.g. deposition using beam induced CVD or masks.

#### U11-C05B4

[1987]

## Modifying materials deposited on substrate (metallic oxides)

Includes e.g. oxidation of metallic layer (e.g. forming alumina film by oxidation of aluminium layer).

#### U11-C05B5

[1987]

## Deposited inorganic nitrogen containing insulating layers

Includes all nitrides of silicon and silicon oxide using methods in U11-C05B1, U11-C05B2 or U11-C05B3. Silicate glasses and silicon oxides without nitride content are covered by U11-C05B7.

#### U11-C05B6

[1987]

### Chemically altered deposited layers

Alumina layer, metal nitrides, metal oxides, hafnium oxide

#### U11-C05B7

[1987]

## Chemically altered semiconductor material and other nitrogen free dielectric layers

Includes all silicate glasses and silicon oxides without nitride content. Includes also fluoride type dielectric layers. It also covers deposition of ferroelectric film e.g. for capacitor dielectrics.

Phospho-silicate glass, PSG, BPSG, spin on glass, SOG, calcium fluoride, barium strontium fluoride, calcium strontium fluoride, silicon dioxide

## U11-C05B8

[1987]

## Non-silicon semiconductor substrate for insulating layer deposition

#### U11-C05B8A

[1992]

## AIII-BV compound substrate for insulating layer deposition

Includes complex ternary and quaternary compounds.

Gallium arsenide, gallium phosphide, indium phosphide, gallium aluminium arsenide, gallium indium arsenide, gallium nitride, cubic boron nitride

#### U11-C05B8B

#### [1992]

## All-BVI compound substrate for insulating layer deposition

Includes complex ternary and quaternary compounds.

Mercury sulphide, cadmium mercury telluride, zinc sulphide, mercury selenide, zinc selenide, cadmium selenide, cadmium telluride, cadmium sulphide

### U11-C05B8C

#### [1992]

## AIV element/compound substrate for insulating layer deposition

Silicon carbide, diamond

#### U11-C05B8X

[1992]

## Other non-silicon substrate for insulating layer deposition

#### U11-C05B9

[1987]

## Characterised by sequence of steps to produce insulating layer structure, shape

Includes e.g. dielectric layer applied over interconnection structure (see also U11-C05D1), planarisation layers, passivation films, patterning, etching dielectric layers with metallic interconnection aspects (see also other relevant codes e.g. U11-C05D1, U11-C05D3). Also covers layers to prevent soft errors (inside device, rather than package adaptations). Includes post-treatment of insulating layers.

#### U11-C05B9A

[1997]

#### Planarisation/protection

(U11-C05B9)

Includes e.g. dielectric layer applied over interconnect structure (see also U11-C05D01), planarisation layers, patterning etching dielectric layers with metallic interconnect aspects (see other relevant codes e.g. U11-C05D1, U11-C05D3). Also covers passivation films, films for moisture protection, etching stop layers and films for radiation protection.

Smoothing, field oxide

#### U11-C05B9B

[1997]

## Insulating side wall formation

(U11-C05B9)

Includes forming side wall spacers.

#### U11-C05B9C

[1997]

## **Buried insulating film formation**

(U11-C05B9, U11-C08A1) Buried layer

## U11-C05C

## Electrode and interconnection layer formation

Includes methods of deposition of conductive layers. For apparatus details see U11-C09 codes. From 1997, U11-C05C codes cover specific deposition methods for superconductive films (see also U14-F02A). Prior to 1997 for superconductive film deposition see U11-C01 codes.

Silicide, polysilicon, metallisation

#### U11-C05C1\*

[1983-1986]

#### Interconnections

\*This code is now discontinued, but remains searchable and valid for records from 1983 to 1986. See U11-C05D from 1987.

#### U11-C05C2

[1987]

#### Physical deposition of conductive layer

E.g. sputter, thermal evaporation, electron beam evaporation, etc. For apparatus see U11-C09A. *Magnetron sputter deposition, refractory metal silicide* 

#### U11-C05C3

[1987]

## Reactive chemical deposition of conductive layer

For apparatus, see U11-C09B. *CVD* 

### U11-C05C4\*

[1983-1986]

#### **Electrodes**

\*This code is now discontinued, but remains searchable and valid for records from 1983 to 1986. See U11-C05E from 1987.

Silicide

#### U11-C05C5

[1987]

## Localised deposition of conductive layers, selective deposition

Covers beam induced deposition or use of masks. *Anisotropic directional deposition* 

### U11-C05C6

[1987]

## Other methods of forming conductive layer

Includes electroplating, transformation of deposited layer, (e.g. semiconductor into conductor, or insulator into superconductor), deposition by solution process (electroless by chemical reaction) etc. For doping aspects related to permanent or temporary change of conductivity, e.g. reduction of contact resistance, see also U11-C02J3.

## U11-C05C7 [1987]

# Chemical, metallurgical details of conductive layers, using CVD, sputter deposition

Includes pre or after-treatment of deposited layer or substrate on which conductive layer is deposited.

### U11-C05C9 [1983]

## Other aspects of conductive layer formation

From 198701 for formation of resistive layers and bumps see U11-C05G.

#### U11-C05D [1987]

#### Interconnections

(U11-C05C1)

## U11-C05D1 [1987]

#### Nature of material

Mainly used for multilayer wiring insulating layers, e.g. for smoothing surface topography. Covers use of dielectric layers in multilayer interconnects both in integrated circuit chips and in multichip modules. Includes interlayer insulating film for mutually insulating wires (including electrodes) arranged on same plane or upper and lower wires. Includes shaping of insulator around deposited interconnection (see also U11-C05B9).

#### U11-C05D2 [1987]

## Multilayer metallisation manufacturing techniques

Includes sequence of steps to result in multilayer structure i.e. deposition, shaping in which the techniques may be routine, but succession of steps or final structure is novel. Covers metallic layer deposited simultaneously over two differing apertures on two different levels. Includes Damascene processes.

## U11-C05D3 [1987]

### Lateral/vertical interconnection manufacture

Includes lithographical aspects, etching, deposition for shaping conductor, through holes to accommodate contacts to devices and contacts between levels. For opening, etching vias, windows into dielectric over region to be contacted see also U11-C07D2. Also covers filling of contact holes with conductive material or forming conductive plugs in windows. For 'back-side metallisation', vias, substrate through holes see also other relevant codes, e.g. U11-C05G2, U11-D03B3, U11-D03C3. For metallurgical aspects, e.g. electromigration, diffusion barriers, low resistance interconnection, see also U11-D03B2. Includes dual-damascene processes.

Buried interconnections, windows, contacts, step coverage, runners

#### U11-C05D4 [1987]

## Interconnections to semiconductor device electrodes

Includes metallisation that facilitates electric current conduction to and from semiconductor device (see also U11-C05E, U11-C05F codes). For metallurgy related to e.g. electromigration, low resistance interconnections, see also U11-D03B2.

### U11-C05E [1987]

#### Electrode manufacture

(U11-C05C4)

Includes metallic, dielectric and doped semiconductor regions that form electrode with or without electrical connection thereto. For contacts to electrodes see also U11-C05D4, for metallurgical aspects see also U11-D03B2. For electrode bump see U11-C05G2B and/or U11-D03B1. If electrode structure is novel see also U12-E02.

#### U11-C05E1 [1987]

## Ohmic, Schottky etc. electrode manufacture

For contacts to semiconductor device electrodes see also U11-C05D4, for metallurgical aspects see also U11-D03B2.

#### U11-C05E2 [1987]

## Geometric structure miniaturisation for electrode manufacture

Includes e.g. submicron gate, T-shaped gate manufacture.

### U11-C05E3 [1992]

### Self-alignment for electrode manufacture

Used e.g. for self-aligned silicon gate manufacture (see also U11-C05F1), self-aligned emitter-base contacts in bipolar transistor (see also U11-C05F2).

#### U11-C05F [1987]

Electrode manufacture for specific device, semiconductor substrate

U11-C05F1 [1987]

**Electrode manufacture for FET** 

U11-C05F1A [2005]

#### Gate insulation layer manufacture

Includes forming insulated gate structures for all MOS gated devices.

#### U11-C05F2 [1987]

#### Electrode manufacture for bipolar device

Includes electrode manufacture for diodes, bipolar transistors.

#### U11-C05F2A [1992]

Electrode manufacture for bipolar device with polysilicon emitter

U11-C05F3 [1987]

Electrode manufacture for non-silicon semiconductor

#### U11-C05F3A [1992]

## Electrode manufacture for AIII-BV substrate

Includes complex ternary and quaternary compounds.

Gallium arsenide, gallium phosphide, indium phosphide, gallium aluminium arsenide, gallium indium arsenide, gallium nitride, cubic boron nitride

### U11-C05F3B [1992]

#### Electrode manufacture for AIV substrate

Diamond, germanium, silicon carbide

#### U11-C05F3D [1992]

## Electrode manufacture for All-BVI substrate

Includes complex ternary and quaternary compounds.

Mercury sulphide, cadmium mercury telluride, zinc sulphide, mercury selenide, zinc selenide, cadmium selenide, cadmium telluride, cadmium sulphide

## U11-C05F3X [1992]

Electrode manufacture on other semiconductor substrate

U11-C05F4 [1987]

#### Electrode manufacture for heterojunction

Heterojunction gate

U11-C05F5 [1987]

Electrode manufacture for thin film transistor

U11-C05F6 [1987]

## Electrode manufacture for other devices e.g. SAW, CCD, semiconductor lasers, photovoltaic, superconducting devices

This code is used in conjunction with other relevant codes to identify type of device, e.g. U14-G for SAW, U13-A02 for CCD, U14-F for superconducting devices, etc. It also includes electrode manufacture for resistors (see also U11-C05G1A), capacitors (see also U11-C05G1B).

#### U11-C05G [1987]

#### Passive component manufacture

Includes formation of resistive layers, contact bumps, fuses.

#### U11-C05G1

#### **RLC** component manufacture

#### U11-C05G1A [1992]

#### Resistor manufacture

For details regarding resistor structure see also U12-C03.

## U11-C05G1B [1992]

#### **Capacitor manufacture**

For details regarding capacitor structure see also U12-C02 codes.

#### U11-C05G1C [1992]

#### Inductor manufacture

For details regarding inductor structure see also U12-C03.

## U11-C05G2 [1987]

Fuses, contact bumps and pads, vias manufacture for semiconductor device

# U11-C05G2A [1992]

#### **Fuses manufacture**

Includes antifuse manufacture. See also U12-C04 for fuse structure after 2002. Prior to 2002 see U11-D03B2A.

#### U11-C05G2B [1992]

# Contact bumps, bonding pads manufacture

See also U11-D03B1 for metallurgical details.

#### U11-C05G2C [1992]

# Vias, pillars, studs manufacture

See also U11-C05D3, U11-D03C3, U11-D03B9. Includes e.g. back side metallisation (see also U11-D03B9) and metallised vias through ceramic substrate for HF circuits.

'plated through holes', plug

# U11-C05X [1992]

# Other aspects of layer formation

#### U11-C06

Mechanical treatment, surface chemical treatment of semiconductor substrate and beam lead manufacturing techniques

#### U11-C06A [1987]

Mechanical and surface chemical treatment

#### U11-C06A1 [1992]

# Cleaning, polishing or grinding

(U11-C04A1)

Prior to 1992 all cleaning processes are covered by U11-C04A1. From 1992 for cleaning processes relating to microlithography see U11-C04A1A. For cleaning leads after package encapsulation see U11-E02B. For materials involved e.g. polishers, abrasives, etc. see also U11-A10.

# U11-C06A1A [1992]

# Grinding, bevelling, lapping, polishing

#### U11-C06A1B [1992]

# Cleaning

(U11-C04A1)

Includes drying of wafer after cleaning process. Includes dry cleaning e.g. electrostatic. It also covers native oxide removal, but not etching of previously deposited Insulating layer. Includes cleaning apparatus but excludes cleaning of processing apparatus or package.

# U11-C06A1C [2002]

# Process endpoint detection for cleaning, polishing or grinding

#### U11-C06A2 [1992]

#### **Cutting, dicing**

Includes wafer production by crystal slicing or sawing, also dice preparation from wafer by scribing, making grooves, cracking, cleaving, breaking or cutting. For 'sticky-back' adhesive tape which holds wafer in place while cutting it into separate dice see also U11-F02A2.

Grind, groove, slice, divide

#### U11-C06B [1987]

# Beam lead device manufacturing techniques

See also U11-C08A5 when beam lead technique is used as isolation method between circuit elements. See also U11-C05D4 or/and U11-D03A1 codes when metallisation process is emphasised as main part of lead beam technique. Also includes manufacture of other structures on wafer usually assembled after dicing, e.g. lenses and encapsulant structures.

#### U11-C06C [2007]

# Masking techniques unrelated to microlithography

Masks and masking techniques for general etching, deposition or treatment, for semiconductor manufacture. Before 2007 see U11-C04D for all masking, along with other relevant codes, e.g. U11-C05D3 for masking techniques applied to interconnection manufacture, U11-C07D1 for masks used in etching fine details, U11-C18D and U14-K01A1C for masks used in optical filter manufacture for LCD, etc.

#### U11-C07

# **Etching; Chemical treatment for semiconductor manufacture**

Includes processes, e.g. dry, wet, beam etching to produce patterned structures. Also covers nature of material being etched and techniques to obtain intended etched structure.

# U11-C07A [1983]

#### Dry etching

For microlithography, e.g. plasma ashing, see U11-C04A1D.

# U11-C07A1 [1987]

# Reactive vapour, plasma-assisted etching techniques

Includes reactive ion etching, sputter etching and ion milling, plasma etching, reactive ion beam etching. For apparatus, see also U11-C09C. For etchant composition see also U11-A10.

#### U11-C07A2 [1987]

# Using optical or particle beam to induce localised etching in ambient atmosphere of reactive gas

Includes e.g. selective laser induced etching (e.g. for metal-interconnection etching, where laser beam cracks oxide formed on metal surface prior to reactive etching).

# U11-C07A3 [1987]

## **Detecting dry etching completion**

Includes instrumentation and control. See also appropriate S02-A codes.

Monitor, endpoint

# U11-C07A4 [1987]

# Laser or beam scribing, usually using air/inert atmosphere

Used also for fuse cutting or melting by laser (see also U11-D03B2), circuit trimming or repair (see also U11-C19A). For apparatus see also V05-F05A1.

Pattern, surface, trim, laser zapping

# U11-C07B [1987]

#### Other wet-etching

Includes apparatus used for wet etching. For etchant composition see also U11-A10. For wet etching intended as cleaning process see also U11-C06A1B. For microlithography see also U11-C04A1 codes

Solution, tank, water, fluid, acid, spray etching, aerosol jet, electrolytic etching

#### U11-C07B1 [1987]

#### **Detecting wet etching completion**

Includes instrumentation and control. See also S02-A codes.

Monitor, endpoint

#### U11-C07C [1987]

#### Nature of materials being etched

# U11-C07C1 [1987]

## **Etching silicon**

For polysilicon used as conductive layer, or in gate manufacture see also U11-C07C2.

#### U11-C07C2 [198

**Etching conducting layers** 

U11-C07C3 [1987]

**Etching insulating layers** 

U11-C07C4 [1987]

**Etching non-silicon semiconductor** 

## U11-C07C4A [1992]

# **Etching AllI-BV compounds**

Includes complex ternary and quaternary compounds.

Gallium arsenide, gallium phosphide, indium phosphide, gallium aluminium arsenide, gallium indium arsenide, gallium nitride, cubic boron nitride

#### U11-C07C4B [1992]

# **Etching All-BVI compounds**

Includes complex ternary and quaternary compounds.

Mercury sulphide, cadmium mercury telluride, zinc sulphide, mercury selenide, zinc selenide, cadmium selenide, cadmium telluride, cadmium sulphide

## U11-C07C4C [1992]

# Etching AIV elements and their compounds

Excludes elemental silicon. Silicon carbide, diamond

## U11-C07C4X [1992]

**Etching other semiconductor material** 

U11-C07C5 [1987]

**Etching thin film** 

Layer

# U11-C07D [1987]

#### **Etching techniques**

Includes techniques for specific objectives.

#### U11-C07D1 [1987]

# **Etching to produce finer details**

Includes use of sequence of etch and mask stages. For lift off see also U11-C04D1.

# U11-C07D2 [1987]

# Etching to produce taper or structural profiles of deposited layers on substrate

# U11-C07D3 [1987]

#### Planarisation by etching

Includes e.g. etching followed by smoothing layer (which may be also covered by U11-C05B9A).

Smoothing layer

# U11-C07D4 [1992]

Etching to produce trenches, grooves in semiconductor substrate

(U11-C07D9)

U11-C07D9 [1987]

Other etching aspects

U11-C08

**Isolating IC components** 

U11-C08A [1987]

Methods for isolating IC components

U11-C08A1 [1987]

## P-N junction for isolating IC components

From 1997 buried insulating layer is coded in U11-C05B9C.

Diode isolation, buried layer

# U11-C08A2 [1987]

# LOCOS or local substrate chemical reaction for isolating IC components

Bird's beak, sidewall masked isolation, SWAMI, sealed interface local oxidation, SILO, selective polysilicon oxidation, SEPOX

#### U11-C08A3 [1987]

# Dielectric, polycrystalline silicon trench for isolating IC components

Includes trench refilling with dielectric or e.g. polysilicon. If used as sidewall isolation e.g. for SOI structures, P-N junction structures, see also U11-C05B9B, U11-C08A6 and U11-C08A1 codes as appropriate.

Buried oxide, BOX

# U11-C08A4 [1987]

# Dielectric isolation process (sacrificial substrate) for isolating IC components

Dielectric islands, epitaxial passivated IC, EPIC

# U11-C08A5 [1987]

# Other methods for isolating IC components

Includes proton bombardment, combination of above methods. Includes air gaps for isolation.

#### U11-C08A6 [1992]

#### Semiconductor on insulator

(U11-C08A5, U13-D)

Includes bonded wafers (see also U11-C01 and U11-C01J8A), full isolation by porous oxidised silicon (FIPOS), zone melted recrystallisation (ZMR), separation by silicon implanted buried oxide layer (SIMOX). See also U11-C08C for recrystallisation over insulating layers, selective epitaxial growth. SEG, epitaxial lateral overgrowth, ELO, SOI, silicon on sapphire, SOS

#### U11-C08B [1987]

IC component isolation characterised by non-silicon semiconductor substrate

#### U11-C08B1 [1992]

# Isolating IC components on AIII-BV substrate

Includes complex ternary and quaternary compounds.

Gallium arsenide, gallium phosphide, indium phosphide, gallium aluminium arsenide, gallium indium arsenide, gallium nitride, cubic boron nitride

# U11-C08B2 [1992]

# Isolating IC components on AII-BVI substrate

Includes complex ternary and quaternary compounds.

Mercury sulphide, cadmium mercury telluride, zinc sulphide, mercury selenide, zinc selenide, cadmium selenide, cadmium telluride, cadmium sulphide

#### U11-C08B3 [1992]

Isolating IC components on AIV element/compound substrate

Silicon carbide, diamond

# U11-C08B9 [1992]

Isolating IC component on other substrate material

# U11-C08C [1987]

# Isolating IC component combined with subsequent further semiconductor material deposition

Includes recrystallisation of semiconductor over insulating layers (see also U11-C03J1), 3-D structures (see also U13-D05), selective epitaxial growth/epitaxial lateral overgrowth. SEG. ELO

## U11-C09 [1983]

# Sputtering, vapour deposition, plasma etc. apparatus for semiconductor processing

From 1997 vacuum apparatus for semiconductor processing is covered by U11-C09Q. For electrical details see also X25-A04 codes. For generic deposition process masks use appropriate U11-C09 code with U11-C06C, and for specific material deposition use U11-C06C with other U11-C codes. Chamber, vessel, gas, vacuum, holder, wafer boat

# U11-C09A [1987]

# Sputtering and other physical deposition apparatus

Includes targets, power supply and control. Also covers apparatus for thermal evaporation. See also V05-F05C codes.

Chamber, vessel, gas, vacuum, holder

#### U11-C09B [1987]

#### **Chemical vapour deposition apparatus**

For Plasma enhanced CVD apparatus, electron cyclotron resonance CVD apparatus see also U11-C09C. Also cover vapour phase epitaxy (VPE) apparatus.

CVD, PECVD, ECRCVD, vertical reactor

#### U11-C09B1 [2002]

# Gas delivery head details for chemical vapour deposition

Showerhead, gas flow

### U11-C09C [1987]

#### Plasma, reactive ion apparatus

Includes dry etching apparatus (see also U11-C07A1), and apparatus for plasma activated CVD (see also U11-C09B). See also V05-F05C codes. *Microwave, source, generator, PECVD, ECRCVD* 

#### U11-C09D [1992]

#### Molecular beam epitaxy apparatus

(U11-C09X, U11-C01A2)

Includes molecular beam and ion beam apparatus.

# U11-C09E [2002]

## Sintering/curing furnaces

Details of furnaces used for ceramic sintering, photoresist/other layer baking/drying, or encapsulant curing. For all other heating methods and equipment for semiconductor manufacture see U11-C03A.

#### U11-C09F [1987]

#### Cleaning and maintenance of apparatus

Refers mainly to apparatus covered by U11-C09 codes.

Surface-trap, particle

## U11-C09F1 [2006]

# **Testing of manufacture apparatus**

See also U11-C09 codes for type of apparatus being tested.

Fault diagnosis

# U11-C09G [2010]

# **Laser Treatment apparatus**

Includes all laser treatment apparatus used for manufacturing semiconductor devices. If used for heating a semiconductor substrate or wafer then also see U11-C03D.

#### U11-C09M [1997]

# Multi-chamber apparatus for semiconductor processing

(U11-C09)

Includes self-contained apparatus with several rooms for various processes e.g. cleaning, deposition, etching.

# U11-C09Q [1997]

# Vacuum equipment and pumps for semiconductor processing

(U11-C09)

Prior to 1997, for vacuum equipment see U11-C09. General pumps, vacuum, holder

#### U11-C09X [1987]

# Other apparatus for semiconductor processing

# U11-C10 [2005]

# Prevention of charge build-up on wafer

Includes methods and apparatus for removing charge build-up on wafer which can cause incorrect operation of apparatus or damage to wafer during e.g. plasma process, charged particle beam lithography and charged particle beam microscopy. See also U11-F01B1 and S01 codes for monitoring of wafer charging.

Plasma damage

#### U11-C11 [2005]

# Pattern formation using scanning tunnelling microscope

Includes e.g. patterning, localised deposition and oxidation using scanning probe microscopes and other analogous microscopy techniques. Use in conjunction with other U11-C codes where applicable to particular process (e.g. U11-C11 and U11-C05C5 for localised deposition of conductive layer using SPM). Does not include microscopy per se, see S03-E02F codes and U11-F01B4 for application to semiconductor wafer measurement. See V05-F codes for novel apparatus and methods of apparatus monitoring, operation and control. Scanning probe microscope, SPM, scanning tunnelling microscope, STM, atomic force microscope, AFM

#### U11-C12 [2006]

# **Self-assembly monolayers**

Includes self-assembled monolayer deposition of all material types for semiconductor manufacture. *SAM, viral deposition* 

U11-C13 [2007]

Nano scale structure formation and deposition

U11-C15 [1987]

General aspects of semiconductor manufacture

U11-C15A [1992]

# Wafer identification, shaping

Includes wafer labelling and reading wafer markings. Covers also shaping, bevelling wafer edges (see also U11-C06A1A). For marking IC package see U11-E02B. For marking defective chips on wafer as result of testing procedure see U11-F01D.

Wafer tracking, optical character recognition, bar code

U11-C15B [1992]

Semiconductor plant and facilities

#### U11-C15B1 [1997]

## Semiconductor equipment and clothing

(U11-C15B)

Includes systems for air conditioning, filtering, hazardous gas leak monitor. Covers protective clothing and anti-static materials used in clean room.

Air conditioning, filtering, environmental control, anti-static systems, gas supply, hazardous gas leak monitor

# U11-C15B3 [1997]

# **Water purification**

(U11-C15B)

Water purification

#### U11-C15C [1992]

# Semiconductor manufacture process control

For large scale process control, not for single processes. See also T01-J07B2 for computerised control systems.

Production management

# U11-C15D [2006]

# Control and monitoring of single or specific process/apparatus only

Includes automated fluid/gas control systems. See also U11-F01B and S02/S03 codes for film measurement. See U11-C04 codes or U11-C03A for control of lithography or temperature respectively. For process control of complete production facility and multiple processing stages see U11-C15C and T06 and T01 codes.

[1997]

# U11-C15Q

# Waste reprocessing and disposal in semiconductor processing

(U11-C15X)

Includes exhausts and exhaust management systems. For vacuum pumps and systems associated with exhaust and gas removal see also U11-C09Q. Prior to 1997 see U11-C15X.

# U11-C15X [1992]

Other semiconductor plant aspects

U11-C18 [1987]

Multistep processes for semiconductor device manufacture

# U11-C18A [1987]

# Complete manufacture of transistor devices

This code is used for a sequence of steps with claims encompassing several of the above sections. For phototransistor manufacture see U11-C18B4. For BiCMOS complete manufacture see U13-D03B2. For CMOS manufacture see U13-D02A.

#### U11-C18A1 [1992]

#### Thin film transistor manufacture

(U11-C18)

For TFT manufacture for active matrix LCD see also U14-H01A and/or U14-K01A2B.

#### U11-C18A2 [1992]

# **Bipolar transistor manufacture**

This code may be used in conjunction with U12-D01A codes to identify type of transistor.

# U11-C18A3 [1992]

# **Unipolar transistor manufacture**

This code may be used in conjunction with U12-D02A to U12-D02X codes to identify type of transistor.

FFT

#### U11-C18B [1987]

# Multistep processes for manufacture of electronic devices other than transistors per se

Capacitor manufacture is covered by U11-C05G1B, resistor manufacture by U11-C01G1A, inductor manufacture by U11-C05G1C. For Hall-effect device, galvanomagnetic device manufacture, see U12-B01 codes.

#### U11-C18B1 [1992]

#### Complete manufacture of diode devices

Photodiode manufacture is covered by U11-C18B4.

U11-C18B2 [1992]

Complete manufacture of thyristor devices

U11-C18B3 [1992]

Complete manufacture of charge coupled devices

# U11-C18B4 [1992]

# Complete manufacture of optoelectronic devices

Includes manufacture of monolithic and thin film photosensitive device e.g. photodiode, phototransistor, light emitting diode, laser diode, integrated optics. Laser diode manufacture is also covered by U12-A01B2. For LED manufacture see also U12-A01A2.

**OEIC** 

## U11-C18B5 [1992]

## Complete manufacture of memory

See also appropriate codes in U13-C, U13-D and/or U14.

# U11-C18B9 [1992]

## Complete manufacture of other devices

Includes manufacture of e.g. SAW devices (see also U14-G), field emitting structures (see also U12-B03D), superconductive devices (see also U14-F02B), photovoltaic devices (see also U12-A02).

#### U11-C18C [1987]

# Mechanical structures e.g. membranes etc., transducers manufacture

See also U12-B03E or U12-B03F.

Pressure diaphragm, anisotropic, pressure

## U11-C18D [1987]

#### Optical filter, lens array manufacture

Includes e.g. filters for CCD, transparent conductive layers for e.g. LCD, integrated optics. See also U14-H01E for thin-film spin-coated or dipped layers. Includes pixel/colour filters, lithography for general imager/display use.

# U11-C19 [1992]

# Trimming, circuit repair, safety circuits for semiconductor device

(U11-C20)

#### U11-C19A [1992]

# Circuit repair and redundant circuitry for semiconductor device

Includes late stage tailoring, cutting fuses with laser, focused ion beam (see also U11-C07A4), or opening fusible links with high current. For circuit repair by localised deposition see also U11-C05C5. For trimming thin/thick film for hybrid circuit see U14-H04B3B. For repair of integrated circuits using redundant circuitry. For memory redundancy see U14-D01A.

Laser zapping

# U11-C19B [1992]

# Method of securing IC from unauthorised copying and use

Includes narrow circuit cuts in metallised connections lines, disordering lattice structure or changing the doping level of a semiconductor region, by using e.g. laser or ion beam. For package adaptations see U11-D01C4.

#### U11-C20

# Other aspects of semiconductor manufacture

#### U11-D

# Packages, mountings and terminals for semiconductor devices

Includes on-chip interconnection layout and metallurgical details.

#### U11-D01

# Containers, enclosures and housing for semiconductor device

From 1997 sockets, connectors, holders for semiconductor devices are coded in U11-D01Q and V04-K02.

#### U11-D01A [1987]

#### Integrated circuit packages and mountings

Includes substrates, mountings, e.g. ceramic, glass, metallic, used in packaging. Multilayer circuit packages, e.g. high density interconnect, are covered by U14-H03A1, U14-H03A4, and also, where appropriate, U11-D03C3 and/or U11-D03B codes. See also U14-H03C for high grade ceramic substrate, e.g. aluminium nitride. Multilayer ceramic substrates are also covered by U14-H03B codes for materials/structure.

# U11-D01A1 [1987]

# Lead frame or brazed type ceramic/resin encapsulated/metallic packages

Includes packages for both through hole and surface mounted devices (see also U11-D01A3). Prior to 199201 brazed type packages are covered by U11-D01A9.

Case, dual in line package, DIP, single in line package, SIP, zigzag in line, ZIP, CERDIP, CERQUAD, pin insertion type, chip in tape, TAB, anodised aluminium, hollow package, LOC, lead on chip

# U11-D01A3 [1987]

# Leadless/Surface mounting for semiconductor packages

Includes leadless with via holes, but leadless arrays with stand-offs, e.g. pad grid arrays, are also covered by U11-D01A5. Prior to 199201 for chip carrier package see U11-D01A. For sockets for surface interconnect package to board see U11-D01 and V04-B01 or V04-K02. For flip-chip process and package see U11-E01C.

Surface mounted device, SMD, small outline integrated circuit, SOIC, flat pack, chip carrier, plastic leaded chip carrier, PLCC, gull-wing leads, TAB package, chip in tape, plastic quad flat pack, PQFP, ball grid array, BGA

# U11-D01A3A

# [1997]

#### Chip on board packages

Includes direct attachment with protective polymer overcoat (see also U14-H03A3).  $\label{eq:control} % \begin{center} \begi$ 

COB, glob top

# U11-D01A4

## [1992]

# **High frequency packages**

(U11-D01A9)

Includes packages for high speed IC with large number of transmission and power lines. See also U14-H03C2 for microstrip/stripline circuitry and/or U11-D03B9 for metallurgical details. For terminals for high frequency devices see U11-D03A6.

Microwave, MMIC package

#### U11-D01A5

## [1987]

# High pin count packages

E.g. pin/pad grid arrays, and high ball count BGAs (see also U11-D01A3).

Pad grid array, PGA, BGA

#### U11-D01A6

#### [1992]

## Multichip modules, high density packages

(U11-D03D, U14-H03C3)

For multichip PGA modules see also U11-D01A5. For high-density package mountings, e.g. high density interconnect, see U14-H03A1 and/or U14-H03A4, with manufacture covered by the appropriate subclasses in U11-C05D, U11-D03B, U11-D03C, U14-H04A. For hybrid circuit package see also U14-H03C3.

MCM

# U11-D01A7 [1987]

# Low profile card type packages for e.g. unencapsulated IC

Includes package for 'smart' card (see also T04-K). See U14-H01D for thin film aspects.

# U11-D01A8

## Wafer level packages

Includes chip packaging on wafer.

#### U11-D01A9

## [1987]

[1987]

#### Other types of packages

Includes e.g. transistor outline (plug type) package and bare chips (unpackaged).

TO package

#### U11-D01B

# [1987]

#### Discrete device package structure

Aspects regarding terminals for low/high power devices are covered by U11-D03A4/U11-D03A5. *Seal* 

## U11-D01B1

#### [1987]

# Two terminal packages

For LED packages see U12-A01A4, for laser diode package see U12-A01B3, for solar cell see U12-A02A1, for photodiode package see U12-A02B3. *Diode* 

#### U11-D01B3

#### [1987]

# Three or more terminal packages

Includes bridge rectifier. For phototransistor package see U12-A02B3.

Transistor, bipolar, FET

#### U11-D01C

#### [1987]

#### Special package adaptations

Includes package getters.

## U11-D01C1

## [1987]

# Window structures e.g. for image sensors, ROM's

Glass, pick-up, light, transparent, translucent, UV erasable memory

#### U11-D01C2

#### [1992]

# Package protection against radiation

Includes protection against e.g. light, alpha radiation, etc.

#### U11-D01C3

#### [1992]

# Package protection against electrostatic discharge

(U11-D03C1)

See X25-S for general applications for static electricity prevention.

#### U11-D01C4

# [1992]

# Package protection from inspection and reverse engineering

(U11-D01C9)

Includes e.g. security coatings and/or other adaptation to prevent unauthorised reproduction of the integrated circuit.

#### U11-D01C5

[1997]

# Electromagnetic shielding for semiconductor packages

(U11-D01C9)

# U11-D01C6

[1997]

# Thermal protection for semiconductor packages

(U11-D01C9)

# U11-D01C9

[1987]

# Other special package adaptations

Includes e.g. special moisture barrier, protection against short-circuit. For fire retardant barriers. Hermetic seal structures (for sealing process see also U11-E02A2)

#### U11-D01Q

# [1997]

# Sockets, connectors and holders

(U11-D01)

Previously coded in U11-D01. For conversion sockets. Sockets, connectors, holders for semiconductor devices are also coded in V04-K02. See also appropriate package code.

#### U11-D02

# Cooling, heating and ventilating arrangements for semiconductor packages

See V04-T03 codes for cooling/heating of electronic equipment in general.

Fin, heat sink, block, radiate, coolant, liquid

#### U11-D02A

[1987]

# High power thyristor, transistor, rectifier cooling arrangements

#### U11-D02A1

[1987]

#### Stacks, installations cooling

# U11-D02B

[1987]

# Medium power transistor modules and heat sinks

Includes materials that facilitate heat transfer.

# U11-D02B1 [1987]

# Internal cooling structures on chip or within package

Includes permanent, non-removable heat sinks.

#### U11-D02B2 [1987]

# External heat sink mounted on package

Includes mainly detachable heat sinks.

#### U11-D02C [1987]

# Cryogenic - for photodetector or superconductor electronics

Search with U14-F for superconductor aspects. See X25-V for electrical aspects of cryogenic system per se.

Cryostat

#### U11-D02D [1987]

Cooling for surface mounted chip assemblies, modules, chip on substrate

#### U11-D02D1 [1992]

Cooling arrangements with heat transfer by fluid means

#### U11-D02D2 [1992]

Cooling arrangements with Peltier element

#### U11-D02E [2007]

# Heating arrangements for semiconductor package

Includes package structures, internal or external to cause or facilitate heating within a semiconductor package.

#### U11-D03

Lead-frames, terminals, interconnections, wiring layout

U11-D03A [1983]

Lead and terminal arrangements

U11-D03A1 [1987]

Lead frames; Carrier tapes (structure, manufacture)

# U11-D03A1A [1992]

# Lead frames

For transporting, handling lead frames see also U11-F02A. Materials, e.g. metallic alloys, are also covered by U11-A08B and U11-D03B. Includes manufacture, although if particular aspects of manufacture are emphasised, other relevant codes

may be used, e.g. U11-C05C6 for electroplating.

# U11-D03A1B [1992]

## **Carrier tapes**

Includes leads in insulating substrates, e.g. tapes for TAB; multilayer metal beam tape e.g. for area array TAB. Also covers editing or cutting to remove defective pattern units from TAB tape and to rearrange remaining desired portions. For carrier tapes for transporting semiconductor device packages see U11-F02A4.

ATAB

# U11-D03A2 [1987]

# Connection details between lead frame and chip terminals

Includes wire and gang bonding (see also U11-E01A, U11-E01B respectively). For bonding pads, bump terminals, e.g. raised pad on bonding tape, see also U11-D03B1.

#### U11-D03A3 [1987]

# Details of other types of terminals for IC packages

Includes aspects regarding shape of leads, pins. For forming leads after encapsulation see U11-E02B.

J leads, gull-wing leads

# U11-D03A4 [1987]

Terminals for low/medium power diodes and transistors

# U11-D03A5 [1987]

Terminals for higher power diodes/transistors/thyristors

# U11-D03A6 [1987]

Terminals for high frequency devices

U11-D03A9 [1987]

Microwave

# Other types of connection to chips

For solder preforms see also U14-H03A2 (hybrid circuits). See also V04-A06 for direct connections to PCBs using conductive adhesives, and V04-A11 for direct connection using anisotropic connectors.

#### U11-D03B [1983]

Metallurgical connections, materials, structure, details of interconnections on or within chip, bonding pads, wire bonds

# U11-D03B1 [1987]

# Terminals to chip, bonding pads, wire bonds, bonding wire, bump terminals

Includes flip chip pads (see also U11-E01C). For complete manufacture of contact bumps or bonding pads see U11-C05G2B.

Ball limiting metallurgy, BLM, top surface metallurgy, TSM

# U11-D03B2 [1987]

# Metallurgical aspects of interconnections within chip, packaging

Includes forming of diffusion barrier, e.g. titanium nitride, titanium tungsten, to prevent spiking, methods and structure to prevent electromigration, e.g. slits in bent wiring section etc. Also includes metallurgical aspects related to electrodes. Covers structure which ensures minimum resistance interconnections, also air-bridges, fuses (for fuse manufacture, see U11-C05G2A).

Electromigration, air bridges

#### U11-D03B2A\*

[1997-2001]

### Fuses, antifuses

(U11-D03B2)

\*This code is now discontinued, but remains searchable and valid for records from 1997 to 2001. See U12-C04 from 200201. For manufacture of fuse see U11-C05G2A.

# U11-D03B3 [1987]

# Metallurgy, solder, conductive adhesive connecting chip base to substrate or lead-frame

Includes forming conductor patterns on ceramic, glass based packaging, joints or bonds in multilayer packages between metallised components such as pins, leads or heat sinks and ceramic substrates. Covers joining metal-ceramics when, e.g. attaching lids to ceramic package (see also U11-E02A2). Also includes adhesives for die bonding (see also U11-E02A3).

Plated heat sink, eutectic alloying, self-soldering, solder reflow, solder mask

# U11-D03B9 [1987]

#### Other metallurgical aspects

Includes high frequency monolithic signal transmission lines (see also U14-H03C2 and, where appropriate, U11-D03C1, U11-D03C3), wafer scale and thin film circuit multilayer interconnection. Also covers back-side metallisation for MMIC.

Microstrip

# U11-D03C [1987]

# Integrated circuit wiring details

Includes layout, logic, signal transfer and multichip interconnection details. See also corresponding U13 and U14 codes where appropriate. *Cell* 

#### U11-D03C1 [1987]

# Power supply, grounding details, wiring layout

Includes analogue wiring, capacitors or other passive components, protection fuses fixed inside package, I/O pad layout, wiring reconfiguration, wafer test pad wiring layout e.g. for built-in testing (see also U11-F01D2). For design aspects regarding wiring layout see U11-G.

## U11-D03C1A [1997]

# Wiring layout, power supply

(U11-D03C1)

Includes analogue wiring, I/O pad layout, wiring reconfiguration, wafer test pad wiring layout e.g. for built-in testing (see also U11-F01D2). For design aspects regarding wiring layout see U11-G.

#### U11-D03C1B [1997]

# Passive elements within package

(U11-D03C1)

Includes by-pass capacitors or other passive components, protection fuses fixed inside package. Decoupling capacitor

## U11-D03C2 [1987]

#### High density digital wiring

Includes wiring for gate arrays (see also U13-C04D).

Master-slice

# U11-D03C3 [1987]

#### Power/signal transfer

Includes e.g. opto-electronic, inductive, capacitive, feed-through arrangements for high speed devices. For multichip high-density interconnect see also U14-H03A1 and/or U14-H03A4.

# U11-D03C3A [1997]

#### **Noise reduction**

For noise reduction interconnections, and removal of cross talk, coupling/decoupling capacitance.

Cross talk, Parasitic capacitance

# U11-D03C3B [1997]

# 3-D interconnection, chip on chip

Includes e.g. opto-electronic, inductive, and capacitive feed through arrangements for high speed devices. For multi-chip high density interconnect see also U14-and/or U14-H03A4. Also includes interconnects for spherical ICs.

# U11-D03D [1987]

# Other metallurgical aspects of lead frames

# U11-E

# Assembly for semiconductor package

#### U11-E01

## Attaching leads to semiconductor package

#### U11-E01A [1983]

# Wire bonding for semiconductor package

For wire material see also U11-A08B and U11-D03B1. Includes e.g. thermosonic and thermocompression bonding.

Capillary

#### U11-E01B [1987]

# Tape automated bonding for semiconductor package

Includes inner and/or outer lead bonding by, e.g. thermosonics, thermocompression, laser bonding. Also covers beam lead bonding. For carrier tape structure and manufacture, see U11-D03A1B. *TAB, Bread-board, ILB, OLB, gang bonding* 

# U11-E01C [1992]

# Flip chip technology for semiconductor package

Contact bump manufacture is covered by U11-C05G2B. For metallurgical aspects relating to bumps, e.g. ball limiting and/or top surface metallurgy, see also U11-D03B1.

Controlled collapse bonding, CCB, controlled collapse chip connection, C4, face down

#### U11-E01X [1987]

# Other methods for attaching leads to package

Covers e.g. cleaning aspects related to lead attaching, fitting PGA pins, etc.

# U11-E02

#### Mounting; Encapsulating; Filling

[1987]

## U11-E02A

# **Encapsulation**

For non resin or metallic encapsulation. *Seal, glass, glaze* 

#### U11-E02A1 [1987]

#### Resin encapsulation

Includes mould design, manufacture, materials. Also covers coatings to protect stress sensitive areas, e.g. wires or die during encapsulation. If mentioned covers are meant to improve radiation immunity, see also U11-D01C2. For encapsulant materials see U11-A07.

Transfer moulding

## U11-E02A2 [1987]

# Package assembly. Attaching covers, joining dissimilar materials

Includes CERDIP technology to ensure hermetic seal ceramic packages. For joining metal-ceramic interfaces see also U11-D03B3.

Alignment, airtight seal, hollow package

# U11-E02A3 [1987]

#### Handling chip, die bonding

Includes die attachment to appropriate mount media, e.g. paddle of lead frame or refractory ceramic packages. If die attach pad is novel, e.g. for reducing die stress in semiconductor die assembly, see also U11-D03A1. For metallurgical aspects of eutectic, solder or polymer die bonding see also U11-D03B3. For positioning aspects see also U11-F02B.

Wafer, slice

# U11-E02A9 [1987]

## Other encapsulation details

Includes e.g. positioning of chip in rapport with predeterminable stress factors to reduce voltage offsets, marking TAB before encapsulation, forming lens on package, etc. Also includes use of phosphor within package encapsulant e.g. for white light LED (see also U12-A01A4A).

#### U11-E02B [1987]

## Processes undertaken after encapsulation

Includes opening package for internal inspection and package repairs.

# U11-E02B1 [1997]

## **Shaping and trimming leads**

(U11-E02B)

Includes isolation of leads and paddle from each other and frame, i.e. lead frame trimming, lead forming. Also covers forming shorting bar protection to prevent lead deformation during transport, lead cladding or solder application to outer leads.

Cut, bend, press, shape, soldering barrier, chip carrier ring

#### U11-E02B3 [1997]

# Cleaning and marking package

(U11-E02B)

Includes cleaning, deburring and marking package.

Mark, deflashing, deburring

#### U11-F

# Measuring; Positioning for semiconductor technology

# U11-F01 [1983]

# Measuring; Testing (including sorting) for semiconductor technology

See also S01-G01, S01-G02, for testing electrical properties. For checking store/memory operation see also U14-D. Measurement of non-electrical properties, e.g. dimensions, flaw detection etc., is also coded in S02 and S03 as appropriate.

#### U11-F01A [1983]

# Measuring material properties for semiconductor manufacture

## U11-F01A1 [1992]

# Doping and carrier transport related measurements

Includes measuring doping level, concentration, minority carrier lifetime, carrier mobility, semiconductor wafer conductivity. See also S03-E02 codes.

Deep level

#### U11-F01A2 [1992]

# Measuring level and nature of defects in semiconductor material

Includes measurements related to e.g. stacking faults, dislocations, inherent stress in material.

Oxidation-induced stacking fault, OSF

# U11-F01A3 [1992]

# Surface topography measurements for semiconductor processing

See also S02-A codes.

Flatness, curvature, profile, smoothness

#### U11-F01A4

# Measurements of physical parameters, e.g. temperature for semiconductor processing

[1992]

Includes measurements for various processes in semiconductor manufacture, e.g. annealing, deposition. See also S03-B, S03-A codes.

# U11-F01A5 [1997]

# Chemical composition measurement for semiconductor processing

Bragg diffraction testing for semiconductor wafer. Also includes impurity analysis.

Spectroscopy

# U11-F01A9 [1992]

# Other measurements for semiconductor processing

Includes energy bandgap measurement. Covers also dielectric test (e.g. measuring relative dielectric constant). For crystal structure.

#### U11-F01B [1983]

Film parameter measurement for semiconductor processing

# U11-F01B1 [1987]

# Measuring during semiconductor manufacturing process, within reaction vessels

In situ

# U11-F01B2 [1987]

# Measuring using beam scanning

Includes measurements related to point defects, e.g. dust on wafer surface. For optical inspection in general see S03-E04 codes, In particular, S03-E04F codes cover optical techniques for flaw detection or contamination. For Electron beam microscopy see also U11-F01B4 and V05-F01 codes as appropriate. See also V05 codes for novel electron beam methods and apparatus aspects.

#### U11-F01B3 [1987]

# Measuring using image recognition

See T04-D codes also.

Pattern, memory, compare, discriminate

# U11-F01B4 [1997]

# Optical or electron microscopy for semiconductor processing

(U11-F01B9)

Includes visual inspection. For electron microscopy at film level. For electron microscopes per se see also S03-E06B1 and V05-F01 codes.

#### U11-F01B5 [1997]

# Film thickness measurement for semiconductor processing

(U11-F01B)

Includes measuring thickness of deposited layer, profile of semiconductor structure. (See also S02-A02 codes). Prior to 199701 see U11-F01B.

#### U11-F01B6 [2007]

## X-ray testing for semiconductor package

Includes all testing of semiconductor chip at package level.

#### U11-F01B7 [2007]

# X-ray testing for semiconductor processing

Includes testing at wafer level during manufacture using X-ray equipment. See also U11-F01D3 for test apparatus.

#### U11-F01B9 [1987]

# Other measuring/testing aspects for semiconductor processing

## U11-F01C [1983]

#### Semiconductor device testing

Includes measurements on individual semiconductor chips, after separation from wafer and/or individual module package. Measurements at internal circuit nodes for wafers are covered by U11-F01D. If details regarding type of testing are emphasised, see appropriate code in U11-F01C and U11-F01G. For on-chip testing, e.g. built-in test, see U11-F01D2, U13-C07, U21-C03D. *Known good die* 

# U11-F01C1 [1987]

# Probes, connector apparatus for semiconductor device testing

Includes probe heads, contact parts, e.g. clips, sockets, liquid or conductive rubber contacts, connection to mount, strip line. See also S01-G02B5 and S01-H03 codes. Probes for testing semiconductors mounted on PCB's are coded in V04-R06 codes.

Burn in board, prober

# U11-F01C3 [1987]

## **Testing integrated circuits**

Includes measurement on encapsulated chip, or die prior to encapsulation, the IC being regarded as a functional block (see also S01-G02B codes). Covers also automated testing by using off-chip random pattern generators (see also U11-F01D2B). "Stuck at" fault testing, IDDQ, quiescent current, DUT

#### U11-F01C5 [1987]

# Testing diodes, transistors, solar cells, CCD, others

Includes semiconductor laser testing (see also V08-A04A, V08-A06) and memory testing (see also U14-D codes).

# U11-F01D [1983]

## Testing circuits on wafer

Includes testing performed on individual device at wafer level, marking defective chips on wafers. Also covers built-in testing (U11-F01D2). For testing at interval circuit nodes see S01-G01A1 or S01-G01C1; for checking device as functional block see S01-G02B1.

## U11-F01D1 [1987]

# Probes, contacts, signal transfer methods for testing circuits on wafer

Includes wafer prober, probe card. See also S01-G02B1 and S01-H03 codes. For probes for testing semiconductors mounted on PCB's are coded in V04-R06 codes.

# U11-F01D2 [1987]

# Circuitry on chip to aid testing

See also U13-C07 and/or U21-C03D for digital/logic circuit aspects. For computer processing details see also T01-G02A2B. *Built-in self-test, BIST* 

## U11-F01D2A [1992]

# Scan based testing method for integrated circuits

(U11-F01D, U13-C07)

Includes level sensitive scan design. LSSD, scan path, set/scan logic

#### U11-F01D2B [1992]

# Signature analysis and random pattern generation for testing integrated circuits

(U13-C07, U21-C03D)

For off-chip random pattern generators see also U11-F01C3.

# U11-F01D3

# Separate electronic testing apparatus for testing semiconductor devices, ICs, etc

[1987]

Includes all apparatus for testing of semiconductor devices, separate or at substrate level, includes apparatus for testing of e.g. LED/OLED displays, solar panels etc.

#### U11-F01E [1987]

# Testing circuit packages, chip carriers and multilayer circuit boards

Includes e.g. bonding strength test, detection of abnormal bonding, air-tightness test, moisture resistance of encapsulation, lead or bump inspection. For automatic visual inspection see also T04-D07 codes.

Pin

# U11-F01F [1987]

## **Hybrid circuit testing**

Includes also testing matrix array, for LCD (see also U14-K01A8). For hybrid circuits testing see also U14-H04B9.

#### U11-F01G [1992]

# Characterised by type of tests being carried out

This code is usually applied with one of above U11-F01 codes depending on device being tested. Includes life test, ageing, e.g. acceleration test, burn-in test, fatigue test, also mechanical strength test, e.g. vibration, impact test, moisture resistance, e.g. pressure cooker test, thermal impact test (see also appropriate codes in S01, S02, S03).

## U11-F02 [1983]

# **Handling components**

#### U11-F02A [1983]

#### Wafer/chip holders and conveyors

Includes e.g. lead frame transfer, transport (see also U11-D03A1 codes).

#### U11-F02A1 [1987]

# Wafer holders and conveyors for storage, transport

Includes transfer from processing station to another. Also includes transfer and storage of LCD parts during LCD panel manufacture and assembly, also U14-K01A1K.

Carry, position, feed, support, tweezers, SMIF, standard mechanical interface, pod

# U11-F02A1A [1992]

# Wafer protection during transport and storage

Includes covering wafer with cling film, oxide layer for protection during wafer handling.

#### U11-F02A2 [1987]

# Jig holders for handling wafers within processing apparatus

Includes also clamping mechanism with temperature regulated platen (see also U11-C09 codes).

Chuck, table, vacuum, hold down, susceptor, electrostatic

#### U11-F02A3 [1987]

## Chip die handling

Includes carrier tapes for die transport.

#### U11-F02A4 [1987]

# Holders and transport for IC packages, encapsulated devices

Includes carrier lines to e.g. test devices (see also U11-F01C), integrated circuit magazine, sockets to prevent lead deformation during transport, carrier tapes. For transporting packages and storage of devices.

## U11-F02B [1983]

# Positioning for semiconductor device manufacture

Includes detecting, positioning, of wafer orientation flat.

Orient, angle, align, rotate, stage, control, notch

## U11-G [1987]

# Integrated circuit design including wiring layout, use of CAD etc.

Includes geometrical layout of components, e.g. standard cell, custom LSI, semi-custom input/output layout, automatic routing. See also T01-J15A2. See also U11-C15C for computer simulation of manufacture process. For computer simulation of semiconductor device operation see also U11-F01.

Pattern, LSI, connect, computer aided design

#### U11-G01 [200

#### Integrated circuit design using CAD

# U11-G02 [2002]

# Automated component/interconnect layout design

Includes software packages. For software simulation see T01-J15 and U11-C15C codes.  $\it VHDL$ 

U11-G03 [2002]

# Circuit simulation and/or fault-finding techniques

Includes software simulations.

U11-G09 [2002]

Other IC design aspects

U11-H [2007]

# End of life-cycle product recycling

Includes: old displays, LCDs or any U11 to U14 product recycling that has reached the end of its life-cycle.

#### **U12: Discrete Devices**

This section deals with individual semiconductor devices for use either as discrete device per se, or as an element of an integrated circuit. U12 codes are also used for inventions involving manufacture (together with U11 codes) to define as far as possible the nature of the device being manufactured. From 9201 U12-Q code has been introduced to indicate devices used in integrated circuit embodiments.

#### U12-A

#### **Opto-electronic devices**

#### U12-A01

# Light emitting devices with jump or surface barrier

Including packages, arrays and electronic drive circuitry.

#### U12-A01A

# **Light emitting diodes**

# U12-A01A1 [1987]

#### Semiconductor structure of individual LED

Covers chip layer structure of LED. See U12-A01A4 for LED package structure.

# U12-A01A1A [1992]

# **LED with AIII-BV compound layers**

Includes complex ternary and quaternary compounds.

Gallium arsenide, gallium indium phosphide, gallium phosphide, gallium aluminium arsenide, indium phosphide

#### U12-A01A1B [1992]

# **LED with All-BVI compound layers**

Includes complex ternary and quaternary compounds.

Cadmium telluride, cadmium sulphide, zinc sulphide, mercury selenide, cadmium selenide, cadmium mercury telluride

# U12-A01A1C [1992]

# LED with AIV element/compound (except elemental silicon) layers

Diamond, silicon carbide

#### U12-A01A1D [1997]

#### LED with indirect bandgap semiconductor

Silicon, germanium

#### U12-A01A1E [2006]

#### **LEDs with Organic Materials**

(U12-A01A1X) OLED

#### U12-A01A1X [1992]

#### LED with other type of semiconductor

From 2006 see U12-A01A1E for polymeric and organic LEDs, see also U12-B03C for general organic device aspects.

Lead sulphide

# U12-A01A2 [1987]

#### LED manufacture

Includes manufacture of single LED device of LED display, or more specific aspects e.g. polarizing/optical film, electrodes, arrays of LEDs. If deposition/etching techniques are emphasised, see also U11-C01/U11-C07 codes.

LED, OLED, QLED display manufacture

#### U12-A01A3 [1987]

# Monolithic or hybrid circuit LED arrays

Display, optical print head

## U12-A01A4 [1987]

## Package construction for LED

See also U11-D01B1.

Resin. seal. lens

#### U12-A01A4A [2005]

# **Packages for white LEDs**

Covers package aspects for white LEDs, including phosphors for white LEDs.

#### U12-A01A4B [2006]

#### **Packages for coloured LEDs**

Covers package aspects for red, green or blue and other non-white LEDs, including phosphors for coloured, non-white LEDs.

### U12-A01A5 [1987]

#### **Drive circuitry for LED**

See also under application. Switch, control, modulator

#### U12-A01A5A [1992]

**Drive circuit for individual LED** 

#### U12-A01A5B [1992]

**Drive circuit for LED array** 

## U12-A01A6 [1987]

# **Arrays of encapsulated LEDs**

Display, optical print head

#### U12-A01A7 [2007]

## Light emitting diode displays

For display drivers see also U12-A01A5 codes. For monolithic and un-encapsulated LED array displays see also U12-A01A3, and for encapsulated LED array displays see also U12-A01A6.

LED display, OLED display

#### U12-A01B

#### **Semiconductor lasers**

See V08-A04A also. For testing of semiconductor laser see U11-F01C5.

## U12-A01B1 [1987]

#### Semiconductor details of laser body

Includes p-n junction lasers. For manufacture of laser electrodes see U11-C05F6 and V08-A01B also.

Ohmic contact, Schottky barrier layer, PN-junction, homojunction laser

## U12-A01B1A [1992]

#### Heterojunction semiconductor laser

Includes carrier confinement structures e.g. inverted rib, ridge waveguide, etched mesa, buried heterostructure, channelled substrate buried heterostructure, constricted mesa. For quantum well, superlattice lasers U12-A01B1B takes precedence.

#### U12-A01B1B [1992]

#### Quantum well semiconductor laser

Includes superlattice aspects.

Vertical-cavity surface-emitting, stripe confinement, double heterojunction

#### U12-A01B1J [1992]

#### Semiconductor laser arrays

(U12-A01B1, U13-D04)

# U12-A01B2 [1987]

# Laser diode manufacture

Use instead of U12-A01B1 if emphasis is on manufacture rather than semiconductor body details. See also appropriate codes in U11 if particular aspects of e.g. deposition, etching, isolation, electrode manufacture are emphasised. Excludes any packaging aspects.

Etch, cladding layer

# U12-A01B3 [1987]

#### Packages for semiconductor lasers

For particular aspects of packaging which may be also applicable to other semiconductor devices, see also U11-D codes. Includes impedance matching, terminals. For connection to optical fibber see also U12-A01C.

Bond, mount, cap, cover, glass, interconnect

#### U12-A01B3A [1992]

# Cooling arrangements for semiconductor laser package

See also appropriate codes in U11-D02 and V08-A05.

#### U12-A01B4 [1987]

# Electronic drive circuitry for individual semiconductor laser

See also V08-A02A.

#### U12-A01B6 [1992]

# Semiconductor laser characterised by type of semiconductor material

This code does not apply to semiconductor lasers using conventional materials belonging to AIII-BV group. It includes e.g. heterojunction with beryllium carbon nitride, boron nitride, cadmium telluride layers.

Chalcopyrite, zinc blend crystal

# U12-A01C [1987]

# Optical fiber connections to LEDs, lasers or photoreceivers

When the connection to optical fiber implies package alterations see also appropriate code i.e. U12-A01A4 for LED, U12-A01B3 for laser, U12-A02B3 for photoreceiver. See also V07-G10C. Couple, align, waveguide, photocoupler

## U12-A01X

# Other aspects of light emitting devices

#### U12-A02

## Radiation sensitive devices

#### U12-A02A

# Radiation sensitive devices for energy conversion

See X15 also for solar power generation. *Photovoltaic, solar cell* 

# U12-A02A1 [1983]

## Single solar cell

Prior to 1997 all packaging aspects of individual solar cells were covered by this code, from 1997 they are covered by U12-A02A4E.

#### U12-A02A2 [1987]

# Semiconductor materials and structures for solar cells

E.g. for monocrystalline, amorphous and heterojunction structures. For thin film solar cells see also U12-B03B.

# U12-A02A2A [1992]

Solar cells with AII-BVI compounds

U12-A02A2B [1992]

Solar cell with AIII-BV compounds

# U12-A02A2C [1992]

# Solar cell with AIV compounds

Excludes elemental silicon.

# U12-A02A2D [2006]

# Solar cells with organic materials

Excludes elemental silicon.

#### U12-A02A2E [1997]

# Solar cell with chalcogenide/chalcopyrite compounds

(U12-A02A2X)

Includes materials not covered by U12-A02A2A to U12-A02A2C codes, e.g. AI-BII-CVI, AII-BIV-CV, AII-BIV-CVI group semiconductors. For heterojunctions with e.g. copper indium selenide/cadmium sulphide films or copper indium selenide/cadmium sulphide films see also U12-E01 codes.

Copper indium sulphide, copper gallium selenide, copper indium selenide, lead sulphide

#### U12-A02A2F [1992]

# Solar cell with amorphous, polycrystalline semiconductor

Hydrogenated a-Si

# U12-A02A2Q [1992]

# Solar cell structure

For tandem solar cells see U12-A02A4C. Back surface field, textured cell, V-groove multijunction

# U12-A02A2X [1992]

# Other semiconductor materials for solar cells

From 2006 see U12-A02A2D for devices using polymeric and organic layers. Includes perovskite material for solar cells.

#### U12-A02A3 [1987]

## Characterised by solar cell manufacture

Includes manufacture of single or assembly of solar cells and manufacturing apparatus. If material manufacturing details are emphasized use U12-A02A2 section. See also U11-C18B9 for photovoltaic devices manufacture.

# U12-A02A4 [1987]

# Solar cell substrate, electrode and packaging

#### U12-A02A4A [1992]

#### Solar cell electrodes

Include electrode structure and material. For manufacture see U11-C05F6. For thin film transparent conductive layer details see also U14-H01E.

# U12-A02A4B [1992]

Solar cell substrate details

# U12-A02A4C [1992]

# Multijunction tandem solar cells Includes both mechanically stacked cells (held

together by an adhesive or bonding techniques), and monolithically integrated multijunction cells.

#### U12-A02A4D [1992]

#### Covering layers for solar cells

Includes e.g. passivating, anti-reflection film, back surface layers. Also resin layers and/or adhesive layers as part of protection film/barrier layer only.

#### U12-A02A4E [1997]

Packaging aspects for solar cells

(U12-A02A1)

#### U12-A02A5 [1983]

## Assemblies of solar cells

(U12-A02A5, U12-A02A6)

Microlithography for forming interconnections. Monolithic integration. Solar battery. Also includes frame assembly, installation of solar panels, supporting of solar power generation module. Solar battery

#### U12-A02A6\*

# Assemblies of cells on separate substrates

[1987-1996]

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 1996. From 1997 all aspects regarding solar cell assemblies are covered by U12-A02A5.

## U12-A02A7 [1992]

# Power transfer, circuitry arrangements for solar cells

(U12-A02A9)

Control, voltage/current regulator, charge

## U12-A02A8 [2005]

# Dye sensitised solar cells

See also X15 codes as appropriate.

# U12-A02A9 [1987]

# Other radiation sensitive devices for energy conversion

Includes e.g. hybrid systems (wind-photovoltaic, thermophotovoltaic, etc.). For photoelectrochemical cells after 2005 see U12-A02A8.

#### U12-A02B

## Photoreceiver for controlling current flow

Optical, IR, light, photoelectric, photodetector, avalanche

#### U12-A02B1 [1987]

Photoresistor, photoconductor

#### U12-A02B2 [1987]

# Phototransistor, photodiode

Infrared light, optical, photoelectric

## U12-A02B2A [1992]

#### **Photodiode**

Includes p-n junction diode, p-i-n diode, metalsemiconductor diode (Schottky barrier), heterojunction diode, avalanche photodiode. *APD, PD, PIN* 

# U12-A02B2B [1992]

# **Phototransistor**

Includes bipolar and field effect phototransistor. *FET* 

# U12-A02B2C [1992]

# **Photothyristor**

(U12-A02B, U12-A02B2, U12-D01B) Light activated thyristor

#### U12-A02B3 [1987]

## Package details for photoreceiver

Includes packages for devices in U12-A02B1 and U12-A02B2. For specific packaging aspects which may be also applicable to other semiconductor devices, see also U11-D codes.

Window, cap

## U12-A02B4 [1987]

# Electronic circuits for photodiodes and phototransistors

See also under application, e.g. for opto-receiver amplifiers in general see U24-G01A5, and for such amplifiers in optical communication systems see also W02-C04A3B.

Bias, current, amplify, demodulate

# U12-A02B5 [1992]

**Photoreceiver characterised by material** (U12-A02B)

#### U12-A02B5A [1992]

# **Photoreceiver with All-BVI compounds**

Includes complex ternary and quaternary compounds.

Cadmium sulphide, cadmium telluride, mercury selenide, cadmium mercury telluride, zinc sulphide, mercury zinc selenium telluride

# U12-A02B5B [1992]

# **Photoreceiver with AIII-BV compounds**

Includes complex ternary and quaternary compounds.

Gallium indium arsenide, gallium arsenide phosphide, gallium arsenide, gallium phosphide, indium arsenide

### U12-A02B5C [1992]

# Photoreceiver with amorphous, polycrystalline semiconductor

Hydrogenated a-Si

#### U12-A02B5D [1997]

# Photoreceiver with AIV elements and their compounds

(U12-A02B5X)

Diamond, silicon carbide, germanium

# U12-A02B5E [2006]

## Photoreceiver with organic materials

(U12-A02B5X)

# U12-A02B5X [1992]

# Photoreceiver with other semiconductor materials

Includes materials not covered by U12-A02B5A to U12-A02B5D codes, e.g. AI-BIII-CVI group and AII-BIV-CV group semiconductors.

Chalcopyrite compounds, copper indium sulphide, copper gallium selenide, chalcogenide compounds, zinc tin arsenide, cadmium germanium arsenide, lead sulphide, bacteriorhodopsin

#### U12-A02C

# Structurally combined with light emitter

#### U12-A02C1

[1987]

[1987]

[1987]

# **Optocouplers, optoisolators**

Includes structure, packaging aspects. Light, LED, photodiode, phototransistor, photocoupler

#### U12-A02C2

# Light path emerging from package

E.g. for reflective light barrier, rotary encoder. (See also S03-C09, U21-A03J/W05-D01 codes respectively).

Light switch, photointerrupter, reflection switch

## U12-A02C3

# Semiconductor light transmitting and receiving device

Includes light amplifiers, modulators (see also V07-K01A, V07-K01C1).

# U12-A03 [1992]

# Devices sensitive to X-ray, gamma ray, particle and ions

(U12-A02B, U12-B03X)

See S03-G02B2G for radiation intensity measurement using semiconductor sensors or S03-E06H5A for semiconductor x-ray imaging detectors.

# U12-B

Hall-, Ovshinsky- and Gunn-effect devices; Dielectric triodes and other devices not catered for elsewhere in U12

#### U12-B01 [1987]

# Hall-effect, magnetoresistive or spintronic devices

# U12-B01A [1992]

#### Hall effect devices

Includes materials, manufacture and structure of device.

#### U12-B01B [1992]

# **Magnetoresistive or spintronic devices**

Covers manufacture or structure of all magnetoresistive devices. Includes spintronic devices that involve giant magnetoresistance. Also covers spin detection in ferromagnetic semiconductor sources.

Giant magnetoresistive (GMR) device, spintronic device

#### U12-B02 [1987]

# Ovshinsky devices. Bulk negative differential resistance (NDR) devices

For negative resistance FET see U12-D02J1.

# U12-B02A [1992]

#### **Gunn-effect devices**

Includes Transferred-Electron Devices. *TED* 

## U12-B03 [1987]

# Other devices and thick/thin film and organic semiconductor devices

See also U14-H codes for film circuits.

## U12-B03A [1987]

## Thin/thick film transistors (inorganic)

Covers materials and structural details of individual device rather than array or layout details. Includes coplanar type, stagger structure TFT.

Reverse staggered

#### U12-B03B [1987]

# Thick/thin film devices (inorganic) other than transistors

Includes e.g. thin film solar cells (see also U12-A02 or U12-A02A2Q).

# U12-B03C [1987]

#### **Organic devices**

Excludes chemical or pressure-sensitive transducers (see U12-B03E). For LEDs, Solar cells and photoreceivers with organic layers see U12-A01A1E, U12-A02A2D and U12-A2B5E respectively.

Bacteriorhodopsin

# U12-B03D [1992]

#### Cold cathode field emission devices

(U12-B03X)

See also V05 codes. Covers micro-scale, or smaller, devices created using IC manufacturing processes. For complete manufacture see also U11-C18B9, or relevant U11-C codes for specific processes.

**FED** 

## U12-B03E [1992]

#### Semiconductor transducers

(U12-B03X)

See also appropriate codes in S02, S03 and V06 classes. For non-semiconductor piezoelectric elements/transducers see V06 codes only. Includes e.g. pressure sensitive (see also S02-F04B3), piezoresistive, and chemical sensors. For manufacture see also U11-C18C.

CHEMFET, ISFET

#### U12-B03F [1992]

# Microstructural or nanostructural devices or systems

(U12-B03X)

For manufacture, see also U11-C18C codes. See X25-L01A and X25-L03A codes for microvalves and micropumps respectively, and V06-M06G codes for micromotors.

#### U12-B03F1 [2002]

#### Microstructures

See S03-H02A for micrometre scale instrumentation.

# U12-B03F1A [2002]

#### Microstructural devices

Includes individual MEMs devices

# U12-B03F1B [2002]

#### Microstructural systems

Includes assemblies of MEMs devices, and MEMs systems.

#### U12-B03F1C [2006]

#### Micromachine packages

See also V06 codes. For package details see also U11-D codes and for packaging processes see also U11-E codes.

#### U12-B03F2 [2002]

#### **Nanostructures**

See S03-H02B for nanometer scale instrumentation.

# U12-B03F2A [2002]

Nanostructural devices

# U12-B03F2B [2002]

Nanostructural systems

#### U12-B03X [1987]

#### Other discrete devices

From Jan 2002 see U12-B03F2 codes for nanotechnology.

#### U12-C

# Other two terminal devices (incl. resistors, capacitors)

Resistors and capacitors not implemented in semiconductor form are covered by V01 codes.

# U12-C01 [1983]

#### Diodes (incl. rectifier assemblies)

The following codes are no longer applied but they remain valid for records prior to 9201: U12-C01A, U12-C01B. For complete manufacture of diode devices see U11-C18B1. For Gunn diodes see U12-B02A. For variable capacitance diode, see U12-C02B. For Shockley diode and two terminal semiconductor controlled rectifier (SCR) see U12-D01B4.

#### U12-C01A\* [1987-1991]

#### Diodes - low, medium power

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 1991. From 1992 see U12-C01C to U12-C01X codes.

# U12-C01B\* [1987-1991]

# **Diodes - high power**

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 1991. From 1992 see U12-C01C to U12-C01X codes.

# U12-C01C [1992]

#### **Rectifier diodes**

Includes Schottky, planar, p-i-n diodes. PIN, PN, hot carrier diode, hot electron diode, Schottky barrier

#### U12-C01D [1992]

#### **Breakdown diodes**

Includes Zener, avalanche diodes.

Avalanche breakdown, voltage reference

# U12-C01E [1992]

#### IMPATT and related transit time diodes

(U12-B, U12-B02)

Includes barrier junction injection and transit time diode, trapped plasma avalanche triggered transit diode, double velocity transit time diode, mixed tunnelling avalanche transit time.

BARRITT, TRAPPATT, DOVETT, MITATT

# U12-C01G [1992]

#### **Tunnel diodes**

(U12-C, U12-B)

Includes metal-insulator-semiconductor tunnel diode, metal-insulator-metal tunnel diode, Esaki diode, but also quantum effect diodes, e.g. resonant tunnelling diodes.

MIS, MIM, RTD

U12-C01X [1992]

Other types of diode

U12-C02 [1987]

**Capacitors** 

U12-C02A [1987]

Metal-insulator-semiconductor capacitors e.g. MOS

U12-C02A1 [1987]

For memories e.g. dynamic RAM

# U12-C02B [1992]

#### p-n junction capacitors

Includes variable capacitance diodes, e.g. varactors. See V01-B02B1 for discrete diode embodiments.

# U12-C02C [1992]

#### **Metal-insulator-metal capacitors**

When used as LCD driving element in active matrix see also U14-H01A and U14-K01A2A.

MIM

#### U12-C02F [1997]

# Ferroelectric capacitor for integrated circuits

(U12-C02X)

For capacitors used in ferroelectric memories see also U14-A03F.

# U12-C02X [1992]

#### Other types of capacitor

# U12-C03 [1987]

#### Resistors, inductors

Includes resistors with PN junction.

#### U12-C03A [2002]

#### Resistors

Includes PN junction structure aspects.

## U12-C03B [2002]

#### **Inductors**

Includes structure of inductive aspects of monolithic microwave integrated circuits (MMIC) (see also U14-H03C2 codes). For telecommunications aspects see W01 codes.

# U12-C04 [2002]

#### Fuses

For all structural aspects of fuses/antifuses including memory redundancy circuits (see also U14-D01A). Before Jan 2002 see U11-D03B2A for structural aspects. For fuse manufacture see U11-C05G2A.

#### U12-D

# Electrically controllable semiconductor devices

Codes in this section are used on their own for novel device structures, but also together with U11 codes to identify type of device whose manufacture is covered by U11 codes. For example, electrode manufacture for SOI insulated gate field effect transistor is coded in U11-C05F1 and U12-D02A4. For thin film transistor see U12-B03A and appropriate U12-D codes according to type of transistor.

#### U12-D01

# **Bipolar devices**

#### U12-D01A

#### **Bipolar transistors**

Bipolar junction, Darlington transistor

# U12-D01A1 [1992]

#### MOS gated bipolar transistor

Includes insulated gate bipolar transistor IGBT, conductivity modulation MOS

# U12-D01A2 [1992]

#### Heterojunction bipolar transistor

See also U12-E01 for details regarding materials, structures of the heterostructure.

# U12-D01A3 [1992]

# Hot electron bipolar transistor

This code takes precedence over U12-D01A2, e.g. for HBT with heterostructures. For hot electron unipolar transistors see U12-D02J.

Auger transistor

#### U12-D01A4 [1992]

# Bipolar transistor with tunnelling mechanism

Includes resonant tunnelling bipolar transistor. *RTBT* 

#### U12-D01A5 [1992]

# Bipolar transistor with semiconductor on insulator substrate

(U11-C08A5, U13-D, U12-D01A)

For manufacturing aspects regarding silicon-oninsulator structures see U11-C08A6.

SOI

#### U12-D01A9 [1992]

## Other types of bipolar transistor

Covers aspects such as lateral/vertical collector diffused isolation structure.

#### U12-D01B

# **Thyristors**

For light activated thyristors see U12-A02B2C.

#### U12-D01B1 [1992]

# Field controlled thyristor (FCT)

For MOS gated control turn-off see also U12-D01B3.

МСТ

#### U12-D01B2 [1992]

## **Bidirectional thyristors**

Includes triacs (triode ac switch), diacs (diode as ac switch).

Bilateral diode switch, diac, bilateral triode switch, triac

## U12-D01B3 [1992]

# **Gate turn-off thyristor**

GTO

#### U12-D01B4 [1997]

#### Semiconductor controlled rectifier

(U12-D01B9)

Prior to 1997 for SCR see U12-D01B. For bilateral devices see U12-D01B2. Includes Shockley diodes. Forward blocking, reverse blocking

# U12-D01B5 [1997]

## Static induction thyristor

(U12-D01B9)

Static induced thyristor

#### U12-D01B9

[1992]

#### Other types of thyristor

Includes silicon unilateral/bilateral switch. From 1997 see U11-D01B4 for Shockley diodes and U11-D01B5 for static induced thyristors.

#### U12-D02

# **Unipolar devices**

#### U12-D02A

#### **IGFETs**

Also includes device in which insulator is made of material other than oxide e.g. nitride, and gate electrode is made of material other than metal, e.g. polysilicon. See also S03 codes for FETs used as sensors.

MOSFET, MISFET, CHEMFET, ISFET

#### U12-D02A1 [1983]

### **FET with floating gate**

For memories using floating gate FETs see U13-C04A, U13-C04B2, U14-A03B7 codes.

# U12-D02A2 [1992]

# FET with metal-insulator-silicon oxidesilicon (MIOS) structure for memories

Includes metal-nitride-oxide-semiconductor type. For memories using this type of transistor see U13-C04 codes and/or U14-A03B7.

MNOS

# U12-D02A3 [1992]

#### FET with lightly doped drain

(U11-C02J6, U12-D02A) LDD

#### U12-D02A4 [1992]

# FET with semiconductor on insulator substrate

(U11-C08A5, U12-D02A, U13-D)

For manufacturing aspects regarding silicon-on-insulator structures see U11-C08A6.

SOI

# U12-D02A5 [1992]

#### **IGFET** with heterostructure

HIGFET, SISFET, heterostructure MISFET

# U12-D02A7 [1997]

#### Ferroelectric transistor

(U12-D02A9)

## U12-D02A9 [1992]

#### Other IGFETs

Includes vertical MOS, trench, U-shaped grooved MOS, double diffused MOS, trench type MOSFET, Schottky barrier source and drain MOS. Also includes magnetoelectric FET, Spin-FET, Magnetic-FET MAGFET. For superconductive FET see also U14-F02B. From Jan 2006 see U12-D02E for multigate MOSFETs.

VMOS, UMOS, DMOS, DIMOS

## U12-D02B [1992]

# FET with pn-junction or Schottky barrier diode gate

(U12-D02X)

MESFET, JFET, dual-gate MESFET

# U12-D02C [1992]

# Transistor with static field regions

(U12-D02X)

Includes static induction transistor, permeable base transistor.

SIT, PBT

# U12-D02D [1992]

#### FET with quantum well, wire

(U12-D02X, U12-E01)

Includes doped channel hetero-MISFET (see also U12-D02A5), semiconductor gate heterostructure FET (see also U12-D02A5), double heterostructure FET. See also U12-E01 codes for details regarding materials, structures of the heterostructure.

#### U12-D02D1 [1997]

# **One-dimensional charge carrier FET**

(U12-D02D)

Quantum wire FET

#### U12-D02D2 [1997]

## **High electron mobility transistor**

(U12-D02D)

Includes Modulation doped FET, Two dimensional electron gas FET, Separately doped FET, Quantum well FET, Two dimensional hole gas FET.

SQWFET, HEMT, MODFET, TEGFET, 2DHGFET, SISFET, DHFET, HFET, doped channel heterojunction

# U12-D02E [2006]

#### **Multi-gate Unipolar transistors**

Used in conjunction with other U12-D02 codes where necessary to indicate the type of device, e.g. for Dual-gate MESFET see also U12-D02B.

Double-gated MOS. FINFET

#### U12-D02J

[1992]

## Hot electron transistor (HET)

(U12-D01A, U12-D02X)

Includes metal base transistor, planar doped barrier transistor.

PDB

## U12-D02J1 [1992]

## Real space transfer transistor

Includes negative resistance FET, charge injection transistor.

NERFET, CHINT, delta doping

# U12-D02J2 [1992]

# FET with tunnelling mechanism

Includes resonant tunnelling hot electron unipolar transistor, resonant tunnelling gate field effect transistor, ballistic transistor, tunnelling hot electron transfer amplifier, MIMIM structure tunnel transistor.

RHET, RT-FET, THETA

#### U12-D02K

[1992]

#### **Quantum interference devices**

(U12-D02X)

Covers devices whose operation is based on wave phenomena (e.g. electrons in two parallel highmobility channels are made to interfere constructively).

# U12-D02X

#### Other unipolar devices

# U12-E

# General

#### U12-E01

#### **Semiconductor bodies**

Heterojunction

#### U12-E01A

[1992]

# Semiconductor body characterised by materials

# U12-E01A1 [1992]

# Semiconductor body with AIII-BV compound layers

Includes complex ternary and quaternary compounds.

Gallium arsenide, gallium phosphide, indium phosphide, gallium aluminium arsenide, gallium indium arsenide, gallium indium phosphide, gallium nitride, cubic boron nitride

# U12-E01A2 [1992]

# Semiconductor body with AII-BVI compound layers

Includes complex ternary and quaternary compounds.

Mercury sulphide, cadmium sulphide, zinc sulphide, mercury selenide, zinc selenide, cadmium selenide, cadmium telluride, cadmium mercury telluride

# U12-E01A3 [1992]

# Semiconductor body with group IV element/compound (except elemental silicon) layers

Includes silicon-germanium layers.

Silicon carbide, diamond, germanium

# U12-E01A4 [1997]

# Semiconductor body with chalcogenide/chalcopyrite compounds

For solar cells, see U12-A02A2E. Includes semiconductors such as AI-BII-CVI, AII-BIV-CV, AII-BIV-CVI, etc.

Copper indium sulphide, copper gallium selenide, copper indium selenide

#### U12-E01A5 [1997]

#### Silicon-on-insulator structure

(U12-E01A, U12-E01A9)

For SOI manufacture, see U11-C08A6. This code is used for discrete device with SOI substrate. For integrated circuit with SOI substrate see U13-D07. *SOI* 

# U12-E01A9 [1992]

Semiconductor bodies characterised by other materials

#### U12-E01B [1992]

Characterised by semiconductor structure

# U12-E01B1 [1992]

# Semiconductor body with heterojunctions

U12-E01B2 code takes precedence.

# U12-E01B1A [2006]

## **Device with strained layer structure**

Includes strained channel to enhance chargecarrier mobility. For strained layer super lattice see also U12-E01B2.

Strained silicon, strained layer, relaxed layer, SLS

#### U12-E01B2 [1992]

# Semiconductor body with quantum wire, wells, superlattice

SQW, multi-quantum well, MQW

#### U12-E02

#### **Electrodes for semiconductor devices**

Includes ohmic electrodes, Schottky barrier electrodes and metal-insulator-semiconductor electrodes. Also includes novel gate structures. For electrode manufacture see U11-C05E and U11-C05F codes.

Schottky, ohmic

#### U12-Q [1992]

# Device intended to be used as part of integrated circuit

This code is used for individual devices intended to be used as elements of an integrated circuit. For example, a floating gate transistor for an EPROM is coded in U12-D02A1, U12-Q, U14-A03B7 and, if integration aspects are important, in U13-C04A.

# **U13: Integrated Circuits**

U13-B/C codes in this section are not used for circuitry which is routinely integrated e.g. logic gates, low power amplifiers etc. for which codes indicating the form of implementation in the appropriate sections of U21-U25 should be used. See U14-H01 for thin film circuitry e.g. for memories, display devices and large area contact image pick-up devices. For individual devices intended to be used in an integrated circuit see U12-Q and the more specific U12 code indicating the type of device (e.g. U12-D02A1 for floating gate IGFET, U12-C02A1 for capacitors used in DRAMs).

#### U13-A

# Charge transfer devices; Radiation sensors/detectors

Includes most types of solid state image sensors e.g. charge coupled devices, MOS. For video cameras see W04-M01.

#### U13-A01 [1983]

# IC radiation sensors, e.g. imagers characterised by detecting element

For complete manufacture see U11-C18B4. For Line image sensors (thin film) see U14-H01B. For CMOS image sensor structure and manufacture see also U13-D02A.

Image pick-up, matrix, row, column, photoelectric

# U13-A01A [1987]

# IC radiation sensor with photodiode, photoconductor

For individual device see U12-A02B2A. Includes MOS imagers.

# U13-A01B [1987]

# IC radiation sensor with phototransistor

For individual device see U12-A02B2B. Vertical, horizontal transistor

#### U13-A01B1 [1987]

IC radiation sensor with static induction transistor (SIT)

# U13-A01D [1997]

# Packaging aspects of IC radiation sensor

(U13-A01X)

Specific package aspects for individual photodiode, phototransistor are covered by U12-A01B3.

#### U13-A01F [1997]

# **Optical elements for IC radiation sensor**

(U13-A01X)

Includes optical filters, lenses. For complete optical filter manufacture see U11-C18D. For package window structures see U13-A01D and U11-D01C1. Filter, lens

#### U13-A01G [2002]

# Wavelength conversion layers for IC radiation sensors

Includes phosphors coated onto photodiodebased MOS imagers which fluoresce under X-ray radiation (see S05 codes for medical applications).

# U13-A01H [2006]

Circuits, drivers for IC radiation sensors

# U13-A01X [1987]

## Other aspects of IC radiation sensors

Includes focal plane array constructional details. Smear, blooming

# U13-A02 [1983]

#### Charge transfer devices

Includes acoustic charge transport devices, (see also U14-G if SAW driving employed). For complete manufacture see U11-C18B3. For CTD used as shift registers see U14-A01B. See also W04-M01 codes for area imagers, and S06-D05 codes for linear imagers. Includes any aspect regarding discrete CCD and also integrated CCD for imagers (see also W04-M01B).

Read, shift, register, clock

# U13-A02A [1992]

## Charge transfer device structure

Includes charge coupled devices, bucket brigade devices, charge injection devices.

Surface channel, SCCD, buried channel, BCCD, fill and spill, CCD, BBD, CID

#### U13-A02B [1992]

Circuits, drivers for CCD

#### U13-A02C [1992]

Packaging aspects of CCD

#### U13-A02D [2006]

#### **Optical elements for CCD imagers**

Includes optical filters, lenses that are inside, or part of, the package. For complete optical filter manufacture see U11-C18D. For package window structures see U13-A02C and U11-D01C1.

#### U13-A02X [1992]

## Other aspects of CCD

Smear, blooming

#### U13-B

## **Analogue circuits**

Mainly used for A-D and D-A converters (see also U21-A codes), but includes also modulators, demodulators, mixers and active filters which are integrated and do not have a specific code breakdown indicating IC details. Prior to 1997 for analogue and digital circuits integrated on same semiconductor chip see U13-B and U13-C; from 1997 for analogue/digital integration on same semiconductor substrate see U13-C09.

#### U13-B01

# Analogue circuits with bipolar devices

For semiconductor structure see U13-D01 codes.

#### U13-B01A\*

[1987-1991]

#### With FET elements

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 1991. From 1992 see U13-B03.

#### U13-B02

#### **Analogue circuits with FETs**

For semiconductor structure see U13-D02 codes.

#### U13-B02A [1987]

**Analogue circuits with MOSFETs** 

**CMOS** 

U13-B02B [1987]

Analogue circuits with MESFET, JFET

U13-B02C\* [1987-1991]

#### **FET with bipolar transistor**

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 1991. From 1992 see U13-B03.

#### U13-B03 [1992]

# Analogue circuits with combined FET and bipolar devices

(U13-B01A, U13-B02C)

Includes e.g. Bi-FET operational amplifier. For semiconductor structure see U13-D03 codes. **BiCMOS** 

#### U13-B04 [1992]

# Analogue circuits with diodes and/or capacitors and/or resistors

(U13-B01A, U13-B02C)

For semiconductor structures see U13-D01B.

#### U13-B09

[1987]

# Other aspects for analogue circuits

Includes custom analogue array.

## U13-C

## **Digital circuits**

Binary

#### U13-C01

# Digital circuits with bipolar devices

For semiconductor structures see U13-D01 codes.

#### U13-C01A [1992]

# Digital circuits with diodes, capacitors, resistors

For semiconductor structures see U13-D01B.

#### U13-C02

## **Digital circuits with FETs**

For semiconductor structures see U13-D02. Buffer, compound

# U13-C02A

[1987]

# **Digital circuits with MOSFETs**

**CMOS** 

# U13-C02B

[1987]

[1987]

## Digital circuits with MESFET, JFET

U13-C02C [1992]

# Digital circuit with FET and diodes, capacitors, resistors

For semiconductor structures see U13-D03A.

#### U13-C03 [1987]

# Digital circuits with combined bipolar and FET

For semiconductor structures see U13-D03B.

#### U13-C04

# Digital circuits with repetitive structures

E.g. matrix layout for read-only memories, programmable logic arrays, random access memories, gate arrays (for wiring and layout details see also U21-C01E and/or U11-G).

# U13-C04A [1987]

# Read only memory (non-electrically alterable)

Includes read only memory, programmable read only memory, erasable programmable read only memory, matrix layout. For more specific memory aspects see U14-A03B7, U14-A06C (for EPROM), U14-A06B1 (for PROM), U14-A06B5 (for ROM). For complete memory manufacture see also U11-C18B5.

Mask ROM

#### U13-C04A1 [1997]

# **Electrically-programmable ROM**

(U13-C04A) EPROM

# U13-C04B [1987]

## For RAMs and electrically alterable ROMs

Includes matrix layout. For complete memory manufacture see also U11-C18B5.

# U13-C04B1 [1992]

#### **Dynamic/static RAMs**

Random access

## U13-C04B1A [1992]

#### **Dynamic RAM**

Includes single transistor-single capacitor cell, three transistor cell. For specific aspects regarding capacitor manufacture, see U11-C05G1B, for capacitor structure see U12-C02A1. Prior to 1992 for transistor-capacitor DRAM structure, see U13-D03; after 1991 see also U13-D03A. For data refreshing, see U14-A03B4A.

# U13-C04B1B [1992]

#### Static RAM

For bipolar static RAM, E/R static RAM, flip flop, see also e.g. U14-A03A or U14-A03B1 codes.

Pseudo-static RAM, PSRAM

# U13-C04B2 [1992]

#### **Electrically erasable (alterable) PROM**

For specific transistor structure see e.g. U12-D02A1, U12-D02A2 as appropriate. See also U14-A03B7 for memory details.

EEPROM, E2PROM, EAROM, FLASH EPROM

# U13-C04C [1987]

# Integrated circuit Programmable Logic Devices

Includes field programmable logic devices, programmable logic arrays, programmable array logic, logic cell arrays. See also U21-C01E for circuitry for PLD e.g. power controller, sense amplifiers etc.

FPLA, PLA, PAL, fixed OR array, FOA, programmable interconnect, user configurable arrays

#### U13-C04D [1987]

# Full custom or semi-custom integrated circuit arrays

Includes application specific integrated circuits e.g. gate arrays, master slice, uncommitted logic arrays, configurable gate arrays.

Sea of gates, channel-less, channel type gate array, logic array, ASIC, basic cell, ULA

# U13-C05 [1987]

# Computer integrated circuit aspects. Single chip computer

See also T01-M05.

Microcomputer, microprocessor, one chip, system on chip, SOC

#### U13-C06 [1997]

# Large scale IC, Ultra large IC, wafer scale digital circuit aspects

Covers circuit and logic aspects only, for constructional details see U13-D codes. Cellular, VLSI, ULSI, LSI

# U13-C07 [1987]

#### On-chip testing circuits

Includes scan based testing, pattern generation (See also U11-F01D2A, U11-F01D2B). For computer aspects of shift path maintenance techniques, see T01-G02A1 also. Includes analogue test/trimming and multiple usage of terminals.

Scan testing

#### U13-C08 [1997]

#### **Circuit trimming**

For physical circuit repair see U11-C19A. For trimming thin/thick film for hybrid circuits see U14-H04B3B.

# U13-C09 [1997]

# Analogue/digital integration on same semiconductor chip

(U13-B, U13-C)

Prior to 199701, see U13-B and U13-C.

#### U13-D

#### Integrated circuit structures

Prior to 1992, for integration on all insulating (e.g. SOI) substrates see U11-C08A5 and U13-D. From 1992 for integrated circuits on insulating substrates see U13-D07.

#### U13-D01

Integrated circuit structure with bipolar devices

#### U13-D01A [1992]

Integrated circuit structure with complementary bipolar devices

Includes NPN-PNP structures.

#### U13-D01B [1992]

# Integrated circuit structure with diodes, passive components

Includes bipolar transistor-diode, diode-diode, capacitor, resistor integration.

# U13-D02

# Integrated circuit structure with FET

Field effect

#### U13-D02A [1983]

# **CMOS** integrated circuit structure

Includes manufacture.

Complementary metal oxide semiconductor

#### U13-D03 [1983]

Combined FET and bipolar integrated circuit structure

## U13-D03A [1992]

# FET in combination with diodes and/or capacitors and/or resistors

For one-transistor DRAM cell see also U14-A03B4. For transistors, diodes, used as protective elements e.g. for MOS devices see also U13-E01.

# U13-D03B [1992]

# **Bipolar-FET transistor integrated circuit structures**

Includes BiCMOS, BiFET structures.

# U13-D03B1 [1992]

Integrated circuit characterised by novel structure

#### U13-D03B2 [1992]

Integrated circuit characterised by novel method for structure manufacture

#### U13-D04 [1987]

# Integrated circuit structure in combination with other elements

Includes integration with e.g. SAW devices, piezoelectric, thermoelectric, Hall effect devices.

# U13-D04A [1992]

# **Opto-electronic integrated circuits**

For optoelectronics using integrated optical waveguides see also V07-F01A5.

OEIC

# U13-D04B [2005]

# Lab-On-Chip (LOC)

Includes DNA microarrays or biochips using semiconductor based technology. For instrumentation details see also \$03-H01 codes. For MEMs aspects see V06, and U12-B03F codes for micro- and nano-structural electronic or MEMs aspects. For glass microarray or non-semiconductor fluorescence based techniques see \$03 codes only.

Microfluidic, microarray, DNA chip, biochip, Gene ChipTM

# U13-D05 [1987]

# Three-dimensional, wafer-scale integration

Includes constructional details of master-slice circuitry. See also U11-D01A8 (packages) and U11-D03C3 (chip-on-chip). For 3-D structure manufactured by semiconductor recrystallisation over insulating substrates see also U11-C08C, U11-C03J1. For wafer scale circuitry see U13-C06. *Laminate* 

# U13-D06 [2002]

# Spherical integrated circuit structures

Includes spherical sensor circuits for in-situ monitoring of body functions (see also S05 codes for medical applications).

# U13-D07 [1992]

# Integrated circuit with semiconductor on insulator structure

For semiconductor on insulator manufacture see U11-C08A6. For bipolar and field effect transistor on insulating substrate see U12-D01A5 and U12-D02A4 respectively.

SOI, SOG, SOS

# U13-D08 [1997]

#### **Radiation hardened integrated circuits**

Rad hard

#### U13-D09 [2006]

# Integrated circuit with strained structures

Includes CMOS with strained channel structure to enhance charge-carrier mobility (see also U13-D02A), lattice mismatch and bandgap engineering. Strain

U13-E [1987]

**Circuitry in general** 

#### U13-E01 [1992]

# Electrical and thermal protection of integrated circuit

Includes protection against transient condition, reverse battery condition, electrostatic discharge. For fuses see U11-D03B2. For logic circuit aspects see U21-A03A2. For general low power electronic circuit protection see U24-F codes. For electrostatic, electromagnetic, thermal protection implemented as IC package adaptation see U11-D01C codes.

Latch-up prevention

# U13-E02 [1992]

# Power supply, substrate biasing of integrated circuit

For supply grounding see U11-D03C1. For amplifier protection see U24-G03C. For logic circuit aspects see U21-C03A2.

Charge pumps

# U13-E03 [1997]

# Input/output circuitry for integrated circuit

Includes input/output circuitry on integrated circuit chip. For layout design see U11-G.

Buffer

U13-E04 [2002]

# Clocking and synchronisation circuitry for integrated circuits

Includes on chip real-time clocks.

U13-E09 [1992]

Other general aspects IC of circuitry

# **U14: Memories, Film and Hybrid Circuits**

#### U14-A

#### **Digital static stores**

Dynamic recording is in T03 and W04. Storage systems for digital computing are in T01-H.

#### U14-A01

Shift stores (serial access)

#### U14-A01A

# **Magnetic devices**

For magnetic film/core memories, see U14-A04 codes.

#### U14-A01A1

[1983]

# **Bubble memories (non-volatile)**

Includes Bloch line memory, but when used as RAM see U14-A04A.

#### U14-A01B

# **Charge transfer devices**

Includes serpentine, serial parallel serial (SPS) structure, recirculating shift registers. Any aspect regarding CTD structure, packaging is covered by U13-A02 codes.

#### U14-A01X

## Other types of shift store memories

For FIFO aspects see U14-A08B1 also. *Inverter, LIFO* 

# U14-A02

Memories using (electro-, magneto-) optical elements

U14-A02A

[1992]

Memories using electro-optical or magneto-optical elements

U14-A02B

[1992]

Memories using optical storage elements

U14-A02B1

[1992]

Optical memories with interference, diffraction patterns

Includes e.g. holograms.

U14-A02B9

[1992]

Other types of optical memories

#### U14-A03

Memories using electric elements

#### U14-A03A

## Memories with bipolar devices

Includes memories with diodes and thyristors.

#### U14-A03A1

[1992]

# Memories with bipolar transistors

Covers memories using bipolar transistors as main constituents. Includes ECL RAMs (bipolar static RAM), ECL and Schottky TTL PROMs (programmed by blowing fusible links, see also U14-A06B1). For static RAM structures and/or complete manufacture see also U13-C04B1B and/or U11-C18B5. SRAM

#### U14-A03B

Memories with FETs (NMOS, CMOS)

#### U14-A03B1

[1983]

# Memories with FET in bistable cell configuration

Includes flip-flop, enhancement/resistance, six transistor cell static RAM (see also U13-C04B1B). For complete memory manufacture see also U11-C18B5.

(E/R)SRAM, (4T-2R)SRAM, random access

#### U14-A03B4

[1983]

#### Memories with capacitor store

(U14-A03X)

Includes planar, trench, stacked capacitor dynamic RAM. For structure and manufacture see U13-C04B1A, U13-D03 and U11-C18B5. If only capacitor manufacture and/or structure emphasised see U11-C05G1B and/or U12-C02A1. DRAM, random access

## U14-A03B4A

[1992]

#### **Data refreshing for memories**

(U14-A20)

Includes both internal and external refresh for dynamic RAM, pseudo-static RAM.

#### U14-A03B5

[1992]

# **Memories with FET-bipolar integration**

(U14-A03A, U14-A03B)

For bipolar static RAM with e.g. CMOS circuitry, i.e. BiCMOS static RAM, see also U14-A03A and/or U13-C04B1B, U13-D03B codes if structure and manufacture are important. For BiCMOS dynamic RAM see also U14-A03B4 and/or U13-C04B1A, U13-D03B codes if structure and manufacture are important. Complete memory manufacture is covered by U11-C18B5.

BIMOS, SRAM, DRAM

# U14-A03B7 [1983]

# Memories with adjustable threshold MOS transistor

(U14-A03X)

Covers electrically programmable read-only memory, electrically erasable programmable read-only memory, electrically bulk erasable programmable read only memory. Includes variations of floating gate type e.g. floating gate tunnel oxide, textured polysilicon, split gate, floating gate avalanche MOS, stacked gate avalanche injection MOS, as well as variations of silicon-nitride-oxide-silicon type e.g. silicon-oxide-oxide-silicon, metal-nitride-oxide-silicon. For more specific details regarding floating gate MOS transistor or MIOS type transistor see also U12-D02A1, U12-D02A2 respectively. For matrix layout see U13-C04A1 for EPROMs, and U13-C04B2 for EEPROMs.

EPROM, EEPROM, FLASH EEPROM, FLOTOX, FAMOS, SAMOS, SNOS, SONOS, MNOS, Fowler-Nordheim tunnelling, hot carrier injection

#### U14-A03B9 [1987]

# Memories with combined ROM and RAM memory cells

Includes e.g. non-volatile RAM in which SRAM array is duplicated (shadowed) by an equivalent EEPROM.

NOVRAM, shadow RAM

#### U14-A03F [1992]

#### Memories with ferroelectric elements

(U14-A03X)

Includes e.g. non-volatile variable resistive EEPROMs, non-volatile ferroelectric RAMs, ferroelectric capacitor memories (see also U14-A03B4).

'Cross point arrays'

# U14-A03G [1992]

#### Memories with superconductive elements

(U14-A03X)

See also U14-F02B.

Josephson, superconducting

#### U14-A03H [2006]

# Programmable conductor RAM (PCRAM)

Includes chalcogenide memories, phase change ovonic unified memories, phase change memories, and programmable resistor memories, resistive memories.

OUM

#### U14-A03X

# Other types of memories with electric elements

Includes e.g. memories based on electrochemical cell, organic films etc. For variable resistance memories see U14-A03H from 2006.

#### U14-A04

## Memories with magnetic elements

#### U14-A04A

[1992]

#### Memories with magnetic thin films

Includes crosstie random access memory, Bloch line memory element used for non-volatile RAM. *CRAM, magnetoresistive RAM* 

# U14-A04A1 [2006]

## Using giant magnetoresistance effect

E.g. using ferromagnetic layers separated by metallic layer. Includes pseudo spin valve MRAM devices.

GMR, spin valve, spin transistor, pseudo spin valve, PSVMRAM

# U14-A04A2 [2006]

## Using tunnel magnetoresistance effect

E.g. using ferromagnetic layers separated by electrically insulating layer. Includes magnetic tunnel junction or tunnelling magneto-resistance MRAM devices.

TMR, spin tunnel transistor, tunnel junction, MJT

#### U14-A04X

#### Memories with core stores

Includes ring shaped ferrite cores.

# U14-A05

#### **Associative memories**

Includes content addressable memory. *CAM* 

#### U14-A06

# (Semi-)permanent (non-volatile) ROM

# U14-A06A\*

[1983-1986]

# **Electrically alterable semiconductor stores**

\*This code is now discontinued, but remains searchable and valid for records from 1983 to 1986. From 1987 see U14-A03B7.

# U14-A06B [1983]

# Non-reprogrammable stores (fixed-program memory)

Includes one-time programmable or 'one shot' EPROMS (without guard window to allow UV erasure).

OTP

#### U14-A06B1 [1987]

# Non-reprogrammable memories using diodes or fuses

Includes PROM based on e.g. bipolar transistors (ECL or Schottky TTL) which are programmed by blowing fusible links.

Zener-zap

#### U14-A06B5 [1987]

# Mask programmable, ion implantation programmable ROM

Includes ROM custom programmed during manufacture, obtained both with bipolar or MOS technology, by using e.g. contact window method, diffusion layer method, or ion implantation. For details of manufacture, see appropriate codes in U11 and for structure see also U13-D codes and/or U13-C04A.

#### U14-A06C [1987]

## Non-electrically (e.g. UV) erasable ROM

Includes EPROM which can be programmed by user. See also U13-C04A and/or, prior to 1992, U13-C04B, U14-A03B7, as appropriate.

### U14-A06X [1987]

## Other non-volatile memories

## U14-A07

#### Reading/writing

Includes data-in/data-out (I/O) control circuits, I/O signal interface, bit line control e.g. precharge and equalisation circuitry, voltage boosters, clocking circuits for read/write operations, safety circuits to prevent inadvertent reading/writing, initialisation circuits. Prior to 1992, some aspects regarding circuitry for reading/writing were covered by U14-A20.

## U14-A07A [1983]

#### Reading, sensing circuits

Includes reading methods, sense amplifiers and associated circuitry e.g. sense reference voltage generator, charge pump circuits for providing current to sense amplifiers.

#### U14-A07B [1992]

## Programming, erasing circuits

Includes voltage boosters for e.g. erasing/programming EEPROMs.

#### U14-A07C

#### [1997]

## Clocking circuits, synchronisation

(U14-A07

General aspects of digital circuit synchronisation are covered by U22-H.

Time skewing

# U14-A08

# Address selection; Transmission of information between stores

For shift aspects of FIFO stores see U14-A01X also. Includes address, decoders and associated circuits, word line control circuits, timing circuits for address selection, two dimensional and multiplexed addressing. Prior to 1992 some aspects regarding circuitry for addressing were covered by U14-A20.

# U14-A08A [1983]

#### **Address-selection**

Includes e.g. page mode and static column mode operation, chip selection circuitry.

Row address strobe, RAS, column address strobe, CAS

#### U14-A08B [1983]

# Transmission of information between stores

Serial transmission, cache memory

# U14-A08B1 Multiport memories

[1992]

[1992]

Includes both random access memories and sequential memories (for the latter see also U14-A01X). Prior to 1992, first in-first out aspects are covered by U14-A08 and, for shift stores, by U14-A01X.

FIFO, dual port RAM, dual port burst access memory, BAM

# U14-A09

#### **Power supply for memories**

(U14-A20)

Includes power back-up and data preservation aspects.

## U14-A10 [1992]

## **Packages for memories**

(U14-A20)

For specific aspects of packaging see appropriate subclasses in U11-D, U11-E. Includes special adaptations e.g. small battery provided inside package.

#### U14-A11 [1992]

# Software error prevention modifications

(U14-A20)

Includes e.g. method to prevent errors introduced by radiation (see also U11-D01C2 for package adaptations).

#### U14-A20

## Other memory circuits

#### U14-B

# **Electric analogue stores**

Sample-and-hold arrangements are coded in U21-B03.

Analogue memory

#### U14-B01

# **Multilevel memory**

Includes digital memory functionality with cells holding more than two voltage levels (not strictly digital)

## U14-B02 [2002]

#### With elements simulating neuronal cells

For complex neuronal configurations see T01-E05B and/or T02-A04A5.

# U14-C

# General layout aspects regarding memories; Interconnection arrangements

Core, matrix, plate, unit, frame

#### U14-C01 [1992]

# Interconnecting storage elements

(U14-A20)

Include power/signal transmission line layout relating to bit and word lines. See also appropriate codes in U11-C05, U11-D03, U11-G.

Open bit line architecture, folded bit line architecture

#### U14-D

# Checking store operation, redundancy

#### U14-D01 [1987]

## Memory built-in self test, redundancy

Includes detecting defective memory elements and replacing them with redundant memory elements.

[1987]

#### U14-D01A

#### Redundant arrangements, fuses

Includes redundant memory cells used to replace defective cells of main memory array and associated techniques e.g. cutting the fuse with laser beam.

#### U14-D01B [1997]

# Testing memory operation using internal circuit

(U14-D01)

Self-test, built-in circuit

## U14-D02 [1987]

# Testing memory using error correction codes

Includes two dimensional codes e.g. Hamming codes, horizontal and vertical parity, BCH codes and multidimensional codes.

#### U14-D03 [1987]

# Testing memory using external circuit or apparatus

E.g. for testing bubble memories.

# U14-D09 [1987]

Other memory testing aspects

# U14-E

# Thermoelectric/magnetic devices

Peltier effect, Seebeck effect

#### U14-E01 [1987]

# Radiation pyroelectric detector

Includes image sensors. See also S03-A03 and S03-A01B codes.

#### U14-E01A [1992]

# Pyroelectric device characterised by material

(U11-A02, U14-E)

For pyroelectric materials see also U11-A02.

# U14-E01B [1992]

# Structure of pyroelectric device

See also S03-A03 for pyrometry in general. Dielectric bolometer, pyroelectric sensor

# U14-E01C [1992

Pyroelectric device manufacture

# U14-E02 [1992]

## Thermomagnetic devices

(U14-E)

Includes devices using Nernst-Ettinghausen effect. Covers manufacture.

## U14-E05 [1987]

# Power generation, cooling, temperature sensors

Includes devices with junction of dissimilar materials exhibiting Seebeck, Peltier effect.

#### U14-E05A [1992]

Characterised by function of thermoelectric device

#### U14-E05A1 [1992]

# Power generating thermoelectric device

Thermopiles

#### U14-E05A2 [1992]

# Heat extracting thermoelectric devices

Heat pumps, cooling, Peltier, electrocaloric effect, thin film perovskite PZT

#### U14-E05A3 [1992]

#### Thermoelectric sensors

(U14-E09)

See also S03-B01A.

Thermocouple

## U14-E05B [1992]

# Thermoelectric device characterised by material

(U14-E)

Bismuth telluride (with antimony)

#### U14-E05C [1992]

Thermoelectric device manufacture

#### U14-E09 [1987]

# Other aspects regarding thermoelectric devices

#### U14-F

# Superconductive devices

Josephson

## U14-F01 [1992]

#### Materials for superconductive devices

Includes novel compositions (chemical and crystalline structures), and their manufacture and processing to improve characteristics, (e.g. grinding, mixing, pressing, sintering etc.). Materials, devices and equipment specifically for heavy/power electrical use are covered by X12-C05, X11-H05, X12-D06 codes. Materials for unspecified uses are covered by U14 and X12-D06B codes. For testing aspects see also U11-F01 codes.

#### U14-F01A [1992]

Superconductive metal alloys and their manufacture

## U14-F01A1 [1992]

Superconductive alloy manufacture and processing

#### U14-F01A5 [1992]

**Novel superconductive metal alloys** 

#### U14-F01B [1992]

Non-metal superconductive materials and their manufacture

#### U14-F01B1 [1992]

# Manufacture and processing of ceramic superconductive materials

Milling, mixing, calcination, sintering, cold/hot pressing

#### U14-F01B5 [1992]

# Superconductive oxide novel materials

## U14-F01B7 [1997]

#### Other superconductive materials

(U14-F01B)

For materials not covered by U14-F01A5 and U14-F01B5, e.g. for superconductive organic material.

#### U14-F02 [1992]

#### Superconductive device, circuits

These codes imply use of oxide materials unless specified by presence of U14-F02H code.

## U14-F02A [1992]

## Superconductive thin/thick film

Includes deposition, patterning, metallurgical details, patterned layers. For techniques of deposition or etching see also U11-C05C codes U11-C01 or U11-C07 codes, for apparatus see also U11-C09 codes. See also U14-H02 for thick film.

# U14-F02B [1992]

#### Superconductive devices

For manufacture of complete device see also U11-C18B9; for specific aspects e.g. electrode manufacture, see also U11 codes e.g. U11-C05F6. For superconductive FET see also U12-D01A9. Josephson tunnel junction, SQUID

#### U14-F02C [1992]

# Circuits using superconductive devices

(U21-A03G, U21-C01X)

For logic circuits see also U21-C01F. For analogue to digital converters using superconductive elements see U21-A03G.

#### U14-F02H [1992]

# Superconductive devices, circuits using metal alloys

This code is used in conjunction with U14-F02 codes to indicate use of alloy material rather than oxide for particular circuit, device.

# U14-G

#### **Acoustic wave devices**

For surface acoustic wave generator, see also V06-V01E1. For acoustic charge transport device using SAW see also U13-A02A.

Elastic, surface, SAW

#### U14-H

# Film and hybrid circuits, multilayer substrates, IC chip mounting

See V04-R also for details applicable to PCB manufacture.

#### U14-H01

## Thin film

# U14-H01A [1987]

# Thin film two dimensional arrays e.g. for memories, LCDs, ELDs

Used for layout and manufacturing aspects. Use U12-B03A for semiconductor physics, material and heterostructure details. For LCD see also U14-K01A2 codes; for electroluminescent displays see also U14-J codes.

Display, matrix

# U14-H01B [1987]

# Thin film transducers, printers, line image sensors

For facsimile applications see S06-D05 also. Used for sensor arrays not having sufficient semiconductor body details for inclusion in U12-A02B. For thermal printer heads/materials see S06-H03 or for thermal ink jet printer see S06-G01. Does not include thin film magnetic heads, for which see T03-A03E.

# U14-H01C [1987]

# Thin film circuits, amplifiers, filters

For thin film capacitors, resistors with emphasis on semiconductor body see U12-B03B and U12-C02 or U12-C03 as appropriate.

# U14-H01D [1987]

# Thin film packages, interconnections

See also U11-D codes.

## U14-H01E [1987]

## Thin film transparent conductive layers

See U11-C18D also for sputtered optical layers. Includes pixel/colour filters, lithography, and general imager-display use.

Indium tin oxide, ITO, lead oxide, zinc oxide

# U14-H01E1 [2015]

#### **Transparent conductive oxides**

Includes indium tin oxide (ITO), zinc oxide compounds etc.

#### U14-H01E2 [2015]

#### **Transparent conducting polymers**

Includes polythiophenes, e.g. Poly(3,4-ethylenedioxythiophene) (PEDOT), Poly(4,4-dioctylcyclopentadithiophene) etc.

#### U14-H01E3 [2015]

# **Metal compositions**

Includes metal halides, such as silver halide, copper iodine. Can be used in conjunction with U14-H01E1 for example film containing indium oxide (ITO) and copper iodide.

## U14-H01E4 [2015]

## Nanowire transparent conductive films

Includes use of carbon, silver or copper nanowires or nanotubes or nano-particles as transparent conductive films.

#### U14-H01E5 [2015]

#### Mesh structured films

Includes copper mesh, silver mesh, metal mesh PET

## U14-H01F [1987]

## General thin film layer details

Includes e.g. insulating, conductive, lithography, multi-layer structures (e.g. for chip-carrier boards), using thin-film deposition (see also U11-C and U11-D codes).

#### U14-H02

#### Thick film

For material composition of thick films see U11-A05 codes.

#### U14-H03

## **Hybrid circuits**

From 2009 IC chip mountings have been transferred to U14-H05. See also V04-R and V04-Q codes.

## U14-H03A\* [1987-2008]

# Mountings for unpackaged IC chips onto substrate (ceramic, polymer, dielectric)

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 2008. From 2009 see U14-H03D to U14-H03H codes.

#### U14-H03A1\* [1987-2008]

# Un-encapsulated IC chip mounting arrangement (ceramic, multilayer ceramic, polymer, semiconductor substrate)

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 2008. From 2009 see U14-H03D to U14-H03H codes. Used for chip carrier which implies subsequent encapsulation of device once mounted (for encapsulation see U14-H03A3). See also U11-D01 for package details. For general chip carrier substrate aspects see U11-D01A. For high density multilayer interconnect see U14-H03A4. Multilayer ceramic boards are also covered by U14-H03B for structure/material, and by U14-H04A3 for manufacture.

## U14-H03A2\* [1987-2008]

### Other chip to substrate connection

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 2008. From 2009 see U14-H03D to U14-H03H codes. For solder preforms see also U11-D03A9 (semiconductor mountings and terminals). Prior to 1992 this code included flip chip technology, (from 1992 see U11-E01C).

## U14-H03A3\* [1987-2008]

# **Encapsulation details for individual chip** mounted on substrate

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 2008. From 2009 see U14-H03D to U14-H03H codes. For general aspects regarding multi-chip module, see U11-D01A6 or, for hybrid circuit packages see U14-H03C3.

## U14-H03A4\* [1987-2008]

# Interconnections between several chips on substrate

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 2008. From 2009 see U14-H03D to U14-H03H codes. Includes use of e.g. wire bonding between chips on same substrate (which may also include semiconductor, e.g. silicon). Covers Advanced VLSI packaging, high density interconnect. Also includes optical contactless connection for communication between chips (see also U11-D03C3).

AVP, HDI, high density multi-chip interconnect, HDMI

#### U14-H03A4A\* [1992-2008]

# Thick film modules using e.g. ceramic dielectric

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 2008. From 2009 see U14-H03D to U14-H03H codes. See also relevant codes in U11 class, e.g. U11-D03B9, U11-D03C3 and/or other relevant codes in U14 class, e.g. U14-H03A1, U14-H02, U14-H03B, U14-H04A3.

#### U14-H03A4B\* [1992-2008]

# Thin film modules using e.g. polymer dielectric

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 2008. From 2009 see U14-H03D to U14-H03H codes. See also relevant codes in U11 class e.g. U11-C05A, U11-C05D2, U11-C05D3, U11-D03B9, U11-D03C3 and/or relevant codes in U14 class, e.g. U14-H01D, U14-H01F, U14-H03A1.

Polyimide thermoset, KAPTON

## U14-H03B\* [1987-2008]

## Multilayer ceramic wiring boards

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 2008. From 2009 see U14-H03D to U14-H03H codes. For chip carriers see also U11-D01A, for unencapsulated IC mountings see also U14-H03A1. For high density multilayer interconnect see U14-H03A4.

#### U14-H03B1\*

[1987-2008]

# Details of materials/structures for multilayer ceramic substrates

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 2008. From 2009 see U14-H03D to U14-H03H codes.

#### U14-H03B2\*

[1987-2008]

# Other details associated with chip mounted on multilayer ceramic substrate

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 2008. From 2009 see U14-H03D to U14-H03H codes. Includes e.g. recess to facilitate enclosure of chip, terminals, capacitors included in the multilayer board (see also U11-D03C1) etc.

#### U14-H03C\*

[1987-2008]

### Hybrid circuits (general)

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 2008. From 2009 see U14-H03G. Includes substrates not covered elsewhere in U14-H03. See also U11-A05B for material aspects, and U11-D01A for chip carrier.

Aluminium nitride, silicon carbide

## U14-H03C1\*

[1987-2008]

#### Alignment of chips in array

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 2008. From 2009 see U14-H03D to U14-H03H codes. E.g. for line image sensor, facsimile, photoelectric reader.

Facsimile, reader, photoelectric

### U14-H03C2\*

[1987-2008]

# Analogue circuitry - transistor and transmission line details

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 2008. From 2009 see U14-H03D to U14-H03H codes. See W02-A also for microstrip/stripline circuitry.

Triplate

#### U14-H03C2A\*

[1997-2008]

## High frequency integrated circuits

(U14-H03C2)

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 2008. From 2009 see code U14-H03H for high frequency circuits. Includes monolithic microwave integrated circuits. For package aspects see U11-D01A4. For integrated circuit structures see also U13-D codes.

MMIC

#### U14-H03C3\*

[1987-2008]

## Hybrid circuit packages and terminals

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 2008. From 2009 see U14-H03D to U14-H03H codes. For multi-chip modules see also U11-D01A6.

Lead, Pin

## U14-H03D

[2009]

Hybrid circuits using thick films

#### U14-H03E

[2009]

Hybrid circuits using thin films

#### U14-H03F

[2009]

**Substrates for hybrid circuits** 

#### U14-H03F1

[2009]

### Ceramic substrates

Includes any details of ceramic substrates to do with hybrid circuits.

# U14-H03F2

[2009]

## Other substrates types

Includes all substrates other than ceramic substrates associated with hybrid circuits.

#### U14-H03G

[2009]

## Hybrid circuits(general)

Covers general hybrid circuit aspects that are not covered in above H03 codes. Replaces retired code, H03C.

## U14-H03H

[2009]

### High frequency integrated circuits

(U14-H03C2A)

Covers all high frequency integrated circuits. Includes high frequency ICs for RFID tags and other RF devices.

MMIC, RFID

#### U14-H04

Hybrid and thick film circuit manufacture

U14-H04A [1983]

Film and substrate processing for hybrid circuits

U14-H04A1 [1987]

# Screen printing; Thick film layer processing

Includes ceramic 'wafer' dicing. Squeegee, print, bake

### U14-H04A2 [1987]

# Electroplating, vapour beam deposition, sputtering processes to apply conductive layers to ceramic or hybrid substrates

For metallurgical aspects regarding conductor patterns on ceramic substrate see also U11-D03B3.

### U14-H04A3 [1987]

Ceramic circuit board manufacture (For hybrid circuits only)

U14-H04A4 [2009]

Trimming of thin/thick film components (U14-H04B3B)

U14-H04A9 [1987]

Other hybrid circuit manufacturing aspects

## U14-H04B [1983]

### Hybrid circuit assembling

Includes all aspects of hybrid circuit assembling and manufacture, previously coded before 2009 in U14-H04B1 to U14-H04B9.

#### U14-H04B1\* [1987-2008]

#### Hybrid circuit packaging

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 2008. From 2009 see U14-H04B which now includes all aspects of hybrid circuit assembling and manufacture. Coating with resin, sealing package.

# U14-H04B2\* [1987-2008]

## Applying terminals for hybrid circuits

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 2008. From 2009 see U14-H04B which now includes all aspects of hybrid circuit assembling and manufacture. Includes e.g. connector for hybrid circuit (see also V04-K02 and V04-B01).

# U14-H04B3\* [1987-2008]

# Mounting components onto substrate; Trimming of layer components

\*This code is now discontinued, but remains searchable and valid for records from 1987 to 2008. From 2009 see U14-H04B which now includes all aspects of hybrid circuit assembling and manufacture.

## U14-H04B3A\* [1992-2008]

# Bonding, mounting components on hybrid circuit substrate

\*This code is now discontinued, but remains searchable and valid for records from 1992 to 2008. From 2009 see U14-H04B which now includes all aspects of hybrid circuit assembling and manufacture.

## U14-H04B3B\* [1992-2008]

## Trimming of thin/thick film components

\*This code is now discontinued, but remains searchable and valid for records from 1992 to 2008. From 2009 see U14-H04A4.

# U14-H04B9\* [1992-2008]

## Other hybrid circuit assembling aspects

\*This code is now discontinued, but remains searchable and valid for records from 1992 to 2008. From 2009 see U14-H04B which now includes all aspects of hybrid circuit assembling and manufacture. Includes e.g. demounting defective components in multi-chip modules (see also U11-E02B). For testing aspects see also U11-F01F.

#### U14-H05 [2009]

# Hybrid circuit package and/or terminal arrangements

(U14-H03)

Includes mountings of chips on substrates, leads, terminals, sockets, holders and packaging.

### U14-J

### **Electroluminescent light sources**

For electroluminescent materials see U11-A15. See also X26-J only if device is used for illumination purposes. Excludes devices covered by U12-A01.

#### U14-J01 [1992]

#### Electroluminescent source manufacture

## U14-J01A [2005]

# Manufacture for electroluminescent displays

Includes all methods of manufacture for electroluminescent displays.

### U14-J01B [2005]

# **Equipment for manufacture of electroluminescent devices or displays**

Includes all equipment for both electroluminescent devices or displays.

### U14-J02 [1992]

# **Electroluminescent display structure**

ELD

## U14-J02A [1992]

# With electrode details of electroluminescent display

For thin film transparent conductive layer on glass substrate see also U14-H01E. From 2002 use with U14-J02D codes to indicate material aspects of structure.

Indium tin oxide, ITO

## U14-J02B [1992]

# Module details and sealing arrangements of electroluminescent display

Includes connections to external electrodes or PCBs.

#### U14-J02C [2005]

#### **EL** display optical components

For complete filter manufacture see also U11-C18D.

#### U14-J02D [2002]

Inorganic/organic electroluminescent displays

U14-J02D1 [2002]

Inorganic electroluminescent displays

U14-J02D2 [2002]

# Organic or polymeric electroluminescent displays

Includes structures with polymeric and organometallic complexes.

U14-J02E [2005]

# Switching elements for active matrix electroluminescent displays

Includes two and three terminal switching arrays

U14-J03 [1992]

# Circuits and drivers for electroluminescent devices

From 2002 use with U14-J02D codes to indicate material aspects of structure.

U14-J03A [2007]

**Circuits and drivers for electroluminescent displays** 

U14-J03B [2007]

Circuits and drivers for other electroluminescent devices

U14-J04 [2005]

# Testing aspects of Electroluminescent displays

Testing for active matrix see also U11-F01F and U11-F01D codes. For module testing see also S01-G01A3 and V04-Q02A2.

U14-J05 [2007]

#### **Electroluminescent device structure**

For electroluminescent devices other than displays.

U14-J05A [2007]

Electrode details for electroluminescent devices

U14-J05B [2007]

Module/Package details and sealing arrangements of electroluminescent devices

U14-J05C [2007]

Optical elements for electroluminescent devices

U14-J05D1 [2007]

Inorganic electroluminescent device

U14-J05D2 [2007]

Organic electroluminescent device

#### U14-K

### **Passive displays**

Refers to displays modifying light generated elsewhere.

## U14-K01 [1983]

### Liquid crystal displays

For materials see U11-A03A, V07-K10A. For light valves, shutters, light spatial modulator see V07-K01A2. Testing aspects of active matrix are also covered by U11-F01F. For storage effect see U14-A02A.

LCD

## U14-K01A [1983]

Cells, constructional details, and circuits of LCD

### U14-K01A1 [1987]

Transparent conductive films, alignment layers, spacers of LCD

## U14-K01A1A [1992]

## LCD alignment layer

(U11-A09, U14-K01A1)

Includes films and materials used for alignment, cloths for rubbing the alignment coating, etc.

Orientation

#### U14-K01A1B [1992]

# Transparent conductive films, and electrodes of LCD

Includes electrode details for passive LCD, i.e. with parallel conductive tracks. See also U14-H01E for transparent conductive film.

## U14-K01A1C [1992]

## **LCD** optical components

Includes filters, polarisers, phase retarders. For complete filter manufacture see also U11-C18D.

#### U14-K01A1D [1992]

## Spacers used in LCD

(U14-K01A, U14-K01A2)

## U14-K01A1G [1992]

# Characterised by specific electro- or magneto-optical effect of LC material

Includes field induced birefringence, guest-host effect, dynamic scattering, etc. For optical addressing (thermally induced phase transitions) see V07-K01A2.

Field induced phase change, cholesteric, twisted nematic, orientation, plechroic dye

## U14-K01A1J [1992]

#### **LCD** manufacture

(U14-K01, U14-K01A)

Include e.g. filling the cell with LC material. For manufacture of switching elements for driving active matrix see U14-K01A2 codes.

### U14-K01A1K [2005]

## **Equipment for manufacture of LCDs**

Includes all equipment for manufacture of LCD, including substrate handling equipment, etching, lithography etc. See also U11 codes for individual processes and equipment.

## U14-K01A1L [2007]

## LCD repair and correction

See also U14-K01A8 for LCD testing aspects.

## U14-K01A2 [1987]

# Other constructional details, coating, and optical layers of LCD

Includes manufacture and structural details regarding switching elements for driving active matrix display. Also covers antireflective coatings.

#### U14-K01A2A [1992]

# For two terminal switching elements of LCD

Includes diodes, MIM elements, varistors. For thin film aspects see also U14-H01A. See also other appropriate codes in U11 and U12 e.g. U11-C05G1, U11-C18B1, U12-C01, U12-C03.

### U14-K01A2B [1992]

# For three terminal switching elements of

Includes thin film transistor (TFT) aspects. See also U14-H01A and where appropriate, U11-C18A1, U12-B03A, U12-D02A.

#### U14-K01A2C [1997]

#### Plasma addressed LCD

(U14-K01A2, U14-K01A1B) See also V05-A01A7.

### U14-K01A2D [1997]

# LC cells integral with photoconducting, ferroelectric layer

Prior to 1997 see also U14-K01A1G, V07-K01A, V07-K05.

## U14-K01A2E [2007]

#### **Coatings for LCD**

Covers all protective coatings, includes antireflective films coating for LCDs

## U14-K01A3 [1987]

#### Circuits, drivers of LCD

Includes mainly drive circuitry integral with LCD or circuitry which depends on specific characteristics of LCD., e.g. feedback control for detection of ambient light and control of light valve. More general aspects of drive circuitry are covered by T04-H03C2 or W03-A08B codes. See also under application.

## U14-K01A4 [1987]

# LCD associated with mountings, PCB connectors. Module details

Includes back-lighting aspects (see also W05-E05B).

## U14-K01A4A [1997]

## **Modular details of LCD**

(U14-K01A4)

Includes sealing aspects.

#### U14-K01A4B [1997]

# Connections of LCD to external electrodes or PCB

(U14-K01A4)

See also V04 codes. Includes connections from electrodes to cell terminals.

## U14-K01A4C [1997]

## **LCD** illumination arrangements

(U14-K01A4)

Includes internal and reflection type LCD illumination. From 2007, also see X26-U04A1 for backlighting and backlight circuitry including ambient environment detection and feedback control. See W05-E05B1 and relevant X26 codes prior to 2007.

## U14-K01A5 [1997]

## LCD substrate details

(U14-K01A, U14-K01A2)

For production and processing aspects of substrate. See U11 codes also. For active matrix aspects see U14-K01A2 codes.

Glass

#### U14-K01A8 [1997]

#### Testing aspects of LCD

(U14-K01A)

For testing of liquid crystal materials see also S02-J04A3; for active matrix testing see also S02-J04A3A and U11-F01F and/or U11-F01D codes. For module testing see also S01-G01A3 and V04-Q02A2.

Probe

## U14-K02 [1992]

## **Electrochromic displays**

(U14-K09)

For building and vehicle windows using electrochromic layers see X25-U01 and X22-J codes respectively.

### U14-K02A [1992]

# Constructional details and manufacture of electrochromic display

(U14-K09)

## U14-K02A1 [1997]

# Structural arrangements for electrochromic display

(U14-K02A)

Includes spacers, gaskets, electrodes.

## U14-K02A2 [1997]

## **Electrochromic display manufacture**

(U14-K02A)

For materials see U11-A03C only.

#### U14-K02B [1992]

# Circuits, drivers of electrochromic display (U14-K09)

## U14-K03 [1992]

#### **Electrophoretic displays**

(U14-K09)

Includes materials, constructional details. For electrostatic ball displays see appropriate W05-E08 codes.

#### U14-K03A [2005]

Constructional details and manufacture of electrophoretic displays

### U14-K03A1 [2005]

Structural arrangements for electrophoretic displays

## U14-K03A2 [2005]

**Electrophoretic display manufacture** 

### U14-K03B [2005]

Circuits, drivers of electrophoretic displays

# U14-K04 [1992]

# Electro-optic displays based on ceramics or electro-optical crystal exhibiting Kerr or Pockells effect

(U14-K09)

For optical shutters see V07-G15 and V07-K01A. PLZT

## U14-K05 [2014]

## **Electrowetting displays**

Includes manufacture, structure, drive circuits etc.

# U14-K09 [1983]

## Other passive displays

Includes electronic paper, can be used in conjunction with any other U14-K codes. For electronic paper in general see also W05-E10. *Magnetophoretic* 

## U14-L [2021]

## Non-display switchable glass panels

Includes electronic switching glass panels used for non-display purposes, e.g. for privacy, or light dimming in places such as building windows, privacy screens, vehicle windows, dimming mirrors etc.

Smart glass, Electrolytic PDLC Film, Electrochromic glass, LCD Glass

# U21: Logic Circuits, Electronic Switching and Coding

#### U21-A

## Coding, decoding

Encode, compress, predict

# U21-A01\* [1980-1991]

#### Pulse code modulation

\*This code is discontinued from 1992. In addition to U21 codes, inventions involving PCM may be assigned the following codes depending on applications and their precise nature:

- (1) W02-C06 for general transmission systems using PCM  $\,$
- (2) W02-F07 codes for PCM TV transmission systems
- (3) S06-K07A4D for facsimile coding and compression
- (4) W04-F01F codes for video recording using compression coding
- (5) W04-G01F for audio signal recording coding and compression
- (6) W04-P01A codes for video signal coding
- (7) W04-V05G codes for speech signal coding
- (8) W04-V10 codes for coding of audio signals in general

#### U21-A02

#### D/A conversion

Search with U21-A04A for sigma-delta type.

U21-A02A [1987]
Digital-to-analogue converters

DAC

U21-A02A1 [1992]

Binary-weighted D/A converters

Weighted resistor

U21-A02A2 [1992]

Ladder-type D/A converters

R-2R ladder

U21-A02A3 [1992]

D/A converters with intermediate conversion to time or frequency of pulses

U21-A02A4 [2006]

**Resistor string** 

U21-A02A5 [2007]
Switched capacitor D/A converters

U21-A02A9 [1992]

Other D/A converters

Includes e.g. multiplying D/A converter.

U21-A02B [1987]

Broader system details, testing of D/A converters

U21-A02B1 [1997]

**Broader system details** 

(U21-A02B)

U21-A02B1A [2005]

Input/output circuitry

U21-A02B1B [2006]

## Voltage reference circuits

Also see relevant U24 codes for novel voltage reference circuits.

U21-A02B1C [2005]

Clock arrangements

U21-A02B1X [2005]

Other details

U21-A02B2 [1997]

#### Testing and calibrating

(U21-A02B, U21-A03F1)

Prior to 1997 testing and calibrating for DAC was covered by U21-A02B and U21-A03F1.

DC offset, auto-zero

#### U21-A02B3\* [1997-2004]

#### Noise reduction and error correction

(U21-A02B, U21-A03F3)

\*This code is now discontinued and from 2005 noise reduction and error correction for DACs is covered by U21-A02B7G. Prior to 1997 noise reduction for DAC was covered by U21-A02B and U21-A03F3.

U21-A02B7 [2005]

Improvements to DA converter performance

U21-A02B7A [2005]

**Increased resolution** 

U21-A02B7C [2005]

Increased conversion speed

## U21-A02B7E [2005]

### Increased range

Covers increase in number of bits or other change in representation of data, or on analog side by increasing dynamic range, output voltage swing, etc.

U21-A02B7G [2005]

Noise reduction and error correction

U21-A02B7J [2006]
Reducing power consumption

U21-A02B7L [2006]

Size reduction

U21-A02B7N [2012]

## Increased accuracy or precision

Prior to 2012 see U21-A02B7G or U21-A02B7X depending on emphasis.

U21-A02B7X [2005]

Other DA converter performance improvement

U21-A03

#### A/D conversion

Search with U21-A04A for sigma-delta type. *ADC* 

## U21-A03A

# A/D converters with conversion to duration/frequency

Includes counter ramp (counting) converter when type of conversion is emphasised, otherwise coded in U21-A03B as a converter with feedback. Also includes integrating type e.g. dual slope or ratiometric converter. Search U21-A03X also prior to 1983.

Tracking, servo converter

## U21-A03B

# A/D converters using D/A converter (feedback type)

Includes successive approximation type. SAR, serial comparator

U21-A03B1 [2006]

SAR

Successive approximation type converters.

U21-A03B3 [2006]

**Pipeline** 

U21-A03B5 [2007]
Switched capacitor A/D converters

U21-A03B9 [2006]

Other feedback types

U21-A03C [1987]

Flash A/D converters

Parallel comparator, simultaneous ADC

U21-A03E [1987]

Interpolating A/D converters, hybrid arrangements combining different converters

Includes serial-parallel type (see also U21-A03B).

U21-A03F [1987]

Testing and calibrating, broader system details

U21-A03F1 [1992]

Testing and calibrating

DC offset, auto-zero

U21-A03F3\* [1992-2004]

#### Noise reduction and error correction

\*This code is now discontinued and from 2005 noise reduction and error correction for ADCs is covered by U21-A03F7G.

U21-A03F5 [1992]

**Broader system details** 

U21-A03F5A [2005]

## Input/output circuitry

Includes scaling and gain control arrangements, see U24-C codes for novel amplifier/gain control aspects.

U21-A03F5B [2006]

Voltage reference circuits

U21-A03F5C [2005]

**Clock arrangements** 

U21-A03F5X [2005]

Other details

U21-A03F6 [2005]

## Sampling

This code covers sampling arrangements and wider sampling aspects. See U21-B03 for novel sample and hold arrangements and U21-A04A for sigma delta converters.

## U21-A03F6A [2005]

### **Novel sampling circuit**

This code covers all novel sampling arrangements. See other U21-A03F6 codes for sampling function aspect.

U21-A03F6B [2005]

Oversampling

U21-A03F6C [2005]

Undersampling

U21-A03F6D [2005]

## Sample modification

Modification of digital samples in DSP is covered by U22-G03B1 codes ('Re-sampling').

U21-A03F6X [2005]

Other sampling functions

U21-A03F7 [2005]

Improvements to AD converter performance

U21-A03F7A [2005]

Increased resolution

U21-A03F7C [2005]

**Increased conversion speed**

Increased range

U21-A03F7G [2005]

Noise reduction and error correction

U21-A03F7J [2006]

Reducing power consumption

U21-A03F7L [2006]

Size reduction

U21-A03F7N [2012] Increased accuracy or precision

Prior to 2012 see U21-A03F7G or U21-A03F7X depending on emphasis.

U21-A03F7X [2005]

Other AD converter performance improvement

#### U21-A03G [1987]

# A/D converters implemented using other technology

Includes use of e.g. SAW, optical, Josephson junction devices (for superconductive devices, circuits, see also U14-F02 codes).

U21-A03H [1992]

**Reversible converters** 

(U21-A02B, U21-A03F)

U21-A03J [1992]

#### Position encoders

(U21-A03X)

For absolute encoders for which displacement directly generates unique digital value U21-A03J5 is assigned with other U21-A03J codes as appropriate. See also S02-K03

U21-A03J1 [1992]

## **Optical position encoders**

(U21-A03X)

Rotary encoders, shaft angle, moire fringes

U21-A03J2 [1992]

Magnetic or inductive position encoders

(U21-A03X)

U21-A03J5 [2002]

#### **Absolute position encoders**

This code is assigned with other U21-A03J codes as appropriate, depending on technology, and refers to encoders with a unique relation between position and output code. Such types were indicated by the additional assignment of W05-D01 codes (now discontinued) prior to 2002.

Gray code, disc, scale, track.

### U21-A03J9 [1992]

## Other types of position encoders

(U21-A03X)

Includes electric type e.g. capacitive, brush arrangements.

Wiping contact, potentiometer

#### U21-A03X

Other aspects of A/D conversion

#### U21-A04

## **Delta and differential modulation**

For testing aspects see also U21-A03F1.

## U21-A04A [1992]

## **Delta-sigma converters**

Includes oversampled converter architectures. Where sampling is novel see U21-A03F6 and also see U21-A02/A03 codes as appropriate.

Sigma-delta, continuously variable slope delta, CVSD, delta modulator, oversampling

## U21-A04B [1992]

#### Differential modulation

Adaptive differential PCM, ADPCM

#### U21-A05

#### **Code conversion**

See W01-A02 also for application of code conversion to data transmission in general. Coding of audio and video signals is not included and is covered by W04-P01A codes (video signals), W04-V05G codes (speech signals) and W04-V10 codes (audio signals in general). Coding for error detection and correction in general is covered by U21-A06 codes.

Bit structure, character interval, format, mapping, recoding

#### U21-A05A

#### Static code converters

#### U21-A05A1 [1987]

# Parallel code conversion. Conversion to or from (non-) weighted or stochastic codes

Includes decimal code, binary coded decimal code, conversion from or to n out of m codes, to or from one out of m codes, conversion to or from floating point codes, conversion to or from Gray codes.

BCD

## U21-A05A2 [1987]

# Compression, expansion, suppression of redundancy

This code is used in a general way to represent 'coding', e.g. for data compression. It is assigned alone or in conjunction with other codes - e.g. for audio or video coding, or coding for data transmission - if U21-A05A2 codes can highlight additional detail e.g. if using U21-A05A2A enables 'variable length coding' to be highlighted. When specific codes exist for the type of coding involved in an invention and U21-A05A2 codes do not provide additional focus, they are not assigned. Specific codes for particular coding applications are: S06-K07A4D for document imaging and copying; T01-D02 for computer data coding; T01-J10D for image compression; T03-P01B for compression of recorded data; W01-A02A for data transmission; W04-F01F for video signal recording coding, W04-G01F for audio signal recording

coding, W04-P01A codes for video signal coding, W04-V05G for speech coding; W04-V10 for general audio coding.

## U21-A05A2A [1992]

# Conversion to or from variable length codes

Shannon-Fano code, Huffman code, Morse code

#### U21-A05A2B

[1992]

## Conversion to or from run length codes

#### U21-A05B

[1987]

# Parallel/series and series/parallel conversion

Series-in parallel-out register, SIPO, series-in seriesout register, SISO, parallel-in series-out register, PISO, serial-parallel, parallel-serial

## U21-A05C [1987]

# Series transmission code. Manchester, biphase level coding

Includes conversion to or from representation by three or more level pulses.

NR7

### U21-A05D [1987]

# Coding associated with computer keyboard or printers. Language scripts

For key scanning and coding aspects see also T04-F01A5. For keyboard interfacing see also T01-C codes.

## U21-A05D1 [1987]

## Language script coding techniques

Includes coding for dealing with e.g. Chinese, Arabic characters. Search with W01-C01B8M for application to coding for telephone keys. *Kanji, Kana, Arabic characters* 

#### U21-A06

#### **Error detection and correction**

U21-A06 codes are assigned for error detection/correction in general, and to provide specific details of error correction coding in conjunction with codes in other classes, such as with T03-P01A for data recording error correction. For applications specific to telecommunications alone, W01-A01B codes are applied instead.

## U21-A06A [2005]

## **Using block codes**

Covers error detection/correction coding where a predetermined number of check bits are joined to a predetermined number of information bits.

U21-A06A1 [2005]

Cyclic redundancy check

U21-A06A2 [2005]

**Parity bit** 

U21-A06A3 [2005]

**Hamming codes** 

U21-A06A4 [2005]

**Reed Solomon coding** 

U21-A06A9 [2005]

Other block codes

U21-A06C [2005]

## **Using convolutional codes**

Covers error detection/correction coding where the coded sequence is algorithmically achieved through the use of current data bits plus some of the previous data bits from the incoming stream.

U21-A06C1 [2005]

Viterbi coding

U21-A06C2 [2005]

**Turbo coding** 

U21-A06C3 [2005]

**Trellis coding** 

U21-A06C9 [2005]

Other convolutional codes

U21-A06E [2005]

#### **Using Interleaving techniques**

Covers error detection/correction arrangements where the data structure is re-organised to reduce errors

U21-A06G [2006]

## Using multiple coding techniques

This code covers error correction/detection using either multiple (two or more) block or convolutional codes or a combination of block and convolutional. The coding types of the combination are applied in addition to this code. Please note, this code is only applied where the combination is the novel aspect and not where multiple coding techniques are merely listed as separate possibilities.

## U21-A06G1 [2014]

### Multiple codes used together

Covers the simultaneous use of two or more errordetecting or error-correcting codes, e.g. either multiple block or multiple convolutional codes or a combination of block and convolutional codes, used together.

## U21-A06G5 [2014]

# Multiple codes used separately (i.e. one at a time)

Covers the separate use of two or more errordetecting or error-correcting codes, e.g. either multiple block or multiple convolutional codes or a combination of block and convolutional codes, used at different times.

## U21-A06X [2005]

## Other error detection/correction

#### U21-B

## **Electronic switching or gating**

Purely mechanical and electromechanical switches using moving metallic contacts are covered in V03 and X13. Note that mechanical details of actuating elements and the like for electronic switches in which part of the switch moves (e.g. as denoted by U21-B02C2) are also covered in V03 (e.g. by V03-B and V03-C codes) when necessary. Electronic switching without any physical movement is covered in U21 only.

#### U21-B01

Electronic switching or gating characterised by switching device

### U21-B01A

# Switching using bipolar transistors and diodes

Includes Darlington configuration.

U21-B01A1 [2006]

Switching using IGBTs

## U21-B01B

**Switching using field effect transistors** 

#### U21-B01C

## Switching using thyristors, triacs etc.

Note that U21-B02H (novel bi-directional switching arrangements) is not routinely applied with this code for devices such as triacs which are inherently bi-directional.

Gate turn-off, GTO

## U21-B01D [1987]

Compound switches (FET/bipolar, thyristor/FET), other semiconductor switches

#### U21-B01D1 [1992]

**Switching using transformer coupling** (U21-B01D)

#### U21-B01E [1992]

### **Using optoelectronic devices**

(U21-B01X)

Opto-coupler

## U21-B01P [2009]

# Switching using phase-change devices

(U21-B01X)

This code is intended for electronic switching arrangements using devices with phase-change properties, e.g. based on materials such as chalcogenides. Logic circuits applying this technology are covered by U21-C01P. Phase-change memories are covered by U14-A03H and optical recording materials based on phase-change effects are covered by T03-B01B codes.

Amorphous, chalcogen, crystalline, selenide, sulfide, telluride

## U21-B01T [2006]

#### **Using nano-tubes**

Other U21-B01 codes are applied where applicable, only electronic switches are coded here, if electromechanical see V03 and if solely optical see V07.

#### U21-B01X

#### Other devices

Includes switches using Hall effect devices (when used for proximity switches see U21-B02C), superconductive devices (see U14-F02B also), gas or vacuum tubes, etc.

## U21-B02

**Circuit details** 

#### U21-B02A

Controlling switching point/instant

### U21-B02A1 [1987]

Introducing delay before switching using capacitor and transistors

## U21-B02A2 [1987]

Introducing delay before switching using digital counter, timer, computer modules

#### U21-B02A3 [1987]

# Providing predetermined threshold before switching and switching at zero-crossing

See U22-D07A for circuits delivering a pulse in response to zero-crossing and U22-A04D5 for comparators in general.

#### U21-B02B

### Affecting states; Power-on resetting

Includes storing actual state of switch when supply voltage fails.

Reset

### U21-B02C [1983]

#### Proximity/touch switches

See T04-F01 also for computer keyboard switches.

## U21-B02C1 [1987]

# Capacitive/inductive/resistive not requiring displacement of switch element

This code covers 'touch' switches operating without any movement of the switch or switch parts and includes electronic switching aspects of touch screens and the like, which in general are also coded as T04-F02A2. Capacitive, inductive, magnetic or resistive electronic 'touch' switches in which part of the switch moves during operation are covered by U21-B02C2.

#### U21-B02C2 [1987]

Inductive/capacitive/resistive responding to physical displacement of plate or magnetic flux element

## U21-B02C3 [1987]

## Using optical or other switching elements

See S03-C08 codes.

Light barrier

### U21-B02D [1987]

Accelerating switching speed, reducing power consumption, ensuring fully conductive state, increasing max. current or voltage

(U21-B02X)

Includes also modifications for improving heat dissipation.

### U21-B02D1 [1987]

Using series/parallel switches to distribute current/voltage

## U21-B02E [1987]

## **Switch protection**

(U21-B02X)

See U24-F for protection of electronic circuits in general.

### U21-B02F [1992]

Eliminating interference voltages or currents, or other sources of noise

(U21-B02X)

U21-B02G [1992]

Compensating variations of physical values e.g. temperature

(U21-B02X)

## U21-B02H [2006]

#### **Bidirectional switching**

This code covers novel bi-directional switching arrangements and is not routinely applied for devices such as triacs which are inherently bi-directional

### U21-B02J [2006]

**Switch testing** 

U21-B02X

Other aspects of electronic switching

U21-B03

Sample-and-hold arrangements

U21-B05 [1987]

Applications of electronic switching circuits

U21-B05A [1987]

#### **Analogue switching**

Transmission gate, multiplexer/demultiplexer, signal selector

U21-B05B [1987]

#### Very high power/speed switching

Includes power-pulse techniques.

U21-B05C [1987]

### Power converters and power switching

For low and very high power converters see separately U24-D and X12-J codes.

Semiconductor relay

## U21-B05D [1987]

### Logic

This code is used to indicate the application of electronic switching to logic circuitry and is applied for novel electronic switching inventions which can be used in logic circuits. Details of logic circuits themselves are covered by U21-C codes which can be assigned in addition to U21-B05D when an electronic switching invention includes specific details of those circuits. In general, since it is understood that logic circuits involve switching, inventions presented as novel logic circuits are not also assigned U21-B codes.

## U21-B05E [1992]

## Signal switching

(U21-B05X)

Includes digital telecommunications, multiplexing/demultiplexing aspects, single/multiple switch arrangements. See also W01-B codes.

## U21-B05X [1987]

# Other applications of electronic switching circuits

Includes computer applications, pulse distributors etc.

### U21-C

**Logic circuits** 

### U21-C01

Logic circuits characterised by components

#### U21-C01A

**Bipolar transistors and diodes** 

## U21-C01A1 [1992]

#### Diode- or resistor-transistor logic

Includes complementary transistor logic, Schottky transistor logic.

CTL, STL

#### U21-C01A2 [1992]

#### **Emitter coupled logic**

Includes emitter function logic, base coupled logic. *ECL, EFL, BCL* 

## U21-C01A3 [1992]

#### **Transistor-transistor logic**

TTL

## U21-C01A4 [1992]

## Integrated injection logic

Includes integrated Schottky logic, static induction logic.

ISL, STIL, IIL, I2L

#### U21-C01B

**FET** 

U21-C01B1 [1987]

**MESFET** 

U21-C01B3 [1987]

**MOSFET** 

Complementary, CMOS, enhancement/depletion mode, source coupled field effect logic, SCFL

U21-C01B5 [1987]

**Dynamic MOSFET** 

U21-C01C [1987]

## **Combined FET and bipolar**

Schottky diode-FET logic, SDFL, BiCMOS, BiMOS, BiFET, BiMIS

U21-C01D [1987]

# Logic circuits implemented with circuit blocks

Includes use of e.g. operational amplifiers and multiplexers, and also use of logic gates as 'blocks' to make up larger logic circuits and systems.

#### U21-C01E [1987]

# Programmable logic arrays, gate arrays, reconfigurable logic

(U21-C01X)

This code is intended to highlight the **use** of programmable logic, such as semi-custom ASIC e.g. gate arrays (uncommitted logic arrays, configurable gate arrays, logic arrays), programmable logic devices categorised as programmable logic arrays, programmable array logic, programmable logic sequencers. For physical layout and interconnection details see also U11-D03, U13-C04C. To identify type of transistor employed, U21-C01B or U13-C codes are used. Novel logic circuitry details of programmable logic are covered by U21-C03B3.

PLA, PLD, FPGA

## U21-C01F [1992]

# Logic circuits using superconductive devices

(U21-C01X)

See also U14-F02C.

#### U21-C01G [1992]

# Logic circuits using optoelectronic devices

(U21-C01X)

For optical logic elements, see V07-K06. For digital computing aspects, see T01-E05.

#### U21-C01P [2009]

## Logic circuits using phase-change devices

(U21-C01X)

This code is intended for logic circuits using devices with phase-change properties, e.g. based on materials such as chalcogenides. Electronic switching circuits applying this technology are covered by U21-B01P. Phase-change memories are covered by U14-A03H and optical recording materials based on phase-change effects are covered by T03-B01B codes.

Amorphous, chalcogen, crystalline, selenide, sulfide, telluride

#### U21-C01R [1997]

# Logic circuits using devices with tunnelling mechanism

Includes resonant tunnelling transistor or diode. *RTBT, RHET, tunnel diode* 

## U21-C01T [2006]

## Logic circuits using nano tubes

(U21-C01X)

#### U21-C01X

# Logic circuits using other technology or components

Includes logic circuits using magnetic, galvanomagnetic (Hall-effect) devices, ferroelectric capacitors.

#### U21-C02

#### Interface circuits

input circuit, output circuit, buffer, transistor level shifting

#### U21-C02A [1987]

## Inter-family; Logic level shifting

TTL-CMOS, TTL-ECL

## U21-C02A1 [2007]

#### Inter-family

This code is intended for circuits interfacing between different logic families. Circuits providing an interface between logic circuits of the same type operating from different supply voltages are covered by U21-C02A5.

## U21-C02A5 [2007]

## Logic level shifting

This code is intended for circuits providing an interface between logic circuits of the same type operating from different supply voltages. Interfacing between different logic families is covered by U21-C02A1.

## U21-C02B [1987]

## Drivers for displays, relays etc.

See also T04-H codes for displays, V03-D02 for relays.

## U21-C02C [1987]

## Tri-state driver and parallel bus

See also appropriate codes in T01 and W01.

## U21-C02D [1987]

#### Serial line transmission

See also appropriate codes in T01 and W01.

# U21-C02D1 [2007]

#### **Differential transmission**

This code includes e.g. low voltage differential signalling (LVDS) circuits, from 2007 see also W01-A08D for differential data transmission systems in general.

## U21-C02E [2006]

#### **IC** termination

Covers interface for termination of transmission line for integrated circuits using active or passive components. Includes stand alone or on-chip, see also U25-D05 and/or W01/W02.

#### U21-C03 [1983]

Logic function and general integrated circuit details

U21-C03A [1987]

Integrated circuit - general gate aspects

# U21-C03A1 [1987]

## Input-output details, increased speed

Includes modifications to increase fan-in and fanout, and protection against short-circuited output.

## U21-C03A2 [1987]

## Power supply and noise prevention

'Power supply details' refers to **internal** details of the logic circuit. Novel circuits for power supplies in general are covered by U24-D and U24-E codes which are also assigned as appropriate when part of the logic circuit itself.

## U21-C03A2A [1992]

## Modifications to reduce power dissipation

Includes power supply substrate bias.

## U21-C03A2B [1992]

#### **Noise suppression**

Includes modifications for eliminating interference or parasitic voltages and currents, compensating for variations in temperature, supply voltage etc.

Ground bounce

### U21-C03A3 [1992]

#### Inverter circuit details

(U21-C03A9)

Includes details of pulses for e.g. NMOS, CMOS, BJT inverters (see also U21-C01A, U21-C01B). For pulse aspects see also appropriate U22-D01 codes. Includes also modifications of threshold for gating or switching. Complete novel inverters are coded as logic gates under U21-C03B.

#### U21-C03A5 [2006]

Reducing circuit size

U21-C03A9 [1987]

Other aspects of logic circuits

## U21-C03B [1987]

### Logic gates

Includes novel circuits which perform logic functions e.g. AND, OR, NOR, NOT, EXCLUSIVE-OR, NAND.

### U21-C03B1 [1987]

Tri- or multi-level, fuzzy logic

## U21-C03B1A [1992]

Tri- or multi-level logic

## U21-C03B1B [1992]

### **Fuzzy logic**

See T01-J16B for complex systems.

### U21-C03B2 [1987]

# Arithmetic

Includes majority and minority circuits. See also T01-E02.

Add, carry, computation, equivalence, multifunction, majority, arithmetic logic unit, ALU

## U21-C03B3 [2005]

# Programmable logic circuitry, including programmable controllers

This code covers novel aspects of programmable logic circuits and programmable controllers. The use of this kind of device in logic systems is covered by U21-C01E and both codes can be assigned together when necessary, e.g. for a novel programmable controller implemented by configurable logic circuits. See also T01 codes for programme control aspects and T06 codes for process and machine control aspects.

Programmable controllers without any logic circuit details are not coded in U21 and are generally covered in T06, e.g. by T06-A04B1.

# U21-C03B4 [2005]

#### State machines

See also relevant T01 codes
State Machine, Finite State Machine

U21-C03B9 [1987]

Other types of logic circuits

U21-C03C [1987]

Fail-safe

Monitor, fault detection, majority

## U21-C03D [1987]

# Logic simulators, design logic circuit construction, circuit board wiring

Includes e.g. piggy-back construction for bus systems. For CAD applied to integrated circuits, see also U11-G.

Computer-aided logic design, logic CAD, layout optimisation, logic synthesis

### U21-C03D1 [1997]

#### Logic circuit testing

See also S01-G01A codes and, for integrated circuit aspects, U11-F01D and/or U13-C07 codes. Signal analysis, set/scan logic

## U21-D

### Pulse counters and frequency dividers

## U21-D01

# Input/output circuits

Serial-in parallel-out, serial-in serial-out

#### U21-D02

## Starting/stopping/monitoring

U21-D02A [1992]

Starting/stopping

Reset

U21-D02B [1992]

Monitoring; Error correction

#### U21-D03

#### Synchronous counting chains

Includes both series (ripple) carry and parallel (look-ahead) carry for enable signal of synchronous counter.

### U21-D03A [1992]

#### **Ring counters**

Includes feedback shift register counters. For random output counters see U21-D05C6.

Twisted-ring, switched tail, moebius, Johnson

#### U21-D04

## Asynchronous counting chains

Ripple counters

U21-D05 [1992]

Characterised by counter details

U21-D05A [1992]

Reversible

Up-down, forward-backward

U21-D05B [1992]

## With non-binary base

Excludes counters with base which is power of two.

U21-D05B1 [1992]

With variable counting base

U21-D05B2 [1992]

**Divide-by-N counters** 

U21-D05B2A [1992]

**Decade counters** 

U21-D05B2B [1992]

In which the base is an odd number

U21-D05B3 [1992]

In which the base is a non-integer

U: Semiconductors and Electronic Circuitry

## U21-D05C [1992]

# Counters characterised by random or specific code output

Excludes standard base types e.g. binary, hexadecimal etc. Includes counting systems for specific coding formats e.g. reflected codes.

U21-D05C1 [1992]

**Using Gray code** 

U21-D05C2 [1992]

Using excess three code

U21-D05C3 [1992]

Using biquinary code

U21-D05C6 [1992]

#### **Random counters**

See U22-A01A for random pulse generators in general.

U21-D06 [1992]

Characterised by the type of the device used

U21-D06A [1992]

**Using semiconductor devices** 

U21-D06A1 [1992]

**Field effect transistors** 

CMOS counters

U21-D06A2 [1992]

**Bipolar transistors** 

TTL, ECL

U21-D06A3 [1992]

**Opto-electronic devices** 

U21-D06B [1992]

**Using electromechanical devices** 

Includes counters using e.g. relays.

U21-D06X [1992]

#### Other devices used as counters

Includes counters using semiconductor devices not covered by U21-D06A, e.g. thyristors, diodes, CCD and other types of device e.g. magnetic cores, gas-filled tubes etc.

### U21-D09

Other aspects of pulse counters and frequency dividers

## **U22: Pulse Generation and Manipulation**

#### U22-A

## **Generating electric pulses**

#### U22-A01

## **Generators producing trains of pulses**

#### U22-A01A

# **Random pulse generators**

See T01-E04 for data processing arrangements for generating random numbers. Random counters are covered by U21-D05C6. Random number generators for e.g. gaming purposes are covered by T05-F and W04-X02 codes.

[1983]

Pseudo-random generator, pseudo-random binary sequence (PRBS), shift register

#### U22-A02

## Characterised by active element

#### U22-A02A

**Bipolar transistors** 

U22-A02A1 [1987]

In integrated circuit form

U22-A02B

**FET** 

U22-A02B1 [1987]

In integrated circuit form

## U22-A02C

#### Other semiconductor devices

Includes discrete and integrated devices.

## U22-A02D [1987]

#### **Using logic blocks**

E.g. gates, counters and flip-flops. *RS/JK/D-type, inverter* 

#### U22-A02E [1987]

# Using operational amplifiers or comparators

This code covers the **use** only of comparators or operational amplifiers, i.e. where the devices themselves are not novel. Novel OPAMPs are covered by U24-G02A5 codes and novel comparator circuits of general application by U22-A04D5. From 1992 - 2011, U22-A04D1 also covered pulse generators with an overall comparator function.

#### U22-A02X

#### Other active element

Includes Josephson superconductor (with U14-F), and use of Wiegand wire.

#### U22-A03

# Using energy-accumulating element and external switching signal

Includes capacitor store discharging into load, transmission line, etc. See also X12-J09 for high power types.

Blumlein, inductive store

U22-A04 [1983]

**Circuit type** 

U22-A04A [1983]

**Astable** 

U22-A04A1 [1987]

## **Blocking oscillator**

Transformer, winding, flux, saturation, inverter, converter

#### U22-A04A2 [1987]

## Crystal

Also coded in U23-A01A codes, based on inherent 'single frequency' aspect. Includes oscillator using other electromechanical resonator types, such as ceramic, SAW, etc. See V06-V codes for details of electromechanical resonators per se.

Piezoelectric, quartz, series, parallel, resonance

# U22-A04A3 [1987]

#### **Feedback**

Includes oscillator with e.g. logic gates (also covered in U22-A02D) in ring circuit or similar. U22-A04A2 takes precedence for feedback arrangement including resonator element.

U22-A04A4 [1987]

## Relaxation

Capacitor, charge

U22-A04A9 [1987]

With voltage or current control

Includes VCO.

U22-A04B [1983]

Mono-stable

U22-A04C [1983]

Bi-stable

## U22-A04D\* [1987-2011]

#### Comparator

\*This code is now discontinued and from 2012 this subject matter is transferred to U22-A02E in the case of pulse generators based on comparators and U22-D01A1C for circuits performing a thresholding function on pulses. U22-A04D remains valid and searchable for records between 1992 and 2011 when it was used for comparator circuit pulse generators in general.

## U22-A04D1\* [1992-2011]

### Comparator pulse generator

\*This code is now discontinued and from 2012 this subject matter is transferred to U22-A02E in the case of pulse generators based on comparators and U22-D01A1C for circuits performing a thresholding function on pulses. U22-A04D1 remains valid and searchable for records between 1992 and 2011 when it was used for circuits configured as comparators with the purpose of generating pulses. Novel comparator circuits are coded in U22-A04D5, irrespective of application. (See note for that code).

#### U22-A04D5 [1992]

## **General comparator circuits**

This code is used to denote novel comparator circuits per se of general application, i.e. without regard to the pulse/continuous nature of either the input signal(s) or the output produced. The following codes may also be applied depending on the purpose of the circuit:

- 1. Thresholding circuits, i.e. determining that a pulse has reached a preset amplitude are covered by U22-D01A1C.
- 2. Circuits comparing pulses or pulse trains with one another are covered by U22-D02 codes.
- 3. Circuits generating a pulse in response to a given characteristic of an input signal, are covered by U22-D07 codes.
- 4. Circuits providing a switching function in response to a given input signal characteristic are covered by U21-B02A3.

## U22-A04X [1983]

## Other circuit type

Includes multistable pulse generating circuits.

## U22-B

#### **Generator details**

See U22-H also, if phase frequency/control is involved.

### U22-B01

## Output regulation/control

U22-B02 [1987]

On-chip integrated circuit details

U22-B03 [1987]

## **General details of larger IC systems**

Includes e.g. reset circuits.

## U22-B05 [1997]

### **Parameter compensation**

U22-B05 codes are assigned for compensation of parameters of the oscillator/pulse generator circuit itself and for the effect of external parameters. The codes are **not** used for similar arrangements applied to subsequent circuitry such as pulse shaping or pulse amplifying circuits.

U22-B05A [1997]

**Active device characteristics** 

U22-B05C [1997]

### **Physical characteristics**

Temperature, voltage

#### U22-B09

## Other pulse generator details

Includes generator starting circuits.

## U22-C

Generating finite slope or stepped portion pulses

#### U22-C01

Generating triangular shape pulses

## U22-C09

Other finite slope or stepped portion pulse generation

#### U22-D

Manipulating pulses

### U22-D01

Shaping pulses

### U22-D01A

Thresholding, changing duration, limiting, amplifying, steepening

[1987]

#### U22-D01A1

Thresholding, limiting, amplifying, steepening

## U22-D01A1A [1992]

## Level clamping

Covers limiting of amplitude and establishment or removal of offsets.

## U22-D01A1C [1992]

### **Thresholding**

This code is used for circuits determining that a pulse signal has attained a preset threshold level, i.e. comparing the amplitude of a pulse with a (usually fixed) reference. For example, a circuit reestablishing logic levels in data read from a magnetic hard disc would be coded here (also in T03-A06C3 and T03-A08A1C). When comparators are used for this purpose U22-D10F is also assigned.

Slicing

#### U22-D01A3 [1992]

## General pulse noise reduction circuits

This code is used for anti-contact-bounce arrangements and for circuitry suppressing the effects of other noise sources on pulses.

#### U22-D01A5\*

[1987-1991]

# Changing duration without time reference signals

\*This code is now discontinued and from 1992 this subject matter is transferred to U22-D01A6A.

## U22-D01A6 [1992]

# **Changing pulse duration**

This code covers material previously coded in U22-D01A5 and U22-D01A7, and has been introduced to better reflect the hierarchical relationship of those codes which are now no longer used, but remain valid for records prior to 1992.

## U22-D01A6A [1992]

# Changing duration without time reference signals

(U22-D01A5)

Includes use of delay line, resonant circuit, etc. *Pulse stretching* 

#### U22-D01A6C [1992]

# Changing duration using time reference signals

(U22-D01A7)

## U22-D01A7\* [1987-1991]

# Changing duration using time reference signals

\*This code is now discontinued and from 1992 this subject matter is transferred to U22-D01A6C.

#### U22-D01D\*

[1987-1996]

# Characterised by active element technology

\*This code is now discontinued. From 1997 see U22-D10 codes which are intended to provide information on active element technology for all U22-D subdivisions. U22-D codes remain valid for records from 1987-1996.

## U22-D01D1\*

[1987-1996]

## Integrated circuit implementation

\*This code is now discontinued.

#### U22-D01D3\*

[1987-1996]

**Discrete: FET, bipolar, etc.**\*This code is now discontinued.

## U22-D01D5\*

[1987-1996]

## Gates, flip-flops, counters

\*This code is now discontinued.

#### U22-D01D7\*

[1987-1996]

## Operational amplifier, comparator

\*This code is now discontinued.

#### U22-D01D9\*

[1987-1996]

## Other technology for pulse shaping

\*This code is now discontinued.

## U22-D01X

Other pulse shaping

#### U22-D02

## Comparing/sorting pulses

Includes comparison of individual pulses or pulse trains. See note for U22-A04D5 (comparators in general).

## U22-D02A

[1997]

### With respect to amplitude

U22-D02C

[1997]

## With respect to phase

Includes time-of-arrival comparison pulses.

# U22-D02E

[1997]

## With respect to frequency

U22-D02G [1997]

With respect to duration

U22-D02X [1997]

Pulse comparison based on other characteristic

#### U22-D03

## **Monitoring pulses**

Includes circuits to detect deviation from desired characteristic of individual pulse and also missing pulses in pulse trains.

U22-D03A [1997]

With respect to amplitude

U22-D03C [1997]

With respect to phase

U22-D03E [1997]

With respect to frequency

U22-D03G [1997]

With respect to duration

U22-D03X [1997]

Pulse monitoring based on other characteristic

#### U22-D04

## Changing timing of pulses at single output

Synchronization, clock, phase, delay, gate

## U22-D04A [1997]

# Changing pulse timing using active devices

This code covers the use of individual transistors, amplifiers, logic gates etc. to alter the timing of pulses and takes precedence over U22-D04C. Counter, D-type, flip-flop, memory, register

#### U22-D04C [1997]

# Changing pulse timing using passive devices

This code covers the use of passive components only such as resistors, capacitors, delay lines and networks to alter the timing of pulses.

Coil, CR, filter, inductor, LC, RC, RL, transmission line, winding

#### U22-D05

### Changing pulse train pattern

Includes circuits separating pulses from composite pulse train. For TV synchronizing signal separation in receivers see W03-A06 codes also.

[1987]

#### U22-D05A

## Frequency multipliers and dividers

In addition to coverage of circuits providing fixed multiplication or division of pulse signals, from 2011 the scope of this code has been expanded to include digitally controllable devices and circuits, which were previously excluded. Novel aspects of variable divider and multiplier circuits based on counters are covered by U21-D codes which are also assigned as necessary. See U23-B02 for digital frequency multipliers for analog signals, e.g. sinusoidal oscillator signals.

#### U22-D06

#### **Pulse distributors**

Includes clock signal distributors. See T01-K codes also for arrangements specifically for computers.

Clock tree, multiple output

U22-D06A [1997]

With outputs differing in phase

U22-D06C [1997]

## With outputs differing in frequency

Clock doubler

#### U22-D07

# Delivering pulse as function of input signal characteristics

Includes comparator type circuits generating a pulse when input signal reaches a preset threshold, and edge triggered circuits. See note for U22-A04D5.

#### U22-D07A [1987]

## Zero crossing, responding to power supply

Includes e.g. power-on-reset circuits (see U21-B02B also). See U21-B02A3 for switching circuits operating at zero-crossing.

# U22-D07C [1997]

## Individual pulse peak detector

Covers arrangements delivering a pulse in response to the peak value of an input signal. For peak detectors in the context of signal rectifiers see U24-C03A, and for electrical measuring instruments in particular, S01-D01A3.

## U22-D10 [1997]

## Pulse manipulation circuit implementation

Codes in this section are applied, in conjunction with other U22-D codes, to indicate the technology used only. They do not, in general, represent novel aspects which are indicated by the accompanying code(s) appropriate to the particular pulse manipulation involved. Prior to 1997, technology was indicated for pulse shaping only by U22-D01D codes, which are no longer assigned.

#### U22-E

## Modulating/demodulating pulses; Transforming modulation type

From 1997, this code is expanded to include demodulation of pulses and transformation of modulation type, previously covered by U22-F. U22-F is no longer used but remains valid for records prior to 1997. Pulse amplifying circuits per se are covered by U22-D01A1.

#### U22-E01 [1997]

## Characterised by modulation type

U22-E01 codes are assigned to indicate the type of modulation (or demodulation with U22-E05A) only, and do not themselves represent novel aspects, these being highlighted by other U22-E codes.

U22-E01A	[1997]
----------	--------

[1997]

(U22-F)

U22-E05C

U22-E07 [1997]

# Application of pulse modulation/demodulation

(U22-F)

This code is intended to represent, with U22-E01 and/or U22-E05 codes as appropriate, applications of pulse modulation or demodulation. It may be assigned, therefore, for inventions where circuitry aspects are not novel per se.

U22-E09 [1997]

Other pulse modulation/demodulation

U22-F\* [1980-1996]

# Demodulating pulses, transforming modulation type

\*This code is now discontinued and the subject matter is incorporated into U22-E codes. U22-F remains valid for records prior to 1997.

#### U22-G

#### **Digital filters and networks**

U22-G03 codes cover digital signal processing/networks in general and U22-G01 codes are applied in addition when concerned with digital filters. See U25 codes for analogue equivalent filters and networks. See also T01-J08B for data processing aspects.

U22-G01 [1992]

### **Digital filters**

Codes in this section are split into filter type and filter function. For construction, performance, operation and application see relevant U22-G03 codes. See T01-J08B for computer aspect.

U22-G01A [1992]

**Digital filter types** 

U22-G01A1 [1992]

Recursive

Covers filters incorporating feedback. *Infinite impulse response, IIR* 

U22-G01A1A [1992]

**Wave digital filter** 

U22-G01A1B [2005]

Kalman filter

U22-G01A3 [1992]

#### Non-recursive

Covers filters without feedback and includes digital transversal filters. See U25-A02 for analogue transversal filters.

Finite impulse response, FIR

U22-G01A5 [1992]

## Adaptive and variable filter

From 2015, the title of this code has been changed to reflect the existing coverage of filters with characteristics that are adjustable but not necessarily varied in response to input signal characteristics, i.e. not necessarily adaptive.

U22-G01A5A [1997]

Coefficient derivation details

Тар

U22-G01A5B [2005]

**Matched filter** 

U22-G01B [1992]

**Filter function** 

U22-G01B1 [1992]

Low pass

U22-G01B6 takes precedence where emphasis is on decimation filtering.

U22-G01B2 [1992]

**Band pass** 

U22-G01B3 [1992]

High pass

U22-G01B4 [1992]

**Notch filter** 

This code covers digital filters which attenuate a band of frequencies and pass those on either side. Band stop filter

U22-G01B5 [1992]

Comb filter

U22-G01B6 [1992]

**Decimation filter** 

U22-G01B9 [1992]

Other filter function

## U22-G01C\* [1992-2004]

#### Filter construction

\*This code is now discontinued. From 2005 details of components/configuration of digital signal processing/networks in general are covered by U22-G03 codes.

## U22-G01D\* [1992-2004]

### **Filter operation**

\*This code is now discontinued. From 2005 details of operation and application of digital signal processing/networks in general are covered by U22-G03 codes.

### U22-G01X [1992]

# Other digital filter aspects

## U22-G03 [2005]

## **Digital Signal Processing/Networks**

U22-G03 codes cover digital signal processing and networks and are split to cover constructional details (U22-G03A), digital sampling (U22-G03B), functions and performance (U22-G03C) and operation and application (U22-G03E). U22-G01 codes applied in addition to U22-G03 codes to highlight digital filter aspects.

## U22-G03A [2005]

#### Construction

This code covers constructional details including design, z-transform blocks, DSP block architectures, etc. Testing aspects are covered in U22-G03A1. Other U22-G03 are applied where applicable.

U22-G03A1	[2005]
-----------	--------

**Testing** 

## U22-G03A5 [2015]

# Design of digital filters and digital signal processors in general

This code is assigned for novel aspects of apparatus, methods or software for use in the DSP design process. For computer-aided design (CAD) aspects see also T01-J15A codes.

#### U22-G03B [2006]

#### **Digital sampling**

Includes systems that sample signals that are already digital, for sampling of analog signals see U21-A03F6 codes. Interpolation aspects are coded here.

## U22-G03B1 [2006]

## Re-sampling

Includes arrangements for interfacing two DSP blocks/systems that have different sampling rates.

U22-G03B1A [2006]

**Up-sampling** 

U22-G03B1C [2006]

Down-sampling

U22-G03C [2005]

**Functions and performance** 

U22-G03C1 [2005]

## Functions used in digital signal processing

U22-G03C1 codes are applied to highlight functions performed by digital signal processors and networks. These codes are used to highlight block level functions and not the overall application, which is represented by U22-G03E3 codes. Filtering using digital filters is covered by U22-G01 codes.

### U22-G03C1A [2005]

## **Addition and multiplication**

For integration function see U22-G03C1G.

U22-G03C1C [2005]

**Delay** 

U22-G03C1E [2005]

#### Array handling

This code is applied to highlight the function of fetching values from memory locations and/or copying data from memory to memory.

U22-G03C1G [2006]

Integration

U22-G03C1X [2005]

Other function

U22-G03C2 [2005]

Reduction in power consumption

U22-G03C2E [2005]

Increasing processing speed

U22-G03C2X [2005]

Other performance aspect

## U22-G03E [2005]

### **Operation and application**

These codes are used to highlight overall operation and application of a DSP system/network, i.e. the use of DSP blocks to perform e.g. Fourier transform, where the novelty may not be the blocks themselves but is the way the blocks are used to perform the operation.

### U22-G03E1 [2005]

## **Operation**

This code is applied to highlight general operation of digital signal processing/networks.

### U22-G03E1A [2005]

## Software and algorithms

See T01-J04B1 for transformation functions in general.

Fourier transform, Hilbert transform, Polynomial transform, WALSH functions

## U22-G03E3 [2005]

## **Applications of DSP**

U22-G03E3 codes are applied to highlight the application of a digital signal processor or network. Filtering using digital filters is covered by U22-G01 codes but applications of filtering can be indicated by assignment of U22-G03E3 codes as well, e.g. a digital filter used for reducing noise would be represented by appropriate U22-G01 codes in conjunction with U22-G03E3A.

## U22-G03E3A [2005]

Noise reducing/cancelling

U22-G03E3C [2005]

**Equalization** 

U22-G03E3D [2005]

Correlation

See T01-J04B2 for correlation functions in general.

U22-G03E3F [2005]

Phase shifting and delay

U22-G03E3X [2005]

Other DSP application

U22-G05\* [1992-2004]

## **Digital networks**

\*This code is now discontinued. From 2005 digital Networks in general are covered by U22-G03 codes.

## U22-G05A\* [1992-2004]

#### **Network construction**

\*This code is now discontinued. From 2005 digital network construction in general is covered by U22-G03 codes.

### U22-G05B\* [1992-2004]

#### **Network operation**

\*This code is now discontinued. From 2005 digital network operation in general is covered by U22-G03 codes.

### U22-G09 [1992]

Other digital network aspects.

#### U22-H

# Automatic digital phase/frequency-control and synchronization

This is a general code used to indicate control of phase or frequency in digital systems, especially for synchronization, and includes non-PLL phase control and clock extraction circuits (see W01-A04 codes for data transmission aspects). Other U22 codes are also assigned as necessary, such as U22-D04 codes for delay circuits and U22-D06 codes for clock distribution arrangements. Inventions concerned with digital phase lock loops (PLLs) and delay lock loops (DLLs) are covered by U23-D01 codes which are assigned instead of U22-H.

Fourier, clock signal, clock skew, clock tree.

#### **U23: Oscillation and Modulation**

In general this class covers circuits dealing with sinusoidal oscillations, but also includes digital implementations of circuits such as phase-locked loops, phase detectors etc. which may be interfaced with analogue systems. Applications may involve codes in section W for data transmission, radio and TV receivers. etc.

#### U23-A

## Sinusoidal oscillators, (using)

See U23-E codes for control of output.

## U23-A01

## **Amplifier with regenerative feedback**

Negative resistance oscillator circuits are coded in U23-A02.

#### U23-A01A

#### Electromechanical resonator

Oscillators using logic inverters and the like in a feedback arrangement with an electromechanical resonator are also assigned U22 codes (e.g. U22-A02D and U22-A04A2). Novel aspects of resonators themselves are covered by V06-V01E codes with other V06-V codes as appropriate.

Quartz, crystal, piezoelectric, fundamental, overtone, parallel, series, resonance, effective series resistance, ESR, trim

#### U23-A01A1 [1987]

#### **SAW** resonator

See U14-G and V06-V codes for SAW resonators per se

Surface acoustic wave, IDT, interdigitated

# U23-A01A2 [2006]

## **MEMs** resonator

See V06-V codes for MEMs and NEMs resonators themselves.

Surface acoustic wave, IDT, interdigitated

#### U23-A01A5 [1992]

## With voltage control, e.g. VCXO

This code is used with U23-A01A or U23-A01A1, as appropriate. Voltage controlled oscillators for PLLs are covered by U23-D01A1, and astable multivibrator type VCOs by U22-A04B9.

## U23-A01B

#### Inductive/capacitive resistive elements

## U23-A01B1 [1987]

#### **Discrete LCR**

Frequency/phase-shift, Wien bridge, parallel-T, tuned circuit, coil, inductor, capacitor, resistor

#### U23-A01B2 [1987]

# Distributed LCR, YIG or dielectric resonator etc.

Includes the use of waveguide-type elements, novel aspects of which are coded in W02-A, e.g. W02-A03A codes for resonators. See U23-Q also for constructional and layout aspects influenced by the frequency of operation.

Coaxial, cavity, tuned line, stripline, microstrip, YIG sphere, magnetic

## U23-A01B5 [1992]

# With voltage control e.g. VCO

This code is used with U23-A01B1 or U23-A01B2 as appropriate. (See note for U23-A01A5).

#### U23-A02

## Negative resistance element or transittime effects

Includes oscillators with conventional threeterminal device in negative resistance circuit configuration.

Gunn diode, IMPATT, klystron, magnetron, TWT

### U23-A05 [2014]

# Oscillators based on spin transport electronics

Covers oscillators using 'spintronics' or 'magnetoelectronics', e.g. spin torque oscillators as used in microwave-assisted magnetic recording, for which T03-A06N3 codes are also assigned. U23-Q is also assigned to denote significant high-frequency (e.g. microwave) aspects.

Giant magnetoresistance, GMR, MAMR, oscillating field, STO, TMR, tunnel magnetoresistance

## U23-A06 [2016]

## **Atomic oscillators**

This code is intended to cover oscillators in which signals, e.g. at microwave frequencies, are emitted by electrons in the atoms of gaseous alkali metals changing energy levels. Prior to 2016 this kind of oscillator was coded as U23-A when appropriate but was chiefly covered by U23-D02 which will continue to be assigned for inventions based on the use of such oscillators as a reference frequency source.

Cesium, coherent population trapping, CPT, double resonance, energy transition, gas cell, laser, light, quantum interference, rubidium

#### U23-B

## Frequency multipliers/dividers

## U23-B01 [1987]

### **Analogue**

Harmonic resonator, varactor, injection, diode bridge

### U23-B02 [1987]

## **Digital**

See U22-D05A for circuits multiplying or dividing pulse rate. Counter circuits are covered by U21-D codes.

## U23-C

## Phase or frequency comparators

This code covers circuits for comparing the phase of frequency of sinusoidal signals. U23-D01A3A, which covers phase comparators / detectors in phase lock loops or delay lock loops takes precedence over U23-C codes.

#### U23-C01 [1987]

## Analogue phase or frequency comparator

This code covers analogue circuitry used for comparing the phase or frequency of sinusoidal signals.

#### U23-C02 [1987]

#### Digital phase or frequency comparator

This code covers digital circuitry used for comparing the phase or frequency of sinusoidal signals. Digital circuits comparing the phase of pulse signals are covered by U22-D02C and their frequency by U22-D02E.

## U23-D

# Automatic phase/frequency control; Synchronization

Purely digital circuitry e.g. for clock extraction from incoming data stream, is coded in U22-H. From 1992 U23-D01 codes are used for **all** aspects of phase-locked loops, whether of analogue or digital type. U23-D01A8 codes are used to distinguish analogue, digital, or hybrid types when this is significant. Prior to 1992 see U23-D01 codes and U22-H codes as appropriate.

## U23-D01 [1987]

## Delay lock loop and phase lock loop

In 2005, the title of this code was changed to better reflect its inclusion of delay lock loops as well as phase lock loops. In the case of DLLs U23-D01D is assigned with other U23-D01 codes as appropriate. U23-D01 codes take precedence over the 'general synchronization' code U22-H, which is assigned for digital phase and frequency control circuits not involving a PLL or DLL.

DLL. PLL

## U23-D01A [1987]

Loop details

## U23-D01A1 [1992]

## Voltage controlled oscillator

Reference oscillators for frequency synthesizers are covered by U23-D01B3.

Current/voltage/numerically controlled oscillator, CCO, VCO, NCO, voltage controlled crystal oscillator, VCXO

#### U23-D01A2 [2007]

#### Active loop control

Includes control of loop gain, for which U24-C01 codes are also assigned as appropriate.

#### U23-D01A3 [1992]

## Phase detectors and charge pumps

From 2002 the title of this code has been changed to better reflect the previous inclusion of charge pumps, now coded separately as U23-D01A3C.

## U23-D01A3A [2002]

Phase detector

## U23-D01A3C [2002]

#### Charge pump

Charge pumps in general are covered by U24-D02A1.

## U23-D01A5 [1992]

#### **Lock detector**

False lock protection is covered by U23-D01F3. Out-of-lock detector

## U23-D01A6 [2005]

#### Delay array

Includes delay lines, gates, etc. making up the delay chain. U22-D04 and U25-A05 are also assigned where relevant.

## U23-D01A7 [1992]

#### **Loop filter**

U23-D01A7A [1992]

Variable bandwidth

U23-D01A8 [1992]

**Loop type** 

U23-D01A8A [1992]

**Analogue** 

U23-D01A8B [1992]

Digital

U23-D01A8C [1992]

Hybrid analogue/digital PLL system

U23-D01B [1987]

#### Frequency synthesizers

See W02-G03A codes also for application to radio communications equipment in general, and U23-F01 codes for direct synthesizers.

Synthesis, step, select, preset channel, radio receiver, transceiver, transmitter

U23-D01B1 [1992]

Division circuit, e.g. variable ratio divider

U23-D01B1A [1997]

### For fractional synthesis

Fractional-N

U23-D01B3 [1992]

## **Reference oscillator**

See U23-A01A also for oscillator circuits employing an electromechanical resonator. VCOs (and VCXOs) are coded in U23-D01A1 and the appropriate U23-A code. For temperature compensation aspects U23-E05 is also assigned. *Quartz, crystal, SAW, oven, temperature, control* 

## U23-D01B5 [1992]

# Output filter arrangements, improving purity

This code covers arrangements to reduce noise, spurious signals, etc. which are specific to the synthesizer circuit, i.e. it is not routinely assigned for noise reduction that is actually a property of the PLL itself which is covered by U23-D01F5.

## U23-D01B7 [1997]

# Characterised by use of more than one loop

Includes dual-loop PLL synthesizers.

U23-D01C [1987]

## Modulation/demodulation applications

See also other U23 codes for type of modulation.

U23-D01C1 [1992]

**Costas loop system** 

U23-D01D [2005]

#### **Delay lock loop**

This code is assigned to indicate that an invention relates to a delay lock loop rather than a phase lock loop, other U23-D01 codes being assigned with it depending on novelty. When U23-D01 codes are assigned without U23-D01D, it is assumed that a PLL is involved or that the invention is not specific to DLLs.

U23-D01E [2006]

## PLL and DLL testing

Includes calibration aspects.

U23-D01F [1997]

# Modifications and improvements to loop characteristics

These codes are used with other U23-D01 codes as appropriate.

U23-D01F1 [1997]

## Lock acquisition time reduction

See also U23-D01A7A. *In-lock, pull-in, track* 

U23-D01F3 [1997]

# **False lock prevention**

See also U23-D01A5.

U23-D01F5 [1997]

#### **Noise reduction**

Arrangements specific to indirect frequency synthesizers where the improvement is not a function of loop performance itself, e.g. an improved reference oscillator or an output filter, are covered by U23-D01B5 instead, but both codes can be used together when appropriate.

U23-D01F7 [1997]

Broadening capture range

U23-D01F9 [1997]

Other modifications to PLLs

## U23-D02 [1987]

## Other phase/frequency shift correction

Includes systems not relying solely on PLLs to correct phase or frequency, e.g. non-feedback frequency control of an oscillator based on sensed temperature, injection locking and use of atomic oscillators. (Time and frequency standards based on atomic oscillators are covered by S04-B02X and S04-C09). Prior to 2016 details of atomic oscillators themselves were chiefly assigned this code but from 2016 novel details of such oscillators, e.g. gas cells containing alkali metals, are covered by U23-A06.

### U23-E

## Oscillator starting and output control

U23-E codes are assigned for oscillator circuit control and for temperature compensation arrangements associated with the oscillator itself. The codes are **not** used for subsequent circuitry such as phase shifting, phase splitting or amplifying circuits. See U22-B codes for analogous arrangements for pulse generators.

U23-E01 [1992]

**Output control** 

U23-E01A [1992]

#### **AGC-based system**

See U24-C01 codes also for automatic gain control circuits.

## U23-E05 [1992]

### **Temperature compensation**

Includes choice of components (e.g. complementary temperature-dependent characteristics), temperature-responsive 'trimming' of oscillator circuits, and 'oven' arrangements.

### U23-F

# Miscellaneous oscillation and noise generators

## U23-F01\* [1987-2004]

#### **Direct frequency synthesizers**

\*This code is now discontinued. From 2005 direct frequency synthesizers are covered by U23-F03 codes.

## U23-F01A\* [1997-2004]

#### **Memory aspects**

\*This code is now discontinued. From 2005 memory aspects of direct frequency synthesizers are covered by U23-F03A1.

## U23-F01C\* [1997-2004]

### Improving output signal purity

\*This code is now discontinued. From 2005 improvements in spectral purity of direct frequency synthesizers are covered by U23-F03B5.

#### U23-F02\* [1987-2004]

# Waveform generators using computer ROM and A-D/D-A converters

\*This code is now discontinued. From 2005 direct frequency synthesis and direct digital synthesis is covered by U23-F03 codes.

## U23-F03 [2005]

## **Direct Frequency Synthesizers**

From 2005 U23-F03 codes have been introduced to better reflect direct frequency synthesis and includes direct digital synthesis. Indirect frequency synthesis is coded in U23-D01B.

U23-F03A [2005]

**Novel synthesizer details** 

U23-F03A1 [2005]

Memory aspect and look-up tables

U23-F03A3 [2005]

Phase accumulators

U23-F03A5 [2005]

Other

U23-F03B [2005]

**Synthesizer performance** 

U23-F03B1 [2005]

Improving frequency resolution

U23-F03B3 [2005]

**Increasing frequency transition** 

Includes improving hopping speed.

U23-F03B5 [2005]

Improve spectral purity

U23-F03B9 [2005]

Other

U23-F05 [1997]

**Noise generators** 

Chaos, white noise

U23-F09 [1997] Other oscillation generation

#### U23-G

## **Amplitude modulation**

This code relates to amplitude modulation of a carrier wave by an analogue signal. For AM using digital modulating signals see U23-P01C codes. See also U23-P codes for relevant additional details and W02-G01D for transmitter application. This code is intended to highlight novel aspects of amplitude modulators, e.g. with U23-P codes, or novel modulation schemes. It is **not** applied merely to indicate the **use** of AM in a general sense.

Balanced modulator, DSB/SSB modulator

#### U23-H

## Angle modulation

This code relates to frequency or phase modulation of a carrier wave by an **analogue** signal. For FM or PM using digital modulating signals see U23-P01A codes. See also U23-P codes for relevant additional details and W02-G01D for transmitter application. This code is intended to highlight novel aspects of frequency or phase modulators, e.g. with U23-P codes, or novel modulation schemes. It is **not** applied merely to indicate the use of FM or PM in a general sense.

Reactance modulator, varactor, varicap, phase shifter

## U23-J

## Mixing; Frequency changing

Radio receiver applications (general) are coded in W02-G03A5.

U23-J01 [1997]

#### Mixer

See also under applications, e.g. W02-G03A5 for radio receivers in general, W03-B01A5 for broadcast radio receivers, and W03-A01B5 for TV receiver tuners. For image-suppression mixers, search with W02-G03B4A.

U23-J01A [1997]

Characterised by active device

U23-J01C [1997]

Characterised by configuration

U23-J01C1 [1997]

Single-ended

U23-J01C5 [1997]

**Balanced** 

U23-J01C5A [1997]

Single-balanced

U23-J01C5C [1997]

### **Double-balanced**

For ring configurations, U23-J01C5E takes precedence.

DBM

U23-J01C5E [1997]

## Rina

This code takes precedence over U23-J01C5C.

U23-J01C5G [2017]

#### Triple-balanced

Covers use of two double-balanced mixers driven in a push-pull configuration.

Doubly double-balanced mixer, TBM

U23-J01C9 [1997]

Other configuration

## U23-J01E [2002]

## Integrated or film circuit implementation

This code is assigned with other U23-J01 codes as necessary, to indicate a self-contained mixer in integrated form. Specific novel constructional and manufacturing aspects of monolithic and film circuits are also assigned codes from classes U11-U14 as appropriate.

U23-J05 [1997]

Frequency changing

U23-J05A [1997]

**Single conversion** 

U23-J05C [1997]

## **Double and multiple conversion**

This code denotes two or more frequency conversions being performed.

#### U23-K

## **Amplitude demodulation**

See also U23-P codes for relevant additional details and W02-G03E for (general) radio receiver applications. Demodulators of signals amplitude modulated by digital signals are covered by U23-P01C and U23-P01J3. Signal rectifiers, e.g. for AGC purposes, are covered by U24-C03.

## U23-L

#### Angle demodulation

See also U23-P codes for relevant additional details and W02-G03E for (general) radio receiver applications. Demodulators of signals frequency or phase modulated by digital signals are covered by U23-P01A and U23-P01J3.

Frequency, phase, FM, discriminator, quadrature detector, limiter

## U23-P [1987]

#### Modulation/demodulation, general

Codes in this section are used either alone, or with other U23 codes as appropriate. Additional codes may be assigned from section W for radio equipment applications.

## U23-P01 [1987]

## **Digital Modulation/Demodulation**

From 2005 the title of this code has been changed to better reflect its content. U23-P01 codes are chiefly used with W01-A09 codes for carrier systems data transmission. They describe modulation of a carrier by **digital** signals.

U23-P01A [2005]

## **Angle Modulation**

Angle modulation with **analogue** modulating signals is covered by U23-H.

U23-P01A1 [2005]

**Frequency Shift Keying** 

**FSK** 

U23-P01A3 [2005]

**Phase Shift Keying** 

PSK, QPSK

U23-P01A5 [2005]

Minimum Shift Keying

MSK

U23-P01A9 [2005]

Other

U23-P01C [2005]

#### **Amplitude Modulation**

Amplitude modulation with **analogue** modulating signals is covered by U23-G.

U23-P01C1 [2005]

Amplitude Shift Keying

ASK

U23-P01C9 [2005]

Other

U23-P01E [2005]

**Hybrid Modulation** 

U23-P01E1 [2005]

Quadrature Amplitude Modulation

QAM

U23-P01E9 [2005]

Other

U23-P01G [2005]

Multi-frequency code techniques

U23-P01J [2005]

**Novel Modulator/Demodulator Circuits** 

U23-P01J1 [2005]

#### Modulator

Amplitude and angle modulators with **analogue** modulating signals are respectively covered by U23-G and U23-H.

U23-P01J3 [2005]

**Demodulator** 

U23-P01J3A [2005]

**Coherent detection** 

U23-P02 [1987]

## **Analogue circuit details**

This code is used in conjunction with U13-B codes for significant integrated circuit aspects.

U23-P03 [1987]

## Implementation using digital techniques

See T01-J codes for computer circuit aspects.

U23-P04 [1987]

## **Broader systems details**

Covers circuit blocks used for signal processing, rather than 'internal' circuit details. For amplitude-locked loop demodulation applications, use with U24-C01G.

U23-P05 [1987]

### Stereo, mixed AM/FM

See W02-E and W02-F06 codes also for stereophonic broadcasting. Decoders in TV and radio receivers are also coded in W03-A02B1 and W03-B02C3 codes respectively.

# U23-Q [1987]

### Microwave and HF circuits

(U23-X)

This code is intended to indicate construction and layout aspects of microwave circuits and is used in conjunction with other relevant U23 codes. Waveguide components per se (including microstrip) are covered by W02-A codes. Construction and layout of microwave amplifiers is covered by U24-G04M.

Microwave integrated circuit, MIC, stripline, resonator, cavity

U23-R [2006]

#### Testing/calibration

This code covers all testing/calibration aspects for U23 type circuits apart from PLLs and DLLs for which U23-D01E is applied. See also S01 codes.

U23-R01 [2006]

**Testing** 

U23-R02 [2006]

**Calibration** 

#### U23-X

# Other aspects of modulation/demodulation

This code includes (de)modulation of EM waves, e.g. in a waveguide, and aspects of modulation or demodulation not otherwise catered for in U23.

## **U24: Amplifier and Low Power Supplies**

Heavy current equipment is in section X.

#### U24-A\*

[1980-1986]

#### Semiconductor/valve amplifiers

\*This code is now discontinued. The codes U24-A01 to U24-A09 in this group remain valid for records prior to 1987.

#### U24-A01\*

[1980-1986]

## DC and low frequency amplifiers

\*This code is now discontinued.

U24-A02\*

[1980-1986]

## High frequency and wideband amplifiers

\*This code is now discontinued.

U24-A03\*

[1980-1986]

## Power and switching amplifiers

\*This code is now discontinued.

U24-A04\*

[1980-1986]

# Differential, operation, push-pull amplifiers; Phase splitters

\*This code is now discontinued.

#### U24-A05\*

[1980-1986]

## Feedback arrangements; Raising efficiency

\*This code is now discontinued.

## U24-A06\*

[1980-1986]

Modification for reducing noise/internal impedance effects/ temp. and supply voltage influence/ distortion; Bandwidth extension

\*This code is now discontinued.

#### U24-A09\*

[1980-1986]

# Other (incl. protection circuitry, multichannel amplifiers)

\*This code is now discontinued.

## U24-B\*

[1980-1991]

# Parametric, magnetic and dielectric amplifiers, etc.

\*This code is now discontinued but remains valid for records prior to 1992. For parametric amplifiers see U24-G04E, dielectric amplifiers see U24-G04X, magnetic amplifiers see U24-E04.

## U24-C

#### Gain control

Includes compression/expansion, AGC, muting, general signal rectifiers.

#### U24-C01

## **Automatic gain control**

AGC

U24-C01A

[1987]

AGC amplifiers with analogue control

U24-C01B

[1987]

AGC amplifiers with digital control

U24-C01C

[1987]

**Control signal derivation** 

U24-C01C1

[1997]

#### Novel signal processing per se

Includes processing of derived control signal to achieve particular gain control characteristic.

#### U24-C01C5

[1997]

## Taking other parameters into account

E.g. using ambient acoustic signal, signal produced from mechanical parameters such as vehicle or engine speed, etc.

In-car-entertainment, passenger compartment, microphone, volume

### U24-C01G

[1997]

### Amplitude-locked loop

See U23 codes also for AM and FM demodulation applications. Phase lock loops are covered by U23-D01 codes.

ALL

## U24-C02

## **Companders; Amplitude limiters**

U24-C02A

[1987]

## Limiters

Clipper circuit

#### U24-C02A1

[1992]

## **Soft limiter**

(U24-C02)

## U24-C02A5 [1992]

## DC limiting i.e. level clamp circuit

Video signal clamping circuits for TV receivers are coded in W03-A04C.

## U24-C02B [1987]

## Companding, compression, expansion

Emphasis, pre-emphasis, compressor, compander, expander, Dolby®, Dolby-B®

## U24-C03 [1987]

## **General signal rectifiers**

Covers rectifiers for control signal derivation. Amplitude demodulators in general are covered by U23-K.

## U24-C03A [1997]

#### **Peak detector**

See U21-B03 for sample-and-hold circuits.

## U24-C05 [1987]

# Manual control, combined gain/tone control, muting

(U24-C09)

See W03-C codes also for audio amplifier aspects.

## U24-C05A [1987]

## Manual gain control

Also coded in W03-C03 for audio amplifiers. *Volume* 

## U24-C05A1 [1997]

## **Continuously variable**

Potentiometer

## U24-C05A5 [1997]

#### Stepped variation

Ladder, resistor, network, switch, tap

## U24-C05B [1987]

## Digital control details, e.g. by computer

Includes e.g. computer circuit details.

## U24-C05C [1987]

## Muting

Muting in radio receivers is covered by W02-G03B1.

#### U24-C05D [1987]

## Combined gain and tone control

### U24-C09

## Other gain control

#### U24-D

#### **Power converters**

Includes normally low electronic power converters. High power converters are in X12-J and their controllers in X13-G03. Indeterminate power converters are in U24 and X12. Unregulated or unstabilized converters are in U24-D. Stabilisers or voltage regulators are in U24-E. Does **not** cover individual components e.g. capacitors, transformers even if specifically intended for converters.

#### U24-D01

#### General converter details

#### U24-D01A

## **Generation of control voltages**

See also U21-B01 and U21-B05 codes for electronic switching.

## U24-D01A1 [1992]

For bipolar transistor

U24-D01A1A [1992]

For IGBTs

U24-D01A3 [1992]

For FETs

U24-D01A7 [1992]

## For control of other devices

## U24-D01A8 [2007]

#### **Multi-phase control**

This code is applied in conjunction with other U24-D codes to highlight novel multi-phase control.

## U24-D01A9 [1992]

#### **Characterised by PWM**

See U22-E codes for PWM in general.

## U24-D01B [1992]

### **Protection**

See also U24-F. For high power converters see X12-J01B and X13-C04D.

## U24-D01B1 [2005]

**Snubber circuits** 

#### U24-D01B1A [2005]

### **Passive**

Includes the use of RLC elements and diodes.

## U24-D01B1C [2005]

#### Active

Includes the use of transistors, etc.

## U24-D01B1F [2005]

#### **Dissipative**

Includes arrangements for dumping excess switching energy into a resistor. May be used in conjunction with other U24-D01B1 codes.

## U24-D01B1H [2005]

### **Non-dissipative**

Includes arrangements for excess switching energy to be fed back or fed forward, respectively, to the input or output.

## U24-D01E [1992]

## **Reducing harmonics and ripples**

(U24-D01X)

See U25-E codes for filters in general.

## U24-D01E1 [2006]

**Harmonics reduction** 

### U24-D01E2 [2006]

**Ripple reduction** 

## U24-D01E5 [2014]

## Reducing electromagnetic interference

This code covers measures to reduce electromagnetic interference generated by the converter itself, e.g. based on circuitry or on constructional details such as screening for which V04-U codes are also assigned. W02-H01 codes (general codes for EMI/RFI reduction at source) are also assigned as appropriate.

Electromagnetic compatibility, EM, EMC, filter, harmonic, PWM frequency, radio frequency interference, RF, SMPS, switched mode, switching frequency, switching regulator, switching transient

## U24-D01G [1992]

## **General cooling details**

(U24-D01X)

See also V04-T03 codes.

# U24-D01J [2005]

## Measurements/testing/monitoring

Includes self-checking arrangements and also monitoring by external equipment. See S01 codes for related electrical instrumentation aspects.

### U24-D01K [2007]

## **Constructional details**

#### U24-D01X

#### Other converter aspects

Includes converter details not covered elsewhere.

#### U24-D02

**DC-DC** converters

#### U24-D02A

#### Without intermediate AC

Charge pump

U24-D02A1 [2005]

Charge pump

U24-D02A2 [2005]

Chopper

U24-D02B

With intermediate AC

U24-D02B1 [1992]

Flyback; Forward

U24-D02B3 [1992]

Half-bridge or single-ended push-pull;

**Push-pull** 

**SEPP** 

U24-D02B5 [1992]

Full bridge

U24-D02B7 [1992]

Resonant

U24-D03

**AC-AC** converters

U24-D04

**AC-DC** converter

Rectifier

U24-D04A [1992]

Half-wave

U24-D04C [1992]

**Full-wave** 

U24-D04C1 [1992]

Bridge

U24-D04C1A [1992]

Characterised by diodes

U24-D04E [1992]

Voltage multiplier

U24-D04G [2002]

Synchronous rectifier

(U24-D04C)

Includes rectifiers using active transistor switches.

U24-D05

**DC-AC** converter

Inverter

U24-D05A

Full- and half-bridge

U24-D05A1 [1992]

**Characterised by bipolar transistors** 

U24-D05A1A [1992]

**Characterised by IGBTs** 

U24-D05A3 [1992]

**Characterised by FETs** 

U24-D05A5 [2006]

Characterised by combination of bipolar/IGBTs/FETs

U24-D05A9 [1992]

Other inverters

Includes inverters characterised by type of switch not covered elsewhere.

U24-D05B [2005]

Inverter-type

To be used in conjunction with other inverter codes such as U24-D05A.

U24-D05B1 [2005]

Voltage source inverter

U24-D05B2 [2005]

**Current source inverter** 

U24-D05B3 [2005]

**Utility inter-tie inverter** 

Includes inverters fed by solar/wind power/etc generators for connecting to a mains/utility supply. For high power inverters, see X12-J codes.

U24-D06 [2005]

## **Pulse voltage supply**

See X12-J06 for high power pulse supply. See U22-A03 also for energy-storage pulse generation.

## U24-D09

#### Other converters

Includes other converters not covered elsewhere e.g. dynamic types.

U24-D10 [2007]

#### **Bidirectional converter**

This code is used in conjunction with other codes to indicate a bidirectional novelty.

U24-D11 [2007]

## Multiple input/output

This code is used in conjunction with other codes to indicate multiple input/outputs aspects. Caters for, for example, converters that output voltages of different magnitudes.

U24-D12 [2007]

## Intelligent power supply

Includes power supplies characterised by having a microcontroller for providing programmable features. The latter include the ability to adaptively respond to external conditions, adaptive current limit for different phases of the PSU operation, programmable output voltage, supervisory features, fault recovery, status information provision for remote diagnostics, etc. See also relevant T01-J08 codes.

#### U24-E

## Regulating power/current/voltage

#### U24-E01

## Non-feedback systems

Includes e.g. Zener diode.

U24-E01A [2005]

**AC** variable

U24-E01C [2005]

**DC** variable

U24-E01C1 [2005]

Zener diode-based

## U24-E01C5 [2005]

#### **Current mirror circuits**

Includes current sinking/sourcing configurations for the regulating transistor to connect a load to the ground/DC power supply terminal.

## U24-E01C7 [2005]

## **Band gap reference circuits**

Includes, generally, regulators using the difference between base-emitter voltages of two bipolar transistors operating at different current densities. For voltage reference circuits using feedback, see U24-E02B7.

#### U24-E02

Feedback systems

U24-E02A

For AC

U24-E02B

For DC

U24-E02B1

With overload protection

U24-E02B1A [1992]

With overload protection and series dissipative transistor

(U24-E02B3)

U24-E02B2

With transistor

U24-E02B2A [1992]

Switching regulator or switched mode power supply

(U24-E02B4) SMPS

U24-E02B2D [1992]

**Dissipative regulators** 

(U24-E02B6)

U24-E02B3\* [1983-1991]

## With overload protection and series dissipative transistor

\*This code is now discontinued and was formerly a subdivision of U24-E02B1. From 1992 this subject matter is transferred to U24-E02B1A to indicate its proper hierarchical relationship to U24-E02B1. It remains valid and searchable for documents from 1983 to 1991.

## U24-E02B4\* [1983-1991]

#### Switching regulators

\*This code is now discontinued and was formerly a subdivision of U24-E02B2. From 1992 this subject matter is transferred to U24-E02B2A to indicate its proper hierarchical relationship to U24-E02B2. It remains valid and searchable for documents from 1983 to 1991.

## U24-E02B6\* [1983-1991]

#### **Dissipative regulators**

\*This code is now discontinued and was formerly a subdivision of U24-E02B2). From 1992 this subject matter is transferred to U24-E02B2D to indicate its proper hierarchical relationship to U24-E02B2. It remains valid and searchable for documents from 1983 to 1991.

## U24-E02B7 [2006]

#### Voltage reference circuit

Includes circuit using feedback. For non-feedback voltage reference circuits, see U24-E01C7.

#### U24-E02B9

## Other DC regulators

Includes other DC feedback systems to control power/current/voltage.

U24-E02C [1987]

Regulation for AC or DC variable

U24-E02D [1987]

Regulation of electric power

U24-E02D1 [1987]

Maximum energy transfer from generator

Includes e.g. solar cell circuits.

## U24-E02D1A [1997]

Solar power system and associated converter interconnection with commercial utility system

(U24-E02D1)

Generally includes inverter control (see also U24-D codes) to enable max. power transfer. See also X12-H01B.

## U24-E02D2 [1987]

## Regulating power factor

Capacitor banks for power factor correction in heavy current systems are in X12-H01A.

#### U24-E03 [1987]

## Regulating electric variables using input deviation detection

Phase/firing angle, phase-switching, fire, zero-crossing detector, trigger

U24-E03A [1987]

AC input with thyristors or triacs

U24-E03B [1987]

AC input with transistors, FETs

U24-E03X [1987]

## Other electric output regulation based on input deviation

Includes other electric variables regulation.

U24-E04 [1987]

**Regulating magnetic variables** 

(U24-X)

Includes magnetic amplifiers using e.g. transductors.

## U24-F [1983]

#### **Protective circuits**

(U24-X)

Protection for heavy current systems is covered by X13-C codes.

## U24-F01 [1983]

## For automatic disconnection

(U24-X)

This code covers protection arrangements for low-power electrical and electronic circuits involving disconnection which may be capable of being reset or may be non-resettable, e.g. based on fuses. Novel details of fuses themselves are not included and are covered by X13-D01 codes.

## U24-F02 [1983]

## Limiting excess current/voltage

(U24-X)

Surge protection

#### U24-F03\* [1997-2016]

## **Smart protectors**

\*This code is now discontinued and from 2017 this subject matter is covered by U24-F05, i.e. as digital protectors. U24-F03 remains valid and searchable for records between 1997 and 2016 when it covered smart protectors using microprocessors and the like. See also U13-E01 for IC protectors and relevant T01-J08 codes for microprocessor control.

## U24-F04 [1997]

## Solid-state (analogue) protectors

## U24-F05 [1997]

## **Digital protectors**

From 2017 the scope of this code is expanded to cover all low-power circuit protection devices which rely on digital circuitry and devices to detect fault conditions and initiate protective measures, including smart protectors which prior to 2017 were covered by U24-F03.

ADC, analog-to-digital converter, digital relay, digital protective relay, logic, microprocessor, neural network, numerical relay, smart circuit protector, software

U24-F06 [2002]

**Electrostatic protection** 

U24-F07 [2002]

Thermal protection

U24-F08 [2018]

## **Charging protection**

This code covers protection for energy stores such as secondary cells and capacitors, and equipment using them, from damage arising from charging. The protection may be triggered by an undesired electrical condition or by a physical change, such as deformation of battery casing or temperature rise. Other U24-F codes are also assigned as appropriate, e.g. U24-F01 for protection involving disconnection from a charging source or U24-F07 for protection initiated by rise in temperature. Charging of batteries is also covered by X16-G codes and of capacitor energy stores by U24-L and X16-L02. Protection for high-power batteries and battery systems is covered by X13-C04X.

Fast charging, gas pressure, overcharging, rapid charging

#### U24-G [1987]

#### Semiconductor/valve and other amplifiers

Codes in this section are divided into categories of circuit application (U24-G01 codes), circuit type and configuration (U24-G02 codes), circuit modifications (U24-G03 codes) and implementation technology (U24-G04 codes). In general, codes from the U24-G01,-G02 and -G04 sections are assigned to describe general aspects of the amplifier, novel features being chiefly represented by U24-G03 codes. From 1992, subject matter previously covered by U24-B has been incorporated in this section.

## U24-G01 [1987]

## **Circuit applications**

U24-G01A [1987]

Instrumentation servo, sensor optoreceiver (U24-A01, U24-A09)

U24-G01A1

## Instrumentation

Instrumentation in general is covered in section S.

[1992]

#### U24-G01A5 [1992]

### **Opto-receiver amplifiers**

Covers amplifiers with e.g. photodiode, phototransistor at input. See also codes for application, e.g. W02-C04A3B for optical communication receiving amplifier.

U24-G01B [1987]

**Power** 

U24-G01B1 [1987]

#### Low frequency

Also coded in W03-C01C when used as an audio power amplifier.

#### U24-G01B5 [1987]

### **High frequency**

Also coded in W02-G01B when used as transmitter power amplifier. See U24-G04M for microwave amplifier constructional aspects.

HF, RF, microwave, millimetre, wave

#### U24-G01C [1987]

## Audio and general low frequency

See W03-C codes also for non-power audio amplifiers, e.g. W03-C01A for audio preamplifiers.

#### U24-G01D [1987]

#### **High frequency**

Covers HF/RF signal amplifiers for video and radio equipment. See also under application, e.g. W02-G03A3 for radio receiver RF amplifiers. See U24-G04M for microwave amplifier constructional aspects.

#### U24-G01F [1992]

## Logarithmic amplifier

Compression in general is covered by U24-C02B. Circuit modifications to introduce deliberate nonlinearity are covered by U24-G03K.

U24-G01X

Other amplifier application

U24-G02 [1987] Circuit type and configuration

U24-G02A [1987]

Differential amplifier, current mirror, operational amplifier

(U24-A04)

#### U24-G02A1 [1992]

#### Differential amplifier

From 2002, U24-G02A1C is assigned for amplifiers with both differential input and output, and takes precedence over the other two subdivisions of U24-G02A1.

U24-G02A1A [2002]

Differential input

U24-G02A1B [2002]

Differential output

U24-G02A1C [2002]

## Differential input and output

This code takes precedence over U24-G02A1A and U24-G02A1B.

U24-G02A3 [1992]

**Current mirror** 

U24-G02A5 [1992]

Operational amplifier

U24-G02A5A [1997]

Transconductance amplifier

 $OT\Delta$ 

#### U24-G02A5C [1997]

## **Current mode operation**

Covers amplifier with predominately current-based feedback.

U24-G02A7 [1992]

Follower circuit e.g. emitter follower

U24-G02B [1987]

## Switched capacitor

This code covers switched-capacitor amplifier technology, and includes any amplifier circuit using this technique. Circuits of this type using 'off-theshelf' (i.e. not novel) operational amplifiers, used as a functional block or 'black box', are covered by U24-G04C1, which is assigned as well as U24-G02B when necessary. Switched capacitor filters and switched capacitor networks in general are covered by U25 codes.

U24-G02C [1987]

Push-pull, phase splitters

U24-G02C1 [1992]

## **Phase splitter circuits**

This code is used for novel phase splitting circuits of general application.

Transformer, transistor

U24-G02C5 [1992]

**Push-pull amplifier** 

U24-G02D [1987]

**DC** coupled

U24-G02E [1987]

## **Switching Amplifier**

From 2005, the title of this code has changed to better reflect its content. This code covers switching amplifier arrangements or as they are more commonly known Class D amplifiers. Digital Amplifiers and Class E amplifiers are also covered here. See U22-E codes for pulse modulation in general, U21-B codes for electronic switching in general and U24-G01 codes and W03-C codes for audio applications.

Digital Amplifier, Class D, Class E, PWM, Switching Amplifier

U24-G02F [1987]

Gated, two-way, cascade, cascode, bridge, and combination amplifiers

U24-G02F1 [1992]

**Gated amplifier** 

Amplifier muting in general is covered by U24-C05C.

U24-G02F2 [1992]

Multichannel amplifier

U24-G02F3 [1992]

**Bidirectional amplifier** 

Two-way

U24-G02F4 [1992]

**Bridge amplifier** 

U24-G02F5 [1992]

**Cascaded amplifier** 

Multistage

U24-G02F7 [1992]

**Cascode amplifier** 

U24-G02X [1987]

Other amplifier circuit configurations

Includes reflex amplifiers.

U24-G03 [1987]

Modifications and improvements to amplifiers

(U24-A05, U24-A06)

U24-G03A [1987]

**Negative feedback** 

NFB

U24-G03B [1987] Positive feedback, feedforward

U24-G03B1 [1992]

**Feedforward** 

See U24-G03D5 also when object is distortion reduction.

U24-G03C [1987]

**Protection** 

(U24-A09)

Overvoltage or overcurrent protection in general is covered by U24-F codes.

U24-G03D [1987]

Noise/distortion reduction

U24-G03D1 [1992]

**Noise reduction** 

For application to radio receivers, see W02-G03B codes also.

U24-G03D1A [2002]

Noise arising from amplifier components

U24-G03D1B [2002]

Reducing effect of external noise sources

U24-G03D3 [2002]

Improvement in dynamic range

U24-G03D5 [1992]

Distortion reduction, linearity

improvement

For pre-distortion see U24-G03K and when relating to RF systems, W02-G04B codes also.

U24-G03D5A [2002]

**Harmonic distortion** 

U24-G03D5C [2002]

Intermodulation distortion

U24-G03D5X [2002]

Other distortion

U24-G03E [1987]

## For integrated circuits

Inventions coded in U24-G03E codes deal with improvements to amplifiers where the integrated aspect is a significant factor, and are not normally coded in U13 unless structural aspects are involved. See U24-G04A codes for general integrated circuit implementation aspects of amplifiers.

## U24-G03E1 [1992]

## Measures improving performance

This code may be used with other U24-G03 codes depending on the nature of the improvement. Includes e.g. improvement in noise figure, slew rate, (see U24-G03D1 and U24-G03J respectively also) etc.

## U24-G03E5 [1992]

#### **Physical measures**

This code is used to denote measures not involving changes to the circuit per se, but to physical characteristics, e.g. enabling reduction of chip area.

#### U24-G03F [1992]

#### Offset reduction

For application to DC amplifiers search with U24-G02D.

U24-G03G [1992]

Improving immunity to supply voltage change, novel biasing networks

U24-G03G1 [1997]

**Novel biasing networks** 

U24-G03H [1992]

Improving immunity to temperature change

U24-G03J [1992]

## **Extending bandwidth**

Includes improvements to wideband performance, increasing slew rate, etc.

## U24-G03K [1992]

### **Deliberate nonlinearity introduction**

For pre-distortion see U24-G03D5 and when relating to RF systems, W02-G04B codes also.

U24-G03L [1992]

#### Measures to improve stability

Bode, Nyquist, compensation, open, loop, closed loop, feedback

U24-G03N [1992]

Improving efficiency, reducing supply voltage

(U24-G03X)

U24-G03N1 [1997]

## Improving efficiency

This code mainly relates to power amplifiers in which case U24-G01B codes are also applied. Battery saving, headroom improvement

## U24-G03N5 [1997]

## Reducing supply voltage

Includes arrangements for enabling operation with reduced supply voltage, e.g. in battery-operated equipment.

Headroom, saturation, voltage swing, rail

U24-G03P [1997]

Improving CMRR, improving gain

(U24-G03X)

U24-G03P1 [1997]

## Improving CMRR

(U24-G03X)

See U24-G02A5 codes for differential amplifier per se.

Common mode rejection ratio

U24-G03P5 [1997]

Improving gain

(U24-G03X)

U24-G03Q [1997]

## Reducing dependence on device characteristics

This code may be used with U24-G03E and U24-G04 codes as appropriate.

U24-G03R [1997]

Modifying input-output impedance

(U24-G03X)

U24-G03X [1987]

Other modifications and improvements to amplifiers

## U24-G04 [1987]

## **Amplifier implementation technology**

These codes are applied whenever the implementation is specific to a single main type.

## U24-G04A [1987]

#### Integrated transistor circuits

Inventions assigned U24-G04A codes are not normally coded in U13 unless structural aspects are involved.

U24-G04A1 [1987]

**Bipolar** 

U24-G04A2 [1987]

## Field effect transistor

CMOS, FET, IGFET, JFET, MESFET, MISFET, MOS, MOSFET

U24-G04A3 [1992]

**Bipolar and FET combined** 

U24-G04B [1987]

**Discrete transistor circuits** 

U24-G04B1 [1987]

**Bipolar** 

U24-G04B2 [1987]

#### Field effect transistor

CMOS, FET, IGFET, JFET, MESFET, MISFET, MOS, MOSFET

U24-G04B3 [1987]

**Bipolar and FET combined** 

U24-G04B9 [1987]

Other discrete semiconductor device implementation

U24-G04C [1987]

# Amplifier modules using operational amplifiers

Includes circuits using general amplifier configurations as functional blocks. (Analogue computing elements are covered by T02-A04B codes).

## U24-G04C1 [1987]

## Switched capacitor amplifier using OPAMPs

This code covers the use of non-novel operational amplifiers in switched capacitor amplifier circuit configurations. All aspects of switched capacitor amplifiers are covered by U24-G02B (which is therefore assigned with this code). Switched capacitor networks in general are covered by U25-A01.

## U24-G04D [1987]

#### Valve

Includes klystron, travelling wave tube, etc. amplifiers. For novel details of tubes themselves see V05-B and V05-C codes.

#### U24-G04E [1992]

## **Parametric amplifier**

Parametric amplifiers are generally coded in U24-G01D also.

## U24-G04M [1992]

## Amplifiers using microwave or millimeter wave constructional techniques

From 2017 the title of this code has been changed to clarify its coverage of amplifiers whose operating frequency dictates the techniques used, e.g. distributed or transmission line amplifiers (also assigned U24-G02F5) and those employing distributed-constant elements such as waveguides, cavity resonators, and the like. Novel constructional details of amplifiers in general, such as PCB mountings, housings etc. are covered by U24-G05A which can be assigned with this code as necessary. Small-signal amplifiers of this kind are also assigned U24-G01D and RF power amplifiers are also assigned U24-G01B5. Distributed-constant elements such as waveguides, filters and resonators are covered by W02-A codes.

Dielectric resonator, directional coupler, finline, microstrip, probe, stripline

#### U24-G04X [1987]

Other amplifier implementation technology

U24-G05 [1997]

Constructional details and testing

## U24-G05A [1997]

## **Constructional details of amplifiers**

Includes cooling, housings, mounting details, etc. V04-S and V04-T codes for electronic equipment casings and constructional details in general are also assigned as necessary. Amplifiers using microwave or millimeter wave constructional techniques, e.g. microstrip or other types of waveguide, are covered by U24-G04M and are only assigned this code as well for novel constructional details of the amplifier as a whole.

Circuit board mounting, coolant, fan, heatsink, PCB mounting, pillar, rack mount, screening, shielding

## U24-G05C [1997]

## **Testing**

Includes amplifier calibration, self-testing and testing using external equipment. To denote testing of a specific amplifier property U24-G03 codes are also assigned as appropriate, e.g. U24-G03F and U24-G05C are assigned for measurement of amplifier offset voltage. For electrical tests S01 codes are also assigned as appropriate.

## U24-G09 [1987]

## Other amplifier details

## U24-H [1992]

#### Low power systems

(U24-X)

This code is analogous to X12-H.

## U24-H01 [2005]

#### **Protection**

Includes arrangements to protect LV power networks. For example, vehicle 12V network protection. To be used with U24-F codes, as appropriate. For individual PSU protection, see U24-D01B/F. For high power networks, see X13-C codes.

## U24-H02 [2005]

### Wireless/non-contact power distribution

Includes low level non-contact power transfer. For non-contact high power distribution see X12-H01E codes. See X16-G03 for non-contact battery charging, W01-C01E5E for wireless phone charging and X21-B01A1C for offboard non-contact charging of electric vehicle batteries. WPT, near-field

## U24-H02A [2021]

### Using capacitive coupling

### U24-H02B [2021]

## Using inductive coupling

Also see V02 for novel inductive components, e.g. V02-G01D for inductive connections. See S05 for biomedical and implant applications.

[2021]

#### U24-H02C

### Using radio waves or microwaves

See also W02 codes for novel RF details such as directional array or Yagi antennae, satellite communications and telemetry.

#### U24-H02D [2021]

#### **Usina liaht**

Includes use of off-board mains supply. See X16-G01 for mains battery charging.

#### U24-H02E [2021]

## **Using ultrasonic waves**

See also V06 codes for novel ultrasonic transducers.

## U24-H02L [2021]

## Wireless power transmission control, monitoring and optimization

Includes optimizing position for non-contact power transfer; reducing electric, magnetic or electromagnetic leakage/interference; detecting foreign objects; as well as transmitting data during power transfer.

#### U24-H03 [2005]

## Arrangement of power bus(es) fed by multiple sources

Includes several PSUs supplying main bus, or several buses at same or different voltages, that feeds power to one or more loads. Covers, for example, switch control to distribute power where required.

## U24-H04 [2005]

#### Power management techniques

Includes operation of a PSU to save/reduce battery energy dissipation and mains power. Operation measures may include switching off or operating in low power consumption mode, slowing of processor clock frequency, current/voltage control (for which U24-D/E codes are also assigned), to reduce power consumption. Changes to the operation of a PSU within portable equipment so as to reduce battery dissipation are covered by U24-K.

### U24-H05 [2006]

## Power distribution over communication network

Includes power supply distribution, and its control, over a communication network such as a LAN, for which W01-A06 codes are also assigned as appropriate. The use of power distribution conductors as a communications medium for a data network is covered by W01-A06C6, and for communications in general, by W02-C01A3.

PoE, power over Ethernet®

## U24-H06 [2006]

Low power network control

U24-H07 [2006]

#### **Vehicle LV distribution network**

Includes systems for IC engine-driven vehicles for voltages up to 42V. HV electric traction vehicle distribution systems are covered by X12-H01B codes and X21/X23. Also includes low voltage electric distribution systems for vehicles (see also X21-B and X22-F codes).

## U24-J [1992]

## Standby power supply

Includes uninterruptible power supplies. See T01-L01B for computers, W01-A07K for data communications and W01-C07B for telephone systems.

U24-J01 [2005]

**Battery back-up** 

U24-J02 [2005]

Capacitor back-up

U24-J03 [2005]

Power converter back-up

U24-J04 [2005]

Combination of battery and capacitor back-up

## U24-K [2005]

## PSU power-saving mode/operation

This code covers operation of a power supply unit within portable equipment to reduce battery dissipation. Power management techniques with the emphasis on power distribution are covered by U24-H04.

## U24-L [2005]

## **Capacitor charging circuits**

This is analogous to X16-G for battery chargers.

#### U24-T [2017]

## Constructional details of low power supplies and power distribution systems

Includes construction details of all types of low power supply except power converters covered by U24-D01 codes (e.g. U24-D01K). Also covers constructional details of power distribution systems. This code is assigned in conjunction with other U24 'power' codes as necessary, and is intended to highlight mechanical or physical details, including cooling, of inventions in this field. V04 codes dealing with electronic equipment constructional details in general are also assigned as necessary.

Bracket, casing, circuit board mounting, fan, fixing, heatsink, housing, PCB, printed circuit board mounting, ventilation

#### U24-X

## Other low power supply details

Portable power supply, power bank, wearable power supply.

## **U25: Impedance Networks and Tuning**

This section includes mainly lumped-constant circuit elements. Impedance networks with distributed-constant elements are covered by W02-A codes. Subject matter coded in U25 is generally for use in analogue circuits. Digital implementations of filters and similar networks are **not** included here and are covered chiefly by U22-G codes and T01-J08 codes for computing aspects. For application to radio equipment see W02 and W03 codes as appropriate.

## U25-A

Time delay and time-varying (incl. adaptive) networks

#### U25-A01 [1983]

## Switched capacitor networks; N-path filters

Switched capacitor amplifiers are covered by U24-G02B.

## U25-A02 [1983]

#### **Transversal filters**

Digital transversal filters are covered by U22-G01A3.

## U25-A03 [1992]

#### **Comb filters**

Digital comb filters are covered by U22-G01B5.

## U25-A05 [1992]

### **Time delay circuits**

Covers arrangements with emphasis on achieving a required time delay. Circuitry to produce a specific phase shift is covered in U25-F01 codes. Other delay aspects, e.g. for equalisation, are covered by U25-E05Q.

#### U25-B

#### **Electromechanical networks**

This code covers networks of electromechanical devices, i.e. two or more resonators forming e.g. a lattice or ladder filter such as a bandpass filter or a duplexer for a radio transceiver (in which case W02-G02A5B is also assigned). Individual piezoelectric, electrostrictive and magnetostrictive devices are covered by V06-V codes and SAW devices by U14-G, and are not assigned U25-B unless specifically intended for use in a network made up of these devices. U25-B also includes matching transformers (with V02-F02) and other components for electromechanical networks, for which other codes are also assigned as appropriate. U25-D codes are also assigned as necessary, e.g. U25-D01 codes when a splitting

function is performed, U25-D03 for a balun function, and U25-D05 for impedance matching aspects.

Crystal filter, ceramic filter, block filter

#### U25-C

## Active networks simulating reactances; impedance converters

This code covers circuits for simulating reactances, changing their sign (e.g. producing an inductive reactance from a capacitor) and changing their magnitude, such as a 'capacitor amplifier' or 'capacitor multiplier'.

Gyrator, negative/positive impedance converter, NIC, PIC, reactance multiplier, Miller effect

#### U25-D

Signal splitting/combining, impedance matching, balanced-to-unbalanced networks: Attenuators

## U25-D01 [1992]

## Signal splitters and combiners

This code and its subdivisions cover active and passive networks for splitting and combining signals, generally without regard to frequency. Splitting and combining circuits based on electromechanical filters are assigned U25-B and U25-D01 codes as appropriate. Where splitting or combining networks involve use of frequency-selective elements such as filters implemented with coils and capacitors, U25-E05K is assigned (with other U25-E codes as appropriate) **instead of** U25-D01 codes. Note that loudspeaker cross-over networks are not included in U25 unless other aspects or wider applications are involved, being covered by W04-T05 and V06-V02S.

U25-D01A [1997]

Active

U25-D01C [1997]

**Passive** *Transformer* 

U25-D03 [1992]

## **Balanced-to-unbalanced converters**

Distributed-constant balanced-to-unbalanced converters are covered by W02-A02A5.

Balun

## U25-D05 [1992]

## Impedance matching networks

Distributed-constant impedance matching is covered by W02-A02A5.

## U25-D07 [1992]

#### **Attenuators**

Waveguide-technology attenuators are covered by W02-A04C codes.

Insertion loss

## U25-D07A [1997]

#### Active

This code covers the use of semiconductor devices in attenuator circuits, both as switches and as controllable resistances.

PIN diode, FET

U25-D07C [1997]

**Passive** 

## U25-E

## Frequency selective networks

Codes in this group are used for filters (excluding those covered by U25-A codes and U25-B) involving at least two types of elements, i.e. RC, RL, or LC networks. Thus individual components described as 'filters' or 'noise filters' in a power supply or other circuit are not included, unless intentionally using a secondary property such as series inductance of a capacitor, or stray capacitance of an inductor. Noise filters for RFI suppression are covered in general in W02-H01 codes and for power supply lines in W02-H03 and U24/X12 codes, whether single components or combinations. Where filter function is specified, codes from the U25-E05 section are used with either U25-E01 or U25-E02. Active networks other than filters are assigned appropriate codes elsewhere in U25. For digital filters see U22-G01 codes. Waveguide technology filters are covered by W02-A05 codes.

Filter, lowpass, bandpass, highpass, notch

U25-E01

**Active** 

U25-E01A [1997]

**Biquadratic filter** 

Biquad

U25-E02

**Passive** 

U25-E02A [1997]

#### With structurally-associated components

Includes networks implemented with 'composite' components. See also V01-A02G5 and V01-B03C8 for composite resistor and capacitor aspects respectively, and V02-F01J for filter inductors.

## U25-E05 [1992]

## Characterised by function and operation

From 2009 U25-E05K is introduced for frequency selective networks with emphasis on separation or combination of frequency bands and takes precedence over other U25-E05 codes.

U25-E05A [1992]

**Lowpass filter** 

U25-E05B [1992]

**Bandpass filter** 

U25-E05B1 [1997]

Single LC resonant circuit

U25-E05C [1992]

**Highpass filter** 

U25-E05D [1992]

#### **Notch filter**

This code covers analog filters which attenuate a band of frequencies and pass those on either side. Band stop filter

## U25-E05H [1992]

#### Variable characteristic

This code is used with other U25-E05 codes or alone, as appropriate.

#### U25-E05K [2009]

# **Combining or separating different frequencies**

(U25-E05X)

This code is intended for frequency selective networks, i.e. filters normally, where the emphasis is on combination or separation of frequency bands. Examples include duplexers for radio transceivers, for which W02-G02A5B is also assigned. Where there are significant novel aspects in specific filters making up the frequency separating or combining network other U25-E05 codes are also assigned as appropriate, but otherwise U25-E05K takes precedence. Combining and splitting networks (lumped constant type) in general, without emphasis on frequency separation, are covered by U25-D01 codes. When frequencybased separation is involved U25-E05K takes precedence. Note that loudspeaker cross-over networks are not included, being covered by W04-T05 and V06-V02S

### U25-E05Q [2009]

## Delay equalisation and all-pass networks

(U25-E05X)

This code is intended for circuits in which emphasis is on delay equalization (and not amplitude equalization) and all-pass networks, in which all frequencies are passed, but the phase of the output is modified. Analogue circuits based on lumped constant impedances for correcting amplitude-frequency distortion are covered by U25-E05X but U25-E05Q takes precedence when delay equalisation is the main purpose.

Group delay

## U25-E05X [1992]

#### Other filter network function

This code includes frequency-dependent circuits used for amplitude equalisation, e.g. to compensate for increasing attenuation in a circuit or transmission line with frequency. (W02-C01B2B is also assigned when the application is to equalization of transmission lines for communications purposes and W01-A08B2 when the emphasis is on pulse shaping for data transmission). Prior to 2009 U25-E05X was also used for circuits with emphasis on delay equalization, now covered by U25-E05Q which takes precedence over this code when both amplitude and delay equalization are involved. Analogue time delay networks are covered by U25-A05. See U25-F01 codes for networks with emphasis on achieving a particular phase shift. From 2009 frequency selective networks (i.e. filters normally) with emphasis on the separation or combining of frequency bands are no longer coded here and are covered by U25-E05K.

#### U25-F

Tone or bandwidth control; Other impedance networks (incl. phase shifters)

Amplitude fall-off, frequency-dependent loss,

lowpass characteristic, peaking, roll-off

U25-F01 [1992]

#### Phase shift networks

Covers arrangements to produce a particular phase shift, e.g. at a single frequency. Time delay networks are covered by U25-A05 and delay equalisation networks by U25-E05X.

U25-F01A [1992]

Variable phase shifter

U25-F05 [1992]

#### **Bandwidth control**

See W03-C05 codes also for audio amplifier tone control circuits.

U25-F05A [1992]

**Automatically varied or switched** 

U25-F05A1 [1992]

**Continuous variation** 

U25-F05A5 [1992]

Switched bandwidth

U25-F05C [1992]

**Manual control** 

U25-F05C1 [1992]

Continuously variable

U25-F05C5 [1992]

Switched bandwidth

U25-F09 [1992]

Other impedance networks

### U25-G

#### **Continuous tuning**

Includes tracking adjustment.

U25-G01 [1992]

#### Mechanically varied

Covers tuning by conventional variable capacitor or inductor, either manually or by motor drive. For capacitors and inductors per se see V01-B and V02 codes, e.g. V02-F01.

MEMS actuator, permeability

U25-G03 [1992]

## **Electrically varied**

Includes use of varactor diodes, saturable core inductors, etc.

Varicap, reactance circuit, Miller

#### U25-H

## **Discontinuous tuning; Band selection**

Step, preset, pushbutton, select

## U25-H01 [1992]

#### **Bandswitching**

Includes electromechanical and electronic methods and circuits for switching tuning range. (Step tuning within a frequency band is covered by U25-H03).

#### U25-H03 [1992]

## Step tuning e.g. by synthesiser

See U23-D01B codes for details of PLL synthesisers and U23-F03 codes for direct types. (Switching between frequency bands is covered by U25-H01).

#### U25-H03A [1992]

With channel memory

### U25-J

## Automatic band scanning; Automatic frequency control

Lock, AFC

## U25-J01 [1992]

## **Bandscanning**

Bandscanning arrangements for spectrum analysers/panoramic receivers are coded in S01-D03C1 also, and in W02, e.g. W02-C05 and W02-G03A codes.

Sweep, scan

## U25-J01A [1992]

## Using synthesiser tuning

See U23-D01B codes for details of PLL synthesisers per se and U23-F03 codes for direct types.

#### U25-J01A1 [1992]

## With channel memory

Preset, select, priority channel

#### U25-J01C [1992]

## Stopping on detected station

## U25-J05 [1992]

### **Automatic frequency control**

See U23-D codes for frequency/phase control circuits, and under application, e.g. W03-A02A for AFC in TV receivers, W03-B01B for broadcast radio receivers respectively.

AFT, automatic fine tuning

#### U25-K

#### Other tuning

Includes testing and production trimming of tuned circuits and filters, either manually or automatically. (See S01-G08 codes also, together with appropriate code in e.g. W02 or W03). This code also includes remotely-controlled tuning per se. For wider aspects of remote control see W03-A02C, W03-G05A and W04-E04A codes for remote control of TV receivers, audio/video equipment, and recording equipment respectively. (Remote control in general is covered by W05-D codes). Tuning scale, dial, drive, drum, pointer, illumination, test, align, set-up

# **Section V: Electronic Components**

V01: RESISTORS AND CAPACITORS	517
V02: Inductors and Transformers	529
V03: SWITCHES, RELAYS	536
V04: Printed Circuits and Connectors	543
V05: Valves, Discharge Tubes and CRTs	560
V06: ELECTROMECHANICAL TRANSDUCERS AND SMALL MACHINES	592
V07: FIBER-OPTICS AND LIGHT CONTROL	610
V08: LASERS AND MASERS	617

## **V01: Resistors and Capacitors**

This section deals with resistors and capacitors usable as discrete components, so that components forming part of an integrated circuit are **not** included. Similarly, thick and thin film circuits are **not** included and are covered by U14-H codes. Power resistors and capacitors are covered by X12-A and X12-B codes respectively.

## V01-A

#### Resistors

#### V01-A01

#### Mounting, housing, coding; Terminals

Marking, colour coding, lead, wire

## V01-A01A [1992]

#### Substrate details

Includes composition, structure etc. *Baseplate, ceramic* 

## V01-A01B [1992]

## Housing, encapsulation, mountings

Casing

## V01-A01B1 [1992]

### **Encapsulation**

Includes compositions.

## V01-A01C [1992]

Electrodes and terminals

## V01-A01C1 [1992]

## Electrodes

Film, end cap, contact

## V01-A01C5 [1992]

#### **Terminals**

Includes lead arrangements.

Wire, axial, tag, pad

## V01-A01D [1992]

## Coding, marking

Colour code, value, tolerance

## V01-A01X [1992]

#### Other

Includes shielding and cooling arrangements (for low-power resistors only).

#### V01-A02

#### **Fixed resistors**

#### V01-A02A

#### **Thermistors**

For temperature measurement application see V01-A02A7A and S03-B01F also. This code is intended for resistors using e.g. oxides of transition metals, and not linear TCR devices based on metallic conductors, for which S03-B01B is assigned, (although novel details of such resistances are assigned other V01 codes when appropriate).

Temp, coefficient resistance, PTC, NTC, circuit protector, cold conductor

[1992]

#### V01-A02A1

## **Novel thermistor composition**

## V01-A02A1A [1997]

#### Manufacture of thermistor material

This code covers the manufacture of material for use in thermistors and does **not** relate to manufacture of thermistors per se, which is covered by V01-A04 codes (especially V01-A04K1).

### V01-A02A5 [1992]

## Characterised by temperature dependence

TCR, resistance, coefficient

#### V01-A02A5A [1992]

## Negative temperature coefficient

NTC

## V01-A02A5B [1992]

### Positive temperature coefficient

PTC

#### V01-A02A7 [1992]

## **Characterised by intended function**

#### V01-A02A7A [1992]

## Measurement of temperature per se

Temperature measurement using thermistors is also coded in S03-B01F.

Thermometer, sensor

## V01-A02A7B [1992]

#### **Current limiting**

Includes use as cold conductor.

Circuit protector

## V01-A02A7C [1992]

## **Time-dependent current control**

Includes use of heating to gradually decrease or increase current, e.g. for degaussing CRT, (see W03-A08A4C also) or for motor starting (see V06-N05 also).

Decay, decrease, time delay, demagnetising

## V01-A02A7D [1992]

## For self-regulating heating

See X25-B01 codes also.

Self heater

## V01-A02A7X [1992]

#### Other thermistor function

#### V01-A02B

## Voltage dependent resistors

Includes current-responsive resistors.

Nonlinear resistor, varistor, VDR, protection, zinc oxide, sintered

#### V01-A02B1 [1992]

#### **Novel varistor composition**

## V01-A02B1A [1997]

#### Manufacture of varistor material

This code covers the manufacture of material for use in varistors and does **not** relate to manufacture of varistors per se, which is covered by V01-A04 codes (especially V01-A04K2).

#### V01-A02C

#### Film resistors

Note - resistors forming part of a film or integrated circuit are not coded in V01- see appropriate codes in section U, e.g. U11-C05G1A for manufacture, U12-C03 for resistors per se, and U14-H01C for film circuit resistors.

Thick film, thin film, layer resistor

## V01-A02C1 [1992]

## **Novel film resistor composition**

See U11-A05 also for film compositions.

## V01-A02C3 [1992]

#### Film structure

Covers film structures for discrete resistor components only.

## V01-A02C3A [1992]

## Thin film

V01-A02C3C [1992]

Thick film

V01-A02D [1987]

## Chip resistor

Leadless, surface mounting

V01-A02F [1992]

#### Wire-wound resistor

(V01-A02X)

V01-A02G [1992]

## **Composite resistor**

(V01-A02X)

Includes resistors structurally associated with other discrete components.

Multiple

V01-A02G1 [1992]

### With other resistive components

(V01-A02X)

Includes resistor array.

## V01-A02G5 [1992]

## With other non-resistive components

(V01-A02X)

Includes RL and RLC elements.

RC, CR, capacitor, inductor, coil

#### V01-A02H [1992]

#### Temperature compensation

(V01-A02X)

Resistors with deliberately manufactured positive or negative temperature coefficient are covered by V01-A02A codes.

### V01-A02J [2024]

**Piezoresistor** 

#### V01-A02X

### Other

Includes low-power liquid resistors. Power types are coded in X12-A only.

## V01-A03

## Variable resistors

Codes in this section include variable resistors as preset or manual controls, and also resistive transducers in which physical movement is involved. For other types see V01-A02 codes.

Linear, rotary, potentiometer, dual, ganged, winding, track, shaft, spindle

## V01-A03A [1992]

## Housing, casing, mounting kit

(V01-A01, V01-A03)

From 1992 housing and mounting details of variable resistors are coded in V01-A03 codes only.

## V01-A03A1 [1992]

#### Variable resistor housing

(V01-A01, V01-A03)

## V01-A03A5 [1992]

## Mounting details for variable resistors

(V01-A01, V01-A03)

Bushing, nut, washer, bracket

## V01-A03B [1992]

## Electrodes, terminals, slider

(V01-A01, V01-A03)

## V01-A03B1 [1992]

#### **Electrodes and terminals**

(V01-A01, V01-A03)

Covers end-of-track electrodes. Slider/wiper is covered by V01-A03B5.

## V01-A03B5 [1992]

## Slider, contact brush

(V01-A01, V01-A03)

## V01-A03C [1992]

#### Novel resistance element details

Includes compositions. Codes in this section are applied to indicate novel aspects only. V01-A03D codes are used for general aspects (not necessarily novel).

V01-A03C1 [1992]

Film track

V01-A03C3 [1992]

#### Wire track

Includes wirewound variable resistors. Power variable resistors are covered by X12-A.

## V01-A03C5 [1992]

#### Linear track

Covers shape of track only. Arrangements to achieve a particular control law are covered by V01-A03C8. For general details of slide-type potentiometers, see V01-A03D6.

## V01-A03C7 [1992]

#### **Rotary track**

For general details of rotary potentiometers, see V01-A03D5.

## V01-A03C7A [1992]

#### Helical

Includes track having shape of short section of

#### V01-A03C8 [1992]

## Characterised by resistance law or characteristic

Linear, logarithmic

### V01-A03C9 [1992]

#### Other

Includes other resistive component configurations, such as switched resistance network, and **use** of magnetoresistors and movable permanent magnet. (Magnetoresistors per se are not covered in V01 - see U12-B01B codes and S02-K03A5A for transducing aspects, these codes also being assigned for this type of 'potentiometer').

## V01-A03D [1992]

## Characterised by type of adjustment/component

Codes in this section are applied irrespective of claimed novelty to indicate the type of device/adjustment only, either in combination with novel aspect codes, or alone.

#### V01-A03D1 [1992]

## Manual e.g. front panel control

Volume, gain, tone, adjust, set

### V01-A03D2 [1992]

#### Semi-variable

Covers preset control, adjusted for e.g. setting-up. *Trimmer, test* 

## V01-A03D3 [1992]

## Measurement transducer

Covers component with variation of resistance value by physical movement, including force, compression, etc. Variation of resistance due to physical parameter other than movement is covered by V01-A02 codes.

#### V01-A03D4 [1992]

## Surface mounting variable resistor

Chip, leadless

V01-A03D5 [1992]

**Rotational adjustment** 

Rotary

V01-A03D5A [1992]

With more than 360 degree rotation

Includes helical potentiometer.

V01-A03D6 [1992]

Linear

Includes slide-type potentiometer.

Audio, mixing, fade, balance, graphic equaliser

V01-A03F [1992]

Control knob, actuator mechanism

Includes mechanical drive arrangement for e.g. joystick (see T04-F02B3 also).

Gear, proportional, two-dimensional, X-Y

V01-A03X [1992]

Other

V01-A04

**Manufacturing resistors** 

Includes single and multiple-step resistor manufacturing methods and equipment, and testing of manufactured resistors.

V01-A04A [1992]

Substrate processing

Includes firing, sintering, etc.

V01-A04B [1992]

Coating

Covers deposition of resistive material. Sputtering, vapour, flame spraying

V01-A04C [1992]

Treating deposited layer

Use V01-A04E also for heat treatment.

V01-A04D [1992]

Encapsulation

V01-A04E [1992]

Firing, heat treatment

Includes sintering, etc.

V01-A04F [1992]

Attaching leads, manufacturing electrodes

V01-A04G [1992]

Multistep manufacturing process and novel manufacturing equipment

V01-A04G1 [1997]

Multistep manufacturing process

This code is used when a sequence of manufacturing steps is claimed without apparent emphasis on any one aspect.

V01-A04G2 [2024]

Winding

Includes winding of resistors.

V01-A04G5 [1997]

**Novel manufacturing equipment** 

Use with other V01-A04 codes as appropriate.

V01-A04H [1992]

Testing, sorting, trimming, marking

V01-A04H1 [1992]

**Testing and sorting resistors** 

See S01-D05B1 and S01-G12A for electrical testing of resistors.

Aging test

V01-A04H3 [1992]

**Trimming resistor value** 

See X24-D03B for laser trimming apparatus.

V01-A04H5 [1992]

**Marking resistors** 

V01-A04J [1992]

Tape carriers, packing

Includes 'bandolier' tape carriers per se (see V04-V01A also), loading finished resistors onto tapes, shipping containers, etc.

V01-A04K [1992]

**Resistor type** 

Codes in this section are used to indicate the type of resistor being manufactured only. V01-A04K codes are not used if a manufactured resistor is also claimed resulting in the assignment of a V01-A02 or V01-A03 code.

V01-A04K1 [1992]

Thermistor

Manufacture of thermistor material is **not** covered here - see V01-A02A1A.

V01-A04K2 [1992]

Varistor

Manufacture of varistor material is **not** covered here - see V01-A02B1A.

V01-A04K3 [1992]

Film resistor

V01-A04K4 [1992]

**Chip resistor** 

V01-A04K5 [1992]

Wirewound resistor

V01-A04K6 [1992]

Variable resistor

Potentiometer

V01-A04K9 [1992]

Other resistor type

V01-A04R [2005]

Resistor manufacture process waste disposal and recycling

(V01-A04X)

V01-A04R1 [2005]

#### Waste handling and disposal

Includes all aspects of waste disposal and waste treatment equipment to make the waste safe in the environment.

V01-A04R2 [2005]

## Materials treatment and recycling

Includes all aspects of recovery of materials, solutions, and the like for reuse in resistor manufacture.

V01-A04X [1992]

Other resistor manufacturing details

**V01-B** 

**Capacitors** 

V01-B01

**Electrolytic devices** 

V01-B01A

**Electrodes** 

Lead, terminal wire, anode, tag, lug

V01-B01A1 [1983]

#### Sintered

This code is assigned alone or with V01-B01A4 codes describing composition or manufacture of materials.

Tantalum, solid powder, oxide, alloy, anodised

V01-B01A3 [2006]

## Double-layer and supercapacitor electrodes

This code is assigned alone or with V01-B01A4 codes describing composition or manufacture of materials. For all other aspects of double-layer and supercapacitors V01-B01D codes are assigned with other V01-B codes as appropriate. Manufacture of these capacitor types is covered by V01-B01G8D and other V01-B01G codes as appropriate.

V01-B01A4 [2006]

## Novel electrode materials composition and materials manufacture

These codes are normally assigned with V01-B01A1 or V01-B01A3 as appropriate. For details relating to foil electrodes, see V01-B01A5 codes.

V01-B01A4A [2006]

**Novel electrode materials composition** 

V01-B01A4C [2006]

#### Manufacture of electrode materials

This code is intended to cover manufacture of materials to be subsequently used as an electrolytic capacitor electrode, and does not include manufacture or treatment of electrode materials forming part of a process for mfg the capacitor itself, which is covered by V01-B01G1.

V01-B01A5 [1983]

Foil

Aluminium, etched, wound

V01-B01A5A [1992]

#### Foil manufacture

Manufacture and preparation of foil other than as a step in a complete process for making a capacitor is coded here, otherwise see V01-B01G1.

V01-B01A5C [1992]

Foil composition

V01-B01A7 [1992]

**Terminals and lead arrangements** 

Wire, axial

#### V01-B01B

## **Electrolytes and electrolyte manufacture; Separators; Containers**

From 2006 the scope of this code has been expanded to allow electrolyte compositions and electrolyte manufacture to be separately highlighted, and where neither of these aspects are novel, the solid or liquid/paste nature of the electrolyte to be indicated (to define the overall capacitor type) by means of V01-B01B6 codes. *Encapsulation, mounting* 

#### V01-B01B1 [1983]

## Novel details of solid electrolytes

From 2006, this code has been subdivided to allow novel solid electrolyte compositions (V01-B01B1A) and electrolyte manufacture (V01-B01B1C) to be separately highlighted. The two new codes take precedence over V01-B01B6A which is assigned to indicate that the capacitor is characterised by having a solid (non-novel) electrolyte.

Tetra cyano di-quino methane (TCNQ), complex

#### V01-B01B1A [2006]

## Solid electrolyte composition and materials

Novel details of solid electrolyte composition, and/or materials used in the preparation/manufacture of the solid electrolyte.

## V01-B01B1C [2006]

## Solid electrolyte and material manufacturing aspects

This code covers the manufacture of materials destined to be used as a solid electrolyte. Manufacture of the capacitor itself is covered by V01-B01G8A and other V01-B01G codes as appropriate.

V01-B01B3 [1992]

**Separators** 

V01-B01B5 [1983]

#### Novel details of liquid or paste electrolytes

From 2006, this code has been subdivided to allow novel liquid or paste electrolyte compositions (V01-B01B5A) and electrolyte manufacture (V01-B01B5C) to be separately highlighted. The two new codes take precedence over V01-B01B6C which is assigned to indicate that the capacitor is characterised by having a liquid or paste (non-novel) electrolyte.

Aqueous, solvent, ethylene glycol, carboxylic acid, boric acid

## V01-B01B5A [2006]

## Liquid or paste electrolyte compositions and materials

Novel details of liquid or paste electrolyte composition and/or materials used for the preparation/manufacture of the liquid/paste electrolyte.

## V01-B01B5C [2006]

## Liquid or paste electrolyte manufacture

This code covers the manufacture of materials destined to be used as a liquid or paste electrolyte. Manufacture of the capacitor itself is covered by V01-B01G8B and other V01-B01G codes as appropriate, e.g. forming aspects in V01-B01G7A.

#### V01-B01B6 [2006]

## Electrolytic capacitor characterised by electrolyte type

These codes are assigned to indicate the physical state of electrolyte only, and are not assigned when novel aspects of electrolyte composition or manufacture can be highlighted by V01-B01B1 or V01-B01B5 codes. For inventions concerned solely with capacitor manufacture V01-B01B6 codes are not assigned and V01-B01G8 codes are applied instead. In cases where novelty exists in both the capacitor and its manufacture V01-B01B6 codes take precedence.

#### V01-B01B6A [2006]

## Solid electrolyte capacitor

This code is assigned just to indicate that a capacitor has a solid electrolyte, which is not itself novel. If the solid electrolyte is novel in some way, V01-B01B6A is not used and V01-B01B1 codes are used instead.

#### V01-B01B6C [2006]

#### Liquid or paste electrolyte capacitor

This code is assigned just to indicate that a capacitor has a liquid or paste electrolyte, which is not itself novel. If the liquid or paste electrolyte is novel in some way, V01-B01B6C is not used and V01-B01B5 codes are used instead.

#### V01-B01B7 [1992]

Housings, seals, mounting

## V01-B01B7A [1992]

## With pressure-relieving vent

See V01-B01F5 also for pressure relief also causing electrical disconnection.

Blowout, plug

V01-B01B7C [1992]

Mounting kit

Clamp, bracket, lead-spacer, base

V01-B01B7D [1992]

Housing for several capacitors

Multiple capacitor

V01-B01C [1983]

**Devices other than capacitors** 

Electrolytic transducer, photosensitive device, acceleration sensor, electrokinetic cell

V01-B01D [1987]

**Double-layer capacitor** 

See X16-L02 also for energy-storage using capacitors, and T01-H01/T01-L01 codes for computer memory module and power supply systems.

Memory back-up

V01-B01D1 [1992]

Stack of cells

V01-B01D5 [2002]

**Super-capacitor** 

(V01-B01D, V01-B01X)

See T01-H01/T01-L01 codes for computer memory module and power supply systems, e.g. memory back-up; and for high power applications e.g. electric/hybrid vehicles, see X12-B, and X21-B codes. Includes electrostatic double layer capacitors, electrochemical pseudocapacitors and hybrid capacitors such as lithium ion capacitors. Ultracapacitor, electrochemical double layer, EDLC, high capacitance, pseudocapacitor, hybrid lithium ion. LiC. LIC

V01-B01E [1992]

Leadless electrolytic capacitor

Surface mounting, chip

V01-B01F [1992]

**Electrical protective arrangements** 

(V01-B01X)

Excess pressure venting is covered by V01-B01B7A.

V01-B01F1 [1992]

**Involving fuse protection** 

(V01-B01X)

V01-B01F5 [1992]

**Involving mechanical disconnection** 

(V01-B01X)

Use with V01-B01B7A for end cap movement rupturing leads.

V01-B01G [1992]

**Electrolytic capacitor manufacture** 

See V01-B04 codes for manufacture of nonelectrolytic capacitors.

V01-B01G1 [1992]

Electrode manufacture

Includes sintering. Covers treatment of foil to form electrodes, but not manufacture of foil per se which is covered in V01-B01A5A.

Etching, degreasing, anodising

V01-B01G3 [1992]

Winding, laminating, dielectric impregnation

V01-B01G5 [1992]

**Assembly** 

Includes manufacture of leads and external electrodes. Attachment of manufactured leads and external electrodes is covered by V01-B01G5C. Production of internal electrodes is covered by V01-B01G1.

V01-B01G5A [1992]

**Encapsulation** 

V01-B01G5C [1992]

**Attaching leads** 

This code covers the attachment of leads and external electrodes only. Manufacture of leads and external electrodes is covered by V01-B01G5.

V01-B01G6 [1992]

Multistep manufacturing process and novel manufacturing equipment

Includes waste treatment and recovery processes.

V01-B01G6A [1997]

Multi-step manufacturing process

This code is used for processes involving a sequence of steps without emphasis on any particular one.

V01-B01G6C [1997]

Novel manufacturing equipment

Use with other B01G codes as appropriate.

### V01-B01G6E [2005]

## **Process waste management**

(V01-B01G6)

This code includes all aspects of treatment of waste and contaminants arising from electrolytic capacitor manufacture, including making safe, waste classification, and separation aspects. Recycling of materials to be reused in the manufacturing process is covered by V01-B01G6G. Prior to 2005 coded in V01-B01G6.

#### V01-B01G6F\*

[2005-2007]

## Waste handling and disposal

(V01-B01G6)

\*This code is now discontinued. From 2008 all aspects of handling, making safe, and disposal of waste from electrolytic capacitor manufacture are now covered by V01-B01G6E.

#### V01-B01G6G

[2005]

## **Materials recycling**

(V01-B01G6)

Includes treatment and recycling, handling equipment and environmental protection and safety equipment aspects for electrolytic capacitor manufacture. Prior to 2005 coded in V01-B01G6. See V04-X01C for other electronics components recycling.

V01-B01G7 [1992]

Forming, testing, ageing, packing

V01-B01G7A [1992]

Forming, ageing

V01-B01G7C [1992]

## Testina

Measurement of capacitance value in general is coded in S01-D05A3, and general electrical testing of capacitors in S01-G12C.

V01-B01G7E [1997]

**Packing** 

Includes tape carriers.

V01-B01G8 [1992]

## Characterised by type of capacitor

Codes in this section are applied irrespective of claimed novelty to indicate the type of capacitor only. These codes are not used if a manufactured capacitor is also claimed, for which the appropriate V01-B01 code will be assigned.

V01-B01G8A [1992]

Solid dielectric

V01-B01G8B [1992]

Liquid/paste dielectric

V01-B01G8D [1992]

**Double layer capacitor** 

V01-B01G8E [1992]

**Leadless capacitor** 

V01-B01G8X [1992]

Other capacitor type

V01-B01X

Other

V01-B02

## Variable capacitors

Capacitive transducers for physical quantities are coded in V01-B02A, where motion of plates or dielectric is involved, otherwise in V01-B02B. For tuning of resonant circuits see U25 codes.

#### V01-B02A

#### Mechanically varied

Tuning capacitor, double, differential, ganged, dielectric, shaft, spindle, preset, trimmer

V01-B02A1 [1992]

**Electrode details** 

V01-B02A1A [1992]

Rotor, moving electrode

V01-B02A1B [1992]

Stator

V01-B02A1C [1992]

Terminals, external connections

V01-B02A3 [1992]

**Dielectric details** 

V01-B02A4 [1992]

Substrate, housing, mounting kit

Mount, screw, nut, bushing

V01-B02A5 [1992]

## Characterised by type of capacitor

Codes in this section are applied irrespective of claimed novelty to indicate the type of capacitor only.

## V01-B02A5A [1992]

## Variable during normal operation

Includes e.g. tuning capacitor operated manually or by motor drive.

Tune, resonate, peak

#### V01-B02A5B [1992]

#### Pre-set/semi-variable

Includes e.g. trimmer capacitor.

Tune, resonate, peak

## V01-B02A5C [1992]

#### **Transducer**

Covers transducer where physical movement of plates and/or dielectric is involved. Non-mechanically varied types are coded in V01-B02B3. See also appropriate code in S02 or S03 for the parameter being measured and, in general, S02-K03A1C.

#### V01-B02A5E [1992]

## Surface-mounted variable capacitor

Chip, leadless

### V01-B02A5F [1992]

### Multi-section variable capacitor

Covers ganged types.

#### V01-B02B

## Non-mechanically varied capacitors

#### V01-B02B1 [1992]

#### Varicap diodes

See also U12-C02B. Covers discrete component embodiments only (or where integrated circuit aspect not specified). Prior to 1992 coded in U12 only

Varactor, depletion layer, reverse bias, voltagetuned

## V01-B02B3 [1992]

#### **Transducer**

Covers capacitors changing value in response to physical variable where movement is **not** involved. Types involving movement of plates or dielectric are covered by V01-B02A5C. See also appropriate code in S02 or S03, and in general, S02-K03A1.

## V01-B02B5 [1992]

#### **Electrets**

Includes devices in non-circuit application, e.g. as air filter.

## V01-B02B9 [1992]

#### Other

Includes ferroelectric capacitors.

#### V01-B03

## **Fixed capacitors**

See X12-E also for dielectric compositions. Search dielectric codes with V01-B03E1 for self-healing aspects. Capacitors with mixed, i.e. inorganic and organic dielectrics, are assigned V01-B03A5.

#### V01-B03A

## With inorganic dielectric

From 1992 see V01-B03A1 to distinguish novel capacitor from novel dielectric compositions.

Ceramic, perovskite, metal-oxide, green sheet

### V01-B03A1 [1992]

#### **Novel dielectric composition**

See X12-E01 codes also, e.g. X12-E01A for ceramic compositions.

### V01-B03A3 [1992]

#### Manufacture of dielectric material

Covers manufacture of dielectric per se other than as part of capacitor manufacture, which is covered by V01-B04 codes.

## V01-B03A5 [2005]

## Hybrid dielectric (organic-inorganic) polymer material

Includes all compositions of hybrid dielectric material regardless of percentage of organic/inorganic materials ratio in the composite. See V01-B03A1 and V01-B03B1 for new dielectric compositions.

#### V01-B03B

## With organic dielectric

Plastics, polymer, film, paper, impregnated

#### V01-B03B1 [1992]

#### **Novel dielectric composition**

See also X12-E02 codes, e.g. X12-E02B for synthetic polymer materials.

## V01-B03B3 [1992]

#### Manufacture of dielectric material

Covers manufacture of dielectric per se other than as part of capacitor manufacture, which is covered by

V01-B04 codes.

#### V01-B03C

## **Characterised by structure**

Codes in this section are applied to indicate the structure of the capacitor only and do not necessarily represent novel features.

V01-B03C1 [1983]

Wound

V01-B03C3 [1983]

Flat plate

V01-B03C3A [1992]

**Multilayer capacitor** 

Includes stacked types.

Laminated, layer-built, chip, co-fire

V01-B03C5 [1983]

Leadless

Chip, surface mounting

V01-B03C5A [1992]

Film capacitor

Covers discrete components only.

V01-B03C7 [1987]

#### Feedthrough capacitor

Use with V01-B03C8 for feedthrough-type LC filter. See W02-H codes for noise suppression at source in general.

V01-B03C8 [1992]

## **Composite capacitor**

(V01-B03X)

Covers capacitor structurally associated with other component such as RC, LC, or multiple capacitor. For feedthrough type capacitor filter use with V01-B03C7 also.

## V01-B03D

#### **Electrodes; Housings; Terminals**

Marking, colour coding, lead wire, tag, lug, can, casing, foil

V01-B03D1 [1992]

## **Electrodes**

This code is intended for **internal** electrodes e.g. in the case of a multilayer capacitor. External electrodes, i.e. terminals if a leadless type, are covered by V01-B03D5.

V01-B03D1A [1992]

Film

Metallisation, sputtered layer

V01-B03D1C [1992]

Foil

V01-B03D1E [1992]

Novel shape or configuration

V01-B03D1G [1992]

**Novel composition** 

V01-B03D3 [1992]

#### Housing, encapsulation

Includes markings, e.g. of component value.

V01-B03D3A [1992]

## Pressure relieving arrangement

See V01-B03E5 for electric protection arrangements.

V01-B03D5 [1992]

#### Lead and terminal arrangements

This code is intended for **external** electrodes such as terminals of a chip-type laminated capacitor. Internal electrodes are covered by V01-B03D1 codes.

V01-B03D7 [1992]

**Mounting kit** 

V01-B03E [1992]

**Protection and self-healing capacitors** 

V01-B03E1 [1992]

#### Self-healing dielectric type

See V01-B03A/B codes as appropriate for dielectric details.

V01-B03E5 [1992]

#### Fuse or other electrical disconnection

See V01-B03D3A for pressure-relief arrangements.

V01-B03H [1997]

### **Temperature compensation**

(V01-B03X)

Use with V01-B03A or V01-B03B codes as appropriate.

V01-B03X

Other

#### V01-B04

## **Manufacturing capacitors**

Includes testing of manufactured capacitor. See V01-B01G codes for electrolytic capacitor manufacture.

### V01-B04A [1992]

## Characterised by capacitor type

(As defined by V01-B03C codes). Codes in this section are assigned to indicate capacitor type only. They are not used if the manufactured capacitor itself is also claimed, in which case the appropriate V01-B codes for the capacitor per se will also be applied.

V01-B04A1	[1992]
Wound capacitor	
V01-B04A3	[1992]
Flat capacitor	
V01-B04A3A	[1992]
Single layer	
V01-B04A3C	[1992]
Multi-layer	
V01-B04A5	[1992]
Chip capacitor	
V01-B04A5A	[1992]
Film capacitor	
V01-B04A6	[1992]
Variable capacitors	
V01-B04A7	[1992]
Feedthrough capacitor	
V01-B04A8	[1992]
Composite capacitor	

[1992]

[1992]

[1992]

Manufacture of other capacitor types

**Capacitor manufacturing process** 

**Treatment of dielectric** 

V01-B04A9

V01-B04B

V01-B04B1

## V01-B04B3 [1992]

## Manufacture and application of electrodes

This code relates to manufacture of **internal** electrodes only. Manufacture of external electrodes is covered by V01-B04B5.

Sputtering, metallising, etching, cutting

#### V01-B04B5

[1992]

## **Assembly processes**

Includes winding, laminating, pressing, impregnating, etc., and also manufacture of **external** electrodes. Production of internal electrodes is covered by V01-B04B3.

#### V01-B04B7

[1992]

## Heat treatment, firing, drying

Co-fire

#### V01-B04B8 [1992]

## Multistep manufacturing processes and novel manufacturing equipment

Includes waste treatment and recovery processes. From 1997 the scope of this code is expanded to include novel equipment for manufacture, which is assigned V01-B04B8C together with other V01-B04 codes as appropriate.

#### V01-B04B8A

[1997]

[1997]

[2005]

## **Multistep manufacturing process**

#### V01-B04B8C

## **Novel manufacturing equipment**

Use with other V01-B04 codes as appropriate.

## V01-B04B8E

## **Process waste treatment and recycling**

(V01-B04X)

Includes all aspects of waste and contaminant treatment and recycling equipment, for dielectric capacitor manufacture, and all waste classification and separation aspects. Prior to 2005 coded in V01-B04X.

## V01-B04B8F\*

[2005-2007]

#### Waste handling and disposal

(V01-B04X)

\*This code is now discontinued and from 2008 all aspects of handling, making safe, and disposal of waste from capacitor manufacture are now covered by V01-B04B8E.

## V01-B04B8G [2005]

## **Materials recycling**

(V01-B04X)

This code covers treatment and recycling of materials, chemicals and the like for reuse in dielectric (i.e. non-electrolytic) capacitor manufacture. Prior to 2005 these topics were covered in V01-B04X. See V04-X01C for other electronics components recycling.

V01-B04B9 [1992]

Other capacitor manufacturing processes

V01-B04C [1992]

Testing, sorting, trimming, marking

V01-B04C1 [1997]

**Testing and sorting capacitors** 

See S01-D05A3 and S01-G12C also for electrical tests on capacitors.

V01-B04C3 [1997]

**Trimming capacitor value** 

See X24-D03B for laser trimming apparatus.

V01-B04C5 [1997]

**Marking capacitors** 

V01-B04E [1992]

Tape carriers, packing, shipping

Includes 'bandolier' tape carrier per se (see V04-V01A also), loading finished capacitors onto tape, packaging cartons, etc.

V01-B04X [1992]

Other capacitor manufacturing aspects

#### **V02: Inductors and Transformers**

For power transformers and reactors, see X12-C codes. Inductors/transformers implemented as IC devices are not included; see U11/U12 codes. Printed coils are, however, included here and in V04.

See T03-A codes only for details of recording media and heads.

#### V02-A

## **Magnetic materials**

From 2007, V02-A01 codes are only applied for magnetic materials of general application. Therefore, V02 codes are no longer routinely assigned for magnetic recording media and heads with the exception of nano-structures, which are coded in V02-B04. See T03-A codes for specific details of recording media and heads.

## V02-A01

## Hard magnetic materials

#### V02-A01A

## Metals or alloy

Iron, boron, cobalt, ferromagnetic, neodymium, nickel. rare earth metals

## V02-A01A1 [1987]

#### For permanent magnet

## V02-A01A2\* [1987-2006]

## For magnetic recording medium

\*This code is now discontinued and has been transferred to T03-A codes from 200701. It remains searchable for records prior to 2007.

## V02-A01A8 [2006]

## Novel hard magnetic metals or alloys

Composition

#### V02-A01A9 [1992]

## Manufacture of hard magnetic metals or alloys

Includes methods and systems for manufacturing the magnetic composition per se. Other manufacturing details, e.g. magnetic laminations' manufacture, core manufacture, magnet manufacture, etc., are covered by V02-H codes.

#### V02-A01B

## Non-metallic substances

Oxide, ferrite, ferric oxides, metal hydroxide

## V02-A01B1 [1987]

#### For permanent magnet

## V02-A01B2\* [1987-2006]

#### For magnetic recording medium

\*This code is now discontinued and has been transferred to T03-A codes from 200701. It remains searchable for records prior to 2007.

[2006]

#### V02-A01B8

## Novel hard magnetic non-metallic materials

Composition

## V02-A01B9 [1992]

## Manufacture of hard magnetic nonmetallic materials

Includes methods and systems for manufacturing the magnetic composition per se. Other manufacturing details, e.g. magnetic laminations' manufacture, core manufacture, magnet manufacture, etc., are covered by V02-H codes.

## V02-A01C [1992]

#### **Mixtures**

Includes mixtures of metallic and non-metallic magnetic substances.

#### V02-A02

## Soft magnetic materials

### V02-A02A

#### Metals or allovs

Iron, silicon steel, boron, cobalt, nickel, aluminium, chromium, ferromagnetic

#### V02-A02A1\* [1987-2006]

#### For magnetic head

\*This code is now discontinued and has been transferred to T03-A codes from 200701. It remains searchable for records prior to 2007.

## V02-A02A2 [1987]

For electric machine and reactor core

#### V02-A02A8 [2006]

#### Novel soft magnetic metals or alloys

Composition

## V02-A02A9 [1992]

# Manufacture of soft magnetic metals or alloys

Includes methods and systems for manufacturing the magnetic composition per se. Other manufacturing details, e.g. magnetic laminations' manufacture, core manufacture, magnet manufacture, etc., are covered by V02-H codes.

### V02-A02B [1987]

#### Non-metallic substances

Ferrites, metal oxide

## V02-A02B1\* [1987-2006]

### For magnetic head

\*This code is now discontinued and has been transferred to T03-A codes from 200701. It remains searchable for records prior to 2007.

#### V02-A02B2 [1987]

For electric machine and reactor core

## V02-A02B8 [2006]

Novel soft magnetic non-metallic materials

Composition

## V02-A02B9 [1992]

## Manufacture of soft magnetic non-metallic materials

Includes methods and systems for manufacturing the magnetic composition per se. Other manufacturing details, e.g. magnetic laminations' manufacture, core manufacture, magnet manufacture, etc., are covered by V02-H codes.

## V02-A02C [1992]

#### **Mixtures**

(V02-A02A, V02-A02B)

Includes mixtures of metallic and non-metallic magnetic substances.

### V02-A03 [1997]

#### Organic or organo-metallic materials

(V02-A01.V02-A02)

Used together with V02-A01 and V02-A02 codes to denote coercivity, if indicated.

#### V02-A04 [1997]

## Magnetic liquids

(V02-A02A)

Used together with V02-A01 and V02-A02 codes to denote coercivity, if indicated.

Ferrofluid

## V02-A05 [1997]

#### **Magnetic semiconductor materials**

(V02-A01, V02-A02)

Used together with V02-A01 and V02-A02 codes to denote coercivity, if indicated. See also U11-A.

CdCr<sub>2</sub>S<sub>4</sub>, galvano-magnetic

#### V02-A09 [2002]

# Binders and other additives for magnetic materials

Includes binders/additives for both hard and soft materials. This code will be used in conjunction with the magnetic materials' codes.

#### V02-A10 [2005]

#### Nanomaterials and their manufacture

Used in conjunction with hard/soft, metal/non-metallic substances.

## V02-A10A [2005]

Novel nanomaterials

V02-A10C [2005]

Manufacture of nanomaterials

#### V02-B

### Thin magnetic films

Prior to 2007, magnetic film details of thin film heads were coded under V02-B03, which has now been discontinued. From 2007, thin film heads are coded only under T03 codes (T03-A03E). However, nanostructures of thin film heads are still coded under V02-B04.

## V02-B01\* [1987-2006]

## For recording medium

\*This code is now discontinued and has been transferred to T03-A01 codes from 200701. It remains searchable for records prior to 2007. Includes magnetic films, per se, for tapes, discs or drums. SeeT03-A01 codes for record carrier details e.g. binders, bases, backing layers.

Magnetic media, photomagnetic/magneto-optical film

#### V02-B02 [1987]

#### For bubble memory

See also U14-A01A1 codes.

## V02-B03\* [1992-2006]

## Thin film heads

(V02-B01)

\*This code is now discontinued and has been transferred to T03-A03 codes from 200701. It remains searchable for records prior to 2007. See also W04-B codes if audio/video application is intended. Manufacture of thin film heads is covered by T03-A04 codes.

## V02-B04 [2005]

#### **Nanostructures**

Includes nanostructures of thin film heads. Other details of thin film heads are only coded under T03-A03E codes. Manufacturing details of nanostructures are coded under V02-H02G.

#### V02-C

#### Cores, yokes and armatures

For general cases only. For particular application see V02-E, V02-F and V02-G. For high power devices see X12-C.

Magnetic circuits, laminates

#### **V02-D**

## Coils (incl. connections); (de)magnetising

Includes general coils where an application is not clear. Coils designed for communication or HF applications are coded under V02-F codes (e.g. HF coils are coded under V02-F03B), and coils for power supplies or other uses are coded under V02-G codes.

For high power coils, see X12-C codes.

Degaussing

#### V02-E

#### **Magnets**

High strength magnets and super-conducting electromagnets are, respectively, in X12-C06 and X12-C05A.

#### V02-E01

## **Permanent magnets**

Rare earth magnets

#### V02-E02

#### **Electromagnets**

Solenoids, operating circuit, coils, cores, energising circuit

#### V02-E02A

#### With armature

## V02-E02A1 [1987]

#### For electromagnetic valve

See also X25-L for EM valves and X22 for automotive application.

Fuel injection valves, EM-brake, -gear, -clutch

## V02-E02A2 [1987]

### For relay, or printer hammer

See also V03-D codes for relays, and S06-D to S06-K codes for details of printers.

V02-E02A3 [2002]

**Linear actuator** 

V02-E02A4 [2002]

**Rotary actuator** 

Rotary solenoid

V02-E02X

Without armature

V02-E02X1 [1992]

**Using superconducting coils** 

V02-E02X2 [2006]

#### Shim coil

Includes small current-carrying coils that generate the auxiliary magnetic fields for improving the homogeneity of a main field e.g. in an MRI equipment (see also S01-E01 and S03-E07 codes).

#### V02-F

## Inductive components for communications or HF

Inductive components used in applications other than communication or HF applications are coded under V02-G codes. General coils where an application is not clear are coded under V02-D.

## V02-F01

## Inductances

Includes coils for telecommunications and radio equipment (see also W01 and W02). Constructional details are in V02-F03.

Chokes, HF inductor, antenna coils, radio tuning coils

## V02-F01A [1987]

#### For CRT beam deflection

See also V05-D and W03-A codes for TV deflection. Vertical-, horizontal- deflection coils

V02-F01D [1992]

**Variable** 

V02-F01G [1992]

## MRI/NMR equipment gradient/HF coil

Also see S01-E02, S03-E07 and S05-D02 codes, respectively, for magnetic properties sensor, MRI/NMR equipment and medical use.

V02-F01G1 [2006]

**Gradient coil** 

V02-F01G2 [2006]

HF coil

Includes receiver/transmitter antenna coil for detecting an NMR/MRI signal.

Bird cage-, resonator-, saddle-, surface-coils

V02-F01J [1992]

Filter coils

See W02-H and U25-E01 codes also.

V02-F01L [1992]

**Chip inductor** 

V02-F01N [1992]

Flat coils

V02-F01N1 [1992]

**Printed circuit coils** 

See also V04-Q04 and V04-R codes, respectively, for printed circuits and their manufacture.

V02-F01P [2005]

Inductive connector

For HF use. See V02-G01D for power supply inductive connector.

V02-F02

**Transformers** 

Includes pulse, audio and broad-band transformers. Constructional details are in V02-F03.

V02-F02A [1987]

For TV

See also W03-A codes.

Flyback transformers, television line output transformers

V02-F02D [1992]

**Rotary transformer** 

See also T03-A05D3A, W04-B03B1 codes for helical scan head positioning.

V02-F02G [1992]

**Variable** 

V02-F03

**Construction details** 

Includes constructional details of signal and HF transformers and coils. Used in conjunction with the type of coil or transformer, e.g. V02-F02D.

Manufacturing details are coded by V02-H codes.

V02-F03A [1997]

Casings, mounting, cooling; Magnetic cores

V02-F01,V02-F02,V02-F03)

V02-F03A1 [1997]

Cooling

(V02-F03)

V02-F03A2 [1997]

**Magnetic cores** 

(V02-F01,V02-F02)

Laminates

V02-F03A3 [2005]

**Cases**Housing

V02-F03B [1997]

Windings

(V02-F01, V02-F02)

Bobbins, connections, leads, coils

V02-F03B1 [1997]

Insulating

(V02-F01, V02-F02)

V02-F03C [1997]

**Control** 

Includes current collector sliding or rolling on, or along, winding.

V02-F03C1 [1997]

Using tappings on coil or winding

V02-F03C2 [1997]

Using movable core, coil or winding, or shield

V02-F03D [2005]

Shielding

(V02-F03X)

Includes screens, shields, etc.

V02-F03X [1997]

Other HF transformer/inductor constructional details

Includes terminals, circuits for changing electrical characteristics e.g. flux linkage by driving device magnetic circuit into saturation, etc.

Temperature sensors

## V02-F05\* [1992-2006]

## Magnetic recording heads

(V02-C, V02-D, V02-E02X)

\*This code is now discontinued and has been transferred to T03-A03 codes from 200701. It remains searchable for records prior to 2007.

#### V02-G

## Inductive components for power supplies or other uses

Includes inductive components used in applications other than communication or HF applications. Inductive components used in communications or HF applications are coded under V02-F codes. General coils where an application is not clear are coded under V02-D. High power components are coded in X12-C.

#### V02-G01

#### Transformers, reactors, choke coils

Includes vehicle ignition coil (see also X22-A01A).

V02-G01A [1983]

**Power transformers** 

Power supply

V02-G01A1 [1987]

**Variable** 

V02-G01A2 [1997]

Non-linear

Includes transformer, e.g. ferro-resonant, for frequency changing or wave-shape changing.

V02-G01B [1983]

#### **Instrument transformers**

Includes current-, voltage-transformers (also in S01-D01D1A), linear variable displacement **transducers** (LVDT).

Measurement transformers

V02-G01C [1983]

Reactors, choke coils

Lamp ballasts

V02-G01C1 [1987]

**Variable** 

V02-G01D [1997]

#### Inductive connector

For power supply use. See V02-F01P for HF inductive connector.  $\label{eq:power_supple}$ 

Inductive coupling

## V02-G01E [2002]

#### Inductive sensor

Includes non-transformer type current/voltage/other sensors.

Voltage-, current-sensor, inductive probe

## V02-G01F [2005]

#### **Heating inductor**

Low power induction heating coils are included here with high power ones covered by X12-C codes. For general high or low power induction heating, see X25-B02A codes, and X27-C06 for induction cookers.

## V02-G02

#### **Constructional details**

Manufacturing details are coded by V02-H codes.

#### V02-G02A

Casings, mounting, cooling; Magnetic cores

V02-G02A1 [1987]

Cooling

V02-G02A2 [1987]

**Magnetic cores** 

Laminates

**Cases**Housing

V02-G02B

Windings

Bobbins, connections, leads, coils

V02-G02B1 [1987]

Insulating

V02-G02C [1987]

**Control** 

(V02-G02B)

Includes current collector sliding or rolling on or along winding.

V02-G02C1 [1987]

Using tappings on coil or winding

(V02-G02B)

V02-G02C2 [1987]

Using movable core, coil winding or shield

(V02-G02B, V02-G02X)

V02-G02D [2005]

**Shielding** 

(V02-G02X)

Includes screens, shields, etc.

#### V02-G02X

## Other power supply transformer/inductor constructional details

Includes terminals, circuit for changing electric characteristics e.g. flux linkage by driving device magnetic circuit into saturation, etc.

Temperature sensors

#### V02-H

#### Manufacture

Includes apparatus, methods and testing. Manufacture of recording media and magnetic heads is not coded under V02 anymore, but only under T03-A codes.

#### V02-H01

#### **Coil manufacture**

Includes winding, insulating, connecting leads.

V02-H01A [1987]

For reactor, choke coil

V02-H01B [1987]

For transformer

V02-H01C [2002]

For electromagnet

V02-H01C1 [2002]

For EM relay

See also V03-D06B.

V02-H01C2 [2002]

For EM valve

See also X25-L01A.

V02-H01C3 [2002]

For printer

See also S06-D to S06-K codes for details of printers.

V02-H01C9 [2002]

Electromagnet coil manufacture for other

devices

V02-H01X [2002]

Coil manufacture for other devices

V02-H02 [1983]

## Applying magnetic films to substrate

(V02-H09)

Manufacture of recording media is not coded under V02 anymore, but only under T03-A02 codes.

V02-H02A [1987]

Vacuum evaporation

V02-H02B [1987]

**Sputtering** 

V02-H02C [1987]

**Electroless and electrolytic plating** 

V02-H02D [2002]

Plasma processing

V02-H02E\* [2005-2006]

## Magnetic head

\*This code is now discontinued and has been transferred to T03-A04 from 200701. It remains searchable for records prior to 2007.

## V02-H02F\* [2005-2006]

#### Magnetic medium

\*This code is now discontinued and has been transferred to T03-A02 from 200701. It remains searchable for records prior to 2007.

## V02-H02G [2005]

#### Nanostructures manufacture

Non-manufacturing details of nanostructures are covered by V02-B04.

V02-H03 [1987]

#### Core manufacture

(V02-H09)

Also includes the rest of the magnetic circuit e.g. yoke, armature. From 2007, manufacture of magnetic heads is not coded under V02 anymore, but only under T03-A04 codes. Also includes the rest of the magnetic circuit e.g. yoke, armature. Manufacture of magnetic heads is not coded under V02 from 2007, but only under T03-A04 codes.

Annealing, laminating

V02-H03A [1987]

For transformer

(V02-H09)

V02-H03C [2002]

For electromagnet

V02-H03C1 [2002]

For EM relay

See also V03-D06B.

V02-H03C2 [2002]

For EM valve
See also X25-L01A.

V02-H03C3 [2002]

For printer

See also S06-D to S06-K codes for details of printers.

V02-H03C9 [2002]

For electromagnet core of other devices

V02-H03E [2002]

For inductor

V02-H03X [2002]

Core manufacture for other devices

V02-H04 [1987]

**Magnet manufacture** 

(V02-H09)

V02-H05\* [1992-2006]

## Magnetic recording heads

(V02-H01, V02-H03, V02-H09)

\*This code is now discontinued and has been transferred to T03-A04 codes from 200701. It remains searchable for records prior to 2007. Includes manufacture of coil/winding and core plus other aspects and testing.

#### V02-H06 [2002]

#### **Terminal manufacture**

(V02-H09)

Includes manufacture of terminals for all devices and is generally coded in conjunction with the relevant device code, e.g. V02-G01A for transformer terminals.

## V02-H07 [2002]

## **Case manufacture**

(V02-H09)

Includes manufacture of casings for all devices and is generally coded in conjunction with the relevant device code, e.g. V02-G01A for transformer casing.

## V02-H08 [2002]

## **Testing**

(V02-H09)

For all aspects of testing transformer, inductor, etc. From 2007, testing of magnetic heads is not coded under V02 anymore, but only under T03-A04 codes.

#### V02-H09

# Other inductive device manufacturing aspects

Includes manufacture of devices not specified above.

## V02-H10 [2005]

## Device, per se, manufacture

Includes indeterminate detail manufacture as well as multi-step processes.

## V03: Switches, Relays

**NOTE:** V03 codes cover low power mechanical and electromechanical switches, i.e. those involving switching by moving contacts to make and break a circuit.

High power switches, circuit breakers and circuit protectors are coded in X13.

Electronic switching and gating are coded under U21-B codes.

### V03-A

## **Contacts (general)**

Relay and connector contacts are in V03-D and V04-D, respectively.

#### V03-A01

#### Contact material and structures

## V03-A01A [1983]

#### Material

Includes materials such as composite materials containing noble metals, metal with carbide or oxide, copper, carbon particles or fibers, conducting materials dispersed in binding materials, etc.

## V03-A01B [1983]

## Surface shape/structure

Includes details of the shape or structure of the contact-making surface, e.g. grooved, wetted with mercury, laminated, etc.

### V03-A02

## **Contact engagement techniques**

Includes engagement by abutting and sliding.

#### V03-A03

#### **Protective enclosures**

Includes protective enclosures, baffle plates or screens for contacts. Includes contacts sealed in an evacuated or gas-filled envelope, e.g. for reed switches. Reed switches are coded under V03-C06A.

#### V03-A08 [1992]

#### Contact manufacture; Testing; Monitoring

Includes manufacturing details of switches contacts, and details for testing and monitoring the integrity of contacts.

#### V03-A09

#### Other contact details

Includes increasing contact pressure, preventing vibration of contacts, holding contacts together after engagement, terminals, cleaning or lubricating contact-making surfaces, heating or cooling contacts, etc.

## V03-B

#### Switch operating mechanisms (general)

Details of relays are in V03-D.

#### V03-B01

#### Non-hand-operated switches

## V03-B01A [1992]

#### **Limit switches**

Includes switches actuated when reaching a specified limit, e.g. safety switches.

#### V03-B01B [1997]

## Foot pedal switches or mouth operated switches

From 2009, this code covers both foot pedal switches and mouth operated switches. For constructional details, see also V03-B04 codes.

### V03-B01C [1997]

#### **Door switches**

See also V03-U18 for doors and windows. If vehicle doors, see also V03-U03A codes for land vehicles, and X22 codes. For other types of doors, see also X25.

#### V03-B01D [1997]

#### Mat switches

Includes mats triggering opening of automated doors when user walks on the mat, dance mats or platforms used with game consoles and arcade games, etc. If the mat is part of a game, see also V03-U08.

## V03-B01E [1997]

#### Seat switches

Includes switches triggered when sitting on a seat. If vehicle seat, see also V03-U03A for land vehicles and X22 codes.

#### V03-B02

## Internal power arrangements and driving mechanisms

Includes pneumatic or hydraulic actuator, motordrive, electromagnet. Also includes transmitting driving force to contacts by ratchet, belt etc.

Switch-actuating, -operating, -driving

#### V03-B03

## **Snap-action and time-delay arrangements**

Includes devices for introducing a predetermined time delay between the initiation of the switching operation and the opening/closing of the contacts such as dash-pots, flies (e.g. fan governors), thermal timing devices (see also V03-C06B for thermal switches), etc.

## V03-B03A [1987]

### **Snap-action**

Includes use of magnet, deformation of elastic member e.g. coil springs, flexing of blade springs, buckling of disc springs, etc., to first store operation energy which is then released to produce or assist the contact movement.

#### V03-B04

# Housing; Fuse, earthing and safety arrangements

Includes built-in fuses, earthing arrangements, antistatic arrangements, and built-in safety spark gaps. Anti-static arrangement

## V03-B04A [1987]

## Housing

Includes dust-proof, splash-proof, drip-proof, waterproof or flameproof casings, bases or covers. Also includes arrangements to enable replacement of switch, e.g. cartridge housing.

Walls, cases, boxes, covers, seals

#### V03-B05

## **Indicators and markings**

Includes 'on-off' switching conditions, markings for easy location in the dark.

Illuminated marking, light display, symbols

#### V03-B06

## Interlocking, locking or latching; Arc control; Cooling

### V03-B06A [1987]

#### Interlocking, locking or latching

Includes interlocking between casing, cover, protective shutter and operating mechanisms, interlocking of two or more switches, locking using a key, etc.

Safety feature, key, latch

## V03-B06B [1987]

#### Arc control

Includes arrangements for extinguishing or preventing arc between current-carrying parts, for preventing discharge to non-current-carrying parts, and for detecting the presence of an arc or discharge.

Blow-out magnet, arcing horns, corona ring, insulation

#### V03-B09

#### Other switch details

Includes mechanical arrangements for preventing or damping vibration or shock, lubricating means, levers, turn-knobs and pushbuttons, etc.

### V03-B10 [2002]

Modular construction

#### V03-C

**Switches** 

#### V03-C01

Linearly-movable operating parts

#### V03-C01A

#### Adapted for actuation in one direction only

Pushbutton switches

#### V03-C01A1

## With single operating member

Includes e.g. button switches for cameras, doorbells, flashlights, etc. See also V03-C01A3 for constructional details.

Camera, doorbell, flashlight

## V03-C01A1A [2002]

## Membrane switch with single operating member

Includes mechanical contact based membrane switches with single operating member. Includes details of the circuit printed on a polyethylene terephthalate (PET) or indium tin oxide (ITO) layer. For electronic membrane switches e.g. detecting a change in resistance caused by depression of the switch, see U21-B codes instead.

PET layer, ITO layer

#### V03-C01A2

## With two or more operating members

Includes e.g. keyboard-type switches for computer keyboards or telephone key pads. See also V03-C01A3 for constructional details, T04-F01 codes for keyboards details and W01-C01B8 codes for keyboards/keypads details.

Keyboard, keypad

## V03-C01A2A [1992]

# Membrane switch with at least two operating members

Includes mechanical contact based membrane switches with two or more operating members. Includes details of the circuit printed on a polyethylene terephthalate (PET) or indium tin oxide (ITO) layer. For electronic membrane switches e.g. detecting a change in resistance caused by depression of the switch, see U21-B codes instead.

PET layer, ITO layer, control panel for microwave, air conditioner, etc.

#### V03-C01A3

## **Constructional details**

Includes cases, housings, covers, casings, driving mechanisms, key structures (for keypads or keyboards), etc. for switches adapted for actuation in one direction only.

Case, housing, cover, casing, driving mechanism, coil spring, blade spring, disk spring, keystroke, key cap

## V03-C01B

## Adapted for actuation in opposite directions

Includes constructional details and driving arrangements for slide switches.

Slide switches

#### V03-C02

## **Rotary switches**

#### V03-C02A

## Unlimited or unspecified angle

Includes constructional details and driving arrangements for switches operated by turn-knob. *Turn-knob* 

#### V03-C02B

### Restricted angle only

Includes constructional details and driving arrangements for lever- or handle-operated switches, toggle switches, knife switches, etc.

Toggle, lever, handle, knife switch

#### V03-C03

## Operating part adapted for pulling or compound movement

Includes cord or chain operated switches. Cord, chain, pull switch

#### V03-C03A

#### [1992]

#### **Compound movement**

Includes constructional details and driving arrangements for switches having operating part movable angularly in more than one plane, e.g. joystick, and movable both angularly and rectilinearly.

Joystick

#### V03-C04

#### **Tumbler switches**

Includes constructional details and driving arrangements for tumbler and rocker switches. Rocker switch

#### V03-C05

### Lockable switches

Includes key, plug or plate type.

#### V03-C06

## Switches actuated by change of physical condition

#### V03-C06A

## Magnetic or electric field

Includes switch actuated by movement of a float carrying a magnet e.g. level detector.

Reed switch, magnetic switch, electromagnetic switch

## V03-C06B

## Thermal conditions

Includes constructional details and driving arrangements for switches triggered by a change of temperature. See V03-C06B1 for thermally sensitive members per se. See V03-D05D only for electrothermal relays.

Electro-thermal, temperature, thermostat

## V03-C06B1

## Thermally sensitive members

Includes bimetal thermostats.

Bimetallic member

#### V03-C06B9

### Other thermal switches

Includes details of bellows, diaphragm, Bourdon tube, etc.

#### V03-C06C

## Position, speed, acceleration

Includes switches operated by change of inclination or orientation, centrifugal action, shock or vibration, inertia.

Impact switches, tilt switches

#### V03-C06D

## Fluid pressure or flow

Includes switches actuated by bellows, diaphragm, Bourdon tube, vane, piston and cylinder.

#### V03-C06X

# Other physical condition responsive switches

Includes switches operated by a change of liquid level, humidity or liquid density.

Float switch

#### V03-C07

# Switch manufacture; Testing; Monitoring

For contact manufacture and testing see V03-A08. Includes all other manufacturing and testing aspects of switches.

## V03-C07A [2005]

# Micromachining process, method or apparatus

See also U11-C and U12-B03F codes.

MEMS, microswitch, nanoswitch, silicon-machining, micromachining

### V03-C08 [1983]

#### Time (-programme) switches

Includes time or time programme switches operated by rotary or non-rotary parts, thermal action, electrolytic processes or chemical processes. See also S04-C01.

#### V03-C09

## Other switches

Includes liquid contact switches, explosion switches, piezoelectric switches, mercury switches, etc.

Liquid, wet

## V03-C10 [1997]

#### Microswitches; Nanoswitches

Covers details of small-size switches that act by the movement of small levers and used where rapid precise movements are required, especially in keyboards and automatic control devices. For manufacturing details of microswitches or nanoswitches, see also V03-C07A.

Micromachining, MEMS

## V03-C10A [2002]

#### **Nanoswitches**

For manufacturing details (micromachining), see also V03-C07A.

## V03-C15 [1997]

## **Hybrid switches**

Includes combined principle type switches e.g. combined contactless (semiconductor) and contact-type switches.

#### V03-D

#### Relays

#### V03-D01

# Circuits and mechanical arrangements modifying relay operation

Includes arrangements for modifying the operation of the relay, e.g. for holding armature in attracted position, for biasing the electromagnet, for introducing delay, etc.

Operation delay arrangement

#### V03-D02

# **Energising-current supply circuits**

Includes relay coil or coils forming part of a bridge circuit, and EM drive circuit specifically for relay operation.

## V03-D03

# Magnetic circuits, windings, contacts and driving arrangements

## V03-D03A [1983]

#### **Magnetic circuits**

Electromagnetic details forming part of relay are also in V02-E02A2.

Armatures, electromagnets, yokes, magnets, cores, poles

#### V03-D03B [1983]

#### Windings

Includes magnetic coils or windings, including short-circuited conducting sleeves, bands or discs. *Coils, coil formers, bobbins* 

#### V03-D03C [1983]

## **Contact arrangements**

Includes contact spring sets.

## V03-D03D [1983]

## Magnetic circuit to contact drive

Includes driving arrangements between movable part of magnetic circuit and contact with e.g. lost or snap action, etc. Also includes mechanical arrangements for producing a desired natural frequency using e.g. reed or blade spring, diaphragm, etc.

#### V03-D04

**Electromagnetic relays** 

#### V03-D04A

Polarised and sealed relays

### V03-D04A1 [1983]

## **Polarised relays**

Includes polarised relays with or without intermediate neutral position of rest.

# V03-D04A5 [1983]

## Sealed relays

Includes reed relays. For telephony see W01-B.

#### V03-D04X

## Other electromagnetic relays

Includes non-polarised relays, frequency relays, mechanically-tuned relays, self-interrupters, etc.

#### V03-D05

# Non-electromagnetic relays

### V03-D05A [1987]

#### Piezoelectric relays

Includes electrostrictive and piezoelectric relays.

Bimorph elements

## V03-D05B [1997]

Magnetostrictive relays

# V03-D05C [1997]

## **Electrostatic relays**

Includes electrostatic and electro-adhesion relays.

#### V03-D05D [1997]

### **Electrothermal relays**

Includes heating arrangements using direct or indirect heat, and self-interrupters. Details of induction or resistance heating per se are also covered under X25-B codes.

Glow discharge, induction or resistance heating, self-interrupters

## V03-D05E [1997]

#### **Dynamo-electric relays**

Includes electrodynamic relays, ferrodynamic relays, magnetodynamic relays and induction relays.

Electrodynamic, ferrodynamic, magnetodynamic, induction relays

#### V03-D06

# Constructional details; Manufacture; Testing

#### V03-D06A [1983]

# Cases, indicators, shielding, cooling, terminals

Includes bases, casings, covers, indicators, distinguishing marks, electromagnetic or electrostatic shielding, ventilating/cooling of relays and terminal arrangements.

Covers, seals, bases, housing, relay holder

# V03-D06B [1983]

## Manufacture and testing

Includes materials salvaging, apparatus, methods and testing.

## V03-D06B1 [2005]

# Micromachining process, method or apparatus

See also U11-C and U12-B03F codes.

MEMS, microrelay, nanorelay, silicon-machining, micromachining

#### V03-D06C [1987]

#### Arc control

Includes arrangements for extinguishing or preventing arc between current-carrying parts, for preventing discharge to non-current-carrying parts, and for detecting the presence of an arc or discharge.

## V03-D10 [1997]

#### Microrelays; Nanorelays

For manufacturing details of microrelays or nanorelays, see also V03-D06B1.

Micromachining

#### V03-D10A [2002]

Nanorelays

# V03-D15 [1997]

## **Hybrid relays**

Includes combined principle type relays e.g. combined semiconductor and electromagnetic relays.

## V03-D20 [1997]

#### **Smart relays**

Includes smart or intelligent relays.

#### V03-E

#### Selectors

Includes electrically operated, step-by-step wiper motion switches. For telephony see W01-B.

# V03-U [2002]

# Switches/relays characterised by applications

### V03-U01 [2002]

#### **Domestic**

Includes switches for domestic appliances, such as curling irons, ovens, hair dryers, food blenders, washing machines, vacuum cleaners, irons, etc. For switches on personal items, see V03-U02. See also X27 codes for domestic appliances.

#### V03-U02 [2002]

#### Personal

Includes switches for personal items, such as toothbrushes, footwear, clothes, razors, etc. For switches on domestic items, see V03-U01. See also X27 codes for personal appliances.

## V03-U03 [2002]

## **Vehicles**

Includes switches for unspecified vehicles. If the type of vehicle is specified, see V03-U03A, V03-U03B, V03-U03C, V03-U03D or V03-U03E for land vehicles, avionics, shipping, military or railway vehicles respectively.

## V03-U03A [2005]

#### Land vehicles

Includes switches for land vehicles, such as cars, motor bikes, trucks, tractors, vans, utility vehicles, excavators, etc. See also X22 codes.

## V03-U03B [2005]

#### **Avionics**

Includes switches for air vehicles, such as planes, helicopters, gliders, etc. See also W06 codes.

## V03-U03C [2005]

#### Shipping

Includes switches for sea vehicles, such as boats, ferries, submarines, yachts, etc. See also W06 codes.

## V03-U03D [2005]

#### Military

Includes switches for military vehicles, such as rockets, tanks, etc. See also W07 codes.

## V03-U03E [2010]

#### **Railways**

Includes switches for railway vehicles, such as locomotives, carriages, etc. used for passengers, in mines, etc.

## V03-U04 [2002]

# Information equipment

Includes switches for computers, laptops and notebooks, keyboards, keypads, touchscreens, printers, scanners, copiers, facsimiles, graph plotters, personal digital assistants (PDA), calculators, etc.

See also V03-C01A2 for details of switches, and V03-C01A3 for constructional details. Keypads for mobile phones are coded under V03-U05 only. Also includes switches used in stationary and business equipment, e.g. shredder, etc.

See also T01 codes for computer details, T04 codes for keyboard and plotter details, S06-D to S06-K codes for copier, printer and facsimile details, and X27-A02C for electrical aspects of stationary and business equipment.

## V03-U05 [2002]

#### Telecommunication and broadcasting

Includes switches for phones, mobile phones, pagers, televisions, receivers, set-top boxes, radios, remote controllers for television, etc., RF communication, etc. See also W01 and W02 codes for mobile phones, pagers, phones, etc, and W03 codes for TV receivers, remote controllers for television, set-top boxes, etc.

## V03-U06 [2002]

#### **Machine tools**

Includes switches for machine tools such as presses, rolling, milling, drilling, turning, polishing, grinding, boring, cutting, abrading and burnishing machines. See also X25 codes.

## V03-U07 [2002]

#### Industrial

Includes switches used in the industrial field, such as on conveyors, excavators (see also V03-U03A for land vehicles), in the mining industry, on packing, bottling, and sorting devices, cranes, incinerators, engraving systems, in manufacturing and assembly plants, etc. Switches especially for machine tools are coded under V03-U06 only. See also X25 codes.

## V03-U08 [2002]

## **Toys; Games; Sports**

Includes switches on toys, dolls, fitness and exercises machines, sport equipment, arcade games such as Pachinko or fruit machines, video consoles, handheld game consoles, musical instruments such as electric guitars, keyboards, etc. See also W04 codes.

Toys, sport equipment, arcade games, game consoles, guitars, keyboards

## V03-U09 [2002]

## Audio/video equipment

Includes switches on projectors, video recorders (VCR), DVD recorders, Hi-Fi systems, etc. Switches for cameras are coded under V03-U12 only. See also W04 codes.

## V03-U10 [2002]

#### Medical

Includes switches on medical devices, such as pacemakers, hearing aids, defibrillators, diagnostic equipment, life support machines, etc., and on hospital, veterinary, and dentistry equipment, etc. See also S05 codes.

# V03-U11 [2002]

# Lighting

Includes novel slide switches (V03-C01B) used in flashlights, wall-mounted rocker switches (V03-C04) for controlling house lighting, foot-operated switches (V03-B01B) for controlling floor lamps, and inertia responsive switches (V03-C06C) for automatically applying motor vehicle hazard lights after an accident (see also V03-U03A, X22-N and X22-B02X). See also X26 codes for illumination arrangements per se.

## V03-U12 [2002]

#### **Cameras**

Includes switches for digital still cameras, film-based cameras and video cameras. For other A/V equipment, see V03-U09 only. See also W04 codes for digital and video cameras, and S06-B codes for film-based cameras.

Digital camera, film camera, 35 mm camera, SLR camera, CCD camera, camcorder, video camera

#### V03-U13 [2005]

#### Instrumentation

Includes switches on electrical instruments, engineering and scientific instrumentation. See also S01 to S03 codes.

## V03-U14 [2005]

#### **Robotics**

Includes switches on robots used in assembly lines (see also V03-U07 for industrial and X25), during surgery (see also V03-U10 for medical and S05), in home automation (see also V03-U01 for domestic and X27), welding robots (see also V03-U07 for industrial and X24), etc.

#### V03-U15 [2005]

## **Alarms; Signalling**

Includes switches used to e.g. activate silent alarm used to covertly alert police during robbery, indicate unauthorised opening of window in house (see also V03-U18 and X25-U01), or to remotely signal to owner that parked vehicle is being tampered with (see also X22-N and X22-D03C). See also W05-B codes for novel details of alarms per se.

## V03-U16 [2005]

## **Monitoring; Control**

Includes e.g. key sheets used in television remote control units (see also V03-U09 and W03-A02C), pedestrian traffic light control pushbuttons (see also T07-B05A and T07-C03), wall-mounted switches for remotely controlling lighting (see also V03-U11, X26-C03C an W05-D codes) and switches for monitoring whether patient gets out of bed (see also V03-U10 and S05-G02B2 codes).

## V03-U17 [2005]

## **HVAC**; Refrigeration

Includes switches used in heating, ventilating and air conditioning systems, and refrigeration system. See also X27-E and X27-F codes.

## V03-U18 [2005]

#### **Doors and windows**

Includes switches using on doors, gates and windows. For alarms systems, see also V03-U15 and W05 codes. See also X25 codes.

#### **V04: Printed Circuits and Connectors**

NOTES

- (1) Includes low power electronics and domestic mains type connectors.
- (2) High power connectors for power distribution are in X12-G.
- (3) Thick and thin film circuits and hybrid circuits are in U14-H, although aspects relevant to printed circuits are in V04-Q and V04-R.
- (4) For batteries search V04 and X16, and for telephony V04 and W01 together.
- (5) Indeterminate type connectors are in V04 and  $\times 12$
- (6) Direct connections used for 2-part connector terminations are in V04-A and the relevant connector e.g. IDC termination for a 3-pin mains plug is in V04-A03, V04-F, V04-M02 and V04-M07.

#### V04-A

#### **Direct connections**

Relates to electrically conductive connections for two or more conductive members which are in direct contact

#### V04-A01

## Soldered, welded, riveted

See X24 for general soldering, welding and riveting. Manufacture of such connections is covered by V04-P codes.

#### V04-A02

# Twisted, wrapped, bent, crimped

Crimping sleeve, ferrule

#### V04-A03

# With insulation penetrating/displacement member

See also V04-M07.

Insulation displacement connector (IDC), needle point, prong

## V04-A04

### Clamped or spring

#### V04-A04A

Using clamping member acted on by screw or nut

## V04-A04B

Using screw or nut clamping member

## V04-A04C

Using spring, clip, or resilient member

#### V04-A04X

#### Other

Includes connections using cams, wedges, cones or balls to maintain contact.

[1992]

#### V04-A05

#### To earth

Grounding electrode, earthing connector

# V04-A06

#### Conductive adhesive

# V04-A07 [1992]

#### 'Zebra' connector

(V04-A09)

Includes block of insulating material with alternative conductive areas.

Elastomer block

## V04-A08 [1992]

## Insulating connections

(V04-A09)

Includes end caps, sleeves etc.

#### V04-A09

#### Other

Includes connections using shape memory contact, etc.

#### V04-A10 [1992]

## **Superconducting wires connection**

For high power superconducting wire connectors, see X12-G02G.

#### V04-A11 [1992]

## **Anisotropic connector**

(V04-A09)

#### V04-B

# Terminal strips and blocks; Terminals mounted on base

Connectors or connecting arrangements of this type provide a number of mutually insulated connections.

## V04-B01

#### For printed circuits

Includes bed-of-nails connector, see also V04-M05. For semiconductor device holders see also V04-K02, and U11-D01Q codes.

IC socket, holder

## V04-B02 [1987]

#### For flat cables

(V04-B09)

See also V04-M04.

Ribbon cable connector

## V04-B03 [1992]

#### For coaxial cables

(V04-B09)

See also V04-M03.

High frequency, data communication

#### V04-B04 [1992]

## **End pieces for multiconductor cables**

(V04-B09)

## V04-B05 [1992]

# Terminals or binding posts, terminal strips, terminal blocks, terminal boards

(V04-B09)

Includes fastening of connecting parts to base or case.

Distributor block

### V04-B05A [1992]

# Clip-on terminal blocks for mounting on rail or strip

(V04-B09)

#### V04-B09

Other

## V04-C

# End pieces for wires or cables; 2 or more spaced connecting locations

# V04-C01 [1992]

## **End pieces**

Includes end pieces supported by wire or cable and for connection to another wire, terminal or conductive member. For multiconductor cables, see V04-B04.

Clamps, battery post, eye-, fork-, hook-terminals, crocodile clips, spade terminals, probes, needle points, spring clip, ferrule, sleeve, screw, nut

## V04-C05 [1992]

# Two or more connecting locations

Includes connectors for conductive members providing two or more spaced connecting locations which are thereby interconnected.

#### V04-D

#### Connector details

Details only of connectors of the type covered by H01R-015-033 are included here.

#### V04-D01

#### **Contact members**

Includes composition of contacts; hermaphroditic contacts; etc. Conductive materials in general are covered by X12-D01 codes.

Machined, stamped, formed, single beam, dual leaf, crimp-, wire wrap-, angled solder-, straight solder-pin termination

#### V04-D01A [1983]

## Pins, blades, or prongs

Male, termination

# V04-D01B [1983]

## Sockets or receptacle contacts

Tongues, termination, female, twin cantilever

#### V04-D02

#### Securing contact members to base

#### V04-D03

#### Bases: cases: covers

For insulating materials in general see X12-E codes. Housing, body, seals, dust cap, moulding, hood, potting boot

#### V04-D03A [1992]

#### Material

Includes materials for all types of connectors.

## V04-D04

#### Fastenings; Guides

Includes means for enabling engagement or disengagement of coupling parts with ease or for holding them in engagement using bolt or threaded ferrule.

Latches, locks, securing, coupling nut or ring, bayonet, ZIF connector, zero insertion force, screw, locking lever

#### V04-D04A [1983]

#### **Snap-action fastenings**

#### V04-D05

# Structural association with electrical component

Includes built-in fuse, switch, light bulbs, filter capacitors (see also V04-M08), etc. Details of electrical components are in relevant classes e.g. fuses in X13.

#### V04-D06

## **Protective and screening arrangements**

Safety arrangements

#### V04-D06A [1983]

## Preventing access to live parts

Involves use of shutters or cover plates, insulating terminals, lockable dummy plug.

#### V04-D06B [1983]

# **Earthing; Shielding**

Screening, grounding

#### V04-D06C [1992]

# Preventing incorrect coupling

Polarisation

## V04-D06D [1992]

#### **Cable strain-relief**

Clamp

#### V04-D06X [1983]

Other

## V04-D09

# Other

Includes mounting of coupling parts to apparatus e.g. wall or panel, lockable housing for plug not in use, etc.

#### V04-E

#### Single-pole two-part connectors

## V04-F

#### Two-pole two-part connectors

Includes coaxial connectors. Communication type connectors are in section W e.g. for cable TV see W02-F codes.

#### V04-G

## Three or more-pole two-part connectors

#### V04-G01

### With parallel sliding contacts

Includes D-type-, rectangular- and trapezoidal-shaped connectors.

#### V04-G02

## For printed circuits

See also V04-M05. PCB connector

#### V04-G02A

**Edge connectors** 

#### V04-G02B

Surface connectors

#### V04-G09

#### Other

Includes jacks e.g. for telephone. See W01-C, W01-D codes also.

#### V04-G15 [2002]

#### **USB** connectors

Universal serial bus

# V04-H

# (Multiway) adaptors, including plug standards converters

Includes coupling parts adapted for simultaneous co-operation with two or more identical counterparts e.g. twin socket for distributing energy to two or more circuits. Also includes coupling parts adapted for co-operation with two or more dissimilar parts, coupling parts for co-operation with counterparts of different voltages.

## V04-H01 [1992]

#### Rails or bus-bars

Includes arrangements allowing counterpart to be mounted either at any point or at discrete locations.

Low power

#### V04-J

# **Coupling supported connectors**

Includes an intermediate part linking two coupling parts e.g. two male coupling parts interconnected by an intermediate part with two female parts; intermediate parts distributing energy to two or more parallel circuits. Also includes bridging contacts in a counter-part.

Shunt connector, three-part coupling

#### V04-K

#### Connectors with holders

#### V04-K01

## **Lamp holders**

See also X26-F. *Lamp socket* 

# V04-K02 [1983]

## For semiconductor devices

(V04-K09)

See also U11-D01Q, and V04-B01 if holder is for PCB mounting.

LED holder, IC socket

#### V04-K03 [1983]

## **Fuse holders**

(V04-K09)

See also X13-D01B.

Fuse clip

#### V04-K09

#### Other

Includes CRT sockets, valve holders. See also V05-D codes.

#### **V04-L**

# Rotary current collectors, distributors, interrupters

## V04-L01

#### Commutators, slip-rings, contact brushes

For electric machine application, see also V06-M12 or X11-J03.

V04-L01A [1983]

Commutators, slip-rings

V04-L01B [1983]

**Brush arrangements** 

#### V04-L09

#### Other

Includes distributors and interrupters. For vehicles see also X22-A01C.

Distributor caps

#### **V04-M**

#### **Connectors for specific applications**

Normally used in conjunction with above types, as relevant.

#### V04-M01

## High frequency and high speed connectors

Cable TV distribution, coaxial, antenna, RF, computer data, data communications

#### V04-M02

#### **Mains connectors**

Under-carpet cable connection

V04-M03 [1983]

Coaxial cables connectors

V04-M04 [1983]

#### Flat or ribbon cables connectors

Under-carpet flat cable connector

V04-M05 [1983]

**Printed circuits connector** 

V04-M06 [1983]

Adverse environments (dusty, wet, hot)

connector

V04-M07 [1987]

Insulation displacing connectors

IDC

V04-M08 [1987]

**Filter connectors** 

V04-M09 [1992]

#### Hybrid or mixed signal connectors

Includes combination of e.g. optical and electrical signals, power and data signals.

V04-M10 [1992]

**Crimped connectors** 

V04-M11 [1997]

Smart connectors

V04-M12 [1997]

Combination connectors; Stackable

connectors

V04-M15 [2002]

Hot plug connectors

V04-M16 [2005]

**ZIF** connectors

V04-M17 [2006]

# **Cable-connector combination**

Includes a combination of cable and connector where neither is, or both are, novel. See X12-D03Q also.

V04-M20 [2002]

Microconnectors

V04-M30 [1992]

# Characterised by application to specific industry

These codes are used together, if necessary, with other V04-M codes e.g. HF connector for communications is coded in V04-M01 and V04-M30G.

V04-M30A [1992]

Avionics/military/shipping

V04-M30C [1992]

**Land vehicles** 

V04-M30E [1992]

**Data processing** 

V04-M30G [1992]

**Telecommunications** 

V04-M30J [1992]

Oil/petrochemical

V04-M30L [1992]

**Consumer electronics** 

V04-M30M [1997]

Medical

V04-M30N [1992]

**Domestic** 

Includes connectors for irons, fridges, etc. Ordinary mains connectors are in V04-M02.

V04-M30P [1997]

**Personal hygiene** 

V04-M30Q [2002]

Instrumentation

V04-M30R [2002]

**Machine tools: Robotics** 

V04-M30S [2005]

Industrial machines

#### V04-N

# Flexible/turnable/swivel connectors; Nonrotary current collectors

Also includes flat cable arrangement for movable element, e.g. vehicle steering wheel. See also X22-C05, X22-X01.

#### V04-P

# Apparatus and processes for connector manufacture, assembly, testing, repair

Used in conjunction with V04-M. For testing of printed circuit board see V04-R06 instead. For general electric testing also see S01-G codes.

## V04-P01

For crimping, wire wrapping, etc.

V04-P01A [1992]

## Crimping

See also X12-G01E for heavy crimping tools.

V04-P01C [1992]

Wire wrapping

#### V04-P02

#### For commutators, slip-rings, brushes

See also V06-M11A or X11-J08A for application to electric machines.

V04-P03 [1992]

#### Wire stripping

(V04-P09)

See also X12-G01B for heavy power cables.

V04-P04 [1992]

# **Plating**

(V04-P09)

V04-P05 [1992]

Connecting terminal to housing or moulding

(V04-P09)

V04-P06 [1992]

Contact

(V04-P09)

V04-P07 [1992]

Housing (V04-P09)

V04-P08 [1992]

Soldering, riveting, welding

(V04-P09) See also X24.

V04-P09

Other

Metal recovery

V04-P10 [1992]

Connecting superconducting wires

(V04-P09)

See also X12-G01X, X12-D06.

V04-P11 [1992]

Terminating cable

(V04-P09)

V04-P12 [2006]

**Testing** 

V04-Q

**Printed circuits** 

V04-Q01

Printed connections to printed circuit boards

Includes printed elements for providing electric connections to or between printed circuits (See also V04-M05).

V04-Q02

Printed circuits structurally associated with other circuits or non-printed components

Includes printed circuits/boards structurally associated with electronic, electric and 'mechanical' components.

Universal interface board

V04-Q02A [1992]

Association with other non-printed components

V04-Q02A1 [1992]

Switch

V04-Q02A2 [1992]

**Multichip modules** 

See also U11-D01A6 and/or U14-H03A4 and U14-H03C3 codes. MCMs based on silicon substrates are in U11 and U14 only. Indeterminate substrate type MCMs are in sections U and V.

V04-Q02A3 [1992]

**Smart cards** 

See also T01-H, T04-K, and U11-D01A codes for IC card packages. See also U14 codes if thin film aspects are relevant. Connectors for smart cards are coded according to claimed aspects e.g. V04-G02, V04-M05.

V04-Q02A3A [2002]

**Contactless cards** 

V04-Q02A3B [2002]

**Contact cards** 

V04-Q02A3C [2002]

Hybrid/twin cards

V04-Q02A4 [2005]

Non-electrical components

Includes structural association of PCB with nonelectrical components, e.g. heat sink clamps, and optical components, such as lens holders, etc.

V04-Q02A5 [2005]

RFI/EMI (non-tracks) shields

Includes individual modules and whole PCB shielding cans/boxes. See also V04-U codes.

V04-Q02A6 [2005]

**Buried (non-printed) components** 

Includes association with components such as capacitors, resistors or inductors buried within layers or under encapsulant. See V04-R03 for PCB encapsulation per se.

V04-Q02A7 [2005]

Semiconductor device association with PCB

V04-Q02A2 and V04-Q02A3 take precedence.

## V04-Q02A9 [2006]

## Other associated electrical components

Includes PCB association with other electrical components e.g. mountable type antenna.

V04-Q02B [1992]

Association with other circuits

V04-Q02B1 [1992]

Mother/daughter boards

See also V04-T02.

V04-Q02B1A [1992]

**Hierarchical Interconnection Technology** 

See also V04-T02.

HIT

V04-Q03 [1992]

**Hybrid circuits** 

(V04-Q02, V04-Q09)

Includes hybrid circuits per se. Manufacturing is in V04-R05G and relevant processes being claimed e.g. metallisation in V04-R02. All aspects of hybrid circuits are not covered here. For example, packaging and terminals are covered more fully in section U. See also U14-H03 and U14-H04 codes.

V04-Q04 [1992]

Printed resistor, capacitor, or inductor

(V04-Q09)

See also V01-A02, V01-B03, V02-F01 codes.

V04-Q04A [2006]

**Printed resistor** 

V04-Q04B [2006]

**Printed capacitor** 

V04-Q04C [2006]

**Printed inductors; Printed coils** 

Also includes printed coils for transformers (see also V02-F/V02-G codes) and electric motors (see also V06-M08A1).

V04-Q04D [2006]

## **Composite printed components**

Includes printed RC, RL, RLC or LC component combinations. Passive frequency-selective networks using structurally-associated components are also assigned U25-E02A.

V04-Q05 [1992]

Printed circuits per se

(V04-Q09)

Includes track layout, general description of PCB and its components. V04-Q02A takes precedence for specific component association with PCB.

V04-Q05A [2005]

Track layout design for EMI/RFI shielding or ESD protection

See V04-U codes for general EMI/RFI shielding.

V04-Q06 [2002]

**Printed antenna** 

V04-Q08 [2005]

#### **Probe cards**

Use this code together with other V04-Q and V04-R codes if appropriate, e.g. V04-Q02A for novel structural association with electronic components, V04-Q02B for structural association with other PCBs within probe card assembly or test fixture, or V04-R codes for novel manufacturing aspects. See also V04-Q30Q, S01-G, S01-H and U11-F codes. V04-B01/M05 codes may be applied for highlighting novel features of terminals, pins, blades mounted on PCB.

V04-Q08A [2005]

Horizontal probe card

V04-Q08B [2005]

Vertical probe card

V04-Q09

Other

V04-Q30 [2005]

Characterised by application to specific industry or equipment

V04-Q30A [2005]

Avionics/military/shipping

V04-Q30B [2005]

**Land vehicles** 

V04-Q30C [2005]

Computers

V04-Q30D [2005]

Displays; projectors

V04-Q30E [2005]

**Data storage** 

V04-Q30F [2005]

Printers; Scanners; Photocopiers; Fax

machines

V04-Q30G [2005]

Telecommunication and broadcasting

V04-Q30H [2005]

Audio/video equipment

V04-Q30J [2005]

Cameras

V04-Q30K [2005]

**Toys; Games; Sports** 

V04-Q30L [2005]

**Power supplies** 

V04-Q30M [2005]

**Medical equipment** 

V04-Q30N [2005]

**Domestic appliances** 

V04-Q30P [2005]

**Personal articles** 

V04-Q30Q [2005]

Instrumentation

V04-Q30R [2005]

**Machine tools: Robotics** 

V04-Q30S [2005]

**Industrial machines** 

V04-Q30T [2005]

**Alarms; Signalling; Telecontrol** 

V04-Q30U [2010]

**Lighting; Lamps** 

Includes printed circuits used in illumination applications such as street lamps, table lamps and LED lamps.

V04-Q30X [2010]

Other

Includes oil/petroleum application and chemical industry.

V04-R

Printed circuit manufacture

V04-R01

Removing conductive material; resists

V04-R01A [1983]

Resist

Includes photoresist for use as solder mask. See also V04-R03, V04-R04A2.

V04-R01A1 [1992]

Material

V04-R01A2 [1992]

Stripping

V04-R01A3 [1992]

**Protector** 

V04-R01A4 [1992]

Liquid

V04-R01A5 [1992]

Dry

V04-R01A5A [1992]

Laminating

V04-R01A6 [1992]

Developing

V04-R01B [1992]

**Phototool** 

Includes all etching resist exposure methods and apparatus. For all other types of PCB exposure methods and apparatus see V04-R12.

Photomask

V04-R01C [1992]

Metal removal

V04-R01C1 [1992]

**Chemical etching** 

V04-R01C5 [1992]

Mechanical removal

Includes metal removal using e.g. laser.

#### V04-R02

## **Applying conductive material**

Includes wire embedded onto substrate or encapsulated PCB (see also V04-T01), processes to improve adhesion between substrate and metal layer (see also V04-R07), bonding metal foil to substrate is in V04-R07P1.

Conductive ink, circuit pattern production, metallising, masking tape

V04-R02A [1987]

# **Electroless plating**

Catalysts, chemical plating

V04-R02B [1987]

## **Electroplating**

Includes electrolytic plating methods or baths. See X25-R04 also.

V04-R02C [1987]

# Through-hole or via plating

Through-vias, blind vias, buried vias

V04-R02D [1992]

Sputtering

For general sputtering apparatus, see X25-A04.

V04-R02E [1992]

**Evaporation** 

V04-R02F [1992]

**Screen printing** 

V04-R02G [2005]

## Adhesion aids

Includes arrangements or materials for improving adhesion between a conductor track and substrate. Materials related to additives incorporated within the conductive material (see also V04-R02P) and additives incorporated within a substrate material (see also V04-R07L). If the adhesion aid is particularly for either a track or metal foil/layer use either this code or V04-R07P5, respectively. For general cases, use both codes.

V04-R02P [1992]

## **Conductive materials**

Conductive materials in general are covered by X12-D01 codes.

V04-R02Q [1992]

**Baking conductor tracks** 

V04-R02R [1992]

**Plating resists** 

V04-R02S [2006]

## **Ink-jet printing**

Includes the forming of conductive tracks by using an ink-jet printer (see S06-G codes for printer details).

#### V04-R03

#### Secondary treatment

Includes polishing etc.

V04-R03A [1992]

Repairing conductive pattern faults

V04-R03C [1992]

Cleaning

Includes chemical and mechanical cleaning.

Defluxing

V04-R03C1 [1992]

**Brush cleaning** 

V04-R03C2 [1992]

Vapour degreasing

V04-R03C3 [1992]

Wave cleaning

V04-R03C4 [1992]

Ultrasonic

V04-R03C9 [1992]

**CFC-free cleaner** 

V04-R03E [1992]

#### **Protective coatings**

Includes also solder mask left on PCB for protection.

Conformal coatings

V04-R03E1 [1992]

**Applying coatings** 

V04-R03G [1992]

**Drill smear removal** 

V04-R03J [1992]

# **Correcting soldering defects**

Includes de-soldering, resoldering components, removing excess solder. etc.

V04-R03L [1992]

**Drying** 

#### V04-R04

## **Assembling with components**

Includes mounting of electric, electronic and mechanical components. Includes also component removal. V04-R04 codes are used in conjunction with each other as appropriate. For example, surface mounted components and their soldering is in V04-R04B and V04-R04A codes.

# V04-R04A [1983]

## Soldering

Details of soldering methods and apparatus are also in X24-A. Unsoldering of components is also included here if precise method is not indicated.

V04-R04A1 [1987]

Wave soldering

Soldering baths

V04-R04A2 [1987]

Solder mask and its application

See also V04-R03. Solder resist

V04-R04A2A [1992]

**Permanent** 

Screen printing, photoprint, thermal-, UV-curing

V04-R04A2F [1992]

**Temporary** 

Solvent, peelable, aqueous

V04-R04A3 [1992]

**Reflow soldering** 

V04-R04A3A [1992]

Infrared

V04-R04A3C [1992]

Laser

V04-R04A3G [1992]

Thermal conduction

V04-R04A3J [1992]

Hot gas

Includes vapour phase soldering also.

V04-R04A3L [1992]

Soldering iron

Prior to 1992 soldering irons were coded in V04-V09. This is now discontinued.

Desoldering

V04-R04A4 [2010]

**Ultrasonic soldering** 

See also X24-A02X for general ultrasonic soldering.

V04-R04A5 [1992]

Flux/solder material

V04-R04A5A [1992]

Flux, solder paste/cream application

Screen printer, stencil printer, pressure dispensing

V04-R04A5C [1992]

'Clean flux': Fluxless soldering

Includes materials which need no secondary cleaning step.

V04-R04A7 [1992]

Inspecting solder joint

See also V04-R06D3.

V04-R04B [1987]

**Surface mounting** 

Component onserters

V04-R04B1 [1992]

Adhesive application, drying and curing

V04-R04B2 [1997]

Adhesive materials

V04-R04C [1987]

Wiring

See also V04-V02 for records prior to 1992. From 1992 onwards, see V04-V02 only for general circuitry manufacture.

V04-R04D [1992]

Leaded component mounting
V04-R04D1 [1992]

Lead clinching, cutting, shaping, etc.

(V04-R04, V04-V01)

V04-R04F [1992]

Component placement machine

(V04-R04, V04-R04B, V04-V01)

Used in conjunction with V04-R04B or V04-R04D.

V04-R04F1 [1992]

Robot

V04-R04F3 [1992]

Pick-and-place

# V04-R04G [1992]

## Component feeding, orienting

(V04-R04, V04-R01)

See also V04-V01 for records prior to 1992. From 1992 onwards, see V04-V01 only for general circuit manufacture. For component handling within placement machine see only V04-R04F.

Positioning

## V04-R04G1 [1992]

# Component magazine or bandolier per se and its handling

(V04-R04, V04-V01A)

See also V04-V01A for records prior to 1992. From 1992 onwards see V04-V01A only for general circuit manufacture. See also U11-F codes.

## V04-R04J [1992]

# Checking for correct mounting and presence of component

See also V04-R06D5.

#### V04-R05

# **Types of PCB**

This code is used in conjunction with other codes relating to PCBs/hybrids and their manufacture except in those cases where the type of PCB is evident from other claimed features e.g. multilayer substrate material is in V04-R07A and V04-R07L.

V04-R05A Multilayer	[1992]
V04-R05A1 Ceramic	[1992]
V04-R05B Double-sided (V04-R05)	[1992]
V04-R05C Rigid	[1992]
V04-R05D Flexible	[1992]
V04-R05E Three-dimensional	[1992]
<b>V04-R05G Hybrid</b> (V04-Q09)	[1992]

V04-R05H [2005]

Flex-rigid

V04-R06 [1983]

# Testing

(V04-R09)

See also S01-G, S02-A, S03-E, T01-J, T04-D codes. The V04-R06 codes are used in conjunction with each other as appropriate e.g. method for conductivity testing of a bare board by using bed-of-nails contact probe is coded in V04-R06A3 and V04-R06G1A.

Detecting defects, inspecting, shorts, pinholes, open circuit, specks

V04-R06A [1992]

**Bare board** 

V04-R06A1 [1992]

## Isolation

Includes testing of spacing between conductor tracks, short circuit between tracks etc.

## V04-R06A3 [1992]

#### Conductivity

Includes testing of open circuit in conductor tracks.

V04-R06D [1992]

# Loaded board

(V04-R06, V04-V09)

In-circuit

V04-R06D1 [1992]

**Functional** 

V04-R06D3 [1992]

Soldering

V04-R06D5 [1992]

**Correct component position** 

V04-R06G [1992]

**Test fixtures** 

V04-R06G1 [1992]

### **Contact probes**

See S01-H and appropriate V04 codes also. Spring-loaded probes

V04-R06G1A [1992]

**Bed-of-nails** 

V04-R06G1B [2002]

**Flying-probes** 

V04-R06G1C [2002]

**Generic probes** 

V04-R06G2 [2005]

Non-contact probes

V04-R06G3 [1992]

**Automatic Test Equipment** 

V04-R06G4 [2005]

Wireless fixture

Includes fixture having wires replaced by PCB.

V04-R06G5 [2005]

**MEMS-based probes** 

V04-R06J [1992]

Techniques/types

V04-R06J1 [1992]

**Optical** 

V04-R06J1A [1992]

**Visual inspection** 

V04-R06J1C [1992]

Image processing

Includes electronic imaging using CCTV, pattern recognition. See also T01-J, T04-D, W02-F codes.

V04-R06J2 [1997]

X-rays

V04-R06J3 [2006]

Mechanical or thermal tests

Includes e.g. vibration, structural, mechanical or thermal testing.

V04-R06J9 [2006]

Other testing techniques

V04-R06M [1992]

Artwork

Includes checking of traces, position of lands, photomasks/phototool, etc.

V04-R07 [1983]

Substrates

(V04-R09)

Includes measures to improve adhesion of metal to substrates. See also V04-R02.

V04-R07A [1992]

Multilayer

V04-R07A1 [1992]

**Ceramic** 

V04-R07B [1992]

Metal-cored

V04-R07C [1992]

Flexible

Polyimide film, polyester film

V04-R07D [1992]

Hybrid

V04-R07E [2005]

Metal-clad

V04-R07E1 [2005]

Single-sided

V04-R07E2 [2005]

**Double-sided** 

V04-R07F [2005]

**Constructional details** 

V04-R07L [1992]

Material

Insulating materials per se are covered by X12-E codes.

LC polymer, epoxy glass laminate, thermoplastic resin, poly/aryl) ether, ceramic, epoxy resin, phenol resin, alumina, berrylia, glass-coated alumina, unsaturated polyester resin and glass or synthetic fiber, steel, steatite, aluminium nitride sintered

V04-R07P [1992]

Manufacturing

V04-R07P1 [1992]

#### Laminating metal foil to substrate

Selective lamination of metal to form tracks is in V04-R02. See V04-R07P5 for adhesion aids such as materials or arrangements for improving adhesion between a copper foil/layer and the substrate. See note for V04-R02G.

# V04-R07P1A [1992]

## **Applying protective coatings**

Includes for e.g. treatment to prevent oxidation of metal foils.

# V04-R07P2 [2005]

## Manufacturing metal foil

Includes manufacture of metal foil which will subsequently be laminated on insulating substrate.

## V04-R07P3 [1992]

# Laminating layers of multilayer PCB

# V04-R07P4 [2005]

## Depositing (un-patterned) metal layer

Includes depositing (un-patterned) metal layer directly onto substrate.

## V04-R07P5 [2005]

#### Adhesion aids

Includes arrangements or materials for improving adhesion between a conductor foil or layer and substrate. Materials related to additives incorporated within the conductive material (see also V04-R02P) and additives incorporated within a substrate material (see also V04-R07L). If the adhesion aid is particularly for either a track or metal foil/layer use either this code or V04-R02G, respectively. For general cases, use both codes.

# V04-R07P6 [2007]

## **Insulating layers of multilayer PCB**

Includes application of insulating layers in manufacture of multilayer substrates.

# V04-R08 [1987]

#### **Drilling holes or vias**

(V04-R09)

Drilling, punching, through-holes, through-vias, blind vias, buried vias

# V04-R09

## Other

Includes static electricity neutralising, PCB holder/support etc.

## V04-R10 [1987]

### **Mask registration**

(V04-R09)

#### V04-R11 [1992]

# CAD of wiring layout, component placement, etc.

(V04-R09)

See also T01-J15A2. Also includes general layout design.

## V04-R12 [1992]

# **PCB** exposure

(V04-R09)

Includes all non-etching resist exposure methods and apparatus. See V04-R01B for etching resist exposure. For lamp details see X26 codes.

# V04-R13 [1992]

# Blanking, shearing, and cutting

(V04-R09)

## V04-R14 [1992]

# **Multistep processes**

(V04-R09)

This code is used when several well-defined steps are claimed.

#### V04-R15 [1992]

Materials recovery; Recycling

# V04-R15A [1992]

**Etchant** 

(V04-R01)

# V04-R15B [1992]

#### **Conductive material**

(V04-R02)

## V04-R16 [1992]

#### **Decontamination of wastes; Disposal**

(V04-R09)

# V04-R17 [1992]

# Board conveying and handling between processing stages

See X12-H01E8 for holding board in optimized position for non-contact power transfer. (V04-R09)

## V04-R19 [2005]

# **EMI/RFI** shielding tracks manufacture

Covers RFI/EMI shielding tracks manufacture. See V04-U for general shielding.

## V04-R20 [2007]

#### **Overstress indicators**

(V04-R09)

Includes arrangements used to highlight areas of PCB with dangerously high stress levels. See also S02-F codes for mechanical stress and S03-B codes for thermal stress measurements.

## V04-S

# Electronic equipment casing/cabinet, and drawers

Includes casings for electronic equipment like computers, A-V apparatus, etc. Electrical equipment such as microwave ovens, etc are not included here. For insulating materials (see X12-E codes, too) designated for general electronic equipment or apparatus, see V04-S codes for records prior to 1997. From 1997 onwards, see V04-X01B codes.

Housing, cases, covers, bases, panels, castors, handle, lifting eye, adjustable feet, ventilation slots, louvres

#### V04-S01

# Metal and hermetically sealed casings

## V04-S01A [1987]

#### Hermetically sealed casings

Encapsulation of PCBs is in V04-R03 only and component encapsulation is coded in relevant code for the component e.g. resistors in V01. *Encapsulants, seals, epoxy resin* 

# V04-S01C [2005]

Metal casing with insulative coating

V04-S02 [1987]

## Insulating material casing

(V04-S09)

Polyphenylene oxide flame retardant, ABS, plastics

V04-S02A [1992]

Sealed or encapsulated

V04-S02B [2005]

Insulating casing with conductive coating

V04-S03 [1992]

Battery holder/compartment associated with electrical/electronic equipment

(V04-S09)

See also X16-F06.

V04-S04 [2005]

#### Conductive (non-metallic) material casing

#### V04-S09

#### Other

Includes casings of indeterminate material.

Brackets, clips, vibration dampers, nameplate details

V04-S10 [2002]

Manufacture

V04-S15 [2002]

**Materials** 

V04-S20 [2005]

**Transparent casing** 

V04-S22 [2005]

Fire-proof and explosion-proof casing

V04-S23 [2017]

# Water-proof casing

Includes casings which are waterproof.

V04-S24 [2020]

## **Dust-proof casing**

Includes dust proof casing for all electronic devices.

#### V04-S30 [2007]

#### **Mechanical details**

Includes inserts, hinges, handles and locks.

## V04-T

# General constructional details of electronic apparatus

This code is used only for electronic equipment such as computers, A-V apparatus, etc. Electrical equipment such as microwave ovens are not included here.

### V04-T01

#### Arrangements of components and wiring

See also V04-V02 for wiring harnesses. Termination of wire harnesses is in V04-P11.

Panel mounting, breadboards

## V04-T01A [1992]

#### Wiring

Grommets, wire harness, ties, cable sleeve/marker, wire embedding, wire tie tools, cable trough, duct, trunking, busbar

V04-T01C [1992]

**Components** 

Component (de)mounting tool

V04-T01C1 [2002]

**Modular components** 

V04-T02

Mounting supporting structure in casing or on rack: rack construction

See also V04-Q02 for PCB in association with other components, W01-B20 for telephone distribution frame.

Circuit modules, frames, supports, PCB (de)mounting tools, PCB or panel spacer elements, back panel interconnections, mother/daughter board arrangements, card ejector, divider, guides, chassis runner, locating strip

V04-T03

Cooling; Heating; Air filtering/cleaning; Dehumidifiers

Includes cooling of electronic apparatus, systems and devices. Individual component cooling is also coded in relevant classes, e.g. for ICs, see U11-D02 codes.

V04-T03A [1983]

Heat sinks, radiative cooling

Heat conducting plates

V04-T03B [1983]

Forced cooling

V04-T03B1 [2002]

**Using fans** 

V04-T03B2 [2002]

Using pumps/compressors; Refrigeration

V04-T03B3 [2002]

**Cryogenic cooling** 

V04-T03C [2002]

Thermoelectric cooling

Peltier, heat pumps, cooling, electrocaloric effect, thin film perovskite PZT

V04-T03F [2005]

MEMS-based cooling

V04-T03G [2005]

**Hybrid cooling** 

V04-T03H [2002]

**Heat pipes** 

V04-T03J [2002]

**Heating arrangements** 

V04-T03K [2002]

Air filtering/cleaning

V04-T03L [2002]

**Dehumidifiers** 

V04-T03P [2002]

**Materials** 

Includes thermal materials and adhesives.

V04-T03Q [2002]

Manufacture; Testing; Monitoring

V04-T03X [2007]

Other cooling aspects

Includes cooling aspects not covered elsewhere e.g. involving the use of electro-caloric effects, heat sink mounts, etc.

V04-T04 [1992]

Hybrid electrical/optical board arrangements

V04-U

**Electric and magnetic screening** 

Normally includes screening arrangements for an individual equipment and the room containing the equipment. See S01-G08B5 also for screened rooms for electrical equipment testing. For individual measuring instrument screening, see S01-J02 also. For suppressing the emission of interference from an equipment by means of a specific constructional feature of the equipment, see also W02-H01E.

EM shielding, EMI, RFI

V04-U01 [1992]

Material

V04-U01A [1992]

Superconducting materials

See also X12-D06B and U14-F01 for superconducting materials per se.

V04-U02 [1992]

Faraday cage

Includes arrangements for a room, or whole apparatus.

V04-U03 [1992]

# **EMI-proof casings**

See also V04-S codes.

V04-U04 [2007]

### **EMI-proofing elements**

Includes elements such as gaskets, panels (see V04-U03 too, if the panel is part of a casing), etc.

V04-U15 [2002]

Manufacture

V04-U20 [2002]

**EMC** testing

V04-U21 [2010]

## **Electrostatic protection casing**

Includes electronic device protection from electrostatic effect.

#### V04-V

#### General circuit manufacture

- (1) Excludes PCB and its manufacturing from 1992 onwards. Please search relevant V04-R codes.
- (2) Includes general assemblages of electric components and their monitoring.
- (3) Prior to 1992, please search V04-V codes also for PCB component mounting, PCB loaded board testing and (de)soldering irons.
- (4) From 1992 onwards, all PCB testing is covered by V04-R06 codes; V04-V09 is still valid for general circuit testing.

#### V04-V01

# Feeding, orienting, mounting components

Robot assembler, automatic component insertion, positioning components, pick-and-place machine

V04-V01A [1987]

## Component magazine or bandolier

For ICs, see also U11-F.

Cassettes, carrier tapes

### V04-V02

#### Wiring

Includes manual and machine wiring. See also V04-T01

Harness manufacture, automatic wiring, looms, wire tie tools

V04-V02A [1983]

# Shaping component leads, cutting

(V04-V09)

Bending-, trimming-, clinching-, forming-leads

## V04-V09

#### Other

Includes component value changing tool and general circuit testing.

Testing circuit, monitoring

#### V04-X

#### Miscellaneous

Component marking

V04-X01 [1997]

General electronic components packaging, materials, cleaning, manufacture and disposal

V04-X01A [1997]

### Containers, packaging

Storage, shipping, transportation

V04-X01B [1997]

#### **Materials**

For insulating materials (see also X12-E codes) designated for general electronic equipment or apparatus, prior to 1997 see V04-S codes.

# V04-X01B1 [2005]

## **Nanomaterials**

Includes nanomaterials or nanoparticles for general electronic applications.

V04-X01C [1997]

#### Materials recovery and recycling

Includes material recovery and recycling of general electronic components.

V04-X01D [1997]

Cleaning

V04-X01E [2002]

Drying

V04-X01F [2005]

#### Manufacture and testing

Includes general electronic components manufacture and testing.

# V04-X01G [2005]

# Waste decontamination and disposal

Includes decontamination and disposal of general electronic components.

## V05: Valves, Discharge Tubes and CRTs

#### Notes

- (1) All aspects of discharge tubes for lighting (including manufacture) are covered by X26 and are not included in V05.
- (2) Manufacturing aspects of devices are normally only coded in V05-L. However, where important novelty or increased information can be conveyed by inclusion in device codes also, this is done.
- (3) In sections where separate codes for tube details are not included or are insufficient, codes from the general section (V05-M) should be used in conjunction with a device code.
- (4) From 1992 onwards, new codes were introduced to represent tube types which can be used whether the whole tube or just a component part is claimed. These codes can be applied if the particular tube type is specified and thus should be regarded as a means of limiting a search only, since the precise nature of a tube may be unspecified or unimportant in cases of wider application.

#### V05-A

#### **Gas-filled tubes**

Does not include plasma processing tubes - see V05-F05 codes. Prior to 1992, use V05-M in conjunction with V05-A codes for full coverage.

#### V05-A01

#### Plasma display panels and tubes

V05-A01A codes are used to describe the display type in conjunction with codes from V05-A01B to V05-A01G, which describe novel features.

#### Examples:

- (1) A novel barrier rib arrangement of a nonspecific plasma display panel type, use V05-A01A3 and V05-A01D3 together.
- (2) A novel drive circuit for a plasma-addressed LCD would be coded in V05-A01A7 and V05-A01G, as well as U14 and relevant T04/W03 codes.

Flat panel, matrix, seven-segment, plasma, vessel, housing, electrodes, filling

## V05-A01A [1992]

## Characterised by type of display

#### V05-A01A1 [1992]

### Segment type display tube

Prior to 2005, tubes limited to displaying characters only in matrix form were covered by V05-A01A3C.

## V05-A01A3 [1992]

## Plasma display panels

Includes display panels that directly emit the colour of the plasma discharge, as well as panels that use UV emission in order to excite a phosphor. Also includes plasma display panels of unspecified driving voltage type.

## V05-A01A3A [1992]

# **DC** display

Includes Self-scan® display panel with sequential discharge transfer.

## V05-A01A3B [1992]

**AC** display

## V05-A01A3C\* [1992-2004]

## For character display only

\*This code is now discontinued but covered display panels for alphanumeric data only, i.e. where not all points on screen can be addressed. From 2005, this code is no longer used. See V05-A01A9 for other plasma display types.

## V05-A01A3D\* [1992-2004]

## For character and graphics display

\*This code is now discontinued. Covers display with all points addressable. From 2005, this code is no longer used. See V05-A01A9 for other plasma display types.

#### V05-A01A5\* [1992-2004]

### **Multicolour display**

\*This code is now discontinued. From 2005, this code is no longer used. See V05-A01A9 for other plasma display types.

## V05-A01A5A\* [1992-2004]

## **Full colour display**

\*This code is now discontinued. Covers display capable of full colour range with primary colours. From 2005, this code is no longer used. See V05-A01A9 for other plasma display types.

#### V05-A01A7 [1992]

# Combined technology displays e.g. Plasma Addressed LCD

Covers displays where gas discharge is not the sole display mechanism, for example in combination with electroluminescent elements, LCD addressing, FED pixels etc. See also U14-K01A2C for plasma addressed LCD.

## V05-A01A7A\* [1992-2004]

# Using phosphor directly excited by discharge

\*This code is now discontinued. It is assumed that almost all plasma display panels operate using UV emission from the gas discharge in order to excite a phosphor, and thus are just coded in appropriate V05-A01A3 codes.

V05-A01A7B [1992]

Using plasma as source of electrons

V05-A01A9 [1992]

Other types of plasma display

V05-A01B [1992]

Light emitting arrangements; Phosphors

V05-A01B1 [1992]

**Gas filling** 

V05-A01B1A [1992]

## **Gas filling additives**

Includes additives to modify display colour or prolong life.

V05-A01B1C [1992]

## With several separate gases

Covers display with gas filling differing between cells, e.g. to display different colours.

V05-A01B3 [2005]

## **Phosphor Compositions**

(V05-M01A)

Includes manufacture of phosphor compositions. For coating of phosphors in plasma displays, see V05-L02 codes. Prior to 2005, coded in V05-M01A.

V05-A01B5 [2005]

### **Phosphor arrangements**

(V05-A01B)

Prior to 2005 coded in V05-A01B.

V05-A01C [1992]

#### **Electrode assemblies**

Covers details of electrode construction including materials, supports, insulating coatings, and layout. Lead-in conductors are covered by V05-A01D5.

V05-A01C1 [1992]

**Anodes** 

V05-A01C2 [1992]

# Discharge triggering and maintaining electrodes

From 2002 the scope of this code is expanded to allow the inclusion of discharge maintaining or holding electrodes.

Control electrode, bus/address electrodes

V05-A01C2A [2002]

# Discharge triggering electrodes

Covers electrodes specifically intended to initiate gas discharge.

V05-A01C2C [2002]

## Discharge maintaining electrodes

Covers electrodes specifically intended to maintain an existing gas discharge.

Holding electrode

V05-A01C3 [1992]

**Cathodes** 

V05-A01C3A [1992]

**Heated cathode** 

Hot cathode

V05-A01C4 [1992]

## Microfabricated electrodes

Covers electrodes produced by semiconductor device manufacturing techniques, (not screen printing).

V05-A01C5 [1992]

**Electrode supports** 

V05-A01C7 [1992]

## Dielectric coatings

Includes protective overcoats for electrode insulating layers.

V05-A01D [1992]

## Vessels, spacers, cell construction

Includes novel shape or size of cells. Screens and filters not forming part of the vessel are covered by V05-A01F codes.

V05-A01D1 [1992]

#### Vessels per se

Covers materials and construction of front and back panels and sealing arrangements.

Casing, housing, front plate, back plate, glass

## V05-A01D1A [1992]

#### **Seals**

Covers seals for main body of vessel and for leadins. Internal seals are covered by V05-A01D3A.

Frit

## V05-A01D1C [1992]

## Conductive coating

Covers coating e.g. for screening purposes. Electrodes are covered by V05-A01C codes.

#### V05-A01D1E [1992]

## **Optical coatings**

Includes anti-glare coating. External filters (i.e. as part of a display module) are covered by V05-A01F1.

## V05-A01D3 [1992]

## Internal spacing elements and seals

Includes rib structures.

Cell spacers

## V05-A01D3A [1992]

#### Internal seals

Covers seals between separate parts of vessel. Main vessel seals are covered by V05-A01D1A.

#### V05-A01D5 [1992]

Lead-in conductors

# V05-A01D7 [1992]

#### Mounting of integral drive circuitry

Covers circuitry structurally associated with display. Actual circuit details are covered by V05-A01G and, in general, W03-A08D.

## V05-A01E [1992]

# Complete novel display device

This code is used when a complete novel display device is claimed without specific reference to a particular feature.

## V05-A01F [1992]

## **Module aspects**

Includes display device per se (not necessarily novel), with e.g. external filters, housing, and drive electronics. (Circuitry per se is covered by V05-A01G codes). Filters formed as coatings on the discharge vessel are covered by V05-A01D1 codes.

#### V05-A01F1 [1992]

## **Optical filter**

## V05-A01F3 [1992]

## Housing, screening

Includes shielding.

## V05-A01F5 [1992]

### **Drive circuitry PCB mounting; Connectors**

Mounting of circuitry integral with display itself is covered by V05-A01D7.

## V05-A01G [1992]

## **Drive circuitry (circuit details)**

Includes circuitry which may be either integral with the display or external to it. Also includes driving methods. See also T04-H03 codes.

## V05-A01G1 [1992]

Integral with display

# V05-A01H [2006]

## **Tube cooling**

Note that this only applies to cooling systems used to remove heat from the tube envelope. Drive circuitry cooling is not included per se, but may be included in V05-A01F3 or V05-A01F5 codes where relevant housing or PCB mounting details are required. Prior to 2006, coded in V05-M07 codes.

## V05-A03 [1992]

#### Gas filled switching tubes

(V05-A09)

Details of switching tubes are covered by V05-A07 codes. See X13-A04H also for power switching tubes. Electronic switching in general is covered by U21-B codes.

Thyratron, cold cathode tube, TR tube

# V05-A05 [1992]

# Gas filled circuit protection devices

(V05-A09)

For device details see V05-A07 codes. Covers devices designed to limit excess voltage. See also U24-F02 and X13-C03 for low and high power over-voltage limiting in general, and also under application e.g. W01-C08A for telephone systems protection.

# V05-A07 [1992]

### **Details of gas-filled tubes**

(V05-M)

Codes in this section relate to devices in V05-A03, V05-A05, and V05-A09 codes.

V05-B03B8 [1992]

Complete novel tube

V05-B03B9 [1992]

Other cold cathode tube details

V05-B05 [1992]

Microminiature cold cathode devices

Codes in this section cover devices with analogous operation to those in V05-B03 but formed using semiconductor device fabrication techniques. See U11 codes for manufacture aspects (in addition to V05-L codes) and U12-B03D also for devices per se. Field emission electrodes using semiconductor fabrication techniques of general application and not forming part of a complete microfabricated device are coded in V05-M03A1. Microfabricated field emitters for cathode ray tubes are coded in V05-D05C5 codes, and for plasma display panels, in V05-A01C4.

V05-B05A [1992]

Characterised by nature of device

Codes in this section describe the nature of the device and do not necessarily indicate novel features, which are represented by the additional use of V05-B05B codes (see note in V05 class notes).

V05-B05A1 [1992]

**Characterised by number of electrodes** 

V05-B05A1A [1992]

Diode

V05-B05A1B [1992]

Triode

Three-electrode, three terminal, controlled device

V05-B05A1X [1992]

Other number of electrodes

V05-B05A3 [1992]

Characterised by configuration

Codes in this section are used alone or in combination as appropriate.

V05-B05A3A [1992]

Single device

V05-B05A3B [1992]

**Array of devices** 

V05-B05A3C [1992]

For integration with solid state semiconductor device

Covers incorporation with e.g. monolithic or film-type integrated circuit.

V05-B05A3E [1992]

For combination with other vacuum conduction devices

V05-B05A3X [1992]

## Other configurations

Includes cold cathode heat pumps and analogous devices.

V05-B05A5 [1992]

## Characterised by emitting element

Also coded in V05-B05B3 when emitting element per se is novel.

Field emission

V05-B05A5A [1992]

## pn junction

Includes 'hot electron' emitting device, i.e. element imparting acceleration to electrons before field emission process.

V05-B05A5B [1992]

Film electrode

V05-B05A5C [2006]

**Carbon nanotube** 

CNT, nanohorn

V05-B05A5X [1992]

Other emitting elements

V05-B05A8 [1992]

# Characterised by semiconductor or other substrate

Codes in this section are applied to describe the type of substrate only. When the substrate is the novel aspect V05-B05B1 is also assigned. For inventions with unspecified semiconductor substrate V05-B05A8 is assigned. If the substrate is stated to be of dielectric material V05-B05A8X is assigned. For cases where no details of the substrate are disclosed, V05-B05A8 codes are not assigned.

V05-B05A8A [1992]

III - V compounds

Gallium arsenide

V05-B05A8C [1992]

II - VI compounds

V05-B05A8E [1992]

Characterised by silicon substrate

V05-B05A8X [1992]

Other substrate

Includes dielectric material substrates.

V05-B05B [1992]

#### **Device details (novel)**

Codes in this section are only applied to indicate novel features.

V05-B05B1 [1992]

**Substrate** 

Use with V05-B05A8 codes to discriminate type of substrate.

V05-B05B3 [1992]

### **Emitting element i.e. cold cathode**

Use with V05-B05A5 codes to discriminate type of emitter.

V05-B05B5 [1992]

## Other electrodes (non-emitting electrodes)

Emitting electrodes are covered by V05-B05B3.

V05-B05B5A [1992]

**Control electrodes** 

Covers 'grid' control electrodes.

V05-B05B5B [1992]

Collector electrode

Covers 'anode' electrodes.

V05-B05B5X [1992]

Other non-emitting electrodes

V05-B05B7 [1992]

Housing, interconnections, integral circuitry

circuitiy

V05-B05B7A [1992]

Housing, encapsulation

V05-B05B7B [1992]

Interconnections

V05-B05B7C [1992]

**Connections to external circuitry** 

V05-B05B7D [1992]

Integral circuitry

Covers circuitry for driving, interfacing etc.

## V05-B05B8 [1992]

#### Complete novel device

This code takes precedence over other V05-B05B (i.e. novel feature) codes and is used in conjunction with V05-B05A codes to describe device type when the complete device is claimed as novel.

## V05-B05B9 [1992]

## Other novel details

## V05-C

#### **Transit-time tubes**

## V05-C01

## **Tube types**

Codes in this section e.g. V05-C01A are used when the tube as a complete device is claimed, otherwise the subdivision 'details' codes e.g. V05-C01A1 (introduced from 1992) are assigned together with appropriate codes from the 'details' (V05-C02) section. Prior to 1992, V05-C02 codes were used alone if only details of a tube were claimed.

Examples:

- (1) Novel magnetron: V05-C01A
- (2) Novel anode for magnetron: V05-C01A1 and V05-C02A1
- (3) Novel anode for any type of transit time tube: V05-C02A1.

## V05-C01A [1983]

#### Magnetrons

Does not cover apparatus for magnetron sputtering or other workpiece processing, which is covered by V05-F05 codes, especially V05-F05C3A.

Multi-cavity

## V05-C01A1 [1992]

#### **Tube details**

Search with V05-C02 codes for novel details of tube

## V05-C01B [1983]

# **Travelling-wave tubes**

TWT, crossed-field tube, forward wave, backward wave, parametric, BWO

## V05-C01B1 [1992]

#### **Tube details**

Search with V05-C02 codes for novel details of tube.

## V05-C01C [1987]

## **Klystrons**

(V05-C01X)

Reflex, interaction, beam, stream

## V05-C01C1 [1992]

#### **Tube details**

Search with V05-C02 codes for novel details of tube.

#### V05-C01D [1992]

## Gyrotron

(V05-C01X)

For quasi optical types see V08-B also. Includes gyro-klystron devices.

## V05-C01D1 [1992]

#### **Tube details**

Search with V05-C02 codes for novel details of tube.

## V05-C01E [2006]

## **Inductive output tubes**

Prior to 2006, coded in V05-C01X *IOT* 

#### V05-C01E1 [2006]

## **Tube details**

Search with V05-C02 codes for novel details of tube.

# V05-C01X [1983]

#### Other tube types

Multipactor

#### V05-C02

#### **General constructional details**

To link to a particular type of tube use appropriate 'tube details' code from V05-C01 section.

#### V05-C02A [1983]

# Electrodes, screens, magnetic control

#### V05-C02A1 [1992]

#### **Anodes**

See V05-C02C1 codes also when combined function as anode and resonator is significant. Note that slow-wave structures per se are treated as a distributed element, but for manufacture, as an electrode. (See note for V05-C02C3A).

Collector

V05-C02A3 [1992]

**Cathodes** 

Thermionic, dispenser

V05-C02A3A [1992]

Heaters

V05-C02A5 [1992]

**Electron guns** 

Includes grid electrodes, and electrostatic focusing and beam path control. (Use V05-C02A7 codes for magnetic control of these functions).

V05-C02A7 [1992]

**Magnetic control** 

Magnet, electromagnet, coil, winding, solenoid

V05-C02A7A [1992]

Focusing

Focusing by electrodes is covered by V05-C02A5.

V05-C02A7C [1992]

Influencing beam path

Magnetron

V05-C02A9 [1992]

Other electrodes, screens

Includes screens.

V05-C02B [1983]

Vessels, lead-ins, seals, RFI suppression

Suppression of RFI other than by lead filtering is covered by V05-C02C codes. V05-C02B codes include cooling and coupling arrangements. Housing, heat sink, window, filter, RFI suppressor

V05-C02B1 [1992]

**Vessels** 

V05-C02B1A [1992]

Seals

V05-C02B1C [1992]

**Coupling windows** 

Covers part of vessel enabling transfer of RF energy. See V05-C02C5 for waveguide coupling arrangement.

V05-C02B3 [1992]

Lead-ins

V05-C02B3A [1992]

**Lead-in filters** 

Includes filter devices preventing radiation of RF energy from e.g. heater power supply terminals, also assigned W02-H01 (RFI suppression at source in general). See U25-E02 codes also for details of filters per se. RFI suppression by internal means is covered by V05-C02C7.

Radio frequency interference, choke, feedthrough, capacitor, condenser

V05-C02B5 [1992]

Cooling

See V05-M07 codes for cooling of tubes in general. Heatsink, radiate, air, fan, blower, pump, fluid, liquid, vapour

V05-C02C [1983]

**Distributed elements** 

Includes resonators, delays, etc. See W02-A codes for distributed-constant elements not forming part of tube. (These elements are not assigned W02-A codes when part of a tube, unless wider application is suggested).

V05-C02C1 [1992]

Resonator structures

Cavity

V05-C02C1A [1992]

Single resonator

V05-C02C1B [1992]

Multiple resonator

Interconnection, multicavity

V05-C02C1C [1992]

**Tunable resonator** 

Includes mechanically- and electrically-tuneable structures.

V05-C02C3 [1992]

**Delay elements** 

V05-C02C3A [1992]

Slow wave structures

Manufacture of slow wave structure is covered by V05-L01B7, i.e. for manufacturing purposes only, it is regarded as an electrode.

Helix

## V05-C02C5 [1992]

## **Distributed coupling**

Includes e.g. waveguide structure for coupling to tube. Window structures forming part of vessel are covered by V05-C02B1C.

### V05-C02C7 [1992]

## **RFI** and harmonic suppression

W02-H01, general code for RFI suppression at source, is not applied for arrangements internal to the tube per se. External filtering of lead-ins is covered by V05-C02B3A.

Damping

## V05-C03 [1992]

## Circuitry specific to transit time tubes

Codes in this section are only used for specific circuitry taking into account device characteristics, and where provision does not exist elsewhere. In general, see under application, e.g. W02-G01 codes for transmitters, U23-A02 for oscillators, U24-G04D for amplifiers, etc.

#### V05-C03A [1992]

## **Power supplies**

HT, LT, anode supply, heater supply

## V05-C03C [1992]

# **Control of tube operation**

Output control, oscillation, pulse, magnet current

#### V05-D

## Cathode-ray tubes; Electron beam tubes

This section relates to CRTs and similar tubes, chiefly for displays or for imaging purposes - video cameras for example. Tubes for beam processing of workpieces, electron microscopes etc. are not included and are covered by V05-F codes.

V05-D codes are divided into those relating to particular tube types (V05-D01 to V05-D04) and those for details of tubes and associated devices (V05-D05 to V05-D10).

Within V05-D, manufacture of all tube and device types is covered by V05-L codes only. Codes for the device per se are not used unless that aspect is also claimed. Prior to 1992 tube type codes were only assigned when the tube was presented as a complete novel device. From 1992 onwards, distinction is made between complete novel tubes and codes describing tube type and/or indicating novel details of the tube.

Note that novel display drive circuitry for CRTs is not included in V05 at all, as generally this is not part of the vacuum tube assembly itself and is instead covered by relevant W03 and T04 codes. However, Field Emission Display drive circuitry

(V05-D10) is included as often it is integral to the display substrate, as well as being covered by relevant W03 and T04 codes. Operating circuitry for image converters and intensifiers is also included in V05-D03H.

#### Examples

- (1) Completely novel beam penetration CRT: V05-D01A and V05-D01B1C.
- (2) Novel cold cathode for field emission display: V05-D01C3 and V05-D05C5.

#### V05-D01

## Image display tubes

TV, VDU, VDT, video terminal, projection

## V05-D01A

[1992]

# Complete novel tube

This code is used with other V05-D01 codes indicating type.

## V05-D01B [1992]

#### Cathode ray tubes

Includes unspecified CRT display types.

Braun tube

# V05-D01B1 [1992]

Single electron gun tubes

## V05-D01B1A [1992]

**Monochrome tubes** 

# V05-D01B1C [1992]

**Beam penetration tubes** 

## V05-D01B1D [1992]

# Single gun multibeam tubes

Includes tubes analogous to Trinitron® capable of colour display.

Aperture grill

# V05-D01B1E [1992]

## Flood gun tubes

Includes tube with e.g. three primary colour areas on screen usable as multicolour pixel in large display.

## V05-D01B3 [1992]

### Multiple electron gun tubes

This code is used if 'shadow mask CRT' specified with no indication of gun type.

# V05-D01B3A [1992]

## In-line gun tubes

# V05-D01B3B [1992]

#### Delta gun tubes

Triad

#### V05-D01B3C [1992]

## Matrix configuration multiple gun tubes

Covers tube with large number of electron beams, e.g. 'matrix drive with deflection' type. Prior to 2005 included field emission display matrices, now coded in V05-D06A codes.

## V05-D01B3D [1992]

#### 'Composite' tube with separate tube necks

Covers tube with e.g. three separate neck sections each with gun system, e.g. for large display area.

# V05-D01B5 [1992]

#### Flat CRT

Includes tubes with electron gun not perpendicular to screen surface. Does not cover flat panel matrix-gun tubes, which are covered by V05-D01B3C.

## V05-D01B6 [1992]

**Beam index colour CRT** 

V05-D01B9 [1992]

Other CRT type

V05-D01C [1992]

Vacuum fluorescent display tubes

# V05-D01C1 [1992]

#### For displaying character only

Includes seven segment type display.

# V05-D01C3 [2002]

## **Field Emission Displays**

Includes displays with field emission cathodes. For novel details of cold cathodes per se, see also V05-D05C5 codes. For novel emitter arrangements, see also V05-D06A codes.

Prior to 2002 field emission displays can be found in V05-D01C5 with V05-M03A to signify cathode type (if cathode is not novel) or in V05-D05C5 is cathode is novel.

Cold cathode, surface emission, surface emission electron conduction display, SED, FED

# V05-D01C5 [1992]

#### Dot matrix displays

#### V05-D02

#### Image pick-up tubes

TV camera tube, vidicon, plumbicon

## V05-D02A [1992]

Complete novel tube

#### V05-D02B [1992]

#### **Tube details**

Use with V05-D05 to V05-D09 codes as appropriate.

#### V05-D03

## Image converters and intensifiers

Tubes for night vision equipment are assigned W07-G codes also.

Streak tube, x-ray imaging tube, infrared imaging tube

## V05-D03A [1992]

#### Complete novel tube

For cases where particular detail of tube is the novel aspect, this code is not used. Search V05-D03B to V05-D03E with V05-D05 to V05-D09 codes as appropriate.

## V05-D03B [1992]

## **Tubes with optical output**

Covers tubes acting as both converters and intensifiers, which may be viewed directly, photographed, or used to generate visible image for another image pick-up device.

#### V05-D03B1 [1992]

#### **Tube with non-light input**

Includes image converters.

## V05-D03B1A [1992]

For X-rays

Radiography

#### V05-D03B3 [1992]

## Tubes with non-visible light input

Includes tube converting IR image to visible light output. Video cameras sensitive to IR are coded in W04-M01E1 codes.

Thermal imaging camera

## V05-D03B5 [1992]

## Tube with low level visible light input

Includes image intensifier.

## V05-D03C [1992]

## **Tubes with electrical output**

Covers camera tubes sensitive to radiation other than visible light. (Electrical output/visible light input tubes are covered by V05-D02 codes).

Note: does not include photomultiplier tubes, see V05-G and K codes as appropriate.

# V05-D03E [1992]

# **Tubes for scientific analysis**

Includes streak tube. See also appropriate codes in S02 or S03, e.g. S02-H, S03-A codes etc.

#### V05-D03H [1992]

## **Operating circuitry**

Includes e.g. power supplies for scanning and nonvideo arrangements. See W04-M01 codes for video camera circuitry and W07-G codes for night vision equipment.

#### V05-D04

Other tubes (Including tubes for data storage, phase shifting)

V05-D04A [1992]

Complete novel tube

V05-D04B [1992]

#### **Tube details**

Use with V05-D05 to V05-D09 codes as appropriate.

#### V05-D05

**Electrodes, screens** 

## V05-D05A

## Photoelectric and charge-storage screens

Target, photoconductive screen, photovoltaic screen

V05-D05A1 [1992]

#### Photoelectric screen

Photocathode

V05-D05A3 [2005]

#### Semiconductor diode arrays

(V05-D05A5A)

Includes e.g. Laser diode CRT screens. Prior to 2005, coded in V05-D05A5A.

Laser CRT

V05-D05A5 [1992]

#### Charge storage screen

## V05-D05A5A\* [1992-2004]

## Screen with array of semiconductor diodes

\*This code is now discontinued. See V05-D05A3.

#### V05-D05B

#### **Luminescent screens**

See V05-M01 also for compositions.

Phosphor screen, fluorescent material, aluminium coating, black matrix, dot, triad, stripe

## V05-D05B1 [1992]

# Phosphor compositions

Includes manufacture of phosphor materials per se. Also coded in V05-M01A if suitable for screens in general. (Prior to 1992, search V05-D05B and V05-M01).

Activator, host, killer, phosphorous, oxide, persistence

# V05-D05B3 [1992]

### Single phosphor screen

Monochrome

## V05-D05B5 [1992]

## Multiple phosphor screen

Covers screens for display of more than one colour. *RGB, red, green, blue* 

#### V05-D05B5A [1992]

With phosphor arranged in dots of different colours

#### V05-D05B5B [1992]

With phosphors arranged in stripes of different colour

## V05-D05B5C [1992]

#### With overlaid different colour phosphors

Includes screen for beam penetration type CRT. Also coded in V05-D01B1C.

## V05-D05B7 [1992]

#### Non-phosphor aspects of screen

Covers non-luminous components of screen. Binder, vehicle, black matrix

# V05-D05B7A [1992]

# **Protective metallic coatings**

Covers metallic coatings applied over screen phosphors for protection.

Aluminum

V05-D05C [1987]

**Cathodes** 

Coating, emission

V05-D05C1 [1992]

#### Thermionic cathodes

See V05-M02 codes for thermionic cathodes in general.

## V05-D05C1A [1992]

#### Thermionic cathode composition

Includes composition of coatings.

Barium, scandium, strontium, thorium

V05-D05C1C [1992]

#### **Heater element**

Tungsten

V05-D05C5 [1992]

#### Cold cathodes

For field emission cathode arrays search with V05-D01B3C.

Field emission, FED, SED

## V05-D05C5A [1992]

#### Microminiature cold cathodes

Covers e.g. carbon nanotube emitters. Also covers cold cathodes formed on semiconductor substrate. See V05-M03A1 and U12-B03D for such structures in general, and V05-B05 codes for complete microminiature devices.

V05-D05C5C [1997]

## **Current limiting arrangements**

(V05-D05C5)

Includes ballast resistors.

V05-D05D [1987]

# Shadow masks

Colour selection electrode, aperture mask, slot mask, foil mask, tensed-steel mask

V05-D05D1 [1992]

**Mask construction** 

V05-D05D1A [1992]

**Details of apertures** 

V05-D05D1C [1992]

# Shape of mask

This code is used to describe novel shape of the mask as a whole and not apertures, which are covered by V05-D05D1A.

V05-D05D3 [1992]

#### Mask material

Covers material compositions of mask per se and also coatings.

Nickel, steel

V05-D05D5 [1992]

#### Mask mounting details

Also coded in V05-D07A3 if vessel aspects involved.

Frame

V05-D05D5A [1992]

# For removal and alignment during exposure

Actual exposure process using colour selection electrode as a lithographic mask is covered by V05-L02E3.

V05-D05E [1992]

Internal shield

V05-D05E1 [1992]

Magnetic shield

V05-D05F [1992]

# Fluorescent or field emission display screen electrodes

Includes field emission display screen anodes. Also includes beam index electrodes (search with V05-D01B6) and fluorescent screen tube anodes.

# V05-D05X

# Other electrode or screen details

## V05-D06

# Beam generating and controlling arrangements

Electron-optical arrangements in general are covered by V05-M04 codes.

## V05-D06A

# Electron guns, controlling beam crosssection or aberration, focusing arrangements

Grid, anode, electrode assembly, electrode supports, colour purity, convergence adjustment, electron lens, apertured disc

V05-D06A1 [1992]

**Electron gun type** 

V05-D06A1A [1992]

Single gun

Also coded in appropriate V05-D01B1 code.

V05-D06A1B [1992]

In-line multiple gun

Also coded in V05-D01B3A.

V05-D06A1C [1992]

Delta multiple gun

Also coded in V05-D01B3B.

V05-D06A1E [1992]

Matrix of electron guns or field emission devices

See also V05-D01B3C for CRT matrices. See V05-D01C3 for FED matrices. Prior to 2005, coded in V05-D01B3C.

Matrix drive with deflection

V05-D06A1F [2005]

Field emission device

Includes novel complete emitter, gate and anode structure.

V05-D06A2 [1992]

**Beam intensity control** 

Includes grid/gate electrodes stimulating field emission.

Acceleration electrode

V05-D06A3 [1992]

Focusing

Lens electrodes, quadrupole

V05-D06A5 [1992]

Beam cross-section and aberration correction

Halo correction

V05-D06A7 [1992]

Components associated with electron gun

Includes resistive potential divider structurally associated with gun. Current limiting arrangements associated with field emission cathodes are coded in V05-D05C5C only.

V05-D06B

Beam deflection arrangements

See also V02-F01A for inductive deflection components, and T04-H01 or W03-A08A1 codes as appropriate.

Horizontal, vertical, coil assembly

V05-D06B1 [1992]

**Electromagnetic deflection** 

Includes convergence coils, also coded in W03-A08A5A.

V05-D06B1A [1992]

**Deflection yoke assembly** 

Includes manufacture of deflection yokes. Also coded in V02-F01A and W03-A08A1B unless TV receiver displays are specifically excluded. Note, convergence coils are covered by V05-D06B1.

V05-D06B5 [1992]

**Electrostatic deflection** 

X-plates, Y-plates

V05-D06B5A [1992]

With electrodes on tube surface

Also coded in V05-D07B3A. Includes e.g. deflection electrodes for image pick-up tube (also coded in V05-D02B).

V05-D06C [1992]

**Post-deflection arrangements** 

Post deflection anode, PDA, post-acceleration

V05-D06E [1992]

**Electron-multiplier arrangements** 

For electron multipliers in general, see V05-K01 codes. See V05-L01A5A for manufacture. (Prior to 1992 search V05-D06X and V05-K).

MCP, microchannel plate

V05-D06X

Other beam generating and controlling arrangements

Afterglow-preventing electron gun blocker, Internal beam reflecting surface

V05-D07 [1987]

Vessels, seals, cooling, combined optical arrangements etc.

V05-D07A [1987]

Vessels, seals, tension band

V05-D07A1 [1992]

**Tension band** 

Includes e.g. attaching mechanism of t-band to envelope.

Anti-implosion band, t-band, reinforcing, adhesive tape

V05-D07A3 [1992]

Internal electrode supports

V05-D07A5 [1992]

Vessel per se

Glass panel, funnel, neck

V05-D07A5A [1992]

Shape

Covers novel shape or contour e.g. for particular aspect ratio display.

V05-D07A5C [1992]

Composition

V05-D07A5E [1997]

**Spacers** 

(V05-D07A5)

Covers internal spacers used to support vessel against atmospheric pressure. See V05-L03A1 for spacer manufacture.

V05-D07A7 [1992]

**Seals for vessel** 

V05-D07A7A [1992]

**Vessel seal compositions** 

V05-D07B [1987]

Lead-ins, screening and antistatic coatings

V05-D07B1 [1992]

**Lead-in conductors** 

Connecting pins

V05-D07B3 [1992]

Antistatic, magnetic and EM shielding coatings

Includes conductive coatings in general, where coating function or location (internal/external) is not disclosed or is irrelevant.

Discharge preventing coating, conductive coating, touchscreen, front panel RFI filter

V05-D07B3A [1992]

Internal coating

V05-D07B3C [1992]

**External coating** 

V05-D07B3E [2005]

**EM shielding coatings** 

(V05-D07B3) *X-ray, EMI* 

V05-D07B3M [2005]

**Magnetic coatings** 

(V05-D07B3)

V05-D07B3S [2005]

**Antistatic coatings** 

(V05-D07B3)

V05-D07B5 [1992]

Separate screening device

Includes detachable radiation screen placed over tube faceplate, for e.g. EM radiation prevention. For detachable optical filters see V05-D07C5E. V05-D07B3 takes precedence over this code if 'screening device' is mentioned without further detail.

V05-D07C

Cooling, optical arrangements structurally combined with vessel

V05-D07C1 [1992]

**Tube cooling** 

For projection TV tube use W04-Q01A also. Liquid, fluid, faceplate, conduct

V05-D07C3 [1992]

Optical layer on tube surface

Includes filters for e.g. antireflective purposes. For detachable types see V05-D07C5E which takes precedence if 'filter' only is mentioned.

Antiglare, faceplate

V05-D07C3A [1997]

Internal optical layer

(V05-D07C3)

V05-D07C3C [1997]

**External optical layer** 

(V05-D07C3)

V05-D07C5 [1992]

**Associated optics** 

Codes in this section cover optical arrangements which are not part of the tube per se.

## V05-D07C5A [1992]

#### Lens

Includes lens assembly for e.g. projection TV (also coded in W04-Q01A and W04-Q01E).

## V05-D07C5C [1992]

#### **Fiber optics**

OFT, FOT, optical fiber tube

# V05-D07C5E [1992]

## **Detachable optical filter**

Includes anti-reflective filters. This code takes precedence over V05-D07C3 (filter layer on tube surface) if 'optical filter' only is mentioned without further detail.

V05-D07E [1992]

Getters

V05-D08 [1992]

## Associated devices and circuitry

Codes in this section deal with ancillary apparatus but not detachable conductive and optical filters which are coded in V05-D07B5 and V05-D07C5E respectively. See also relevant equipment codes in e.g. T04 or W03.

## V05-D08A [1992]

#### **Degaussing system**

Degaussing/demagnetising in general is covered by V02-D, which is also assigned here. Covers cancelling arrangements for terrestrial magnetism.

## V05-D08A1 [1992]

#### Circuitry

Includes power supply, current control, etc. For use of thermistors to cause current decay search with V01-A02A7C.

V05-D08A5 [1992]

Coil

V05-D08B [1992]

## **Radiation preventing coil**

Covers arrangements to cancel radiated fields from e.g. deflection system.

V05-D08C [1992]

**Connectors** 

See also appropriate code in V04.

V05-D08C1 [1992]

For final anode

EHT connection, anode cap, HV, anode button

## V05-D08C5 [1992]

#### For tube base

Also coded in V04-K.

CRT Rose

# V05-D08E [1992]

#### **External shield enclosure for CRT**

Includes external shields which can protect against effects either leaving or entering the body of the CRT other than through the faceplate. Shielding for electrical equipment in general is covered by V04-U codes.

#### V05-D09

# Other details of cathode-ray tube; Electron beam tube

Includes ion traps.

# V05-D10 [2005]

# Field Emission and Fluorescent Display Drive Circuitry

Includes drive circuitry integral with vacuum tube. Note that drive circuitry for Cathode Ray Tubes is not included in V05, and should be searched in appropriate T04/W03 classes.

#### **V05-E**

# X-ray/Extreme UV tubes and techniques (general); Ion beam tubes

Ion beam tubes for processing workpieces are not included -see V05-F05 codes, e.g. V05-F05A7C.

### V05-E01

# Electron beam target-impact X-ray tubes and generators

Covers X-ray generators where operation is by impingement of electron beam on target. See V05-L05E for X-ray tube manufacture.

Medical therapy/diagnostic source, lithography/materials processing source

### V05-E01A [1992]

## Anode electrode per se

See V05-L01B3 for manufacture.

V05-E01A1 [1992]

Material composition

V05-E01A1A [1992]

Of separate active target part

V05-E01A3 [1992]

Shape and construction

V05-E01A3A [1992]

Of separate target section

V05-E01B [1992]

#### Rotary anode system

Does not include details of anode electrode per se, which are covered by V05-E01A codes.

V05-E01B1 [1992]

Bearings, support shaft

V05-E01B1A [1992]

**Bearings** 

V05-E01B3 [1992]

Rotary drive system

V05-E01B3A [1992]

With separate motor drive

V05-E01B3C [1992]

With anode assembly forming part of

.......

V05-E01B5 [1992]

#### Anode cooling system

For non-rotary anode cooling see V05-E01F.

V05-E01C [1992]

**Cathodes** 

Includes cathode supports.

V05-E01C1 [1992]

Heater

V05-E01C5 [1992]

### Separate heating arrangement

Includes use of e.g. laser beam to heat thermionic cathode.

V05-E01C7 [2006]

#### Cold cathode

Note that prior to 2006, cold cathode electron emitters for X-ray generators were coded in V05-E01C combined with V05-M03A codes.

Field emission, FE

V05-E01C7A [2006]

#### Carbon nanotube based

Includes all microminiature semiconductor or nanotechnology-based field emitters. Prior to 2006, coded in V05-E01C and V05-M03A1.

CNT, nanotube, carbon nanofiber

V05-E01D [1992]

**Electron guns and other electrodes** 

V05-E01D1 [1992]

**Electron gun** 

Includes all X-ray tube electron-optical systems.

V05-E01E [1992]

Vessels, lead-ins, seals

V05-E01E1 [1992]

**Vessel construction** 

V05-E01E1A [1992]

X-ray windows

V05-E01E3 [1992]

Seals

V05-E01E5 [1992]

Lead-in conductors

V05-E01F [1992]

**Cooling system** 

See V05-E01B5 for cooling of rotary anode.

V05-E01H [1992]

#### X-ray tube type

Codes in this section are used to indicate the type of tube only, irrespective of novel features which are indicated by other V05-E01 codes.

**V05-E01H1** [1992]

Rotary anode tube

V05-E01H1A [2006]

Multiple rotary anode tube

V05-E01H3 [1992]

Fixed anode tube

V05-E01H5 [1992]

**Tube employing electron gun** 

V05-E01H5A [1992]

With circular electron beam path

Synchrotron X-ray generators are not included - see V05-E03A.

V05-E01H7 [1992]

Tube for 'flash' operation

Pulse operation

# V05-E01H9 [1992]

# Other target-impact type tube

Includes liquid metal target-impact tubes. For non-electron beam target-impact tubes (e.g. laser T-I), see V05-E03.

Gallium

# V05-E01X [1992]

#### Other X-ray tube details

#### V05-E02

### Controlling or protecting X-ray apparatus

See also S05-A03 and S05-D02A for medical therapy and diagnostic apparatus respectively.

#### V05-E02A [1992]

# Power supply for X-ray equipment

See U24-D and X12-J codes for power supplies in general.

#### V05-E02C [1992]

# **Output control; Tube protection**

Includes setting desired current/time exposure.

Exposure time control, dose control, measurement, monitoring

#### V05-E02C1 [1992]

### For flash operation

Pulse operation

# V05-E02C5 [1992]

#### Incorporating protection features

# V05-E02C5A [1992]

# Protection of tube per se

Includes monitoring excess current or temperature.

Measurement, monitoring

#### V05-E02C5C [1992]

# **Limiting output level**

Includes control based on e.g. radiation dosage. See also S05-A03 and S05-D02A3 codes for medical applications.

Dose control

#### V05-E03 [1992]

# Non-standard X-ray generators

For tube details, see also V05-M codes.

#### V05-E03A [1992]

#### **Synchrotron**

See also X14-G02.

#### V05-E03B [2006]

#### Laser target impact sources

Prior to 2006, coded in V05-E03.

# V05-E03C [2006]

#### X-ray laser sources

Includes tubes which produce coherent, monochromatic X-ray radiation. See also V08-B02. Prior to 2006, coded in V05-E03.

# V05-E04 [2005]

### Laser plasma X-ray/EUV sources

For application to lithography systems, see also V05-F08C1 and V05-F05 codes. See also relevant V05-M codes for novelty not included below. Prior to 2005, coded in V05-E03. In 2005, V05-E04 covered all details of non-standard X-ray generators, but from 2006 V05-E04 specifically covers details of Laser plasma X-ray/EUV sources used in non-standard X-ray generators. Other details of non-standard X-ray generators are coded in V05-E03.

#### V05-E04A [2005]

#### Gas filling

Includes gas compositions.

#### V05-E04B [2005]

### **lonising arrangements**

# V05-E05 [1992]

### Ion beam tubes and devices

Tubes for processing objects are covered by V05-F codes.

Penning ion source, plasma imploding device, surface ionisation, photo-ionisation tube

# V05-E05A [1992]

#### For propulsive effect

Includes ion thruster for e.g. satellite (also coded in W06-B03A).

Gas bottle, orient, pitch, yaw, turn, spacecraft

#### V05-E06 [2005]

#### **Neutron sources and devices**

(V05-E09

Prior to 2005 neutron sources were coded in V05-E09.

#### V05-E08 [1992]

#### X-ray 'optical' elements

Includes EUV and X-ray lithography masks. See also U11-C04H2 and V05-F05 codes.

# V05-E08A [2005]

# 'Optical' manipulation of X-rays

This code is intended to be used with X-ray optical elements that use wave effects or similar to alter e.g. the focus or direction of the radiation.

Molybdenum layered mirror, capillary optics, Kumakhov lens

# V05-E08C [2005]

# Absorption, blocking or anti-scatter X-ray optics

E.g. anti-scatter apparatus, grids and passive (i.e. non-"optical") collimators.

#### V05-E09

# Other X-ray tubes and techniques

# V05-E10 [2006]

# Complete novel tube

See also V05-E01, E03, E04, E05 or E06 for individual tube/source where relevant.

#### V05-F

# **Tubes for processing/examining objects**

This section deals with tubes and analogous devices for processing workpieces (including semiconductor devices) and for examining objects. From 1992, V05-F02 and V05-F03 codes are no longer used and the subject matter previously coded there has been reallocated. V05-F is divided into four main sections.

V05-F01 codes dealing with analysis devices such as electron microscopes, microanalysers, etc. and, from 1992 including X-ray microscopes. V05-F05 codes dealing with equipment for processing workpieces e.g. by beam or plasma treatment. V05-F04 codes dealing with novel details of both analysis and processing equipment. V05-F08 codes dealing with the actual operation performed by the equipment and enabling a secondary function to be indicated.

# Assignment of codes:

Codes from the V05-F01 or V05-F05 sections are assigned to describe apparatus type and to broadly indicate the novel aspect, e.g. details of the apparatus, complete novel apparatus, control circuitry, etc. V05-F04 codes are used to further highlight novel details e.g. electrodes, vessels, etc., and V05-F08 codes are routinely assigned to indicate the function of the equipment.

#### **EXAMPLES**

- (1) Novel field emission electrode for scanning electron microscope: V05-F01A1B, V05-F01B3 and V05-F04A3
- (2) Control circuit for SEM measuring dimensions V05-F01A1B, V05-F01B5A and V05-F08B (S02-A05A will also be assigned)

(3) Any novel aspect of plasma etching equipment using magnetron effect V05-F05C3A and V05-F08E1.

#### V05-F01

# Microscopes and other analysing tubes

See S03-E06B1 also for microscopes. (Optical microscopes per se are coded in S02-J04B1, and see S03-E04R for microscopy).

Photon microscope, Transmission/scanning electron microscope, SEM, secondary emission detection, focusing deflection, electron/ion-optical system

V05-F01A [1992]

Device type

V05-F01A1 [1992]

# **Electron microscope**

Includes electron diffraction tube.

V05-F01A1A [1992]

**Transmission** 

TEM

V05-F01A1B [1992]

Scanning

**SEM** 

V05-F01A1C [1992]

# **Combined transmission and scanning**

STEM

V05-F01A2 [1992]

# Ion microscope

Includes ion diffraction tube.

V05-F01A3 [1992]

# X-ray microscope

(V05-E09, V05-F09)

X-ray source details are covered by V05-E01 or V05-E03 codes and not V05-F04 codes.

# V05-F01A4 [1992]

# Microanalysers

(V05-F09)

Spot analyser

# V05-F01A5 [1992]

# **Tunnel current and analogous devices**

Includes tunnel current microscopes and similar devices, e.g. atomic, magnetic force microscopes. For materials investigation see also S03-E02F codes and V05-F08B. For image-producing analysis search with S03-E02F codes and V05-F08A.

Prior to 2005, included processing and recording. After 2005, see V05-F05D, as well as relevant V05-F08C codes.

V05-F01A6 [2011]

X-ray spectrometer

V05-F01A9 [1992]

Other devices

V05-F01B [1992]

**Novel details** 

V05-F01B1 [1992]

### **Complete device**

This code is only used if the analysis device is presented as a completely novel piece of equipment. For cases where actual novelty can not be determined, V05-F01B codes will not be assigned.

V05-F01B3 [1992]

# **Device details**

For specific features see also V05-F04 codes.

V05-F01B5 [1992]

# Circuitry and operation of device

Includes power supplies (see appropriate U24 or X12 codes for power supplies in general).

V05-F01B5A [1992]

Control

V05-F01B9 [1992]

### Other novel details

Includes cleaning and maintenance of analysing equipment.

# V05-F02\* [1980-1991]

# Electron- or ion-beam tubes for localised treatment of object

\*This code is now discontinued and from 1992 this subject matter is transferred to V05-F05A codes (device details now covered by V05-F04 codes). V05-F02 remains valid and searchable for records prior to 1992.

Electron beam cutting/welding/lithography patterning/inscribing/marking/focusing, deflection, electron/ion-optical system

# V05-F03\* [1980-1991]

# **Arrangements of electrodes**

\*This code is now discontinued and from 1992 this subject matter is transferred to V05-F04B codes and appropriate codes from V05-F04A and V05-F04C sections. V05-F03 remains valid and searchable for records prior to 1992.

Accelerating system, electron gun, electrostatic beam position/cross-section/intensity control electrodes

#### V05-F04 [1992]

### Analysis and processing device details

Codes in this section are used with V05-F01 or V05-F05 codes as appropriate, for details of analysis and processing devices respectively.

# V05-F04A [1992]

#### **Emission source**

Codes in this section relate to electron or ion sources. X-ray sources (including those for X-ray microscopes) are coded in V05-E01 or V05-E03 codes.

# V05-F04A1 [1992]

# Thermionic emitter

Cathode, oxide, coated

V05-F04A1A [1992]

#### Heated by non-electric means

Includes laser heating

# V05-F04A3 [1992]

# Field emission electrodes

Cold cathode

# V05-F04A3A [1992]

# Microfabricated field emission electrodes

Includes electrodes produced by semiconductor manufacturing techniques. See V05-M03A1 for microfabricated electrodes in general, and V05-B05 codes for complete microfabricated vacuum conduction devices.

V05-F04A3C [1997]

**Current limiting arrangements** 

(V05-F04A3)

V05-F04A5 [1992]

Ion source

V05-F04A5A [1992]

With gas supply

V05-F04A9 [1992]

Other emission sources

V05-F04B [1992]

**Electrodes and electrode systems** 

(V05-F03)

Covers all non-emitting electrodes. Electrodes are also assigned V05-F04C codes when electron/ion optical aspect is significant.

Electron gun

V05-F04B1 [1992]

For beam modulation

Grid, blanking

V05-F04B1A [1997]

**Apertures** 

(V05-F04B1)

Etching mask, electron beam lithography

V05-F04B3 [1992]

For beam scanning

Only includes beam scanning arrangements inside e.g. electron gun structure. For post gun scanning/deflection arrangements see V05-F04C5.

X-Y, raster, deflection

V05-F04B5 [1992]

For gas discharge type apparatus

Use with V05-F05C codes. *Etching, coating, sputtering* 

V05-F04B5A [1992]

**Anodes** 

V05-F04B5C [1992]

**Cathodes**Sputtering target

------

V05-F04B6 [1992]

**Probe electrodes** 

V05-F04B6A [1997]

Tunnel device probe or cantilever

(V05-F04B6)

See also S03-E02F codes and V05-F01A5.

Tunnel current, AFM, SPM, STM

V05-F04B8 [1992]

**Electrode positioning** 

V05-F04B8A [1992]

Dynamic positioning system

Includes X-Y positioning system and scanning arrangement for tunnel current device.

AFM, SPM, STM

V05-F04B9 [1992]

Other electrode details

V05-F04C [1992]

Electron/ion-optical systems

(V05-F03, V05-M04)

Where electron gun electrodes are significant V05-F04B1 or V05-F04B3 codes are also applied.

V05-F04C1 [1992]

Characterised by type of system

V05-F04C1A [1992]

Magnetic, electromagnetic

See appropriate V02 codes for details of permanent magnets, electromagnets, coils, etc.

ΕM

V05-F04C1C [1992]

Combined electromagnetic and electrostatic

EM-ES

V05-F04C1E [1992]

**Electrostatic** 

ES

V05-F04C3 [1992]

For focusing

Includes arrangements to correct for beam aberrations such as coma, astigmatism etc.

V05-F04C5 [1992]

For deflection

X-Y, raster

# V05-F04C7 [1992]

# For particle selection

Includes selection of desired ion species. Particle spectrometers are coded in V05-J.

V05-F04C8 [2005]

For confinement

V05-F04D [1992]

Vessels, seals, vacuum locks

(V05-F09, V05-M05)

V05-F04D1 [1992]

#### Vessels and seals

(V05-F09)

Includes material compositions of vessels and seals, vessel shape, etc.

#### V05-F04D3 [1992]

# Vacuum locks, specimen/workpiece introduction

(V05-F09, V05-M05)

Includes evacuation apparatus.

#### V05-F04D3A [1992]

# Arrangements for introducing specimen or workpiece

(V05-F09, V05-M05)

Includes e.g. carriage arrangements introducing specimen or workpiece into analysis or processing chamber. Actual holder is covered by V05-F04G. For semiconductor wafer applications search with U11-F02A1 also.

Window, viewport

# V05-F04E [1992]

#### Gas filling

(V05-F09)

Includes compositions. (Chiefly for gas fillings used in plasma apparatus and similar, also coded in V05-F05 codes).

# V05-F04G [1992]

#### Specimen/workpiece holder

Covers holder per se. For semiconductor wafer application search with U11-F02A2. Carriage and drive arrangements for introducing specimen or workpiece into equipment are covered by V05-F04D3A.

# V05-F04H [1992]

#### **Detectors**

Includes optical types, secondary electron detectors, etc. (Systems forming an image are covered by V05-F04J). Also includes detectors used to monitor progress of an operation, e.g. etching (with V05-F08E1).

#### V05-F04H1 [2005]

# Scanning probe or cantilever displacement detection system

Includes detectors for all tunnel current and analogous scanning probe type microscopy techniques. See also S02-A03 for optical techniques, and S03 codes.

#### V05-F04J [1992]

#### Imaging and display systems

Includes photographic, stimulable sheet recording, video systems and any other novel aspect of analysis equipment image presentation.

Microscope, microanalyser, screen, CRT, raster, scan, synchronise

# V05-F04K [1992]

#### Cooling

(V05-F09, V05-M09)

Includes cooling for the apparatus itself, and also for specimens and workpieces.

# V05-F04L [1997]

#### Antennae and waveguides

(V05-F04X)

E.g. for ICP reactor (See also V05-F05C1 codes).

#### V05-F04M [2006]

Vibration reduction, control and compensation

#### V05-F04X [1992]

#### Other process/analysis device details

Includes device heating and shielding. Heater, deposition-limiting shield

# V05-F05 [1992]

#### **Tubes and devices for processing**

(V05-F02, V05-F09)

Processing tubes and devices are also assigned codes based on application. For example, search with U11-C codes for relevance to semiconductor device fabrication, X25-A04 for cathodic sputtering, X25-Q02 for surface treatment in metallurgy, etc.

# V05-F05A [1992]

#### **Using beams**

Prior to 1992 the code for localised treatment by beam equipment (V05-F02) was only used for focused beams. Flood effect devices were coded in V05-F09.

# V05-F05A1 [1992]

#### With focused beam

(V05-F02)

Scan, raster, X-Y, focus, local

# V05-F05A3 [2005]

#### With multiple beams

Includes e.g. field emission arrays for one-shot electron beam lithography or atomic resolution storage.

# V05-F05A5 [1992]

#### With flood effect beam

(V05-F09)

# V05-F05A7 [1992]

#### Characterised by beam type

(V05-F02, V05-F09)

Codes in this section are applied as appropriate either in conjunction with other V05-F05A codes, or alone.

**Electron beam** 

V05-F05A7C [1992]

Ion beam

V05-F05A7X [1992]

#### Other beam type

Includes use of X-ray and Extreme UV (EUV). X-ray/EUV sources per se are not coded in the V05-F04A section and are covered by V05-E01 or V05-E03 codes.

EUV

# V05-F05C [1992]

# Using plasma, gas-filled tubes

(V05-F09)

See X14-F codes also for general aspects of plasma technique.

Discharge, arc, glow

# V05-F05C1 [1992]

# With externally-applied ionising energy

(V05-F09)

Includes all ionising arrangements located outside tube envelope. For conductive RF coupling internal to the tube, see V05-F05C2.

# V05-F05C1A [1992]

#### Microwave

(V05-F09)

RF, feed, waveguide, port, matching, stub, impedance

# V05-F05C1C [1992]

# **Optical**

(V05-F09)

Laser, UV, lamp, irradiate

# V05-F05C1E [1997]

# Inductively coupled

(V05-F05C1)

#### V05-F05C1G [1997]

### Capacitively coupled

(V05-F05C1)

#### V05-F05C2 [2006]

# With internally applied ionising energy

Includes e.g. conductive RF coupling. Prior to 2006, coded in V05-F05C.

RF, discharge, arc

### V05-F05C3 [1992]

# With confinement or manipulation of plasma

(V05-F09)

Includes electromagnetic and other confinement systems.

ECR, electron cyclotron resonance

# V05-F05C3A [1992]

# With magnetron effect

(V05-F09)

Equipment using magnetron discharge effect is not coded in V05-C01A.

# V05-F05D [2005]

# Using scanning probe/tunnelling effects

(V05-F01A5)

Includes all analogous techniques, e.g. AFM. See V05-F08C codes for lithography or recording techniques.

Does not include microscopy, see V05-F01A5. Prior to 2005, processing using scanning probe/tunnelling effects was coded in V05-F01A5 in combination with V05-F08C and V05-F05E codes. See U11-C11 for application to semiconductor wafer processing, or T03-C05 for recording or data storage applications.

# V05-F05E [1992]

# Novel details of processing devices

Codes in this section describe in a general sense the novel aspects of equipment covered by V05-F05A and V05-F05C codes.

#### V05-F05E1 [1992]

# **Complete device**

(V05-F09)

This code is only assigned if the complete device is presented as novel. In cases where the precise novel aspect cannot be determined, no V05-F05E code will be assigned.

#### V05-F05E3 [1992]

#### **Device details**

For detailed information on novel aspects search with V05-F04 codes.

#### V05-F05E5 [1992]

#### Circuitry and operation of device

Includes power supplies. See also U24 and X12 codes for low and high power supplies respectively.

# V05-F05E5A [1992]

#### **Control and monitoring**

Includes control circuits to determine completion of e.g. etching or coating. (Search with V05-F08D1 or V05-F08E1 respectively).

# V05-F05E9 [1992]

# Other novel details

Includes all cleaning and maintenance of equipment.

# V05-F05X [1992]

# Other processing tubes

# V05-F08 [1992]

#### **Equipment function**

These codes relate to the actual function of the inventive equipment, and not necessarily its primary function. Thus an electron microscope arrangement to measure voltage would be assigned V05-F08B and not V05-F08A (V05-F01A1 codes and S01-D01D7 would also be assigned).

#### V05-F08A [1992]

# **Imaging**

In general, S03-E06B codes are also assigned for this aspect.

# V05-F08B [1992]

#### Measurement

Includes measurement of voltage (see also e.g. S01-D01D7), dimensions (see also S02-A05A), and properties of materials (see also e.g. S03-E06 codes).

# V05-F08C [1992]

Recording, storage

#### V05-F08C1 [1992]

#### Lithography

Also assigned U11-C04 codes where application is to semiconductor device lithography.

Semiconductor, wafer, image, pattern

#### V05-F08C3 [1992]

### Recording

Memory, store, high density

### V05-F08D [1992]

# Coating, implanting ions, surface treatment

# V05-F08D1 [1992]

#### Coating

Surface, layer, coat, deposition

# V05-F08D1A [1992]

#### Sputtering

Cathodic, magnetron

#### V05-F08D3 [1992]

# Ion implantation

Also assigned U11-C02B codes where application is to semiconductor device manufacture.

Doping

# V05-F08D5 [1992]

#### Surface treatment

Hardening, nitriding

#### V05-F08E [1992]

# Removing material, cutting, machining and cleaning

Includes cleaning of specimen/workpiece, or e.g. resist ashing.

Ashing, stripping

# V05-F08E1 [1992]

# **Etching**

See also U11-C07 codes for application to semiconductor device fabrication.

#### V05-F08E3 [1992]

# Cutting

Includes welding - also coded in X24-D02.

# V05-F08E5 [1992]

Machining/milling

#### V05-F08F [2005]

# Molecular decomposition and fluid processing

Includes fuel processing, e.g. Plasmatron™.

# V05-F08G [2005]

# **Powder synthesis**

Includes e.g. nanoparticulate production.

#### V05-F08X [1992]

#### Other equipment function

# V05-F09

Other

#### V05-G

# Photoelectric discharge tubes not involving gas ionisation; Photomultiplier tube

See also V05-K01 codes where electron multiplier arrangements of PMT are novel.

PMT, PM, photomultiplier

# V05-G01 [2005]

# **Photocathodes**

Includes all novel photocathode materials, constructions etc. See also V05-D02/D03 codes for application to camera tubes/image converters or intensifiers.

#### V05-H

#### **Radiation and particle detectors**

Includes only radiation or particle detectors where incident radiation causes gas ionisation detected via breakdown voltage. See also S03-G codes.

Geiger-muller tube, Geiger counter, proportional counter tube, multi-wire proportional counters

#### V05-J

# Particle spectrometer or separator tubes; Lenard tubes

See S03-E10A codes for more details of mass spectrometers.

Mass analyser, mass spectrometry, mass spectroscopy, static, dynamic, time-of-flight, energy spectrometer

#### V05-J01 [1992]

# Particle spectrometer/separator tubes

V05-M codes are also assigned where aspect not covered in V05-J.

# V05-J01A [1992]

# Spectrometer type

Static, dynamic, quadrupole, time-of-flight, TOF

#### V05-J01A1 [1992]

# **Mass spectrometers**

Secondary ion mass spectrometer, SIMS

# V05-J01A5 [1992]

#### **Energy spectrometers**

# V05-J01C [1992]

# Sample introduction arrangement

Includes sample carriers. For vacuum locks search with V05-M05D codes.

Chamber, pressure, atomising, sample injection

# V05-J01E [1992]

#### **lonising arrangement**

Ionisation chamber, ion gun

# V05-J01G [1992]

### Ion-optical system

V05-M04 codes are also assigned.

Electrode, electromagnetic, solenoid, current, deflection, beam, path

#### V05-J01J [1992]

# **Detection system**

# V05-J01K [1992]

### Interface with other equipment

Includes combination with e.g. chromatography apparatus, for which S03-E09C codes are also assigned.

V05-J01M [1992]

# **Control and monitoring**

Includes operation of device.

V05-J01X [1992]

Other details of particle spectrometer/separator tubes

V05-J05 [1992]

#### Lenard tubes

Covers tubes emitting electrons or ions through the vessel. For details of window structures search with V05-M05E.

### V05-K

Thermionic generators; Secondaryemission tubes; Electron multipliers; Ion pumps; Pressure measuring tubes

V05-K01 [1992]

#### **Electron multiplier**

For image intensifier application see V05-D03 codes also. Night vision equipment in general is coded in W07-G.

PMT, PM, photomultiplier

V05-K01A [1997]

Microchannel plates

(V05-K01)

V05-K01C [1997]

**Dynodes** (V05-K01)

V05-K01X [1997]

Other electron multipliers

(V05-K01)

V05-K03 [1997]

# **Ionisation pressure gauges**

(V05-K)

For novel aspects of gauges (e.g. cathodes), see V05-M codes. Pressure gauges in general are coded in S02-F04D1.

Penning

#### V05-L

#### Discharge tube manufacture

See note (1) of V05 class descriptor.

From 1992, codes from the V05-L05 section relating to the type of tube or device being manufactured are always assigned, except where the device is also claimed, resulting in the assignment of the code for that device also.

Manufacture of certain auxiliary devices for tubes, e.g. CRT deflection coils, are not regarded as manufacture of the tube per se, and hence not coded in V05-L. See also the appropriate codes for the auxiliary device and any relevant manufacturing codes in other sections, e.g. V02-H01 codes.

Also, novel manufacture of phosphor compositions is treated as a novel phosphor per se, and is coded under V05-M01 or other relevant V05 sections.

#### V05-L01

**Electrodes** 

V05-L01A [1992]

#### **Emitting electrodes**

Electrodes, emission

V05-L01A1 [1992]

#### Thermionic cathodes

Tungsten, thorium, oxide, carbide, carburising, hydrocarbon, heating, cylinder, mesh, grille, grid

V05-L01A1A [1992]

**Heaters** 

Indirectly heated cathode

V05-L01A3 [1992]

**Cold cathodes** 

Field emission electrode

V05-L01A3A [1992]

# Micro-fabricated cold cathodes

Also coded in V05-L05B5 when application is to complete vacuum conduction device. Includes use of semiconductor manufacturing techniques, see U11-C18B also for semiconductor manufacturing details.

V05-L01A5 [1992]

Secondary emission electrodes

V05-L01A5A [1992]

**Electron multiplier** 

Also coded in V05-L05K.

V05-L01A5B [1992]

**Photoelectric** 

V05-L01A5X [1992]

Other radiation-induced emission

V05-L01A9 [1992]

Other emitting electrodes

V05-L01B [1992]

Non-emitting electrodes

V05-L01B1 [1992]

Grids

Includes FED gate electrodes.

V05-L01B2 [1997]

# Tunnelling device probe manufacture

(V05-L01B9)

See also V05-F04B6A. For tunnel current device manufacture, see V05-L05F1A. For novel device see V05-F01A5.

Cantilever

V05-L01B3 [1992]

#### **Anodes**

Includes FED screen electrodes. For FED gate electrodes, see V05-L01B1.

V05-L01B4 [1992]

# Electron guns, electron-optical systems

Includes assembly of the electrode system. Mounting of assembly in vessel is covered by V05-L03C1.

V05-L01B4A [1992]

For deflection

V05-L01B5 [1992]

**Shadow masks** 

Also coded in V05-L05D1.

V05-L01B6 [2005]

Plasma display panel electrodes

V05-L01B6A [2006]

# **Dielectric coatings**

Includes manufacture of protective coatings for electrode insulating layers.

V05-L01B7 [1992]

#### Slow wave devices

Also coded in V05-L05C. (Slow wave devices per se are coded as transit time tube distributed elements).

# V05-L01B8 [1992]

#### Screen electrode

Covers e.g. beam index CRT screen electrodes. For FED screen anodes, see only V05-L01B3. Manufacture of image screens is covered by V05-L02 codes.

V05-L01B9 [1992]

Other non-emitting electrodes

#### V05-L02

#### Screens

Codes in this section cover the manufacture of screens for producing an image from, e.g. electron impact, and for converting an optical image into an electrical signal.

Image, pick-up, latent, electrostatic, discharge, scan, target, photoconductive, photovoltaic, display, light, fluorescent, phosphor, persistence

#### V05-L02A [1992]

# Screen type

Codes indicating screen type are only used where a code cannot be assigned from the V05-L05 section or from the codes relating to the screen application tube per se. For example, if application to a specific tube type is not mentioned, or if the screen is stated to be applicable to several types of tube.

V05-L02A1 [1992]

Radiation-sensitive screen

V05-L02A5 [1992]

Radiation-emitting screen

V05-L02B [1992]

# **Substrate preparation**

Includes washing, acid rinsing etc.

V05-L02C [1992]

# **Coating processes**

See X25 codes for electrical aspects of coating processes.

V05-L02C1 [1992]

Liquid deposition by e.g. spraying

Spin coating

V05-L02C5 [1992]

Electrical method e.g. electrophoresis

# V05-L02C7\* [1992-2004]

# **Material deposited**

\*This code is now discontinued. See V05-L02M codes for general screen material types.

V05-L02C7 codes are used to describe the material being deposited in conjunction with a code relating to the actual deposition process. Codes in this section are not used if the material is unspecified or a complete manufacturing process is described.

# V05-L02C7A\* [1992-2004]

# Visible radiation emitting material

\*This code is now discontinued but prior to 2005 included e.g. use of phosphor in the case of a display tube, such as CRT. From 2005 see V05-L02M1.

Luminescent

# V05-L02C7B\* [1992-2004]

#### **Radiation-sensitive material**

\*This code is now discontinued. From 2005 see V05-L02M2.

#### V05-L02C7C\* [1992-2004]

# **Auxiliary materials**

\*This code is now discontinued. From 2005 see V05-L02M3.

Includes deposition of specific materials. Black matrix

V05-L02D [2005]

**Baking processes** 

V05-L02E [1992]

**Exposure and development** 

V05-L02E1 [1992]

**Exposure processes** 

V05-L02E1A [1992]

# Multistep sequence of exposure and development

This code takes precedence over separate codes for exposure and development stages of screen manufacturing process.

# V05-L02E3 [1992]

# Using tube component as mask

Includes use of CRT shadow mask. For details of shadow mask per se see V05-D05D codes.

V05-L02E5 [1992]

Exposure apparatus e.g. lighthouse

# V05-L02E5A [1992]

# **Optical system**

Includes lenses, filters, etc.

#### V05-L02E5C [1992]

#### **Light source**

See X26 codes for details of novel lamps etc. Bulb, discharge lamp, UV

#### V05-L02E7 [1992]

# **Development**

V05-L02E1A takes precedence for combined exposure and development.

# V05-L02E8 [1992]

# Control of exposure method or apparatus

Includes general control aspects and also control of light source, sequential operation, etc.

Monitor, check, registration, time, duration

#### V05-L02F [1992]

# Application of protective or other layers

Includes metallisation of screen internal surface.

Antireflective, aluminium

# V05-L02H [1992]

# **Testing and inspection of screen**

Testing of manufacturing process/apparatus in general is covered by V05-L07E codes. See appropriate codes in S03, e.g. S03-E04F2, for optical inspection of manufactured screen. *Pattern, defect, flaw, reject* 

# V05-L02H1 [1992]

**During manufacture** 

V05-L02H5 [1992]

Finished screen

V05-L02M [2005]

Screen material being processed

V05-L02M1 [2005]

Visible radiation emitting material

E.g. phosphor.

V05-L02M2 [2005]

**Radiation sensitive materials** 

# V05-L02M3 [2005]

# **Auxiliary materials**

Includes e.g. black matrix.

#### V05-L03

Vessels, lead-ins, exhausting, filling

V05-L03A [1992]

Manufacture of vessels, spacers, ribs, leadins etc.

V05-L03A1 [1992]

Manufacture of internal ribs and spacing elements

Spacer

V05-L03A3 [1992]

Manufacture of electrode supports

V05-L03A5 [1992]

Manufacture of lead-in conductors

V05-L03A7 [2005]

Manufacturing of vessel per se

(V05-L03A)

Includes glass moulding, baking, toughening etc.

V05-L03B [1992]

**Applying coatings or markings** 

Manufacturing of coating materials per se is not treated as tube manufacture; see appropriate devices codes where relevant.

Reflection prevention

V05-L03B1 [1992]

**Conductive** 

Antistatic, graphite

V05-L03B3 [1992]

**Optical** 

This code does not relate to screen manufacture, which is covered by V05-L02 codes, but to coatings acting as e.g. filters.

Anti-reflective, anti-glare

V05-L03B5 [1992]

Marking

Covers application of manufacturer's and product name etc., and also markings such as bar codes used for inventory or control purposes.

V05-L03C [1992]

**Assembly** 

Covers assembly of tube from individual components and joining vessel parts.

V05-L03C1 [1992]

Inserting electrode system

Electron gun, support, spacing, mounting, shadow mask

V05-L03C1A [1992]

**Inserting CRT gun** 

(V05-L03C1)

See also V05-D01B for CRT "per se" and V05-L05D1B for CRT manufacture.

V05-L03C3 [1992]

**Pre-treatment of vessel surfaces** 

Cleaning, polishing, etching, machining

V05-L03C3A [1992]

To improve seal

Actual process of sealing is covered by V05-L03C5A.

V05-L03C5 [1992]

Joining vessel parts, sealing, evacuating, filling, alignment

V05-L03C5A [1992]

Sealing

V05-L03C5C [1992]

**Evacuating** 

Includes methods and apparatus, e.g. vacuum pumps specifically for evacuating vessels. For electrical aspects of pumps see X25-L03A. Vacuum gauges in general are coded in S02-F04D1 and specifically ionisation-type gauges are additionally coded in V05-K03.

V05-L03C5E [1992]

**Fillina** 

Covers methods and apparatus for filling tubes with desired gas composition of mixture.

V05-L03C5G [2006]

**Alignment** 

V05-L03C7 [1992]

Post sealing treatment

Washing

V05-L03C7A [1992]

To improve operation or lifetime

Includes e.g. getter flashing. (Getters per se are coded in V05-D07E, getter manufacture in V05-L06).

V05-L03C7C [1992]

#### To improve structural strength

Includes e.g. tension band fitting. Manufacture of band per se is covered by V05-L03D.

T-band

V05-L03D [1992]

**Tension band manufacture** 

T-band

V05-L05 [1992]

# Type of tube being manufactured

Codes in this section are only used for device-specific manufacturing details and generally follow the 'device' codes V05-A to V05-K. For further indication of scope, see the definitions accompanying those codes. For inventions involving significant aspects of a tube itself, as well as its manufacture, V05-A to V05-K codes take precedence to indicate tube type and are assigned instead of V05-L05 codes.

V05-L05A [1992]

**Gas discharge** 

V05-L05A1 [1992]

Plasma display panel/segment type

display

V05-L05A1A [2006]

**DC Displays** 

V05-L05A1B [2006]

**AC Displays** 

V05-L05A3 [2006]

**Gas-filled switching/protection devices** 

Prior to 2006, coded in V05-L05A.

V05-L05B [2005]

Classical and cold cathode vacuum tubes

V05-L05B1 [1992]

Thermionic tube

V05-L05B3 [2005]

**Cold cathode devices** 

V05-L05B5 [1992]

Micro cold cathode devices

V05-L05C [1992]

Transit time tube

V05-L05D [1992]

Cathode ray tubes; Electron beam tubes

V05-L05D1 [1992]

**Display tubes** 

V05-L05D1A [2002]

Field emission display tubes

V05-L05D1B [1992]

Cathode ray display tubes

V05-L05D1C [1992]

Fluorescent display

V05-L05D2 [1992]

**Camera tubes** 

V05-L05D3 [1992]

Image intensifiers and converters

V05-L05E [1992]

X-ray/EUV generators; Ion tubes

V05-L05F [1992]

**Analysis and process tubes** 

V05-L05F1 [1992]

**Analysis tubes** 

V05-L05F1A [1997]

**Tunnel current devices** 

(V05-L05F1)

See V05-L01B2 for probe manufacture. See also

V05-F01A5. STM, SPM, AFM

V05-L05F5 [1992]

**Processing tubes** 

V05-L05G [1992]

Photoelectric tube

V05-L05H [1992]

**Radiation detector** 

V05-L05J [1992]

**Spectrometer tubes** 

V05-L05K [1992]

**Electron multiplier** 

V05-L05X [2005]

Other

Includes e.g. manufacture of radiation image storage screens.

V05-L06 [1992]

**Getter manufacture** 

(V05-L09)

Getter flashing is covered by V05-L03C7A.

V05-L07 [1992]

**General aspects of manufacture** 

(V05-L09)

Codes in this section may be used alone, or with other V05-L codes.

V05-L07A [1992]

Multistep process for manufacturing whole device

(V05-L09)

V05-L07B [2005]

Workpiece holder

V05-L07C [1992]

Transport equipment moving between processing stages

(V05-L09)

V05-L07D [2005]

Workpiece positioning

Covers positioning of workpiece with relation to manufacturing equipment.

V05-L07E [1992]

Testing, salvage and other general aspects of manufacture

(V05-L09)

V05-L07E1 [1992]

**Testing** 

(V05-L09)

Where electrical characteristics are being measured relating to the tube per se, S01-G02A is also assigned.

V05-L07E1A [1992]

Of partially complete device

(V05-L09)

V05-L07E1B [1992]

Of manufacturing process or apparatus

(V05-L09)

This code is used for monitoring the manufacturing process or apparatus only. For testing of tubes per se V05-L07E1A or V05-L07E1C are used.

V05-L07E1C [1992]

Of complete device

V05-L07E3 [1992]

Ageing, soak testing, life testing

(V05-L09)

Burn-in, oven, high temperature, accelerate

V05-L07E5 [1992]

Adjustment, rectification

(V05-L09)

Correct, repair, re-gun, spot-knocking

V05-L07E6 [1992]

Salvage

(V05-L09)

Covers salvage of materials or tube parts for re-use or other purpose. This code is used with other V05-L codes as appropriate.

V05-L07E7 [1992]

Packing, shipping

(V05-L09)

V05-L07E9 [1992]

Other general manufacturing aspects

(V05-L09)

Includes protection arrangement for tube to avoid damage during manufacture, e.g. dummy protective tube base.

V05-L09

Other details of discharge tube manufacture

V05-M

**General details** 

Codes in this section are used to describe details of tubes for cases of very general (or unstated) application, or in conjunction with tube type codes not having the appropriate subdivisions.

#### V05-M01

# Image screens; Luminescent coatings

Radiation converting screens not necessarily part of a tube are included in V05-M01C codes.

Luminescent screen, fluorescent screen, radiation imaging screen

# V05-M01A [1992]

# **Light emitting compositions**

Phosphor, rare earth

#### V05-M01C [1992]

# Separate screen not part of tube

Conversion screen, radiography, medical diagnosis

# V05-M01C1 [1992]

# **Radiation image storage screen**

Includes e.g. stimulable phosphor. Recording and reproducing equipment for use with stimulable phosphors is coded in S06-K99G and other S06-K codes as appropriate.

#### V05-M02

#### Solid thermionic cathodes

Coating, impregnated cathode, dispenser cathode, heater, filament, directly-heated

#### V05-M02A [1992]

#### Solid thermionic cathode compositions

# V05-M03

# **Electrode assemblies: Other electrodes**

Includes unspecified emitting electrode types. *Electrode support, mountings* 

#### V05-M03A [1992]

# Emitting electrodes, i.e. cold cathodes

Field emitters, field emission, FE

#### V05-M03A1 [1992]

#### Micro-fabricated cold cathode

Includes carbon nanotube based field emitters.

Also covers cathode (or other electrode in conjunction with it) formed using semiconductor manufacturing techniques on e.g. silicon substrate. CNT, carbon nanofiber, nano-emitter

# V05-M03A3 [1997]

# **Current limiting arrangements**

(V05-M03A)

V05-M03C [1992]

Grids

Control, modulation, intensity, screen, suppressor

V05-M03E [1992]

**Anodes** 

V05-M03G [1992]

#### Electron/ion guns

Also coded in V05-M04A as an electron/ion optical arrangement.

Lens, focus, correct, beam

# V05-M03X [1992]

#### Other electrodes

#### V05-M04

# **Electron- or ion-optical arrangements**

Electron gun, lens, focusing, deflection, deflection coil, winding

#### V05-M04A [1992]

#### Electrostatic

Novel electron guns are also coded in V05-M03G. *ES* 

#### V05-M04B [1992]

#### Electromagnetic

ЕМ

#### V05-M05

#### Vessels; Lead-in conductors; Seals

Insulator, support pins, conductive coatings

### V05-M05A [1992]

#### Vessel

Glass composition, shape, form, housing, container

V05-M05B [1992]

Lead-ins

Pin, base, contact

V05-M05C [1992]

**Seal** Frit

V05-M05D [1992]

Vacuum locks

V05-M05D1 [1992]

Sample/specimen introducing

arrangement

# V05-M05E [1992]

# **Vessel windows**

Covers arrangement enabling emission or introduction of e.g. ions or electrons from the vessel. X-ray windows are covered by V05-E01E1A.

# V05-M05F [1992]

#### Coatings applied to vessel

Includes optical or conductive coatings.

V05-M06 [1992]

Getters

V05-M07 [1992]

# **Tube cooling**

(V05-M09)

Cooling of electronic equipment in general is covered by V04-T03 codes.

# V05-M07A [1992]

# Heat sink, radiative

(V05-M09)

Fin, extrusion, radiator

# V05-M07B [1992]

#### **Forced circulation**

(V05-M09)

Liquid, vapour, gas, pump, heat exchanger, tank, reservoir, fan, blower, air

#### V05-M09

# Other general tubes details (Including gas filling compositions)

Includes gas filling compositions. Compositions for gas-filled tubes covered by V05-A codes are assigned the appropriate subdivision code in that section.

# V06: Electromechanical Transducers and Small Machines

# V06-A\*

[1980-2006]

#### Loudspeakers

\*This code is now discontinued and has been transferred to V06-V04A1 from 200701. It remains searchable for records prior to 2007.

#### V06-A01\*

[1980-2006]

#### **Transducers**

\*This code is now discontinued and has been transferred to V06-V01 and V06-V04A1 from 200701. It remains searchable for records prior to 2007.

All loudspeaker transducers are also coded in V06-E.

Voice-coils, drivers, piezoelectric, moving coil

#### V06-A02\*

[1980-2006]

# Cones/diaphragms

\*This code is now discontinued and has been transferred to V06-V02A and V06-V04A1 from 200701. It remains searchable for records prior to 2007.

General use cones/diaphragms are in V06-F only. *Membranes, vibration plates* 

#### V06-B\*

[1983-2006]

#### Pick-ups, cutters, microphones; Sonar/ultrasonic transducers

\*This code is now discontinued and has been transferred to V06-V from 200701. It remains searchable for records prior to 2007.

#### V06-B01\*

[1983-2006]

### **Gramophone pick-ups and cutters**

\*This code is now discontinued and has been transferred to V06-V04A3 from 200701. It remains searchable for records prior to 2007.

See also W04-A.

Stylus, Cartridges, Diamond, groove, mechanical recording

# V06-B02\*

[1983-2006]

#### Microphones

\*This code is now discontinued and has been transferred to V06-V04A2 from 200701. It remains searchable for records prior to 2007.

All microphone transducers are also coded in the relevant V06-E code.

Piezoelectric, electroacoustic, electret, condenser, diaphragms

#### V06-B03\*

[1983-2006]

#### Sonar/ultrasonic transducers

\*This code is now discontinued and has been transferred to V06-V01N from 200701. It remains searchable for records prior to 2007.

For hydrophones and sonar systems, see also W02-C07 and W06-A05 codes.

Piezoelectric, underwater acoustic transducers

#### V06-C\*

[1980-2006]

#### **Headphones; Telephone handsets**

\*This code is now discontinued and has been transferred to V06-V04A4 and V06-V04B1 from 200701. It remains searchable for records prior to 2007.

Telephone transducers per se are coded in W01-C01M also, and mounting details in W01-C01A3.

Earphones, earpieces, receivers, transmitters, mouthpieces

#### V06-D\*

[1980-2006]

### Vibration generators for performing mechanical work

\*This code is now discontinued and has been transferred to V06-V04C from 200701. It remains searchable for records prior to 2007.

Includes shock wave generators for e.g. lithotripsy which are also coded in S05-B02. For industrial scale vibration generators see X25-L.

Coil, electromechanical

# V06-E\*

[1980-2006]

### **Transducers**

\*This code is now discontinued and has been transferred to V06-V01 from 200701. It remains searchable for records prior to 2007.

This code is in general only used for audio or communication-type transducers.

#### V06-E01\*

[1980-2006]

# Moving coil/strip/wire

\*This code is now discontinued and has been transferred to V06-V01A1 and V06-V04A3 from 200701. It remains searchable for records prior to 2007.

Ribbon

### V06-E01A\*

[1987-2006]

# Moving coil

\*This code is now discontinued and has been transferred to V06-V01A1 from 200701. It remains searchable for records prior to 2007.

Bobbins, voice coils

# V06-E02\* [1980-2006]

#### Piezoelectric: Electrostrictive

\*This code is now discontinued and has been transferred to V06-V01B from 200701. It remains searchable for records prior to 2007.

Acoustic, ceramic, ultrasonic, quartz, piezo-ceramic

#### V06-E03\*

[1980-2006]

# **Electrostatic**

\*This code is now discontinued and has been transferred to V06-V01C from 200701. It remains searchable for records prior to 2007.

Includes electrets and other capacitive-effect transducers.

Condenser

#### V06-E04\*

[1997-2006]

# **Digital transducers**

\*This code is now discontinued and has been transferred to V06-V01L from 200701. It remains searchable for records prior to 2007.

#### V06-E05\*

[1997-2006]

#### Wireless transducers

\*This code is now discontinued and has been transferred to V06-V01M from 200701. It remains searchable for records prior to 2007.

### V06-E06\*

[1997-2006]

# Microtransducers: Nanotransducers

\*This code is now discontinued and has been transferred to V06-V01K from 200701. It remains searchable for records prior to 2007.

Micromachining, micromechanical, microelectromechanical, micromechanism

#### V06-E06A\*

[2002-2006]

# **Nanotransducers**

\*This code is now discontinued and has been transferred to V06-V01K2 from 200701. It remains searchable for records prior to 2007.

#### V06-E07\*

[2005-2006]

#### Ultrasonic transducer

\*This code is now discontinued and has been transferred to V06-V01N from 200701. It remains searchable for records prior to 2007.

Includes audio/communication type ultrasonic transducers.

#### V06-E08\*

[2005-2006]

#### Bone conduction transducer

\*This code is now discontinued and has been transferred to V06-V01P from 200701. It remains searchable for records prior to 2007.

# V06-E09\* [1980-2006]

#### Other

\*This code is now discontinued and has been transferred to V06-V01A2, V06-V01D, and V06-V01X from 200701. It remains searchable for records prior to 2007.

Includes moving armature, magnetostrictive and combined-principle transducers.

# V06-F\*

[1980-2006]

# Diaphragms; cones

\*This code is now discontinued and has been transferred to V06-V02A from 200701. It remains searchable for records prior to 2007.

Membranes, vibration plates

# V06-G\*

[1980-2006]

#### **Transducer details**

\*This code is now discontinued and has been transferred to V06-V02 from 200701. It remains searchable for records prior to 2007.

#### V06-G01\*

[1980-2006]

# Casings; Cabinets, mountings

\*This code is now discontinued and has been transferred to V06-V02E and V06-V02F from 200701. It remains searchable for records prior to 2007.

Includes structural association of transducers with electric circuitry; throat mountings for microphones; lead-throughs for earphones; supports for music pick-ups. See also W04-S. *Enclosure, housings, chambers, holders* 

#### V06-G02\*

[1980-2006]

# Obtaining desired frequency or directional characteristics

\*This code is now discontinued and has been transferred to V06-V02G from 200701. It remains searchable for records prior to 2007.

Includes structural combinations and spatial arrangements of separate transducers responsive to two or more frequency ranges; enclosures modified by mechanical or acoustic dampers; use of horns; use of several identical transducers.

Dampers

# V06-G09\*

[1980-2006]

#### Other

\*This code is now discontinued and has been transferred to V06-V02H, V06-V02J and V06-V02X from 200701. It remains searchable for records prior to 2007.

Leads, mouthpieces, earpieces, sanitary devices

# V06-H\* [1980-2006]

#### Circuits for transducers

\*This code is now discontinued and has been transferred to V06-V02S from 200701. It remains searchable for records prior to 2007.

Includes circuits for preventing acoustic reaction or correcting frequency response; cross-over networks for loudspeakers. Does not include volume control circuits. See W04-T also.

Frequency/amplitude control, delay circuits

### V06-J\*

[1980-2006]

# Transducer manufacture, testing, monitoring

\*This code is now discontinued and has been transferred to V06-V03 from 200701. It remains searchable for records prior to 2007.

# V06-J01\*

[1992-2006]

#### Manufacture

\*This code is now discontinued and has been transferred to V06-V03A from 200701. It remains searchable for records prior to 2007.

#### V06-J01A\*

[1992-2006]

# Diaphragm

\*This code is now discontinued and has been transferred to V06-V03A1 from 200701. It remains searchable for records prior to 2007.

# V06-J02\*

[1992-2006]

#### Testing, monitoring

\*This code is now discontinued and has been transferred to V06-V03B from 200701. It remains searchable for records prior to 2007.

#### V06-J03\*

[2005-2006]

# Micromachining process, method or apparatus

\*This code is now discontinued and has been transferred to V06-V03A7 from 200701. It remains searchable for records prior to 2007.

See also U11-C and U12-B03F codes.

MEMS, microtransducer, nanotransducer, siliconmachining, micromachining

# V06-K\*

[1980-2006]

# Electromechanical resonators and delay lines

\*This code is now discontinued and has been transferred to V06-V01E and V06-V04D2 from 200701. It remains searchable for records prior to 2007

For networks using resonators see U25-B codes also.

#### V06-K01\*

[1980-2006]

#### **Delay lines**

\*This code is now discontinued and has been transferred to V06-V04D2 from 200701. It remains searchable for records prior to 2007.

#### V06-K02\*

[1980-2006]

# Piezoelectric, electrostrictive and magnetostrictive resonators

\*This code is now discontinued and has been transferred to V06-V01B, V06-V01D and V06-V01E from 200701. It remains searchable for records prior to 2007.

Includes crystal tuning forks.

Oscillator

#### V06-K03\*

[1980-2006]

# Holders, electrodes, coils

\*This code is now discontinued and has been transferred to V06-V02B, V06-V02C and V06-V02F from 200701. It remains searchable for records prior to 2007.

Mounts, seals, bases, housing, supports

#### V06-K03A\*

[1987-2006]

#### **Electrodes**

\*This code is now discontinued and has been transferred to V06-V02B from 200701. It remains searchable for records prior to 2007.

Electrode arrays, forks, comb electrodes, interdigitated electrodes

#### V06-K04\*

[1987-2006]

#### **Filters**

(V06-K09)

\*This code is now discontinued and has been transferred to V06-V04D1 from 200701. It remains searchable for records prior to 2007.

See U25-B also.

#### V06-K05\*

[1997-2006]

#### **SAW** resonators

\*This code is now discontinued and has been transferred to V06-V01E1 and V06-V01E2 from 200701. It remains searchable for records prior to 2007.

See U14-G also.

Surface acoustic wave

#### V06-K06\*

[1997-2006]

#### MSW resonators

\*This code is now discontinued and has been transferred to V06-V01E3 from 200701. It remains searchable for records prior to 2007.

Magnetostatic, surface wave, MSSW, forward volume, MSFVW, backward volume, MSBVW

#### V06-K07\*

[1997-2006]

#### **Microresonators: Nanoresonators**

\*This code is now discontinued and has been transferred to V06-V01E and V06-V01K from 200701. It remains searchable for records prior to 2007.

Micromachining, micromechanical, microelectromechanical, micromechanism

#### V06-K07A\*

[2002-2006]

#### **Nanoresonators**

\*This code is now discontinued and has been transferred to V06-V01E and V06-V01K2 from 200701. It remains searchable for records prior to 2007.

# V06-K08\*

[1992-2006]

# Manufacture and testing

(V06-K09)

\*This code is now discontinued and has been transferred to V06-V03A and V06-V03B from 200701. It remains searchable for records prior to 2007.

#### V06-K08A\*

[2005-2006]

# Micromachining process, method or apparatus

\*This code is now discontinued and has been transferred to V06-V03A7 from 200701. It remains searchable for records prior to 2007.

See also U11-C and U12-B03F codes.

MEMS, microresonator, nanoresonator, siliconmachining, micromachining

#### V06-K09\*

[1980-2006]

#### Other

\*This code is now discontinued and has been transferred to V06-V01E and V06-V02S from 200701. It remains searchable for records prior to 2007.

Includes circuits; resonators not covered by previous codes.

#### V06-K10\*

[2005-2006]

#### Ultrasonic resonator

\*This code is now discontinued and has been transferred to V06-V01E and V06-V01N from 200701. It remains searchable for records prior to 2007.

Includes ultrasonic delay lines and resonators.

#### V06-L\*

[1980-2006]

# Measuring or general use type piezoelectric, electrostrictive, magnetostrictive or electromagnetic transducers

\*This code is now discontinued and has been transferred to V06-V01A, V06-V01B, V06-V01D, V06-V02 and V06-V04G from 200701. It remains searchable for records prior to 2007.

See V06-M, V06-N and V06-U codes for motors and actuators. Vibration generators for performing mechanical work are in V06-V04C.

# V06-L01\*

[1980-2006]

# Piezoelectric, electrostrictive, magnetostrictive

\*This code is now discontinued and has been transferred to V06-V01B, V06-V01D, V06-V02 and V06-V04G from 200701. It remains searchable for records prior to 2007.

Materials are also in U11-A02.

Ultrasonic, acoustic, magnetostrictive, electrostrictive

#### V06-L01A\*

[1987-2006]

#### **Piezoelectric**

\*This code is now discontinued and has been transferred to V06-V01B, V06-V02 and V06-V04G from 200701. It remains searchable for records prior to 2007.

Piezoelectric composition, ceramic, ultrasonic, crystal, igniter, switch, micromechanism, sensor, buzzer

# V06-L01A1\* [1987-2006]

# **Medical applications**

\*This code is now discontinued and has been transferred to V06-V01B, V06-V02, V06-V04G and V06-V04K from 200701. It remains searchable for records prior to 2007.

See also S05-D.

Ultrasonic probes, acoustic transducers, ultrasonic diagnostics transducers

# V06-L01A2\* [1980-2006]

#### **General measurements**

\*This code is now discontinued and has been transferred to V06-V01B, V06-V02 and V06-V04G from 200701. It remains searchable for records prior to 2007.

See also relevant S02, S03 codes.

Vibration, pressure, force

# V06-L01A3\* [1997-2006]

#### Piezoelectric transformers

\*This code is now discontinued and has been transferred to V06-V01B, V06-V02 and V06-V04F from 200701. It remains searchable for records prior to 2007.

# V06-L01A3A\* [2002-2006]

#### Multilayer

\*This code is now discontinued and has been transferred to V06-V01B1, V06-V02 and V06-V04F from 200701. It remains searchable for records prior to 2007.

# V06-L01A3B\* [2002-2006]

# Rosen type

\*This code is now discontinued and has been transferred to V06-V01B2, V06-V02 and V06-V04F from 200701. It remains searchable for records prior to 2007.

#### V06-L01A4\* [1997-2006]

#### Piezoelectric (contactless) switches

\*This code is now discontinued and has been transferred to V06-V01B, V06-V02 and V06-V04E from 200701. It remains searchable for records prior to 2007.

# V06-L01B\* [1997-2006]

#### Magnetostrictive

(V06-L01)

\*This code is now discontinued and has been transferred to V06-V01D, V06-V02 and V06-V04G from 200701. It remains searchable for records prior to 2007.

# V06-L02\* [1980-2006]

#### Manufacture, testing

\*This code is now discontinued and has been transferred to V06-V01, V06-V03A and V06-V03B from 200701. It remains searchable for records prior to 2007.

Polarising, polymerising, coating, process, assembling

### V06-L02A\* [2005-2006]

# Micromachining process, method or apparatus

\*This code is now discontinued and has been transferred to V06-V01 and V06-V03A7 from 200701. It remains searchable for records prior to 2007.

See also U11-C and U12-B03F codes.

MEMS, microsensor, nanosensor, silicon-machining, micromachining

#### V06-L03\* [1997-2006]

#### Microsensors; Nanosensors

\*This code is now discontinued and has been transferred to V06-V01K, V06-V02 and V06-V04G from 200701. It remains searchable for records prior to 2007.

Micromachining, micromechanical, microelectromechanical, micromechanism

# V06-L03A\* [2002-2006]

#### Nanosensors

\*This code is now discontinued and has been transferred to V06-V01K2, V06-V02 and V06-V04G from 200701. It remains searchable for records prior to 2007.

# V06-L04\* [1997-2006]

#### **Smart sensors**

\*This code is now discontinued and has been transferred to V06-V01Q, V06-V02 and V06-V04G from 200701. It remains searchable for records prior to 2007.

Intelligent

# V06-L05\* [1992-2006]

# **Electromagnetic sensors**

\*This code is now discontinued and has been transferred to V06-V01A, V06-V02 and V06-V04G from 200701. It remains searchable for records prior to 2007.

# V06-L06\* [2005-2006]

#### Ultrasonic sensor

\*This code is now discontinued and has been transferred to V06-V01N, V06-V02 and V06-V04G from 200701. It remains searchable for records prior to 2007.

Includes measurement type ultrasonic sensors.

# V06-L10\* [2002-2006]

### **Resonant sensors**

\*This code is now discontinued and has been transferred to V06-V02 and V06-V04G2 from 200701. It remains searchable for records prior to 2007.

#### V06-M

#### **Small electric machines**

Includes low power electric machines. Medium and large size machines and their controllers are in X11 and X13, respectively. Indeterminate size machines are in both V06 and X11 classes.

#### V06-M01

#### **Synchronous machines**

Motors, generators

#### V06-M01A

With permanent magnet

# V06-M01A1 [2008]

Interior permanent magnet

IPM

#### V06-M01B

Without permanent magnet

# V06-M01C [1997]

#### **Hybrid synchronous machines**

Includes combined permanent magnet and wound rotor type synchronous machines.

# V06-M02

### DC and induction machines

Includes universal machines.

# V06-M02A [1987]

#### **DC** machines

Motors, generators, commutator motors, shunt motors

# V06-M02B [1987]

#### **AC** machines

Induction-, squirrel cage-, asynchronous-, capacitorstart, split-phase-, AC commutator-machine

#### V06-M03

#### Non-mechanical commutator machines

Includes both AC and DC type brushless motors. Brushless, electronic commutator

# V06-M03A [1997]

# **Permanent magnet**

PM DC/AC brushless

V06-M03B [1997]

#### Switched reluctance

SR DC/AC brushless

# V06-M03C [1997]

# Sensorless

BEMF

#### V06-M04

#### Machines with vibrating armatures or coils

Includes voice-coil type motors, solenoidal motors, vibration motors.

Reciprocating/oscillating magnet, polarisedarmature, vibration motor

# V06-M04A [1997]

**Voice coil motors** 

V06-M05

**Stepping motors** 

V06-M05A [1987]

Variable reluctance

V06-M05B [1987]

Permanent magnet

V06-M05C [1997]

Hybrid

#### V06-M06

#### Other electric machines

Includes 'perpetual motion' motors, torque motors. Electrodynamic-clutches, -brakes, -gears V06-M06A [1987]

Synchros and selsyns

AC position motors

V06-M06B [1987]

**Linear motors** 

V06-M06B1 [1997]

**Asynchronous** *Induction, AC, LIM* 

V06-M06B2 [1997]

Synchronous

AC, LSM

V06-M06B3 [1997]

**Direct current** 

DC, linear

V06-M06B7 [1997]

Piezoelectric or electrostrictive

(V06-M06D)

V06-M06B8 [1997]

**Electrostatic** 

(V06-M06F)

V06-M06B9 [1997]

Magnetostrictive

(V06-M06)

V06-M06C [1987]

**Tachogenerators** 

Includes AC and DC type speed or rpm counters. See S02-G codes also.

V06-M06D [1987]

Piezoelectric or electrostrictive motors, actuators; Piezoelectric generators

Includes piezoelectric elements placed in printheads of inkjet printers (see also S06-G codes for inkjet printers). Also includes surface acoustic wave actuators for which U14-G is also assigned.

Bimorph actuators, SAW actuators

V06-M06D1 [1992]

**Ultrasonic motors** 

V06-M06D2 [1997]

Generators

V06-M06D3 [2002]

Laminated type

V06-M06D4 [2002]

**Bimorph type** 

V06-M06E [1987]

Servomotors

V06-M06F [1992]

Electrostatic motors, actuators, generators

Also includes triboelectric motors or generators.

Triboelectric effect

V06-M06G [1992]

Micromotors/microactuators; Nanomotors/nanoactuators

See also U12-B03F. For mfg. see V06-M11 and

U11-C18C codes.

Micromachine, micromachining, micromechanical, microelectromechanical, micromechanism

V06-M06G1 [1992]

**Electrostatic excitation** 

V06-M06G1A [2002]

**Comb motors** 

V06-M06G1B [2002]

**Wobble motors** 

V06-M06G2 [1992]

Magnetic excitation

V06-M06G3 [2007]

**Electro-thermal effect** 

For non-MEMS type electro-thermal actuator see V06-M06M.

V06-M06G8 [2005]

Microgenerators; Nanogenerators

V06-M06G8A [2005]

**Nanogenerators** 

V06-M06G9 [2002]

Nanomotors/nanoactuators

V06-M06H [1997]

Magnetostrictive motors, actuators;

Generators

(V06-M06)

Includes magnetostrictive motors, actuators and generators

V06-M06H1 [2005]

**Motors**; Actuators

V06-M06H2 [2005]

Generators

V06-M06J [1997]

**Corona motors** 

(V06-M06)

V06-M06K [1997]

# Magnetic-fluid motors, actuators

(V06-M06)

Includes electromagnetic pumps used for moving liquid metal or some other magnetic fluid using electromagnetic force. Electromagnetic pumps for high power applications are coded under X11-H03B only.

V06-M06M [1997]

**Shape-memory alloy motors** 

(V06-M06)

V06-M06N [1997]

**Printed-circuit or pancake motors** 

(V06-M06)

V06-M06P [1997]

Multidimensional motors

(V06-M06)

V06-M06Q [2002]

**MHD** generators

See X11-H03B for medium/high power machines.

Magneto-hydro-dynamics

V06-M06R [2005]

**Ultrasonic motors** 

Includes non-piezoelectric type ultrasonic motors. See V06-M06D1 for piezoelectric ultrasonic motors.

V06-M06S [2007]

# **Electro-active polymer motors**

Includes actuators/motors and generators having, for example, an electro-active polymer for electrical to mechanical, and vice-versa, energy conversion. See V06-M06D codes for piezoelectric actuators or motors. The actuator may have either a liquid or solid electrolyte.

EAP

V06-M06T [2008]

#### **External rotor type motor**

Includes motor with an outer or external rotor construction.

V06-M07

### **Magnetic circuits**

Magnets, magnetic poles, cores, yokes, tooth, slots, laminations

V06-M07A [1987]

Stator

Includes insulation details of stator.

V06-M07B [1987]

Rotor

Includes insulation details of rotor.

V06-M08

Windings

Slot-closures, wedges, ties, fastening windings

V06-M08A [1987]

Conductor shape, form, construction or layout

Coils, disc, flat

V06-M08A1 [2002]

Printed coils/windings

V06-M08B [1987]

Insulation; Shielding; Protection

Corona protection

V06-M09

#### **Casings; Supports**

Includes enclosures, casings, bearing and brush supports, bearing shields or end plates. Also includes lubrication and insulation details of bearings, etc.

Housing, machine mountings, seals, explosionproofing, vibration-damping, brush holders

V06-M09A [2002]

**Connectors; Terminal boxes** 

V06-M10

# Arrangements for handling mechanical energy

Shaft, clutches, brakes, gears, pulleys, mechanical starting, loads, flywheels, balancing arrangements, bearings, couplings

V06-M10A [2002]

Microgears; Microtransmission

V06-M11

# Manufacture, testing, repair and maintenance

Includes recycling details (see also X25-W04).

V06-M11A

[1983]

# Commutators, slip-rings, brushes

Includes wear indicators. See also V04-P02 for manufacture of general commutators, brushes, etc.

V06-M11B

[1983]

#### Windings

Coiling, inserting wires, winding jigs, laying conductors, conductor bending

V06-M11C

[1987]

# Insulation, balancing, centering

Includes impregnating, insulating, heating or drying of windings, rotors or machines. Also includes centering/balancing details of motor. *Taping* 

V06-M11D [1987]

Core

For rotor or stator bodies.

Magnetic poles, casting, moulding, laminating, slotting, magnetic circuits

V06-M11E

**Casings and supports** 

Housing, enclosure

V06-M11G

[2005]

[1997]

[2016]

# Micromachining process, method or apparatus

See also U11-C and U12-B03F codes.

MEMS, micromotor, microactuator, nanomachine, nanoactuator, silicon-machining, micromachining

V06-M11M

#### Testing, repair and maintenance

Includes analysis, diagnosis, monitoring, fault detection. This code can be used in conjunction with other V06-M11 codes, e.g. together with V06-M11A, V06 M11B, V06-M11C and V06-M11D for testing of brushes, windings, insulation and cores, respectively.

V06-M11P [1997]

Characterised by use of microprocessors

V06-M12 [1983]

### Commutators, slip-rings, brushes

Includes connections with windings, commutation improving arrangements. See also V04-L01.

Commutator segments, current collectors

V06-M13 [1992]

# Cooling, ventilation

This code covers cooling and/or ventilation of e.g. the motor itself, and **not** when the motor is part of the cooling/ventilation system for cooling another device.

V06-M14 [1992]

# Structural association with electric component

Includes measuring and protecting electronic components e.g. resistors, switches or RFI suppressors.

Position/rotation/direction detectors

V06-M15 [2002]

**Materials** 

V06-M15A [2002]

#### **Conductive materials**

Includes details of materials for thermal or electrical conduction.

V06-M15B [2002]

**Magnetic materials** 

V06-M15C [2002]

#### **Insulative materials**

Includes details of materials for electrical insulation.

V06-M16 [2008]

# Non-electrodynamic motor details

Includes details, such as electrodes, for piezoelectric, electrostatic, etc motors.

#### V06-M20

### Other details

This code includes details of model illustrating / demonstrating how an electric motor works. See also W04-W07C for demonstration of process or effect. Also includes machine simulation/design. Includes motor cable details.

Motor simulation, generator simulation, electric machine simulation, motor design, generator design, electric machine design V06-N [1983] **Controlling small electric machines** Includes control of low power motors, actuators and generators. Protective circuits for low power motors are coded by U24-F codes. V06-N01 [1983] **Stepping motors** Translation circuit, stepper, step-by-step motor V06-N01A [2005] Variable reluctance V06-N01B [2005] **Permanent magnet** V06-N01C [2005] Hybrid V06-N02 [1983] **DC** mechanical commutator motors Shunt motor V06-N03 [1983] **AC** motors V06-N03A [1997] **Asynchronous** Induction V06-N03B [1997] **Synchronous** V06-N03B1 [2006] With permanent magnet V06-N03B2 [2006] Without permanent magnet V06-N04 [1987] **DC** brushless motors V06-N04A [1997] **Permanent magnet** PM DC brushless

[1997]

V06-N04B

**Switched reluctance** *SR DC brushless* 

V06-N04C [1997] Sensorless BEMF V06-N05 [1987] Starting V06-N06 [1987] **Braking**; Stopping Reversing, resistive-, regenerative-braking V06-N07 [1992] Piezoelectric or electrostrictive motors. actuators Ultrasonic **V06-N08** [1997] **Electrostatic motors, actuators** V06-N09 [1997] Magnetostrictive motors, actuators V06-N10 [1997] **Servomotors** V06-N11 [1997] **Linear motors** V06-N11A [1997] **Asynchronous** Induction, AC, LIM V06-N11B [1997] **Synchronous** AC, LSM V06-N11C [1997] **Direct current** DC, linear V06-N11D [1997] Piezoelectric or electrostrictive V06-N11E [1997] Magnetostrictive V06-N11F [1997] **Electrostatic** 

V06-N12 [1997]

Voice coil motors

V06-N13 [1997]

**Corona motors** 

V06-N14 [1997]

Magnetic-fluid motors, actuators

(V06-N)

V06-N16 [1997]

**Shape-memory alloy motors** 

(V06-N)

V06-N18 [1997]

**Printed-circuit or pancake motors** 

(V06-N)

V06-N20 [1997]

**Multidimensional motors** 

(V06-N)

V06-N21 [2018]

Machines with vibrating armatures or coils

Control of ultrasonic motors are coded under V06-N36 only.

Vibration motor

V06-N22 [1997]

Micromotors/microactuators; Nanomotors/nanoactuators

Micromachine, micromachining, micromechanical, microelectromechanical, micromechanism

V06-N22A [2002]

Nanomotors/nanoactuators

V06-N24 [1997]

**Smartpower IC controllers** 

Integrated circuit controller, integrated smart power circuit

V06-N26 [1997]

**Microprocessor control** 

Includes DSP, ECU, PLC.

V06-N30 [1997]

**Multimotor control** 

V06-N35 [2002]

Remote motor control

V06-N36 [2005]

**Ultrasonic motors** 

Use this code together with other V06-N codes if required for highlighting the type of motor being controlled.

V06-N37 [2005]

**Vector control** 

Field-oriented, flux-vector, direct-torque, control, regulation

V06-N40 [2005]

Low power generators

For records prior to 2005, see X13-G02 codes. Medium and high power generator control is in X13-G02.

V06-N40A [2005]

**Synchronous generators** 

V06-N40B [2005]

**DC** generators

V06-N40C [2005]

Induction generators

V06-N40D [2005]

Piezoelectric generators

V06-N40E [2005]

Magnetostrictive generators

V06-N40F [2005]

**Electrostatic generators** 

V06-N40G [2005]

**MHD** generators

V06-N40H [2005]

**Microgenerators; Nanogenerators** 

V06-N40H1 [2005]

**Nanogenerators** 

V06-N45 [2005]

Speed control or regulation of electrical machines characterized by specific switching or control device

V06-N45A [2005]

Characterized by diodes

V06-N45B [2005]

Characterized by bipolar transistors

V06-N45C [2005]

**Characterized by FETs** 

V06-N45D [2005]

**Characterized by IGBTs** 

V06-N45E [2005]

Characterized by combination of switching devices

V06-N45F [2005]

Characterized by AC-to-DC converter

V06-N45G [2005]

Characterized by DC-to-AC converter

V06-N45H [2005]

Characterized by AC-to-AC converter

V06-N45J [2005]

Characterized by DC-to-DC converter

V06-P [2007]

#### Power generation plant

Covers only very low power generation. Medium to large scale power generation is covered in X11, X14 and X15.

V06-P01 [2007]

#### MEMS or chip-scale power plant

Includes the implementation of whole power plants on a MEM device or chip. Covers microcombustion of fuels to drive a micro steam- or gasor other- turbine, which drives a micro-generator. Individual MEMS generators are in V06-M06G. See also U12-B03F codes.

Micro power generator

V06-P02 [2007]

# **Small scale power plant**

Includes low wattage power plants typically used for powering small electronic equipment.

V06-U [1997]

Electric machines characterised by applications

V06-U01 [1997]

#### **Domestic**

Includes motors used in domestic and household equipment such as washing machines, dishwashers, vacuum cleaners, office paper shredder etc. Personal items, such as toothbrushes, razors, etc, are coded under V06-U02 only. Domestic and household equipment are also coded under X27.

Household

V06-U02 [1997]

#### Personal

Includes motors used in personal items such as toothbrushes, razors, hair dryers, etc. Domestic items are also coded under X27.

Toothbrush, razor, hair dryer

V06-U03 [1997]

**Vehicles** 

V06-U04 [1997]

Information equipment

V06-U04A [1997]

**Disk drives; Tape drives** 

V06-U04B [1997]

Printers; Graph plotters; Scanners;

**Photocopiers** 

V06-U04C [1997]

Facsimile machines

V06-U04D [1997]

#### **Ventilation; Cooling**

Also includes motor for cooling of electronic equipments, printed circuits etc.

V06-U04E [2002]

# **Telecommunication**

Includes mobile telephones.

V06-U05 [1997]

**Robotics** 

V06-U06 [1997]

Machine tools

# V06-U07 [1997]

# **Dispensing / vending machines**

See T05-H codes for details of vending machines, and X25-F03B for details of dispenser, including food/drink dispensers.

ATM machine

V06-U08 [1997]

**Toys; Games; Sports** 

Includes exercise machines.

V06-U09 [1997]

# Audio, video equipment

Includes motors for projectors, video recorders (VCR), DVD recorders and players, Hi-Fi systems, etc. Also includes motors for digital cameras, including cameras for mobile phones, laptops, etc. Non-digital cameras, or film cameras, are only coded under V06-U13. See also W04 codes for audio / video equipment.

CCD camera, digital camera, VCR, DVD player

V06-U10 [1997]

Medical

V06-U11 [1997]

# **Electronic equipment manufacture**

Includes semiconductor manufacturing equipment.

# V06-U12 [1997]

#### Instrumentation

Includes details of timepieces, e.g. chronograph timepiece.

# V06-U13 [2002]

#### Non-digital / film cameras

Includes motor details for non-digital cameras, such as silver halide film cameras, 35 mm cameras, etc. Digital cameras are only coded under V06-U09. All video cameras are coded under V06-U09 only. See also S06-B for electrical details of film cameras.

Silver halide, 35 mm camera

V06-U14 [2002]

**Optical switches** 

V06-U15 [2002]

#### **Industrial machines/components**

Includes industrial vehicles e.g. cranes, concrete mixing lorry, fork lift truck etc.

V06-U99 [2006]

#### Other electric machine applications

# V06-V [2007]

#### **Electromechanical transducers**

This section covers all electromechanical transducers for audio/communication, resonators, sensors, vibrators (mechanical work) and general transducers not covered elsewhere.

For records prior to 2007, see V06-A to V06-J codes for audio/communication type transducers and vibrators (mechanical work), V06-K codes for resonators and V06-L codes for sensors, and general transducers not covered elsewhere.

See V06-M, V06-N and V06-U codes for small motors/actuators construction, manufacture, testing, monitoring, maintenance, control and applications. See U12-B01B for magnetoresistors, U12-B03E for piezoresistors.

# V06-V01 [2007]

# Transducers characterised by mode, principle, scale or type

These codes are used to highlight a specific transducer aspect such as mode (ultrasonic), principle (electrostriction), scale (micro) and type (moving coil). V06-V01 codes are used in conjunction with other relevant codes such as V06-V02 for details, V06-V03 for manufacture and V06-V04 for applications. For example, a novel electrode of a piezoelectric resonator for a delay line would be coded in V06-V01B, V06-V01E, V06-V02B and V06-V04D2.

# V06-V01A [2007]

# **Electromagnetic induction**

(V06-E01, V06-E09 and V06-L05)

See also V02-G01E for linear variable displacement transducers or transformers (LVDT)

#### V06-V01A1 [2007]

#### Moving coil

(V06-E01A)

Voice coil, bobbins

#### V06-V01A2 [2007]

#### Moving armature, core or magnet

(V06-E09)

LVDT

#### V06-V01A3

[2007]

# Moving wire or strip

(V06-E01) Ribbon

# V06-V01B [2007]

#### Piezoelectric: Electrostrictive

(V06-E02, V06-K02, V06-L01A)

Details of piezoelectric or electrostrictive materials are covered by both V06-V01B and V06-V02R ('Materials').

Piezoceramic, quartz, ceramic, crystal resonator

V06-V01B1 [2007]

Multilayer

(V06-L01A3A)

V06-V01B2 [2007]

Rosen type (V06-L01A3B)

V06-V01C [2007]

**Electrostatic** 

(V06-E03)

Includes electrets and other capacitive-effect transducers (see also V01-B02 codes).

Condenser

V06-V01D [2007]

Magnetostrictive

(V06-E09, V06-L01B)

V06-V01E [2007]

# Resonators

(V06-K02)

Includes electromechanical resonators. For networks using resonators, see U25-B codes also. *Oscillators, crystal resonators, elastic wave* 

resonators

V06-V01E1 [2007]

Surface acoustic wave

(V06-K05)

SAW

V06-V01E2 [2007]

**Bulk acoustic wave** 

(V06-K05) BAW

V06-V01E3 [2007]

# Magnetostatic acoustic wave

(V06-K06)

Magnetostatic surface wave, MSSW, magnetostatic forward volume wave, MSFVW, magnetostatic backward volume wave, MSBVW

V06-V01K [2007]

Microtransducers; Nanotransducers

V06-V01K1 [2007]

#### Microtransducers

(V06-E06, V06-K07, V06-L03)

MEMS, micromechanical, microelectromechanical, micromechanism

V06-V01K2 [2007]

#### **Nanotransducers**

(V06-E06A, V06-K07A, V06-L03A)

NEMS, nanomechanical, nanoelectromechanical, nanomechanism, (piezoelectric) nano-wire

V06-V01L [2007]

**Digital transducers** 

(V06-E04)

V06-V01M [2007]

#### Wireless transducers

(V06-E05)

Bluetooth transducer

V06-V01N [2007]

#### **Ultrasonic transducers**

(V06-B03, V06-E07, V06-K10, V06-L06)

Includes details of supersonic transducers and ultrasonic/megasonic cleaning. Ultrasonic cleaning is also covered by V06-V04C and X25-H09A.

V06-V01P [2007]

# **Bone conduction transducers**

(V06-E08)

Includes details of bone anchored hearing aids (BAHA). Hearing aids are also coded under V06-V04K for medical applications, and under W04-Y. If the hearing aid is implanted, see also S05-F01. Hearing aid, bone anchored hearing aids, BAHA, bone conduction transducers

V06-V01Q [2007]

# **Smart transducers**

(V06-L04)

Includes details of the processing unit and the communication interface.

IEEE1451, SensorML, TransducerML, Transducer Markup-Language

V06-V01X [2007]

#### Other transducers

(V06-E09, V06-K09, V06-L)

Includes electro-optical(audio), combined-principle and infrasonic transducers.

# V06-V02 [2007]

#### Transducer details, circuits, materials

These codes are used in conjunction with other V06-V codes as appropriate. For example, a novel coil construction of a moving coil type transducer for a loudspeaker in a PA system is coded in V06-V01A1, V06-V02C, V06-V04A1 and V06-V04A5.

# V06-V02A [2007]

# **Diaphragms; Cones**

(V06-A02, V06-F)

Membranes, vibration plates

#### V06-V02B [2007]

#### **Electrodes; Terminals**

(V06-G09, V06-K03A)

# V06-V02C [2007]

# Coils; (electro)magnets

(V06-K03)

# V06-V02D [2007]

**Substrates; Layers** 

# V06-V02E [2007]

# **Casings**

(V06-G01, V06-K03)

Includes individual transducer housings. Also includes shield element to protect individual transducer. If the shield element is part of the cabinet, V06-V02F should be applied instead.

#### V06-V02F [2007]

# **Cabinets; Mountings; Supports**

(V06-G01, V06-K03)

Includes cabinets, mountings, supports for the transducer(s) within a cabinet. Also includes mountings of circuit board.

Enclosure, chambers, holders

# V06-V02G [2007]

# Obtaining desired frequency or directional characteristics

(V06-G02)

Includes structural combinations and spatial arrangements of separate transducers responsive to two or more frequency ranges, enclosures modified by mechanical or acoustic dampers, use of horns, use of several identical transducers.

# V06-V02H [2007]

#### Leads, connectors

(V06-G09)

Includes earphone jacks, cables for headphone/earphone, etc. Details of cables are also coded under X12-D.

#### V06-V02J [2007]

# **Sanitary devices**

(V06-G09)

Includes details of waterproof filter protecting the mouthpiece of a microphone, etc.

# V06-V02R [2007]

#### **Materials**

(V06-L01)

Manufacturing details of materials are covered by both V06-V02R and V06-V03A9 ('Other transducer manufacture'). Details of piezoelectric or electrostrictive materials are covered by V06-V02R and V06-V01B ('Piezoelectric; electrostrictive').

# V06-V02S [2007]

#### Circuits

(V06-H, V06-K09)

Includes circuits for preventing acoustic reaction or correcting frequency response; cross-over networks for loudspeakers. Does not include volume control circuits. See W04-T also.

# V06-V02X [2007]

### Other transducer details

(V06-G09)

Includes transducer details not covered elsewhere. Also includes details of model illustrating / demonstrating how a transducer works. See also W04-W07C for demonstration of process or effect.

#### V06-V03 [2007]

# Transducer manufacture, testing, monitoring

These codes are used in conjunction with other V06-V codes as appropriate. For example, a novel coil manufacture of a moving coil type transducer for a loudspeaker in a PA system is coded in V06-V01A1, V06-V03A3, V06-V04A1 and V06-V04A5.

#### V06-V03A [2007]

# Manufacture

(V06-J01, V06-K08, V06-L02)

# V06-V03A1 [2007]

#### Diaphragms; cones

(V06-J01A)

# V06-V03A2 [2007]

**Electrodes; terminals** 

(V06-J01, V06-K08, V06-L02)

### V06-V03A3 [2007]

Coils; (electro)magnets

(V06-J01, V06-K08 and V06-L02)

V06-V03A4 [2007]

Substrates; Layers

(V06-J01, V06-K08, V06-L02)

V06-V03A5 [2007]

**Casings** 

(V06-J01, V06-K08, V06-L02)

V06-V03A6 [2007]

**Cabinets; Mountings; Supports** 

(V06-J01, V06-K08, V06-L02)

#### V06-V03A7 [2007]

# Micromachining process, method or apparatus

(V06-J03, V06-K08A, V06-L02A)

Includes manufacture of MEMS and NEMS. See also U11-C and U12-B03F codes.

Micromechanical, microelectromechanical, micromechanism, microtransducer, nanomechanical, nanoelectromechanical, nanomechanism, nanotransducer

#### V06-V03A9 [2007]

#### Other transducer manufacture

(V06-J01, V06-K08, V06-L02)

Includes manufacture of transducer details not covered by the above codes. Includes manufacturing details of materials (see also V06-V02R).

# V06-V03B [2007]

# Testing, monitoring and calibration of transducers

(V06-J02, V06-L02, V06-K08)

This code includes testing and monitoring details of transducers, and not when the transducers are used as testing or sensing transducers, e.g. when the transducer is used to detect the tire pressure. Sensing, testing and imaging-type transducers are coded under V06-V04G.

# V06-V04 [2007]

# **Transducer applications**

These codes are used in conjunction with other V06-V codes as appropriate. For example, a novel coil of a moving coil type transducer for a loudspeaker in a PA system is coded in V06-V01A1, V06-V02C, V06-V04A1 and V06-V04A5. For applications in the communications and audio/video fields, see also W01, W02, W03 and W04 classes. For applications in the instrumentation and medical fields, see also S01, S02, S03 and S05 classes.

# V06-V04A [2007]

#### Audio/video equipment

Includes details of microphone (V06-V04A2) and/or speaker arrangements (V06-V04A4) for non-implanted hearing aids. Bone anchored or implanted hearing aids are only coded under V06-V04K and V06-V01P. Hearing aids are also coded under W04-Y. Also includes musical instruments, such as electronic trumpet, and cameras. Details of digital cameras are also included by W04-M01 codes

# V06-V04A1 [2007]

#### Loudspeakers

(V06-A)

See also W04-S codes.

# V06-V04A2 [2007]

#### Microphones

(V06-B02)

Pick-ups for musical instruments are coded in V06-V04A3. For microphones used for measurement purposes, see V06-V04G3.

#### V06-V04A3 [2007]

#### Pick-ups

(V06-B01)

Includes pick-ups for gramophones and musical instruments. General audio microphones are in V06-V04A2.

Stylus, cartridges, groove, mechanical recording, needle

# V06-V04A4 [2007]

#### **Headphones**; Earphones

(V06-C)

Also includes hands-free kits, hearing aids. For hearing aids, also apply V06-V04K.

Earphones, earpieces, mouthpieces, hearing aids

# V06-V04A5 [2007]

# **Public address systems**

Includes equipment used in sound broadcasting during concerts, in public places such as train or underground stations, exhibition halls, etc. Includes details of long-line public address systems. Details of microphones and loudspeakers are coded under V04-V06A1 and V06-V04A2, respectively. See also W04-S codes.

PA system, loudhailer, concert, exhibition, conference, megaphone, LLPA

# V06-V04B [2007]

# **Communication equipment**

Also includes hydrophones used for audio/voice communications. For hydrophones used in instrumentation, see V06-V04G1. For sonar systems, see also W02-C07 and W06-A05 codes.

# V06-V04B1 [2007]

# Telephone handsets

(V06-C)

Telephone transducers, per se, are also coded in W01-C01M, and mounting details in W01-C01A3. *Receivers, transmitters* 

### V06-V04B2 [2007]

**Radio communication** 

#### V06-V04C [2007]

#### Vibrators (mechanical work)

(V06-D)

Includes transducers for performing mechanical work e.g. shock wave generator for lithotripsy. For industrial-scale vibration generators see X25-L codes. See V06-M codes for motors and actuators. *Buzzers, ultrasonic cleaning* 

V06-V04D [2007]

Filters; Delay lines

V06-V04D1 [2007]

Filters (V06-K04)

V06-V04D2 [2007]

**Delay lines** (V06-K01)

V06-V04E [2007]

Switching (contactless)

(V06-L01A4)

V06-V04F [2007]

#### **Transformers**

(V06-L01A3)

V06-V04G [2007]

#### Instrumentation

(V06-L01A2)

Includes sensing, detecting and imaging type transducers. Also includes transducers described as sensors. See also S02 and S03 codes for transducers used for general instrumentation.

#### V06-V04G1 [2007]

#### Sonar

(V06-B03, V06-E, V06-L)

Includes hydrophones for e.g. ranging. For audio/voice communications, see V06-V04B.

#### V06-V04G2 [2007]

#### **Resonant sensor**

(V06-L10)

# V06-V04G3 [2007]

# **Measurement microphone**

(V06-B02

For audio/communication-type microphones, see V06-V04A2.

# V06-V04H [2007]

#### **Vehicles**

Includes land, sea and air vehicles.

# V06-V04J [2007]

# Military

See also W07 codes for military applications of transducers.

# V06-V04K [2007]

# Medical

(V06-L01A1)

Includes details of transducers for hearing aids, including bone anchored or implanted hearing aids. Details of the bone conducting transducers are also coded under V06-V01P, and details of the microphone and/or speaker arrangements are also coded under V06-A04A codes. Hearing aids are also coded under W04-Y. See also S05 codes for transducers used in medical devices.

Hearing aid, veterinary, RIC (Receiver In Canal), inear canals

# V06-V04L [2007]

#### Industrial

Includes machine tools, manipulators, etc. *Drilling, cutting, turning, lathe, robotics* 

# V06-V04M [2008]

#### Information equipment

Includes details of transducers for computers, and computer peripheral devices e.g. mouse, disk drives, etc.

V06-V04N [2008]

**Alarms; Signalling** 

V06-V04P [2008]

**Personal** 

V06-V04Q [2008]

**Displays** 

V06-V04R [2008]

**Toys; Games; Sports** 

See also W04 codes.

Exercise machines, karaoke systems

V06-V04S [2008]

**Domestic** 

V06-V04T [2013]

# **Purification; Sterilization**

Includes details of transducers for purifying/sterilizing air in buildings, rooms, etc. Details of these air cleaners are also coded under X27-E01B2.

# V06-V04X [2007]

# Other transducer applications

Includes applications not covered elsewhere, e.g. igniters, vending machines, etc.

# **V07: Fiber-Optics and Light Control**

The codes in this class were introduced at the start of 1983 and used to backlog code all basic abstracts to update 198018. Coverage is restricted to components for coupling, guiding, or performing operations - e.g. multiplexing - on IR, visible, or UV radiation. Individual radiation sources and receivers per se are not included, and are coded in U12 and V08. See W02-C04 codes for optical communications systems in general.

V07-F [1983]

**Optical elements** 

V07-F01 [1983]

**Light guides** 

V07-F01A [1983]

# **Guiding structures**

Includes guiding structures e.g. rods, rectangular core waveguides. From 1992 for optical fiber bundles see V07-F01A1B.

# V07-F01A1 [1983]

# **Optical fibers**

Includes individual glass, plastics and high power air-clad optical fibers; core and cladding structures providing desired refractive index profile, e.g. concentric guiding structure; doping.

Matched, raised cladding, single mode, step-index, graded-index

#### V07-F01A1A [1992]

# Light guides with polarisation-maintaining effect

(V07-F01A1)

# V07-F01A1B [1992]

# **Optical fiber bundles**

(V07-F01A)

Includes image transmission using fiber-optic face plates and imaging bundles, i.e. guides with same relative position of fibers at both ends.

Image inverters

#### V07-F01A1C [1997]

#### **Optical fiber arrays**

(V07-F01A1B)

Prior to 1997 coded in V07-F01A1B.

#### V07-F01A1D [1997]

# **Optical fiber tapes**

(V07-F01A1B)

Prior to 1997, coded in V07-F01A1B. See V07-F01B4 for optical fiber cables.

Ribbon

#### V07-F01A1E [2007]

# **Dispersion compensation optical fibers**

# V07-F01A1F [2007]

#### **Graded Index Fibers**

(V07-F01A1B)

As opposed to step index fiber. Refractive index with quadratic profile. Graded index fibers are always multimode fibers

Graduated index, Graded index, Multimode

# V07-F01A1X [2005]

#### Other novel optical fibers

Includes holey fibers, photonic fibers and micro/nano structured fibers. Dispersion compensating and slope compensating fibers may also be coded here. U13-B03F and V06 codes may also be added for micro/nano structured aspects. See V07-K10C for photonic materials, V07-F01A4 for photonic waveguides, and from 2006 see V07-F02D for all other photonic optical elements.

# V07-F01A2 [1987]

#### **Optical preform**

Includes structure, with manufacture in V07-F01A3A. Also includes similar structures for other optical elements, e.g. GRIN lens, tapered waveguide.

Soot

#### V07-F01A3 [1987]

# Manufacture, materials for optical fibers

#### V07-F01A3A [1992]

# Manufacturing methods for optical fibers and waveguides

From year 2002, manufacturing equipment for optical fibers is coded in V07-F01A3C

#### V07-F01A3B [1992]

# Materials for optical fibers and waveguides

For non-linear optical and electro-optical materials see V07-K10 codes. Details of materials for optical cables are coded under V07-F01B4C only.

Silica

# V07-F01A3C [2002]

#### Manufacturing equipment

Covers equipment for the manufacture of optical fibers. Equipment for preparing fibers goes in V07-G01, and for light guides/cables go in V07-H01.

#### V07-F01A4 [2005]

#### Slab and Planar waveguides

Prior to 2005 see V07-F01A. Includes photonic waveguides with novel structure. For photonic materials see V07-K10C, for photonic fibers see V07-F01A1X, and from 2006 see V07-F02D for all other photonic optical elements.

# V07-F01A5 [1983]

# Integrated optical waveguides

Includes thin film waveguide and its manufacture. Connections, switches and modulators integrated onto waveguide are also included, but see also V07-G or V07-K codes. Thin film optical element e.g. filter or lens is additionally coded in V07-F02. Semiconductor waveguides are also coded in U12-A or U13-D04A but waveguides for lasers are not included.

Substrate, integrated optics

# V07-F01A5A [1997]

# Characterised by integrated optical waveguide manufacture

(V07-F01A5)

Includes film deposition, substitution of dopant atoms, etching, using polymerisation.

# V07-F01A5S [2002]

#### Integrated optical waveguide sensors

Includes multilayered optical filters.

Fiber gratings, smart skin, smart structure

#### V07-F01A6 [1997]

Polarisation-independent light guides

### V07-F01B [1983]

Light guide protection; Repair and maintenance; Optical cables

# V07-F01B1 [1987]

# **Light guide protection**

Includes materials, manufacture of covering layers (i.e. non-optical layers) coated on fiber after extrusion e.g. radiation curable layers and metal coatings.

Sheath

# V07-F01B1A [2002]

#### **Dust-proof and water-tight structures**

Includes drainage and protection system for relay points of optical cables, communication able terminations, and enclosures for protecting optical fiber connections from dust and humidity.

Dust-proofing, weather-proofing, environmental protection

### V07-F01B2 [2005]

# Optical fiber repair and maintenance methods and equipment

# V07-F01B4 [1987]

#### **Optical cable**

Includes composite electrical and optical fibers cable for transmission line signalling and optical repeaters.

# V07-F01B4A [1992]

# Characterised by optical cable structure

Helical/S-Z winding, spacers

# V07-F01B4B [1992]

# Characterised by optical cable manufacture

Includes method and equipment for manufacturing optical cables.

#### V07-F01B4C [2023]

# Characterised by optical cable materials

Includes optical cable materials. Details of materials for optical fibers and waveguides are coded under V07-F01A3B only.

Plastic, silica, glass

#### V07-F02 [1983]

# Lenses, reflectors, other optical elements

Includes in general passive optical components associated with optical fibers and waveguides e.g. for coupling waveguides, sources and receivers; beam profile correction, etc. Also includes components manufactured from optical fiber e.g. filter, attenuator. For lens formed on fiber end, see V07-G04. Electro- and magneto-optic components are coded in V07-K.

#### V07-F02A [1987]

#### Lenses; Reflectors; Refractors

Includes prism; mirror (for scanning, see also V07-K05; incorporating electro-optic light shutter, see V07-K01A and for vehicle rear view/anti-dazzle mirror, see X22-J04).

# V07-F02B [1987]

#### **Gratings; Filters; Polarisers**

Includes light retardation film, light diffusion film. *Diffraction* 

# V07-F02C [1987]

#### **Holograms**

Excludes materials for holograms. For holograms used as optical components e.g. holographic diffraction grating, see also V07-F02B. Holography is in V07-M.

# V07-F02D [2006]

#### **Photonic optical elements**

For waveguides see V07-F01A4. For fibers see V07-F01A1X. For novel band gap aspects of photonic materials, and novel photonic materials, see V07-K10C.

### V07-F03 [1992]

#### Mode selectors/converters

(V07-F01A1) Multi-mode

# V07-G [1983]

# **Coupling light guides**

Codes V07-G01 to V07-G04 are used in conjunction with V07-G10 to V07-G12.

# V07-G01 [1983]

### **Preparing fiber**

Includes cutting, polishing, stripping protective coating (see also V07-H01). Hand tools are also in V07-H01.

Cleaving, scoring

#### V07-G02 [1983]

#### Aligning with fiber or source

Includes alignment using e.g. ferrules or by injecting light into fiber and measuring maximum transmission.

# V07-G02A [2005]

#### **Optical ferrules**

Includes all aspects of ferrule structure, manufacture, molding, methods and equipment

# V07-G03 [1983]

# Fixing separation, fastening

Includes plugs, screw-ins, lever locking, retainment against pulling force, spring-biasing, strain relief (see also V07-H codes), fixing gap between fiber ends, optical cement, etc.

# V07-G04 [1983]

#### Beam shaping and focusing

Includes expanding of beam with lens, forming of e.g. elliptical lens on fiber, heating to alter refractive index distribution, mode, phase, and beam profile matching, anti-reflection coating.

#### V07-G05 [2005]

# Optical components other than beam shaping and focusing

Includes filters, polarisers, gratings, mirrors etc. for coupling structures. Filters for beam shaping or lensing are covered in V07-G04, otherwise covered here. For novel optical element aspects see V07-F02 codes.

# V07-G10 [1983]

# 2- port connections

Includes coaxial connections, e.g. simplex, duplex, ribbon cable to ribbon cable, bundle to bundle, fiber termination, coupling fiber to thin film waveguide, and connections on thin film waveguide (see also V07-F01A5). V07-G10 is used if it is unclear whether connection is detachable or permanent. When this code is used in combination with V07-F02 it indicates that connection has other optical function, e.g. as attenuator.

#### V07-G10A [1983]

#### **Detachable connectors**

Includes connections intended for repeated connection/disconnection e.g. plug type.

# V07-G10B [1983]

#### Permanent connections

Includes splicing by fusing fiber ends or using heat shrinkable sleeve or using index matching adhesive.

#### V07-G10C [1983]

# Coupling guide end to active source/detector

Includes connections to LED, laser diode, lamp, or photodiode, bi-directional coupling to source/detector. In general, use also V07-G10A if connection is detachable but not V07-G10B, if permanent. Also includes bare fiber inserted into source module package, e.g. as pigtail (see also U12-A01C).

# V07-G10D [1987]

# **Optical coupling**

Includes coupling between fibers using e.g. lens, fiber-thin film coupling.

# V07-G10E [2002]

# Orthogonal intersection of parallel fiber optic threads

Includes intersection of parallel woven fiber optic threads, orthogonal to another fiber optic thread. Fabric panel, display, energy beam, internal reflection, light generating pixels

# V07-G11 [1983]

#### 3- or more port couplers

Includes coupling e.g. by splitting light path or removing cladding, (de)multiplexing (see also V07-K04); circulators, evanescent coupling, star couplers, bi-directional coupling using beam splitter, mode selector/converter (see also V07-F03).

Branching

# V07-G12 [1983]

# **Rotary couplers**

Slip-ring

# V07-G13 [2005]

# Optical fiber component packages/modules for optical communications

Includes optical line cards, optical backplanes and other passive optical component modules. Does not include electro-optical packages, which are coded in W02. Includes manufacture.

### V07-G15 [1983]

#### **Optical switching**

Includes mechanical, electromechanical, electro/magneto-optic or thin film switches. Electromechanical or electro/magneto-optic switching is also in V07-K01. Rotary switches are also in V07-G12.

Shutter, fiber displacement

# V07-H [1983]

#### Light guide installation

Covers installations analogous to W01-D, X12-G.

#### V07-H01 [1992]

# Methods and equipment for installing light quides/cables

Includes hand tools for use in-field (see also V07-G01), stripping coating or cladding, dispensers, air blowing, pulling of guide through duct, splicing, cable marking.

Joining, terminating

# V07-H02 [1992]

# Fittings for optical guides/cables

Includes splice cases, distribution boxes, strain relief, heat shrinkable covers, clamps etc. For installation tools used with these fittings see also V07-H01.

#### V07-H03 [1992]

# Installations for optical guides/cables

Includes details of optical fibers in underwater/underground/overhead power distribution network. For installation tools used on site see also V07-H01.

Conduit, ducting, feed-throughs, bushings

# V07-H04 [2005]

# **Optical fiber excess management**

Includes optical cable reels, trays, cable guides and supports for excess cable management, surface inlaid fiber optic installations and pre-assembled fiber-optic installation panels. From 2006 see V07-H04A for excess fiber management for fiber in use, and V07-H04B for excess fiber management for fiber not in use. See also X12-G04A1 for reels for composite optical and electrical cables. Prior to 2005 see V07-H09.

Reels

#### V07-H04A [2006]

# Optical fiber excess handling and management

Includes optical cable reels, trays, cable guides and supports for excess cable management, surface inlaid fiber optic installations and pre-assembled fiber-optic installation panels for fiber-optics connected to communications/light transmitting system. Also includes protection of buried fiber optic nodes.

# V07-H04B [2006]

# Optical fiber storage and transporting aspects

Includes optical cable reels, trays, cable guides and supports for excess cable management, surface inlaid fiber optic installations and pre-assembled fiber-optic installation panels for excess/spare fiber not connected to anything, e.g. for storage in warehouse/ storage cabinet. Also includes storage space for jacketed fiber.

### V07-H09 [1992]

# Other aspects of light guide installations

Includes all other aspects of cable installation not covered anywhere else. From 2005 see V07-H04 codes for reels.

# V07-J [1983]

### Measuring optical element parameters

For measurements during waveguide manufacture, see also V07-F01A3A. Includes measuring/testing guide characteristics e.g. loss, dispersion (see also S02-J04A1); fault location/monitoring of transmission system e.g. breakage (see W02-C codes also). Excludes optical sensors i.e. measuring of non-optical parameter using optical fibers: these are coded in V07-K and in the relevant S01/S02/S03 codes.

Attenuation, intensity, optical time domain reflectometry, OTDR

# V07-K [1983]

#### **Controlling light**

In general, includes modification of optical properties of medium electrically, magnetically, acoustically, and physically (i.e. force, stress, etc.), and by using light (i.e. non-linear optics). Also includes light switching and electro- or magnetooptic materials. For spatial light modulation, prior to 1997, see V07-K01 and V07-K05; from 1997 spatial light modulators are covered in V07-K01A2. For spatial phase correction, prior to 199701 see V07-K02 and V07-K05; from 1997 spatial phase correction is covered by V07-K02 and V07-K01A2. Excludes anti-dazzle electro-optic vehicle mirror (see X22-J), electro-optic spectacles (see X27-A02D), constructional details of electro-optic display (e.g. for liquid crystal, electrochromic displays, see U14-K codes).

# V07-K01 [1983]

#### Light intensity control, modulation

Includes physically modifying fiber e.g. by stretching, bending; using acousto- or magneto-optic effects. Also covers optically activated liquid crystal devices.

# V07-K01A [1987]

# Light intensity control/modulation using electro-optical devices

Includes control using liquid crystal devices; semiconductor light in-light out devices (see also U12-A02C3); MQWs (see also U12-E01B2). From 1992 for optical logic devices see V07-K06.

Multi-quantum well, Kerr, Pockells, Stark

# V07-K01A1 [1997]

#### Single optical beam modulation

(V07-K01A)

# V07-K01A2 [1997]

#### Area modulation

(V07-K01, V07-K05)

Prior to 1997 spatial modulation is covered by V07-K01 and V07-K05. For magneto-optic spatial modulation see also V07-K03.

Light valves, spatial, Spatial light Modulation (SLM), 3D Projecting light displays

[1987]

#### V07-K01B

# **Light control using shutters**

Includes e.g. electromechanical chopper, ferromagnetic fluid.

# V07-K01C [1992]

# **Optical amplification**

(V07-K01, V07-K01A, V08-A04X) Repeater

# V07-K01C1 [1992]

# Semiconductor optical amplifiers

(V07-K01A)

Includes amplifiers derived from conventional laser diodes. See also U12-A02B1, U12-A02C3 or V08-A04A.

#### V07-K01C2 [1992]

#### **Optical fiber amplifiers**

(V07-F01A1, V08-A4X)

Includes fiber doped with rare earth metal (e.g. erbium) amplifier.

# V07-K02 [1983]

# **Phase**

Includes pulse shaping.

Sagnac, interferometer, delay, refractive index

# V07-K03 [1983]

#### **Polarisation**

Includes magneto-optic effect, and materials which exhibit this effect. For magnetometers using rotation of polarised light, see also S01-E01.

Faraday effect/rotator, Kerr, optical isolator, circulator

# V07-K04 [1983]

# Frequency, colour

Includes (de)multiplexing, heterodyning, frequency shifter e.g. using non-linear optics (for materials see V07-K10 codes), wave mixing or mode shifting in optical fiber and 3- or more pole multiplexing connectors (see also V07-G11).

Up/down converter, frequency doubling, second harmonic generation, SHG, optical harmonic generators

# V07-K05 [1983]

#### Position or direction

Includes deflection, scanning using e.g. rotating mirror or acousto-optic devices. Scanners are also coded in S06-D and E, or W04-M01E depending on application, respectively, to copier, printer, facsimile, or opto-mechanical TV systems. Mirrors per se are coded in V07-F02A.

# V07-K06 [1992]

# **Optical logic**

(V07-K01A)

Includes bistable devices, optical computer elements, optical ADC. See also relevant codes in U12-A01, U12-E01, U14-A02, T01-E05A, T02-A03, U21-A03G, U21-C01G.

Self-electro-optic effect, SEED, binary optics

#### V07-K10 [1992]

#### Materials used for controlling light

(\/07-K)

For materials with magneto-optic effect see V07-K03.

#### V07-K10A [1992]

# **Liquid crystals**

See also U11-A03A.

# V07-K10B [1992]

# Nonlinear optical and electro-optical materials

Second harmonic generation, SHG

#### V07-K10B1 [1992]

# Inorganic non-linear optical and electrooptical materials

Includes lithium niobate, potassium titanyl phosphate (KTP), beta-barium borate (BBO), ceramics e.g. lead lanthanum zirconium titanate (PLZT).

#### V07-K10B2 [1992]

# Organic non-linear optical and electrooptical materials

Includes Langmuir-Blodgett thin films, polymers. Steroidal ketone, organopolysiloxane

#### V07-K10C [2005]

# Novel photonic crystals and materials

Covers all novel photonic materials, including e.g. new band-gap technology/arrangements. For photonic fibers see V07-F01A1X, for photonic waveguides see V07-F01A4, and from 2006 see V07-F02D for all other photonic optical elements.

# V07-L [2006]

# Manufacture, materials, equipment for optical elements other than optical fibers and waveguides

All manufacturing aspects of optical fibers and waveguides are coded in V07-F01A3 codes. Prior to 2006 all manufacturing aspects were coded under the relevant device. Post 2006 see both relevant device code and V07-L code to indicate the manufacturing aspect of the device in question.

# V07-L01 [2006]

Manufacturing methods for optical elements other than optical fibers and waveguides

# V07-L02 [2006]

Materials for manufacturing optical elements other than optical fibers and waveguides

For non-linear and electro-optical materials see V07-K10 codes.

#### V07-L03 [2006]

Equipment for manufacturing optical elements other than optical fibers and waveguides

# V07-M [1983]

# Holography

All aspects are included. Holograms per se are in V07-F02C.

Record, image, rainbow

# V07-N [1987]

# **Applications of optical fibers**

Applications other than those in V07-N01 to V07-N03 are coded in V07-N e.g. fiber-optic lasers using Raman/Stimulated Brillouin Scattering (see also V08-A codes). If fiber-optic laser is used as amplifier see V07-K01C2.

SBS

# V07-N01 [1987]

# Gyroscopes, interferometers, sensors

Sensing using optical fibers. If novelty covers control of light, see also V07-K. Semiconductor laser light source for gyroscopes are also coded in U12-A01B1 and V08-A04A. Gyroscopes are also coded in S02-B07 and W06-A07; for interferometers see also S02-A03

Rotating, angular, loop, Sagnac

# V07-N02 [1987]

#### **Endoscopes, fiberscopes**

Medical and industrial endoscopes are also coded respectively in S05-D04 and S02-J04.

Camera, imaging

# V07-N03 [1987]

#### Illumination

See X26-G also. Includes transmission of solar radiation from outside to interior of building, Christmas tree lighting, microscope slide illumination, use of lamp at one end of fiber for lighting.

# V07-X [1983]

# Miscellaneous aspects of light guides

Includes (chemical) optrodes, sacrificial/consumable non-waveguide sensors, etc.

#### V08: Lasers and Masers

Includes details of sources and amplifiers of coherent optical (i.e. IR, visible light and UV) and other EM waves.

#### V08-A

#### Lasers

For aspects directly involved with construction, operation, parameter control and monitoring of laser; and also for equipment, e.g. safety goggles, required for working with laser. For electrical aspects of laser used with weaponry and in laser surgery see W07, according to application, and S05-B01 codes respectively. For lidar see W06-A06 codes. For optical amplifier used in optical communication see also V07-K01C codes.

#### V08-A01

# Construction/shape of optical resonators or active medium

From 1992 details of active medium are covered by V08-A01D.

# V08-A01A [1983]

#### **Optical resonators**

Includes reflector details e.g. mirror, which is also coded in V08-A08 if it is unclear whether it forms part of resonator. Also includes external mirror for semiconductor laser.

# V08-A01A1 [1992]

# **Ring lasers**

(V08-A01A)

For gyroscopes see also S02-B07B and W06-A07.

#### V08-A01A2 [1992]

# With passive optical components to control e.g. laser frequency

(V08-A01A, V08-A03)

Includes prism, diffraction grating, birefringent, non-linear materials placed inside optical resonator. For controlling laser parameters see also V08-A03 codes.

#### V08-A01A3 [1997]

# **External optical resonator**

(V08-A01A)

External cavity, folded cavities

# V08-A01B [1992]

# Characterised by electrode details of laser

(V08-A01, V08-A02)

Includes material, structure of electrodes. See also V08-A04B code for arrangement of electrodes passing through discharge tube of gas laser.

#### V08-A01C [1992]

# Gas management systems of laser

(V08-A01, V08-A04B) Gettering, replenishing

# V08-A01D [1992]

# Characterised by active medium material of laser

This code is used in conjunction with V08-A04 codes to identify type of laser for which the active material is used. For semiconductor laser see also U12-A01B6 code for e.g. blue and green light emitting lasers.

### V08-A01D1 [2002]

#### Preparation of active material

(V08-A01D)

Includes crystal growth and doping aspects. Does not include semiconductor laser formation (see U11/U12-A01B codes).

# V08-A02

#### Pumping of active medium within laser

Includes thermal, chemical and electron beam pumping; expansion shock (e.g. compressed argon/xenon) excitation system; etc.

Excitation, population inversion

#### V08-A02A [1987]

#### Semiconductor laser drive circuit

Semiconductor laser drive circuits, are also coded in U12-A01B4. Control of drive circuit for stabilisation of laser is also in V08-A03A1 for amplitude stabilisation, or V08-A03C2 for frequency stabilisation.

#### V08-A02B [1987]

#### **Optical pumping of laser**

Includes flash-lamps, shining light on semiconductor laser.

#### V08-A02C [1992]

#### **Pumping of gas laser**

Includes pre-ionisation, gas discharge, capacitive or inductive excitation. Covers pumping by electrical discharge in gas laser, pulse drives.

Discharge electrode

#### V08-A03

### **Control of laser parameters**

Includes control of beam parameters e.g. phase, frequency, mode. For use of feedback to monitor laser output and correct pumping conditions see also V08-A06A. Also includes varying position of optical components inside laser cavity. For control of components outside resonant cavity see also V08-A08, V07-F02, V07-K codes or under application. For stabilisation using temp. control involving cooling see also V08-A05. Also applied for laser using electro-optical device exhibiting Pockells- or Kerr- effect, etc.

Mirror positioning, direction, polarisation, nonlinear optics, Brillouin/Raman scattering

#### V08-A03A [1987]

# **Control of laser intensity**

Power

V08-A03A1 [1992]

**Amplitude stabilisation of laser output** 

V08-A03B [1987]

### Control of laser mode

Locking, suppression

V08-A03C [1987]

#### Control of laser frequency

Line width, tuning

### V08-A03C1 [1992]

# Frequency multiplication of laser output

(V08-A03)

See also V08-A01A2 if passive optical component is placed inside optical resonator.

#### V08-A03C2 [1992]

#### Frequency stabilisation of laser output

# V08-A03D [1992]

# Laser Q-switching

(V08-A03)

Includes electro-optic, magneto-optic, acoustooptic modulators, rotating mirror or prism, bleachable dye used for giant-pulse technique. *Q-spoiling* 

# V08-A04

#### Laser types

This code is used in conjunction with other codes as applicable, e.g. gas laser optical resonator is coded in V08-A01A and V08-A04B. For materials or compositions for active medium see also V08-A01D.

#### V08-A04A

#### Semiconductor laser

See also U12-A01B codes for semiconductor laser body, package and manufacturing details. Includes DBR and DFB. For light-in/light-out modulators and logic gates see also V07-K codes and U12-A02C3. For testing of semiconductor laser see U11-F01C5 and V08-A06. For semiconductor laser drive circuits see U12-A01B4 and V08-A02A. For optical amplifier see V07-K01C1. For laser used to read optical disk or CD see also W04-C and T03-B codes.

Active, single-heterostructure, doubleheterostructure, buried, stripe, surface emitting, electrode, distributed Bragg reflection, distributed feedback, current blocking layer, lateral current confinement, quantum well, cleaved-coupled cavity

# V08-A04B [1983]

#### Gas laser

(V08-A04X)

Includes atomic, molecular, ion, excimer, metal vapour and chemical lasers. For controlling gas pressure see V08-A01C. For electrode details see also V08-A01B. For gas laser excitation see V08-A02C.

TEA, carbon dioxide, helium-neon, argon, krypton/fluoride, xenon chloride, oxygeniodine

# V08-A04C [1983]

#### Solid-state laser

(V08-A04X)

Includes doped insulator, crystal, glass, etc. laser. Excludes semiconductor laser.

Rod, slab, neodymium, YAG, ruby, holmium

# V08-A04C1 [1997]

### Laser diode pumped solid state laser

(V08-A04C)

Includes solid state lasers pumped by laser diodes or laser diode arrays. For specific optical pumping details see V08-A02B code also.

#### V08-A04C2 [1997]

#### **Optical fiber laser**

(V08-A04X, V08-A04C)

See also V07 codes. For fiber-optic amplifier see V07-K01C2 only. Details of laser pumping of optical fiber are covered by V08-A02B. Prior to 1997 optical fiber lasers were covered by V08-A04X.

Waveguide laser

# V08-A04D [1983]

#### Liquid or dye laser

(V08-A04X)

Rhodamine, crystal violet, coumarin

# V08-A04E [1987]

#### Free electron laser

FEL, wiggler field

#### V08-A04F [2011]

# Infrared lasers and UV lasers, non-visible light sources

Includes IR and UV lasers emitted from non visible light source, For illumination aspects see also X26-Q01 and X26-Q03

#### V08-A04X

# Other laser types

Includes lasers using scattering effects. From 1997 for optical fiber lasers see V08-A04C2. For X-ray lasers and MASERs see V08-B codes.

Raman, Brillouin

# V08-A05 [1987]

# Cooling/heating aspects of laser

(V08-A09)

Includes cooling as part of gas recirculation system, heat sinks, temperature control and stabilisation. For laser parameter stabilisation and control see also appropriate V08-A03 code. For heat sinks for semiconductor lasers see also U12-A01B3A.

Circulate, coolant, pump, thermostat

#### V08-A06 [1987]

# Measurements and testing of laser

(V08-A09)

Includes monitoring of laser output during operation e.g. arc discharge detection. For photodiode arrangement within laser diode package see also U12-A01B3. For measurements performed on laser beam see also S03-A codes. For testing of semiconductor laser see also U11-F01C5.

# V08-A06A [1997]

# Monitoring for direct active feedback control of laser parameter

(V08-A06)

For monitoring details of automatic laser parameter control using monitored laser output to stabilise parameter or control laser operation. For semiconductor laser diode drive circuit receiving parameter measurement from e.g. photodiode see U12-A01B4 and V08-A02A codes also. See also applicable V08-A03 code.

# V08-A07 [1992]

#### Assemblies of lasers

Prior to 1992 laser diode arrays were coded in U12-A01B, U13-D04, V08-A04A. From 1992 they are covered by this code and U12-A01B1, V08-A04A.

# V08-A07A [1992]

# Injection locking within laser assembly

(V08-A01, V08-A03, V08-A04)

Includes master-slave arrangements for continuous wave lasers and, in case of pulsed laser, Master Oscillator-Power Amplifier configuration.

Seed oscillator, CW, MOPA

#### V08-A08 [1992]

# Correcting laser beam parameters outside resonator

(V08-A09)

Includes components for correcting laser beam parameters e.g. profile/field patterns. See also V07 codes. Also includes homogenisation of beam.

#### V08-A09

# Other laser related aspects

Includes packaging and enclosure details. For packages for semiconductor lasers see U12-A01B3, with semiconductor laser package manufacture covered in U11-D01 and E02 codes.

# V08-A10 [1997]

# Protection equipment for use with laser

Includes passive and active laser protection equipment preventing injury or blinding of person using laser or person upon which laser is operated. For direct active control of laser using parameter measurement feedback see V08-A06A and V08-A03 codes also. For goggles see also X27-A02D. *Goggles* 

# V08-B

#### Other stimulated emission devices

For frequency standard aspects see U23-D codes, e.g. U23-D02, S04-C09. For atomic clock aspects see S04-B02X.

Atomic frequency standard

# V08-B01 [1997]

# Sub-IR frequency emitting device

Used for ultra-low frequency emitting device e.g. MASER

Microwaves

#### V08-B02 [1997]

# X-ray laser

(V08-B)

Prior to 199701 X-ray lasers were covered by V08-B. For ultra-high frequency laser see also V05-E03. For X-ray lithography in semiconductor manufacture see also U11-C04H1.

# **Section W: Communications**

W01: TELEPHONE AND DATA TRANSMISSION SYSTEMS	. 621
W02: Broadcasting, Radio and Line Transmission Systems	. 666
W03: TV and Broadcast Radio Receivers	. 719
W04: Audio/Visual Recording and Systems	. 749
W05: Alarms, Signalling, Telemetry and Telecontrol	. 796
W06: Aviation, Marine and Radar Systems	. 820
W07: ELECTRICAL MILITARY EQUIPMENT AND WEAPONS	. 836

# W01: Telephone and Data Transmission Systems

#### W01-A

# **Digital information transmission**

Codes in this group relate chiefly to novel aspects of digital transmission and to a lesser extent to its applications. Note that some communications or broadcast systems which are inherently digital, such as GSM or DAB, are not routinely coded here but are included for specific novel data communication aspects which can be usefully represented by the assignment of W01-A codes. (For systems aspects of GSM, see W01-B05A1A and W02-C03C1A; for DAB see W02-D05C1). From 2002, it is intended to make a greater distinction between these aspects of novel digital transmission technology and applications which are better dealt with elsewhere. Thus, for example, inventions concerned merely with the use of the internet, such as for e-business purposes, or with software aspects of email, will **not** be included in W01, and are covered in class T01 (digital computing).

# W01-A01

# **Error detection and prevention**

Error correction coding in general is covered by U21-A06 codes.

Monitor, link, check, redundancy, BER

# W01-A01A

#### By diversity, repeating or returning

Diversity radio systems are covered by W02-C03A codes and where an invention is concerned chiefly with radio aspects and data transmission details are not significant, those codes are assigned instead of W01-A01A. However, where radio aspects and data transmission aspects are significant both W01-A01A and W02-C03A codes may be assigned together.

ARQ, retransmission request, MIMO, return channel, Stop-and-wait protocols, Go-Back-N protocols, Selective-repeat protocols

# W01-A01B

#### **Using codes**

Generally-applicable error detection using codes, i.e. not specific to data communications, is covered by U21-A06 codes.

Decode, encode, symbol, Reed, Forward Error Correction (FEC)

# W01-A01B1 [1992]

#### **Block codes**

Covers coding where the final codeword is of fixed, finite length e.g. cyclic block coding.

Parity, cyclic, Hamming distance, BCH

### W01-A01B1A [2005]

#### Using parity

Includes the use of odd and even checking bits.

# W01-A01B1C [2002]

#### **Reed Solomon coding**

Note: Reed Solomon coding was incorrectly treated as a convolutional code from 2002 to 2004 and coded as W01-A01B2C. That code has now been deleted and the records to which it was assigned have been recoded as W01-A01B1C to place them in the correct block code hierarchy.

### W01-A01B1E [2021]

#### **Low Density Parity Check**

Includes channel coding in a 5G system for which W02-C03C1L is also assigned.

LDPC

# W01-A01B1G [2021]

#### Polar codes

Includes channel coding for control channels in 5G system for which W02-C03C1L is also assigned.

#### W01-A01B2 [1992]

#### **Convolutional codes**

Covers generation of a digit sequence from the informational digits in which no finite group of digits can be ascribed to one informational codeword. Includes max - likelihood or sequential algorithm for e.g. Viterbi, Fano, ZJ algorithms.

Trellis, punctured code

# W01-A01B2A [2002]

Viterbi coding

#### W01-A01B2E [2002]

# **Turbo coding**

Parallel concatenated convolutional codes

#### W01-A01B2G\* [2002-2005]

# **Combined convolutional coding scheme**

\*This code is now discontinued. W01-A01B2G remains valid and searchable for records between 2002 and 2005 for combined convolutional coding schemes. From 2006, all aspects of hybrid or combined error correction coding schemes are covered in W01-A01B4.

# W01-A01B2S

[2002]

### Novel algorithm or software aspects

Codes from class T01 are normally assigned for these aspects also, e.g. from the T01-S group.

#### W01-A01B2X [2002]

# Other aspects of error correction based on convolutional codes

#### W01-A01B3

[1992]

#### **Using format**

Includes checking the format of received data for detection of errors, for example, system for checking complementary nature of received signals when complement of signal is also transmitted.

# W01-A01B4

[2006]

# **Hybrid coding scheme**

(W01-A01B2G)

This code covers error correction using either a combination of block and convolution codes or multiple block or convolutional codes. Other W01-A01B codes are assigned as appropriate to highlight the coding types being used. Prior to 2006, combined error correction coding using convolutional codes only was indicated by assignment of W01-A01B2G.

Concatenated, outer-inner coding

# W01-A01B4A

[2021]

# **Hybrid Automatic Repeat Request**

This code indicates the use of HARQ in a 4G or 5G communication system for which W02-C03C1H or W02-C03C1L are also assigned.

HARQ

## W01-A01B5 [2005]

#### Interleaving

Covers reduction in burst errors by re-organising data structure before transmission.

### W01-A01C

[1992]

# Signal quality detection/testing correct operation

See also S01 and W02 codes. Includes jitter monitoring, using pseudo-errors and comparing transmitted test signals with locally generated replica.

Link quality estimation (LQE), jitter

#### W01-A01C1

[2002]

# Signal quality detection based on measurement of bit error rate

This code is intended to be used when the emphasis is on BER measurement, for whatever purpose. Systems with the emphasis on overall link quality and testing for correct operation are covered by W01-A01C5. BER measurement for radio receivers is covered by W02-G03J5 codes.

#### W01-A01C1A

[2002]

# Novel hardware or software aspects for BER measurement

Codes from class T01 are normally assigned for software or algorithm-based aspects also, e.g. from the T01-S group.

#### W01-A01C1C

[2002]

# Applications of BER measurement

This code is intended for arrangements which make **use** of a BER measurement which is already available, and not itself the novel aspect. This code may be used with W01-A01C5 when the purpose is the establishment of a link quality value, QoS, etc.

#### W01-A01C5

[2002]

# **Testing correct operation**

This code is intended to be used when the emphasis is on testing satisfactory link operation by investigating signal quality, making use of error detection and possibly involving other parameters also, and includes techniques such as eye pattern measurements. Systems with the emphasis on BER measurement, and novel methods or hardware for this, are covered by W01-A01C1 codes. Fault detection and monitoring of data networks is covered by W01-A06A codes and by W01-A07L for data transmission in general, which may be assigned in conjunction with this, and other W01-A01C codes, as necessary.

Eye diagram

# W01-A01X

[1992]

# Other error correction and detection aspects

#### W01-A02

#### Code conversion

See also W01-A08A1A for synchronous start-stop systems characterised by code and U21-A05 codes for specific coding formats.

Modulation, trellis coding, biphase level, Manchester coding, stochastic, parallel weight, NRZ

# W01-A02A [1997]

#### **Data compression**

See also U21-A05A2 and T01-D02 codes as appropriate.

#### W01-A03

# Multiple use of transmission path

The codes in this section relate to multiple access methods, duplex and multiplex transmission. Multiplex transmission in general is covered by W02-K codes.

Header, data, trailer, fixed-length, variable-length, STM (synch transfer mode), CBX (computerised branch exchange)

# W01-A03A\* [1987-2001]

#### Access control

\*This code is now discontinued and from 2002 the subject matter covered is transferred to W01-A06F1 codes. W01-A03A remains valid and searchable for records between 1987 and 2001 and was assigned with W01-A06 codes for network aspects, e.g. with W01-A06B5A for access control in LANs. See also T01 codes, such as T01-H05 and T01-H07codes.

Access right, protocol, arbitration, code division, CDMA, binding

#### W01-A03A1\* [1987-2001]

# Carrier sense multiple access (CSMA/CD and CA)

\*This code is now discontinued and from 2002 the subject matter covered is transferred to W01-A06F1A. W01-A03A1 remains valid and searchable for records between 1987 and 2001. During this time W01-A03A1 was combined with W01-A06F to indicate Ethernet. Request handling for interconnection or data transfer in computer systems is covered by T01-H05 codes, e.g. T01-H05B3 for contention avoidance for access to common bus.

Collision detection, dc level shift, heterodyne, Ethernet®, timeout period, random delay, collision avoidance, contention

# W01-A03A2\* [1987-2001]

#### Time division multiple access (TDMA)

\*This code is now discontinued and from 2002 the subject matter covered is transferred to W01-A06F1G. W01-A03A2 remains valid and searchable for records between 1987 and 2001. See W02-C03B and W02-K codes, e.g. W02-C03B1D and W02-K02D, for TDMA aspects of satellite radio systems.

Aloha, slotted, synchronous, frame, burst transmission, DQDB (distributed queue dual bus), CRMA (cyclic reservation multiple access)

# W01-A03A3\* [1987-2001]

#### **Token pass**

\*This code is now discontinued and from 2002 the subject matter covered is transferred to W01-A06F1E. W01-A03A3 remains valid and searchable for records between 1987 and 2001.

Dynamic logical ring, priority token, address, FDDI

[1992]

#### W01-A03B

# **Packet transmission**

(W01-A06X)

Covers all systems where digital data cells or packets are transmitted to a selected destination by a terminal, computer applications program or other data handling device. The destination can be another data handling or data communication apparatus or system. Includes Packet Assembler/Disassembler (PAD). See W01-A06G2 for store and forward packet switching processors and W02-K03 for packet switching in general, e.g. voice packet switching.

# Virtual circuit, VCI, Virtual path, VPI

# W01-A03B1 [1992]

# Asynchronous Transfer Mode (ATM)

(W01-A06X) Cell, B-ISDN, PTM

# W01-A03C [1992]

#### Time division multiplexing (TDM)

Pulse stuffing

#### W01-A03C1 [2005]

#### **Time Division Multiple Access (TDMA)**

See W01-A06F1G for network aspects of access control scheme and W02-C03B and W02-K codes, e.g. W02-C03B1D and W02-K02D, for TDMA aspects of satellite radio system.

Aloha, slotted, synchronous, frame, burst transmission, DQDB (distributed queue dual bus), CRMA (cyclic reservation multiple access)

# W01-A03D [1992]

# Duplex

Includes half and full duplex systems.

W01-A03D1 [2002]

Half duplex

W01-A03D5 [2002]

**Full duplex** 

W01-A03E [2002]

WDM and FDM

# W01-A03E1

#### **WDM**

WDM in general is assigned W02-C04B4B and W02-K04. General aspects of optical data transmission are covered by W01-A07E, and those specific to data networks by W01-A06C1 (optical fiber-based) and W01-A06C3 (free-space transmission). Optical communication in general is covered by W02-C04 codes. Novel optical components are covered in V07, especially V07-K04.

[2002]

#### W01-A03E5 [2002]

#### **FDM**

FDM in general is assigned W02-K01 codes.

#### W01-A04

# Synchronising receiver with transmitter

See also W02-K02A codes for general aspects of synchronising in TDM and W02-K05B7 for synchronising in spread spectrum communications. Digital synchronising circuits in general are assigned U22-H and PLL circuits are covered by U23-D01 codes.

Clock, phase, synchronous, frame delay, lock, recover regenerate, bit stuffing

#### W01-A04A

#### Using synchronisation signals

# W01-A04A1

# Using properties of error detecting/correcting codes or special codes

Includes parity, correlators, PN codes. (Data transmission with error detection/correction codes in general is covered by W01-A01B codes). *Pseudonoise* 

[1992]

# W01-A04A2 [1992]

# Using cyclic recurring signals

See also W01-A01C for jitter monitoring and W01-B02X for clock distribution.  $\label{eq:w01-A01C}$ 

Clock generation

# W01-A04A9 [1992]

### Other systems using synchronising signals

Includes pulse stuffing. Search with W01-A03C for this aspect in TDM data transmission. See W02-K02A3 for pulse stuffing in TDM systems in general.

# W01-A04B [1992]

# Signals containing no special synchronisation information

(W01-A04X)

#### W01-A04B1 [1992]

# Tracking or using signal transitions

(W01-A04X)

Includes use of equaliser output; tap values; decision values or transmission code rule.

PLL

#### W01-A04B2 [1992]

# **Extraction of synchronisation/clock signal** from spectrum

(W01-A04X)

Includes using resonant or bandpass circuit with squaring loop or Costas loop. (See U23-D01C1 for Costas loop demodulation in general.)

#### W01-A04X

# Other data synchronising aspects

Pattern

#### W01-A05

#### Secret communication

These codes are intended for secret and secure data transmission systems, including aspects such as authentication (covered in W01-A05B). From 2002, inventions involving the **application only** of these techniques are excluded when specific codes exist elsewhere, such as in T01 (e.g. T01-D01A, T01-J12C).

Secrecy or scrambling systems for digitised speech or video (e.g. with bit order rearrangement) are assigned W01-A05 codes for novel data transmission aspects, but are chiefly covered by W02-L05 for audio and W02-F05A or W02-F10N codes for video systems.

Algorithm, RSA

# W01-A05A [1992]

# Blockwise coding using registers and memories

Includes DES (Data encryption standard) and AES (Advance encryption standard) systems, and key distribution.

Cryptographic communication, public key, private key

# W01-A05A1 [2005]

#### Wireless

Includes WEP (Wired equivalent privacy) and WPA (Wi-Fi protected access) systems. Prior to 2005, this topic was coded as W01-A05A and W01-A06C4X. From 2005 W01-A06 codes are only assigned for significant network aspects.

WEP, WPA-PSK, WPA-802.1x, WPA2

# W01-A05B [1992]

# Identity verification/access control

This code covers authentication and identity verification in which data encryption is involved in some way. Verifying entitlement to access data networks is covered by W01-A06E1C, and is not assigned W01-A05B also unless some encryption aspect exists. Applications such as password checking for computer access are not included, and are covered by T01-J12C codes for computer security in general, and from 2002, by T01-N02B1B. Confidential mail password

# W01-A05E [2006]

# **Quantum cryptography**

This code covers the use of quantum physics to provide inherent detection of eavesdropping or interception of data communications. Where optical communications are involved, e.g. single-photon systems, W01-A07E, W01-A06C1, or W02-C04 codes are also assigned as appropriate. *Polarisation, filter* 

# W01-A05L [2007]

# Data interception and prevention of interception

This code covers the interception of data communications using any medium. Secret and secure data transmissions using either cryptographic encryption or quantum cryptography are covered by W01-A05A and W01-A05E respectively. Interception and prevention of interception of analogue communication system are covered by W02-L07 codes.

W01-A05L1 [2007]

**Data interception** 

W01-A05L5 [2007]

# **Prevention of interception**

Includes data concealment Masking, steganography

W01-A05X [1992]

Other secret data communication

# W01-A06

# Exchanges, connections between exchanges, data networks and network switching

Subject matter covered here has considerable overlap with class T01, especially in the case of computer communication aspects. Searching appropriate T01 codes, e.g. T01-H05, T01-H07, or T01-N codes, in conjunction with W01-A06 codes enables these topics to be further discriminated. In

general, a 'network' is regarded here as an interconnection for data transfer of at least three stations, so that inventions involving data communication between only two stations are assigned W01-A07 codes instead. (Although note that W01-A07 codes may be used with W01-A06 codes to highlight a specific aspect, e.g. a power supply for a LAN is represented by W01-A06B5A and W01-A07K).

Note: As stated at the start of the W01-A code group, since 2002 inventions concerned purely with applications of data networks such as the internet, have not been covered in W01-A06 codes where specific T01 codes exist. Similarly, since 2002 electronic mail has been covered in T01-N01C only, unless specific novel data communications aspects are involved which require assignment of W01-A codes. (Prior to 2002 W01-A06E1, W01-A06G2, and W01-A06X, were routinely used, depending on details).

Due to convergence between wireless network and mobile telephone technologies analogous codes should also be considered in these areas when searching particular topics. For example, W01-A06C4 codes denoting wireless networks and W01-B05A1 codes for cellular phone systems may cover overlapping areas. From 2012 W01-E codes have been introduced for mobility-related aspects such as roaming and registration in wireless data networks and mobile phone networks. Prior to 2012 inventions concerned with roaming where the emphasis is on wireless data network access were assigned W01-A06E1R or W01-A06E1S (respectively roaming between same-standard and between different-standard networks) whilst roaming with emphasis on cellular mobile telephone systems was assigned W01-B05A1R. (These codes are now discontinued and replaced by W01-E01 codes).

Mode, outstations, gateway

#### W01-A06A

**Testing and monitoring** 

W01-A06A1 [1992]

### Failsafe and standby systems

Includes standby and back-up systems.

#### W01-A06A1A [1992]

# Standby switching to powered up equipment

Includes hot standby systems. See W01-C02A1C for hot standby systems in telephone exchanges, W02-C01D3A for their use in general line communication and W02-G08A for application to radio equipment.

# W01-A06A2 [1992]

#### Fault detection, isolation

Covers routines, equipment and isolation as part of fault location. Bridging/disconnecting arrangements for faulty equipment are covered in W01-A06A1 codes. See also S01 for measurement of specific electrical parameters. Fault detection in telephone exchanges is covered by W01-C02A1 codes. Communications system fault detection in general is covered by W02-C01D codes for line transmission, W02-C04C1 codes for optical transmission systems, and by W02-C05 codes in general.

# W01-A06A2A [2012]

#### **Network apparatus testing**

This code covers testing of apparatus that is being used in a network with other codes assigned as appropriate, e.g. router testing is denoted by assignment of W01-A06A2A and W01-A06G5E. Testing of data communications hardware in a 'non-network' sense, i.e. 'bench testing' or otherwise testing the equipment in isolation, is covered by W01-A07L codes, which are also used for fault detection or testing of data communications equipment for general or unspecified application.

### W01-A06A3 [2005]

#### Network usage and operation monitoring

Includes measurement of network activity and quality of service, and detection of overload/blocking condition. See T01-N02B2 for computer network aspects of monitoring. Analogous arrangements in telephone switching are covered by W01-C02A1A. Prior to 2012 this code was assigned with W01-A06E to indicate resource allocation in data networks. From 2012 the topic of network resource allocation is covered by W01-A06E1L but W01-A06A3 will still be assigned also when measurement of network performance is a significant part of an invention. From 2010 resource allocation in radio communication has been covered by W02-C03G1 and cognitive radio systems are covered by W02-C03G5 with W01-A06A3, W01-A06E codes and wireless network codes assigned as appropriate. Load measuring, network forensics, QoS

#### W01-A06B [1987]

#### Characterised by structure

Structural codes are used where novelty exists and are also used with other W01-A06 codes as additional detail or a more general description, for example, W01-A06B2, W01-A06B5A and W01-A06E1 can be used to describe a ring LAN with a novel access or routing system.

Topology

W01-A06B1 [1987]

Bus

Linear network, daisy chain, DQDB

W01-A06B2 [1987]

Loop

Ring, FDDI, Cambridge loop

W01-A06B3 [1987]

Star

Dedicated link, hub, cluster, PBX

W01-A06B4 [1992]

#### Tree and mesh

From 2005, the title of this code is expanded to reflect the inclusion of mesh configuration networks, and subdivided.

W01-A06B4A [2005]

Tree

W01-A06B4C [2005]

Mesh

W01-A06B5 [1992]

#### **Networks**

These codes are intended to define the network by size, scale, or usage.

#### W01-A06B5A [1992]

#### Small scale (LAN)

VAN, vehicle area network, CAN, controller area network

W01-A06B5B [1992]

#### Large scale (WAN)

Public data networks, MAN

W01-A06B5C [1992]

#### ISDN

This code is intended to focus on data network aspects of ISDN. See also W01-C05B7 codes, which are assigned for all aspects.

# W01-A06B7 [1997]

#### Internet and intranet

(W01-A06B9)

From 2002 this code has been subdivided to separately cover internet and intranet systems, and in the case of internet, for novel details and for applications. However, note that the applications code (W01-A06B7C) is only used when no other code is available elsewhere (e.g. in T01). In general, inventions concerned purely with the **use** of the internet without any communications novelty will not be covered in W01 from 2002.

#### W01-A06B7A [2002]

# **Novel internet system details**

This code is used for novel aspects of internet systems, and may involve computing aspects represented by T01 codes, e.g. T01-N or T01-M02A codes. **Applications** of the internet are coded in W01-A06B7C when specific codes elsewhere are not appropriate.

# W01-A06B7C [2002]

# **Applications of internet**

This code is intended for applications which cannot be represented by codes elsewhere. Thus, it will not normally be used for inventions involving the application of the internet to e.g. email, ecommerce, chatrooms, etc., for which T01-N01 codes are assigned.

#### W01-A06B7E [2002]

**Intranet system** 

#### W01-A06B7G [2005]

# Virtual networks, including virtual private networks

The title of this code has been expanded to reflect its coverage of virtual networks in general as well as those with the emphasis on restricted access, such as private data networks that make use of public telecommunications infrastructure, e.g. maintaining privacy through the use of tunnelling protocol (see also W01-A06F7C for this aspect) and security procedures (for which W01-A06E1C is also assigned as appropriate). Virtual private telephone networks are covered by W01-C03A.

VPN, VLAN (virtual local area network)

#### W01-A06B8 [2005]

# Data network operation and logical structure

Includes networks operating with a client/server or client/client relationship.

# W01-A06B8A [2005]

#### Client-server network

See T01-N02A2C for computer communication using a client/server relationship.

#### W01-A06B8C [2005]

### Peer-to-peer network

Prior to 2005, all aspects of peer-to-peer network were covered in W01-A06G3. See also T01-N02A2E for computer network aspects of peer-to-peer network.

P2P

# W01-A06B8E [2007]

#### Ad-hoc network

Includes dynamic network where the device are part of the network only for the duration of a communication session or, in close proximity to the rest of the network. Computer aspects of Ad-hoc network are covered by T01-N02A1B.

MANET, Mobile Ad-hoc Network

# W01-A06B9 [1992]

# Other data network types

#### W01-A06C [1987]

#### Data networks characterised by medium

Radio link, free space, optical link, multi-media network, broadband system

#### W01-A06C1 [1987]

#### **Optical fiber**

Non-networked optical communication is covered by W01-A07E. Optical communication in general is covered by W02-C04 codes, optical fiber CATV networks are covered by W02-F03A3 and optical components are covered by V07 codes.

Fiber-optic network, optical coupler, optical modulator, FDDI (fiber distributed data interface), SONET

# W01-A06C2 [1987]

# Coaxial cable, twisted pair

See W02-F03A1 also for LAN using CATV system. Includes dedicated twisted pair system only - see W01-C05B3 codes for shared telephonic and data communication.

#### W01-A06C2A [1992]

#### **Coaxial cable**

Coaxial cables per se are covered by X12-D05, coaxial waveguides by W02-A01A2.

#### W01-A06C2B [1992]

# **Twisted pair**

# W01-A06C3 [1992]

# Free-space optical link

Free-space optical interfaces not specifically for network communication between several stations are covered by W01-A07H3.

#### W01-A06C4 [1992]

#### Radio link

See W02-C03 codes for details of radio systems and W02-G codes for radio equipment itself. Short range systems e.g. Bluetooth®, are assigned W01-A06B5A (to denote LAN) as well. Interfaces of this kind not specifically for network communication between several stations are covered by W01-A07H2 codes. Specific aspects of protocol peculiar to the network types listed below are covered by additional assignment of W01-A06F codes, the intention of the W01-A06C4 codes being to characterize the network link from the radio viewpoint. From 2012 W01-E codes are introduced to cover mobility-related aspects such as roaming and registration in wireless data networks (and mobile phone networks) and these codes will be assigned in preference to W01-A06C4 codes for these specific topics unless the use of W01-A06 codes is required to indicate other significant aspects of an invention, in which case W01-A06C4 codes will also be assigned.

#### W01-A06C4A [2002]

# IEEE 802.15 radio link, including Bluetooth\*

Radio systems for remote measurement and control are covered by W05-D codes, e.g. W05-D06A1A and W05-D08C1. Sensor networks are covered by W05-D06F and W05-D08E. W01-A06C4A is assigned when the wireless network aspect is significant.

ZigBee, WPAN, 802.15x

# W01-A06C4C [2002]

#### **DECT-based radio link**

DECT systems for actual telephone usage are assigned W01-B05A1B and W02-C03C3 codes, with handsets covered by W01-C01D1 codes.

# W01-A06C4E [2005]

#### IEEE 802.11 radio link

Includes systems using 802.11x standards e.g. 802.11p that uses 5.9 GHz frequency for communication between vehicles (Dedicated Short-Range Communications). See also X21-K. *DSRC* 

# W01-A06C4G [2006]

#### IEEE 802.16 radio link

This code covers long-range data communications by radio, including wireless MAN, etc. WiMAX, WMAN, 802.16x

# W01-A06C4K [2005]

#### **UWB** and impulse radio link

Covers carrier-free and carrier-based links using time hopping and similar techniques. Novel details of ultra-wideband systems are covered by W02-K05 codes, especially W02-K05A9 codes.

# W01-A06C4L [2021]

#### Millimetre radio link

This code covers the use of millimetre waves, typically operating between 3GHz to 300GHz for communication e.g. in a 5G system for which W02-C03C1L is also assigned.

# W01-A06C4N [2021]

# Terahertz radio link

This code covers the use of electromagnetic waves with band of frequencies operating between 300GHz to 3THz.

# W01-A06C4P [2021]

# Long range radio link

For communication systems which operate in frequencies below 1GHz, possibly for long range and low power consumption.

LoRa, LPWAN, LoRa Gateway, LoRaWAN

#### W01-A06C4X [2002]

#### Other radio link for networks

#### W01-A06C6 [2006]

#### Power line data network

Covers network using power line carrier as the medium for data transmission, and not systems for supplying power via data network conductors, which are coded according to network type and in U24-H codes. Novel aspects of power line communication are covered in W02-C01A3. See also under application e.g. W05-D06P for remote control aspects and X12-H03E codes for power line carrier systems.

# W01-A06C9 [1992]

# Other transmission media for networks

# W01-A06D [1992]

# **Network modelling**

(W01-A06X)

Includes use of CAD (computer aided design) to design and test networks. Search with T01-J15A4 also.

#### W01-A06E [1992]

#### **Network control and software**

(W01-A06X)

Includes hardware and software for control of transmission and reception of messages and/or data across a network. See also T01-N02B1A code for network management software. Prior to 2012 this code was assigned with W01-A06A3 for network resource allocation, but from 2012 this topic is covered by W01-A06E1L. (W01-A06A3 is also assigned as necessary where actual network performance measurement is part of an invention).

#### W01-A06E1 [1992]

#### **Access and routing**

From 2024, network addressing is coded under W01-A06E1N. Network addressing as opposed to routing (i.e. for determining destination of packets, and not the route that they will travel) is covered in T01-N02A1A. From 2006, all aspects of routing are covered by W01-A06E1J and since 2002, routers per se have been covered by W01-A06G5E.

#### W01-A06E1A [1997]

# Data conferencing and broadcasting

Includes transmission of messages to all users on a LAN, for example (with W01-A06B5A). Electronic mail in general is covered by T01-N01C. See W01-C02B1 for telephone conferencing system and W02-F08A codes for video conferencing system. *Message broadcasting, multi-casting* 

# W01-A06E1C [2005]

# User privileges/password system

Includes systems for granting or denying access to a network. (See T01-N02B1B for computer aspects of user privileges/password systems).

Security, login, permissions, access control list

# W01-A06E1E [2005]

#### Metering and billing aspects

Covers billing and usage aspects of data network services. Analogous systems for telephone usage charging are covered by W01-C06 codes. Internet-café, public wireless access point

# W01-A06E1G [2005]

#### **Graded service**

This code covers the provision of different level/quality of service based on entitlement/agreement in a network context. Analogous arrangements for telephone service are covered by W01-C02B6 codes.

# W01-A06E1J [2006]

# Routing

(W01-A06E1)

This code covers determination of the appropriate path by which data should travel between two places.

# W01-A06E1L [2012]

#### **Data network resource allocation**

Prior to 2012 this topic was covered by W01-A06A3 and W01-A06E. Where measurement of network performance is a significant part of an invention W01-A06A3 will also be assigned. From 2010 resource allocation in radio communication has been covered by W02-C03G1 and cognitive radio systems are covered by W02-C03G5 with W01-A06A3, W01-A06E codes and wireless network codes assigned as appropriate.

# W01-A06E1N [2024]

#### **Network addressing**

Includes all addressing details in a network, like address mapping, address translation etc.

Media Access Control, MAC

# W01-A06E1P [2024]

### **Network proxy**

This code covers the use of proxy servers for accessing a website.

#### W01-A06E1R\* [2006-2011]

# Roaming between same-standard networks

\*This code is now discontinued and from 2012 this subject matter will be covered by W01-E01A1. W01-A06E1R remains valid and searchable for records between 2006 and 2011 when it was used for roaming between networks, e.g. wireless LANs for which W01-A06B5A and W01-A06C4 codes were also assigned, it being assumed that the networks are operating on the same transmission standards. Roaming between different-standard networks was covered by W01-A06E1S, which took precedence over W01-A06E1R.

#### W01-A06E1S\*

[2006-2011]

# Roaming between networks operating on different standards

\*This code is now discontinued and from 2012 this subject matter will be covered by W01-E01A3. W01-A06E1S remains valid and searchable for records between 2006 and 2011 when it covered roaming between networks operating on different transmission standards, including switching between wireless data networks and mobile telephone networks when W01-B05A1R was also assigned. When used, W01-A06E1S took precedence over W01-A06E1R, which covered same-network type roaming.

#### W01-A06E2

[1992]

# Network control characterised by mode

#### W01-A06E2A [1992]

#### **Centralised control**

Covers networks where the host exercises control over the tributary stations all of which are connected to it. The host may also act as a message-switching device between remote sites. See W01-A06G1 also for network circuit switching. Prior to 2002 W01-A06E2A was used to denote polling, with W01-A06F also assigned for significant protocol aspects. From 2002, the topic of polling will be covered by W01-A06F1C, with W01-A06E2A only assigned for specific 'centralised control' aspects.

# W01-A06E2B [1992]

# **Decentralised control**

Includes hierarchical and distributed systems. Covers networks where each station may be connected to several others in the network; giving the possibility to share resources and to distribute the database to the systems which access the data most frequently.

Random access

# W01-A06F [1992]

#### **Network protocol**

(W01-A07G)

W01-A06F codes are assigned to highlight the protocol in use in a network without this being necessarily novel. When some aspect of protocol is novel, W01-A06F5 is also assigned. From 2002 access control topics previously covered by W01-A03A codes are transferred to these codes which will cover all the types of protocols. W01-A06F codes take precedence over W01-A07G codes which cover protocol aspects in a general or nonnetwork sense.

CODEC, DQDB, OSI layer, bi-sync, SDLC, HDLC, SDH, PDH

#### W01-A06F1

[2002]

#### Access control

Search with W01-A06 codes for network aspects, e.g. with W01-A06B5A for access control in LANs. See also T01 codes, such as T01-H07B and T01-N02 codes

Access right, protocol, arbitration, code division, CDMA, binding

# W01-A06F1A [2002]

#### **Contention protocols**

(W01-A03A1, W01-A06F)

Includes Carrier Sense Multiple Access/Collision Detect (CSMA/CD and CA) and Ethernet®. Request handling for interconnection or data transfer in computer systems is covered by T01-H05 codes, e.g. T01-H05B3 for contention avoidance for access to common bus. W01-A06F1A is also used for network access aspects of cognitive radio (with W01-A06C4 codes) based on channel state sensing in which case W02-C03G5 is also assigned from 2010. Resource allocation in data networks in general is covered by W01-A06E1L. (From 2005 to 2012 resource allocation was covered by W01-A06A3 and W01-A06E).

Back-off, channel occupancy, collision avoidance, collision detection, contention, DC level shift, Ethernet®, heterodyne, random delay, timeout period

#### W01-A06F1C

[2002]

#### Polling protocols

(W01-A06E2A, W01-A06F)

Includes hub and roll call polling. Prior to 2002 polling was covered by W01-A06E2A with W01-A06F for protocol aspects.

# W01-A06F1E [2002]

#### **Token pass protocols**

(W01-A03A3)

Token pass protocols for ring networks are also coded in W01-A06B2, and in W01-A06B1 for bus

Dynamic logical ring, priority token, address, FDDI

### W01-A06F1G

[2002]

# Time Division Multiple Access (TDMA)

(W01-A03A2)

See W01-A03C1 for non-network aspects of TDMA in data transmission and W02-C03B and W02-K codes, e.g. W02-C03B1D and W02-K02D, for TDMA aspects of satellite radio system.

Aloha, slotted, synchronous, frame, burst transmission, DQDB (distributed queue dual bus), CRMA (cyclic reservation multiple access) W01-A06F2 [2002]

# **Network layer protocols**

Routing, IP multicast

W01-A06F2A [2002]

IΡ

(W01-A06B7, W01-A06F) Mobile IP

W01-A06F2C [2002]

# **Application layer protocols**

DNS/BIND, FTP, HTTP, Telnet, MIME, MQTT, Network File System, NNTP, SMTP, SNMP, POP, RTP, UDP, URI

W01-A06F5 [2002]

# **Novel protocol**

This code is used with other W01-A06F codes as appropriate to denote that some aspect of the protocol itself is novel.

W01-A06F7 [2005]

# Network protocol conversion, encapsulation, and tunnelling

(W01-A06F9)

This code covers arrangements for handling different protocols within a network, the topic previously being covered in W01-A06F9.

W01-A06F7A [2005]

**Network protocol conversion** 

W01-A06F7C [2005]

# Network protocol encapsulation and tunnelling

For protocol tunnelling in connection with VPNs search with W01-A06B7G.

W01-A06F9 [2002]

Other network protocol aspects

W01-A06G [1992]

**Network switching/connection** 

(W01-A06X)

# W01-A06G1 [1992]

# **Circuit switching**

Covers centralised switching method, with one branch exchange (PBX), calls are centralised and switched and distributed switching method with hierarchical network, having a number of DSN's (Distributed Switching Nodes) controlled so that the entire system operates as one exchange. See also W01-A06E2 for centralised and decentralised network control. Includes stored program control and use of time division.

Clos network, fat tree, folded Clos network, fourth generation PBX

# W01-A06G2 [1992]

#### Stored and forward switching

Includes packet routing (with W01-A03B codes), using radio channel (with W01-A06C4), flow control, bandwidth control and message switching systems. For facsimile systems see S06-K07C2B also.

# W01-A06G3 [1992]

#### **Network inter-connection**

(W01-A06X)

Covers communication conducted between a number of LANs using a MAC (media access control) to connect them through a bridge apparatus. Includes source routing and non-source routing; bridging of networks; and interconnect programs. See W01-A06E and T01 codes for network software in general. Also includes network interfacing. From 2005, all aspects of peer-to-peer network are covered in W01-A06B8C.

MAU (medium attachment units), BBN (backbone network)

# W01-A06G5 [2002]

# Network switching and interconnecting devices

These codes are intended to highlight particular devices used in networks for connection, switching, routing and repeating purposes. The codes may be used alone if of general application or in conjunction with other W01-A06 codes as appropriate.

W01-A06G5A [2002]

**Cross-connect switch** 

W01-A06G5C [2002]

#### **Gateway or bridge**

Includes wireless access points (normally with W01-A06C4E), previously coded in W01-A06G5 or W01-A06G5E, depending on specific aspects, and in W01-A06C4X.

# W01-A06G5E

#### Router

Routers were previously coded in W01-A06E1, which is still assigned for significant control aspects.

[2002]

#### W01-A06G5G [2002]

#### **Network repeaters**

This code is intended to be used as a single reference for repeaters for data transmission in general, and replaces W01-A08A2 and W01-A08B1 (repeaters for baseband data transmission), which are discontinued from 2002. Network repeaters for which the baseband aspect is significant will from now on be assigned W01-A06G5G and an appropriate W01-A08 code, while for cases where broadband transmission is significant, W01-A09 codes will be used with W01-A06C5G. Repeaters for line communication in general are covered by W02-C01E codes, for radio by W02-G05C and W02-C03B codes, and for optical communication in general by W02-C04A5.

#### W01-A06G5X [2002]

# Other network switching and interconnecting devices

Includes devices providing simple interconnection without any switching necessarily taking place, e.g. hubs.

# W01-A06G9 [1992]

Other switching/connection of networks

#### W01-A06X

Other data exchange and network aspects

#### W01-A07

# Standard code systems and general data transmission systems or equipment

W01-A07 codes are intended for inventions in the field of data transmission of a generally applicable nature. Although W01-A07 codes may be used with W01-A06 (network) codes to highlight a specific aspect, (e.g. a power supply for a LAN is represented by W01-A06B5A and W01-A07K), in general, inventions involving data communication between only two stations are assigned W01-A07 codes whilst those involving data transfer between three or more stations are regarded as networks and are assigned W01-A06 codes.

Signalling format, text

#### W01-A07A

#### **Dot-and-dash code systems**

Morse code, telegraphy, telegraph operator, training, mark, space

#### W01-A07B

# **Equal-length code element systems**

Includes telex and analogous systems, also coded in W01-C05B3D.

Teleprinter

W01-A07C

[1992]

**Transmitter apparatus or circuits** 

W01-A07D

[1992]

Receiver apparatus or circuits

W01-A07E

[1992]

#### **Optical communications**

Prior to 2006 this code was used with W01-A07H1 to indicate optical fiber interfaces, now covered by W01-A07H4 alone. Data networks using fiber-optic and free-space optical links are respectively covered by W01-A06C1 or W01-A06C3. W02-C04 codes cover optical communication in general and are also assigned for novel details such as light source drive circuitry, photodiode current amplifiers, etc.

#### W01-A07F

[1992]

# Communication control and processing

Line termination

#### W01-A07F1

[1992]

For a number of communication lines

### W01-A07G

[1992]

# **Communication protocol**

This code and its subdivision are intended for novel or significant aspects of data communication protocols in a general or non-network context. W01-A06F codes are assigned **instead** of W01-A07G codes for protocol aspects specific to networks. Computer communication protocols are covered by T01-N02A1.

#### W01-A07G1

[1992]

# Transmission control procedure

Includes data link level control.

Time out detection, contention type

#### W01-A07G9

[1992]

Other general protocol aspects

W01-A07H

[1992]

Characterised by interface or data terminal

# W01-A07H1 [1997]

#### Wired interface

This code is intended for transmission of data through a wired medium, including serial and parallel interfaces. Prior to 2006 this code included optical fiber interfaces when used with W01-A07E. From 2006 interfaces of that type are covered by W01-A07H4.

C-type, Centronics®, Firewire®, IEEE1394, i-link®, parallel port, RS-232, RS-485, serial port, universal serial bus. USB

#### W01-A07H2 [1997]

#### Radio and near-field interface

From 2010 the title of this code has been changed to reflect the previous inclusion of near-field interfaces, now covered by W01-A07H2N. Prior to 2010 search W01-A07H2\* with W02-C02 codes or with the terms 'near-field' or 'NFC' for interfaces based on near-field communication. See W02-C02 codes for novel details of near-field systems, W02-C03 codes for details of radio systems and W02-G codes for radio equipment itself. Specific aspects of protocol peculiar to the interface types listed below are covered by additional assignment of W01-A07G codes, the intention of the W01-A07H2 codes being to characterise the interface from the radio viewpoint. Radio links specifically for network communication between several stations (i.e. more than two) are covered by W01-A06C4 codes.

# W01-A07H2A [2002]

#### Bluetooth\* and ZigBee\* radio interface

From 2010 the title of this code is changed to reflect the previous inclusion of ZigBee-based radio interfaces. Wireless network aspects of Bluetooth and ZigBee systems (i.e. more than two stations communicating using IEEE 802.15 standard) are covered by W01-A06C4A. Novel aspects of the frequency-hopping system are also assigned W02-K05A6 and other W02-K05 codes as appropriate.

# W01-A07H2C [2002]

### **DECT-based radio interface**

DECT systems for actual telephone usage are assigned W01-B05A1B and W02-C03C3 codes, with handsets covered by W01-C01D1 codes.

# W01-A07H2K [2005]

#### **UWB** and impulse radio link

Covers carrier-free and carrier-based links using time hopping and similar techniques. Novel details of ultra-wideband systems are covered by W02-K05 codes, especially W02-K05A9 codes. UWB wireless links between three or more stations (regarded as a network) are covered by W01-A06C4K.

# W01-A07H2N [2010]

#### **Near-field interface**

This code covers interfaces for transfer of digital data using near-field communication (NFC) systems based on inductive loops and magnetic or electric fields, and also those using antennas with deliberately enhanced near-field or suppressed farfield characteristics, including those operating at microwave frequencies. Interfaces using normal farfield radio communication are not included and are covered by other W01-A07H2 codes. Novel aspects of the near-field system are also assigned W02-C02 and W02-G codes as appropriate. Nearfield interfaces for mobile phones are also assigned W01-C01D3C and W01-C01R codes. Use of a mobile phone as an electronic ticket or similar is covered by W01-C01D3C and W01-C01P9. Coil, coupler, NFC interface, TransferJet™

# W01-A07H2X [2002]

### Other radio interface

#### W01-A07H3 [1997]

#### Free space optical interface

Free space optical communication specifically for data networks is covered by W01-A06C3, and in general by W02-C04B2 codes. *IrDA* 

# W01-A07H4 [2006]

#### **Optical fiber interface**

Prior to 2006 this topic was covered by W01-A07E and W01-A07H1. Novel details of optical communications equipment are also assigned W02-C04 codes and those relating to novel fiberoptic technology are also assigned V07 codes.

## W01-A07J [1997]

# **General construction details**

See also V04-S or V04-T codes.

# W01-A07K [1997]

# **Power supply**

See also U24 codes, e.g. U24-D and U24-E for further details of power supplies.

#### W01-A07L [1997]

# Fault detection and apparatus testing

From 2012 the title of this code has been changed to clarify its coverage of fault detection and testing of equipment for data communications in a general or 'non-network' application. Fault detection in a network environment, i.e. while the equipment is connected in the network, is covered by W01-A06A2 and from 2012 W01-A06A2A has been introduced specifically for network apparatus testing.

# W01-A07L1

[2012]

# Data communications equipment fault detection and apparatus testing

Fault detection in data networks is covered by W01-A06A2.

#### W01-A07L5

[2012]

# **Data communications equipment testing**

Testing of equipment while it is connected in a network is covered by W01-A06A2A.

#### W01-A07X

[1992]

# Other general data transmission aspects

#### W01-A08

# Baseband and DC data transmission systems

From 2002 the title of this code is expanded to better reflect its coverage of baseband data transmission systems. The codes is this section are used for any aspect of data transmission in which a DC or baseband aspect is significant, e.g. they may be applied to the post demodulation processing in a radio receiver. Data transmission in which **broadband**, modulated carrier, aspects are significant, are covered by W01-A09 codes. *Direct coupled* 

#### W01-A08A

# Synchronous or start-stop systems

# W01-A08A1

[1992]

#### Transmitting circuits/Receiving circuits

Distributors, repeaters

# W01-A08A1A

[1992]

# Characterised by code

Includes predistortion, insertion, idle bit, using 3 or more amplitude levels, transition code and correlative code. See W01-A02 for data transmission characterised by use of code conversion, and U21-A05 codes for specific coding formats.

HDB3 code, Baudot code

# W01-A08A1B

[1992]

# With storage before transmission or reception

#### W01-A08A2\*

[1992-2001]

### Repeater, relay circuits

\*This code is now discontinued and from 2002 the subject matter covered is transferred to W01-A06G5G. W01-A08A2 remains valid and searchable for records between 1992 and 2001. During this time W01-A08B1 was regarded as the general code for baseband data transmission repeaters.

#### W01-A08B

# Shaping networks; Repeater and relay circuits

From 2002 data transmission repeaters are covered by W01-A06G5G.

#### W01-A08B1\*

[1992-2001]

#### Repeater and relay circuits

\*This code is now discontinued and from 2002 the subject matter covered is transferred to W01-A06G5G. W01-A08B1 remains valid and searchable for records between 1992 and 2001. During this time W01-A08B1 was regarded as the general code for baseband data transmission repeaters and W01-A08A2 was assigned for repeaters specific to synchronous or start-stop systems. From 2002, repeaters specific to baseband data transmission will be indicated by W01-A06G5G and a W01-A08 code as appropriate. Regenerator, single to double current, semiconductor, optical sensing, modulation

#### W01-A08B2

[1992]

# **Shaping networks**

Includes decision feedback and transversal equalisers, and passive shaping networks. See W02-C01B2B for general line transmission equalisers and W02-C03E1B for radio receiver equalisers, also assigned W02-G03 codes, e.g. W02-G03B6.

Adaptive, DFE, coefficient, weighting, tap

#### W01-A08C

[1992]

# Non-synchronous systems

(W01-A08X)

Includes using 3 of more different amplitudes e.g. cable code.

Asynchronous

#### W01-A08D

[2007]

#### Differential data transmission

This code covers differential data transmission and is assigned with other W01-A08 codes as appropriate. Novel logic circuits intended for use in differential serial bus systems are covered by U21-C02D1.

LVDS

# W01-A08E [2007]

# DC offset suppression or adjustment

This code covers the suppression or removal of DC offsets and the clamping of a signal to a desired DC level, primarily in baseband signals. Novel circuits for clamping the level of pulse signals in general to a desired DC level are covered by U22-D01A1A.

#### W01-A08X

# Other baseband and DC data transmission aspects

Interface, coupling

#### W01-A09

#### **Broadband and modulated carrier systems**

From 2002 the title of this code has been changed (formerly 'AC systems') to better reflect its coverage of broadband data transmission systems, generally employing modulated carriers. Data transmission systems in which baseband data is directly transmitted ('DC systems') are covered by W01-A08 codes. Codes are generally assigned to highlight a particular mode of transmission, e.g. OOK, FSK, QAM, and where appropriate to focus on particular novel aspects of modulators or demodulators (W01-A09E codes).

Modulate, modem, demodulate, carrier systems, broadband systems, multilevel

#### W01-A09A

# Amplitude and frequency modulated carrier systems

# W01-A09A1 [1992]

#### **AM carrier systems**

On-off keying (OOK), single side band (SSB), vestigial side band (VSB), superheterodyne, carrier recovery

#### W01-A09A2 [1992]

#### FM carrier systems

FSK, TFM, using filters, oscillators, quadrature

# W01-A09B [1987]

### PSK

Includes suppressed carrier product modulation methods by means of a digital signal.

Phase shift keying, binary phase-shift keying (BPSK), differential phase shift keying (DPSK), Gaussian minimum shift keying (GMSK), minimum shift keying (MSK), quadrature phase-shift keying (QPSK)

#### W01-A09C [1987]

# **QAM** and other hybrid modulation

Quadrature amplitude modulation, 16-QAM, constellation, signal points

W01-A09C1 [2005]

QAM

W01-A09C5 [2005]

Layered modulation

W01-A09D [1992]

#### Using multi-frequency codes

(W01-A09X)

Covers simultaneous transmission of different frequencies each representing one code element and systems where each code element is represented by a combination of frequencies. Multifrequency signalling for telephony is coded in W01-B09 only.

#### W01-A09E [1992]

# Modems, modulators and demodulators

(W01-A09)

Search with other W01-A09 codes for specific modulation type. Telephone line modems are also assigned W01-C05B3A and novel modulator or demodulator circuitry is also assigned U23-P01J codes.

Frequency-multiplexing, microwave, QPSK, CPSK, DPSK

# W01-A09E1 [1992]

#### **Modulator circuits**

Search with U23 codes e.g. U23-P01J1 for digital aspects and U23-D01C codes for PLL aspects.

#### W01-A09E2 [1992]

#### **Demodulator circuits**

Search with U23 codes e.g. U23-P01J3 for digital aspects and U23-D01C codes for PLL aspects.

Carrier recovery, PLL, Costas loop

# W01-A09E3 [1997]

#### Voice over data transmission

Includes modem, modulation or demodulation aspects only. Covers switching between voice and data transmission, compression, and out of band transmission. Search with U23 codes for modulation aspects as appropriate. Search W01-C05B3G for combination with telephone system or T01 codes for combination with computing system. Voice-over-IP telephone communication is covered by W01-C05B4C from 2002. (Prior to 2002, W01-A06B7, W01-A06F, and W01-C05B3 were used, in addition to T01-H07C5E).

SVD, voice span®, VoiceView®

#### W01-A09X

# Other broadband data transmission aspects

# W01-A20

### Other data transmission aspects

#### W01-B

#### Selecting

Includes selection (i.e. switching), for telephony (W01-C) and other signal applications. Mechanical switches per se are covered by V03, and electronic switching by U21-B codes.

#### W01-B01

#### **Direct selection**

#### W01-B02

#### Indirect selection

This code is used for novel signal switches per se, including optical switching. See also V03 codes or U21-B codes as appropriate, e.g. U21-B05E. RF waveguide technology switches are covered by W02-A4A code.

Space switching, optical switching, relay, electronic, switch, matrix

#### W01-B02A

#### Common control by centralised logic

Processor control

# W01-B02A1 [1992]

#### Stored program control

See also T01 codes.

SPC, microprocessor, microprogram, microcomputer, computer

#### W01-B02X

#### Other indirect selection

Clock signal distribution, distributed control

#### W01-B03

# Connecting to satellite or sub-exchange; Distribution; Caller identification

Inter-exchange link, concentrator, stacking

#### W01-B03A [1992]

# Connecting to satellite or sub-exchange, distribution

(W01-B03)

# W01-B03C [1992]

### **Caller identification**

From 2002, transmission of caller ID, and its inhibition, as special subscriber services in an exchange are covered by W01-C02B3C and W01-C02B3E respectively. Prior to then, W01-B03C was assigned for these topics with W01-C02B9. From 2002 W01-B03C is used only for novel aspects of determining caller ID.

Call tracing

#### W01-B04

#### Party line selection

#### W01-B05

# Connecting via radio, inductive or freespace optical links

The codes in this subgroup deal with connections that do not involve use of cables or optical fibers, the essential feature being a 'wireless' aspect. Further details are specified by co-assignment of 'transmission system' codes in the W02-C group as appropriate, e.g. W02-C03C codes when mobile radio is involved.

Selective calling, cellular radiotelephone, cordless telephone, paging

#### W01-B05A [1992]

#### Radio

This section relates to both base station apparatus and to overall radio systems, and should be used with W02-C03 and W02-G codes as appropriate for these aspects.

#### W01-B05A1 [1992]

# For mobile radio telephone system

See W01-C01D codes for subscriber equipment. Includes multi-handset cordless telephones, see also W01-C01D1.

# W01-B05A1A [1992]

#### Cellular

This code is normally assigned to indicate layout or design of a cellular telephone system, the arrangement of cells and base stations, or novel methods of operating the network involving signalling, paging, and the like. (Note that dedicated 'paging systems' are not coded here, being covered by W01-B05A5 for selective calling aspects). Novel base station details are also included, for which W02-C03C1B is also assigned. In general, other W02-C03C1 'cellular radio' codes are also assigned with W01-B05A1A as necessary when mobile radio system aspects are significant. When emphasis is on 'telephone exchange' and 'switching' aspects of cellular mobile phone systems W01-B05A1C is assigned instead of W01-

B05A1A. From 2012 W01-E codes are introduced to cover mobility-related aspects such as roaming and registration in mobile phone networks (and wireless data networks) and these codes will be assigned in preference to W01-B05A1 codes for these specific topics. If the use of W01-B05A1A is required to indicate other significant aspects of an invention the code will be assigned in addition to W01-E codes.

Microcellular, macrocellular, GSM, PCN, NADC, JDC, Qualcomm®, CDMA

#### W01-B05A1B [1992]

# **Cordless call-point phone system**

Cordless telephones per se are covered by W01-C01D1 codes. Non-cellular mobile radio system aspects are indicated by use of W02-C03C3 codes. CT2, CT3, DECT, PHS

#### W01-B05A1C [1992]

# **Exchange details**

This code is normally used instead of W01-B05A1A when focus is on 'telephone exchange' and 'switching' aspects of cellular mobile phone systems. W02-C03C1 codes are not normally required, but may be assigned when specifically relevant. From 2012 W01-E codes are introduced to cover mobility-related aspects such as roaming and registration in mobile phone networks (and wireless data networks) and these codes will be assigned in preference to W01-B05A1C for these specific topics. If the use of W01-B05A1C is required to indicate other significant aspects of an invention the code will be assigned in addition to W01-E codes.

# W01-B05A1D [1997]

# Direct mode connection between telephones

Search with other W01-B codes for dual mode operation,e.g. W01-B05A1A or W01-B05A1B for switching between cellular or cordless call point systems and direct mode. Also includes Sidelink communications (connection between the devices without requiring the base station) used in 4G and 5G systems. Search with W02-C03R2 for resource selection by the terminal.

Digital short range radio system (DSRRS), Sidelink communication

# W01-B05A1E [1997]

# Satellite telephone connection

W02-C03B1 codes are assigned to indicate aspects of satellite radio relay systems. For the purpose of highlighting the 'mobile radio' aspect, satellite telephone systems are regarded as being of cellular type, i.e. W02-C03C1 codes are also assigned. Satellite telephone sets themselves are assigned W01-C01D3E, and other W01-C01 codes as appropriate.

TFTS, aeroplane telephone

# W01-B05A1F [1997]

#### Short messaging service

This code covers exchange and 'system' aspects specific to mobile telephone networks. Prior to 2009 these aspects of MMS were also covered here (now assigned W01-B05A1H). 'Special subscriber service' aspects of SMS - i.e. aspects of the system as it appears to subscribers in terms of features offered by the service provider - are covered by W01-C02B7D instead. SMS telephones themselves are assigned W01-C01G6A (and W01-C01D3C when a mobile phone is involved).

#### W01-B05A1G [1997]

#### **Fixed location radio telephone access**

W02-C03D codes are also assigned to indicate the 'point-to-point' nature of the radio link.

#### W01-B05A1H [2009]

# Multimedia messaging service

(W01-B05A1F)

This code covers exchange and 'system' aspects specific to mobile telephone networks. Prior to 2009 these aspects of MMS were assigned W01-B05A1F. 'Special subscriber service' aspects of MMS - i.e. aspects of the system as it appears to subscribers in terms of features offered by the service provider - are covered by W01-C02B7F instead. MMS telephones themselves are assigned W01-C01G6B (and W01-C01D3C when a mobile phone is involved).

# W01-B05A1M [2006]

# **Network broadcasting**

This code is intended for network broadcast messages for system management and information, and other broadcasting aspects, e.g. involving entertainment aspects with W01-C05 codes assigned as appropriate.

#### W01-B05A1N\*

[2006-2011]

### Registration of mobile subscriber

\*This code is now discontinued and from 2012 this subject matter will be covered by W01-E01C3. W01-B05A1N remains valid and searchable for records between 2006 and 2011 when it covered registration of mobile subscribers in mobile telephone networks.

#### W01-B05A1Q\*

[2006-2011]

# Location register details

\*This code is now discontinued and from 2012 this subject matter will be covered by W01-E01C1. W01-B05A1Q remains valid and searchable for records between 2006 and 2012 when it covered location register aspects of mobile telephone networks.

HLR. VLR

#### W01-B05A1R\*

[2006-2011]

#### Subscriber roaming aspects

\*This code is now discontinued and from 2012 this subject matter will be covered by W01-E01A codes. W01-B05A1R remains valid and searchable for records between 2006 and 2011 when it covered roaming in mobile telephone networks and when assigned with W01-A06E1S, switching between wireless data networks and mobile telephone networks.

#### W01-B05A3

[1992]

# Inter-exchange connection

See also W01-C03 for telephone system and W02-C03B codes for radio relay systems.

Trunked radio, TETRA

#### W01-B05A5

[1992]

### Paging system

This code covers selective calling aspects of traditional paging systems i.e. those normally operating over a dedicated mobile radio network in which text messages and the like are transmitted to dedicated portable receivers, frequently operating independently of mobile telephone systems. All aspects of paging systems and equipment are covered by W05-A05C codes and novel mobile radio system details by W02-C03C codes. Note that 'paging' in the sense of a base station transmitting a message to a mobile phone to set-up a call in a cellular telephone system is not included, being covered by W01-B05A1A. ERMES, FLEX, ReFLEX, POCSAG, code, address

# W01-B05A7

[1992]

# For non-telephone mobile radio

Includes selective calling for private mobile radio. Multichannel access, MCA, PMR

#### W01-B05A9

[1992]

# Other radio link selection aspects

#### W01-B05B

[1992]

#### Inductive

See W02-C02 codes for near field inductive systems also.

# W01-B05C

[1992]

### **Optical**

See W02-C04 codes for optical transmission systems also.

# W01-B05X

[1992]

# Other wireless telephone connection

#### W01-B06\*

[1980-2011]

# Telecontrol and telemetry systems

\*This code is now discontinued and from 2012 this subject matter will be covered by W05-D02 codes. W01-B06 remains valid and searchable for records between 1980 and 2011 when it was used for selection aspects only of telemetry and telecontrol, and was not regarded as the main code for this topic. All aspects of general-purpose telemetry or telecontrol are covered by W05-D codes which should be searched with application as appropriate. Exceptions to this are: general audio/video remote control, coded in W03-G05A codes; remote control for TV receivers coded in W03-A02C codes; remote control for recording equipment coded in W04-E04A; remote control for TV camera coded in W04-M01D1A.

#### W01-B07

### **Selection for multiplex systems**

See W02-K codes for multiplex systems in general. Time switch, time division multiplexing (TDM), frequency division multiplexing (FDM)

#### W01-B08

#### **Testing equipment**

This code is used either on its own or in conjunction with other codes from the W01-B group to indicate the type of switching system under test. W01-B08 is intended for testing of selection apparatus only, and **not** for testing of a whole exchange, which is covered by either W01-A06A or W01-C02A codes depending upon the exchange type.

Selection equipment test/maintenance

#### W01-B09

# Signalling

See also appropriate codes for oscillators and tone generators, e.g. U23-F02.

Multi frequency, DTMF signalling, pushbutton dial signalling, MF, dual tone, PB

#### W01-B20

#### Other

Includes distribution frames, circuit card mountings and other constructional aspects. See V04-T02 for rack construction in general.

#### W01-C

# **Telephony**

#### W01-C01

#### Subscriber equipment

Includes analogous equipment when used in conjunction with appropriate code.

# W01-C01A

# Construction (incl. cradle switch mechanical aspects)

Electroacoustic aspects of telephone handsets are assigned V06-V04B1 also.

Mechanical hook switch, mechanical telephone lock, hygiene attachment, disinfecting, cleaning

#### W01-C01A1 [1992]

#### Internal construction e.g. PCB Mounting

# W01-C01A2 [1997]

# **Display**

This code is intended for constructional aspects arising from the inclusion of a display and does not cover novel display devices such as LCDs themselves, which are covered by W01-C01B3E. Arrangements for display of incoming call number are covered by W01-C01F3. Constructional aspects relating to touch screens are also assigned W01-C01B8H.

#### W01-C01A2A [2002]

# Back or edge lighting for telephone display

From 2007, these topics in general are covered by X26-U04A codes (now the main codes for backlighting and edge lighting) which are also assigned and in U14-K01A4C, assuming LCD. Prior to 2006, W05-E05B codes (now discontinued) were assigned in this role. During 2006 W05-E05B codes were also assigned when wider applications were stated but were not used with W01-C01A2A for cases specific to telephone displays alone.

# W01-C01A2C [2006]

#### Multiple display aspects

Covers the use of more than one display and arrangements for viewing a display from e.g. both sides of a handset.

# W01-C01A3 [1992]

#### Casing and hand set construction

Telephone handsets as casings for electroacoustic transducers are coded in V06-C also. To link the features represented by the following codes with portable mobile phones search with W01-C01D3C.

# W01-C01A3A [2002]

# Handset with movable portion

Includes 'folding' or 'flip' aspects, e.g. for mobile phones.

#### W01-C01A3C [2002]

# Handset or casing with detachable fascia or similar portion

This code is intended for fascias and similar parts which can be changed by the user, e.g. for customising mobile phones.

#### W01-C01A3E [2002]

# Handset or casing with novel shape or appearance

This code is intended for telephone sets or casings with unconventional shape, e.g. with some novelty or amusement aspect.

# W01-C01A3G [2006]

# Telephone set incorporated into clothing

Includes telephones, usually of portable type and hence also assigned W01-C01D3C, forming a permanent part of headgear or other clothing. Mountings for telephones which are **detachable** from clothing are covered by W01-C01A5. X27-A02B1 codes are also assigned in either case.

# W01-C01A4 [1997]

# **Radiation exposure protection features**

This code covers constructional arrangements, especially shielding and screening, for protecting the user of a mobile phone from RF radiation and is normally used with W01-C01D3C (for cellular handsets). See also V04-U, S05-A03 and W02 codes, especially W02-B08B5 when antenna details are relevant.

Radio telephone, handset, portable, SAR, specific absorption rate

# W01-C01A5 [1992]

# Support, mounting bracket

Includes arrangements for e.g. wall mounting, or vehicle dashboard installation (with W01-C01D3B) or attaching to belt etc.

# W01-C01A6 [1997]

#### **Telephone cover**

This code is intended for hard or soft carrying cases for telephone sets, especially hand-held mobile phones for which W01-C01D3C is also assigned. Detachable covers in the form of coloured fascias which can be changed by the user are not included in W01-C01A6 and are assigned W01-C01A3C. *Mobile, radio, portable, case* 

#### W01-C01A7 [1992]

#### **Acoustic constructional details**

Includes loudspeaker enclosures external to telephone set per se, e.g. for loudspeaker, conference or car telephone. See W01-C01A1 or W01-C01A3 for mounting of loudspeaker or microphone in telephone. (Also assigned V06-V codes and W04-S01 codes).

# W01-C01A8 [2009]

# **Telephone set cooling**

(W01-C08X)

This code is intended for novel aspects of cooling for subscriber telephones and related equipment. Other codes are assigned as appropriate, e.g. battery cooling in a mobile phone is represented by W01-C01A8, W01-C01D3C and W01-C01E5B. Cooling of the transmitter part of a mobile phone is also coded as W02-G01H (e.g. with W02-C03C1C, assuming a cellphone). Cooling of telephone equipment in general is covered by W01-C08X. In all cases V04-T03 codes (for cooling electronic equipment in general) are assigned as appropriate.

### W01-C01A9 [1992]

#### Other constructional details

Includes hygiene arrangements, (see also V06 codes) and mechanical locks (also assigned W01-C01B5D when designed to prevent dialling). Telephone cable connected to subscriber equipment is not included, being covered by W01-C01X.

#### W01-C01B

#### Subscriber calling devices

See W01-B09 also for MF tone generator. Rotary dial, pushbutton, key, select, call

#### W01-C01B1 [1987]

# Autodialers, repertory dialling

Number memory, card storage, last number re-dial, automatic dialler, alarm autodialer, modem autodialer

## W01-C01B1A [1992]

Number storage, repertory

#### W01-C01B1B [1992]

# Voice dialling, hands free dialling

See also W04-V codes, e.g. W04-V04A, for voice analysis details. For loudspeaker telephone search with W01-C01G2.

#### W01-C01B1C [1992]

#### With bar code, OCR input

Novel aspects of optical bar code readers are coded in T04-A03B1 also. Character and pattern recognition aspects are also assigned T04-D codes.

#### W01-C01B1D [1992]

#### With external module

Includes unit usable with any MF dialling telephone, e.g. by acoustic coupling to microphone.

Promotional, free gift, accessory, pager

# W01-C01B1E [1997]

# Reply dialling

(W01-C01B1, W01-C01F3)
See W01-C02B5A for exchange based system.

# W01-C01B1F [2002]

#### **Redialers**

This code is intended for external boxes redirecting certain calls to secure more favourable tariff, and may be assigned with W01-C01B4 (for least cost routing aspects) depending on the novelty.

#### W01-C01B1X [1992]

#### Other automatic dialling

#### W01-C01B2 [1992]

# **Dial signal generator**

(W01-B09, W01-C01B)

#### W01-C01B2A [1992]

# **Producing dial pulses**

(W01-C01B) DP

# W01-C01B2C [1992]

# Producing tones (includes MF tone generator)

(W01-B09, W01-C01B)

From 9201, tone generator per se is coded (in W01) as W01-C01B2C only. See also appropriate codes in e.g. U23-F.

Dual tone multifrequency, DTMF

# W01-C01B3 [1992]

# Dial and user interface display

The title of this code has been expanded from 2002 to better reflect its coverage of novel details of display circuitry and the typical additional uses of displays on telephone sets. Constructional details of displays are covered by W01-C01A2 and the display of caller ID by W01-C01F3.

Dial display

# W01-C01B3A [2002]

#### **Drive circuitry**

Circuitry aspects specific to touch screen operation are covered by W01-C01B8H, which takes precedence over this code.

# W01-C01B3C [2002]

# **Back lighting circuitry and control**

Physical aspects of telephone display back- or edge-lighting, such as light sources, diffusers, etc. are covered by W01-C01A2A, and of displays in general by X26-U04A codes from 2007 (previouslyW05-E05B codes).

# W01-C01B3E [2002]

# Novel display for dialling and user interface

This code is intended to highlight telephone set applications for displays the novel details of which are coded elsewhere, e.g. U14-K01 codes in the case of LCDs.

# W01-C01B4 [1997]

# Least cost routing

(W01-C01B9)

See W01-C02A7 and W01-C06A for LCR system based at exchange.

LCR

# W01-C01B5 [1987]

#### Security, restricted dialling

Codes in this section cover the use of both electronic and mechanical safeguards against unauthorised use.

#### W01-C01B5A [1992]

# Security based on input code or card

Password, access code, enter, key, card reader

#### W01-C01B5B [1992]

#### Security based on voice recognition/input

Voice or other biometrics-based control of access to the phone as a whole is covered by W01-C01Q8C. W04-V codes, e.g. W04-V04A3, are also assigned for speech recognition aspects.

Designated user, voice print, voice pattern, speakerdependent

#### W01-C01B5C [1992]

# Preventing dialling of predetermined numbers

Long-distance dialling detector, leading-zero detector

# W01-C01B5D [1992]

#### Using mechanical lock

See W01-C01A9 also.

W01-C01B5X

[1992]

# Other secure dialling arrangements

#### W01-C01B7

[1992]

#### **Dial format detection**

Covers circuitry automatically selecting appropriate dial signal generator to suit format of exchange.

DP, dial pulse, MF, DTMF, dual tone multifrequency

# W01-C01B8

[1992]

# Keyboard and other manual input arrangements

This code covers details of keyboards, pushbuttons, switches and other manual input arrangements for controlling a telephone. W01-C01B8 and its subdivisions are used with V03 codes if the novel aspect is an electromechanical switch or with U21-B codes for electronic switching.

### W01-C01B8A

[1992]

# Layout of keyboard

Includes configuration of keys, provision of special function keys, etc. Special function keys themselves are covered by W01-C01B8K from 2002.

Braille

#### W01-C01B8C

[1992]

#### Construction of keyboard per se

# W01-C01B8E

[1992]

#### Key switching element

This code is used for novel switching elements per se. For novel electronic switch details, U21-B codes are also assigned.

#### W01-C01B8G

[1992]

# **Keyboard illumination**

#### W01-C01B8H

[2002]

# Manual input devices based on absolute position, including touch screen

Covers devices such as touch pads and touchscreens. Prior to 2006 touch pads and similar 'absolute position' input arrangements not involving displays were covered by W01-C01B8K. Constructional aspects of touchscreens are also assigned W01-C01A2. This code takes precedence over W01-C01B3A (display drive circuitry). Touch screens in general are covered by T04-F02A2. Stylus, tablet

#### W01-C01B8K

[2002]

### Special function keys per se

Details relating to the layout of keyboards on which special function keys or analogous controls are provided which are not themselves the novel aspect, are covered by W01-C01B8A. From 2006, trackballs, joysticks and the like are covered by W01-C01B8L.

#### W01-C01B8L

[2006]

# Manual input devices based on relative position

Covers trackball, joystick, or analogous arrangements for data input (previously coded in W01-C01B8K). See T04-F codes for further details. *Mouse, track pad, joystick, track ball* 

#### W01-C01B8M

[2007]

# Key circuitry and coding

See also U21-A05D codes for key coding aspects, e.g. U21-A05D1 for coding arrangements for handling different language character sets.

#### W01-C01B8N

[2009]

# **External keyboard arrangements**

This code is intended for arrangements for using an external keyboard with telephone equipment, including novel keyboards themselves and arrangements for connecting or interfacing them with e.g. a telephone set. Novel digital interfacing aspects of telephones are covered by W01-C01R, with W01-A07H codes assigned as appropriate to indicate the technology used.

#### W01-C01B9

[1992]

#### Other subscriber calling device details

# W01-C01C

Automatic answering, speech amplifiers, anti-side-tone circuits

#### W01-C01C1

[1992]

# Speech amplifier details

Amplifiers in general are coded in U24-G.

# W01-C01C1A

[1992]

#### For microphone

Microphone transducers per se are coded in W01-C01M and, in general, in V06-B02.

# W01-C01C1B

[1992]

#### For earphone or loudspeaker

Transducers per se are coded in W01-C01M. For loudspeaker telephone search with W01-C01G2A.

# W01-C01C1C [1992]

#### **Gain control**

U24-C codes are also assigned for novel circuitry. Control of gain dependent on dominant transmission direction is covered by W01-C01C3A.

#### W01-C01C1D [1997]

# **Muting circuit**

(U24-C05C, W01-C01C1C)

Includes muting on hold. See W01-C02B2A for exchange details of call holding.

Mute, hold

W01-C01C1X [1992]

Other speech amplifier details

W01-C01C3 [1992]

Anti-sidetone, noise and feedback suppression

# W01-C01C3A [1992]

#### Control of transmit-receive gain

Includes gain control based on dominant transmission direction, e.g. for loudspeaker telephone, also coded in W01-C01G2A. Speech amplifier gain control in general is covered by W01-C01C1C.

#### W01-C01C3C [1992]

# Local noise cancelling arrangements

Includes arrangement of transducers and/or circuitry to achieve cancellation or reduction of ambient noise level.

# W01-C01C3E [1997]

# Sidetone or feedback suppression

Includes echo suppression for speakerphone, also coded in W01-C01G2A. See also W01-C08E.

# W01-C01C5 [1992]

### **Automatic answering**

Centralised answering systems based within a telephone exchange are covered by W01-C02B4 codes.

# W01-C01C5A [1992]

#### Using dynamic recording

See also T03/W04 for e.g. tape deck details.

# W01-C01C5B [1992]

### Using static recording (RAM etc.)

For storage of audio signals in general using solidstate memory, see W04-G01B codes.

# W01-C01C5C [1992]

#### Date/time recording

Covers arrangements recording time at which message is received.

#### W01-C01C5D [1992]

# Remote control of playback

#### W01-C01C5E [1992]

# **Outgoing message transmission**

Includes automatic sending of pre-recorded message at preset time. See also W01-C01B1 codes for automatic dialling aspects.

OGM

#### W01-C01C5F [1997]

#### **Privacy function**

Includes password protection for message retrieval in shared device.

Password, PIN, ID

#### W01-C01C5G [1997]

# Caller telephone number recording

(W01-C015X, W01-C01F3, W01-C01F9) See W01-C01B1E for reply dialling.

# W01-C01C5X [1992]

Other automatic answering details

# W01-C01C7 [1992]

### Digital speech processing

See U21-A and W04-V05 codes for specific processing and coding details.

# W01-C01C7A [2002]

**Comfort noise generation** 

#### W01-C01C7C [2002]

**Novel coding scheme** 

#### W01-C01C7E [2002]

# **Novel speech coders and decoders**

# W01-C01C7L [2002]

# Scrambling and speech coding for security

This code is intended for scrambling aspects within the telephone itself. Overall systems aspects of security are covered by W01-C08F1 codes.

Scrambling for speech communication in general is covered by W02-L05, and secrecy aspects of data transmission by W01-A05 codes.

#### W01-C01C7X [2002]

# Other digital speech processing aspects

Includes significant **novel** aspects of speech synthesis or recognition circuitry, e.g. used for voice dialling (W01-C01B1B or W01-C01B5B also assigned depending on purpose), or overall security (W01-C01Q8C). W04-V codes are also assigned.

#### W01-C01C9 [1992]

# Other speech circuitry and systems

#### W01-C01D [1987]

#### Cordless, mobile radio telephone

(W01-C01X)

Use with other W01-C codes as appropriate. Cordless and mobile radio telephones are also coded in the appropriate section of W02 for radio equipment (e.g. W02-G02 for transceivers) if any RF aspect is involved. Inventions concerned purely with the telephone aspect are assigned W01-C01 codes only. Mobile radio telephone systems are assigned W01-B05 and W02-C03C codes.

Portable telephone

# W01-C01D1 [1992]

# **Cordless telephone**

Includes home-use, multi-user and call-point systems. Search with other W01-C01D codes for telephone which is capable of switching between operating systems e.g. DECT and cellular. DECT

# W01-C01D1A [1992]

#### Portable unit details

This code covers cordless telephone usable with one or multiple base stations at the subscriber location.

### W01-C01D1B [1992]

# **Base unit details**

See W01-C01E5A also for battery charging and mains power unit details.

### W01-C01D1D [1992]

# Security, ID

See also T04-K codes for SIM card aspects. Personal identification number, PIN, subscriber identification module, SIM, ID

#### W01-C01D1E [1992]

### Call-point cordless telephone

Covers personal cordless telephone usable with one or multiple distributed callpoints, solely provided by the service provider. See W01-C01D1A for cordless telephone handsets used with a base station at the subscriber location.

CT2, CT3, JCT, PHS, Personal handyphone

# W01-C01D2 [1997]

#### Direct mode communication telephone

Search with other W01-C01D codes for dual mode operating telephones e.g. with W01-C01D3 for telephone that switches from cellular communication to direct mode when possible.

Digital short range radio system (DSRRS)

# W01-C01D3 [1992]

#### Mobile radio telephone

From 1997 all mobile telephones are considered as cellular. For RF aspects of non-cellular mobile telephones search with W02-C03C3 codes. Search with other W01-C01D codes for telephone which is able to switch between communication systems, e.g. DECT and cellular.

GSM, PCN, NADC, JDC, Qualcomm®

#### W01-C01D3A\* [1992-1996]

#### Cellular

\*This code is now discontinued and since 1997 all mobile telephones have been considered to be cellular. This code is therefore no longer assigned, but remains valid and searchable for records prior to 1997.

# W01-C01D3B [1992]

## Vehicle telephone

The title of this code has been changed (from 2017) to clarify its previous coverage of mobile phones permanently-installed in a land, marine or air vehicle, and also hand-held phones (for which W01-C01D3C is also assigned) having some adaptation such as connection to an external antenna or vehicle interface, mounting cradles, and the like.

Airplane, aeroplane, automobile, bicycle, boat, car, GSM-R, helicopter, lorry, motorcycle, railway, scooter, train, van

# W01-C01D3C [1992]

#### Portable: Hand-held

This code is assigned as a general reference for 'mobile phone', i.e. the terminology is assumed to refer to a hand-held phone unless there is evidence to the contrary. With the convergence of mobile telephone networks and wireless data networks, W01-C01D3C is also assigned for inventions relating to a 'portable terminal', unless there can clearly be no telephone aspect, with 'wireless network' codes (e.g. W01-A06C4 codes and other W01-A codes) being also assigned when appropriate.

# W01-C01D3D [1992]

# **Telephone identification**

From 2009 the title of this code is changed (formerly 'Security, ID') to reflect its main focus on identification aspects within the telephone itself. It includes use of e.g. International Mobile Equipment Identity (IMEI) number, and also Subscriber Identity Module (SIM) cards and the like, in the case of mobile phones for which W01-C01D3C is normally also assigned. (T04-K codes are also assigned for smart card aspects). Use of two or more cards is covered from 2010 by W01-C01D3K, which takes precedence over this code. Arrangements to transmit ID data for security and billing purposes which involve some novelty in the phone itself are included here, but novel telephone system aspects of checking ID and entitlement to access e.g. a mobile telephone network are covered by W01-C02B6A (with W01-B05A1A) and are not assigned W01-C01D3D. Subscriber registration (by the telephone network) is covered by W01-B05A1N. General aspects of telephone security such as preventing access, theft alarms and dialling restriction are not included here, being covered by W01-C01Q8 and W01-C01B5 codes respectively. ID, IMEI, IMSI, MEID, PIN, SIM, USIM, USIMID

# W01-C01D3E [1997]

# Satellite telephone

RF details of satellite phones are covered by W02-C03B1C and W02-C03C1C (i.e. they are regarded as cellular mobile satellite ground stations), with W02-G codes assigned as appropriate.

Satphone

### W01-C01D3G [2002]

#### 'Third generation' mobile phone

This code is assigned for so-called third generation mobile phones, intended to operate in a UMTS system, and for analogous types based on similar multiple access schemes, i.e. other than TDMA alone. For inventions involving some RF novelty W02 codes are also assigned, e.g. W02-C03C1C and W02-C03C1G, along with W02-G codes. Where the novelty resides in the spread-spectrum

aspect, W02-K05 codes are also assigned, e.g. W02-K05A7, as appropriate. Systems based on OFDM are assigned W02-K07C as well as W01 and W02 telephone and 'mobile radio' codes. Other W01-C01 codes are assigned with W01-C01D3G as appropriate, depending on the aspect, e.g. W01-C01G6E for connecting to the internet on a 3G phone.

Universal mobile telephone system, 3G, fourth generation, 4G

#### W01-C01D3J [2002]

# **Dual or multi-band mobile phone**

This code is assigned for phones capable of operating in two or more cellular bands, e.g. 900 and 1900 MHz. As such, it is likely to involve RF details and corresponding assignment of W02 codes. Prior to 2010 W01-C01D3J was assigned to indicate multiple SIM card aspects of mobile phones with W01-C01D3C and W01-C01D3D. From 2010, W01-C01D3K specifically covers the use of multiple SIM cards and W01-C01D3J will only be assigned for genuine multi-band aspects. *GSM. PCS* 

# W01-C01D3K [2010]

# **Dual or multiple SIM-card mobile phone**

This code takes precedence over W01-C01D3D and is assigned for phones capable of operating with two or more SIM cards or analogous devices, e.g. enabling use of different identities or different service providers. Dual or multi-band mobile phones are covered by W01-C01D3J which is also assigned as appropriate. Prior to 2010 W01-C01D3J was assigned for this topic with W01-C01D3D.

Dual SIM, Multi SIM

# W01-C01D4 [1997]

#### **Fixed location radiotelephone**

This code is broader in scope than other W01-C01D codes and covers the whole subscriber installation, including antennas and 'outdoor units'. Novel aspects of these are highlighted using codes from W02-B (antennas) and W02-G (radio equipment details) groups, and also W02-C03D codes to highlight the 'point-to-point' radio link aspect. Base station or 'exchange-end' aspects are **not** assigned W01-C01D4, but are covered by W01-B05A1G and W02 codes as above.

Remote location, roadside emergency (radio), radio-in-the-loop, wireless local loop, WLL

# W01-C01E [1992]

# **Power supply**

(W01-C01X, W01-C07B)

Low-power power supplies in general are covered by U24 codes, which are also assigned as necessary to highlight novel aspects.

W01-C01E1 [1992]

**Derived from subscriber line** 

W01-C01E5 [1992]

Power supply at subscriber location

W01-C01E5A [1992]

# From mains including battery charging

See also X16-G01 for battery charger per se. Charging from e.g. a vehicle battery, is covered by W01-C01E5C.

W01-C01E5B [1992]

Battery per se, battery saving, battery supply

See X16 for novel battery detail.

W01-C01E5C [1997]

# Charging from battery, or solar source

(W01-C01E5A)

E.g. charging from vehicle battery. See also X16-G02 codes for charger circuit per se.

#### W01-C01E5D [2005]

# From generator including battery charging

Includes the use of mechanical generator, e.g. hand-operated types, for battery charging or short-term powering of a telephone. See V06 for novel generators per se and X16-G, e.g. X16-G02C for battery charging using generators.

# W01-C01E5E [2017]

# Non-contact charging

Includes wireless mobile phone charging. Noncontact battery charging in general is covered by X16-G03. Wireless transmission of electrical power in general is covered by U24-H02 for low-power systems and X12-H01E for higher power levels.

Non-contact, wireless charging, remote charging

W01-C01F [1992]

Ringing, call screening, call handling, identification of caller

(W01-C01X)

W01-C01F1 [1992]

Ringing

# W01-C01F1A [1992]

#### Transducer per se

See also V06 codes for transducer details. Transducers for microphone or earphone use are **not** included. See W01-C01M.

#### W01-C01F1B [1992]

# Volume setting, muting, drive circuitry

From 1997, volume control based on sensed ambient lighting is coded in W01-C01F1D only. For disconnection determined by actual time of day, see W01-C01F1C.

W01-C01F1C [1992]

Timed disconnection of ringer

W01-C01F1D [1997]

# Disconnection or volume reduction based on ambient lighting

(W01-C01F1B, W01-C01F1C)

#### W01-C01F1E [1992]

# **Accessory ringer**

(W01-C01X)

Includes unit which can be plugged into telephone socket to warn of incoming call only. Prior to 1992 search W01-C05A and W01-C01X.

W01-C01F1F [1997]

#### Mechanical ringer

Vibrating, silent alert

W01-C01F1G [1997]

**Optical ringer** 

W01-C01F1K [2002]

# Automatic switching between different ringer types

This code is intended for arrangements switching between different types of ringer, e.g. switching from mechanical to acoustic ringing if a call is not acknowledged. Arrangements for signalling different types of incoming call, e.g. by means of different tones or tone sequences, are covered by W01-C01F1M. Facilities for inputting ringing tone sounds or musical extracts to be stored as ringing tones are covered by W01-C01F1P.

# W01-C01F1M [2002]

# Signalling different incoming call types

Covers arrangements for signalling different types of incoming call, e.g. voice calls and text messages, by means of different tones or tone sequences. For aspects specific to SMS and similar telephones, search with W01-C01G6 codes.

# W01-C01F1P [2002]

# Memory storage input for ring tone generation

Covers arrangements for inputting, including downloading, of ringing tone sounds or musical extracts to be stored as ringing tones. Search with W01-C01Q2 codes for storage of ringing tones in memory. Sampling in electronic musical instruments is covered by W04-U01C1, and sequencer arrangements in W04-U06, these codes being assigned also as appropriate for genuine novel aspects. Waveform storage for tone generation in general is covered by U23-F codes.

#### W01-C01F3 [1992]

# Display of caller number

Covers display of **incoming** calls originating number only. Display of dialled numbers is covered by W01-C01B3 codes.

# W01-C01F5 [1992]

# Call screening, password systems

(W01-C01X)

Includes automatic arrangements requiring receipt of additional code signal to actuate ringer, for example. Arrangements displaying calling subscriber's number enabling choice of answering only, are coded in W01-C01F3.

#### W01-C01F6 [1997]

# Controlling built-in and external equipment in response to incoming call

(W01-C01F9, W01-C05B5A, W03-G05)

From 2006 the scope of this code has been expanded and subdivided to allow highlighting of control, e.g. muting or pausing, of built-in audio, video, or other equipment in response to an incoming call, in addition to the previous usage for transmitting control signals to external equipment.

#### W01-C01F6A [2006]

# Controlling internal equipment in response to incoming call

This code covers the control of additional equipment built-in to a telephone, such as audio or video players, in response to an incoming call. W01-C01P6 codes are also assigned as appropriate.

# W01-C01F6C [2006]

# Controlling external equipment in response to incoming call

This code covers the control of equipment external to a telephone, such as audio or video players, in response to an incoming call.

# W01-C01F8 [2005]

#### **Call handling**

Covers arrangements for call handling using a variety of methods, e.g. text message, ringing, voice message, etc. Exchange-based call handling systems are covered by W01-C02B codes, especially W01-C02B2 codes.

# W01-C01F8A [2005]

#### **Based on Caller ID**

Covers handling of incoming calls based on CLI information, e.g. activating ringer for priority numbers, sending a voice or text message for others.

# W01-C01F8C [2005]

# Based on profile, e.g. Presence-Enhanced Contacts profile

Provides a dynamic profile of the user, visible to others, the user's availability, whereabouts and suitable methods of communication. System aspects of telephone call handling are covered by W01-C02B2N.

#### W01-C01F9 [1992]

# Other incoming call alerting aspects

# W01-C01G [1992]

#### **Equipment type**

Codes in this section do not necessarily indicate novel aspects and are assigned with other W01-C01 codes as appropriate. Cordless and mobile radio telephones are **not** coded here - see W01-C01D codes.

# W01-C01G1 [1992]

# Intercom

(W01-C01, W01-C04)

This code is used for an otherwise standard telephone with an intercom facility, and **not** an intercom of e.g. apartment block security type with no telephone aspect, which is coded in W01-C04. See W01-C01D2 for direct communication between radio telephones.

# W01-C01G2 [1992]

#### Loudspeaker and hands-free telephone

(W01-C01, W01-C04)

The title of this code has been expanded from 2002 to better reflect its coverage of loudspeaker telephone and hands free telephone.

# W01-C01G2A [2002]

#### Loudspeaker telephone

#### W01-C01G2C [2002]

# **Headset telephone**

(W01-C01G9)

Includes 'hands-free kit' mobile phone, for which W01-C01D3C is also assigned. Telephone headset aspects were previously coded in W01-C01G9.

Hands free

#### W01-C01G3 [1992]

#### Pushbutton/key telephone

Prior to 1992, pushbutton and key telephone systems were coded in W01-B03, W01-C01X and W01-C02X. From 1992 see W01-C02G5C.

#### W01-C01G4 [1992]

# Video telephone

(W01-C01X, W01-C05B1, W02-F09)

Also coded in W02-F08B3. For complete video telephone system see W01-C05B1 codes and W02-F08B1.

#### W01-C01G5 [1992]

# **Conference telephone**

(W01-C01, W01-C04)

See W01-C02B1 for exchange details. For video conference telephone search with W01-C01G4. Prior to 1992 search W01-C05B1, W02-F09 and W01-C01X.

#### W01-C01G6 [1992]

# Screen text and internet communication telephone

The title of this code has been expanded from 2002 to better reflect coverage of SMS, email and internet communication. Telephone network aspects of text-based communication in general are covered by W01-C05B1A.

#### W01-C01G6A [2002]

#### **SMS**

This code is intended for 'text messaging', primarily in mobile phones, for which W01-C01D3C is also assigned.

Short message service

#### W01-C01G6B [2005]

#### **MMS**

This code is intended for "multimedia messaging". primarily in mobile phones, for which W01-C01D3C is also assigned.

Multimedia messaging service, picture messaging, MMS

#### W01-C01G6C [2002]

#### **Email**

Email in general is covered by T01-N01C, which is also assigned here.

#### W01-C01G6E [2002]

#### Internet communication

This code is assigned with W01-C01D3 codes for WAP phone aspects, e.g. W01-C01D3G for '3G' or '4G' handsets, and with W01-C01P1 for multimedia aspects. W01-C01G6E includes telephone sets equipped for placing calls over the internet, e.g. using VoIP. (Systems aspects of VoIP are covered by W01-C05B4C). Phones using push to talk over packet network technology are covered by W01-C01G6H.

i-mode

#### W01-C01G6F [2005]

#### Instant messaging

This code covers phones with the provision of real time mobile communication using instant messaging.

#### W01-C01G6G [2002]

# Data streaming and packet handling

This code is intended for telephones capable of data streaming and packet handling, e.g. for GPRS when used with W01-C01D3 codes.

GPRS, EDGE, packet

#### W01-C01G6H [2005]

#### Push to talk over packet network

This code covers phones providing direct one-toone or one-to-many voice communication using 'push to talk' Voice over IP (VoIP) communication over packet-based networks. Telephone systems aspects are covered by W01-C05B4G. Phones using VoIP technology other than push to talk are covered by W01-C01G6E.

PoC

#### W01-C01G8 [1992]

#### Feature telephone and smartphone

Covers telephone set with several features, e.g. operated by special keys or additional software modules, including smart phones which from 2016 are covered by W01-C01G8S. (Prior to 2016 W01-C01G8 codes were assigned as appropriate for this topic together with W01-C01P2 for PDA aspects and W01-C01D3C to denote hand-held mobile phones). For program control and software aspects search with W01-C01Q3 codes, T01-F codes and T01-S codes.

# W01-C01G8A [2002]

# User interface management/menu-driven telephone set

Covers telephone, especially of mobile type (W01-C01D3 codes also assigned in that case), in which particular features are accessible via a menu system or via a special user interface, e.g. using a reduced number of keys. Special function keys themselves are covered by W01-C01B8K. Control circuitry in general for telephones is covered by W01-C01Q codes, which may also be assigned depending on novelty. GUI aspects are also covered by T01 codes, e.g. T01-J12 codes.

UI, pull down menu, window, split screen, icons

#### W01-C01G8C [2002]

#### **Automatic selection of functions**

Covers telephones, especially of mobile type (W01-C01D3 codes also assigned in that case), in which particular features are selected without direct action by the user, based on sensed conditions or environment.

# W01-C01G8E [2007]

#### Haptic feedback control

This code covers sense of touch feedback control, including force and vibrating feedback. Signal processing aspects of feedback control are covered by W01-C01Q6E.

## W01-C01G8S [2016]

# **Smartphone**

This code is intended to represent phones (normally mobile for which W01-C01D3C is also assigned) having computing capability using a dedicated or adapted operating system with the ability to run application software that may be downloaded by the user. While it is recognized that the majority of mobile phones now fall into this category the code is intended as a search reference for this topic which prior to 2016 was represented by W01-C01G8 codes with W01-C01D3C and W01-C01P2 as necessary for 'PDA' aspects. For inventions concerned with software and program control aspects such as operating system details or mobile 'apps' search with W01-C01Q3 codes and T01-F codes.

Android®, BlackBerry®, Mozilla Firefox®, OS, iOS, Windows Phone®

# W01-C01G9 [1992]

# Other telephone set type

Prior to 2002, this code was used for telephone headsets which are now covered by W01-C01G2C.

# W01-C01H [1992]

# **External devices switching interface**

(W01-C01X)

This code is used for arrangements to interface with e.g. facsimile equipment (see S06-K07C2B also) and includes automatic switching on detection of type of call.

### W01-C01J [1992]

# Metering at subscriber equip. location

(W01-C01X, W01-C06)

From 1992 subscriber metering is coded in W01-C01J only, and not W01-C06.

#### W01-C01K [1992]

# **Subscriber equipment testing**

This code is intended for testing using external apparatus. from 2002, self testing and monitoring as part of a telephone set control system is covered by W01-C01Q1. See W01-C08C codes for testing in general, which may also be assigned with W01-C01K when specifically relevant.

### W01-C01L [1992]

### **Network interface aspects**

(W01-C01X)

The title of this code has been expanded from 2002 to better reflect its coverage of ADSL aspects in addition to interfaces for ISDN. Connection of telephone sets with external equipment using a digital interface is covered by W01-C01R.

# W01-C01L1 [2002]

#### **ISDN** interface

See W01-C05B7 codes for all aspects of ISDN.

#### W01-C01L3 [2002]

#### **ADSL** interface

ADSL is covered by W01-C05B8A.

#### W01-C01L5 [2002]

Splitter arrangements, e.g. POTS/ISDN splitter

# W01-C01L7 [2002]

**Standard, i.e. POTS line interface** (W01-C01X)

#### W01-C01L9 [2002]

#### Other network interface aspects

# W01-C01M [1992]

# Acoustic transducers (microphones and loudspeakers)

For full details of transducers search with appropriate codes in V06. (Ringing transducers are covered by W01-C01F1 codes only, e.g. W01-C01F1A for acoustic ringing and W01-C01F1F for vibrating types).

## W01-C01N [1992]

# **Extension and line holding arrangements**

Includes automatic arrangement to restore on-hook condition. See W01-C01D1 codes only for cordless telephones.

# W01-C01P [1997]

# Telephone apparatus integrated with other device

(W01-C01X, W01-C05B)

Covers telephone combined with other equipment (in the form of hardware or a software module), forming a single unit. See W01-C05B codes for combination of external devices with telephone equipment and systems.

# W01-C01P1 [1997]

# Multi media apparatus

See also T01-J30 codes and W01-C05B2 for system aspects. Prior to 2011 this code was also assigned for multimedia aspects of DMB receivers. From 2011 these are covered solely by W01-C01P6G and W03-A11G5.

# W01-C01P2 [1997]

### Personal digital assistant

See also T01-M06A1A and W01-C01D codes for mobile telephone aspects.

Personal digital organiser, PDA

#### W01-C01P3 [1997]

# Telephone answering machine

(W01-C01C5)

See W01-C01C5 for answering machine details.

# W01-C01P4 [1997]

#### **Facsimile machine**

See also S06- D to K codes. General telephone systems aspects of facsimile are covered by W01-C05B1C.

#### W01-C01P5 [1997]

#### Modem

General telephone system aspects of modems are covered by W01-C05B3A.

# W01-C01P6 [2005]

# Telephone with built-in entertainment device

Novel details of audio and video equipment are also assigned W03 or W04 codes as appropriate.

### W01-C01P6A [2005]

# Portable audio player/recorder

W04-G01B8 is also assigned for solid-state audio players such as MP3 types, with other W04 codes as necessary for novel aspects.

#### W01-C01P6C [2005]

# **Digital camera**

W04-M01B1 codes are also assigned, and for novel details of digital cameras other W04-M01 codes are applied as necessary. Video phones are covered by W01-C01G4.

Camera phone

### W01-C01P6E [2005]

#### **Broadcast radio receiver**

W03-B codes are also assigned for specific radio receiver aspects.

### W01-C01P6G [2005]

# Broadcast TV receiver and digital multimedia broadcast receiver

From 2011 the title of this code has been changed to reflect the inclusion of DMB receivers for which W03-A11G5 is also assigned, along with other W03-A codes as necessary. Prior to 2011 W01-C01P1 was also assigned to indicate multimedia aspects depending on novelty.

# W01-C01P6J [2005]

# Video player/recorder

From 2009 the title of this code has been expanded to reflect the previous inclusion of video players as well as recorders. Novel details of the video recorder/player are also assigned W04 codes, e.g. W04-P01C8 for solid-state types.

### W01-C01P6L [2005]

# Game player

See W04-X02 codes for gaming aspects in general and T01-J30B and T01-N01B1 for computer gaming.

# W01-C01P6X [2005]

# Other entertainment equipment built into a telephone set

# W01-C01P7 [2005]

#### **Navigational receiver**

Covers telephones with integrated navigational receiver, e.g. a GPS receiver. See W06-A codes also for details of navigational systems, e.g. W06-A03A codes for GPS.

# W01-C01P8 [2007]

# Medical parameter monitoring equipment

This code includes arrangements for monitoring physiological parameters such as vital signs to determine the health status of a person, or in connection with sporting activity (in which case e.g. W04-X01A1 or other W04-X01 code is also assigned), using a built-in phone monitoring device. See also S05 codes, for medical monitoring equipment in general, to highlight specific measurements.

#### W01-C01P9 [1997]

# Other equipment built into a telephone set

Includes 'alarm clock' (also assigned S04-B05), built-in smart card or similar (also assigned T04-K codes) for use with ticket gates (also assigned T05-D01A1), built-in OCR facility (also assigned T04-D codes), built-in torch (also assigned X26-E01 codes) or any other built-in equipment not covered by the above subdivisions.

#### W01-C01Q [2002]

# General control circuitry for telephone sets

These codes are intended to cover general aspects of telephone set control and especially microprocessor-based aspects which are also assigned T01-J08A codes as appropriate. For aspects specific to menu-driven telephone sets, search with W01-C01G8A.

#### W01-C01Q1 [2002]

### Self testing and monitoring

Testing of subscriber telephone using **external** equipment is covered by W01-C01K.

#### W01-C01Q1A [2002]

# **Checking remaining battery capacity**

This code is assigned with W01-C01E5B. Checking battery charge state in general is covered by S01-G06A and X16-H01.

# W01-C01Q2 [2005]

# **Memory storage**

Covers memory storage facilities for data, including application programs, music and video files. See also W01-C01Q3A for software updating and modification and W01-C01B1A with W01-C01D3D (and e.g. W01-C01D3C) for storage of telephone numbers within a mobile phone SIM card.

# W01-C01Q2A [2005]

#### **Internal memory**

Covers memory forming a fixed part of the phone. *RAM, flash memory* 

# W01-C01Q2C [2005]

#### **External memory**

Covers user-changeable memory, e.g. cards. See also T01-H01B3A for memory cards per se. Memory card,  $CF^{\otimes}$ ,  $SD^{TM}$ ,  $miniSD^{TM}$ ,  $MMC^{TM}$ ,  $reduced\ size\ MMC^{TM}$ ,  $memory\ stick^{\otimes}$ ,  $xD\ card^{TM}$ ,  $smartmedia^{TM}$ 

# W01-C01Q3 [2002]

### **Program control aspects**

From 2016 this code is further subdivided to differentiate between program control aspects relating to a phone's operating system (W01-C01Q3C) and those relating to installed or downloaded programs (W01-C01Q3E). Program control in computer and microprocessor systems is covered by T01-F codes, software development by T01-J20 codes and software content by T01-S codes, which are also assigned as appropriate. For application to smartphones search with W01-C01G8S (from 2016).

### W01-C01Q3A [2002]

#### Software updating and modification

Includes arrangements for downloading or otherwise inputting data to modify the control program.

#### W01-C01Q3C [2016]

# Program control aspects and software relating to operation of phone itself

This code covers any novel aspects of the operating system (OS), and also multiple OS phones.

#### W01-C01Q3E [2016]

# Program control aspects and software relating to applications

Includes novel application software ('apps') and their development and also inventions relying on apps, whether pre-installed or downloaded by the user.

#### W01-C01Q4 [2005]

#### Voice activated control

Includes the use of voice to control the operational aspects of the telephone. See also W01-C01B1B for voice dialling per se and W01-C01B5B for restricted dialling based on voice recognition. Control of access to the phone as a whole based on voice or other biometric aspects is covered by W01-C01Q8C. W04-V codes, e.g. W04-V04A, are also assigned for speech recognition aspects. Voice command

#### W01-C01Q5 [2002]

#### Sensing systems

Covers arrangements for determining particular conditions relating to the environment or usage of the telephone. Checking battery charge state is covered by W01-C01Q1A.

#### W01-C01Q5A [2002]

#### Sensing user proximity

Covers arrangements for determining that a telephone or handset is being held by the user, e.g. by proximity sensing, to control parameters such as loudspeaker volume. This relates especially to portable telephones, in which case W01-C01D3C is also assigned. Human presence detection in general is covered by \$03-C06 codes. Arrangements for determining a guiescent state, i.e. non-usage of the telephone, and switching between this and an active state, are covered by W01-C01Q7A.

#### W01-C01Q5B [2007]

#### Sensing other users in the vicinity

This code includes arrangement for sensing/detecting other users in the vicinity. See also W01-C01R and W01-A07H codes for the type of medium being used.

Proximity Mail ®

#### W01-C01Q5C [2002]

### Sensing connection of external devices

This relates to sensing the connection of external headsets, car adapters for portable phones, PCs, and any other equipment whose connection requires some change in the operation of the telephone set.

#### W01-C01Q5G [2014]

# Sensing acceleration, orientation and relative position

Covers arrangements for sensing movement or orientation of a phone, especially a mobile phone for which W01-C01D3C is also assigned, e.g. for auto-rotating display images, coming out of standby mode, or camera shake detection for which W01-C01Q6A, W01-C01Q7A or W01-C01P6C respectively are also assigned as necessary. Novel aspects such as transducers are also assigned S02 codes, e.g. S02-B07 codes for gyro-based sensors or S02-G03 for accelerometers. Sensing of direction or absolute position using e.g. a compass or navigational systems is not included and is covered by W01-C01P7.

Angle, landscape, portrait, rotate, turn

#### W01-C01Q5X [2002]

# Other sensing systems for telephone sets

Includes fingerprint sensors.

#### W01-C01Q6 [2006]

# Multimedia processing aspects

Covers processing aspects of the telephone, including graphics and display, audio, haptic and tactile and any general processing aspects.

Acceleration, rendering, GPU

#### W01-C01Q6A [2007]

# **Graphics and display processing**

(W01-C01B3A, W01-C01Q6)

Previously coded in W01-C01Q6. Includes arrangements for processing graphical and display information that is not part of the display screen hardware. See also T01-C04D for computer display processing. Prior to 2006, all aspects of display/control circuitry were coded in W01-C01B3A.

Acceleration, rendering, GPU

#### W01-C01Q6C [2007]

#### Audio signal processing

Includes arrangements for processing audio signals other than for normal speech processing for communication, which is covered by W01-C01C7 codes. In all cases W04-V codes are also assigned for specific processing and coding details.

MIDI. Wave

# W01-C01Q6E [2007]

# Haptic and tactile processing

This code covers processing necessary for implementation of haptic functions, e.g. in connection with user interface aspects. Novel transducers and drive circuits for haptic features are covered by W01-C01G8E.

# W01-C01Q6X [2007]

# Other multimedia processing

# W01-C01Q7 [2002]

# Standby and related systems

This covers arrangements for disabling parts of a telephone, especially a portable type (with W01-C01D3C) as a power-saving measure.

# W01-C01Q7A [2002]

# **Determining quiescent state**

This covers arrangements for determining a quiescent state based on e.g. non-actuation of keys for a preset period.

# W01-C01Q8 [2002]

# **Security aspects**

This code is used for general security aspects of the telephone control system. SIM card aspects of mobile phones are covered by W01-C01D3D and security aspects involving dialling restrictions are covered by W01-C01B5 codes. From 2010 W01-C01Q8E is introduced for arrangements to prevent access to confidential data stored in a mobile phone.

# W01-C01Q8A [2002]

#### Theft alarms

This code covers alarms warning of the possible theft, or leaving behind, of a telephone set itself, again usually of portable type (with W01-C01D3C). W05-B01 codes for theft alarms are also assigned as appropriate.

# W01-C01Q8C [2005]

### Security based on biometrics identification

Includes control of access to the phone as a whole based on fingerprint, eye or voice recognition. Restricted dialling alone based on voice recognition is covered by W01-C01B5B. W04-V codes, e.g. W04-V04A3, are also assigned for speech recognition aspects and S05-D01C5A for fingerprint and eye recognition aspects.

# W01-C01Q8E [2010]

# Preventing access to confidential data

This code is intended for arrangements with the emphasis on preventing access to confidential data stored in a mobile phone or similar. It includes arrangements for erasing data both locally and remotely (e.g. by the owner or service provider in the case of a stolen device), and also for preventing unauthorised access via a Bluetooth\* or similar link. Aspects involving the digital interface itself are also assigned W01-C01R. Preventing access to, or use of, the phone as a whole is covered by other W01-C01Q8 codes or W01-C01B5 codes.

Anti-hacking, Bloover, bluejacking, bluesnarfing, intrusion, remote erasure

[2002]

### W01-C01Q9

# Other general telephone set control circuitry aspects

# W01-C01R [2006]

# Interfacing systems

(W01-C01X)

This code includes the interfacing of a telephone set (usually mobile, for which W01-C01D3C is also assigned) to a local external device via a digital connection. From 2011 it is subdivided to differentiate between novelty in the interface itself and applications where the **use** of the interface is significant. W01-A07H codes are also assigned to highlight the interface medium used when specific, e.g. W01-A07H2A for a Bluetooth® link. See also T01-C codes for interfacing with a computer. Circuits and components for interfacing with PSTN landlines are not included and covered by W01-C01L codes. 'User interface' aspects such as GUI or menus etc. are **not** included, being covered by W01-C01G8A.

Bluetooth®, Firewire®, IEEE1394, i-link®, infrared data association, IrDA, RS-232, RS-485, serial port, TransferJetTM, USB, universal serial bus

# W01-C01R1 [2011]

#### Novel details of telephone digital interface

This code is intended for novel details of digital interfaces for telephones, including software and also hardware aspects such as connectors and circuitry.

#### W01-C01R5 [2011]

# Applications of telephone digital interface

This code is intended for significant applications of digital interfaces for telephones, e.g. where an invention relies on the use of the interface to connect a phone with an external system or equipment.

# W01-C01V [2017]

# Manufacturing subscriber equipment

Includes manufacturing of home telephones, mobile phones, smartphones, or other subscriber equipment, for which additional W01-C01 codes are assigned as necessary. This code covers assembly of subscriber equipment and also manufacture of items specific to the equipment itself, such as housings, PCBs and the like. Manufacture of bought-in components such as audio transducers, semiconductor devices or displays is not included and for these aspects see codes relating to the component itself, e.g. U14-K01A1J for LCD manufacture.

Assembly, fitting, molding

# W01-C01W [2017]

# **Recycling subscriber equipment**

Includes recycling of all kinds of subscriber apparatus including landline telephones, smartphones, and accessories. Other W01-C codes specific to the equipment being recycled are also assigned, e.g. W01-C01G8S for smartphones. Materials recovery and recycling of electronic components in general is covered by V04-X01C and electrical aspects of recycling in general are covered by X25-W04.

Environmentally-friendly, rare earth, recycle, reprocess, reuse

#### W01-C01W1 [2017]

# Equipment design and components improving recyclability

Covers design features including use of recycled components and materials and selection of components and materials that facilitate the recycling of unwanted telephone equipment. Recyclable

# W01-C01W5 [2017]

# **Equipment and methods of recycling**

Covers equipment and methods used in recycling of subscriber equipment, e.g. for disassembly, recovery of reusable components or valuable materials. Machines dispensing a payment in return for deposited recyclable items in general are covered by T05-H02E which is also assigned as appropriate.

Desoldering, dissolving, heating, kiosk, reversevend, separating, tools

#### W01-C01X

#### Other subscriber equipment

#### W01-C02

### Automatic/semi-automatic exchanges

See W01-B codes for actual selection details. Data exchange e.g. for networks is covered by W01-A06 codes.

#### W01-C02A

#### Supervising, testing, indicating faults

See W01-B08 for selection system testing and W01-C08C codes for general aspects.

# W01-C02A1 [1987]

#### Monitoring/testing exchange

Codes in this section are also used with W01-C08C5 for testing of an exchange from an external maintenance centre.

# W01-C02A1A [1992]

# Statistical metering

(W01-C02A, W01-C06)

Covers detection of overload/blocking condition and general measurements on telephone system usage and performance, including call centre operator call handling (with W01-C02G3 codes)

### W01-C02A1C [1992]

# Fault location, standby systems

Standby systems for data networks are covered by W01-A06A1 code, for line systems in general by W02-C01D3 codes, and for radio equipment by W02-G08 codes.

Redundancy, hot standby, back-up

#### W01-C02A5 [1987]

# Testing external system incl. subscriber loop

Testing for line systems in general is covered by W02-C01D codes.

Continuity test

# W01-C02A5A [1992]

# Discriminating line fault from apparatus fault

Internal/external fault discrimination

# W01-C02A7 [1992]

#### Control of exchange

Includes overall control of operation and functions such as least cost routing (also coded in W01-C06A). Network resource allocation is covered by W01-C02A7 and W01-C02A1A. Radio resource allocation in general is covered by W02-C03E7 and when relating to cellular mobile telephone systems W01-B05A1 and W02-C03C1 codes are also assigned as appropriate.

Stored program, control, SPC, computer, microprocessor, microprogram, LCR

#### W01-C02A7A [1997]

#### Intelligent network

(W01-C02A7, W01-C02B)

See also W01-C02B codes for special features and T01-J08C codes for communication control aspects.

#### W01-C02B

# **Special subscriber services**

Codes in this section deal with services wholly provided by the exchange itself, and also those involving external services (W01-C02B7 codes). *Call interception* 

# W01-C02B1 [1987]

#### **Conference systems**

See W01-C01G5 for subscriber conference equipment. TV conference systems are covered by W02-F08A, combine with W01-C codes as appropriate for any telephone aspects. For example, moving-picture TV conference system using the telephone network is coded as W01-C02B1, W01-C05B1E, W02-F08A1 and W02-F08B1.

Bridge, multiple subscriber connection

# W01-C02B2 [1992]

# Call forwarding, transfer and diversion

For topics below relating to automatic exchange functions W01-C02G5A is normally assigned as well.

# W01-C02B2A [2002]

# **Direct-inward dialling**

This code is intended for systems allowing direct dialling, e.g. by entering additional digits once a connection to an exchange is made.

# W01-C02B2C [2002]

# Simultaneous or successive ringing of extensions

This code is intended for arrangements to ring a number of extensions until a call is answered.

# W01-C02B2E [2002]

#### **Call diversion**

This code is intended for the facility by which a subscriber can set up or cancel call diversion, and specify a number to which calls are to be routed **without** ringing of the subscriber's telephone. Call forwarding based on a call going **unanswered** is covered by W01-C02B2L. Time-dependent operation of this feature is indicated by assignment of W01-C02B2J also. Call barring is covered by W01-C02B2G.

Redial, redirect

# W01-C02B2G [2002]

#### **Call barring**

This code is intended for the facility by which a subscriber can set up or cancel a call barring facility. Time-dependent operation of this feature is indicated by assignment of W01-C02B2J also. Call diversion is covered by W01-C02B2E.

### W01-C02B2J [2002]

#### Time-dependent call handling

This code is intended for the facility by which a subscriber can establish time windows for operation of call handling features. It is used in conjunction with other W01-C02B2 codes as necessary.

# W01-C02B2L [2005]

#### **Call forwarding**

This code is intended for the facility by which a subscriber can set up call forwarding, and specify a number to which unanswered calls are to be forwarded. Call diversion **without** ringing is covered by W01-C02B2E and call barring is covered by W01-C02B2G.

Redial, redirect

# W01-C02B2M [2006]

#### **Call transfer**

This code is primarily intended for manual arrangements for re-directing a received call to another extension. Automatic arrangements for diversion of calls are covered by W01-C02B2E if no ringing of the dialled telephone occurs and W01-C02B2L if the call is forwarded only if unanswered. Redial. redirect

#### W01-C02B2N [2006]

# Based on profile, e.g. Presence-Enhanced Contacts profile

Provides a dynamic profile of the user, visible to others, the user's availability, whereabouts and suitable methods of communication. Subscriber telephone set aspects of profile-based call handling are covered in W01-C01F8C.

W01-C02B2X [2002]

# Other incoming call handling functions

W01-C02B3 [1992]

### Camp-on, call-back and caller ID system.

The title of this code has been expanded from 2002 to better reflect its coverage of caller ID systems. See also W01-B03C for **novel** aspects of caller ID systems and call tracing.

W01-C02B3A [2002]

Camp-on and call-back

W01-C02B3C [2002]

**Caller ID transmission** 

(W01-B03C, W01-C02B9)

W01-C02B3E [2002]

# Inhibiting ongoing transmission of caller ID

(W01-B03C, W01-C02B9)

This code includes the use of digit sequences entered by a calling subscriber before dialling, to inhibit the caller ID feature of the exchange. Withheld Number

W01-C02B4 [1992]

#### Centralised call answering

Automatic answering equipment wholly at the subscriber location is covered by W01-C01C5 codes. Voice mail is covered by W01-C02B7C.

W01-C02B4A [1997]

# **Call holding**

Search with W01-C05B5A for music on hold. Line holding circuits for subscriber telephones are covered by W01-C01N.

Music on hold, call waiting

W01-C02B5 [1992]

### Number storage, centralised autodial

Subscriber-based autodial systems are covered by W01-C01B1 codes.

W01-C02B5A [1997]

### Reply dialling

See W01-C01B1E for reply dialling based at subscriber apparatus only.

W01-C02B6 [1992]

Graded service

#### W01-C02B6A [1992]

#### Determining entitlement to level of service

Includes checking of ID in e.g. cellular telephone network (also coded as W01-B05A1A and W02-C03C1 codes).

W01-C02B6C [2002]

# Denying access to telephone service based on non-entitlement

Includes inhibiting access using e.g. stolen mobile phone. Arrangements for inhibiting any mobile phone in a sensitive area are covered by W01-C08F5.

W01-C02B7 [1992]

# Involving facilities external to exchange

Codes in this section are used with W01-C05 codes as appropriate to the external service provided. The concept of 'external' is intended to denote facilities not involved in the primary function of the exchange.

W01-C02B7A [1992]

# **Paging**

See also W01-C05A and W05-A05C codes. Short messaging service is coded in W01-C02B7D only.

### W01-C02B7B [1992]

# Alarm monitoring systems

Covers exchange monitoring of external alarms, see also W01-C05A and W05-B05 codes. From 2002 alarm systems communicating via the telephone network **without** any novelty in the telephone aspect are covered by W05 codes only.

W01-C02B7C [1992]

#### Voice mail system

See also W01-C05B5E for recording aspects.

W01-C02B7D [1997]

#### Short messaging service

Covers transmission of paging message to radio telephone. See W01-B05A1F for switching details, and W01-C01G6A for SMS telephones themselves. See W01-C02B7A for telephone exchange aspects of paging systems.

W01-C02B7E [2002]

#### Automatic directory enquiry services

(W01-C02B7X, W01-C05B5C)

Automatic directory enquiry services are now only also assigned W01-C05B5C for specific details of the database or similar system, for which T01-J05B codes are likely to be used as well.

# W01-C02B7F [2005]

# Multimedia messaging service (MMS)

Covers transmission of messages to a (usually mobile) telephone including a combination of image, sound and text. Aspects specific to the telephone itself are covered by W01-C01G6B.

Multimedia messaging service, picture messaging, MMS

#### W01-C02B7G [2007]

# Centralised storage of user profile

Includes arrangement of storing user profiles in a central place, and downloading the profile to the phone on power-up when connected to network.

# W01-C02B7H [2007]

# Transfer of personalised ringtone

Includes arrangements for sending a personalised ringtone to the called person.

# W01-C02B7L [2007]

#### Location based service

Includes arrangement of providing a personalised service, based on the location of the mobile terminal. See also other W01-C02B and W01-C05 codes for the type of service being offered.

#### W01-C02B7X [1992]

#### Other external service provision

Prior to 2002, automatic directory enquiry services were coded here as well as in W01-C05B5C. (Now covered by W01-C02B7E)

#### W01-C02B8 [1992]

#### Alarm call systems

Includes 'early-morning-call' type system. *Automatic, select, key, dial* 

# W01-C02B9 [1992]

# Other subscriber services

Includes interactive voice response (IVR) systems for which W04-V04 codes are also assigned. *IVR* 

# W01-C02C [1992]

# Attendant desk, consoles

(W01-C02X)

# W01-C02C1 [1997]

# Automatic call distribution or call centre console

ACD

# W01-C02D [1992]

#### Interfacing with external network

(W01-C02X)

Includes circuits and arrangements for connection to subscriber lines and inter-exchange trunks (also coded in W01-C03).

#### W01-C02D1 [1992]

### Subscriber line interface circuit

See also W01-C08B for hybrid circuit details. *SLIC* 

#### W01-C02D3 [1992]

#### Transmission of ringing signals

Subscriber set ringers are covered by W01-C01F1 codes. See W01-C07B also where current supply aspects are involved.

# W01-C02D5 [1992]

# Reception of ringing signals, line state details

# W01-C02E [1992]

#### **Power supply details**

See also W01-C07B for current supply details. Subscriber set aspects are covered by W01-C01E codes

#### W01-C02G [1992]

#### **Exchange type**

Codes in this section are used to indicate exchange type only and do not necessarily represent novel aspects.

#### W01-C02G1 [1992]

# Central office type

Attendant/operator system

#### W01-C02G3 [1997]

#### Automatic call distribution or call centre

(W01-B03, W01-C02B2)

#### W01-C02G3A [1997]

#### **Automatic call distribution centre**

(W01-B03, W01-C02B2)

ACD

# W01-C02G3B [1997]

#### Call centre

(W01-B03, W01-C02B2)

# W01-C02G5 [1992]

# Private exchange

Search with W01-B05A1 codes for radio private exchange. Search with W01-C03 for centrex.

# W01-C02G5A [1992]

#### Automatic, i.e. PABX

See W01-C02B2 for direct inward dialling details.

# W01-C02G5B [1992]

#### **PBX**

(W01-C02X)

Attendant/operator system

# W01-C02G5C [1992]

### Key telephone system

Prior to 1992, key telephone systems were coded in W01-B03, W01-C01X and W01-C02X. For subscriber set aspects see W01-C01G3.

#### W01-C02X

# Other telephone exchange aspects

From 1992, semi-automatic systems are coded in W01-C02G codes and other W01-C02 codes as appropriate.

# W01-C03

# Interconnection between switching centres

See also W01-B03A when emphasis is on switching aspects. See W01-B05A3 and W02-C03C3G for trunked radio telephone system.

Inter-exchange connection, telephone trunk, leased line

#### W01-C03A [1997]

# Virtual private network

See W01-C02G5 codes for aspects of private networks. VPNs as data network, i.e. not specifically for telephone service, are covered by W01-A06B7G.

VPN

# W01-C04

# Interconnection without centralised switching

Includes party-line systems (see W01-B04 for selection aspects). See W01-B05A1D for direct communication between radio telephones. Prior to 1992 this code was also used for loudspeaker telephones, now coded in W01-C01G2.

Feedback suppression, transmission switching, call signal generator

# W01-C04A [1997]

#### Intercom

Includes aircraft crew or mineshaft intercom. For intercom combined with subscriber apparatus see W01-C01G1.

# W01-C04A1 [1997]

#### **Entryphone**

Search with W02-F01A1 for video entryphone.

#### W01-C05

# Telephonic systems combined with other electrical systems

In general, from 2002 pure **applications** of the telephone network to alarm signalling, telemetry, telecontrol and similar topics are not covered here, the W01 codes being reserved for cases of genuine 'telephone novelty' or where no provision exists elsewhere to highlight the telephone aspect.

### W01-C05A

#### With annunciator or alarm systems

See W05 codes also for application to e.g. selective calling systems or alarms (e.g. W05-B05 codes).

Central station alarm signalling, paging system

## W01-C05A1 [2002]

# **Emergency call location determination** systems

See W01-B03C also for call tracing and caller ID aspects, and W02-C03C1E for mobile location determination in cellular telephone systems.

Enhanced 911, E911, FCC

# W01-C05B

# With telegraphic, entertainment, video, or dictation systems

From 1992, all telephone aspects of ISDN are covered by W01-C05B7 codes. From 1997, multimedia systems are coded in W01-C05B2

### W01-C05B1 [1987]

# With video, incl. facsimile, videophone, screen text

Telephone ordering system for pay-per-view TV and telephone audience research systems are coded in W01-C05B5 codes.

Picture, video telephone, narrowband TV

# W01-C05B1A [1992]

#### Screen text systems

Includes instant messaging system. Telephone line based screen text systems are also coded in W02-F05B1.

# W01-C05B1C [1992]

#### Still-picture systems

Includes facsimile (see S06-D to K codes also) and still-picture video telephone systems (see W02-F08 codes also).

Video telephone

# W01-C05B1E [1992]

# Moving picture systems

Includes video telephone (see W02-F08B codes also). Still-picture types are coded in W01-C05B1C. See W01-C01G4 for apparatus details. Search with W01-C02B1 and W02-F08 codes for video conferencing system.

Narrowband TV, picture phone

### W01-C05B2 [1997]

# Multimedia system

See also T01, W03, W04 codes as appropriate, especially T01-J30 and W04-K10 codes. See W01-C01P1 for telephone subscriber apparatus details.

#### W01-C05B3 [1987]

# Telegraphic telephone line communication

See T01 codes also for computer aspects. Prior to 2002 W01-C05B3 was routinely used to highlight computer telephony integration and internet telephony, now both covered by W01-C05B4 codes, and ADSL which is now covered by W01-C05B8A.

Telecontrol, telemetering, computer access, remote terminals

### W01-C05B3A [1992]

#### Telephone line modem

Covers novel aspects of modem per se. See also W01-A09 codes for modulation/demodulation aspects. See W02-C04B2 or W01-A07H3 for free space optical link or W01-A07H2 or W02-G02 for radio link. See W01-C05B3G for voice over data modem.

#### W01-C05B3B [1992]

# Communication with computer from remote terminal

Novel modems are coded in W01-C05B3A, W01-C05B3G or W01-C05B3H, depending on type. (See also T01 codes).

# W01-C05B3C [1992]

#### **Electronic funds transfer**

Also coded in T05-L02, and T01-N01A1 from 2002. Note that from 2002, EFT and e-commerce inventions are **not** coded here unless some novel PSTN aspect is involved.

# W01-C05B3D [1992]

**Telex** 

# W01-C05B3E [1992]

#### Remote control

See also W05-D06G codes.

# W01-C05B3F [1992]

#### Remote monitoring

See also W05-D06G codes. Search W01-C05A only for monitoring in the context of alarm systems.

# W01-C05B3G [1997]

### Voice over data modem

(W01-C05B3A)

Voice-over-IP telephone communication is covered by W01-C05B4C from 2002. (Prior to 2002, W01-A06B7, W01-A06F, and W01-C05B3 were used, in addition to T01-H07C5E).

VoD

#### W01-C05B3H [1997]

#### Facsimile-modem

(W01-C05B1C, W01-C05B3A) Fax-modem

# W01-C05B3J [1997]

#### **Data streaming**

Telephone sets (as opposed to systems) with data streaming capability are covered by W01-C01G6G from 2002.

GPRS, EDGE, packet, radio

# W01-C05B3L [1997]

#### PCMCIA / PC card

This code is intended for PC type interface cards, e.g. used to interface between a mobile phone and a lap top or palm top computer.

# W01-C05B4 [2002]

# CTI and telephone systems combined with internet system

(W01-C05B3)

Prior to 2002 W01-C05B3 was routinely used to highlight computer telephony integration. Voice over data modem aspects are covered by W01-A09E3, and W01-C05B3G when specifically intended for PSTN usage. Voice over IP transmission is covered by W01-C05B4C from 2002 (previously T01-H07C5E, W01-A06B7, W01-A06F, and W01-C05B3).

#### W01-C05B4A

[2002]

# **CTI - (Computer Telephony Integration)**

(W01-A06, W01-C05B3)

#### W01-C05B4C [2002]

# Telephony via the internet and IP-based telephony

(T01-H07C5E, W01-A06B7, W01-A06F, W01-C05B3).

From 2012 the title of this code has been changed to reflect its existing coverage of IP-based telephony over other networks such as LANs, in addition to the use of the internet as a medium. This code takes precedence over W01-C05B4A and is intended for telephone systems using internet protocol to transfer voice information, over the internet and also private networks. Telephone apparatus equipped for VoIP-based communication is covered by W01-C01G6E, or W01-C01G6H in the case of 'push to talk' technology. Arrangements for access to the internet via the telephone network for general purposes are covered by W01-C05B4E. W01-A06B7A is also assigned where novel aspects of the internet itself are involved. Computer system aspects of the internet are assigned T01-N codes also.

Generic Area Network, GAN, Next Generation Public Switched Telephone Network, NPSTN, Unlicensed Mobile Access, UMA, Voice over internet protocol, VoIP

# W01-C05B4E [2002]

# Internet access via telephone system

This code is intended for arrangements for access, via the telephone system, to the internet for general purposes. Telephone systems using VoIP, i.e. using the internet as a medium for telephone traffic, are covered by W01-C05B4C. W01-A06B7A is also assigned where novel aspects of the internet itself are involved. Computer system aspects of the internet are assigned T01-N codes also.

# W01-C05B4G [2006]

# Push to talk over packet network system

(W01-C02B1, W01-C05B3J)

Providing direct one-to-one or one-to-many voice communication using Voice over IP (VoIP) over cellular packet network. Prior to 2006, this topic was covered in W01-C02B1 and W01-C05B3J. Telephone sets equipped for this mode are assigned W01-C01G6H. Internet telephony systems are covered by W01-C05B4C. Instant messaging systems using the telephone network are covered in W01-C05B1A, and telephone sets equipped for that mode are assigned W01-C01G6F. Telephone chatlines in general are covered by W01-C05B5A but internet chatroom systems are not included, being covered by T01 codes (e.g. T01-N03A1C).

#### W01-C05B5

[1987]

#### **Entertainment, dictation**

Value-added telephone services

# W01-C05B5A [1992]

#### **Entertainment systems**

See also W02-F10 codes for interactive entertainment systems, and W04-X02 codes and W04-X03A3 respectively for games or karaoke aspects.

Subscription/cable TV, pay-per-view communication, karaoke, chatline

#### W01-C05B5C [1992]

### **Educational and information systems**

Time announcement, speaking clock, recorded information, audience research

#### W01-C05B5E

[1992]

### **Recording and storage systems**

See W01-C02B7C for voice mail per se. Centralised recording, voice mail

### W01-C05B5G

[2005]

#### Advertising and marketing

Covers transmission of advertising, promotional and marketing information to telephone users. Visual advertising in general is covered by W05-E03 codes, and advertising based solely on audible information by W05-F (from 2014), which are also assigned as appropriate. See T01-N01A2C for transmission of advertising and marketing information in computer networks.

Promotions, offers, adverts

# W01-C05B6 [2005]

#### Mobile commerce

Covers buying and selling of goods and services e.g. financial and business services through wireless telephone systems. Novel aspects of PSTN electronic funds transfer are covered by W01-C05B3C. See T01-N01A2 for computer e-commerce and T01-N01A1 for on-line banking. *m-commerce, on-line shopping, mobile banking, wallet* 

W01-C05B7 [1992]

**ISDN System** 

Used with other W01-C codes as appropriate.

W01-C05B7A [1992]

**Subscriber apparatus** 

Also assigned W01-C01L1 for interface aspects.

W01-C05B7B [1992]

ISDN exchange

Data exchanges interfacing arrangements with ISDN are also coded in W01-A06B5C.

W01-C05B7C [1992]

Complete system (Architecture), signalling or method of operation

W01-C05B7D [1992]

Control

W01-C05B7E [1992]

**Broadband ISDN (B-ISDN)** 

W01-C05B7X [1992]

Other ISDN aspects

W01-C05B8 [2002]

ADSL and other Digital subscriber line system

(W01-C05B3)

Prior to 2002 ADSL was assigned W01-C05B3.

HDSL, XDSL, SDSL

W01-C05B8A [2002]

**ADSL** 

#### W01-C06

# Metering; Time controlling and indicating

Prior to 1992, use with W01-C01X for meter at subscriber location, (from 1992 covered by W01-C01J only). See W01-C02A for exchange aspects. From 1992, statistical metering is covered by W01-C02A1A. Search with W01-C02A7 for least cost routing at exchange or W01-C01B4 only for system in subscriber apparatus.

Call charge calculation, exchange metering, calllogging system, least cost routing

W01-C06A [2002]

**Least cost routing** 

W01-C06C [2002]

Time control and indication

W01-C06E [2002]

**Billing** 

W01-C06G [2002]

Reduced rate and reverse charge systems

W01-C06G1 [2002]

# Reduced rate charging systems

Includes arrangements for reduced rate charging band on e.g. keying in an access code with a prepaid card. Prepayment telephones in general are covered by W01-C07A codes.

W01-C06G3 [2005]

### Toll free calling

Includes arrangements providing free telephone calls through special dial access.

W01-C06G5 [2002]

Reverse call charging

Collect call

W01-C06J [2005]

#### **Prepaid telephone services**

Covers provision of telephone service without a contract being established with the service provider. See W01-C07A codes for prepayment public telephones.

Pay-as-you-go, pre-pay

W01-C06L [2005]

# Call logging

Covers compilation and storage of telephone usage records, usually for a specific number, e.g. to monitor possible unauthorised calls.

W01-C06X [2002]

Other metering, time controlling and indicating aspects

W01-C07

**Prepayment telephones; Current supplies** 

W01-C07A [1987]

# Prepayment/public telephone

See T05-H05C and other T05-H codes also for coin/card-operated aspects.

Coin-operated, card-operated, telephone booth, kiosk

### W01-C07A1 [1992]

#### **Constructional details**

(W01-C01A, W01-C07A)

See W01-C01A also for construction of telephone set per se as far as analogous to subscriber telephone. From 1992, W01-C07A1 only is assigned for details of telephone kiosk, booth etc.

#### W01-C07A3 [1992]

#### **Anti-fraud measures**

Includes alarms and arrangements to prevent interference with metering etc. Use with W01-C07A5 when coin/card aspects involved.

Security, pin-fraud, antitheft

# W01-C07A5 [1992]

# Coin/card-freed aspects

See also T04-C, T04-K and T05-H codes, especially T05-H05C.

#### W01-C07A5A [1997]

#### **Telephone card**

See T04-C, T04-K and T05-H codes also. *Phone card* 

#### W01-C07A7 [1992]

#### **Control and signalling aspects**

Includes arrangements for metering, indicating faults, full cash-box, etc.

W01-C07A9 [1997]

Other

# W01-C07B [1987]

#### **Current supplies**

Prior to 1992, used with W01-C01X for subscriber set aspects which are now covered by W01-C01E codes.

Power supply, exchange battery, subscriber line feed, ringing current generator

W01-C08 [1987]

# General equipment details/circuits

(W01-C09)

### W01-C08A [1987]

# Protection, e.g. against lightning strike etc.

Protection systems in general are in U24-F and X13-C.

Surge protector, gas discharge tube, varistor, fuse

#### W01-C08B [1987]

# Line hybrid (transformers and circuit equivalents)

See also W02-C01X for general (or non-telephone) application, V02 for inductive components, and U25 for impedance networks, (e.g. U25-C for impedance converters, and U25-D codes for matching, combining, etc.).

Two-wire/four-wire circuit, impedance matching/balancing, differential circuit

# W01-C08C [1987]

# **Test equipment**

Covers portable equipment and apparatus used in remote tests. Testing of subscriber devices using external equipment is covered by W01-C01K, which may be assigned with W01-C08C codes for specific cases where the subscriber equipment itself is being tested.

# W01-C08C1 [1992]

Portable test set

### W01-C08C3 [1992]

# Remotely operated auxiliary test device

Includes device for discriminating line fault and subscriber set fault (see also W01-C01K for subscriber set testing generally and W01-C02A5 for exchange testing of subscriber lines).

# W01-C08C5 [1992]

#### Maintenance centre system

Includes system remotely monitoring telephone installations, e.g. monitoring several exchanges (with W01-C02A1).

# W01-C08E [1992]

# Equalisers, echo cancelling, noise reduction

See also appropriate code in W02-C01B or W02-C01C.

# W01-C08F [1992]

# Security aspects and telephone usage control

The title of this code has been expanded from 2002 to better reflect its coverage of telephone usage control. See also W02-L codes for secrecy aspects. Includes detection of eavesdropping, and scrambling systems.

Secrecy, wire-tap/eavesdropping detector

W01-C08F1 [2002]

Wiretapping and prevention of wiretapping

W01-C08F1A [2002]

Wiretapping

W01-C08F1C [2002]

**Prevention and Detection of wiretapping** 

W01-C08F5 [2002]

# Controlling or preventing use of telephone

This code is primarily intended for systems inhibiting the use of e.g. portable phones in a sensitive area, such as a theatre, hospital etc., e.g. by 'dummy' base stations or jamming techniques. It is assigned with mobile phone system codes as appropriate, e.g. W01-B05A1A and W02-C03C1B for base station aspects. Arrangements for determining entitlement, and denying access, to different levels of telephone service are covered by W01-C02B6A and W01-C02B6C respectively.

### W01-C08G [1997]

#### Telephone line type

These codes are only assigned to highlight the significance of the line type to the particular invention, e.g. W01-C08G1 is **not** assigned for every invention relating to copper twisted pair telephone systems.

W01-C08G1 [1997]

Wire line

Twisted pair

W01-C08G2 [1997]

**Optical fiber** 

(W01-C08X, W02-C04B1)

W01-C08G9 [1997]

Other telephone line type

#### W01-C08H [2005]

# Application of telephone systems and apparatus

This code is generally used without other W01 codes, and is intended for inventions relying on use of the telephone systems or apparatus, while not involving novel aspects. The code is assigned only when the particular application cannot be coded elsewhere.

#### W01-C08X [1987]

# Other general details of telephone equipment

Intermediate amplifier, equipment cooling/environmental control

#### W01-C09

# Other (incl. manual exchanges)

From 1992, see W01-C02G and other W01-C02 codes for semi-automatic systems.

#### W01-D

#### Cable or line installation

W01-D covers novel aspects of cable installations for communications purposes, including telephone, data networks, CATV, alarm systems, and the like. Power line installations are not included and are covered by X12-G codes. See V07-H codes for optical fiber aspects.

# W01-D01

### Methods and equipment

Includes digging of trenches, erection of supporting poles, drilling through walls, drawing of cables through conduits or pipes, or their laying in trunking, cable trays, or the like.

Cable feeder, cable puller, cable locator, tools

#### W01-D02

#### **Fittinas**

Includes devices such as plugs and sockets, junction boxes and splices fitted to the cable, rather than arrangements for supporting it or mounting it which are covered by W01-D03. Novel electrical connector aspects are also assigned V04 codes. Terminal, Mounting, fixing, socket, junction box, connector

#### W01-D03

#### Installations

Includes physical aspects of mounting or positioning cables or cable fittings, rather than electrical connection aspects which are covered by W01-D02. Aspects of installations included are protective hardware such as conduits, grommets, cable trays, cable clamps, or trunking, and arrangements for routing cables through walls, under floors, under the ground, or overhead. Underwater/underground/overhead installation, conduit, ducting

# W01-D09

#### Other

This code covers any specific topic not fitting into the above subdivisions. Examples include cable reels and installations between two relativelymoving points which may be permanent or temporary arrangements such as a retractable telephone extension cable arrangement which can be wound around a reel or similar when not in use, or devices for shortening a long telephone set lead by winding it around a suitable retaining device. Drum, elevator intercom, pressurised cable leak monitor

# W01-E [2012]

# General aspects of wireless data networks and mobile phone networks

This code and its subdivisions are intended to indicate aspects of wireless systems, normally operating on a cellular model, that may be equally applicable to data networks as covered by W01-A06C4 codes and mobile phone networks and systems as covered by W01-B05A1 and W01-C01D codes. The codes are intended for wireless networks in a general sense and may be used alone in general cases or with specific additional wireless network or mobile phone system codes as appropriate to provide more detail. When relevant, W02 codes are also assigned for radio system aspects, e.g. details of cellular mobile radio systems are indicated by assignment of W02-C03C1 codes and novelty in radio equipment by W02-C03C1 codes and W02-G codes, these codes being assigned in addition to W01-E codes as necessary.

# W01-E01 [2012]

# Mobility aspects of wireless data and mobile phone networks

This code and its subdivisions cover aspects arising from the movement of mobile phones or wireless terminals and stations in general, such as roaming and registration.

# W01-E01A [2012]

#### Roaming

This code, or its subdivisions, replace W01-A06E1R, W01-A06E1S and W01-B05A1R and covers arrangements for allowing mobile phones or wireless terminals to move between home and other networks.

### W01-E01A1 [2012]

# Roaming between networks operating on the same standard

This code replaces W01-A06E1R and covers inventions for roaming between e.g. wireless local area networks of the same type, or between same-standard mobile phone networks. For roaming between wireless data networks and mobile phone networks W01-E01A3E is assigned instead of W01-E01A1 codes.

#### W01-E01A1A [2012]

# Roaming between wireless data networks operating on the same standard

This code covers arrangements for roaming between wireless data networks, e.g. wireless LANs, which are operating using the same standards.

#### W01-E01A1C [2012]

# Roaming between mobile telephone networks operating on the same standard.

This code replaces W01-B05A1R and covers inventions for roaming between same-standard mobile phone networks, e.g. between GSM networks.

# W01-E01A3 [2012]

# Roaming between networks operating on different standards

This code replaces W01-A06E1S.

#### W01-E01A3A [2012]

# Roaming between wireless data networks operating on different standards

This code covers arrangements for roaming in which mobiles may obtain communications service with wireless data networks operating on different standards, e.g. IEEE 802.11 AND IEEE 802.16. W01-A06C4 codes denoting wireless network standards are assigned as appropriate.

# W01-E01A3C

#### [2012]

# Roaming between mobile telephone networks operating on different standards

This code covers arrangements for roaming in which mobiles may obtain communications service with mobile phone networks operating on different standards, e.g. GSM, 3G, 4G, 5G.

#### W01-E01A3E

# [2012]

# Roaming between mobile telephone networks and wireless data networks

This code covers roaming arrangements allowing mobiles to obtain communications service with mobile phone networks and wireless data networks depending on availability. This code is assigned in preference to W01-E01A1 codes. Prior to 2012 this topic was indicated by assignment of W01-A06E1S and W01-B05A1R.

#### W01-E01A5

#### [2012]

#### International roaming

This code covers arrangements for allowing mobile phones or wireless terminals to obtain communications services across national boundaries.

### W01-E01C

### [2012]

#### **Registration aspects**

This code, or its subdivisions, replace W01-B05A1N and W01-B05A1Q and covers arrangements for registering mobile phones or wireless terminals with a network.

### W01-E01C1

# [2012]

#### Location register details

Prior to 2012 this topic was represented by W01-B05A1Q.

Home location register, HLR, visitor location register, VLR

# W01-E01C3

#### [2012]

# Registration of mobile user

Prior to 2012 this topic was represented by W01-B05A1N in the case of mobile phone networks.

# W01-E01C5

#### [2012]

#### **Transfer of registration information**

This code covers the transfer of information between access points or base stations during roaming or as part of a hand-off procedure. Hand-off aspects are also assigned W02-C03C1D.

#### W01-E99

### [2012]

Other wireless systems and apparatus common to data networks and mobile phone networks

# W02: Broadcasting, Radio and Line Transmission Systems

#### W02-A

### Waveguide devices

Includes specific devices and techniques for RF waveguide technology. Lumped-constant frequency-dependent circuits are in U25, optical waveguides are in V07.

#### W02-A01

# Transmission lines of the waveguide type

Covers waveguides per se, i.e. shape, materials etc.

W02-A01A [1992]

# **Coplanar lines**

Covers lines with two longitudinal conductors.

W02-A01A1 [1992]

Fin, slot lines

W02-A01A2 [1992]

#### **Coaxial lines**

For coaxial cables in general, see X12-D05, e.g. flexible coaxial cables which are coded in X12-D05 only.

W02-A01A3 [1992]

# **Microstrips; Striplines**

See appropriate U14 codes for microstrip technology relevant to film circuits, e.g. U14-H03C2 codes for analogue circuitry, and V04-Q codes for printed circuit details.

W02-A01A9 [1992]

Other coplanar lines

W02-A01B [1992]

#### Waveguide conductor

Covers waveguides with single solid longitudinal conductor.

W02-A01B1 [1992]

Wire

W02-A01B2 [1992]

**Hollow** 

W02-A01B2A [1992]

Ridged or grooved

W02-A01B2B [1992]

#### Circular

Includes elliptic and parabolic cross-section waveguides.

W02-A01B2C [1992]

**Flexible** 

W02-A01B3 [1992]

#### Dielectric

Covers waveguides without a longitudinal conductor.

W02-A01B4 [1992]

#### With several lavers

Increases operating surface by building-up from several layers e.g. alternate dielectric and conductive layers.

W02-A01C [1992]

**Auxiliary devices** 

W02-A01C1 [1992]

**Bends; Corners; Twists** 

Flange, seal, gasket

W02-A01C2 [1992]

**Fixed joints** 

W02-A01C3 [1992]

#### Movable joints; Rotating joints

Includes hinged and rotary joints.

W02-A01C5 [1997]

#### Waveguide windows

Covers window arrangements, e.g. with dielectric material covering aperture in guide wall (see V05-F04L for such arrangements applied to plasma and similar processing equipment). Couplers in general are covered in W02-A02 codes. Dielectric waveguides are covered by W02-A01B3.

W02-A01D [1992]

#### **Materials**

Covers materials for waveguides per se only. Materials of general application to waveguide devices are covered by W02-A08C codes.

#### W02-A02

### Couplers, combiners, impedance matching

Waveguide windows are covered by W02-A01C5. From 2002, couplers within distributed-constant-type filters, e.g. those providing coupling between resonators, are assigned W02-A05Q codes, and are **not** covered by W02-A02 codes unless of wider application.

Port, input, transition, probe

W02-A02A [1992]

Balanced/unbalanced line coupler; Coupling different types of waveguide

W02-A02A1 [1992]

Waveguide-to-coaxial line

W02-A02A2 [1992]

Waveguide-to-stripline

W02-A02A3 [1997]

Coaxial-to-stripline

W02-A02A5 [2007]

#### Balanced-to-unbalanced converter

See U25-D03 for lumped constant balanced-tounbalanced converters.

W02-A02B [1992]

**Active coupler with several ports** 

W02-A02B1 [1992]

# **Conjugate devices**

Covers devices with at least one port decoupled from one other port. Isolators and circulators are covered by W02-A04E and W02-A04F codes respectively.

# W02-A02B1A [1992]

#### **Directional coupler**

Includes couplers consisting of two coupled guides, being either hollow waveguides or arranged in parallel or being coaxial, stripline or microstrip. See W02-A01 codes for claimed waveguide transmission lines, and V04-Q codes for printed circuit details.

W02-A02B1C [1992]

**Magic-T junction** 

W02-A02B1D [1992]

**Hybrid ring junction** 

W02-A02C [1992]

### Impedance transformation; Matching

Lumped constant impedance matching is covered by U25 codes.

W02-A02D [1992]

Power combiner, divider

W02-A03

**Resonators; Delay lines** 

Electromechanical delay lines are in V06.

W02-A03A [1992]

Resonators

W02-A03A1 [1992]

**Helical**; Spiral

W02-A03A2 [1992]

#### **Lecher**; Coaxial

Coaxial resonators covered here include those comprising concentric electrodes with an air space between (W02-A03A2A) and those in which the space between electrodes is filled by a solid dielectric material (W02-A03A2C). Resonators termed 'dielectric' but having outer and inner electrodes are thus assigned the latter code. Resonators comprising a suitably-dimensioned piece of dielectric material without a pair of electrodes are coded in W02-A03A3C if forming part of a resonant cavity, and in W02-A03A5 otherwise.

W02-A03A2A [1997]

Coaxial resonator without solid dielectric

W02-A03A2C [1997]

Coaxial resonator with solid dielectric

W02-A03A3 [1992]

Cavity

W02-A03A3A [1997]

Without solid dielectric

W02-A03A3C [1997]

With solid dielectric See note for W02-A03A2.

W02-A03A4 [1992]

Stripline; Microstrip

# W02-A03A5 [1992]

#### **Dielectric**

Covers dielectric resonators with magnetic field coupling. Resonators with dielectric filled spaces are coded under W02-A03A2 or W02-A03A3.

#### W02-A03B [1992]

# **Delay lines**

Includes helical and interdigital lines.

#### W02-A04

Attenuators; Terminations; Isolators; Circulators; Switches

W02-A04A [1992]

**Switches** 

W02-A04A1 [1992]

### Ferromagnetic; Mechanical

See also appropriate V03- codes for mechanical type switches.

Ferrite

#### W02-A04A3 [1992]

# Using electrical discharge devices

See appropriate V05- codes also.

# W02-A04A5 [1992]

### **Using semiconductor devices**

See appropriate U21-B codes also for electronic switches, e.g. U21-B01A and U21-B05E.

# W02-A04B [1992]

#### **Absorber**

Absorbers for antenna applications are covered by W02-B03D codes, which are also used as a general place for absorber materials.

# W02-A04C [1992]

#### **Attenuator**

Attenuators using chiefly lumped-constant elements are covered by U25-D07.

W02-A04C1 [1992]

Using ferromagnetic material

W02-A04C5 [1997]

Attenuator using semiconductor devices

W02-A04C9 [1992]

Other distributed-constant attenuators

# W02-A04D [1992]

#### **Terminations**

Includes dissipative terminations e.g. resistive, liquid.

Dummy load, water load

# W02-A04E [1992]

#### Isolator

Includes resonance absorption and field displacement isolators.

#### W02-A04F [1992]

#### Circulator

Covers Y-circulators and hollow waveguide circulators.

# W02-A04F1 [1992]

# Stripline and microstrip circulators

#### W02-A05

#### **Filters**

From 1997, W02-A05K codes have been assigned to indicate filter function in conjunction with other W02-A05 codes. From 2002, coupling arrangements, e.g. between resonators, are covered by W02-A05Q codes, and are no longer assigned W02-A02 codes unless of wider application also.

Band pass, notch, high pass, low pass, adjustable, tunable

#### W02-A05A [1992]

### Transverse electromagnetic filters

#### W02-A05A1 [1992]

#### Coaxial

From 1997, cascaded coaxial cavity filters are included in this category to simplify grouping based on physical structure, and are covered by W02-A05A1E.

W02-A05A1A [1997]

Without solid dielectric

W02-A05A1C [1997]

With solid dielectric

See note for W02-A03A2.

W02-A05A1E [1997]

**Cascaded coaxial cavities** 

W02-A05A2 [1992]

Stripline; Microstrip

# W02-A05A3 [1992]

#### Comb or interdigital

Prior to 1997, this code covered cascaded coaxial cavity filters which are now transferred to W02-A05A1E.

W02-A05B [1992]

Hollow waveguide filters

W02-A05B1 [1992]

Cavity

W02-A05B1A [1997]

Without solid dielectric

W02-A05B1C [1997]

With solid dielectric See note for W02-A03A2.

W02-A05B1E [1997]

#### **Cascaded cavities**

Covers cascaded resonators inside hollow wavequide structure.

W02-A05B2 [1992]

Waffle-iron filters; Corrugated structure

W02-A05C\* [1992-1996]

# Suppressing or attenuating harmonic frequencies

\*This code is now discontinued and from 1997 this subject matter is transferred to W02-A05K6. W02-A05C remains valid and searchable for records prior to 1997.

#### W02-A05D\* [1992-1996]

# Combining or separating several different frequencies

\*This code is now discontinued and from 1997 this subject matter is transferred to W02-A05K7. W02-A05D remains valid and searchable for records prior to 1997.

## W02-A05E [1992]

# Ferromagnetic material; YIG

Prior to 1997, this code included magnetostatic wave elements used as non-linear noise-reducing devices (also assigned V06-V codes), which are now transferred to W02-A06E. W02-G03B9 ('Other radio receiver noise reduction') will continue to be applied in addition to indicate the noise-reduction aspect.

# W02-A05F [1992]

#### **Evanescent mode filter**

# W02-A05G [1992]

# **Active filters with distributed components**

See U25-E01 codes for active filters using lumped circuit elements.

#### W02-A05K [1997]

# Characterised by function and operation

Codes in this section are assigned with other codes relating to filter technology as appropriate.

W02-A05K1 [1997]

**Lowpass filter** 

W02-A05K2 [1997]

**Bandpass filter** 

W02-A05K3 [1997]

**Highpass filter** 

W02-A05K4 [1997]

**Notch filter** 

W02-A05K6 [1997]

# Suppressing or attenuating harmonic frequencies

(W02-A05C)

Coded under W02-A05C prior to 1997.

#### W02-A05K7 [1997]

# Combining or separating several different frequencies

(W02-A05D)

Coded under W02-A05D prior to 1997. This code includes duplexers and diplexers having a frequency band separation aspect based on filtering using waveguide technology. Duplexers for use in radio transceivers are also covered by W02-G02A5B. Frequency combining or separating using lumped-constant elements is covered by U25-E05K.

W02-A05K9 [1997]

Other filter function

W02-A05Q [2002]

### **Novel coupling arrangements for filters**

(W02-A02, W02-A05)

This code is intended to highlight novel arrangements for providing coupling between filter sections, and may be used with other W02-A05 codes denoting filter technology. Novel coupling arrangements in general for waveguide devices are covered by W02-A02 codes, which from 2002 are **not** used for internal filter coupling arrangements unless of wider application also.

# W02-A05Q1 [2002]

# Variable coupling arrangements

This code is intended for filter coupling arrangements in which the coefficient of coupling may be adjusted **in normal use**. Arrangements for trimming or adjusting coupling during manufacture are covered by W02-A07 codes.

#### W02-A06

Mode selectors; Phase shifters; Polarizers

W02-A06A [1992]

**Mode selectors** 

W02-A06A1 [1992]

Absorbing spurious modes of propagation

W02-A06B [1992]

**Polarizer** 

See W02-B03C codes for antenna polarizers.

W02-A06B1 [1992]

Circular polarisation

W02-A06B3 [1992]

**Using Faraday rotators** 

W02-A06C [1992]

Phase shifters

W02-A06C1 [1992]

### **Using active elements**

Includes use of e.g. semiconductor devices.

# W02-A06C2 [1992]

# Using a ferromagnetic device

Includes ferromagnetic device having toroidal shape.

# W02-A06E [1997]

# Nonlinear noise reduction devices

Includes magnetostatic wave devices. See also V06 codes, e.g. V06-V06, and W02-G03B9 for radio receiver noise reduction aspect. Also assigned W03-A01A1 and W03-A01B codes as appropriate if forming part of DBS receiver tuner.

# W02-A07

# Manufacture, testing

See also S01 for measuring, e.g. S01-H05 for high-frequency measurements.

# W02-A07A [1997]

# Manufacture of waveguides and waveguide components

Machining, cutting, welding, coating, plating

#### W02-A07A1

[1997]

# For integrated, hybrid, or film circuits

See U14 codes as appropriate, e.g. U14-H04 codes.

#### W02-A07B

[1997]

# Testing of waveguides and waveguide components

See also S01 codes for specific details of electrical testing, and S02/S03 codes for non-electrical testing, such as measuring dimensions, materials testing, etc.

#### W02-A07B1

[1997]

For integrated, hybrid, or film circuits

W02-A08

[1992]

**General details** 

#### W02-A08A

[1992]

# Compensation of environmental effects

Includes protection against the effects of e.g. moisture, temperature.

#### W02-A08B

[1992]

#### Non-specific circuitry

This code is used for circuitry associated with waveguide devices not catered for elsewhere in section W. See also U23-Q.

#### W02-A08C

[1992]

### **Materials**

Includes materials for waveguide devices in general. Materials for waveguides per se only are covered by W02-A01D.

# W02-A08C1

[1992]

For millimetre wave

W02-A08G

[1997]

**Devices with variable parameters** 

W02-A08G1

[1997]

Adjustable resonant frequency

# W02-A08J [2002]

# Waveguides and waveguide devices using superconducting materials

This code is intended to highlight the **use** of superconducting materials, not novel themselves, necessarily. **Novel** superconducting materials are assigned U14-F and X12-D06 codes.

#### W02-A09

# Other waveguide devices

#### W02-B

#### Aerials

Aerials per se are also coded under application.

#### W02-B01

# Monopoles, dipoles, loop and rhombic aerials, etc.

# W02-B01A [1992]

# Loop

Includes circular loops and also rectangular, delta and similar shapes. Parasitic arrays formed from such elements (I.e. 'quad' or 'box kite' antennas) are covered by W02-B04D5. Folded dipole antennas are covered by B01B1A or W02-B01B2A. Includes loop conductor antennas for smart cards, which are also assigned T04-K01C and V04-Q codes for printed circuit details.

# W02-B01A1 [1992]

With core e.g. ferrite rod

# W02-B01B [1992]

#### Dipole

Yagi-Uda parasitic arrays formed from dipole elements are covered by W02-B04D1. Dipole arrays with separate feed to each element are covered by W02-B05B1, but note that log periodic types themselves are coded in W02-B01D1. Folded dipole

# W02-B01B1 [1992]

## Linear dipole antenna

In 2002 the title of this code was changed to better reflect its actual coverage. Formerly entitled 'Center-fed' (dipoles), the title now refers to the linear arrangement of elements, e.g. as distinct from the ring form covered by W02-B01B2 codes. As before, although centre-fed dipoles constitute the majority of postings for this code, those with an offset feed, e.g. for impedance matching purposes (W02-B08E1 assigned as well) are also included.

# W02-B01B1A [2002]

#### Folded dipole

This code is intended for dipoles which may be regarded as a half-wavelength transmission line pair with shorted ends, or a wavelength-long conductor in the form of a flattened loop. Impedance matching aspects are indicated by additional assignment of W02-B08E1.

# W02-B01B2 [1992]

# Ring dipole

From 2002 the title of this code has been changed to better distinguish it from spiral antennas as covered by W02-B01B3. It is intended for dipoles with the ends brought close together to form a ring.

Halo

# W02-B01B2A [2002]

# Folded ring dipole

This code is intended for folded dipoles with the ends brought into proximity so as to form a ring. Impedance matching aspects are indicated by additional assignment of W02-B08E1.

# W02-B01B3 [1992]

### Spiral dipole

From 2002 the title of this code has been changed to better reflect its intended coverage of spiral dipole antennas, as distinct from those essentially comprising a dipole with the ends brought together in the form of a ring.

### W02-B01C [1992]

Unipole, monopole

W02-B01C1 [1992]

Whip, rod

Prior to 1997, telescopic aerials were excluded from this code, being covered by W02-B01X.

# W02-B01C1A [1997]

### **Telescopic antenna**

(W02-B01X)

Coded as W02-B01X prior to 1997. From 1997 collapsible antennas in general are covered by W02-B08K, and collapsible supports by W02-B07A5. The latter code was used for both types from 1992 to 1997.

#### W02-B01C1C [1997]

#### Whip antenna with loading coil

W02-B01C3 takes precedence for continuously-loaded aerials. See also W02-B08E for antenna impedance matching and tuning.

# W02-B01C1G [2002]

### **Ground plane antenna**

This code is intended for monopole arrangements with a associated groundplane in the form of separate elements or a metallic plate, which is part of the antenna itself and not provided by the surface on which it is mounted. Discone antennas are covered by W02-B01C5 (from 2002, formerly W02-B01C and W02-B01X).

W02-B01C3 [1992]

Helical

W02-B01C3A [2002]

#### **Quadrifilar Helix**

(W02-B01C3, W02-B05B)

This code is intended for antennas in the form of two bifilar helical loop sections. For use with satellite telephones search with W01-C01D3E (W02-C03C1C is also assigned for this application since satellite phone systems are regarded as being of cellular type) and W02-C03B1C for application to ground stations in general in a satellite radio system. Prior to 2002, antennas of this type were assigned W02-B01C3 and W02-B05B.

QFH, spacecraft, weather, satellite, APT, HRPT, GPS

#### W02-B01C5 [2002]

# Discone and conical-skirt monopoles

(W02-B01C, W02-B01X)

This code is intended for antennas in the form of a cone and monopole combination, normally employed for reasons of wideband performance. Arrangements for increasing the bandwidth of antennas in general are covered by W02-B08P3 and multi-band antennas by W02-B08R1 codes. Wideband, multi-octave, VHF, UHF, scanning, monitoring

# W02-B01D [1992]

#### **Electrically-long aerials**

Includes resonant aerials e.g. travelling-wave and non-resonant antennas e.g. rhombic.

# W02-B01D1 [1992]

#### Log-periodic

Arrays made up of several log periodic antennas are covered by W02-B05B5.

# W02-B01F [1997]

# **Inverted-F antenna**

(W02-B01X)

# W02-B01R [2010]

#### **Novel radiating element**

This code is intended to indicate novelty in the radiating element of an antenna, e.g. its shape or configuration, and is used in conjunction with other W02-B01 codes as necessary to highlight novel aspects. Note that W02-B01R is **not** used to denote shape or configuration that is a standard feature of the antenna type, such as a helical antenna which is covered by W02-B01C3 codes alone.

#### W02-B01X [1992]

# Other monopole or dipole antenna aspects

Prior to 1997 telescopic aerials were included. These are now coded under W02-B01C1A.

#### W02-B02

Waveguide and slot aerials

#### W02-B02A [1987]

#### Microstrip/stripline aerials

Printed circuit antennas are covered by W02-B07A3 and V04-Q codes

Conductor pattern, etched, patch, substrate

# W02-B02B [1992]

Waveguide horns

W02-B02C [1992]

**Resonant slot aerial** 

W02-B02C1 [1992]

### Microstrip slot antenna

See also W02-B02A.

# W02-B03

Reflectors, refractors, polarizers, absorbers

#### W02-B03A [1992]

# Refractor, diffractor e.g. lens, prism

Dielectric lens

#### W02-B03B [1992]

#### Reflector

From 1997, for collapsible antenna reflector per se (e.g. for on-station deployment from communications satellite, i.e. 'umbrella' type antenna) search reflector type code with W02-B08K (collapsible antenna). Collapsible supports and mountings for non-collapsible antennas are covered by W02-B07A5, which was used for both aspects from 1992 to 1997.

Circular

# W02-B03B1 [1992]

#### Characterised by shape

Form, contour

### W02-B03B1A [1992]

#### **Parabolic**

Search with W02-B08K for collapsible reflectors per se from 1997. (Previously coded as W02-B03B1A and W02-B07A5).

# W02-B03B1B [1992]

Having plane surface

W02-B03B2 [1992]

**Passive reflectors** 

### W02-B03B2A [1992]

#### Chaff

See also W06-A04E1A, which covers jamming of radar systems.

Window strip

# W02-B03B3 [1992]

# **Having variable properties**

# W02-B03C [1992]

#### **Polarizer**

See W02-A06B codes for (waveguide) polarizers in general.

#### W02-B03C1 [1997]

# Variable polarisation

# W02-B03D [1992]

# Absorber

This code is used for absorbers that are part of an antenna or antenna system and also as a general reference for radio frequency absorbers and absorber materials (in W02-B03D1). This includes the use of absorber materials on unrelated structures such as buildings or aircraft. Search with W06-A04X for radar signature reduction using absorbers. Absorbers that are part of an RF waveguide system are covered by W02-A04B. RF shielding is covered by V04-U codes.

#### W02-B03D1 [1992]

#### **Materials**

Includes e.g. metallic threads, ferrite powders and woven or wound filaments.

Rubber, polymer, binder, carbon

#### W02-B04

# Active elements combined with reflectors, etc.

Reflector, director, boom, parabolic, dish

#### W02-B04A\*

[1992-2001]

# Reducing undesirable effects, e.g. edge scattering, cross-polarisation

\*This code is now discontinued and from 2002 is replaced by W02-B08P5E, with other W02-B04 codes assigned as appropriate.

#### W02-B04B

[1992]

# **Using refractor or diffractor**

# W02-B04C

[1992]

#### Feed or driven element

Use with other W02-B codes as appropriate to discriminate types of feed.

Horn feed, dipole feed

#### W02-B04D

[1992]

#### Yagi and quad antennas

From 2002, the scope of this code is expanded to include 'quad' antennas. Log periodic antennas are covered by W02-B01D1. Arrays in which each element is driven are covered by W02-B05 codes.

Parasitic array

# W02-B04D1

[2002]

#### Yagi antennas

Yagi-Uda

# W02-B04D5 [2002]

# **Quad antenna**

This code is intended for 'quad' or 'box kite' antennas with form analogous to Yagi aerials, i.e. driven element arranged between reflector and one or more director elements, with elements typically approximately one wavelength long in total. Quadrifilar helix (QFH) antennas are covered by W02-B01C3A.

#### W02-B04E

[1997]

# Parabolic reflector antenna

Dish

### W02-B05

#### Aerial arrays

Parasitic arrays such as Yagi antennas are covered by W02-B04D codes, log periodic types by W02-B01D1.

#### W02-B05A [1992]

# **Novel feed system**

Includes stripline, modular, slotted waveguide, etc.

#### W02-B05B [1992]

# Characterised by elements making up array

Where a specific subdivision does not exist W02-B05B is assigned together with a code for the antenna type. For example, prior to 2006, an array of helical antennas was coded as W02-B01C3 and W02-B05B (now covered by W02-B05B6).

W02-B05B1	[1992]
-----------	--------

**Dipole** 

W02-B05B2 [1992]

Horn or slot

W02-B05B3 [1992]

Microstrip, patch

W02-B05B4 [1992]

Yagi

W02-B05B5 [1992]

Log periodic

W02-B05B6 [2006]

Helical antenna

#### W02-B05B8\* [1992-2001]

# Array radiating different polarisation

\*This code is now discontinued and from 2002 this topic is covered by assignment of a suitable W02-B05 code in conjunction with W02-B08R5 which represents antennas with multiple polarisation characteristics in general.

W02-B05C [1992]

**Collinear arrangements** 

W02-B05D [1992]

Phased array

# W02-B06

#### Varying directional pattern

From 2005 W02-B06C is assigned for automatic tracking aspects. Prior to 2005 this topic was covered by assignment of W06-A02A1 with W02-B06 codes as appropriate.

Scanning antenna, direction control system, anti-roll positioning ship, vehicle

#### W02-B06A [1992]

# Using mechanical movement

Rotary support

#### W02-B06A1 [1992]

# Between primary active elements and secondary devices of aerials

Includes arrangement to rotate e.g. reflector only.

#### W02-B06B [1992]

#### Using non-mechanical means

Includes electronic beam steering. Phased array antennas are covered by W02-B05D, which is also assigned as appropriate.

Electronic control

#### W02-B06B1 [1992]

#### Continuous

Includes the use of continuous phase shifters. Phase control

#### W02-B06B5 [1992]

#### Non-continuous

Covers switched arrangement giving discrete variation of radiation diagram.

#### W02-B06C [2005]

# Automatic directional control antenna systems

(W02-B06, W06-A02A1)

Covers use of either mechanical movement or electronic beam steering (with W02-B06A or W02-B06B codes as necessary) to automatically adjust directional characteristics to optimize communication with a particular station, e.g. based on maximum signal strength or minimum BER (W02-G03J codes are also assigned to highlight this aspect, e.g. W02-G03J1A or W02-G03J5A). Prior to 2005, this topic was indicated by the assignment of W06-A02A1 ('Automatic direction finding') in addition to W02-B06 codes. From 2005, W06-A02A1 is no longer assigned unless separate direction finding aspects are emphasized. Directional diversity systems are also assigned W02-C03A4 codes and BDMA or SDMA systems are also assigned W02-K10 (from 2017). MIMO systems are covered by W02-C03A5 codes. Antenna set-up, i.e. installation, based on optimum reception is not included, being covered by W02-B08A5A. For use of antenna beam direction control in '5G' mobile networks search with W02-C03C1L. Angle of arrival, direction of arrival, pilot signal,

RSSI, signal scanning

# W02-B06E [2006]

### Variable polarisation antenna

This code is assigned alone or with W02-B06A or W02-B06B codes as appropriate. Novel antenna polarizers are covered by W02-B03C codes.

#### W02-B07

**Supports; Housings** 

W02-B07A [1992]

Supports

W02-B07A1 [1992]

Fixed e.g. tower, mast, pole, base

# W02-B07A1A [2002]

#### Antenna masts and towers

This code is intended for supporting masts and towers, usually dedicated to the purpose of mounting antennas. For arrangement intended to conceal masts, or make them less conspicuous, search with W02-B08P8G.

# W02-B07A1C [2002]

#### Antenna mounting hardware

This code is intended for mounting hardware such as stub masts, clamps, etc., normally designed for fixing an antenna to an existing structure.

# W02-B07A3 [2002]

# PCB and surface mount antennas

These codes are intended to cover antennas produced using printed circuit techniques and those intended for surface mounting **on** a PCB. Microstrip antennas are covered by W02-B02A, and those fabricated as a PCB **without** a parallel groundplane by W02-B07A3A. Antennas structurally combined with active components are also assigned W02-B08C3, which would be assigned for an antenna formed on the circuit board of a radio transceiver, for example (W02-G02 also). See V04 codes also for PCB details.

Etched circuit board, conductor, laminate, foil

# W02-B07A3A [2002]

#### **PCB** antennas

This code covers antennas produced using PCB techniques, and is introduced to better distinguish between true 'waveguide' antennas such as those in microstrip form, which are covered by W02-B02A, and those fabricated as a PCB without a parallel groundplane, although both codes could be assigned for a PCB antenna operating in a genuine 'waveguide' mode. Surface mounted antennas are assigned W02-B07A3C, which takes precedence over this code. PCB antennas are also assigned V04-Q06.

Printed antenna

# W02-B07A3C [2002]

#### Surface mount antenna

This code is intended for an antenna designed to be surface mounted on a PCB, and takes precedence over W02-B07A3A, the code for antennas actually fabricated using PCB techniques.

# W02-B07A5 [1992]

# **Collapsible**

From 1997 this code has been restricted to collapsible **mountings** for antennas only, and not antennas which are themselves collapsible (now covered by W02-B08K). Prior to 1997, W02-B07A5 was used for all aspects.

W02-B07A7 [1992]

Vibration damping, stabilising

W02-B07B [1992]

**De-icing arrangement** 

W02-B07C [1992]

Radome: Protective cover

W02-B07C1 [1992]

# Forming part of vehicle

Includes e.g. the radome cover as used on an aircraft nose or on a missile. See also the appropriate codes in W06 and W07.

W: Communications

# W02-B07D [1992]

#### Vehicle antenna mount

This code and its subdivisions are used only for novel mounting aspects of the antenna, i.e. generally for mechanical details, and not simply to indicate that an antenna is used on a vehicle. Vehicle applications of antennas are indicated by W02-B08F codes which can be assigned for any antenna aspect and hence they can be used with W02-B07D codes as appropriate to indicate the type of vehicle on which the antenna mounting is employed. (Codes indicating electrical aspects of the vehicles concerned are also assigned, such as W06 or X22 codes for aircraft and ships, or land vehicles respectively). Details of the actual antenna will also be coded as usual in the appropriate W02-B section when useful information can be added.

W02-B07D1 Whip	[1992]
W02-B07D3 Waveguide	[1992]
W02-B07D5 Slot	[1992]
W02-B07D9 Microstrip	[1992]
W02-B08 General details	[1992]

W02-B08A

Measuring; testing

(W02-B09)

W02-B08A codes cover monitoring/testing of antenna performance in a general sense, measurement of specific antenna parameters, and antenna set-up and alignment. 'Electrical instrument' (S01) codes are also assigned as appropriate for testing and measuring aspects, especially S01-G08A5.

[1992]

W02-B08A1 [1992]

Measuring of antenna parameters per se (W02-B09)

W02-B08A1A [1997]

Polar diagrams

W02-B08A1C [1997]

**VSWR** 

W02-B08A1E [1997]

Gain

W02-B08A1X [1997]

Other antenna parameter measurements

W02-B08A5 [1997]

### Antenna set-up and alignment

Covers arrangements for set-up and alignment of antennas and antenna systems. W03-A16A is also assigned for satellite TV receiving antenna set-up aspects. Adjustment of antenna parameters such as directional characteristics during normal operation is not included, and is covered by W02-B06 codes.

# W02-B08A5A [2005]

# Antenna set-up based on optimum reception

Covers mechanical or electronic adjustment of antenna characteristics based on maximum signal strength or analogous indication during set-up. *Calibration* 

#### W02-B08A5C [2005]

# Antenna set-up based on geographical position

This code covers arrangements for antenna set-up and alignment based on known position, e.g. using compasses or inclinometer (also assigned S02-B codes), or GPS information (W06-A03A5E is also assigned).

#### W02-B08A9 [1992]

# Other antenna test or measurement aspects

(W02-B09)

Includes non-electrical tests.

W02-B08B [1992]

Isolation, overvoltage protection arrangements

W02-B08B1 [1992]

#### Lightning protection

See X13-C03 for lightning arrestors.

# W02-B08B3 [1992-2009]

# Isolation between adjacent antennas\*

\*This code is now discontinued and from 2010 arrangements for improving isolation between adjacent antennas are covered by W02-B08P6. W02-B08B3 remains valid and searchable for records prior to 2010.

Separation, shield, repeater, receiver, desensitizing

# W02-B08B5 [1997]

#### **Protection against radiation**

Covers arrangements to reduce irradiation of personnel, and also measures to reduce amount of radiation penetrating head of user of portable telephone (search with W01-C01D codes and W01-C01A4 for telephone applications and with W02-G02A1 for general hand-held transceivers).

# W02-B08C [1992]

# Active and structurally-associated aerials, mast-head and general RF preamplifiers

From 2006 the title of this code has been expanded to reflect the existing inclusion of amplifiers mounted in close proximity to e.g. a receiver, but external to it, covered by W02-B08C5C as a subdivision of the previously-existing code for mast-head amplifiers (W02-B08C5). Prior to 2006 search W02-B08C\* with terms such as 'external amplifier' or 'antenna lead amplifier' for external amplifiers used at the receiver end of an antenna cable.

# W02-B08C1 [1992]

**Active aerials** 

#### W02-B08C3 [1997]

# Aerials structurally associated with active components

This code is intended for arrangements having part of e.g. a receiver structurally associated with the antenna, such as a low-noise block for satellite TV reception (also coded in W03-A16A).

#### W02-B08C5 [1992]

# Mast-head and general RF preamplifiers

From 2006 this code has been expanded in scope to include RF preamplifiers in general, e.g. connected into an antenna cable at the receiver end, as well as amplifiers used at the antenna. RF amplifiers within communications receivers are covered by W02-G03A3.

Booster, preamplifier, LNA, low-noise amplifier

# W02-B08C5A [2006]

# **Mast-head amplifiers**

Covers amplifiers mounted in close proximity to an antenna. Amplifiers used at the receiver end of an antenna cable are covered by W02-B08C5C.

# W02-B08C5C [2006]

# **General RF preamplifiers**

Covers amplifiers mounted in close proximity to a receiver, but external to it. Amplifiers used at the antenna end of an antenna cable, i.e. mast-head amplifiers, are covered by W02-B08C5A.

# W02-B08D [1992]

#### Connections for antenna

From 1997, this code includes antenna switching, previously coded in W02-B08X. See also appropriate codes in U21 and V03 (electronic and electromechanical switches respectively) and in V04 for plugs and sockets, especially V04-M30G.

### W02-B08D1 [1992]

#### Coaxial cable

See also V04-M03.

#### W02-B08D3 [1997]

# Involving inductive, capacitive, or optical coupling

(W02-B08D, W02-B08E)

Prior to 1997 couplings of this type were coded under W02-B08D or W02-B08E. This code includes the use of optical fiber feed arrangements for antennas equipped with the necessary devices and circuitry to convert between optical and electric signals or vice-versa.

# W02-B08D5 [1997]

# Antenna switching arrangements

(W02-B08X)

#### W02-B08E [1992]

### Impedance matching and tuning

See also the appropriate codes for tuning and impedance matching in U25. From 1997 inductive and capacitive couplings are covered by W02-B08D3.

From 1992 to 1997 these were coded under W02-B08D and W02-B08E.

# W02-B08E1 [1997]

#### Impedance matching

See U25-D05 for lumped constant networks, and W02-A02C for distributed component aspects.

#### W02-B08E5 [1997]

Antenna tuning

# W02-B08F [1992]

#### Antenna applications for vehicles

Previously coded as W02-B07, under supports and housings. From 1992 the novel mounting aspects of the antenna will be assigned the appropriate W02-B07D code for antenna type, and W02-B08F for the specific application. For antenna application only, use the appropriate W02-B08F code. From 2002, the title of this code has been expanded to emphasise the fact that the applications covered here are to antennas intended to be used on vehicles

W02-B08F1 [1992]

Land vehicles; Automobiles

W02-B08F1A [1992]

#### Glass-mounted antenna

See X22-X02A3 also and X22-J02A, X25-B01C1C for claimed demister.

W02-B08F1B [1992]

Roof/body mounted

See X22-X02A1 also.

W02-B08F2 [1992]

Marine vehicles e.g. ship

See W06-C01B7 also.

W02-B08F5 [1992]

**Aeroplane** 

See W06-B01B7 also.

W02-B08F6 [2006]

# Missile or other projectile

Includes antennas on missiles, rockets, shells and the like, e.g. for guidance, target-seeking, or proximity fuzes. W06 and W07 codes are also assigned as appropriate.

W02-B08F7 [1992]

Space vehicle

See W06-B03C also.

W02-B08K [1997]

Collapsible antenna

(W02-B07A5)

Collapsible antenna supports are covered by W02-B07A5, which was assigned for all categories prior to 1997.

W02-B08K1 [1997]

**Motor driven** 

W02-B08L [1997]

Antenna manufacture

(W02-B08X, W02-B09)

W02-B08L1 [2014]

#### Antenna design and modeling

Where testing is involved W02-B08A codes are also assigned. Computer-aided design (CAD) aspects are also assigned T01-J15A codes.

Simulation

# W02-B08M [2002]

#### Antenna materials

This code is intended for **novel** materials with applications to antennas. It is assigned with other W02-B codes as appropriate. Antennas using materials with special properties, such as metamaterials, are covered by W02-B08Q codes, with W02-B08M codes also assigned if the materials are novel.

W02-B08P [2002]

#### **Antenna improvements**

These codes are used to highlight some specific stated improvement in an antenna design. They are assigned in conjunction with other W02-B codes as appropriate.

W02-B08P1 [2002]

Increased gain

W02-B08P3 [2002]

#### **Increased bandwidth**

Antenna or antenna systems with multi-band characteristics are covered by W02-B08R1 codes.

W02-B08P5 [2002]

# Improved directivity, scattering reduction, and cross-polarisation immunity

Antenna systems specifically designed for multidirectional or multiple polarisation radiation are covered by W02-B08R codes. Prior to 2002, W02-B04A was assigned for these topics when antennas using reflectors or refractors were concerned. From 2002, this topic is indicated by assignment of a relevant W02-B04 code with a W02-B08P5 code for those antenna types.

W02-B08P5A [2002]

Improved directivity

W02-B08P5C [2002]

Improved cross-polarisation immunity

W02-B08P5E [2002]

Reduced scattering and edge effects

# W02-B08P6 [2010]

# Improved isolation between adjacent antennas

(W02-B08B3)

This code covers arrangements for reducing unwanted interaction between antennas and improving isolation between them. Arrays of antennas designed to operate together are covered by W02-B05 codes.

Blocking, cancellation, desensitizing, phase, screen, separation, shield, receiver, repeater

#### W02-B08P7 [2002]

#### Improved VSWR or impedance matching

See W02-B08E1 for impedance matching arrangements for antennas.

# W02-B08P8 [2002]

# Improved non-electrical properties

These codes are used to highlight some specific stated improvement in an antenna which is not **directly** linked to its RF performance.

W02-B08P8A [2002]

Improved mechanical strength

W02-B08P8C [2002]

Improved durability

W02-B08P8E [2002]

Improved weather resistance

W02-B08P8G [2002]

### Improved appearance

This codes is used to highlight aesthetic aspects of antenna design, including concealment or blending in with surroundings.

W02-B08P8J [2005]

Reduced-size antennas

W02-B08P8L [2005]

# **Reduced-weight antennas**

Includes use of lighter materials, novel aspects of which are covered in W02-B08M also.

W02-B08P9 [2002]

# Other improvements to antenna performance

# W02-B08Q [2012]

# Antennas using materials with special properties

This code covers the use of materials with special-properties, such as those not relying on normal ohmic conductivity or those exhibiting a negative refractive index in terms of EM wave propagation. Where materials themselves are novel W02-B08M (general code for antenna materials) is also assigned.

# W02-B08Q1 [2012]

# Antennas using metamaterials

Includes use of composite RH and LH materials.

#### W02-B08Q5 [2012]

#### **Antennas using superconductors**

Waveguide devices using superconductive materials are assigned W02-A08J. Novel superconductors in general are covered by U14-F codes and X12-D06 codes.

### W02-B08Q9 [2012]

# Antennas using other materials with special properties

#### W02-B08R [2002]

# Antenna or antenna systems with multiband, multi-directional, or multiple polarisation characteristics

Individual antennas for which these characteristics are inherent, e.g. wide bandwidth in the case of discone antennas (W02-B01C5), are not routinely assigned W02-B08R codes.

# W02-B08R1 [2002]

# Antenna or antenna systems with multiband or wideband characteristics

From 2005 the title of this code is expanded to better reflect previous inclusion of wideband antennas, and is subdivided to differentiate between continuous wideband coverage and multiband operation, e.g. in harmonic modes, in several possibly narrow, frequency bands.

# W02-B08R1A [2005]

# Antenna or antenna systems with multiband characteristics

This code is intended to cover antennas operating in several frequency bands, harmonically-related or otherwise, the width of the bands not being the distinguishing aspect. Antennas operating over a continuous wide frequency range are covered by W02-B08R1C.

# W02-B08R1C [2005]

# Antenna or antenna systems with wideband characteristics

This code is intended to cover wideband antennas providing continuous coverage over a relatively wide frequency range. Antennas operating in several discrete frequency segments are covered by W02-B08R1A.

#### W02-B08R3 [2002]

Antenna or antenna systems with multidirectional characteristics

#### W02-B08R5 [2002]

# Antenna or antenna systems with multiple polarisation characteristics

Antenna **arrays** with multiple polarisation radiating characteristics were coded in W02-B05B8 prior to 2002.

# W02-B08X [1992]

Other general antenna details

#### W02-B09

# Other antenna types

Bird repellant, plasma antenna, submerged antenna, subterranean antenna, underground antenna, underwater antenna, warning light

#### W02-B10 [2002]

# Antenna for non-communications application

(W02-B09)

This code is intended to be used with any other W02-B code to indicate that an antenna is being used to launch or intercept RF energy for a purpose other than communications. For example, it is assigned for an antenna coupling RF energy into a discharge space in plasma processing apparatus (also assigned V05-F04L, V05-F05C1 codes, and other V05-F codes as appropriate). In general, codes relating to the specific application should also be included in a search, such as S05-B codes for surgery or X25-B02B codes for microwave heating. Note that any transmission and reception of radio signals is regarded as communication, so that applications such as radar, transponder systems, telemetry and remote control are **not** assigned W02-B10.

Applicator, diathermy, emitter, ISM, microwave heating, process chamber, rectenna, rectifying antenna, RF heating, surgery

#### W02-B12 [2005]

Antenna or antenna systems using existing structure or living body as radiator or radiation enhancer

# W02-B12A [2005]

# Using existing metallic structure or conductor system

This code covers the use of conductors whose primary function is not that of an aerial, e.g. use of power conductors, or a resonant slot antenna formed in the roof of a vehicle (W02-B02C, W02-B08F1, W02-B12A and X22-X02A1).

# W02-B12C [2005]

# Using living body, or part of body

This code includes arrangements for improving radiation in a hand-held transceiver such as a mobile phone (W01-C01D3C also assigned) by arranging for the user's body to serve as a ground plane, or similar, in conjunction with a monopole antenna.

#### W02-C

# Transmission systems (general)

#### W02-C01

#### Line systems

Note: telephone systems are covered by W01-C and are coded in W02-C01 also only for common features e.g. equalising, echo suppression, and 'classical' transmission line measurements.

# W02-C01A

#### Using power lines or wave guides

# W02-C01A1 [1992]

### **Using waveguides**

Waveguides per se are in W02-A

# W02-C01A3 [1992]

# Using power line

See also under application e.g. W05-D06P for remote control aspects, X12-H03 for power line carrier systems and W01-A06C6 for data communication network aspects.

Intercom, local area network, remote measurement, PLCC

#### W02-C01A9 [1992]

#### Other power line or waveguide systems

#### W02-C01B

#### Transmission control; Equalising

Transmit-receive switching, level control, amplitudefrequency compensation, phase frequency compensation, modem, passive network, transversal filter, switched capacitor filter

# W02-C01B1 [1992]

#### **Transmission control**

Includes setting of transmission level, i.e. power control, and control of transmission direction. Systems aspects of power control in radio communication are covered by W02-C03E3.

W02-C01B2 [1992]

**Equalising** 

W02-C01B2A [1992]

**Equalising system** 

W02-C01B2B [1992]

# Apparatus, i.e. equaliser per se

See U22-G03E3C for digital signal processing aspects of equalising.

W02-C01B2C [1992]

**Training** 

Training signal transmission

W02-C01B9 [1992]

Other transmission control or equalising

W02-C01C

#### Reducing echo, cross-talk or interference

Double-talk detector, replica signal generator, decoupling

W02-C01C1 [1992]

**Echo, singing reduction** 

W02-C01C1A [1992]

**Using filters** 

W02-C01C1B [1992]

**Echo canceller** 

This code takes precedence over W02-C01C1A for arrangements using filters in an echo-canceller using a replica of the original signal.

W02-C01C1X [1992]

Other echo reduction aspects

W02-C01C2 [1992]

**Reducing cross-talk** 

See W02-C01C3B for correction of external interference.

W02-C01C2A [1992]

Compensating

W02-C01C2X [1992]

Other cross-talk reduction

W02-C01C3 [1992]

Reducing interference

Shielding

W02-C01C3A [1992]

Caused by currents induced in cable

sheath or armour

W02-C01C3B [1992]

Caused by unbalanced current in normally balanced line

Crosstalk compensation is in W02-C01C2A.

W02-C01C3X [1992]

Other line interference reduction

W02-C01D

**Monitoring; Testing** 

See S01 also for measurement of specific electrical parameters.

W02-C01D1 [1992]

**Fault location** 

W02-C01D3 [1992]

Standby systems and redundancy

networks

W02-C01D3A [1992]

With automatic switching to powered-up backup equipment e.g. hot-standby system

W02-C01D5 [1992]

# Measurement of transmission line parameters

Used when emphasis is on actual line parameters. (For telephone subscriber loop testing see W01-C02A5). Includes RLGC values etc.

Attenuation, phase shift, characteristic impedance, return loss, noise/signal-to-noise ratio measurement, frequency response

W02-C01D9 [1992]

Other line measurement

# W02-C01E [1992]

# Repeater circuits

(W02-C01X)

Radio repeaters are coded in W02-G05C.

Regenerator

# W02-C01E1 [1992]

# **Power supply details**

(W01-C01X)

Includes remote power feeding arrangements. Remote power feed

W02-C01E5

[1992]

# **Amplifier details**

(W01-C01X)

See also U24-G codes.

Line amplifier

#### W02-C01E9 [1992]

#### Other line repeater aspects

(W01-C01X)

# W02-C01F [2005]

# Line hybrids, transformers and impedance matching

V02-F codes are also assigned for novel details of transformers and inductors for communications purposes.

# W02-C01F1 [2005]

#### Line hybrids and transformers

Line hybrids specifically for telephone equipment are covered in W01-C08B, and are not assigned this code.

#### W02-C01F5 [2005]

# Impedance matching

Impedance matching in general is covered by U25-D05 for lumped-constant circuits and by W02-A02C for distributed-constant circuits.

#### W02-C01X

# Other line communication aspects

#### W02-C02

#### **Near-field systems**

Includes transmission over deliberately restricted area using predominately magnetic or electric fields, but not conventional radio systems of very low power. W02-C02A or W02-C02B are assigned to indicate system type and W02-C02G codes are assigned to indicate application. Near-field data interfaces are covered from 2010 by W01-A07H2N with W02-C02 codes only assigned for novel near-field aspects.

NFC

#### W02-C02A [1992]

Radiating/leaky cable

W02-C02B [1992]

**Inductive loop systems** 

W02-C02G [1992]

### **Application**

Used in conjunction with W02-C02A or W02-C02B.

# W02-C02G1 [1992]

In tunnel or mine

## W02-C02G3 [1992]

# Entertainment, educational, and hearing aid systems

From 2002 the title of this code is expanded to recognise the use of W02-C02G3A for general applications of near-field systems to hearing aids. *Auditorium* 

# W02-C02G3A [1992]

#### For operation with hearing aids

See also W04-Y, especially W04-Y03C5.

Across-counter communication aid, hearing-aid loop system

# W02-C02G5 [1992]

# For (selective) calling system

Also assigned W05-A05C codes, but note that conventional radio-based paging is **not** included here (see W02-C03 codes with W05-A05C codes).

#### W02-C02G7 [1997]

#### For smart card data transfer

(W02-C02G9)

See T04-K02 also and T05-H02C5C (card-freed services) as appropriate.

### W02-C02G9 [1992]

#### Other near field system applications

## W02-C02X [1992]

## Other near field systems

#### W02-C03

## **Radio systems**

Prior to 1992 codes in this section were chiefly used to denote 'systems' aspects of radio communication. From 1992, all aspects of radio communications (within the scope of W02) have been coded here, including apparatus which is also assigned W02-G codes.

From 2002, inventions relating to pure **applications** of radio communications in the field of alarm signalling and remote control or remote monitoring, are **not** assigned W02-C03 codes. For these applications the relevant 'transmission medium' codes from class W05 should be used in searching (e.g. W05-B05 or W05-D06 codes). Inventions in these fields for which there **is** some novelty in the radio communications sense will continue to be assigned W02-C03 and W02-G codes as appropriate.

#### W02-C03A

### **Diversity systems**

Diversity aspects of data transmission are covered by W01-A01A, and also assigned W02-C03A codes for significant radio aspects. Radio receiver circuits to counter multipath effects are coded in W02-G03B6 codes also, e.g. W02-G03B6A for rake receiver configurations (from 2002). From 2006 hybrid diversity schemes, (e.g. MIMO and the like), are covered by W02-C03A5.

In general in the following codes, those denoted 'System' relate to a diversity radio system operating method, possibly involving signalling and control aspects in a general sense, or the application of diversity at a network level, **without any novel apparatus being involved.** Codes entitled 'Apparatus' relate to novel circuitry, methods, or software at the **equipment level**, whether involving antennas, receivers or transmitters or some combination of these.

Antenna combiner/switching circuit, phase shifter, phase stripping circuit, fading/noise/interference detector, linked AGC system, dual-antenna mobile installation

W02-C03A1 [1992]

**Space diversity** 

W02-C03A1A [1992]

Space diversity system

W02-C03A1B [1992]

Space diversity apparatus

W02-C03A2 [1992]

**Time diversity** 

W02-C03A2A [1992]

Time diversity system

W02-C03A2B [1992]

#### Time diversity apparatus

Rake receivers are covered by W02-G03B6A, with codes assigned to highlight spread spectrum aspects as necessary, e.g. W02-K05A7 for CDMA.

W02-C03A3 [1992]

Frequency diversity

W02-C03A3A [1992]

Frequency diversity system

W02-C03A3B [1992]

Frequency diversity apparatus

W02-C03A4 [1992]

## Polarisation, direction diversity

Includes directional diversity aspects of BDMA and SDMA, which are covered by W02-K10 (from 2017) with antenna control details assigned W02-B06C.

W02-C03A4A [1992]

Polarisation or directional diversity system

W02-C03A4B [1992]

Polarisation or directional diversity apparatus

W02-C03A5 [2006]

#### **Hybrid diversity schemes**

Includes combined space and frequency diversity and systems, e.g. of MIMO and similar type, making use of propagation effects such as multipath to improve reliability, channel capacity, and the like. Rake receivers are covered by W02-G03B6A.

V-Blast, Alamouti, MIMO, precoding, vector

## W02-C03A5A [2017]

## Massive or large-scale MIMO systems

Covers use of a large number of antennas in a MIMO diversity scheme. For relevance to 5G cellular communications search with W02-C03C1L. Automatic antenna direction control is covered by W02-B06C and BDMA/SDMA systems (from 2017) by W02-K10.

Access point, AP, Argos, base station, beam forming, beam tracking, eNodeB, full-dimension MIMO, hyper MIMO, large-scale antenna systems, millimeter wave, mmWave, MU-MIMO, pilot, very large MIMO

#### W02-C03A5P [2017]

### Precoding aspects of hybrid diversity

This code covers precoding in the sense of equalization. (Equalization in general is covered by W02-C03E1 codes). Coding for error correction and detection is covered by W01-A01 codes.

Channel state information, codebook, CSI, linear, matrix, nonlinear, vector

#### W02-C03A5S [2017]

## Algorithms and software aspects of hybrid diversity

Covers algorithms and software aspects of hybrid diversity systems, especially of MIMO type. T01-S codes are also assigned as necessary.

#### W02-C03A9 [1992]

## Other radio diversity schemes

## W02-C03B

#### **Relay systems**

Covers terrestrial and satellite systems. Satellite TV transmission is covered by W02-F06A, and **not** coded here except for novel 'radio relay' aspects. Repeaters per se are covered by W02-G05C.

Frequency translation, on-frequency system, passive reflector, TDMA satellite communication

### W02-C03B1 [1992]

## Artificial satellite and airborne radio relay system

Covers use of satellites and 'atmospheric' relay systems using aircraft, balloons and the like for which W02-C03B1F is assigned in conjunction with other codes as appropriate for system and apparatus details. Satellite and airborne relay telephone systems are regarded as cellular types and thus W02-C03C1 codes are assigned in addition to W02-C03B1 codes.

#### W02-C03B1A [1992]

## Artificial satellite and airborne radio relay system/operating method

#### W02-C03B1B [1992]

## Satellite and airborne radio relay station details

Covers novel details, including constructional details when linked to the radio function, of satellites and also aircraft, balloons etc., for which W02-C03B1F is also assigned. The following codes may also be required: W02-B codes (especially W02-B08F5 and W02-B08F7) for antenna system details; W02-G codes (especially W02-G05C) for radio equipment; W06-B codes for details of airborne or space vehicles.

## W02-C03B1C [1992]

#### **Ground station**

Search with W02-G02A codes for mobile or portable terminal aspects.

Earth station, very small aperture terminal, VSAT, SAT

## W02-C03B1D [1992]

#### **Multiple access**

Search with W02-K codes to define access method. e.g. W02-K01A for FDMA, W02-K02D for TDMA, W02-K05 codes for spread-spectrum multiple access.

Time division, TDMA, frequency division

## W02-C03B1F [2005]

#### Airborne relay

This code is used with other W02-C03B1 codes as appropriate to highlight the use of an atmospheric radio relay system, i.e. one using balloons, highaltitude aircraft, etc.

## W02-C03B2 [1992]

## Terrestrial relay system

(H04B-007/14-195)

#### W02-C03B2A [1992]

## Terrestrial radio relay system/operating method

## W02-C03B2B [1992]

### Terrestrial radio relay apparatus

This code covers all radio-related aspects of repeaters used in terrestrial radio relay systems. Other codes are also assigned as appropriate, e.g. W02-B codes for repeater antennas, or W02-G05C plus other W02-G codes for actual novelty in radio circuitry. Equipment for extending the range or providing 'fill-in' coverage in a mobile phone system is also assigned W02-C03C1B (i.e. it is coded as a base station). Repeaters for extending coverage in a radio broadcast system are also assigned W02-D05 codes, e.g. W02-D05C1 for DAB and W02-F09 is also assigned for terrestrial TV relay stations.

Repeater

#### W02-C03C [1987]

## Mobile radio, including cellular systems

(W02-C03X)

For mobile radio telephone system use with W01-B05A codes. For mobile telephones per se, (including 'non-RF' details not assigned W02-C03C codes), see W01-C01D codes. From 1997, all mobile **telephone** and system-related details have been regarded as cellular, unless specifically indicated as being otherwise, such as 'call-point' or other cordless types, which are covered by W02-C03C3 codes. Prior to 1997, W02-C03C3 codes were used as a 'general' or 'unspecified' area for mobile telephones not clearly of cellular type.

## W02-C03C1 [1987]

### Cellular

(W02-C03X)

Application to telephone systems is indicated by assignment of W01-B05A1A for systems (with W02-C03C1A) or base stations (with W02-C03C1B), and by W01-C01D3 codes for subscriber telephones themselves (with W02-C03C1C). Analogous cellular aspects for inventions with emphasis on wireless data networks are also assigned W02-C03C1 codes with W01-A06C4 codes and other W01-A06 codes as appropriate. From 2012 W01-E codes have been introduced to cover aspects of wireless systems, normally operating on a cellular model, that may be equally applicable to data networks and mobile phone networks These codes cover topics such as roaming and registration, (previously indicated by assignment of W01-B05A1R and W01-B05A1N respectively in the case of mobile phone networks), and should be included in searches to provide more detail on specific cellular radio topics. Since 2002, non-TDMA access schemes, or systems not using that multiple access scheme alone, have been assigned W02-C03C1G, with other W02-C03C1 codes as appropriate. To discriminate these aspects, when the novelty lies in the multiple access technique used, W02-K codes are assigned as well. Thus for CDMA and W-CDMA W02-K05A7 is

assigned (e.g. for UMTS), and for use of OFDM (e.g. as the access scheme for '4G' telephones), W02-K07C is used. Does not include 'call-point' cordless telephone systems, which are covered by W02-C03C3 codes. Satellite telephone systems are regarded as cellular types and thus W02-C03C1 codes are assigned in addition to W02-C03B1 codes.

CA, carrier aggregation, cell, frequency re-use, radiotelephone, zone

## W02-C03C1A [1992]

## Cellular radio system/operating/method

This code is normally assigned along with W01-B05A1A to indicate layout or design of a cellular telephone system, the arrangement of cells and base stations, or novel methods of operating the network involving call set-up procedures, signalling, paging, and the like. This code is also applied for all communication between the network node and the user equipment. For example, beam management procedures such as beam sweeping, beam reporting, and beam failure recovery are covered here along with W02-C03C1L. Also includes control and shared data channels for 4G and 5G networks. Appropriate codes for 3G, 4G and 5G are also assigned to highlight the type of system.

Synchronization Signals, P-SS, S-SS, RACH, PDSCH, PDCCH, PUSCH, PUCCH, Beam Sweeping, Beam reporting, Beam failure recovery, Beam scheduling

[1992]

## W02-C03C1B

**Base station apparatus** 

## W02-C03C1C [1992]

### Mobile apparatus

General and non-RF aspects of cellular telephones (which are not assigned W02-C03C1 codes) are covered by W01-C01 codes only, especially W01-C01D3 codes.

Mobile radiotelephone

#### W02-C03C1D [1992]

#### Cellular radio hand-off

Received signal strength indicators (RSSI) and signal quality measurements in radio receivers in general are covered by W02-G03J codes, which are also assigned for hand-off aspects as appropriate. Soft hand-off in CDMA systems is indicated by additional assignment of W02-K05A7, and since 2002, by W02-C03C1G. Hand-off for non-cellular mobile radio is covered by W02-C03C3D. From 2012 W01-E01 codes are also assigned for mobility-related aspects of wireless data networks and mobile phone networks such as roaming and registration, e.g. W01-E01C5 for transfer of registration information.

Hand-over, reselect, transfer

#### W02-C03C1E

#### [1992]

## Mobile location determination by the network

This code is intended for the determination of location for the purpose of operating the mobile radio system, and does not cover the provision of position information by a navigation receiver built into a mobile station for the benefit of the user only. It does not cover the provision of position information as a 'subscriber service' (e.g. using an unrelated system such as GPS), except when cellular system location register information is employed, in which case W02-C03C1J ('Cellular radio applications') is also assigned. From 2012 W01-E01 codes are also assigned for mobilityrelated aspects of cellular wireless data networks and mobile phone networks, such as location register details in W01-E01C1 (see W01-B05A1Q prior to 2012). For mobile location determination in non-cellular systems see W02-C03C3F.

#### W02-C03C1F

## [2017]

#### Distributed antenna system

This code covers systems in which multiple remote units are used as access points or base stations in a cellular or similar system, usually to provide coverage in localized areas not well-served by normal wireless infrastructure, such as within buildings, tunnels, or other areas underground. Use of optical fiber links such as 'radio-over-fiber' between a hub and remote units is indicated by coassignment of W02-C04B1R.

Active, BDA, bidirectional amplifier, DAS, head end, hub, hybrid, passive, radio access unit, RAU, radio interface unit, RIU, radio-over-fiber

## W02-C03C1G

## [2002]

# Radio system or apparatus details of third generation or analogous mobile phone system

From 2012 the title of this code has been changed to clarify the way it is used. W02-C03C1G is assigned with any other cellular (W02-C03C1) code as appropriate, for inventions involving the use of non-TDMA multi-access techniques, especially CDMA. For example, novel aspects of a 3G mobile phone system are represented by W02-C03C1A and W02-C03C1G, a novel 3G base station by W02-C03C1B and W02-C03C1G, and a novel 3G mobile station by W02-C03C1C and W02-C03C1G. Novel details of the spread spectrum aspect are also assigned W02-K05 codes, e.g. W02-K05A7, as appropriate. Systems based on other multiple access schemes are also covered here with access codes assigned as appropriate, but please note that from 2014 'Fourth generation' mobile phone systems (i.e. '4G' systems) are covered by W02-C03C1H.

3G, 3GPP

## W02-C03C1H [2014]

# Radio system or apparatus details of fourth generation or analogous mobile phone system

This code is assigned with any other cellular (W02-C03C1) code as appropriate, for inventions concerned with 'Fourth generation' (i.e. '4G') mobile phone systems. For example, novel radio-based aspects of a 4G mobile phone system are represented by W02-C03C1A and W02-C03C1H, a novel 4G base station by W02-C03C1B and W02-C03C1H, and a novel 4G mobile station by W02-C03C1C and W02-C03C1H. Novel details of the multiple access aspect are also assigned W02-K codes as appropriate, e.g. W02-K07C for OFDM. Long term evolution, LTE, WiMax

### W02-C03C1J [2002]

## **Cellular radio applications**

This code is generally used without other W02-C03C1 codes, and is intended for inventions making use of the cellular system, while not involving novel cellular aspects. It is used only when the particular application cannot be coded elsewhere, and for cases specific to e.g. alarms and remote monitoring, relevant W05-B or W05-D codes are used instead.

#### W02-C03C1K [2017]

#### Hierarchical cellular network aspects

Covers systems and details of cellular networks organized on a hierarchical basis, e.g. with conventional large cells and smaller cells. Includes the use of local millimeter wave access points to separately deliver high rate data streams, e.g. as proposed for 5G for which W02-C03C1L is also assigned. Distributed antenna systems are covered by W02-C03C1F and are not assigned W02-C03C1K unless specific relevance to hierarchical cellular systems is involved. Hand-off between cells operating at different levels is also assigned W02-C03C1D.

Femtocell, macrocell, microcell, millimeter wave cell, mmWave cell, picocell, small cell

#### W02-C03C1L [2016]

# Radio system or apparatus details of fifth generation or analogous mobile phone system

This code is assigned with any other cellular (W02-C03C1) code as appropriate, for inventions concerned with 'Fifth generation' (i.e. '5G') mobile phone systems. For example, novel radio-based aspects of a 5G mobile phone system are represented by W02-C03C1A and W02-C03C1L, a novel 5G base station by W02-C03C1B and W02-C03C1L, and a novel 5G mobile station by W02-C03C1C and W02-C03C1L. Novel details of the

multiple access aspect are also assigned W02-K codes as appropriate, e.g. W02-K10 (from 2017) for RDMA.

BDMA, beam-division multiple access, SDMA, space-division multiple access, spatial-division

#### W02-C03C1M [2022]

## Radio system or apparatus details of sixthgeneration (6G) or analogous mobile phone system

This code is assigned as a tag with other codes as appropriate for inventions relating to sixthgeneration (6G) communications technology.

#### W02-C03C3 [1992]

#### Private mobile radio, MCA

Prior to 1997, W02-C03C3 codes were used (with W01-B05A or W01-C01D codes as appropriate) to indicate radio telephone systems which were not clearly cellular in nature. From 1997, all radio telephones are regarded as cellular (and thus assigned W02-C03C1 codes for RF aspects) unless recognisable as non-cellular type, such as 'callpoint', or other cordless telephone system.

Multi-channel access, push-to-talk (PTT) system, CT2, CT3, DECT, PHS

#### W02-C03C3A [1992]

## Private mobile radio system/operating method

W02-C03C3B [1992]

**Base station details** 

W02-C03C3C [1992]

Mobile station details

## W02-C03C3D [1997]

## Mobile radio hand-off

Covers arrangements to transfer communication with mobile unit to another base station. Such arrangements for cellular mobile radio are covered by W02-C03C1D. Allocation of channels in trunked radio communication is covered by W02-C03C3G, and only coded in W02-C03C3D also if inter-base station transfer is involved.

#### W02-C03C3E [1992]

## Characterised by mobile radio access method

Search with W02-K codes to define access method, e.g. W02-K01 codes for FDMA, W02-K02 codes for TDMA, W02-K05 codes for spread spectrum multiple access. Prior to 1997, W02-C03C3E was used to represent general aspects of trunked radio systems (now covered by W02-C03C3G) but will

now only be used as well for specific access-related inventions in this category.

## W02-C03C3F [1997]

#### **Mobile location determination**

Includes use of existing navigation systems, such as GPS, (for which W06-A03A5 codes are also assigned), in conjunction with the mobile radio system. For mobile location determination in cellular systems, see W02-C03C1E.

## W02-C03C3G [1997]

#### Trunked radio system

Prior to 1997, this aspect was chiefly indicated by W02-C03C3E. See W02-C03B2 codes also for land-based radio relay systems.

## W02-C03C3H [2002]

#### **Direct mode**

This code is intended for mobile radio communication conducted directly between mobile stations, rather than via a base station, although the base station may be involved in setting up the link. When applicable to trunked radio systems W02-C03C3G is also assigned.

## W02-C03D [1992]

## Point-to-point radio link

(W02-C03X)

### W02-C03D1 [1992]

## Point-to-point radio link system/operation method

(W02-C03X)

## W02-C03D2 [1992]

## Point-to-point radio link apparatus

(W02-C03X)

## W02-C03D5 [1997]

## Characterised by access method

Search with W02-K codes to define access method. e.g. W02-K01 codes for FDMA, W02-K02 codes for TDMA, W02-K05 codes for spread-spectrum multiple access.

#### W02-C03E [1992]

#### General circuit details

(W02-C03X)

## W02-C03E1 [1992]

#### Radio system equalising

(W02-C03X)

W02-C03E1A [1992]

Radio system equalising method

(W02-C03X)

W02-C03E1B [1992]

Radio system equalising apparatus

(W02-C03X)

See U22-G03E3C for digital signal processing aspects of equalising.

W02-C03E2 [1992]

Radio system echo cancelling

(W02-C03X)

W02-C03E2A [1992]

Radio system echo cancelling method

(W02-C03X)

W02-C03E2B [1992]

Radio system echo cancelling apparatus

(W02-C03X)

W02-C03E3 [1992]

**Power control** 

(W02-C03X)

W02-C03E3A [2002]

Novel algorithms for power control

Includes software aspects of power control for which T01-S codes should also be searched.

W02-C03E3B [2024]

**Terminal power control** 

Includes power saving at the user equipment side e.g by means of discontinuous reception (DRX).

W02-C03E3C [2024]

System power control

Includes 'systems' aspects of power control e.g. based on signal transmitted from base station to mobile unit. Transmitter power control circuits per se are covered by W02-G01C codes.

W02-C03E4 [1997]

Doppler shift compensation

(W02-C03E9)

Covers methods and equipment, such as receiver circuitry, for compensation of Doppler effects in e.g. mobile radio, communication with space vehicle, etc.

W02-C03E5 [1997]

Simulation systems for radio communication

(W02-C03E9, W02-C05A)

Includes modelling and planning of radio links. See also T01-J15A codes for CAD aspects, e.g. T01-J15A4, and W02-C05A for system testing aspects.

Search with W02-H01J1 for radio communication simulation during network design to minimise interference.

Path loss, attenuation, rain, fade, margin, signal-tonoise ratio, target

W02-C03E7 [2006-2009]

Resource allocation\*

\*This code Is discontinued from 2010 and the subject matter transferred to W02-C03G1. It included channel allocation and similar aspects of radio communication management. When interference avoidance is the aim W02-H01J5 is also assigned.

W02-C03E9 [1992]

Other general radio circuit details

(W02-C03X)

W02-C03G [2010]

Carrier aggregation, dual connectivity and cognitive radio

W02-C03G1 [2010]

Carrier aggregation and dual connectivity

From 2021, this code has sub-codes which cover carrier aggregation and dual connectivity in 4G and 5G networks.

W02-C03G1A\* [2021-2022]

**General resource allocation** 

\*This code is now discontinued and transferred to W02-C03R from 2023. It is still searchable and valid for records from 2021 and 2022.

W02-C03G1C [2021]

**Carrier Aggregation** 

Includes carrier aggregation for 4G and 5G systems for which W02-C03C1H or W02-C03C1L are also assigned.

CA, Supplementary uplink, Bandwidth Parts (BWP)

W02-C03G1E [2021]

**Dual Connectivity** 

Appropriate codes for 4G and 5G i.e. W02-C03C1H and W02-C03C1L are also assigned to highlight the type of system.

DC

## W02-C03G5 [2010]

### **Cognitive radio systems**

This code covers cognitive radio systems, i.e. those making use of locally-unoccupied frequency allocations. Prior to 2010 this topic was chiefly covered by W01-A06F1A when wireless data networks were involved, which will continue to be assigned for channel occupancy sensing aspects. Channel occupancy, Mitola radio, opportunistic network, primary user, white space

#### W02-C03H [2021]

#### Unlicensed radio network

This code is used to denote radio systems which use available unlicensed frequency bands such as 2.4GHz or 5-6GHz for communication.

LTE-U. NR-U

## W02-C03R [2023]

### Resource/Traffic Management

This code covers more precise details of resource allocation and prior 2023 the same is covered under W02-C03G1A. This is a broad level code and general resource allocation are covered under W02-C03R1.

W02-C03R1 [2023]

General resource allocation

W02-C03R1A [2023]

Allocation in time domain

W02-C03R1B [2023]

Allocation in frequency domain

W02-C03R1C [2023]

Allocation in variable band

W02-C03R1D [2023]

Semi-persistent scheduling (SPS)

W02-C03R1E [2023]

**Grant-free scheduling** 

W02-C03R1F [2023]

#### **Uplink management**

This code is used along with other W02-C03R codes to tell that resource allocation is for uplink management.

#### W02-C03R1G [2023]

#### **Downlink management**

This code is used along with other W02-C03R codes to tell that resource allocation is for downlink management.

W02-C03R2 [2023]

Selection of wireless resources by user or terminal

W02-C03R3 [2023]

#### **Traffic Management**

Traffic/load control for data networks area covered under W01-A06A3.

W02-C03R4 [2023]

Resource management for control channels and signalling

W02-C03R5 [2023]

Resource management for broadcast services

W02-C03R6 [2023]

Resource management for direct mode communication

#### W02-C03X

#### Other radio systems

Ionospheric/tropospheric scatter communication

## W02-C04

#### Light and infra-red systems

Covers free-space and optical fiber communication systems, but note that optical fibers and purely optical components per se are in V07. Electro-optical sources and detectors, and circuitry directly connected to them, are assigned codes in U12 also.

The following subject matter is not coded in W02-C04 unless of general application also, or unless specific novel details represented by W02-C04 codes are involved: General digital optical communication (W01-A07E), Optical fiber data network (W01-A06C1), TV optical remote control (W03-A02C), General optical remote control (W05-D06A3 or W05-D06C with W05-D08C), Optical 'radar' systems (W06-A06).

W02-C04A [1992]

Characterised by apparatus

W02-C04A1 [1992]

Transmitter circuits and apparatus

W02-C04A1A [1992]

#### Modulator

See also V07-K codes for optical modulators in general and V08 codes for laser source modulators.

W: Communications

W02-C04A1B [1992]

#### Amplifier, output stage

Includes source driving circuits.

W02-C04A1C [1992]

**Power control** 

W02-C04A1D [1992]

#### Source

Semiconductor lasers are also assigned U12-A01B codes and V08-A04A codes.

W02-C04A1X [1992]

Other optical transmitter details

W02-C04A3 [1992]

Receiver circuits and apparatus

W02-C04A3A [1992]

**Demodulator** 

W02-C04A3B [1992]

## Amplifier, input stage

Includes circuit for photodiode and the like, also assigned U12-A02B4.

W02-C04A3C [1992]

**AGC** 

See U24-C01 codes also.

W02-C04A3D [1992]

**Optical detector** 

See U12 for photodiode details.

W02-C04A3X [1992]

Other optical receiver details

W02-C04A4 [1997]

#### **Transceiver**

Systems and circuitry specific to transmitters or receivers only are covered by W02-C04A1 or W02-C04A3 codes.

W02-C04A5 [1992]

Repeater circuits

W02-C04A5A [1997]

#### **Optical amplifier arrangements**

Prior to 1997, see W02-C04A1B, W02-C04A5, and W02-C04B1A. Optical amplifiers per se are covered by V07-K01C codes.

## W02-C04A6 [2006]

## Optical multiplexing and switching devices

This code covers novel aspects of optical switches and multiplexers for communications purposes, the core technology area for these topics being covered by V07 codes. Novel switching devices and systems for communications purposes are also assigned W01-B02 or W01-A06G5 codes, and novel multiplexers are covered by W02-C04B4B and W02-K04.

## W02-C04A7 [1992]

## Equalising, noise and distortion eliminating, diversity

From 1997, this code is subdivided to include noise reduction circuits, previously covered by W02-C04C7. See W02-C04B7 for inherently non-dispersive systems, such as transmission using solitons.

#### W02-C04A7A [1997]

#### Equaliser

Prior to 2002, this code was used with W02-C04A7 for dispersion compensation, which is now covered by W02-C04A7J.

#### W02-C04A7C [1997]

#### **Noise reduction circuits**

(W02-C04C7)

#### W02-C04A7E [1997]

#### **Distortion reduction arrangement**

Includes arrangements to reduce effects due to nonlinearities, such as four-wave mixing.

## W02-C04A7G [1997]

## Diversity and polarisation control arrangements

Includes polarisation diversity aspects. Control of polarisation in general (for communications and analogous purpose) is covered by V07-K03 and V07-F02B for gratings, filters and polarizers.

#### W02-C04A7J [2002]

## **Dispersion compensation**

(W02-C04A7, W02-C04A7A)

This code is intended to cover apparatus or methods for the compensation of dispersion arising from e.g. optical fiber characteristics. (Previously covered in W02-C04A7 and W02-C04A7A). V07-K codes are also assigned as appropriate. Optical transmission systems using signals with an inherent resistance to dispersion, e.g. solitons, are covered by W02-C04B7.

## W02-C04A8 [1997]

#### **Optical alignment system**

This code mainly relates to free-space communication apparatus (W02-C02B2 codes also assigned) and covers arrangements to optimise alignment of optical systems at transmitting or receiving stations. W06-A02C codes are also assigned as appropriate for systems detecting angle of incidence of incoming light signals.

## W02-C04A8A [1997]

## **Tracking system**

Covers dynamic arrangements for maintaining alignment. Analogous systems for radio antennas are covered by W02-B06C.

W02-C04A9 [1992]

Other optical communication apparatus

W02-C04B [1992]

## Characterised by system type

W02-C04B codes are assigned to indicate system type, either alone or with W02-C04A codes.

W02-C04B1 [1992]

Fiber optic

W02-C04B1A [1992]

### With coherent light i.e. laser source

Novel laser sources are assigned W02-C04A1D in conjunction with appropriate U12-A01B codes and V08-A codes.

## W02-C04B1R [2017]

### Radio-over-fiber

Covers systems in which radio frequency signals are directly modulated onto an optical carrier wave for transmission from a remote site over optical fibers. For use of this technology in distributed antenna systems for cellular communications search with W02-C03C1F.

DAS, distributed antenna system, remote unit

W02-C04B2 [1992]

Free space

W02-C04B2A [1992]

With coherent light i.e. laser source

W02-C04B3 [1992]

Mobile

W02-C04B4 [1992]

Multiplex optical communication systems

W02-C04B4A [1992]

## With multiplexed baseband

See W02-K codes also.

## W02-C04B4B [1992]

#### With optical multiplexing

Includes WDM, also coded in W01-A03E1 when data transmission aspects are significant. See W02-K04 and V07 codes, e.g. V07-K04, also for novel aspects of optical multiplexing.

W02-C04B7 [1992]

#### **Anti-dispersive**

Includes transmission using solitons.

W02-C04B9 [1992]

Other optical communication system

W02-C04C [1992]

**General details** 

W02-C04C1 [1992]

## Testing of optical communication apparatus/system

See also the appropriate codes in V07-J.

W02-C04C1A [1992]

**Testing of apparatus** 

W02-C04C1C [1992]

**Testing of system** 

W02-C04C7\* [1992-1996]

#### **Noise reduction circuits**

\*This code is now discontinued and the subject matter transferred to W02-C04A7C. W02-C04C7 remains valid and searchable for records prior to 1997.

#### W02-C05

#### **Monitoring; Testing**

See S01 also for measurement of specific electrical parameters. Includes monitoring/testing in general, except for measurements specific to line communication (W02-C01D). Since 1992 testing of optical communications is not included in W02-C05, and has been covered by W02-C04C1 codes.

Test equipment, spectrum analyser, RF power, harmonic radiation, signal-to-noise ratio, noise figure, field strength, propagation loss

W02-C05A [1992]

**Testing of transmission system** 

#### W02-C05B

[1992]

#### **Testing of apparatus**

For equipment test, search together with appropriate code e.g. W02-C05B and W02-G01 codes, for transmitter testing.

#### W02-C06

[1987]

## **PCM** transmission systems (general)

(W02-C09)

See W02-F07 codes for pulse code modulation TV systems, which are **not** included here.

Pulse code modulation, pulse amplitude modulation, voice coding, telephony

#### W02-C06A

[1997]

## **Novel PCM communication systems**

This code is intended for communication systems in general using PCM, for which there is not a more specific code elsewhere.

#### W02-C06C

[1997]

### **Novel coding scheme**

For further details of coding systems, and for coder/decoders per se, see W04-V05G codes. Speech codecs and coding methods specifically for telephone communication are covered by W01-C01C7.

Coding in general is covered by U21-A05 codes, and for video signals, by W02-F07 (prior to 200101) and W04-P01A codes.

## W02-C07

[1987]

## Ultrasonic/sonic systems (including hydrophones)

(W02-C09)

Sonar systems are in W06-A05 as required. For transducers see also V06-B03 and other V06 codes as appropriate.

Underwater communication, diver communication system, passive sonar system, free space sonic/ultrasonic system

## W02-C07A

[1997]

#### Sonic or ultrasonic communication

This code is intended for actual communication systems, i.e. intentional transmission of information from one point to another. Passive arrangements such as hydrophones are covered by W02-C07C.

#### W02-C07C

[1997]

### **Hydrophones**

See V06 codes for actual transducer details, e.g. V06-B03. Sonar transducers are covered in W06-A05C7.

#### W02-C09

#### Other transmission system

Includes communication via other media, e.g. ground.

#### W02-D

#### Sound broadcast distribution systems

Codes in this group relate to the broadcast system as a whole and to studio / transmitter aspects, and are not assigned for receiver details. Broadcast radio receivers are covered by W03-B codes. For radio broadcast studio equipment see also W04-G08.

Broadcast sound studio, sound mixing, outside broadcast equipment

#### W02-D01

[1992]

#### Wired broadcast system

Line, wired system, line amplifier

#### W02-D02

[2011]

## Stereophonic and multiple audio channels sound broadcasting

This code is assigned for digital stereophonic broadcasting when this is a significant aspect, e.g. with W02-D05C codes for digital radio broadcasting. Analog FM and AM stereophonic broadcasting is covered by W02-E codes.

#### W02-D04

[2010]

## **Monitoring; Testing**

(W02-C05; W02-D)

Includes testing equipment and methods for complete sound broadcast systems (including those covered by W02-E codes) or broadcast systems in general. Monitoring of sound broadcast systems for audience research purposes is covered from 2010 by W02-D04B (formerly W02-D08). Note that testing and monitoring of audio recording equipment and (sound) broadcast radio receivers is not included and is covered by W04-J codes and W03-B10A codes respectively. Testing and monitoring of television systems for broadcasting and other purposes and of interactive broadcasting systems is covered by W02-F04 codes.

#### W02-D04A

[2010]

**Testing** 

#### W02-D04A1

[2010]

## Signal testing

Includes checking of signal quality.

Bandwidth, bit rate, coverage, distortion, error, harmonic content, modulation depth, service area, sidebands, spectral regrowth, spurious content, THD

## W02-D04A5 [2010]

#### **Testing of apparatus**

These codes cover the testing of equipment forming part of a sound broadcast system.

Switching centre

## W02-D04A5A [2010]

#### Testing of apparatus in broadcast studio

Testing of audio processing related aspects such as sound mixing is also assigned W04-G codes. Control desk. console. talkback

## W02-D04A5B [2010]

## Testing of apparatus at transmitter or repeater site

W02-G01 or W02-G05 codes are also assigned when radio equipment is involved.

Antenna, cooling, enclosure, generator, power amplifier, power supply, tower

#### W02-D04A5X [2010]

## Other sound broadcast apparatus testing

### W02-D04B [2010]

## Audience research system

(W02-D08)

Analogous systems for TV broadcast audience monitoring are covered by W02-F04B. Systems analyzing listening habits for the purpose of building a profile used to select or suggest content in interactive broadcasting are not included and are covered by W02-F10Q codes.

Tuned frequency, selected channel monitoring system, listener data acquisition

## W02-D04C [2010]

### Station output monitoring

(W02-C05; W02-D)

Covers arrangements to enable verification of scheduled transmission. Analogous systems for TV station output monitoring are covered by W02-F04C.

FCC, monitor, log

## W02-D04C1 [2010]

#### Monitoring programme output

(W02-C05; W02-D)

Includes checking adherence to schedule, timing, etc., and monitoring of automatic recorded programme transmission.

## W02-D04C5 [2010]

## Checking transmission of commercial message

(W02-C05; W02-D)

Sponsor, advertisement, commercial break

### W02-D04X [2010]

## Other sound broadcast system monitoring

#### W02-D05 [1992]

#### Radio broadcast system

W02-G codes are also assigned as appropriate for novel equipment, e.g. W02-G01 codes for transmitters and W02-G05 codes for repeaters. Novel antennas for radio broadcasting are also assigned W02-B codes. Broadcast radio **receivers** are not included and are covered by W03-B codes. *Radio network* 

## W02-D05A [1992]

**Satellite** 

## W02-D05C [1997]

#### **Digital broadcast system**

For broadcasting (not necessarily for entertainment purposes) in cellular telephone or data networks see W01-B05A1M and W01-A06E1A respectively.

#### W02-D05C1 [1997]

### **Involving multiplex transmission**

Includes OFDM systems. Prior to 1997, see W02-K01, W02-K09 in addition to W02-D05. From 1997, W02-K07C is assigned in addition to W02-D05C1. *DAB, packet* 

## W02-D05C5 [2002]

#### Internet broadcasting

(T01-H07C5E, W01-A06B7, W02-D, W02-F10E) See T01-N01D1A also. Interactive broadcasting aspects are covered by W02-F10E codes.

## W02-D07 [2011]

## Additional information transmitted with broadcast signals

These codes are assigned to highlight the transmission of additional information with a sound (e.g. radio) broadcast signal. Other codes relating to the additional information itself are also assigned as necessary. The transmission of additional information using analog FM or AM stereophonic broadcasting is covered by W02-E01 codes.

## W02-D07A [2011]

## **Emergency sound broadcasting**

Codes indicating 'disaster-related' alarms in W05-B08 are also assigned as appropriate. Emergency television broadcasting is covered by W02-F05D. Reception of emergency broadcast messages in radio receivers is covered by W03-B08C7 and in TV receivers by W03-A18A5J.

Adverse weather, avalanche, bush fire, earthquake, eruption, flooding, forest fire, hurricane, landslide, landslip, mudslide, terrorist attack, tidal wave, tornado, tsunami, typhoon, volcano

## W02-D07C [2011]

## Traffic and public transport information

T07-G01 is also assigned for systems providing information to drivers designed to warn of, or reduce, traffic congestion.

## W02-D07E [2011]

### Electronic program guide (EPG) systems

Includes details of programming and also 'now playing' information. Broadcast radio receiver aspects are covered by W03-B08C5. Analog broadcast systems providing additional information on program content are covered by W02-E01B1. EPG systems for TV broadcasting are covered by W02-F10E5 and TV set aspects by W03-A13J.

## W02-D07X [2011]

## Other additional information in broadcast

[1997-2009]

## W02-D08\*

## **Audience monitoring**

(W02-C05, W02-D)

\*This code Is discontinued from 2010 and the subject matter transferred to W02-D04B. W02-D08 was used with W02-D01 or W02-D05 codes as appropriate. (Prior to 1997, W02-C05 was used with the relevant W02-D code.) Analogous arrangements for TV audience research are covered by W02-F04B.

#### W02-D09 [2022]

#### Other sound broadcast systems

Includes FM radio transmitters and repeaters (i.e. radio equipment) for which W02-G01 codes and W02-G05C are respectively assigned also. Includes mounting aspects of FM radio transmitting devices.

#### W02-E

#### Analog stereophonic broadcast systems

From 2011 codes in this group are only assigned for inventions specific to analog stereophonic sound broadcasting. Prior to 2011 W02-E codes were assigned for some inventions involving digital stereophonic broadcasting but from 2011 stereophonic broadcasting of digital or unspecified type is covered by W02-D02. TV stereophonic sound transmission is covered by W02-F06B only. See W03-A and W03-B codes for receiver aspects. *AM, FM multiplex systems, pilot tone, modulator, encoder* 

## W02-E01 [1992]

## **Transmitting additional information**

Includes use of additional subcarriers in a multiplexed analog stereophonic signal for providing subsidiary information channels. Transmission of additional information for digital or unspecified sound broadcasting is covered from 2011 by W02-D07 codes.

Subcarrier authorisation, SCA

### W02-E01A [1992]

#### **Carrying separate programme**

Includes 'storecast' background music.

#### W02-E01B [1992]

## Carrying separate information e.g. RDS

See W03-B codes for receiver details - W02-E01B codes are only used for novel aspects of the system as a whole, and the transmitting station per se (usually with W02-G01 codes).

CCIR 634

#### W02-E01B1 [1992]

### Relating to broadcast station

Includes station identification and radio broadcast program guides. Broadcast radio receiver aspects of program guides are covered by W03-B01C. EPG systems for TV broadcasting are covered by W02-F10E5 and TV set aspects by W03-A13J.

Programme identification, PI, alternative frequency,  $\Delta F$ 

## W02-E01B5 [1992]

#### **Unrelated to broadcast station**

Includes road traffic information (e.g. ARI), financial information, and paging signal transmission (with W05-A05C codes).

#### W02-F

### **Television systems**

TV receivers are covered in W03, studio equipment, cameras etc. in W04.

#### W02-F01

#### **Closed circuit**

The definition of 'closed circuit' intended here is that images are transmitted, usually to a single location, for viewing by humans, i.e. camera systems providing a video signal for image analysis only are not included, being covered by e.g. T04-D07 codes. Novel aspects of video cameras are also assigned W04-M01 codes.

## W02-F01A [1992]

## Closed circuit television for surveillance and security

See also W05-B01C5 for automatically-actuated alarm systems.

#### W02-F01A1 [1992]

### **Entry-phone with CCTV**

See also W01-C04A1 for entry-phone.

#### W02-F01A5 [1997]

## Combined with alarm or surveillance system

See also T01 and T04 image analysis codes and W05-B codes, e.g. W05-B01C5 codes for intruder detection, W05-B02 codes for fire detection and monitoring aspects.

## W02-F01A9 [1992]

Other security CCTV systems

W02-F01B [1992]

**Process control** 

## W02-F01C [1992]

#### Component inspection during manufacture

Systems involving pattern recognition only, without a monitor display for an operator, are assigned T04-D codes and **not** covered here.

#### W02-F01D [1992]

## Calibrated system for measuring dimensions

See also S02-A03 codes.

#### W02-F01E [1997]

## Vehicle external-view CCTV system

(W02-F01X)

See also under application, e.g. X22-E09 for land vehicle, W06-B01B1 for aircraft.

### W02-F01F [1992]

## CCTV over non-wire (or fiber) link e.g. radio link

Includes near-field and low-power systems also.

#### W02-F01M [2006]

#### **Medical CCTV systems**

This code covers the use of CCTV systems and equipment with medical apparatus, normally for diagnosis, for which S05 codes are also assigned such as S05-D04B for endoscopes.

#### W02-F01X [1992]

#### Other closed circuit TV systems

#### W02-F02

#### Color

This code is only used for novel systems, e.g. modified PAL, NTSC etc., and relates to analogue color TV systems only.

#### W02-F03

#### Cable and stereoscopic TV systems

## W02-F03A [1987]

#### Cable

W02-F03A codes are assigned for 'system' inventions, including cable hardware. W03-A codes are assigned for receiver details.

Community antenna TV (CATV), masthead amplifier TV

## W02-F03A1 [1992]

## **Coaxial cable network**

See X12-D05 for coaxial cable per se. *Cable installation* 

#### W02-F03A3 [1992]

**Optical fiber network** 

## W02-F03A5 [1992]

Head-end details, control aspects

W: Communications

## W02-F03A7 [1997]

### Microwave distribution system

(W02-F03A9)

Includes 'microwave cable' TV system providing local distribution of signals, usually in GHz frequency range.

Masthead

#### W02-F03A9 [1992]

#### Other cable TV aspects

Includes hardware aspects such as connectors (see V04 codes also), cable installations and fittings (see W01-D codes also) and repeaters (also assigned W02-C01E and W02-C04A5 codes as appropriate)

#### W02-F03B [1987]

#### Stereoscopic

Includes broadcast and industrial systems. Stereoscopic TV receivers are in W03-A12, signal generation is in W04-M09.

Three-dimensional TV

W02-F03B1 [1992]

**Broadcast** 

W02-F03B3 [1992]

Industrial

W02-F03B9 [1992]

#### Other stereoscopic TV

Includes medical applications of stereoscopic TV - see  ${\sf S05}$  codes also.

## W02-F04

## **Monitoring; Testing**

Includes testing equipment and methods for whole system, or any component part in conjunction with that code, and also audience research systems. Note that monitoring and testing of sound broadcast systems and equipment is covered from 2010 by W02-D04 codes, and that video recording equipment monitoring/testing is covered by W04-J codes only.

Switching centre

## W02-F04A [1992]

## Testing

Production line test equipment, vectorscope, test pattern generator

## W02-F04A1 [1992]

### Signal testing

Covers measurements on analog or digital video signals. Measurement and testing of equipment used in video systems is covered by W02-F04A5 codes

Artifact, BER, bit error rate, black level, color saturation, DC offset, differential gain, differential phase, hue, IRE unit, link quality, link testing, perceptual evaluation of video quality, PEVQ, picture quality, PSNR, SNR, SSIM, structural similarity, video quality

W02-F04A5 [1992]

Testing of apparatus

W02-F04A5A [1992]

In TV studio

W02-F04A5B [1992]

#### At transmitter or repeater

See also W02-G01 or W02-G05 codes.

## W02-F04A5C [1992-2009]

## In receiver\*

\*This code is now discontinued and from 2010 all aspects of TV receiver testing, including production line testing and internal self-monitoring are covered by W03-A18A codes. W02-F04A5C was assigned prior to 2010 for these aspects in addition to the W03 codes.

#### W02-F04A5X [1992]

#### Other TV or video apparatus testing

#### W02-F04B [1992]

#### Audience research system

This code covers arrangements for analyzing user opinions and/or determining viewing figures for audience research purposes. When equipment installed at the viewer location is involved W03-A18R is also assigned. Systems analyzing viewing habits for the purpose of building a profile used to select or suggest content in interactive broadcasting are not included and are covered by W02-F10Q codes. Analogous systems for audience research in broadcasting other than TV are covered by W02-D04B.

Selected channel monitoring system, viewing figure data acquisition

## W02-F04C [1997]

### Station output monitoring

(W02-F04X)

Covers arrangements to enable verification of scheduled transmission. Includes analogous arrangements for cable TV and similar distribution systems.

FCC, monitor, log

### W02-F04C1

[1997]

## Monitoring programme output

(W02-F04X)

Includes checking adherence to schedule, timing, etc., and monitoring of automatic recorded programme transmission.

#### W02-F04C5

[1997]

## Checking transmission of commercial message

(W02-F04X)

Sponsor, advertisement, commercial break

#### W02-F04X

[1992]

Other TV system monitoring

W02-F05

Secrecy, subscription, teletext

## W02-F05A

[1987]

#### Secrecy (scrambling), subscription

From 9701, interactive broadcasting, formerly covered in W02-F05A3C, is transferred to W02-F10 codes.

#### W02-F05A1

[1992]

#### Secrecy

(W02-F05A, W02-L)

See W02-F10N1 codes for scrambling and coding aspects of interactive broadcasting, which take precedence over W02-F05A1 codes.

Synchronising signal suppression, black-white inversion

### W02-F05A1A

[1992]

## Video/audio scrambling system, jamming signal insertion

## W02-F05A1B

[1992]

#### Video/audio descrambling system

TV receiver aspects of descrambling are not included, being covered by W03-A16C3A.

#### W02-F05A3

[1992]

#### Subscription

From 1997, two-way aspects of subscription TV are covered in W02-F10 codes, especially W02-F10A.

#### W02-F05A3A\*

[1992-1996]

### **Billing system**

\*This code is now discontinued and from 1997 billing aspects of subscription TV are covered by W02-F10A codes and W02-F10N5. (These codes are assigned even in cases of non-interactive systems). W02-F05A3A is no longer assigned but remains valid for records prior to 1997.

#### W02-F05A3C\*

[1992-1996]

#### Two-way working

\*This code is now discontinued and from 1997 subject matter previously coded here is transferred to W02-F10 codes, under the general heading of interactive broadcasting. W02-F05A3C remains valid and searchable, for two-way subscription TV and analogous arrangements, for records prior to 1997.

#### W02-F05A9

[1992]

## Other TV secrecy and subscription aspects

#### W02-F05B

[1987]

#### Teletext, screen text systems

Teletext TV receiver decoder is in W03-A10 only. Character multiplex, videotext, off-air system, data base access, horizontal/vertical blanking interval data insertion, framing code, multiplex

## W02-F05B1

[1992]

#### Telephone line-based system

(See also W01-C05B1) Includes e.g. CAPTAIN system.

## W02-F05B5

[1992]

## Transmitted as additional information with television signal

Includes teletext and analogous non-VBI systems as used in e.g. DVB, in which case W02-F07M1 is also assigned.

Burst-and-random error correction system for teletext (BEST)

## W02-F05B9

[1992]

#### Other screen text systems

## W02-F05C [1992]

## Other additional (non-picture) information

Includes transmission of information for station ID or VPS, ghost control reference signals, URLs and the like. See W04-E04C5 codes for recording equipment aspects of off-air programming and W03-A04G for TV receiver ghost-cancelling circuitry. Teletext transmission systems for digital and analog TV broadcasting are covered in W02-F05B5.

Video programming system, GCR

## W02-F05D [2011]

## Transmission of emergency TV broadcast messages

Codes indicating 'disaster-related' alarms in W05-B08 are also assigned as appropriate. Emergency sound radio broadcasting is covered by W02-D07A. Reception of emergency broadcast messages in TV receivers is covered by W03-A18A5J.

Adverse weather, avalanche, bush fire, earthquake, eruption, flooding, forest fire, hurricane, landslide, landslip, mudslide, terrorist attack, tidal wave, tornado, tsunami, typhoon, volcano

#### W02-F06 [1987]

## Satellite TV; MAC systems; High definition TV; Stereophonic/bilingual sound

(W02-F09)

Radio relay systems for communications purposes are assigned W02-C03B codes.

## W02-F06A [1992]

#### Satellite TV

Radio relay systems for communication purposes are coded in W02-C03B codes.

Direct broadcast by satellite (DBS)

#### W02-F06B [1992]

## Stereophonic and multichannel sound TV

W02-F06B1 [1992]

#### Involving companding

Includes NICAM system.

W02-F06B3 [2006]

**Surround sound TV** 

#### W02-F06B5 [1992]

## For carrying separate sound channel

Includes e.g. bilingual broadcast. Second audio programme, SAP

#### W02-F06C [1992]

#### **High definition TV transmission systems**

Covers non-compatible and compatible systems such as IDTV, EDTV, HDTV etc.

#### W02-F06C1 [1992]

## Involving time-multiplexed transmission of TV signal components

Includes MAC system and variants.

## W02-F06C3 [1992]

Involving distinct transmission of motion information

## W02-F06C7 [1992]

**Involving sub-sampling** 

## W02-F06C8 [1992]

#### Increased definition

Includes compatible 'side panel' systems modifying e.g. NTSC or PAL (see W02-F02 also) including 'letterbox' format.

## W02-F07\* [1987-2001]

## Bandwidth/bit-rate reduction, PCM systems

(W02-F09)

\*This code is now discontinued from 2002, as are the W02-F07 subdivision codes up to W02-F07K. These discontinued codes are replaced by the single code W02-F07M - 'Digital image transmission'. W04-P01A codes are still assigned as before, and may be used to highlight the type of coding. (Prior to 2002, the W02-F07 codes were used for methods and complete systems for PCM TV).

See T01-J10D for computer-based image coding and compression, and U21-A codes for coding in general. (Bandwidth reduction for facsimile and analogous systems is covered by S06-K07A4D).

Compression, encoding, narrow band TV, block coding, predictive coding, motion detection

## W02-F07A\* [1992-1997]

## **Movement detection system**

\*This code is now discontinued and from 1997 its subject matter is covered by W04-P01A1.

## W02-F07B\* [1992-2001]

#### **Transform coding**

\*This code is now discontinued and from 2002 its subject matter is covered by W04-P01A3 codes.

## W02-F07C\*

[1992-2001]

#### **Predictive coding**

\*This code is now discontinued and from 2002 its subject matter is covered by W04-P01A5 codes.

#### W02-F07C1\*

[1992-2001]

#### Motion detection and compensation

\*This code is now discontinued and from 2002 its subject matter is covered by W04-P01A5 codes. Interframe, difference, differential

#### W02-F07C1A\*

[1997-2001]

#### **Motion detection**

\*This code is now discontinued and from 2002 its subject matter is covered by W04-P01A5A.

#### W02-F07C1C\*

[1997-2001]

### **Motion compensation**

\*This code is now discontinued and from 2002 its subject matter is covered by W04-P01A5C.

### W02-F07D\*

[1992-2001]

## Subsampling

\*This code is now discontinued and from 2002 its subject matter is covered by W04-P01A7.

Multiple sub-Nyquist sampling encoding, MUSE

#### W02-F07E\*

[1997-2001]

### **Hybrid coding**

\*This code is now discontinued and from 2002 its subject matter is covered by W04-P01A4 codes.

#### W02-F07E1\*

[1997-2001]

## Combined transform and predictive coding

(W02-F07B, W02-F07C)

\*This code is now discontinued and from 2002 its subject matter is covered by W04-P01A4 codes, which include MPEG system coding and variants.

## W02-F07E5\*

[1997-2001]

#### Motion detection and compensation

(W02-F07B, W02-F07C1)

\*This code is now discontinued and from 2002 its subject matter is covered by W04-P01A4 codes.

## W02-F07E5A\*

[1997-2001]

#### **Motion detection system**

(W02-F07B, W02-F07C1)

\*This code is now discontinued and from 2002 its subject matter is covered by W04-P01A4A.

#### W02-F07E5C\*

[1997-2001]

### **Motion compensation system**

(W02-F07B, W02-F07C)

\*This code is now discontinued and from 2002 its subject matter is covered by W04-P01A4C.

### W02-F07K\*

[1997-2001]

#### **Coding based on fractals**

\*This code is now discontinued and from 2002 its subject matter is covered by W04-P01A8.

#### W02-F07M

[2002]

#### **Digital image transmission**

This code is intended to cover digital image transmission from a systems viewpoint, novel aspects of image coding are covered by W04-P01A codes.

#### W02-F07M1

[2005]

#### Digital video broadcasting

Includes DVB and similar systems. TV receivers for signals in this format are covered by W03-A11G. Includes non-interactive broadcasting of video via the internet, e.g. by streaming. Interactive broadcasting via the internet in general is covered by W02-F10E3.

#### W02-F07M1A

[2008]

## Mobile digital video broadcasting

This code is intended for transmission of digital TV broadcasts at a deliberately-reduced data rate, e.g. for handheld receivers with reduced processing and display capabilities.

DVB-H

#### W02-F07M5

[2005]

## Digital video for non-broadcasting applications

Includes digital video transmission for conferencing, surveillance, equipment interconnection and the like.

## W02-F08

[1992]

## **Two-way television systems**

(W02-F09)

#### W02-F08A

[1992]

#### TV conference system

(W02-F09)

W01-C05B1 or other W01-C codes are also assigned if telephone communication is involved.

## W02-F08A1

[1992]

#### System

(W02-F09)

W: Communications

W02-F08A3 [1992]

**Apparatus** 

(W02-F09)

W02-F08B [1992]

Video telephone

(W02-F09)

W02-F08B1 [1992]

**System** 

(W02-F09)

Also assigned W01-C05B1 codes.

W02-F08B3 [1992]

**Apparatus** 

(W02-F09)

Subscriber apparatus is also coded in W01-C01G4.

W02-F08X [1992]

Other two-way TV systems

(W02-F09)

Two-way TV systems.

W02-F09

#### Other television systems

Includes TV transmitters and repeaters (i.e. radio equipment) for which W02-G01 codes and W02-G05C are respectively assigned also. Also includes mounting aspects of television transmitting devices.

#### W02-F10 [1997]

#### Interactive broadcast systems

(W02-F05A3C)

Codes in this section cover subject matter chiefly coded, prior to 1997, in W02-F05A3, and include video, audio/video, sound-only, and information systems provided for access by entertainment equipment, usually of 'subscription' type. W02-F10 codes are used to represent 'head-end' and overall systems aspects. See W03-A16C codes for equipment based at a subscriber location.

W02-F10A [1997]

## Video-on-demand, video-on-request and video-based systems

(W02-F05A3C)

Covers systems predominately of a video nature. Systems involving selection of predominately non-video programme material are covered by W02-F10C.

From 2002 the title of this code has been expanded to better reflect its content, and to separate actual video-on-demand systems from those in which some interactive facility is available

without the provision for causing the downstream transmission of a different programme.

The title of this code has been further expanded to allow the inclusion of video-on-request systems, covered from 2006 in W02-F10A1E.

VOD, pay-per-view

W02-F10A1 [2002]

**Video-on-demand system** 

(W02-F05A3C)

W02-F10A1A [2002]

Full video-on-demand system

(W02-F05A3C)

W02-F10A1C [2002]

Near video-on-demand system

(W02-F05A3C) NVOD

W02-F10A1E [2006]

## Video-on-request system

Covers systems in which video programming is delivered for later viewing, e.g. taking advantage of unused network capacity overnight.

#### W02-F10A1G [2007]

## Video-based systems with different-view facility

Covers interactive video-based systems including the facility to select a different viewing angle. Multiple camera systems for generating different views of a scene are covered by W04-M01V.

## W02-F10A5 [2002]

## TV broadcasting with interactive aspects

(W02-F05A3C)

This code is intended for largely standard TV broadcasting or video distribution with limited interactivity, e.g. the facility to respond to questionnaires, cast votes, etc. Systems enabling fuller control over programme content are covered by W02-F10A1 codes.

## W02-F10C [1997]

#### Audio-on-demand system

(W02-F05A3C)

The title of this code was amended in 2005 to reflect its normal use for audio entertainment. Includes remote access of entertainment library system, e.g. of 'pay-per-play' type.

W02-F10A codes take precedence for interactive systems in which audio is transmitted as a normal accompaniment to video signals in interactive TV.

## W02-F10E [1997]

## For access to information system, programme guide systems, and internet

Database systems in general are covered by T01-J05B codes.

In 2002 the title of this code was expanded to reflect its use for internet aspects including WWW access provided as part of an interactive broadcast system and internet broadcasting itself of an interactive nature, and also programme guide systems. For internet aspects see T01-N codes also.

## W02-F10E1 [2002]

#### For access to internet

(T01-H07C5E, W01-A06B7, W02-F10E)

This code is intended for internet access provided as a facility of interactive broadcasting.

#### W02-F10E3 [2002]

### Interactive internet broadcasting

(T01-H07C5E, W01-A06B7, W02-F10E)

This code is intended for interactive broadcasting using the internet itself. Non-interactive internet radio is covered by W02-D05C5 and non-interactive transmission of video via the internet is included in W02-F07M1.

#### W02-F10E5 [2002]

#### Programme guide systems

(T01-H07C5E, W01-A06B7, W02-F10E)

TV receiver aspects of interactive programme guides are covered by W03-A16C5E and of programme guides in general by W03-A13J. *EPG* 

#### W02-F10F [2005]

## Archival storage of content primarily submitted by user

Includes storage and retrieval of images accessed by digital camera via a communication link. (Digital camera details are covered by W04-M01B1 codes). Also covers storage of video footage and other information.

## W02-F10G [1997]

## For game playing, virtual reality, or karaoke

(W02-F05A3C, W04-X02C)

Video games in general are covered by W04-X02C. For virtual reality aspects, see also W04-W07E codes. Karaoke systems are also coded in W04-X03A3.

## W02-F10H [2002]

#### For access to multimedia systems

(W02-F10X, W04-K10)

Audio/video aspects of multimedia systems in general are also assigned W04-K10.

### W02-F10J [1997]

#### For access to financial network

(W02-F05A3C)

Includes monetary transaction and interactive shopping, also assigned T01-N01A1 or T01-N01A2 codes as appropriate for applications of computing.

#### W02-F10K [1997]

## Storage systems and servers

(W02-F05A3C, W04-K05)

This code covers file servers and similar arrangements for general storage of programme material, and to enable playback operation simulating e.g. VTR functions, such as rewind, fastforward, etc. Multiple recording unit arrangements are also assigned W04-K05A codes.

## W02-F10N [1997]

#### Security aspects and access control

(W02-F05A1, W02-F05A3C)

#### W02-F10N1 [1997]

## Scrambling, coding and copy marking aspects

(W02-F05A1, W02-F05A3C)

From 2009 the title of this code has been expanded to reflect previous inclusion of copy marking. W02-F10N1 codes take precedence over W02-F05A1 codes which cover secrecy and scrambling for non-interactive video systems. See W02-L05 for audio scrambling systems in general. Data encryption in general is covered by W01-A05A codes.

### W02-F10N1A [2009]

#### Broadcast signal scrambling and coding

Covers scrambling and coding (i.e. encryption, especially of video signals) to prevent unauthorised viewing. Arrangements to prevent or restrict the making of copies are covered by W02-F10N1C. Coding for compression is not included, being covered by W04-P01A codes.

## W02-F10N1C [2009]

## Broadcast signal copy restriction and watermarking

Covers arrangements to prevent or restrict the making of copies. Signal processing involving scrambling and coding (especially of video signals) to prevent unauthorised viewing or listening is covered by W02-F10N1A. Signal processing aspects of copy restriction and watermarking within recording equipment are covered by W04-F01L codes or W04-G01L codes.

Digital rights management, DRM

## W02-F10N3 [1997]

### **Access control**

(W02-F05A1, W02-F05A3C)

Includes use of smart cards to authorise decoding (see W03-A16C3C also for subscriber-end aspects), and control of access from server. See W02-F10N7 also for arrangements temporarily increasing access rights.

## W02-F10N5 [1997]

## **Billing arrangements**

(W02-F05A3A)

Aspects of financial transactions **using** an entertainment network, for purposes unrelated to billing for the service itself, are covered by W02-F10J.

## W02-F10N5A [2005]

## According to user-determined level of commercial message provision

Overriding of systems which prevent the recording of commercial messages is covered in W04-E04C5E.

### W02-F10N7 [1997]

## Temporarily increasing access rights and request transmission

(W02-F05A1, W02-F05A3C)

Covers systems enabling 'impulse' decision to e.g. view programme, and associated communications aspects. See W01-C05B5A also where telephone-based link is involved.

#### W02-F10Q [2005]

# User profiling; Content recommendation; Selective insertion of commercial messages

From 2011 the title of this code has been expanded to allow inclusion of user profiling and 'recommendation' or 'suggester' systems which offer content based on a user's profile. W02-F10Q codes relate to systems and equipment at the 'content distribution end' of the broadcast system

and do not cover self-contained analogous systems wholly based at the viewer or listener end which are part of e.g. a TV receiver and are not supplied by the content provider. Arrangements for analyzing user opinions and/or determining viewing figures for audience research purposes, rather than tailoring content, are covered by W02-F04B (TV broadcasting) and W02-D04B (sound broadcasting).

## W02-F10Q1 [2011]

## **User profiling**

This code covers the building of a user profile e.g. to be used to determine preferences in terms of content.

### W02-F10Q1A [2011]

#### Learning aspects

This code covers novel aspects of monitoring user behaviour in terms of content that has been selected and includes automatic detection of patterns in viewing or listening habits.

## W02-F10Q3 [2011]

#### **Content recommendation**

Covers 'recommendation' or 'suggester' systems for offering content based on the determined profile. Selective insertion of commercial messages is **not** included and is covered by W02-F10Q5.

#### W02-F10Q5 [2011]

## Selective insertion of commercial messages

Covers equipment, methods and systems for selective insertion of commercial messages (CMs) presumed to be of interest based on the user profile or geographical region. Offering of content other than CMs is **not** included and is covered by W02-F10Q3.

#### W02-F10X [1997]

## Other interactive broadcasting aspects

(W02-F05A3C)

#### W02-G

## Radio transmission system details and equipment

Broadcast radio and TV receivers are in W03, sound studio equipment is in W04 and W02-D/E. Codes from the radio systems section (W02-C03) which denote apparatus are also assigned as appropriate.

#### W02-G01

#### **Transmitters**

Includes transmitters (for radio and TV) per se and those forming part of e.g. transceiver, where this aspect is the significant part of the disclosure.

## W02-G01A [1992]

#### Oscillator and frequency conversion

### W02-G01A1 [1992]

#### Oscillator

Includes oscillator circuits per se (see U23-A codes also).

#### W02-G01A3 [1992]

#### Frequency control

Include frequency control aspects such as PLL synthesisers (also assigned U23-D01B codes).

#### W02-G01A5 [1992]

#### Frequency translation

Includes frequency mixing. See U23-J codes for frequency changing and U23-B codes for frequency multiplying.

## W02-G01B [1992]

### Amplifier, output stage

Includes buffer amplifiers, driver stages, and output stages, e.g. power amplifiers.

#### W02-G01C [1992]

## Power control, protection

#### W02-G01C1 [1992]

#### **Power control**

Overall systems aspects of power control are covered by W02-C03E3.

Output/level control

#### W02-G01C5 [1992]

## Power limiting, protection

See S01-D05B5 for systems involving reflected power measurement, and U24-G03C for amplifier protection in general.

VSWR power limiting, thermal

#### W02-G01D [1992]

#### Modulator

See U23 codes for modulator circuits in general. *AM, FM, SSB, DSB, balanced modulator* 

## W02-G01E [1992]

## Tuning, matching, impedance networks

From 2012 the title of this code has been expanded to reflect the existing coverage of any impedance network forming part of transmitter RF amplifier input or output circuitry, such as filters, directional couplers, splitters and combiners. For lumped constant impedance networks U25 codes are also assigned as appropriate and for distributed constant circuits W02-A codes.

#### W02-G01H [1992]

#### **Construction and cooling**

#### W02-G01K [2002]

## **Transmitters with digital architecture**

This code is intended for radio transmitters employing a digital architecture within the signal path, i.e. using DSP. See corresponding codes for transceivers and receivers also (W02-G02K and W02-G03K codes respectively).

### W02-G01X [1992]

## Other radio transmitter aspects

#### W02-G02

#### **Transceivers**

Covers fixed and mobile radio transceivers and also relevant RF aspects of e.g. cordless and cellular telephones where appropriate. (Non-RF aspects of mobile phones are not assigned W02-G02 codes and are covered by W01-C01D codes and other W01-C01 codes as necessary). Details specific to radio transmitters are covered by W02-G01 codes and to radio receivers (of non-broadcast or unspecified type) by W02-G03 codes. For transceivers other than radio type codes relating to the communications medium should be considered, such as W02-C04A4 for optical transceivers.

Radiotelephone, transmitter-receiver, two-way radio

#### W02-G02A [1992]

#### Portable and mobile transceiver

#### W02-G02A1 [1992]

## Personal radio transceiver e.g. hand-held walkie-talkie

## W02-G02A2 [1992]

#### Mobile radio transceiver

Covers transceivers installed in vehicles and generally of a higher power than normal hand-held walkie-talkie units.

W02-G02A3 [1992]

### Selective calling e.g. answer-back pager

See also W05-A05C codes for paging details.

W02-G02A5 [1992]

#### Characterised by operation

See W02-G02C3A for novel transmit-receive switching.

W02-G02A5A [1992]

**Push-to-talk** 

PTT

W02-G02A5B [1992]

### **Duplex**

Includes aspects such as duplexers, for which filter codes are also assigned as appropriate (e.g. W02-A05K7 in the case of distributed constant types).

W02-G02A5C [1997]

### Voice-operated switching

(W02-G02C, W04-V04A1)

Prior to 1997 see W02-G02C. See also W04-V04A1 which covers applications of speech recognition and speech/noise discrimination systems.

VOX

W02-G02A5X [1992]

Other radio transceiver operation

W02-G02A9 [1992]

Other radio transceiver details

W02-G02B [1992]

**Base station** 

W02-G02C [1992]

### Control and interfacing

Includes general processor control, see appropriate T01 code also. From 1997 voice actuated control is coded under W02-G02A5C.

W02-G02C1 [1997]

## Controls per se

See also V01-A03 codes for potentiometers, and U21 or V03 codes respectively for electronic and electromechanical switches.

W02-G02C3 [1997]

**General control circuitry** 

W02-G02C3A [1997]

## **Transmit-receive switching**

Portable and mobile transceiver operating modes are covered by W02-G02A5 codes.

W02-G02C5 [1997]

**Testing, monitoring** 

W02-G02C7 [1997]

#### Interfacing

Includes circuitry such as bus and network interface aspects, and connectors (also assigned V04 codes, especially V04-M30G).

W02-G02C9 [1997]

Other radio transceiver control

W02-G02H [1992]

Construction

W02-G02K [2002]

## Transceivers with digital architecture

This code is intended for radio transceivers employing a digital architecture within the signal path, i.e. using DSP. See corresponding codes for transmitters and receivers also (W02-G01K and W02-G03K codes respectively).

#### W02-G03

#### Receivers

Used for receivers of 'professional' i.e. communications type and for application to receivers in general, or where application not disclosed. Broadcast radios are covered by W03-B codes, and not coded here except when used in conjunction with W02-G03B codes for noise/interference suppression or (from 2005) with W02-G03J codes for RSSI aspects. Since 2002, W02-G03K codes have been assigned for receivers with digital architecture.

#### W02-G03A

#### **Tuners**

The W02-G03A codes chiefly cover superheterodyne receivers, TRF types being assigned W02-G03A9. Since 2002 W02-G03A8 codes have been assigned for direct conversion and low-IF receivers.

Preset, step, continuous, variable capacitor, varicap diode, variable inductor, permeability, ganged, tracking, peaking

## W02-G03A1 [1992]

## Tuned circuits, input filters, and attenuators

Search with appropriate codes in U25 for lumped-constant tuned circuits and filters, and W02-A03 or W02-A05 for distributed-constant elements. The title of this code has been expanded from 2002 to allow the inclusion of attenuators, previously coded as W02-G03A9. See U25-D07 codes for lumped constant attenuators and W02-A04C codes for distributed constant types.

### W02-G03A3 [1992]

### **RF** amplifier

Novel RF amplifier details are also assigned U24-G01D and other relevant amplifier codes. From 2006, RF AGC is covered by W02-G03D3, previously coded as W02-G03A3 and W02-G03D.

#### W02-G03A5 [1992]

#### Mixer

Mixer circuits in general are covered by U23-J codes.

#### W02-G03A5A [2006]

#### Image rejection mixer

For application to low-IF receivers search with W02-G03A8C. Prior to 2006 image rejection mixers were represented (in W02) by W02-G03A5 and W02-G03B4A (receiver image signal suppression in general). From 2006 W02-G03B4A will only be assigned for specific novelty in the image rejection aspect.

## W02-G03A7 [1992]

### **Local oscillator**

Includes frequency translation aspects e.g. multipliers, also assigned U23-B codes.

#### W02-G03A7A [1992]

## Frequency control

Includes frequency synthesisers of general application to radio equipment, if specific purpose not disclosed. See U23-D01B codes for details of PLL implementations, and U23-F01 codes for 'direct' synthesisers. For AFC circuits, search with U25-J05.

#### AFC

## W02-G03A8 [2002]

## **Direct conversion and low IF receivers**

These codes are used, in conjunction with other W02-G03 codes as necessary, to represent receivers of homodyne, synchrodyne, 'zero-IF', or 'low-IF' type. Arrangements for suppression of offsets at the output of the mixer are also assigned W02-G03B4G. Direct digital conversion (DDC) in

digital architecture communications receivers is not included here, being covered by W02-G03K5. Direct conversion TV receivers are covered by W03-A01B6 codes and direct conversion broadcast receivers by W03-B01A6 codes.

#### W02-G03A8A [2002]

#### Zero-IF direct conversion receivers

This code is intended for direct conversion schemes in which the baseband information is centered on zero frequency.

## W02-G03A8C [2002]

#### Low IF receivers

This code is intended for direct conversion schemes in which the baseband information is centered on a low frequency, e.g. of the same order as the baseband bandwidth itself.

## W02-G03A9 [1992]

## Other tuner circuitry, including nonsuperheterodyne tuners

TRF, superregenerative receiver

#### W02-G03B

### Noise/interference suppression

Noise suppression at source is covered by W02-H codes.

## W02-G03B1 [1987]

## Squelch/muting arrangements

Search with W04-V04A1 for arrangements lifting squelch only on detection of valid speech signal. Muting of amplifiers in general is covered by U24-C05C.

Squelch, tone squelch, muting, inter-station, carrieroperated, noise-operated, noise filter, noise amplifier, comparator, squelch gate

## W02-G03B2 [1997]

## Noise reduction by variation of RF/IF passband

(W02-G03B9)

Noise reduction by control of signal bandwidth at baseband is covered by W02-G03B8.

## W02-G03B2A [1997]

## **Based on bandwidth modification**

(W02-G03B9)

Includes use of highpass, lowpass, or other input filter (coded in W02-G03A1 also) and also reduction of IF bandwidth (also coded in W02-G03C1). 'IF-shift' techniques are covered by W02-G03B2C. FM threshold extension is covered by W02-G03B7.

## W02-G03B2C

## Based on change in centre-frequency

[1997]

(W02-G03B9)

Covers arrangements with emphasis on changing centre frequency of passband, rather than changing its width, such as 'IF-shift' techniques (also assigned W02-G03C codes when appropriate).

#### W02-G03B3 [1992]

#### Thermal noise reduction

For RF amplifier noise reduction aspects search with W02-G03A3 also. Amplifier noise reduction in general is covered by U24-G03D1.

Search with V04-T03 codes for arrangements involving cooling of circuitry.

#### W02-G03B3A [1997]

## **Based on circuit configuration**

## W02-G03B3C [1997]

#### **Based on low-noise components**

Covers choice of devices with low noise figure. Search with codes relating to semiconductor devices per se, e.g. U12-D codes for bipolar transistors and FETs, and U14-F02 codes for superconductive elements.

#### W02-G03B4 [1992]

## Reducing internal unwanted signals

### W02-G03B4A [1992]

Reducing image response

#### W02-G03B4C [1992]

## **Reducing spurious signals**

Includes reduction in level of oscillator harmonics in dual-conversion receiver, and avoidance of instability (also assigned U24-G01D and U24-G03L when involving HF amplifiers). Also includes arrangements reducing noise due to e.g. CPU clock oscillator harmonics by spread-spectrum techniques, also assigned W02-H01 and W02-K05A1 codes.

## W02-G03B4E [1992]

## Reducing effects due to device transfer characteristic

Includes effects due to non-linear or non-square law characteristic e.g. cross-modulation, intermodulation. For further details of amplifier or mixer circuit improvements to increase strong-signal handling, search with W02-G03A3 and W02-G03A5 respectively. Such arrangements for high frequency (small-signal) amplifiers in general are assigned U24-G01D and U24-G03D5 codes.

RF amplifier, mixer, overload, blocking, desensitising

## W02-G03B4G [2002]

#### Reducing offset effects

This code relates to the reduction of offsets arising from limitations in receiver performance, especially DC offsets due to e.g. LO leakage in a direct conversion receiver, for which W02-G03A8A is also assigned. Correction of offsets, e.g. by AFC, arising from mistuning are **not** included, and are covered by W02-G03A7A and e.g. U25-J05.

#### W02-G03B5 [1987]

## Impulse noise suppression, noise blanker

Automatic noise limiter, peak limiter, noise silencer, blanking signal generator, wideband noise receiver, pulse stretching

### W02-G03B6 [1992]

## Multipath reception compensation

Prior to 1997 this code included television receiver ghost signal canceller, also assigned W03-A04G. Since 1997 this topic is **not** included in W02-G03B6 unless wider applications are also stated.

## W02-G03B6A [2002]

#### Rake receiver

Search with W02-K05 codes for spread spectrum aspects, especially W02-K05A7 for CDMA. Time diversity radio reception equipment is covered by W02-C03A2B which from 2002 will not be routinely assigned for rake receiver configurations.

Delay, finger

#### W02-G03B7 [1992]

## Threshold extension, frequency compressive feedback

Frequency demodulators are coded in U23-L also. Noise reduction by baseband bandwidth reduction is covered by W02-G03B8, and RF/IF bandwidth reduction in W02-G03B2A.

## W02-G03B8 [1992]

## Noise reduction by demodulated baseband bandwidth control

See also U25-F05A codes. Includes dynamic variation of e.g. audio passband dependent on signal strength. Arrangements involving variation of RF or IF passband are covered by W02-G03B2 codes.

Variable de-emphasis

#### W02-G03B9 [1987]

## Other noise reduction and S/N ratio improving circuits

Includes use of non-linear element such as magnetostatic wave device to improve signal-to-noise ratio (also code in W02-A06E as a distributed constant element, and in V06-V).

#### W02-G03C [1992]

## IF system

(W02-G03X)

From 2006, W02-G03C5 is introduced to separately highlight IF amplifiers, and IF AGC is covered by W02-G03D5 (previously coded as W02-G03C and W02-G03D).

## W02-G03C1 [1997]

#### IF filter

For specific analogue filter types search with codes in e.g. V06-V, U14-G, U25-B, U25-E, or W02-A05 codes. Digital filters are covered in U22-G01 codes. Includes 'IF-shift' techniques (also coded in general in W02-G03B2C).

#### W02-G03C5 [2006]

#### IF amplifier

Novel IF amplifier details are also assigned U24-G01D and other relevant amplifier codes. From 2006, IF AGC is covered by W02-G03D5, previously coded as W02-G03C and W02-G03D.

## W02-G03D [1992]

#### **AGC**

(W02-G03X)

Also assigned U24-C01 codes. Prior to 2006 this code was used with W02-G03A3 for RF AGC and W02-G03C for IF AGC. These topics are now covered solely by the subdivision codes below.

## W02-G03D1 [2006]

#### **Novel AGC characteristic**

Covers delayed AGC, or other specific characteristic. See U24-C01C1 for signal processing aspects to obtain a particular AGC characteristic.

## W02-G03D3 [2006]

#### **RF AGC**

Prior to 2006 this topic was covered by W02-G03A3 and W02-G03D.

#### W02-G03D5 [2006]

#### **IF AGC**

Prior to 2006 this topic was covered by W02-G03C and W02-G03D.

## W02-G03D9 [2006]

## Other communications receiver AGC aspects

#### W02-G03E [1992]

#### Demodulator

(W02-G03X)

See U23 codes for demodulators also.

#### W02-G03F [1992]

## **Audio amplifier**

(W02-G03X)

See U24-G and W03-C codes for audio amplifiers in general.

### W02-G03H [1992]

#### Construction

(W02-G03X)

#### W02-G03J [1997]

#### Received signal strength indicator

(W02-G03E, W02-G03X)

Includes arrangements to display signal strength (e.g. 'S-meter') and also to provide a signal for control of an associated transmitter (see W02-G01C1 also).

Since 2005 W02-G03J codes have also been assigned for RSSI aspects of TV and radio receivers, with W03-A and W03-B codes as appropriate. *RSSI* 

#### W02-G03J1 [1997]

#### Based on signal level per se

(W02-G03E, W02-G03X)

Implies use of signal rectifier to generate level-responsive output. Signal level detection purely as part of a receiver AGC system is covered in W02-G03D, but use of existing AGC voltage or current to provide level indication is included. Signal rectifiers in general are covered by U24-C03 codes.

## W02-G03J1A [2002]

## Application of signal strength measurement

(W02-G03E, W02-G03X)

This code is intended for applications of RSSI measurements which are already available. From 2002 novel RSSI measurement circuits are covered by W02-G03J1C.

## W02-G03J1C [2002]

## Novel signal strength measurement arrangements

(W02-G03E, W02-G03X)

This code is intended for novel arrangements or circuits for RSSI measurement. From 2002 applications of RSSI measurement are covered by W02-G03J1A.

#### W02-G03J3 [2002]

## Compensation arrangements for RSSI and BER measurements

(W02-G03E, W02-G03X)

This codes is intended for arrangements to compensate for the effects of external factors, such as temperature, on signal strength and signal-tonoise ratio measurements in radio receivers.

#### W02-G03J5 [1997]

## Based on signal-to-noise ratio or BER

(W02-G03E, W02-G03X)

Includes arrangements to measure S/N ratio by detection of noise accompanying signal, and measurement of bit error rate, or similar, which is also coded in W01-A01C.

#### W02-G03J5A [2002]

## Application of signal-to-noise ratio or BER measurement

(W02-G03E, W02-G03X)

This code is intended for applications of measurements which are already available. From 2002 novel BER measurement arrangements are covered by W02-G03J5C.

## W02-G03J5C [2002]

## Novel signal-to-noise ratio or BER measurement

(W02-G03E, W02-G03X)

This code is intended for novel arrangements or circuits for BER or signal-to-noise ratio measurement. From 2002 applications of these measurements are covered by W02-G03J5A.

## W02-G03J7 [2021]

### Based on power level per se

Includes arrangements to measure the received power

RSRP, SS RSRP, CSI RSRP

#### W02-G03J7A [2021]

#### Applications of power level measurement

## W02-G03J7C [2021]

**Novel power measurement** 

#### W02-G03K [2002]

### Digital and hybrid receiver architecture

This code is assigned for receivers - of signals with analogue or digital modulation - which are implemented using DSP techniques in whole or in part. The codes are used in conjunction with other W02-G03 codes as necessary where there are direct equivalents in analogue receivers, in particular for RF amplifiers, oscillators, IF stages and demodulators. Corresponding digital techniques for broadcast radio receivers are covered by W03-B07 codes and for TV receivers by W03-A11K codes.

## W02-G03K1 [2002]

#### Characterised by usage of DSP

These codes are used to distinguish between different levels of DSP being applied to the signal path in the receiver. As such, they do not normally represent novel digital processing aspects, which are conveyed by use of other W02-G03K codes. DSP in general is covered by T01-J08A2, T01-J08B and U22-G codes depending on specific aspects.

## W02-G03K1A [2002]

## With baseband digital signal processing only

This code covers receivers with a digital signal processing path **after** the conversion to baseband.

#### W02-G03K1C [2002]

## With baseband and IF digital signal processing only

This code covers receivers with DSP in IF, demodulator, and baseband stages.

#### W02-G03K1E [2002]

#### With digitising of RF spectrum

This code covers receivers with digitising of the whole signal processing path, except for the possible use of analog RF amplifiers.

#### W02-G03K1X [2002]

#### Other use of DSP

## W02-G03K3 [2002]

#### **AD** conversion

Novel aspects of AD converters and AD conversion are covered by U21-A03 codes.

#### W02-G03K5 [2002]

## Digital mixing and direct digital conversion

### W02-G03K6 [2002]

#### **Filtering**

Novel digital filters are also assigned U22-G01 codes and T01-J08B when the emphasis is on computing aspects.

#### W02-G03K7 [2006]

## **Transform implementation**

DSP-based transform implementation is covered by U22-G03E1A and computer data processing aspects in general by T01-J04B1.

Fourier, Hilbert, Walsh

#### W02-G03K8 [2006]

#### **DA** conversion

Novel aspects of DA converters and DA conversion are covered by U21-A02 codes.

#### W02-G03K9 [2002]

Other digital receiver aspects

## W02-G03P [2017]

## Radio receiver power supply and power management

Covers novel details of power supplies and also power management for battery saving and the like in portable equipment.

## W02-G03P1 [2017]

## Radio receiver power supply

Covers novel aspects of power supplies for communications-type radio receivers. Novel details of power supplies are covered in U24, such as U24-D codes for power converters and U24-E codes for voltage regulation.

## W02-G03P5 [2017]

#### Radio receiver power management

Covers power management to reduce drain on the supply, e.g. for battery saving and the like in portable equipment by modifying circuit operation or disabling circuitry when idle. U24-H04 and U24-K are also assigned as necessary for power management techniques and modifying PSU operation.

#### W02-G03X

## Other communications radio receiver aspects

#### W02-G04

#### **Bandwidth reduction; Signal predistortion**

Used for RF and other systems, including e.g. audio compander arrangements for recording and communications. (See U24-C02 codes for companders/amplitude limiters in general).

Speech processing, dynamic range limiter, automatic level control, non-linearity correction, feed-forward

### W02-G04A [1992]

**Bandwidth reduction** 

#### W02-G04A1 [1992]

Time compression or expansion

#### W02-G04A9 [1992]

Other bandwidth reduction

## W02-G04B [1992]

## **Signal predistortion**

See U24-G03B1 also for feedforward amplifier circuits.

## W02-G04B1 [1992]

#### Volume compression or expansion

PAPR, peak-to-average power ratio

#### W02-G04B9 [1992]

### Other signal predistortion

## W02-G04C [1992]

#### Single-side band

Includes vestigial sideband transmission. SSB, DSB, VSB

## W02-G05 [1992]

## Transponder, responder, repeater

(W02-G09)

From 2008 transponders and interrogation systems for RFID application are respectively covered by W02-G05A and W02-G05B and in W06-A04B codes only when there is some RF novelty. T04-K codes, e.g. T04-K03B, can be assigned for any aspect, including memory storage and the like. Transponder-based telemetry or telecontrol is covered by W05-D08G and other W05-D codes as appropriate. Satellite 'transponders', i.e. 'repeaters', are coded in W02-G05C.

## W02-G05A [1992]

### Transponder

(W02-G09)

From 1997, the scope of this code is expanded to cover all aspects of transponders per se. Interrogation equipment and system details are covered in W02-G05B. Search with application codes also, e.g. T04-K01 for smart cards, T05-G02B1A for workpiece tags, W05-B01A2C for antitheft tags, W05-D06A1 codes with W05-D08G for telemetry systems, and W06-A04B codes for identification systems.

## W02-G05B [1992]

## Interrogation system

(W02-G09)

From 1997, transponders per se are covered by W02-G05A. This code is intended to represent all other aspects of transponder systems as a whole.

## W02-G05C [1992]

## **Satellite transponder, terrestrial repeaters** (W02-G09)

To discriminate between satellite and terrestrial repeaters, search with W02-C03B codes for radio relay systems. Details of satellites per se, other than 'internal' details of telecomms equipment carried on space vehicles, are covered by W06-B03 codes. Duplex, circulator, isolation, filtering

#### W02-G05X [1992]

## Other transponder or repeater details

(W02-G09)

#### W02-G06 [1992]

#### Construction; Equipment rack; Casing

(W02-G09)

This code is used for radio equipment construction in general only.

#### W02-G08 [1992]

## Standby systems and redundancy networks

(W02-G09)

Fail-safe communications

## W02-G08A [1992]

With automatic switching to powered-up backup equipment e.g. hot-standby system

(W02-G09)

## W02-G09

## Other radio equipment details

#### W02-H

### Noise suppression at source

See W02-G03B codes for radio receiver circuits. W02-H codes are normally assigned together with codes for the apparatus in which noise is being suppressed.

Feedthrough filter, composite LC component, ferrite bead

## W02-H01 [1992]

#### **RFI** suppression at source

IC engine ignition interference suppression, motor commutation, parasitic oscillation prevention

#### W02-H01A [2002]

## RFI suppression of non-communications equipment

This code is intended to cater for the suppression of radiated RF energy from equipment whose primary function is not that of communication, e.g. electric motors, IC engine ignition systems, microwave ovens.

## W02-H01C [2002]

## RFI suppression in communications equipment

This code is intended to cater for the suppression of radiated RF energy from communications equipment, e.g. transmitters, receivers, etc.

## W02-H01C1 [2002]

## Suppression or avoidance of interference within communications equipment

This code is intended to cater for the suppression of interference generated by one part of communications equipment with another part of the same equipment, or a group of similar units assembled together, e.g. prevention **at the transmitter**, of interference with an associated receiver. Arrangements for avoiding interference by modifying the operation of the equipment, including software changes only, are also assigned W02-H01G (or a subdivision). Self-interference

### W02-H01C5 [2002]

## Suppression of interference caused to separate communications systems

This code is intended to cater for the suppression of radiated RF energy from equipment, especially transmitters, which could interfere with other communication systems, e.g. reducing harmonic radiation.

## W02-H01E [2002]

## Suppression or avoidance of interference based on constructional features

Covers screening, siting of modules, etc. and thus V04-S, V04-T or V04-U codes are normally assigned also, as well as constructional details codes specific to the equipment involved.

#### W02-H01G [2002]

## Suppression or avoidance of interference based on circuitry or operation

This code is intended to focus on aspects of circuit design or equipment operation (including software modifications) resulting in a reduction in the level or effect of unwanted radiated RF energy from equipment, or parts of equipment.

## W02-H01G1 [2002]

## Suppression or avoidance of interference based on reduction in harmonic energy

### W02-H01G3 [2002]

## Suppression or avoidance of interference based on energy dispersal

These codes are intended for arrangements reducing the effect of a potentially interfering signal by dispersing its energy, usually over a range of frequencies.

## W02-H01G3A [2002]

#### Based on use of FM

Novel frequency modulators are assigned U23-H if intended for analogue signals, U23-P01 and W01-A09A2 with W01-A09E1 if modulated by digital data.

#### W02-H01G3C [2002]

## Based on use of frequency hopping

Frequency hopping in general is covered by W02-K05A6, which is **not** assigned here unless specific novel aspects are to be conveyed, or more general applications are cited.

## W02-H01G3E [2002]

## Based on direct sequence spectral spreading

Direct sequence spread spectrum systems in general, such as CDMA, are covered by W02-K05A7, which is **not** assigned here unless specific novel aspects are to be conveyed, or more general applications are cited.

## W02-H01G5 [2007]

## Interference avoidance based on selection of operating frequency

This code involves avoidance of interference by changing frequency, e.g. selecting an alternative second local oscillator, clock, or PWM audio amplifier switching frequency depending on the channel selected in a radio receiver. Avoidance of interference based on frequency allocation in radio networks is covered by W02-H01J5.

#### W02-H01J [2002]

# Interference avoidance in radio systems based on frequency allocation and network operation or planning

This code is intended for prophylactic measures, e.g. at the network planning phase or during normal operation, to reduce the likelihood of interference between communications systems. Simulation systems for radio communication are assigned W02-C03E5 also.

## W02-H01J1 [2005]

## Interference avoidance at radio network planning stage

Includes use of CAD (see W02-C03E5 and T01-J15A4 also). Interference avoidance as a normal part of network operation is covered by W02-H01J5.

### W02-H01J5 [2005]

# Interference avoidance based on frequency allocation and network operation

This code is intended to cover interference avoidance during normal network operation, and may involve channel allocation which is also assigned W02-C03G1 (W02-C03E7 prior to 2010) and interference avoidance aspects of cognitive radio systems which are also assigned W02-C03G5. Avoidance of interference at a network design stage is covered by W02-H01J1, and avoidance of interference by changing frequency, e.g. of a clock signal, in equipment is covered by W02-H01G5.

## W02-H01J9 [2005]

Other aspects of interference avoidance based on frequency allocation and network operation

## W02-H03 [1992]

Supply line noise suppression e.g. mains filter

## W02-J\*

[1980-2009]

#### **Facsimile**

\*This code is now discontinued, see S06-D to K. Includes analogous systems for still picture information. See also under application e.g. S06-C02B for electronic color separation systems. Note that digital cameras are not included, and are covered by W04-M01B1 codes.

Copy, print, scan, sheet, image, document, line, satellite weather picture system

#### W02-J01\*

[1980-2009]

## **Scanning arrangements**

\*This code is now discontinued, see S06-D. Includes optical system, lens etc. and scanning drive (See also V07-K05), but not read/write components such as sensors, print heads, and light sources.

Beam, laser, expose, slit, optical magnifications

#### W02-J01A\*

[1992-2009]

## **Satellite TDMA system**

See W02-C03B for transmission system details.

W02-K02E [1992]

Statistical multiplexing

(W02-K02X)

W02-K02X

Other

W02-K03 [1992]

#### Packet switching (general)

Includes e.g. voice packet systems. For data transmission system see W01-A03B codes, and W01-A06G2.

W02-K04 [1992]

### **Optical multiplex system**

(W02-K09)

Includes wavelength-division multiplexing, see W02-C04B4B also.

#### W02-K05 [1987]

## Spread-spectrum, frequency hopping, time hopping and UWB systems

(W02-K09)

W02-K05A codes define system type while W02-K05B codes indicate novelty at the system level, or in apparatus. From 2005 W02-K05A9 codes are introduced for ultra-wideband and time hopping systems. Where the use of spread spectrum technique is inherent to a particular technology (e.g. Bluetooth or 3G mobile phones), W02-K05 codes are only assigned when the novelty lies in the SS aspect. Novel details of radio systems are also assigned W02-C03 codes and novel radio equipment is also assigned W02-G codes.

Pseudo-random, synchronisation, frequency step, synthesiser control, radio system, data transmission, power line carrier communication W02-K05A [1992]

Systems type

W02-K05A1 [1992]

Non-deliberate interference immunity system; Increased reliability

W02-K05A5 [1992]

## System providing secrecy or anti-jamming capability

Note secret transmission per se is coded in W02-L05.

W02-K05A6 [1997]

Frequency hopping spread spectrum

W02-K05A7 [1997]

### **Direct sequence spread spectrum**

Includes CDMA. Prior to 1997 see W02-K08 with W02-K05 codes as appropriate.

W02-K05A8 [1997]

#### Hybrid spread spectrum system

Covers e.g. combined frequency hopping and CDMA system.

W02-K05A9 [2005]

## Ultra wideband and time-hopping systems

This code is used with other W02-K05 codes as appropriate, e.g. with W02-K05B7 for synchronising aspects of UWB communication. Wireless data interfaces between two points using this technology are covered by W01-A07H2K and network communication by W01-A06C4K.

W02-K05A9A [2005]

**Carrier-free impulse communication** 

W02-K05A9C [2005]

## **Carrier-based impulse communication**

Includes spectrally-filtered systems.

W02-K05B [1992]

System or apparatus details

W02-K05B1 [1992]

Operating method/system

W02-K05B3 [1992]

**Apparatus** 

## W02-K05B5 [1992]

# Pseudonoise code details for direct sequence, frequency hopping codes and time hopping codes

Covers details of noise-like codes used in CDMA, frequency hopping and time hopping communication systems. W02-K05A codes are also assigned to differentiate system type, e.g. W02-K05A9A for hopping codes used in a carrier-free impulse communication system.

W02-K05B7 [1992]

Synchronising

W02-K05B9 [1992]

Other spread-spectrum system details

W02-K06 [1992]

## Time assigned speech interpolation (TASI)

(W02-K09)

See also W04-V04A1 for application of speech recognition systems to detection of voice presence in speech interpolation multiplexing systems. *DSI* 

#### W02-K07 [1992]

## Hybrid and orthogonal multiplex systems

(W02-K01, W02-K02, W02-K09)

From 1997, the scope of this code is widened to include orthogonal multiplexing, previously coded in W02-K09.

W02-K07A [1997]

**Mixed FDM-TDM system** 

W02-K07C [1997]

## Orthogonal frequency division multiplexing

(W02-K01, W02-K09)

This code covers the use of OFDM for communication e.g. in a 5G system for which W02-C03C1L is also assigned. See also W02-C03D5 for access methods, e.g. OFDMA is denoted by W02-K07C along with W02-C03D5 code. Pre-1997 this topic was covered by W02-D05, W02-K01 and W02-K09. Receivers for DAB are covered in W03-B codes.

OFDM, CP-OFDM, DFT-S-OFDM, SC-FDMA

## W02-K07E [1997]

## **Orthogonal multiplexing**

(W02-K09)

Search with W02-C03B1 codes, especially W02-C03B1D, for satellite communication aspects of orthogonal multiplexing.

**OTFM** 

#### W02-K07X [1997]

## Other hybrid multiplexing systems

Hybrid spread-spectrum systems are **not** covered here - see W02-K05A8.

### W02-K08 [1992]

#### **Code division multiplexing**

Prior to 1997 this code was used for all aspects of CDMA, which is now transferred to W02-K05A7. From 1997 W02-K08 will be assigned for code division multiplexing not specific to spread spectrum communication.

#### W02-K09

## Other multiplexing

Prior to 2017 this code included beam division and spatial division multiple access (i.e. BDMA and SDMA), e.g. as used at a cellular base station (W02-C03C1B also with W02-C03C1H or W02-C03C1L for '4G' or '5G' respectively) but from 2017 this topic is covered by W02-K10. Prior to 1997 this code included orthogonal multiplexing which is now coded under W02-K07.

### W02-K10 [2017]

## Beam division multiple access: Space division multiple access

Covers BDMA and SDMA, especially in radio communications. For application to millimeter wave data transmission in 5G cellular systems search with W02-C03C1L. Directional diversity is covered by W02-C03A4 and MIMO systems by W02-C03A5 codes. For antenna beam control aspects see W02-B06 codes. Prior to 2017 BDMA and SDMA were covered by W02-K09.

BDMA, SDMA

#### W02-L

## Secret communication; Jamming and antijamming; Eavesdropping and antieavesdropping

Note secret data transmission is covered in W01-A05. For digitised speech/video (e.g. with bit order rearrangement) search with W01-A05 codes. See W02-F05A codes for video systems.

Secrecy, privacy, anti-eavesdropping system, telephone 'wire-tap' detection

## W02-L01 [1992]

#### Jamming and anti-jamming

Jamming/anti-jamming for radar is covered by W06-A04E1 codes only and for GPS by W06-A03A5M only.

W02-L01A [2005]

**Jamming** 

W02-L01C [2005]

**Anti-jamming** 

W02-L05 [1992]

Scrambling

Scrambled audio/video communication

## W02-L07 [2005]

## **Eavesdropping on communications and anti-eavesdropping**

This code covers the interception of communications using any medium, bugging of conversations using hidden microphones, laser reflection from windows etc., and also countermeasures to these techniques. For systems specific to telephone communications (wired or wireless) see W01-C08F1 codes.

## W02-L07A [2005]

#### **Eavesdropping**

Covers systems, methods and equipment for intercepting communications and also use of covert listening devices.

## W02-L07C [2005]

## **Anti-eavesdropping**

Covers arrangements to detect or prevent interception of communications by a third party, other than purely by scrambling or encryption, which in general is covered by W02-L05, and also detection of listening devices, e.g. by 'sweeping' for bugs and similar techniques.

#### W03: TV and Broadcast Radio Receivers

This class covers general audio/video equipment for entertainment purposes, including interconnection aspects, and radio receivers of broadcast type.

Prior to 2007 displays for non-TV receiver applications and associated signal processing circuitry were not coded in W03-A ('TV receivers') being covered under T04 (for computer monitors), or W05 (general display details). From 2007, due to the increasing convergence of TV and general purpose displays all relevant aspects of video displays will be coded in W03, including: signal processing (W03-A04 and W03-A05 codes);

synchronizing (W03-A04 and W03-A05 display aspects (W03-A08 codes); constructional details (W03-A09 codes); stereoscopic aspects (W03-A12 codes); and audio details (W03-A15 codes).

Please note that W03 only covers displays capable of presenting video information. For displays of a general nature (e.g. segment displays), or where there is no particular emphasis on displaying video information (e.g. public information displays) see W05-E codes (W05-E05G for details of construction).

Where a novel display is for a specified non-TV receiver application, W03-A21 (Video display for non-TV receiver application) is also applied along with relevant application codes from other classes (e.g. T04).

Novel module and manufacturing details of liquid crystal, plasma, electroluminescent and field transmission displays for general applications, as well as display driving and interfacing circuitry are not coded in W03. (See U14 and V05 for these topics).

Radio receivers of communications or unspecified type are covered by W02-G03 codes, but note that in addition to appropriate W03 codes, the topic of broadcast TV or radio receiver noise reduction is assigned W02-G03B codes, and from 2005, received signal strength indicating circuits and their applications are also assigned W02-G03J codes. Audio and video recording equipment is covered in class W04.

## W03-A

## **TV** receivers

Since 2002 W03-A11K codes have been assigned for TV receivers with digital architecture. From 2005, TV receivers for digital signals (e.g. DVB-T) are covered by W03-A11G, and set-top boxes by W03-A16E codes. Video signal processing for applications other than TV receivers is covered in W04.

#### W03-A01

#### **Tuners; Tuning displays**

RF amplifier/mixer, local oscillator, tuning band switching, preset, step, continuous, variable capacitance, tracking, tuning scale, channel number digital display, on-screen display

#### W03-A01A

#### [1987]

#### Satellite TV/cable TV converter

Search with W03-A01B codes for specific tuner details.

#### W03-A01A1

#### [1992]

#### Satellite converter

For other aspects of satellite TV reception see W03-A16A.

DBS, LNA, LNB, low noise amplifier, low noise block, down converter

#### W03-A01A5

#### [1992]

#### **Cable TV converter**

Prior to 1992 search W03-A01A and W02-F03A (W02-F03A no longer assigned). This code covers RF/IF tuner circuitry. For general (including non-RF) aspects of cable converters and all other ancillary aspects of home installation see W03-A16C codes. CATV, subscription, wide-band, super-band, set-top box

#### W03-A01B

#### [1992]

#### Tuner circuitry and construction

W03-A01B codes are used to describe actual tuner circuitry in conjunction with W03-A01A codes or alone for standard TV tuners, as appropriate. Communications receiver tuners are covered by W02-G03A codes.

Superheterodyne, single-conversion, double-conversion, homodyne

#### W03-A01B1

### [1992]

## **Tuned circuits, input filters**

Includes input attenuators. See U25 codes for details of lumped constant circuits. Waveguide technology filters and resonators are covered by W02-A codes.

Inductor, capacitor, varicap, varactor diode, block filter

## W03-A01B3 [1992]

## **RF** amplifier

Novel RF amplifier details are also assigned U24-G01D and other relevant amplifier codes. From 2006, RF AGC is covered by W03-A03A3, previously coded as W03-A01B3 and W03-A03A. Amplifiers external to the receiver itself are covered by W02-B08C5 codes.

FET, MOSFET, MESFET, IGFET, dual-gate, bipolar, transistor

## W03-A01B5 [1992]

#### Mixer

Novel mixer details are also assigned U23-J01 codes.

FET, MOSFET, IGFET, dual-gate, bipolar, transistor, diode, ring

## W03-A01B5A [2006]

### Image rejection mixer

Prior to 2006 this topic was represented by W03-A01B5 and W02-G03B4A (receiver image signal suppression in general). From 2006 W02-G03B4A will only be assigned for specific novelty in the image rejection aspect.

## W03-A01B6 [2002]

## **Direct conversion and low-IF receivers**

These codes are used, in conjunction with other W03-A01B codes as necessary, to represent receivers of homodyne, synchrodyne, 'zero-IF', or 'low-IF' type. Arrangements for suppression of offsets at the output of the mixer are also assigned W02-G03B4G. Direct digital conversion (DDC) in digital architecture TV receivers is not included here, being covered by W03-A11K5. Direct conversion communications receivers are covered by W02-G03A8 codes and broadcast receivers of this type by W03-B01A6 codes.

Homodyne, synchrodyne, zero-IF

#### W03-A01B6A [2006]

#### **Zero-IF receivers**

This code is intended for direct conversion schemes in which the baseband information is centred on zero frequency.

#### W03-A01B6C [2006]

#### Low-IF receivers

This code is intended for direct conversion schemes in which the baseband information is centred on a low frequency, e.g. of the same order as the baseband bandwidth itself.

## W03-A01B7 [1992]

#### Local oscillator

Novel oscillator circuits are also assigned U23-A codes. Control of oscillator frequency is covered by W03-A02 codes.

## W03-A01B8 [1997]

#### **Tuner constructional details**

(W03-A01B9, W03-A09A5)

Covers construction of tuner per se, general internal constructional details of receiver being covered by W03-A09A5, which was previously assigned in addition to W03-A01B9 to indicate the construction aspect. Since 1997, W03-A09A5 has only be added for details affecting the design of the receiver, such as mountings, etc.

Shield, screen, housing, PCB, circuit board

#### W03-A01B9 [1992]

#### Other tuner details

Includes testing and alignment (with W03-A18A codes) and diversity arrangements involving tuner or aerial circuitry - see also W02-C03A codes and W03-G08 if receiver is vehicle-mounted.

**Trimming** 

## W03-A01C [1992]

#### **Tuning display**

Includes on-screen display of e.g. channel number. See W03-A10C1 for character generator circuits and W03-A13G for on-screen display systems in general.

OSD, scale, dial

#### W03-A01D [2008]

#### Multiple tuner aspects

This code is assigned with other W03-A codes as appropriate and is intended to highlight the use of two or more tuners in a TV receiver, set-top box, and the like. For novel tuner circuitry W03-A01B codes are also assigned and for novel frequency or channel control aspects W03-A02A or W03-A02B codes. For use in connection with PIP or POP display W03-A13B is also assigned.

# Dual **W03-A02**

Automatic frequency control; Band scanning; Remote control

## W03-A02A [1992]

## AFC and synthesis control

AFC circuits are also coded in U25-J05. PLL synthesisers are also assigned U23-D01B codes. 'Direct' type synthesisers are covered by U23-F03 codes.

Automatic frequency control, automatic fine tuning, AFT, frequency synthesiser

### W03-A02B [1992]

# Bandscanning, channel switching and channel number storage

Band scanning is also assigned U25-J01 codes and step tuning U25-H03 codes.

Seek, search, sweep, stop, store, preset, priority, local, station

## W03-A02B1 [1997]

#### **Channel storage**

Search with U25-H03A for setting up presettable channels, or U25-J01A1 where bandscanning is involved.

## W03-A02B1A [1997]

#### Based on stations received off-air

Search with U25-J01 codes for bandscanning aspects, e.g. U25-J01A1 for storing channels while scanning.

## W03-A02B1C [1997]

## **Based on channel listing**

Includes in-built memory and channel-guide systems. For channel presetting based on location, W03-A02B1E takes precedence.

## W03-A02B1E [1997]

## **Based on receiver location**

For automatic arrangements search with codes for navigation systems, e.g. W06-A03A5E for use of GPS. Memory systems with pre-loaded station information without regard for receiver location, are covered by W03-A02B1C.

## W03-A02B1G [2006]

## User control of channel storage

Includes re-ordering stored channels, deleting channels, forming 'favorites' lists and the like. For security aspects, e.g. parental control, PIN control etc. search with W03-A18A6 and W03-A18A7.

## W03-A02B3 [2007]

### **Channel switching arrangements**

This code covers arrangements for changing the channel to which a TV set is tuned, either under user control or automatically.

Auto-zap, zapping, channel surfing

## W03-A02C [1992]

#### Remote control

Remote control for recording apparatus is coded in W04-E04A, for audio/video equipment in general in W03-G05A codes, and for general or unspecified applications in W05-D codes. For TV remote control by 'Universal' or 'Learning' type controller search W03-A02C codes with W03-G05A1A. For general TV receiver control aspects see W03-A18A. Ultrasonic, optical, IR, transducer, LED, photodiode, APD

## W03-A02C1 [1997]

#### Remote control unit

Covers details of portable controller. Overall system aspects and circuitry within the receiver itself are covered by W03-A02C5.

## W03-A02C1A [1997]

#### **Novel circuitry and components**

Includes IR LEDs and drive circuits, etc. (see U12-A codes also for aspects relating to LEDs) together with coding aspects.

## W03-A02C1C [1997]

### **Construction and layout**

(W03-A02C, W03-A09A)

Includes shape, style and format of control keys etc., and also protective covers and stands (also coded in W03-A09C).

## W03-A02C5 [1997]

#### Remote control system

Includes circuitry and components internal to the receiver and overall system aspects.

#### W03-A02C5A [1997]

#### Involving on-screen display

(W03-A02C, W03-A13G)

Includes application of GUI techniques to control of TV receivers and video displays, such as manipulation of a cursor, menu navigation and virtual keyboard aspects. For use of remote controller in connection with other interactive systems making use of a TV set search with W03-A16C5 codes also. OSD in general is coded in W03-A13G.

## W03-A02C5C

#### [1997]

## **Remote control location system**

Covers transponder-type arrangements providing e.g. audible tone as aid to locating remote unit, in response to signal transmitted from TV set itself.

## W03-A02C5E [2005]

## **Combined with additional features**

This code covers the provision of features beyond the basic remote control function and generally refers to extra facilities being provided to the user on the remote control handset. Examples include a dedicated display, e.g. for indicating control functions, viewing alternative channel or electronic programme guide (for which W03-A13J is also assigned), or the provision of a separate loudspeaker or headphone socket (also assigned W03-A15 codes).

#### W03-A02C5G [2006]

## Receiver-based remote control circuitry, components and construction

This code is assigned with other codes as appropriate, e.g. W03-A09A5 for internal receiver constructional aspects, W02-C04A3 codes for IR receiver circuitry, U12-A01A codes for LEDs or U12-A02B2A for photodiodes.

#### W03-A02C5J [2011]

### Image recognition-based remote control

This code covers the use of image recognition technology as part of a remote control system for TV sets and video displays. It includes recognition of gestures, movement of hands or head, etc. to derive control information. For use in conjunction with virtual keyboards or other on-screen display aspects W03-A02C5A is also assigned. Image-based recognition of individual users, e.g. for parental control or selecting a 'favorites' list, is covered by W03-A18A6. Novel aspects of image recognition are covered by T01-J10B2A and applications are also assigned T04-D07 codes.

## W03-A02C5L [2011]

#### Voice recognition-based remote control

This code covers the use of voice recognition to provide a 'remote control' facility, with or without a remote control handset unit being used, in which spoken commands are used to control the functions of a TV set or video display. The general 'speech recognition application' code, W04-V04A5 is also assigned (with other W04-V codes in case of novel aspects). Voice-based recognition of individual users, e.g. for parental control or selecting a 'favorites' list, is covered by W03-A18A6.

#### W03-A03

## IF amplifiers; Automatic gain control; Sound and vision detectors

#### W03-A03A

#### TV receiver AGC

Prior to 2006 this code was used with W03-A01B3 for RF AGC and W03-A03B for IF AGC. These topics are now covered solely by the subdivisions below

Keyed-AGC, synchronizing signal, burst, level control

## W03-A03A1

## [2006]

[1992]

#### **Novel AGC characteristic**

Covers delayed AGC, or other specific characteristic. See U24-C01C1 for signal processing aspects to obtain a particular AGC characteristic

#### W03-A03A3

#### [2006]

#### **RF AGC**

Prior to 2006 this topic was covered by W03-A01B3 and W03-A03A.

#### W03-A03A5

#### [2006]

#### IF AGC

Prior to 2006 this topic was covered by W03-A03A and W03-A03B.

## W03-A03A9

## [2006]

#### Other TV receiver AGC aspects

### W03-A03B

[1992]

#### TV receiver IF system

From 2006, W03-A03B5 is introduced to separately highlight IF amplifiers, and IF AGC is covered by W03-A03A5 (previously coded as W03-A03A and W03-A03B).

Integrated circuit, multistage, cascade, interstage coupling, sound, picture, vision, video, trap circuit, IF-based ghost suppression circuit

#### W03-A03B1

#### [1992]

## IF filter

For specific filter types, see appropriate codes in e.g. V06-V and U14-G for electromechanical filters, U25-E for analogue lumped constant types, and U22-G01 codes for digital filters.

SAW, surface acoustic wave, ceramic, LC, tuned circuit, passband, ripple

## W03-A03B5 [2006]

#### IF amplifier

Novel IF amplifier details are also assigned U24-G01D and other relevant amplifier codes.

#### W03-A03C [1992]

#### Sound and vision detectors

Demodulation circuits in general are coded in U23.

## W03-A03C1 [1992]

#### Sound detector

For stereophonic decoder search with W03-A12B1. (Also coded in U23-P05).

Intercarrier sound, FM discriminator

## W03-A03C5 [1992]

#### **Vision detector**

For stereoscopic receiver aspects search with W03-A12A.

FM, AM, picture, video

#### W03-A04

## Video signal processing

Includes general processing for black/white signals and where nature of signals is unimportant. See W04-P codes for general non-receiver application, and W04-F codes for processing specific to video recording.

## W03-A04A [1992]

#### Gamma control

Gamma control/correction in general is coded in W04-P01E1.

## W03-A04B [1992]

## **Bandwidth control**

Control of bandwidth in general is covered by U25-F codes which are also assigned as appropriate.

## W03-A04B1 [1992]

#### Peaking, aperture correction

Aperture correction in general is coded in W04-P01E5.

Response, accentuate, HF

## W03-A04C [1992]

#### Clamping circuits, DC restoration

Clamping circuits of general application are coded in U24-C02A5 also. (Prior to 1992 search W03-A04 and U24-C02A for TV receiver clamp circuits.)

## W03-A04D [1992]

#### **Contrast and brightness control**

Includes automatic arrangements and circuitry responding to manual control or remote control operation.

#### W03-A04D1 [1997]

#### Based on display drive aspects

Includes CRT beam current limiting when combined with W03-A08A8A.

## W03-A04D5 [1997]

#### **Based on ambient lighting**

Prior to 1997, see U24-C01C and W03-A04D.

#### W03-A04F\* [1992-2005]

#### Display interface circuit

\*This code is now discontinued. From 2006 this topic is covered by W03-A08S codes.

#### W03-A04G [1992]

## **Ghost suppression and equalising**

The title of this code has been expanded to reflect the previous inclusion of equalising circuits, even when ghost suppression has not been explicitly mentioned. Prior to 1997, ghost cancelling was also coded in W02-G03B6, which covers compensation for multipath reception in general. From 1997, W03-A04G only has been used for this topic in TV receivers. See also U22-G01 codes for digital filters, especially U22-G01A5 codes which relate to adaptive types and U22-G03E3C for application of DSP to equalising in general. Transmission of ghost control reference signals (GCR) is covered by W02-F05C.

Reflection, pulse, delay, transversal filter

#### W03-A04H [1992]

#### **Noise reduction**

For details relevant to the radio receiving aspect W02-G03B codes are also assigned.

## W03-A04H1 [1997]

## Reducing noise generated outside receiver

Covers suppression within the receiver of external interference such as impulse noise (also coded in W02-G03B5) and interference to terrestrial digital TV signals from analogue transmissions, or viceversa. Ghost signal suppression is covered by W03-A04G.

## W03-A04H5 [1997]

## Reducing noise generated in receiver

Includes arrangements to reduce noise and aberrations on picture, except that arising from luminance/chrominance separation, which is covered by W03-A05B5.

#### W03-A05

## **Color signal processing**

W03-A05 codes covers demodulators, luminancechrominance separation, etc., chiefly for analogue color TV. (Color modulators/encoders are covered by W04-Q05).

W03-A05A [1992]

**Color synchronization** 

W03-A05A1 [1992]

**Color subcarrier recovery** 

W03-A05A3 [1992]

Separation of color burst signal

W03-A05B [1992]

**Luminance-chrominance separation** 

Luma, chroma, Y-C

W03-A05B1 [1992]

#### Using comb filter, using digital filter

Comb filters per se are covered by U22-G01B5 (digital) and U25-A03 (analogue).

Delay, line, period

#### W03-A05B5 [1992]

#### Suppressing interference

Includes suppression of cross-color, 'hanging dots' interference, etc. Reduction in the visible effect of radio interference is covered by W03-A04H1.

## W03-A05B7 [1992]

## Adaptive luminance-chrominance separation

Includes movement-responsive control of separation. W03-A11C, which covers detection of picture motion content in general, is also assigned where this aspect is significant.

Scene, change, HF, interframe

### W03-A05C [1992]

#### Control circuit details

Covers automatic and manually/remotely adjustable control.

W03-A05C1 [1992]

Automatic chroma control

W03-A05C3 [1992]

**Color killer circuit** 

W03-A05C5 [1992]

White balance control

W03-A05C7 [1992]

Hue and intensity control

W03-A05D [1992]

**Demodulation circuits** 

NTSC, PAL, SECAM, MAC

W03-A05D1 [1992]

## With recognition of standard

See also W03-A11 codes for multistandard receiver details, especially W03-A11B codes for standard recognition.

W03-A05E [1992]

**Matrix circuit** 

W03-A05F\* [1992-2005]

#### Display interface circuit

\*This code is now discontinued. From 2006 this topic is covered by W03-A08S codes.

## W03-A05X [1992]

#### Other color signal processing

Includes clamping/DC restoration specifically for color video when W03-A04C is also applied, and noise reduction (other than that due to luminance-chrominance separation) with W03-A04H codes. Dithering

#### W03-A06

### Synchronizing

Separation circuit, vertical/horizontal signal separation, clock recovery, deflection/blanking generator control

## W03-A06A [1992]

### **Extracting synchronizing information**

Covers separation of synchronizing signal information from composite video signal. Separation of horizontal and vertical synchronizing information from extracted 'sync' pulses is covered by W03-A06C.

## W03-A06A1 [1992]

## **Detecting presence of signals**

## W03-A06A5

#### Recognising type of signals

See W03-A11B codes also for multistandard receiver aspects.

[1992]

### W03-A06C [1992]

## Separation of vertical and horizontal information

Also coded in U22-D05 if of general application to pulse circuitry. Prior to 1992 search U22-D05 with W03-A06.

Vertical, horizontal, frame, field, line

#### W03-A06E [1992]

# Synchronizing signal distribution and control of other equipment

Covers use of synchronizing signals within receiver.

#### W03-A07

## **Power supplies**

See U24 for (low power) power supplies in general.

## W03-A07A [1992]

## Mains or battery power supply

Transformer, rectifier, smoothing, filter, voltage regulator, converter, AC-DC

#### W03-A07A1 [1992]

## Standby arrangements, timed disconnection

## W03-A07C [1992]

#### **EHT power supply**

Includes discharge protection circuits. Also coded in W03-A08A1C. See also V02-F02A for flyback transformers.

Rectifier, voltage multiplier, tripler, ultor, final anode

#### W03-A08

#### **Display arrangements**

W03-A08 codes cover display aspects of TV receivers and (since 2007) video displays in general. The following codes are assigned to indicate application of the particular display device to TV sets and video displays only: W03-A08A codes, W03-A08B, W03-A08C, W03-A08D, W03-A08G and W03-A08J. Novel details of these display devices are covered in the respective codes for the particular technology, in either V05 or U14 class.

## W03-A08A

#### Cathode ray tube display

CRTs per se are assigned V05-D codes, especially V05-D01B codes.

#### W03-A08A1

#### **Deflection circuits**

## W03-A08A1A [1992]

## **Deflection signal generator and control**

Prior to 1997, this code included picture width and height control which is now transferred to W03-A08A1F. See U22-C codes also for details of sawtooth waveform generators.

Line oscillator, frame oscillator, horizontal, vertical

## W03-A08A1B [1992]

## **Deflection yoke**

Also coded in V02-F01A and V05-D06B1A (and V05-D01B codes depending on tube type). *Coil, winding, core, connections* 

## W03-A08A1C [1992]

#### **Deflection system with power supply**

Also coded in W03-A07C. Includes line output transformer (also coded in V02-F02A).

### W03-A08A1D [1992]

### **Distortion and linearity correction**

Includes pincushion distortion correction.

S-correction, capacitor, coil, barrel, ringing

#### W03-A08A1E [1992]

## Centering of picture on screen

## W03-A08A1F [1997]

### Controlling picture width or height

(W03-A08A1A)

See W03-A08A1A prior to 1997.

#### W03-A08A1G [1992]

## **Deflection with non-uniform speed**

Includes velocity modulation systems.

#### W03-A08A1H [1992]

#### **Progressive scanning**

Covers non-interlaced systems. For HDTV receiver aspects search with W03-A11 codes.

#### W03-A08A1J [1992]

#### Non-raster scanning

Covers scanning systems not following normal sequential raster pattern, such as fractal scanning. Progressive scanning is covered by W03-A08A1H. *Peano* 

### W03-A08A1X

[1992]

## Other deflection system details

W: Communications

## W03-A08A3 [1992]

#### **Focusing arrangement**

(W03-A08A9)

Includes coils (also coded in V02-D), power supply aspects, focus potentiometer, etc.

#### W03-A08A3A [1997]

#### **Dynamic focusing**

See U22-D01A codes also for pulse-shaping aspects.

#### W03-A08A3C [1997]

## **Focusing system components**

Includes high-voltage potentiometers, bias resistor networks, etc. which are covered in V01-A codes, e.g. V01-A03D2 for preset variable resistors.

## W03-A08A4 [1992]

## **Degaussing arrangements**

(W03-A08A9)

For demagnetising in general see V02-D, which is also assigned here.

#### W03-A08A4A [1992]

## **Degaussing coil**

(W03-A08A9)

#### W03-A08A4C [1992]

## **Control circuitry**

(W03-A08A9)

Includes automatic control aspects, e.g. causing current decay by PTC resistance (also coded in V01-A02A7C where the resistance element per se is novel).

## W03-A08A5 [1992]

#### Convergence and beam control

(W03-A08A9)

Beam landing error, misconvergence

#### W03-A08A5A [1992]

## Components e.g. magnets, coils

(W03-A08A9)

#### W03-A08A5C [1992]

#### **Automatic control**

(W03-A08A9)

#### W03-A08A5E [1992]

#### **Beam index control**

(W03-A08A9)

Includes circuitry and electro-optical or other detection system.

## W03-A08A6 [1992]

#### Radiated field suppression

(W03-A08A9)

Covers suppression of magnetic, electromagnetic, or electric fields for EMC or health and safety considerations. See W03-A09 codes also for constructional aspects. Compensation for effects of external magnetic fields is covered by W03-A08A4 for de-magnetising and by W03-A08A1D for distortion correction in deflection circuits.

## W03-A08A7 [1992]

#### **Blanking circuits**

Beam cut-off, bias, grid

## W03-A08A7A [1992]

## Responsive to scan failure

(W03-A08A9)

Includes arrangements to protect screen from damage.

Spot killer

## W03-A08A7C [1992]

## Blanking selective part of screen area

(W03-A08A9, W03-A11)

See W03-A11B1A also for control of display area in multi-standard receiver.

Aspect ratio, widescreen, letterbox, HDTV, IDTV, EDTV. border, edge

## W03-A08A8 [1992]

### **Tube drive circuitry**

(W03-A08A9)

Includes cathode drive circuits, and also matrix drive circuitry. See U24-G codes for amplifiers in general.

## W03-A08A8A [1992]

#### Limiting excess beam current

(W03-A08A9)

Also coded in U24-C02A when based on limiting excessive brightness level of video. (See also W03-A04D1)

ABL

#### W03-A08A8C [1997]

#### Drive circuitry for matrix-type tube

Covers matrix drive with deflection type tube arrangements. Cathode ray tubes of this type are covered by V05-D01B3C. Interface arrangements for matrix displays other than CRTs are covered by W03-A08S5.

MDWD

#### W03-A08A9

### Other CRT display aspects

## W03-A08B

## Liquid crystal display

(W03-A08X)

This code is used to denote the use of an LCD in a TV set or video display, and includes novel LCDs (full details of which are covered by U14-K01 codes). W03-A08B is assigned for drive circuitry integral with the LCD (in U14, U14-K01A3 is assigned for this), external circuitry forming part of the TV set or video display is assigned W03-A08B3. Backlighting components and arrangements are covered by W03-A08B1 and control of backlighting by W03-A08B3. From 2007 backlighting and analogous arrangements are also assigned X26-U04A codes (formerly W05-E05B codes and X26-U041).

[1987]

## W03-A08B1 [1997]

#### Module and constructional details

This code covers module aspects and constructional details associated with the incorporation of the display device itself, including backlighting light sources, filters, diffusers, etc. Control of backlighting is not included being covered by W03-A08B3. From 2007 backlighting and analogous arrangements are also coded in X26-U04A and other X26 codes depending on novelty.

Back lighting, CCFL, lamp, display module connector

#### W03-A08B3 [1997]

## **Drive circuitry**

This code is intended for drive circuitry forming part of the TV set or video display, i.e. it does not include circuitry that is part of the LCD which is coded as W03-A08B. Drive circuitry for backlighting sources is also included.

Matrix drive circuitry, scan signal generator, lamp drive, inverter

## W03-A08C [1997]

## **Display using LEDs**

This code is used to denote the use of inorganic or organic light emitting diodes in a TV set or video display, either as an array of individually-encapsulated LEDs for a large-scale display or as an integrated circuit. LEDs themselves are covered by U12-A01A codes. Note that in the case of 'LED' displays, 'light emitting diode' displays are covered here but 'light emitting device' displays not using LEDs are regarded as being electroluminescent displays and are therefore covered by W03-A08J instead. The use of LEDs for backlighting of liquid crystal displays is **not** regarded as an 'LED display' and is covered by W03-A08B1 for module and constructional aspects and by W03-A08B3 for drive circuitry and control aspects.

## W03-A08D [1992]

## Plasma display

Plasma displays themselves are covered by V05-A01 codes.

#### W03-A08E [1987]

# Optical aspects, incl. head-mounted display

Note that optical elements covered by W03-A08E codes are **not** part of display devices themselves, such as CRTs, FEDs, LCDs, OELDs, or PDPs, but are separate elements used with the display device. Projection TV in general is covered by W04-Q01 codes and only coded in W03 when relevance to receivers is disclosed, such as in a self-contained projection receiver, or for video circuitry details, e.g. light valve driving.

Anti-reflection coating, lens, color filter, projection display, stereoscopic display shutter control, polarisation control

## W03-A08E1 [1997]

#### **Filters**

This code includes color-separation filters, polarising filters, antiglare filters and the like which are separate from the display device itself. Thus a color-separation filter within an LCD for example cannot be assigned this code, and being regarded as an aspect of the display itself, would be coded as W03-A08B only. Display filters of general or unspecified application are covered by W05-E05A.

W03-A08E3 [1997]

Lens systems

W03-A08E5 [1997]

Mirror

## W03-A08E7 [1997]

# Head-mounted displays and electronic shutter arrangements for 3D displays

From 2013 this code is subdivided to distinguish video head-mounted displays (now covered by W03-A08E7A) from shutter arrangements for use with stereoscopic displays (now covered by W03-A08E7C).

## W03-A08E7A [2013]

#### **Head-mounted display**

This code covers head-mounted displays for presenting visual information to the user from video signals. Head-mounted displays using retinal-projection are also assigned W04-Q01L. Application to augmented reality or virtual reality systems is indicated by assignment of W04-W07E1A. Head-mounted displays in general, including those not capable of presenting video, are covered by W05-E07.

### W03-A08E7C [2013]

# Shutter arrangement for stereoscopic display

This code covers arrangements in the form of spectacles with e.g. electro-optical shutters to alternately transmit or block light from a display to left and right eyes of the viewer. W03-A12A, the general code for stereoscopic or '3D' TV receivers and video displays is also assigned and novel aspects of electro-optical shutters are covered by V07-K01A.

3D glasses

#### W03-A08E7E [2013]

## Spectacles using filters for stereoscopic display

This code covers arrangements in the form of **passive** spectacles with e.g. different colour filters or different polarization for each eye to produce a stereoscopic display effect. W03-A12A, the general code for stereoscopic or '3D' TV receivers and video displays is also assigned. Electro-optical shutters to alternately transmit or block light from a display to left and right eyes of the viewer are **not** included and are covered by W03-A08E7C.

Anaglyph, 3D glasses, blue filter, green filter, red filter

## W03-A08E8 [2014]

## Parallax and different-view displays

This code covers optical and electro-optical aspects of displays in which parallax or similar effects are used to enable different images to be perceived depending on the viewer's position. For autostereoscopic displays (i.e. those not requiring the wearing of spectacles with LC shutters, polarized filters, etc.) W03-A12A is also assigned.

Where the object is privacy, e.g. deliberately creating a narrow viewing angle so that someone sitting next to the user of a portable device cannot view displayed content, W03-A08L is also assigned. Confidential, diffraction, diffuser, grating, overlay, refraction, restricted view

#### W03-A08F [1992]

## Optomechanical and electro-optical scanning display

Light beam scanning is covered by V07-K05.

## W03-A08F1

#### With laser light source

For details of lasers per se see V08 codes. Projection TV with laser light source is coded in W04-Q01B1.

[1992]

## W03-A08G [2002]

## Field emission display

(W03-A08X)

This code is intended for non-CRT field emission display arrangements for TV receivers. CRT TV displays using field emission are covered by W03-A08A codes. Novel aspects of field emission displays are covered by V05-D01C3 and other V05-D codes as appropriate.

FED

## W03-A08J [2002]

#### **Electroluminescent display**

(W03-A08X)

Novel aspects of electroluminescent displays are covered by U14-J codes. Note that 'LED displays', in the sense of 'light emitting diode displays' are **not** included here and are covered by W03-A08C. When 'LED' refers to 'light emitting devices' which are **not** LEDs, W03-A08J **is** assigned.

## W03-A08L [2013]

# Display arrangements preventing direct recording by camera and display privacy

This code covers arrangements to prevent direct off-screen recording of still or moving images using e.g. a digital camera, camera phone or camcorder or to perform watermarking on images recorded, and also arrangements to maintain confidentiality or privacy of displayed information, e.g. by deliberately restricting viewing angle.

Arrangements using infra red light within an LCD backlighting system are also covered in W03-A08B codes. The use of similar techniques for projection displays is not included and is covered by W04-Q01J5. Copy protection involving signal processing is covered by W04-F01L1.

Camera blinding, flooding, IR, over-expose, secrecy

## W03-A08S [2006]

## **Display interfacing**

Covers circuitry for interfacing between the receiver and displays that may be integral with it or external. This topic was previously covered in W03-A04F for general interfacing aspects and in W03-A05F for interfacing and display driving specifically related to color video signals. Other W03-A04 or W03-A05 codes are assigned in addition to W03-A08S codes as necessary.

#### W03-A08S1 [2006]

## Digital display interfacing

This code covers aspects specific to the digital nature of the display, such as digitizing and signalling the type of display or resolution. Specific details relating to matrix display driving are covered by W03-A08S5.

DisplayID, EDID, extended display identification data, E-EDID, enhanced EDID

#### W03-A08S5 [2006]

#### Matrix drive details

(W03-A08X)

For driving e.g. LCD, plasma displays with native resolution. Color matrix circuits for converting color-difference signals into color drive signals are not coded here, being covered by W03-A05E instead.

## W03-A08X

## Other TV receiver display aspects

Includes display arrangements using discharge tubes forming a matrix, etc. From 2002 electroluminescent displays for TV receivers are assigned W03-A08J.Also includes touchscreens which are also assigned T04-F02A2 and W03-A13G when OSD aspects are significant.

## W03-A09

#### **Constructional details**

Constructional details of electronic equipment in general are covered by V04-S and V04-T codes.

W03-A09A [1992]

**Receiver constructional details** 

W03-A09A1 [1992]

**Cabinet** 

W03-A09A5 [1992]

#### Internal construction

Cooling

## W03-A09C [1992]

#### Stands and supports

Includes stands for flat-screen TVs, furniture aspects such as stacks for audio/video equipment (see W03-G codes also for general application) and mounting brackets for walls, etc.

## W03-A10 [1983]

## Teletext and related systems

(W03-A20)

Teletext transmission system aspects are covered by W02-F05B codes. Non-television text equipment (e.g. receiving text information over telephone line) is **not** coded here, unless interfacing equipment such as a modulator is being used to insert the text in e.g. the field blanking interval (in which case W03-A18C would be assigned also). For non VBI-based systems used in digital TV search along with W03-A11G.

Character multiplex

## W03-A10A [1992]

#### Decoder

Framing code detector

### W03-A10A1 [1992]

#### **Error protection**

Ghost-cancelling circuits are covered by W03-A04G.

Burst-and-random error correction system for teletext, BEST

## W03-A10C [1992]

## **Character generator**

Character generators for computer peripheral CRT VDUs are covered by T04-H01A1.

## W03-A10C1\* [1992-2005]

#### For other on screen display

\*This code is now discontinued. From 2006 it is assumed that all character generators are for a range of purposes, including teletext type systems, on screen menus and interactive information provision such as Internet TV.

## W03-A10C5 [2006]

### **Character sets and fonts**

Includes use of particular character sets for different languages. Character set encoding is also covered in U21-A05D1.

Cyrillic, Kanji, Kana, Hangul, Arabic, shift JIS

#### W03-A10E\*

#### [1992-2011]

#### **Memory aspects**

\*This code is now discontinued and from 2012 this subject matter will be covered by W03-A11M5. W03-A10E remains valid and searchable for records prior to 2012 when it was assigned for the use of memory to increase apparent speed of retrieval or other purposes in text and subtitle display arrangements. Prior to 2012 memory circuits for OSD and PIP applications were covered by W03-A13A (now W03-A11M3) and for digital/high definition receivers by W03-A11M. Buffer, page memory

## W03-A10G [1997]

## 'Closed caption' and subtitle systems

(W03-A10X, W03-A13G)

Search with S05-K for 'closed caption' systems.

## W03-A10J [1997]

## **Processing additional information signals**

Includes use of VPS data and extraction circuitry (only) for ghost-control reference signals. See W03-A04G for all aspects of ghost signal suppression in receivers.

## W03-A10X [1992]

### Other text system details

Includes the use of text-to-speech conversion (also assigned W04-V04C1) to provide an audible version of text-based information.

## W03-A11 [1987]

## High-definition, multi-standard, and digital architecture receiver

(W03-A20)

HDTV transmission systems are covered by W02-F06C codes. Codes in this section are used with W03-A05 codes for color demodulation, and with W03-A08 codes for display aspects.

From 2002 W03-A11K codes have been assigned for digital architecture TV receivers, i.e. those using DSP. Prior to 2002 this aspect was covered by W03-A11X

HDTV, IDTV, EDTV, MUSE, dual-standard, video signal interpolation

#### W03-A11A [1992]

#### Receiver standards-conversion circuit

TV standards conversion equipment for studio/broadcast use is covered by W04-N05A, and for recording equipment by W04-F01H3.

## W03-A11A1 [2005]

#### Transcoding

Covers conversion of standard of received digital TV signals including changing the coding format used.

#### W03-A11A5 [2010]

TV display upscaling and resolution improvement This code covers arrangements for upscaling a signal to improve resolution, e.g. to provide a 100 Hz field rate from an original 50 Hz rate in the received signal, or to increase the effective number of pixels. Upscaling for video recording and reproducing equipment is covered by W04-F01H3C.

Flicker reduction, interpolation, pixel displacement, pixel shaping

## W03-A11B [1992]

## Standard recognition circuits and switching

Includes recognition based on color signal characteristic (see W03-A05D1 also), synchronizing signal type (see W03-A06A5 also) or e.g. bandwidth of received signal. From 2006 novel standard recognition circuits are covered by W03-A11B5.

#### W03-A11B1 [1992]

## Automatically switching receiver circuitry

Covers control aspects to select appropriate demodulator, or other signal processing stage. Includes use of standard recognition circuits in switching receiver circuitry.

#### W03-A11B1A [1992]

## Controlling display area or scanning format

See W03-A08A7C for arrangements to selectively blank e.g. border area of CRT display. For similar system using physical masking of screen see W03-A08X

Progressive scan, interlaced, non-interlaced, aspect ratio, letterbox, pan-and-scan, 4:3, 16:9

## W03-A11B5 [2006]

## Novel standard recognition circuits

## W03-A11C [1992]

## Picture signal motion detector

This code is not used routinely for decoding predictively encoded video data. Covers novel methods and circuitry for determining motion content of picture, e.g. in adaptive circuitry such as luminance - chrominance separator (also coded in W03-A05B7) as well as in predictive decoding. Motion detector circuits in general are coded in W04-P01A1.

Inter-frame, correlation, difference, H

## W03-A11D [1992]

#### Decoder

Includes decoder for digital TV, e.g. DVB-T signals. Descrambling of encrypted signals is **not** included and is covered by W03-A16C3A.

Decoders/demodulators for 'standard' analogue color TV signals are covered by W03-A05D codes. DVB, ATSC

## W03-A11D1 [2007]

#### **Error detection and correction**

See W01-A01B codes for general error correction in data transmission systems, which were previously assigned with W03-A11D to indicate this topic.

## W03-A11G [2005]

## TV receiver for digital broadcasts and digital multimedia broadcast receiver

From 2011 the title of this code is expanded to reflect the previous inclusion of receivers for digital multimedia broadcast (DMB - now covered by W03-A11G5) as well as receivers of digital TV signals such as DVB-T, irrespective of analogue or digital receiver architecture. Set-top box receivers are also assigned W03-A16E. Digital TV receiver architecture details (for analogue or digital signals) are covered by W03-A11K codes.

#### W03-A11G1 [2006]

## Combined with analogue receiver

### W03-A11G5 [2011]

#### Digital multimedia broadcast receiver

For receivers built-into mobile phones search with W01-C01D3C and W01-C01P6G. DMB

## W03-A11K [2002]

## Digital and hybrid TV receiver architecture

(W03-A11X)

This code is assigned for receivers - of signals with analogue or digital modulation - which are implemented using DSP techniques in whole or in part. The codes are used in conjunction with other

W03-A codes as necessary where there are direct equivalents in analogue receivers, in particular for RF amplifiers, oscillators, IF stages and demodulators. Corresponding digital techniques for communications and broadcast radio receivers are covered by W02-G03K and W03-B07 codes.

## W03-A11K1 [2002]

#### Characterised by usage of DSP

(W03-A11X)

These codes are used to distinguish between different levels of DSP being applied to the signal path in the receiver. As such, they do not normally represent novel digital processing aspects, which are conveyed by use of other W03-A11K codes. DSP in general is covered by T01-J08A2, T01-J08B and U22-G codes depending on specific aspects.

## W03-A11K1A [2002]

## With baseband digital signal processing only

(W03-A11X)

This code covers receivers with a digital signal processing path **after** the conversion to baseband.

## W03-A11K1C [2002]

# With baseband and IF digital signal processing only

(W03-A11X)

This code covers receivers with DSP in IF, demodulator, and baseband stages.

## W03-A11K1E [2002

## With digitising of RF spectrum

(W03-A11X)

This code covers receivers with digitising of the whole signal processing path, except for the possible use of analogue RF amplifiers.

## W03-A11K1X [2002]

## Other use of DSP in digital TV receivers

(W03-A11X)

## W03-A11K3 [2002]

## **AD** conversion

Novel aspects of AD converters and AD conversion are covered by U21-A03 codes.

## W03-A11K5 [2002]

# Digital mixing and direct digital conversion

(W03-A11X) DDC

## W03-A11K6 [2002]

## **Filtering**

(W03-A11X)

Novel digital filters are also assigned U22-G01 codes, and T01-J08B when the emphasis is on computing aspects.

## W03-A11K7 [2006]

## **Transform implementation**

DSP-based transform implementation is covered by U22-G03E1A and computer data processing aspects in general by T01-J04B1.

## W03-A11K8 [2006]

#### **DA** conversion

Novel aspects of DA converters and DA conversion are covered by U21-A02 codes.

#### W03-A11K9 [2002]

## Other digital TV receiver aspects

(W03-A11X)

## W03-A11M [2005]

### TV receiver memory

From 2012 the scope of this code is expanded to enable it to be used as a single reference for 'TV receiver memory' in the sense of memory for images or text. Subdivisions have been introduced to cover the use of memory in video decoding (W03-A11M1), for onscreen display and related topics (W03-A11M3), for text and subtitle display (W03-A11M5) and novel memory itself (W03-A11M7). Prior to 2012 memory circuitry used in TV receivers for applications such as PIP and OSD was covered by W03-A13A, and for teletext by W03-A10E. For memory circuits used for general video applications see W04-P01C codes. For memory circuits used in dynamic recording of video signals (e.g. as a buffer) see W04-F01M codes. Memory used for storing operational settings such as stored channels or for general receiver control aspects is not included, being covered respectively by W03-A02B1 codes and W03-A18A codes.

#### W03-A11M1 [2012]

# TV receiver memory used in decoders and other signal processing

This code covers the use of memory in a TV receiver in connection with video decoding or other signal processing, such as upscaling, standards conversion, noise reduction etc. Codes for these topics are also assigned as necessary

#### W03-A11M3 [2012]

# TV receiver memory for on-screen display and image manipulation

This code replaces W03-A13A and covers the use of memory in a TV receiver in 'image manipulation' applications as covered by W03-A13 codes, such as picture-in-picture, freeze-frame, zoom etc. and also on-screen display (OSD). Where the use of memory is specific to a particular type of image manipulation the corresponding W03-A13 code is also assigned, e.g. W03-A13B for PIP.

#### W03-A11M5 [2012]

## TV receiver memory for text display and subtitles

This code replaces W03-A10E and covers the use of memory in a TV receiver in text or subtitle applications as covered by W03-A10 codes, such as teletext, MHEG text, or closed caption display. W03-A10 codes are also assigned as necessary to provide more information, e.g. W03-A10G is also assigned for inventions specific to the presentation of closed caption information.

Buffer, page memory

## W03-A11M7 [2012]

## Novel memory and memory circuits for TV receivers

This code covers novel memory and memory circuits and as such is likely to be assigned for inventions which are also assigned U14-A codes for memories and/or T01-H01 codes for use of memory in a computing context. W03-A11M7 is intended to indicate application to TV receivers (when specific) for novel memories or memory circuits.

#### W03-A11M9 [2012]

## Other TV receiver memory aspects

#### W03-A11X [1992]

## Other HDTV/dual standard details

Includes multiple analogue standard reception. Receivers for both digital and analogue reception are coded in W03-A11G1.

#### W03-A12 [1987]

# Stereoscopic, stereophonic, and multichannel sound receiver

(W03-A20)

## W03-A12A [1992]

# Stereoscopic and three-dimensional display TV receiver

Covers all aspects of stereoscopic and autostereoscopic TV receivers, such as decoding circuitry and display aspects (see W03-A08 codes also, e.g. W03-A08E7C for LC shutter spectacles) including 3-dimensional displays. For autostereoscopic displays and displays which can present different programme images when viewed from different angles based on optical gratings, grids and the like placed in front of a display panel search with W03-A08E8 (from 2014).

Left, right, image, shutter synchronization

## W03-A12B [1992]

## Stereophonic and multichannel sound TV receiver

Left, right, bilingual sound, separate/second audio programme, SAP, NICAM

## W03-A12B1 [1992]

## Stereophonic decoder

See W03-A03C1 also. (Coded in U23-P05 also).

## W03-A12B1A [1997]

## With separate sound channel

Covers arrangements enabling output of audio signals in different language. TV transmission systems of this type are covered by W02-F06B5. Separate audio programme, SAP, bilingual

### W03-A12B3 [2005]

#### Surround sound aspects

This code is used with W03-A12B1 or W03-A12B5 as appropriate. General aspects of surround sound systems are covered by W04-R01C5.

#### W03-A12B5 [1992]

#### **Audio aspects**

Includes amplifiers, loudspeaker systems, etc. Search with W03-A15 codes.

#### W03-A13 [1987]

# Picture-in-picture, image manipulation, EPG and OSD

(W03-A20)

From 2012 the title of this code has been changed to reflect the transfer of memory circuits to W03-A11M codes (from W03-A13A). W03-A13 codes cover special display modes under control of the viewer, including picture-in-picture, freeze frame, zooming and image manipulation. Special effect generation for general video applications, including its use in TV studio equipment, is covered by W04-N05C codes. On-screen display forming

part of teletext information is covered by W03-A10 codes (see note for W03-A13G).

## W03-A13A\* [1992-2011]

#### Memory circuitry and control

\*This code is now discontinued and from 2012 this subject matter will be covered by W03-A11M3. W03-A13A remains valid and searchable for records between 1992 and 2011 when it was assigned for memory aspects of functions described by W03-A13 codes only, such as PIP or OSD applications, and included novel memory itself and memory addressing. Memory circuits and applications specific to digital and high definition TV receivers, such as memory used in standards conversion or decoding, are covered by W03-A11M1 from 2012. Memory circuits specifically for VBI and digital text reception (e.g. to increase apparent retrieval rate) are coded in W03-A11M5 from 2012. Frame stores for general video applications are covered by W04-P01C codes and the use of memory in video recording signal processing by W04-F01M codes.

## W03-A13B [1992]

## Picture-in-picture display function

Includes picture-outside-picture arrangements. For display of inset picture of different aspect ratio and/or standard, search with W03-A11B1A. Picture inlay for TV special effects in general is covered by W04-N05C5.

PIP. POP

#### W03-A13B1 [1992]

## Displaying external video source in subimage

See W03-A18C also for peripheral connection aspects.

Peripheral, CCTV, monitor, security, video, intercom, door-phone, entry

## W03-A13C [1992]

#### Still-picture display facility

Includes 'freeze-frame' facility. For use to hold picture during low S-N conditions search with W02-G03B1.

Hold, action, video, squelch

#### W03-A13E [1997]

#### Zoom facility and image manipulation

The title of this code has been expanded to reflect the previous inclusion of image manipulation, for which W03-A13X was also assigned as appropriate and W04-N05C codes for inventions of wider application. The code has also been subdivided to separate image zooming and manipulation when the distinction can be made. Image manipulation in general, and for TV studio special effects, is

covered by W04-N05C3 codes and in T01-J10B3A when computer processing aspects are emphasised.

## W03-A13E1 [2005]

#### **Zoom facility**

Covers zooming to enlarge displayed image, or a portion of it. Other special effects such as repositioning, rotating, and altering the shape of the picture are covered by W03-A13E5.

## W03-A13E5 [2005]

## Image manipulation

Covers use of special effects such as resizing, repositioning and altering shape of picture. Zooming is covered by W03-A13E1. Prior to 2005 image manipulation was covered by W03-A13E and/or W03-A13X as appropriate, depending on novel aspects.

## W03-A13G [1992]

## General on-screen display

From 2006 character generation aspects are covered by W03-A10C codes. Includes OSD aspects of touch screens (also assigned W03-A08X and T04-F02A2).

Digit, pattern, ramp, monitoring, self-test

#### W03-A13J [2002]

#### Electronic programme guide systems

(W03-A13G, W03-A16C5E)

This code is regarded as the main one for EPG aspects in receivers and set top boxes. See W03-A13G also for specific OSD aspects of programme guide systems in TV receivers (this code was used more generally for this topic prior to 2002). Interactive aspects of guide systems will continue to be assigned W03-A16C5E as appropriate. Systems or 'head-end' aspects are covered by W02-F10E5. Display of program guide information in radio receivers is covered by W03-B01C.

## W03-A13X [1992]

## Other special display mode aspects

#### W03-A15 [1992]

#### **Audio system aspects**

(W03-A20)

Includes loudspeakers, audio amplifier, and connection to e.g. external Hi-Fi system (with W03-A18C). Search with W03-G05C5A for cordless headphone arrangements. (Prior to 1997, see W03-A15, W03-A18C, and W03-G05).

#### W03-A15A [1992]

# **Audio amplifiers, volume and tone control** (W03-A20)

## W03-A15C [1992]

## Loudspeakers and loudspeaker enclosures

(W03-A20)

See also V06-A codes for loudspeakers per se, and V06-G/W04-S01 codes for enclosures of general application. (Prior to 1992, W04-S was assigned even for self-contained enclosure aspects). From 2005, wireless loudspeaker systems are also assigned W03-G05C5C.

### W03-A16 [1992]

# Ancillary equipment for cable, satellite or subscription TV

(W03-A20)

This code mainly covers equipment external to actual receiver e.g. decoders or converters. (Converter RF circuitry is covered by W03-A01 codes). Search with W02-F03A or W02-F05A codes for wider cable/subscription aspects.

### W03-A16A [1992]

#### Satellite TV

(W03-A20)

Search with W02-B codes for aerial aspects, and W03-A16C3 codes for security and decoding. Satellite TV transmission systems are covered by W02-F06A.

#### W03-A16C [1992]

## Cable, subscription, and interactive TV

(W03-A20)

Systems aspects of cable, interactive and satellite TV (i.e. broadcast infrastructure) are covered by W02-F codes.

## W03-A16C1 [1997]

### Cable TV receiver

The title of this code has been changed to better reflect its coverage. From 2005, cable TV set-top box aspects are highlighted by co-assignment of W03-A16E. Prior to 2005, W03-A16C1 was used more generally for set-top box details.

## W03-A16C3 [1997]

## Security and decoding aspects

See also W02-F05A1 codes for secrecy/scrambling aspects of TV systems in general.

### W03-A16C3A [1997]

## **Descrambling circuitry**

Also coded in W02-F05A1B.

## W03-A16C3C [1997]

### Access control, including card systems

Includes smart cards used to authorise decoding of encrypted broadcast. Access control details relating to e.g. cable head-end are covered by W02-F05A1 codes and W02-F10N3.

#### W03-A16C5 [1997]

## **Interactive TV aspects**

Covers details of (subscriber) systems interacting with rest of two-way network, e.g. to request a programme, carry out a transaction, etc.

## W03-A16C5A [1997]

#### For video-on-demand system

Includes pay-per-view systems for temporarily increasing access rights, and arrangements enabling viewer to influence sequence of events within programme. For systems involving selection of predominantly non-video programme material W03-A16C5C takes precedence.

## W03-A16C5C [1997]

## For audio-on-demand system

The title of this code has been changed to reflect its actual coverage of audio-based on-demand receiving systems. As before, it includes remote access of entertainment library systems, e.g. of 'pay-per-play' type, using an interactive TV installation or other equipment as an interface.

#### W03-A16C5E [1997]

#### For access to information system

This code covers interactive aspects of programme guide systems in receivers, which from 2002 are covered for all aspects by W03-A13J. Prior to 2002, W03-A16C5E was also used for aspects of internet access (now W03-A16C5K).

#### W03-A16C5G [1997]

## For game playing, virtual reality, or karaoke

In 2006 the title of this code was amended to reflect its coverage (since 1997) of virtual reality and karaoke interactive broadcast reception in addition to game playing. Video games in general are covered by W04-X02C and virtual reality in general is covered by T01-J40 codes and W04-W07E codes).

## W03-A16C5H [2005]

#### For access to multimedia system

## W03-A16C5J [1997]

#### For access to financial network

Includes use of TV receiver for online banking or purchasing goods, including 'TV commerce'. Systems involving use of the internet are also assigned W03-A16C5K.

#### W03-A16C5K [2002]

## For access to internet and receiving internet broadcasts, including 'Smart TV'

(T01-H07C5E, W01-A06B7, W03-A16C5E)

This code covers arrangements for internet access as a facility of an interactive broadcast system, and also reception of content on an interactive basis over the internet, such as internet TV, which is also assigned W03-A16C5A.

IPTV, streaming

#### W03-A16C5X [1997]

## For interfacing interactive broadcast terminals with other systems

## W03-A16E [2005]

## Set top box

(W03-A16C1)

This code is used with others as necessary to highlight specific applications, e.g. with W03-A11G for a set-top box DVB receiver, with W03-A16A for a satellite TV receiver, and with W03-A16C1 for a cable TV receiver.

## W03-A16E1 [2005]

### Personal video recorder

Covers personal video recorder aspects that relate to receiver, e.g. programming recording using programme guide. This code is used in conjunction with W04 codes, e.g. W04-B14C3 for hard disk recorders, and other W03 codes to denote novel aspects as appropriate.

PVR, TIVO, ReplayTV, SonicBlue, Digital Video Recorder, DVR

#### W03-A16G [2006]

## Local storage of commercial messages

Production of and arrangements for displaying commercial messages for TV are also covered in W05-E03C. Local storage of AV content in home networks is covered by W03-G05C1A (from 2013) which can also be assigned with W03-A16G when locally-stored TV commercials are accessible over a home network.

#### W03-A18 [1992]

# General control and peripheral connection systems

(W03-A20)

## W03-A18A [1992]

# General aspects of receiver control and monitoring

(W03-A20)

Includes self-checking systems. For microprocessor control aspects, see T01-J08A. Arrangements specific to remote control, not involving overall control aspects, are assigned W03-A02C codes only.

Function display, time programming

#### W03-A18A1

[1992]

# Testing/monitoring with external equipment

(W03-A20)

This code covers any aspect of testing or monitoring of TV receivers or video displays using external equipment, including production line testing or testing subsequently for e.g. fault-finding or repair. Self-testing or self-monitoring arrangements are covered by W03-A18A2.

#### W03-A18A2 [2006]

## Self-testing, monitoring and calibration of TV receiver

This code covers control aspects within the receiver itself for test and diagnosis and also internal calibration. Testing or monitoring of TV receivers and video displays using **external** equipment is covered by W03-A18A1.

#### W03-A18A3 [1997]

# Preventing viewing below minimum distance; Locating viewer

See also S03-C, W06-A02, W06-A05, and W06-A06 codes for detection system details. From 2010 the scope of this code is enlarged to include determination of viewer direction or location. Arrangements for orienting a receiver or display based on this determination are also assigned W03-A18A9. Viewer or user identification is covered by W03-A18A6.

## W03-A18A5 [1997]

## Time programming, channel control and programme guide control

Covers use of programme guide to present suitable channels for viewing to user. Note that the 'time programming' referred to for this code, W03-A18A5A and W03-A18A5C relates to programming of the TV receiver itself, e.g. to switch-on and tune to a desired channel at a particular time, and not programming of recording, which is covered by W04-E04C codes in conjunction with the appropriate W04-B, W04-C and/or W04-F codes.

### W03-A18A5A [2002]

## Time programming with manual input

## W03-A18A5C [2002]

# Time programming, channel and programme guide control with learning function

This code covers automatic time programming arrangements based on learned user preferences, e.g. through monitoring of manual time programming operations or manual channel selection. For analogous arrangements for programming of video recorders see W04-E04C7 along with other relevant W04 recording equipment codes.

Suggester

## W03-A18A5G [2006]

#### **Detecting commercial messages**

Includes arrangements to change channels when commercials are detected. Video recorder-based systems for preventing recording of commercial messages are covered by W04-E04C5C, and for overriding of this feature by W04-E04C5E.

### W03-A18A5J [2007]

## **Detecting emergency broadcast messages**

Includes arrangements to change channels or switch on TV receiver when emergency broadcast messages are detected. See W02-F05D for transmission of emergency TV broadcasts and W05-B08 codes which are assigned for all aspects of emergency broadcasts and disaster warning alarms. Emergency broadcast radio receivers are covered by W03-B08C7.

Adverse weather, avalanche, bush fire, earthquake, eruption, flooding, forest fire, hurricane, landslide, landslip, mudslide, terrorist attack, tidal wave, tornado, tsunami, typhoon, volcano.

## W03-A18A6 [2005]

## **Identifying user**

Covers arrangements to control presented programme content or settings, e.g. brightness, volume, according to individual user. Use in conjunction with W03-A18A7 for arrangements to identify child user and prevent access to certain programming content. Recognition based on biometrics such as fingerprint, palm-print, and similar parameters is also assigned T04-D07F codes, and that based on voice recognition by W04-V04A3. Recognition of user gestures or spoken commands for remote control purposes is not included and is covered by W03-A02C5J and W03-A02C5L respectively.

## W03-A18A7 [1997]

#### Security and child-lock systems

V-chip

#### W03-A18A8 [2005]

## Program control aspects, software updating methods

T01-F codes (computer program control) are also assigned as necessary.

## W03-A18A8A [2010]

## Software updating

This code covers arrangements for downloading or otherwise inputting data to modify the program controlling operation of a TV receiver or analogous equipment.

[1997]

OTA, over the air

#### W03-A18A9

Other TV receiver general control

## W03-A18C [1992]

## **Peripheral connection system**

(W03-A20)

Includes SCART socket per se and details of interconnection with any external equipment. Euroconnector, peritelevision, HDMI, interface, RGB. direct video. baseband

## W03-A18C1 [2005]

#### Interfacing hardware

Includes cables, connectors, and other hardware aspects.

## W03-A18C5 [2005]

Interfacing with other systems

#### W03-A18C5A [2005]

Interfacing with stand-alone systems

## W03-A18C5C [2005]

## Interfacing with local network

W03-G05C1 (for general AV bus systems) is also assigned as necessary, and significant network aspects are also covered by W01-A06 codes, especially W01-A06B5A.

## W03-A18R [2007]

#### **Audience research aspects**

Search in conjunction with W03-A18A6 for monitoring viewing of a particular user. Previously coded in W03-A18A1 for devices separate to subscriber equipment itself, along with W02-F04B for system aspects of audience research.

## W03-A19 [2006]

# Manufacturing, recycling and packaging of TV receiver

See W03-G10 codes for manufacture, recycling and packaging of general audio/video equipment.

## W03-A19A [2006]

### **Manufacturing TV receiver**

Includes assembly of component parts into TV receiver. Manufacture of displays and other TV receiver components is covered in V05, U14 etc. as appropriate, along with relevant W03 codes.

## W03-A19C [2006]

## **Recycling TV receiver**

Recycling of CRTs themselves is not included, being covered by V05-L05D1B and V05-L07E6 (these codes relating especially to tube manufacture).

Scrapping

## W03-A19G [2006]

## **Packaging TV receiver**

Carton, packing

#### W03-A20

#### Other TV receiver details

Includes antenna details. *Input isolation* 

#### W03-A21 [2007]

## Video display for non-TV receiver application

This code is only assigned in conjunction with other W03-A codes used to indicate novel aspects of video displays that are **analogous** to TV receivers but are intended for other applications. For example, a display for radar equipment (also W06-A04C) with a novel gamma control circuit would be assigned W03-A04A and W03-A21. Note that video displays that are suitable for other applications **and** for TV receivers are **not** assigned.W03-A21.

### W03-B

## **Broadcast radio receivers**

Communications receivers and general receiver circuitry are covered by W02-G03 codes, TV receivers by W03-A codes. Where noise reduction aspects of broadcast receivers are involved, W02-G03B codes are **also** assigned.

From 2002, W03-B06 codes are introduced for receivers of digital broadcasts, and W03-B07 codes for digital and hybrid broadcast receiver architecture.

#### W03-B01

## **Tuners; Tuning displays**

RF amplifier, mixer, local oscillator, synthesiser tuning, step tuning, continuous tuning, variable capacitance, permeability, tracking, pushbutton tuner, tuning scale, digital display

#### W03-B01A

[1992]

RF tuner circuitry and construction

#### W03-B01A1

[1992]

#### **Tuned circuits, input filters**

See U25.

#### W03-B01A3

[1992]

### **RF** amplifier

Novel RF amplifier details are also assigned U24-G01D and other relevant amplifier codes. From 2006, RF AGC is covered by W03-B02A3, previously coded as W03-B01A3 and W03-B02A. Amplifiers external to the receiver itself are covered by W02-B08C5 codes.

## W03-B01A5

[1992]

#### Mixer

Novel mixer details are also assigned U23-J01 codes.

#### W03-B01A5A

[2006]

## Image rejection mixer

Prior to 2006 this topic was represented by W03-B01A5 and W02-G03B4A (receiver image signal suppression in general). From 2006 W02-G03B4A will only be assigned for specific novelty in the image rejection aspect.

## W03-B01A6

[2002]

#### **Direct conversion and low-IF receivers**

In 2006, the title of this code was amended to better describer the inclusion of 'low-IF' receivers as well as 'direct conversion' types. The subdivisions of this code are used, in conjunction with other W03-B01A codes as necessary, to represent receivers of homodyne, synchrodyne, 'zero-IF', or 'low-IF' type. Arrangements for suppression of offsets at the output of the mixer are also assigned W02-G03B4G. Direct digital conversion (DDC) in digital architecture broadcast receivers is not included here, being covered by W03-B07E. Direct conversion communications receivers are covered by W02-G03A8 codes and TV receivers of this type by W03-A01B6 codes.

## W03-B01A6A [2006]

#### **Zero-IF receivers**

This code is intended for direct conversion schemes in which the baseband information is centred on zero frequency.

## W03-B01A6C [2006]

#### Low-IF receivers

This code is intended for direct conversion schemes in which the baseband information is centred on a low frequency, e.g. of the same order as the baseband bandwidth itself.

#### W03-B01A7

[1992]

#### Local oscillator

See U23-A codes also for oscillator circuits.

#### W03-B01A8

[1997]

#### **Tuner constructional details**

(W03-B01A9, W03-B05B)

Covers construction of tuner per se, general internal constructional details of receiver being covered by W03-B05B, which was previously assigned in addition to W03-B01A9 to indicate the construction aspect. From 1997, W03-B05B has only been used for details affecting the design of the receiver, such as mountings, etc.

#### W03-B01A9

[1992]

## Other broadcast radio receiver tuner circuitry

Includes non-superheterodyne tuners. *TRF, homodyne* 

#### W03-B01B

[1992]

## Band scanning, synthesiser tuning, AFC

See also U25-J01 codes for band scanning, U25-J05 for AFC, U23-D01B codes for PLL synthesisers, and U23-F01 codes for 'direct types'.

## W03-B01B1

[1997]

#### Channel-storing arrangements

## W03-B01B1A

[1997]

## Based on stations receivable off-air

Signal strength, level

#### W03-B01B1C

[1997]

#### Based on channel listing

Includes use of information derived from RDS signals (search with W03-B08 for this aspect). Prior to 1997 see W03-B01B and W03-B02C5.

Alternative frequency, AF, program identification, PI

## W03-B01B1E [1997]

#### **Based on determined location**

Covers use of position information, e.g. input manually, or derived from navigation system data. Search with W06-A03A5 codes for use of GPS.

#### W03-B01B1G [2006]

## User control of channel storage

Includes re-ordering stored channels, deleting channels, forming 'favorites' lists and the like.

## W03-B01B3 [2007]

**Channel switching arrangements** 

## W03-B01B5 [1997]

Frequency control system per se

## W03-B01C [1992]

#### **Tuning and related displays**

Includes scales, illumination etc., and digital readout of received frequency. The use only of the tuning display to present other information is also included, e.g. for RDS or radio text (also assigned W03-B08 codes) or for DAB program guide (EPG) aspects (also assigned W03-B06). From 2011 novel aspects of broadcast radio receiver program guide reception and data handling are covered by W03-B08C5. (For EPG in TV receivers see W03-A13J).

## W03-B01D [2008]

#### **Multiple tuner aspects**

This code is assigned with other W03-B codes as appropriate and is intended to highlight the use of two or more tuners in a broadcast radio receiver. For novel tuner circuitry W03-B01A codes are also assigned, and for novel frequency or channel control aspects, W03-B01B codes.

Dual

#### W03-B02

#### IF amplifiers; Detectors; Stereo decoders

## W03-B02A [1992]

## Automatic gain control

Prior to 2006 this code was used with W03-B01A3 for RF AGC and W03-B02B for IF AGC. These topics are now covered solely by the subdivisions below.

IF, RF, AGC

#### W03-B02A1 [2006]

#### **Novel AGC characteristic**

Covers delayed AGC, or other specific characteristic. See U24-C01C1 for signal processing aspects to obtain a particular AGC characteristic.

## W03-B02A3 [2006]

#### **RF AGC**

Prior to 2006 this topic was covered by W03-B01A3 and W03-B02A.

#### W03-B02A5 [2006]

#### IF AGC

Prior to 2006 this topic was covered by W03-B02A and W03-B02B.

## W03-B02A9 [2006]

## Other broadcast radio receiver AGC aspects

## W03-B02B [1992]

#### **Broadcast receiver IF system**

From 2006, W03-B02B5 is introduced to separately highlight IF amplifiers, and IF AGC is covered by W03-B02A5 (previously coded as W03-B02A and W03-B02B).

#### W03-B02B1 [1992]

#### IF filter

See U25 codes for LC and active filters. Crystal, SAW, and ceramic filters are also coded in V06 (and U14-G for SAW devices).

## W03-B02B5 [2006]

### IF amplifier

Novel IF amplifier details are also assigned U24-G01D and other relevant amplifier codes. From 2006, IF AGC is covered by W03-B02A5, previously coded as W03-B02A and W03-B02B.

#### W03-B02C [1992]

**Demodulators, decoders** 

## W03-B02C1 [1992]

## **AM/FM demodulators**

See U23 codes for demodulator circuits also.

#### W03-B02C3 [1992]

# Stereophonic decoders and stereo separation control

From 2006, the title of this code is expanded to distinguish novel stereo decoders and automatic control of separation, e.g. by blending, whether performed within the decoder or in a subsequent stage. Where noise reduction is involved W02-G03B codes are also assigned.

Phase-lock loop, PLL, pilot tone detector, matrix circuit

W: Communications

## W03-B02C3A [1992]

# Automatic stereo switching and stereo separation control

This code covers switching between stereo and mono modes, e.g. in response to low signal strength, and automatic control of separation, e.g. by blending, whether performed within the decoder or in a subsequent stage including audio amplifiers. Receiver noise reduction aspects are also assigned W02-G03B codes, e.g. W02-G03B8. Separation control, mixing

## W03-B02C3C [2006]

## **Novel stereophonic decoder**

U23-P05 is also assigned.

## W03-B02C5 [1992]

## **Decoder for additional information**

Includes decoder e.g. for RDS signals, which is also assigned W03-B08 (assigned for all aspects of RDS and similar-system receivers). Prior to 1997, W03-B02C5 codes were used for inventions involving RDS-type decoders and their use in a broad sense. From 1997 only inventions strictly relating to the decoder per se and its operation have been coded in W03-B02C5. In all other cases, W03-B08 is assigned, together with other W03-B codes as appropriate.

Radio data system, station ID, traffic information, ARI, radio teletext

## W03-B02C5A\* [1992-2005]

## With storage function

\*This code is now discontinued. From 2006 this code is no longer assigned, the subject matter being transferred to W03-B08A1. W03-B02C5A remains valid for records prior to 2006, when it was assigned for arrangements to store received bulletins and the like, whether the storage facility was part of the decoder or external to it, additional codes in W04 being also applied depending on storage technology, such as W04-B12 codes for magnetic tape based storage, and W04-G01B codes for storage of audio information in e.g. RAM.

#### W03-B03

#### Car radios

Used in conjunction with other W03-B codes for specific features. For aerial preamplifiers search with W02-B08C5. (Previously coded in W02-B09, W03-B01 and W03-B03). In-car entertainment systems are covered by W03-G08 and systems including car radios in which the radio is not itself linked with the novel aspect are not assigned W03-B03.

Traffic information detector, diversity receiver, antitheft system

## W03-B03A [1992]

#### **Antitheft arrangements**

Includes mechanical aspects such as removable fascias, W03-B05 codes (for constructional details) being assigned as necessary.

## W03-B03A1 [1992]

#### **Electronic**

Includes radio forming part of vehicle alarm system which is also coded in X22-D and W05-B01 codes. Also coded in X22-X03 for general antitheft measures. For 'password' aspects search with T01-J08A and T01-J12C.

#### W03-B04 [1992]

## Audio amplifier and audio circuitry

This code covers audio stages of a broadcast radio receiver and includes details of audio amplifiers and associated circuitry, such as volume and tone controls, auxiliary inputs, and muting arrangements when used with W02-G03B1. Novel amplifier muting circuits are also coded in U24-C05C and gain control in general by U24-C codes. Audio amplifiers in general are covered by W03-C01 codes, and amplifiers in general by U24-G codes. These codes are also assigned as appropriate along with other W03-C codes such as W03-C03C for volume control and W03-C05 codes for tone control and equalizers.

## W03-B05 [1992]

#### **Constructional details**

(W03-B09)

Constructional details of electronic equipment in general are covered by V04-S and V04-T codes.

#### W03-B05A [1992]

## Casing, housing, mounting kit

(W03-B09)

Cabinet, sleeve, escutcheon, bracket, support

#### W03-B05B [1992]

#### Internal construction

(W03-B09)

Includes e.g. PCB or component mounting, etc.

## W03-B06 [2002]

## **Receiver for digital broadcasts**

(W02-K07C, W03-B09)

These codes are intended for broadcast receivers of digital radio signal formats such as DAB, DRM, and analogous systems. Systems aspects of DAB are covered by W02-D05C1 and W02-K07C for the OFDM aspect. Receivers employing digital architecture - for analogue or digital broadcast reception - are covered by W03-B07 codes, which may be assigned as well for digital broadcast receivers with digital architecture.

Digital audio broadcast, digital radio mondiale, digital AM, QAM

#### W03-B06A [2002]

#### Satellite radio broadcast receiver

(W03-A16A, W03-B09)

Prior to 2002, satellite receivers were assigned W03-A16A as well as W03-B09. W03-A16A will continue to be used for satellite radio reception from 'TV' satellites, but from 2002 will not be used for 'pure' radio satellite reception. Systems aspects of satellite radio are covered by W02-D05A and satellite TV by W02-F06A.

## W03-B06C [2002]

#### Internet broadcast receiver

(T01-H07C5E, W01-A06B7, W03-B09)

This code is intended for 'internet radio' receiving arrangements, which may be part of a receiver, accessory equipment, or wholly contained within a PC as hardware or software.

#### W03-B06E [2012]

## Terrestrial digital broadcast radio receiver

This code covers receivers of digital radio broadcasts from terrestrial transmitters, such as digital audio broadcast (DAB) or digital radio mondiale (DRM) receivers. Note that 'DRM' in the sense of 'digital rights management' is not included and is covered by W03-B06J. Prior to 2012 W03-B06 was assigned for terrestrial digital radio broadcast receivers. Receivers for digital satellite radio are covered by W03-B06A.

#### W03-B06E1 [2012]

# Terrestrial digital broadcast radio receiver with analog reception capability

This code covers receivers of digital radio broadcasts from terrestrial transmitters, such as DAB or DRM, which are also capable of receiving analog broadcasts, e.g. in AM or FM bands. TV receivers capable of receiving analog and digital broadcasts are covered by W03-A11G1.

## W03-B06J [2012]

# Digital rights management, copy protection and access control

This code covers digital rights management aspects of digital sound broadcast receivers, including copy protection and access-restriction. Note that when these topics arise in interactive systems, e.g. 'audio on demand', W03-A16C3 codes take precedence and are assigned instead of W03-B06J (with W03-A16C5C in the case of audio-based systems).

#### W03-B07 [2002]

## Digital and hybrid broadcast receiver architecture

(W03-B09)

This code is assigned for receivers - of signals with analogue or digital modulation - which are implemented using DSP techniques in whole or in part. The codes are used in conjunction with other W03-B codes as necessary where there are direct equivalents in analogue receivers, in particular for RF amplifiers, oscillators, IF stages and demodulators. Corresponding digital techniques for communications and TV receivers are covered by W02-G03K and W03-A11K codes. Receivers for digital broadcasts, such as DAB, are covered by W03-B06 codes, and may also be assigned W03-B07 codes if the receiver itself employs a digital, or part digital, architecture.

## W03-B07A [2002]

#### Characterised by usage of DSP

(W03-B09)

These codes are used to distinguish between different levels of DSP being applied to the signal path in the receiver. As such, they do not normally represent novel digital processing aspects, which are conveyed by use of other W03-B07 codes. DSP in general is covered by T01-J08A2, T01-J08B and U22-G codes depending on specific aspects.

#### W03-B07A1 [2002]

# With baseband digital signal processing only

(W03-B09)

This code covers receivers with a digital signal processing path **after** the conversion to baseband.

## W03-B07A3 [2002]

# With baseband and IF digital signal processing only

(W03-B09)

This code covers receivers with DSP in IF, demodulator, and baseband stages.

W: Communications

## W03-B07A5 [2002]

## With digitising of RF spectrum

(W03-B09)

This code covers receivers with digitising of the whole signal processing path, except for the possible use of analogue RF amplifiers.

## W03-B07A9 [2002]

## Other use of DSP in digital broadcast radio receivers

(W03-B09)

## W03-B07C [2002]

#### **AD** conversion

Novel aspects of AD converters and AD conversion are covered by U21-A03 codes.

## W03-B07E [2002]

## Digital mixing and direct digital conversion

(W03-B09) DDC

## W03-B07G [2002]

## **Filtering**

(W03-B09)

Novel digital filters are also assigned U22-G01 codes, and T01-J08B when the emphasis is on computing aspects.

## W03-B07J [2006]

## **Transform implementation**

(W03-B09)

DSP-based transform implementation is covered by U22-G03E1A and computer data processing aspects in general by T01-J04B1.

## W03-B07L [2006]

## **DA** conversion

(W03-B09)

Novel aspects of DA converters and DA conversion are covered by U21-A02 codes.

## W03-B07X [2002]

# Other digital broadcast radio receiver aspects

(W03-B09)

## W03-B08 [1997]

## Receiving additional information

(W03-B02C5, W03-B09)

From 2011, the title of this code has been changed and its scope expanded to include arrangements for receiving 'additional information' such as text and electronic program guide (EPG) information transmitted with digital audio broadcast (DAB) signals, RDS information and emergency broadcast messages. Between 1997 and 2010 this code was used for all aspects of receivers for RDS and similar text-based systems with W03-B02C5 codes being assigned for inventions involving RDS-type decoders. Before 1997 W03-B02C5 was assigned in a broader sense to indicate receivers for RDS and similar systems. In all cases other W03-B codes are also assigned as appropriate.

## W03-B08A [2006]

# Storage for additional information and programme content

(W03-B02C5A)

This code, which replaced W03-B02C5A in 2006, is intended for buffer storage of either additional information (as defined above) for subsequent replay, or programme content, e.g. content missed by the reproduction of a traffic message, or due to channel changing. W03-B08A1 and W03-B08A5 indicate what is stored while W03-B08A7 is assigned when the storage arrangement itself is novel. The storage of messages or content may occur within the broadcast receiver, or within external equipment which is connected to it. For both of the specific subdivisions below. W04 codes are also assigned as appropriate for the technology used to store the information. Full-scale recording within a receiver - e.g. of an extended section of a broadcast program - is not included, and is regarded as a 'radio-recorder' combination and covered by W03-B codes, W03-G03A and W04 codes as appropriate.

#### W03-B08A1 [2006]

#### Storage for additional information

(W03-B02C5, W03-B09)

Covers arrangements for storing traffic bulletins (e.g. TMC announcements, emergency broadcasts, or other information) in text, audio or other form, for replay as desired.

## W03-B08A5 [2006]

## Storage for programme content

(W03-B02C5, W03-B09)

Covers arrangements for storing a limited amount of program content. Includes arrangement for storing e.g. the part of a radio program interrupted by a traffic announcement in RDS or similar systems, so that listening can resume from the time of the interruption. The content stored may be a radio programme received by the broadcast receiver itself, or external sources such as a CD or DVD player, a TV receiver, etc.

#### W03-B08A7 [2011]

## Novel aspects of storage and memory

(W03-B02C5, W03-B09)

Covers novel arrangements such as memory circuits etc.

## W03-B08C [2011]

## Characterised by type of additional information

These codes are assigned to indicate the type of additional information as it is actually received. W03-B08C8 is assigned to denote the conversion of the information into another form.

#### W03-B08C1 [2011]

### **Visual information**

Program guide reception is covered by W03-B08C5 which takes precedence over W03-B08C1 codes as EPG information is assumed to be in the form of text and/or graphics unless other codes indicate another method of presenting it. Prior to 2011 W03-B01C was used to denote EPG presentation but from 2011 will only be assigned for novel display-related aspects.

### W03-B08C1A [2011]

**Text** 

## W03-B08C1C [2011]

## Visual information

This code covers the reception of still or moving images only as 'additional information' transmitted with a radio broadcast. Reception of normal TV signals is covered by W03-A codes and is not included here.

## W03-B08C3 [2011]

## **Audio information**

Includes reception of additional information in the form of spoken announcements.

## W03-B08C4 [2012]

#### Weather information

This code covers reception of meteorological information. When disaster warning or emergency aspects are involved W03-B08C7 ('Emergency broadcasts') is also assigned.

## W03-B08C5 [2011]

# Program guide systems (EPG) and content descriptions

This code covers program guide information and also 'now playing' information describing e.g. a musical piece being played, or other associated information. This code takes precedence over W03-B08C1A, i.e. the information is assumed to be in text form unless other codes indicate another method of presenting it. EPG aspects of DAB receivers are indicated by assignment of W03-B06 also.

## W03-B08C6 [2012]

#### **Transport-related information**

This code covers reception of information related to transport, including road traffic information concerning congestion.

## W03-B08C7 [2011]

#### **Emergency broadcasts**

Codes indicating 'disaster-related' alarms in W05-B08 are also assigned as appropriate. Reception of emergency broadcast messages in TV receivers is covered by W03-A18A5J.

Adverse weather, avalanche, bush fire, earthquake, eruption, flooding, forest fire, hurricane, landslide, landslip, mudslide, terrorist attack, tidal wave, tornado, tsunami, typhoon, volcano.

## W03-B08C8 [2011]

## **Transforming information type**

This code is used with other W03-B08C codes indicating the original form of additional information and denotes its conversion into another form, e.g. from text to audible form or vice versa. W04-V04A6 and W04-V04C1 are also respectively assigned for speech-to-text or text-to-speech conversion when necessary.

#### W03-B08C9 [2011]

## Other information type

#### W03-B09

#### Other broadcast radio receiver aspects

This code was used for digital receivers prior to 2002, now assigned W03-B07 codes, and for testing, control and interfacing aspects until 2010, which are now assigned W03-B10 codes.

Power supply

## W03-B10 [2010]

## Broadcast radio receiver testing, control and interfacing

(W02-C05B; W03-B)

These codes cover testing of broadcast radio receivers and also control in a general sense, rather than control of a specific parameter as part of normal receiver operation.

## W03-B10A [2010]

## **Broadcast radio receiver testing**

(W02-C05B; W03-B)

Testing of a specific part of a broadcast receiver is indicated by co-assignment of the appropriate W03-B code. Testing of broadcast radio **systems** is covered by W02-D04 codes.

## W03-B10A1 [2010]

## **Broadcast radio receiver self-testing**

(W02-C05B; W03-B)

Includes monitoring arrangements for detecting e.g. low battery or fault condition.

## W03-B10A5 [2010]

## Broadcast radio receiver testing using external equipment

(W02-C05B; W03-B)

Includes monitoring and testing using external test equipment, e.g. for production line testing or repair.

## W03-B10C [2010]

#### **Broadcast radio receiver control**

(W03-B09)

This code covers control of broadcast radio receivers in a general sense, and not control of a specific parameter as part of normal receiver operation, such as automatic frequency control (W03-B01B5) or automatic gain control (W03-B02A).

## W03-B10E [2010]

#### **Broadcast radio receiver interfacing**

(W03-B09)

This code covers arrangements for interfacing with broadcast radio receivers including hardware and software aspects. Interfacing with TV receivers is covered by W03-A18C codes and with AV equipment in general by W03-G05C codes.

## W03-B10R [2012]

## Broadcast radio receiver audience research details

Broadcast system aspects of audience research are covered by W02-D04B. TV receiver audience research aspects are covered by W03-A18R.

#### W03-B10X [2010]

# Other broadcast radio receiver control and interfacing aspects

(W03-B09)

#### W03-C

## Audio amplifiers; Tone and volume control; Balancing

Monaural, stereophonic amplifier, preamplifier power amplifier, output stage

#### W03-C01 [1992]

#### Audio amplifier per se

See U24-G codes for circuitry details.

#### W03-C01A [1992]

#### **Preamplifier**

Also coded in U24-G01C.

## W03-C01C [1992]

#### Power amplifier

Also coded in U24-G01B1.

## W03-C01C1 [2005]

#### Amplifier integrated with loudspeaker(s)

For wireless loudspeaker systems W03-G05C5C is also assigned.

Powered speaker

### W03-C01G [2005]

## **Digital amplifier**

Covers amplifiers generally of class-D type, for which U24-G01B1 and U24-G02E are assigned also.

## W03-C01G1 [2005]

Digital input

#### W03-C01G3 [2005]

Digital input and output

## W03-C03 [1992]

Volume and balance control

## W03-C03A [1992]

#### **Balance control**

See W04-R01C codes also for stereophonic systems.

## W03-C03C [2005]

#### Volume control

U24-C codes are also assigned for novel aspects of automatic and manual gain control.

AGC

## W03-C05 [1992]

## Tone controls and equalisers

See U25-F05 and U24-C05D codes for further circuit details.

Fader

W03-C05A [1992]

**Tone controls** 

W03-C05C [1992]

#### **Analogue equalizer circuits**

This code includes analogue graphic equalizers. Prior to 1992, audio equalizing was also routinely coded in W04-G, which is now only assigned for general applications.

## W03-C05E [2005]

## **Digital EQ**

U22-G codes are also assigned for details of digital filters and DSP.

## W03-C05E1 [2005]

## Adaptive EQ

Includes sensing and matching character of speakers. Adaptive digital filters are also assigned U22-G01A5 codes.

## W03-C07 [1992]

## **Constructional details**

See V04-S and V04T codes also.

W03-C09 [1992]

Other audio amplifier details

## W03-G [1992]

## General aspects of audio-video equipment

(W03-X)

Codes in this section are used for general aspects only, and not for instances for which a **single** specific code exists elsewhere (e.g. in W03 or W04).

## W03-G01 [1992]

#### **Constructional details**

(W03-X)

W03-G01A [1992]

Constructional details of equipment per se

W03-X)

W03-G01A1 [1992]

Internal construction

(W03-X)

W03-G01A5 [1992]

## Casings/housings

(W03-X)

Front panel, marking, legend

W03-G01C [1992]

Mountings, supports, stands

(W03-X)

W03-G02 [1992]

## **Power supplies**

(W03-X)

See U24 codes also as appropriate.

W03-G02A [2005]

**Battery power supply** 

W03-G02A1 [2005]

#### Battery per se

Novel details of batteries are covered by X16 codes.

W03-G02A3 [2005]

**Battery supply circuitry** 

W03-G02A5 [2005]

**Battery charging** 

W03-G02C [2005]

Mains power supply

W03-G03 [1992]

**Combination equipment** 

(W03-X)

W03-G03A [1992]

#### Contained in one housing

(W03-X)

Radio-cassette player, radio-TV receiver, clock-radio

## W03-G03A1 [2006]

## Media centre PC and related equipment

This code is assigned for multimedia PC systems designed to perform the functions of several AV equipment units, e.g. TV set, CD/DVD recorder/player, radio receiver, etc. See also T01 codes for specific computing aspects, such as multimedia computer systems in T01-J30 codes.

## W03-G03C [1992]

## Mountable in rack, interlocking apparatus

(W03-X)

Stacked combination hi-fi system

## W03-G03H [2007]

## Home theatre equipment

Covers home theatre applications. Novel details of audio processing circuitry, surround sound and interfacing are assigned e.g. W03-C, W04-R and W03-G05C codes respectively.

#### W03-G04 [2006]

## Portable AV equipment

#### W03-G05 [1992]

## Remote control, general control, general displays and interconnection

(W03-X)

From 2006 the title and scope of this code is expanded to include control and display aspects of AV equipment in general, these topics being respectively covered in W03-G05E and W03-G05G codes.

#### W03-G05A [1992]

## Remote control for audio video apparatus

(W03-X

Remote control specific to TV receivers is covered by W03-A02C codes, and for recording equipment by W04-E04A. W05-D codes cover remote control in general.

#### W03-G05A1 [1997]

### **Coding and transmission format**

## W03-G05A1A [1997]

#### Universal type remote controller

Includes 'learning' types.

#### W03-G05A5 [1997]

#### Combined with additional features

Includes combination with e.g. telephone (see W01-C codes also, e.g. W01-C05B5A, or W01-C01P codes), and remote audio or video display facility. Includes provision of dedicated display, e.g. for indicating control functions.

## W03-G05A6 [2006]

#### In conjunction with on-screen display

This code includes the application of GUI techniques to control of AV equipment in general. When specific to remote control of a TV set W03-A02C5A is assigned instead.

## W03-G05A7 [1997]

#### Locator system

Covers 'transponder' arrangement producing e.g. audible tone in response to signal emitted from main equipment.

## W03-G05A8 [2009]

## AV equipment remote control repeaters and extenders

This code covers arrangements for extending the range of remote control signals transmitted to AV equipment such as 'remote control extenders', usually based on repeaters. Novel aspects of repeaters are also assigned codes depending on technology, e.g. W02-C04A5 for optical repeaters and W02-G05C for radio types. Similar arrangements for remote control applications other than AV equipment are covered by W05-D08R. Free-space, IR, relay, RF, room

#### W03-G05C [1997]

## Interconnection of audio/video equipment

See also appropriate codes for communication system, e.g. W01-A06 codes for networks. HAVI, Home Audio Video Interface, HDMI

## W03-G05C1 [1997]

#### AV home network

Novel network aspects are also assigned W01-A06 codes

DLNA, HANA, Universal Plug and Play, UPnP

## W03-G05C1A [2013]

#### **Networked media storage**

Covers centralised storage of e.g. audio or video content that can be accessed over a home AV network. Novel recording equipment aspects are covered in T03 and W04 as appropriate. Remote servers for content storage in on-demand broadcast systems are not included and are covered by W02-F10K.

Home AV server, network drive

#### W03-G05C1C [2013]

## **Network communication aspects**

Covers novel aspects of communication between AV equipment units over a home network. Novel aspects of network communication are also assigned W01-A06 codes. Home automation (HA) networks for control of heating, lighting and domestic appliances are covered by W05-D07A but that code may be assigned with W03-G05C1 when both AV equipment and other equipment in the home are connected to the same network.

#### W03-G05C3 [2012]

## High definition multimedia interface (HDMI)

This code covers interfacing using high definition multimedia interface (HDMI) standard and is subdivided into novel aspects of HDMI (W03-G05C5A), such as circuitry, cables or connectors, and inventions where the use of HDMI is significant (W03-G05C5C).

#### W03-G05C3A [2012]

### **Novel aspects of HDMI**

This code covers novel aspects of HDMI, such as circuitry, cables or connectors. Specific details of the novelty are indicated by assignment of additional codes, e.g. W03-G07A for a novel HDMI cable.

#### W03-G05C3C [2012]

#### **Applications of HDMI**

This code covers inventions where the use of HDMI is significant. It is not assigned in cases where a number of other types of interface are equally applicable.

W03-G05C5 [1997]

'Dedicated link' systems

W03-G05C5A [1997]

**Cordless headphones** 

W03-G05C5C [2005]

Wireless speaker systems

## W03-G05E [2006]

#### **General AV equipment control**

This code covers control systems of general application to AV equipment, but not remote control, which is covered by W03-G05A codes.

#### W03-G05E1 [2006]

Menu-based AV equipment control

#### W03-G05G [2006]

## **General AV equipment operation display**

These codes are intended for display aspects applicable to AV equipment in general. For display aspects specific to TV sets and recording equipment see W03-A and W04-J03 codes respectively.

## W03-G05G1 [2006]

## **Dedicated display for AV equipment**

Dedicated displays forming part of recording and playback equipment are covered by W04-J03A.

### W03-G05G5 [2006]

## On-screen display for AV equipment

OSD generated within a TV set is covered by W03-A13G and within recording equipment by W04-J03C.

#### W03-G06 [2006]

## AV equipment requiring operation with PC

Includes sound, TV and video recording/editing cards installed in a PC or external devices with e.g. USB interface which operate using a PC processor. See also T01 for computing aspects.

## W03-G07 [1992]

Connectors, leads, plugs, sockets, components in general

W03-G07A [1992]

Leads and cables, connectors

(W03-X)

#### W03-G07C [1992]

#### **Components in general**

(W03-X)

## W03-G08 [1992]

## AV equipment used in a vehicle

(W03-X)

The title of this code has been changed to better reflect its actual use. W03-G08 includes in-car entertainment systems, for which X22-J13 is also assigned, and AV equipment used in any other kind of vehicle for which other codes are also assigned as appropriate, such as W06-B01C7 for aircraft inflight entertainment. Specific W03 and W04 codes are also assigned depending on equipment type. Note that car radios with no other aspect are not included here and are covered by W03-B03 codes.

## W03-G09 [1992]

# Other general audio-video equipment aspects

(W03-X)

Prior to 2006 this code included recycling and packaging aspects. This topic is now covered in W03-G10.

## W03-G10 [2006]

# Manufacturing, recycling and packaging of AV equipment

(W03-X)

Coves all general audio-video equipment, including recording equipment (see W04 for other aspects). Manufacturing, recycling and packaging specifically for TV receivers is covered in W03-A19. For manufacturing, recycling and packaging aspects of general electrical equipment see V04-X01 codes.

W03-G10A [2006]

**Manufacturing AV equipment** 

W03-G10C [2006]

**Recycling AV equipment** 

W03-G10G [2006]

**Packaging for AV equipment** 

#### W03-X

Other audio and video equipment details

## W04: Audio/Visual Recording and Systems

Prior to 2002 this class covered all aspects of audio/visual recording and reproduction (covered chiefly by W04-A to W04-L codes). Signal processing aspects were generally coded in W04 only while details of record carriers and headcarrier drive systems were coded in both T03 (Data recording) and W04. From 2002, with the exception of mechanical recording methods (W04-A), W04 will only cover applications, formatting, signal processing and constructional aspects specific to audio/visual recording. All carrier and mechanical aspects of recording and reproduction are coded in T03 only. Accordingly from 2002 a large number of codes in W04-B, W04-C, W04-D, W04-E, and W04-L have been discontinued. Additionally, from 2006 a number of general aspects of audio-video equipment are covered in W03-G, such as manufacturing, recycling and packaging in W03-G10 and portable equipment in W03-G04. As well as the above, W04 covers the following material:-

- (1) General audio signal processing and sound mixing (W04-G codes)
- (2) Video cameras, TV studio and special effects equipment (W04-M/N codes)
- (3) General video signal processing (W04-P codes)
- (4) Projection TV and analogous systems (W04-Q codes)
- (5) Stereophonic systems, loudspeaker enclosures, public address (W04-R/S/T codes)
- (6) Electronic musical instruments (W04-U codes)
- (7) Sound analysis, synthesis, speech coding, audio coding, and antiphase sound cancelling (W04-V codes)
- (8) Educational and sports equipment, games, amusements (W04-W/X codes)
- (9) Audio and video aspects of multimedia
- (10) Hearing aids (W04-Y codes)

From 1997 W04-E20 codes were introduced to highlight recording equipment operating mode. These codes are intended to be used in conjunction with any other W04 codes relating to recording, to indicate aspects such as time lapse, reverse playback, etc.

#### W04-A

## **Recording using mechanical methods**

Gramophone

## W04-A01

#### **Record carriers; Cleaning**

Brush, fluid, liquid, cleaning pad, anti-static 'gun', groove, vinyl

#### W04-A02

#### Heads; Record carrier positioning

See V06-B01 also for head details.

Pick-up, cartridge, magnetic, moving coil, piezoelectric, stylus, diamond, turntable, mat, motor drive, speed selector/control, autochanger

#### W04-A03

#### Head positioning, i.e. tone arms

Parallel, tangential, radial, tracking, cueing arm, raising, lowering, track selection

#### W04-A09

## Other mechanical recording aspects

Includes integral 'loudspeaker' cone for prerecorded message reproduction in e.g. toy or warning device.

#### W04-B

## **Recording using magnetic record carriers**

Prior to 2002 record carrier materials and carrier manufacture were **not** included, and were assigned T03-A codes only. From 2002 **only** applications, formatting, and signal processing aspects of audio/visual magnetic recording are included in W04-B.

Equalising

## W04-B01

#### Recording formats; Re-recording

For recording format, emphasis is on physical disposition of tracks, see W04-F01 and W04-G01 for signal transformation aspects.

#### W04-B01A

#### [1992]

#### **Recording formats**

Channel, helical, slant, slope, parallel, guard band,

#### W04-B01C\*

#### [1992-2005]

#### Re-recording, anti-copying

\*This code is now discontinued. Since 2006 hardware aspects of anti-copying have been covered in T03-H07 while signal processing aspects are covered in W04-F01L.

#### W04-B01C1\*

## [1992-2005]

## Preventing re-recording of signal

\*This code is now discontinued.

#### W04-B01C1A\*

[1992-2005]

## By signal modification or additional recorded data

\*This code is now discontinued. *Guard* 

## W04-B01C3\* [1992-2004]

#### Re-recording

\*This code is now discontinued and since 2005 all duplication for production of pre-recorded tapes or disks is covered in T03-B07B. See W04-H05A for dubbing.

Сору

## W04-B02\*

[1980-2001]

## Audio/video heads and head cleaning

\*This code is now discontinued and since 2002 this subject matter is assigned T03-A03 and T03-A04 codes only. The codes W04-B02A and W04-B02C remain valid and fully searchable for records prior to 2002.

Core, gap, thin-film, ferromagnetic, ferrite, glass, coil

#### W04-B02A\*

[1992-2001]

#### Audio/video head

\*This code is now discontinued and since 2002 magnetic heads have been assigned T03-A03 codes only, and head manufacture has been covered by T03-A04A codes.

## W04-B02C\*

[1992-2001]

### Cleaning and demagnetisation of heads

\*This code is now discontinued. Prior to 2002, search with T03-A04B codes to discriminate particular aspects e.g. T03-A04B1 for demagnetising (also coded in V02-D); T03-A04B3B and T03-N03 for cleaning cassette.

## W04-B03\*

[1980-2001]

#### **Head positioning**

\*This code is now discontinued and since 2002 the subject matter previously coded here has been covered by T03-A05 codes only. The codes in this sub-group remain valid and fully searchable for records prior to 2002.

Drive, motor, angle, step, track selecting/aligning

#### W04-B03A\*

[1980-2001]

#### For disks or drums

\*This code is now discontinued.

### W04-B03B\*

[1980-2001]

#### For tape

\*This code is now discontinued. Prior to 2002 synchronisation with tape movement was indicated by co-assignment of W04-E10.

#### W04-B03B1\*

[1992-2001]

#### For helical scan

\*This code is now discontinued. Prior to 1992, this topic was indicated by assignment of W04-E01A with W04-B03B. From 2002, T03-A05D codes alone are assigned for helical scan head positioning, including details of the head drum itself.

Rotating drum

#### W04-B03B1A\*

[1992-2001]

## Dynamic adjustment of head position

\*This code is now discontinued. Prior to 2002 T03-A05A1 codes were also assigned for this topic which includes speed control, track following, alignment, and also adjusting elements themselves. (See V06-M06D for piezoelectric elements). Since 2002 T03-A05A1 codes have been assigned exclusively for this subject matter.

Tracking, bimorph

## W04-B03B1C\*

[1992-2001]

#### Head rotary drive per se

\*This code is now discontinued, but prior to 2002 it included the motor itself and drive components.

## W04-B04\*

[1980-2001]

### **Record carrier positioning**

\*This code is now discontinued and from 2002 the subject matter previously coded in this sub-group is covered by T03 codes only. W04-B04 codes remain valid and fully searchable for records prior to 2002.

Cassette, cartridge, load, eject, motor, drive

## W04-B04A\*

[1980-2001]

## For disks or drums

\*This code is now discontinued and from 2002 this subject matter is covered by T03-F codes only. W04-B04A remains valid and fully searchable for records prior to 2002 and included housings in which the carrier is driven during normal operation. W04-E02A codes were also assigned for this topic between 1992 and 2001.

### W04-B04B\*

[1980-2001]

#### For tape

\*This code is now discontinued and since 2002 this subject matter has been coded in T03-E only. The codes W04-B04B1 to W04-B04B7A remain valid and fully searchable for records prior to 2002. For synchronization with head movement, W04-E10 was also assigned.

#### W04-B04B1\*

[1992-2001]

### **Tape containers**

\*This code is now discontinued. For cassettes it was assigned with W04-E02B1 codes and T03-H01B codes but since 2002 only T03-H01B codes have been used to denote this subject matter.

#### W04-B04B3\*

[1992-2001]

### Tape drive system

\*This code is now discontinued. Tape drive systems were also assigned T03-E codes which are now used alone for this topic.

#### W04-B04B3A\*

[1992-2001]

## **Tape drive components**

\*This code is now discontinued.

#### W04-B04B3C\*

[1992-2001]

#### Tape speed control

\*This code is now discontinued. Prior to 2002, combined head/tape speed control was also assigned W04-B03B1A and W04-E10.

## W04-B04B5\*

[1992-2001]

#### Tape drive mode control

\*This code is now discontinued.

#### W04-B04B5A\*

[1992-2001]

## Automatic control of operating mode\*

\*This code is now discontinued and from 2002 this subject matter is coded in T03-E05A or its subdivisions only.

Autostop, blank, space, gap, leader

#### W04-B04B5C\*

[1992-2001]

#### Manual control of operating mode

\*This code is now discontinued and since 2002 this subject matter, which includes switches, operating keys etc., is covered by T03-E05B alone.

#### W04-B04B6\*

[1992-2001]

## Tape cassette loading and changing

\*This code is now discontinued and since 2002 this subject matter has been covered by T03-E01B or its subdivisions only.

#### W04-B04B7\*

[1992-2001]

### Tape looping and threading

\*This code is now discontinued and since 2002 this subject matter has been covered by T03-E01C only.

#### W04-B04B7A\*

[1992-2001]

#### Looping/threading for helical-scan tape

\*This code is now discontinued and since 2002 this subject matter has been covered by T03-E01C1 and T03-N02.

#### W04-B10

[1987]

#### Video tape recorder

Prior to 1992, this code was only used for VTR details which were not completely covered by other W04-B codes. Since 1992 W04-B10 codes have been applied to **all** aspects of VTRs, and are intended to provide broad groupings of subject matter. Other W04 codes should be used in conjunction to provide more detail.

#### W04-B10A

[1992]

## Heads, head and tape transport

Includes recording formats, for which W04-B01A is also assigned. (Prior to 2002 all W04-B01 to W04-B04 codes were assigned with W04-B10A). Since 2002 this code has been used in conjunction with T03-A and T03-E codes to denote the VTR application for inventions relating to heads, head movement, and tape transport.

#### W04-B10B

[1992]

#### Signal processing

For full details of signal processing see W04-F codes also. (for audio signal processing aspects, search with W04-G01 codes).

#### W04-B10C

[1992]

## Control, power supplies, interfacing

For remote control or control or programming search with W04-E04 codes. For editing and indexing aspects search with W04-H codes, and for testing/monitoring, W04-J codes).

#### W04-B10D

[1992]

#### Construction

Also assigned W04-L05 codes.

## W04-B10G

[1992]

#### Digital video tape recorder

**DVTR** 

#### W04-B10K

[1992]

### **Dual cassette deck VTR**

## W04-B12 [1992]

#### Audio tape recorder

Codes in this section are assigned for **all** aspects of audio tape recorders, in conjunction with other W04 codes as appropriate.

## W04-B12A [1992]

## Heads, head and tape transport

Includes recording formats (i.e. scope of this code is that of W04-B01 to W04-B04 codes).

## W04-B12B [1992]

Signal processing

## W04-B12C [1992]

## Control, power supplies, interfacing

For remote control or programming see W04-E04 codes also. For editing and indexing aspects search with W04-H codes and for testing monitoring, W04-J codes.

#### W04-B12D [1992]

#### Construction

Also assigned W04-L05 codes.

## W04-B12G [1992]

## Digital audio tape recorder

DAT, R-DAT

#### W04-B12H [1992]

#### Miniature audio tape recorder

Includes 'personal stereo' type of equipment - with or without recording facility.

#### W04-B12J [1992]

**Dictation recorder** 

## W04-B12K [1992]

**Dual cassette-deck audio tape recorder** 

## W04-B14 [1992]

## Magnetic audio and video disk equipment

From 1997 the scope of this code is expanded to encompass magnetic disk systems for audio recording also, and hard disk systems for both audio and video.

## W04-B14A [1992]

#### Flexible disk system

For use within electronic still picture camera see also W04-M01B1A. Digital cameras using hard disks for picture storage are assigned W04-B14C3.

## W04-B14B\* [1992-2004]

## Playback unit for recorded disk

\*This code is now discontinued and since 2005 systems for playback of flexible disks used for storing pictures from digital cameras are covered in W04-B14A.

## W04-B14C [1997]

#### Hard disk system

Hard disk systems purely for computer data storage are covered in T03 only, e.g. T03-A08A1C or T03-A08A5. For hard disk system storing information in an on-demand entertainment system, see W04-K05A and W02-F10K also. For editing aspects, search with W04-H05 codes.

## W04-B14C1 [1997]

Audio hard disk system

## W04-B14C3 [1997]

Video hard disk system

## W04-B16 [1992]

## Cassette library system

Also coded in T03-N03 and T03-Q01.

#### W04-C

#### **Recording using optical methods**

W04-C10 codes are assigned as appropriate to indicate equipment type.

From 2002 **only** applications, formatting, and signal processing aspects of audio/visual optical recording are included in W04-C. From 2002, optical record carriers and head/record carrier drive arrangements are assigned T03-B codes **only**. Magneto-optical recording is **not** included and is covered by W04-D codes.

Disk, compact, digital, laser

## W04-C01\* [1980-2001]

#### Record carriers

\*This code is now discontinued and since 2002 this subject matter has been covered in T03-B01 only. W04-C01A to W04-C01E remain valid and fully searchable for records prior to 2002.

WORM, DRAW

#### W04-C01A\* [1992-2001]

#### Record carrier substrate

\*This code is now discontinued. Mould, transparent resin, PMMA

## W04-C01B\*

## **Light-sensitive layers**

\*This code is now discontinued.

Photochromic, ablation, deformation, interaction, phase transition, combination, reversible, multilevel, segregation

#### W04-C01C\*

[1992-2001]

[1992-2001]

## Protective and (anti-) reflective layers

\*This code is now discontinued.

#### W04-C01E\*

[1992-2001]

#### **Record carrier manufacture**

\*This code is now discontinued.

#### W04-C01F\*

[1992-2006]

## Physical recording format aspects

\*This code is now discontinued. Since 2007 this topic can be searched using T03-B01F codes in conjunction with T03-B01D1A, T03-B01D3A or T03-B01D5A as appropriate. See W04-C05 for signal aspects of recording formats.

## W04-C02\*

[1980-2001]

#### Heads

\*This code is now discontinued. From 2002 this subject matter is covered by T03-B02B codes only. W04-C02 and its subdivisions remain valid and fully searchable for records prior to 2002.

#### W04-C02A\*

[1992-2001]

#### Light source and photodetector

\*This code is now discontinued.

## W04-C02A1\*

[1992-2001]

#### **Light source**

\*This code is now discontinued. Prior to 2002 it included semiconductor lasers, full details of which are highlighted by U12-A01B codes and corresponding codes in V08, which also includes other laser types.

## W04-C02A5\*

[1992-2001]

#### **Photodetector**

\*This code is now discontinued. Prior to 2002 it included photodetectors for reading from a carrier and for focus detection. U12-A02B codes, e.g. U12-A02B2A for APD and other types of photodiode, are assigned for this topic.

#### W04-C02B\*

[1992-2001]

### Lens and optical system

\*This code is now discontinued.

Objective, beam splitter, polarizer

#### W04-C02C\*

[1992-2001]

#### **Head cleaning**

\*This code is now discontinued and this topic, including use of dummy cleaning carriers, is covered by T03-B02B8 only.

#### W04-C03\*

[1980-2001]

#### Head positioning (incl. focusing)

\*This code is now discontinued and from 2002 this subject matter is now covered by T03-B02A codes only. The codes W04-C03A to W04-C03H remain valid and fully searchable for records prior to 2002 when W04-C10 codes enabled a distinction to be made between head positioning for disks, tapes, etc.

#### W04-C03A\*

[1992-2001]

## For focusing

\*This code is now discontinued.

Focus detection, servo, objective positioning, voice coil motor, VCM

#### W04-C03B\*

[1992-2001]

## For track selection and alignment

\*This code is now discontinued. Prior to 2002 it included topics such as linear motors (see V06-M codes also), and track access/tracking servo systems.

#### W04-C03D\*

[1992-2001]

## **Control circuit for light source**

\*This code is now discontinued and from 2002 is covered by T03-B02A7 only. Laser diode bias control is also assigned U12-A01B4 and corresponding codes in V08.

## W04-C03H\*

[1997-2001]

#### Head positioning for double-sided disk

\*This code is now discontinued but prior to 2002 it included dual-head systems and arrangements for moving a single head to the other side of a disk.

#### W04-C04\*

[1980-2001]

## **Record carrier positioning**

\*This code is now discontinued. From 2002 - 2004 this subject matter was assigned T03-B03 codes, while since 2005 T03-B10 codes have been used, in all cases T03-E and T03-F codes being also assigned as appropriate. The codes W04-C04A to W04-C04B remain valid and fully searchable for records prior to 2002.

Turntable, loading device, drive, motor

#### W04-C04A\*

[1992-2001]

#### **Record carrier container**

\*This code is now discontinued but prior to 2002 it covered containers in which carriers are driven, for which W04-E02 codes were also assigned to indicate further details. Storage containers are covered by W04-L01 codes.

#### W04-C04B\*

[1992-2001]

#### **Record carrier drive**

\*This code is now discontinued. Prior to 2002 it was assigned with W04-E02 codes for further details, e.g. W04-E02A5 codes for disk changing.

#### W04-C05

[1992]

## Signal recording format and methods

From 2002 this code is only used for recording formats and methods specific to audio/video. General optical recording formats and methods are coded in T03-B05. Covers arrangement of data only, physical aspects such as hard sectoring of data, are covered by T03-B01F from 2007. Prior to 2007 this topic was coded in W04-C01F.

#### W04-C06

[1992]

## Reading and writing circuitry

From 2002 this code is only used for reading and writing circuitry with aspects relevant to audio/video recording. General optical reading and writing circuitry is coded in T03-B06.

This code is used with W04-F or W04-G01 codes if audio/video processing is significant.

#### W04-C10

[1992]

#### Optical recorder/player

Codes in this section are applied for **any** aspect of optical recording/playing equipment.

#### W04-C10A

[1992]

Disk

CD, CDi, interactive

W04-C10A1

[1992]

Audio e.g. 'CD player'

W04-C10A1K

[2005]

#### Dual deck optical disk player/recorder

## W04-C10A2\*

[2002-2004]

### Multilayer, e.g. 'DVD player'

\*This code is now discontinued. From 2002 to 2004 it was used to denote multilayer optical disk player/recorders used for non-specified audio/video/data storage. Since 2005 this topic has been covered in T03-B10A1, and for storage of audio/video information along with additional data formats, in W04-C10A3A. Prior to 2002 digital versatile disk or digital video disk player/recorders were coded in W04-C10A3.

#### W04-C10A3

[1992]

## **Optical video players and recorders**

Includes e.g. DVD, Blu-ray disk equipment.

#### W04-C10A3A

[2005]

#### **Combined with additional data formats**

Covers provision of computer program data and surround sound tracks in disk used primarily for storing video information.

### W04-C10A5

[1992]

## Jukebox system

See W04-C04C and W04-E02A5 codes for disk feeding aspects.

W04-C10B

[1992]

**Tape** 

W04-C10C

[1992]

Card

### W04-D

## Magneto-optical and other recording methods

From 2002 only audio/visual applications of magneto-optical and other types of recording are included in W04-D. Head, head positioning and carrier positioning aspects are coded **only** in T03-C and T03-D.

Includes capacitive recording and combination methods. For magneto-optical recording W04-D20 codes are assigned in the case of equipment. Record carriers and head/carrier drive systems are assigned T03-C and T03-D codes also.

### W04-D01\*

[1983-2001]

#### **Record carriers**

\*This code is now discontinued and since 2002 this subject matter now being coded in T03-C and T03-D01A. W04-D01 codes remain valid and fully searchable for records prior to 2002, and covered mainly capacitive record carriers, now assigned T03-C01 codes only.

PVC, carbon, conductive, dielectric, lubricant

#### W04-D01A\*

[1987-2001]

## For 'combination' recording e.g. magnetooptical

\*This code is now discontinued and the subject matter covered by T03-D01A codes.

Photomagnetic, Kerr effect, substrate, film, lightsensitive layer, reflective/antireflective layer, magnetic layer, reference layer, rare earth material, amorphous, protective coating

#### W04-D01A1\*

[1992-2001]

#### **Carrier manufacture**

\*This code is now discontinued. Since 2002 this topic has been covered by T03-D01A8 codes only.

#### W04-D02\*

[1983-2001]

#### **Heads**

\*This code is now discontinued, the subject matter now being coded in T03-C, and in T03-D01C (for optical heads) and T03-D01F1 (for magnetic heads) when magneto-optical recording is involved. W04-D02 remains valid and fully searchable for records prior to 2002.

Stylus, diamond, shank, lens, objective, beam splitter, polarizer, laser, photodetector, magnet, bias, erase

## W04-D03\*

[1983-2001]

## Head positioning

\*This code is now discontinued and since 2002 this subject matter has been coded in T03-C, T03-D01D and T03-D01F1A. W04-D03 remains valid and fully searchable for records prior to 2002.

Prior to 2002, for magneto-optical recording this code included focusing (now only assigned T03-D01D1 codes) and track selection/alignment (now only assigned T03-D01D3 and T03-D01D5 codes).

Track selection, kick-pulse, linear motor, voice coil motor, VCM, focusing

#### W04-D04\*

[1983-2001]

#### **Record carrier positioning**

\*This code is now discontinued and since 2002 this subject matter has been coded in T03-C and T03-D01B, T03-E and T03-F. W04-D04 remains valid and fully searchable for records prior to 2002, when W04-E02 codes were also assigned to provide a more detailed breakdown of subject matter.

Turntable, drive, carriage, load, motor

#### W04-D10

[1987]

#### Hard-copy video arrangements

See S06 codes also for non-standard video applications. Includes photographic methods and use of e.g. line printer. (See also S06-B codes, e.g. S06-B04A, and S06-D to K codes respectively).

Photographic reproduction, optical system, thermal/ink jet/impact/optical printer, electronic still-picture camera hard copy unit

#### W04-D20

[1992]

## Magneto-optical recorder/player

W04-D20 codes are used with other codes in W04 as appropriate.

## W04-D20A

[1992]

## Magneto-optical disk recorder/player

Includes mini-disk recorder/players

#### W04-D20B

[1992]

## Magneto-optical tape recorder/player

#### W04-E

[1983]

## **Recording in general**

From 2002 head positioning, carrier positioning and head record carrier motion synchronisation aspects of audio/visual recording are no longer coded in W04-E, the subject matter being covered in T03-E, T03-F, T03-G, T03-H and T03-J. Consequently the title of this code has been amended.

## W04-E01\*

[1983-2001]

#### **Head positioning**

\*This code is now discontinued, the subject matter now being coded in T03-G only. The codes W04-E01A to W04-E01C remain valid and fully searchable for records prior to 2002.

These codes were assigned for generally applicable cases. See appropriate codes in W04-B, W04-C or W04-D which took precedence.

#### W04-E01A\*

[1983-2001]

#### **Helical scan**

\*This code is now discontinued. Drum, cylinder

#### W04-E01B\*

[1983-2001]

## For longitudinally scanned tape

\*This code is now discontinued.

#### W04-E01C\*

[1983-2001]

#### For disks

\*This code is now discontinued.

## W04-E02\* [1983-2001]

## **Record carrier positioning**

\*This code is now discontinued and from 2002 this subject matter is covered by T03-E, T03-F and T03-H codes only. W04-E02 codes remain valid and fully searchable for records prior to 2002.

For motor and other position transducer aspects see V06 codes. Includes housings in which carriers are driven during normal operation.

## W04-E02A\* [1983-2001]

#### For disks

\*This code is now discontinued.

## W04-E02A1\* [1992-2001]

#### Disk cassettes per se

\*This code is now discontinued.

## W04-E02A1A\* [1992-2001]

#### Disk cassette manufacture

\*This code is now discontinued.

## W04-E02A1C\* [1992-2001]

#### Disk cassette construction

\*This code is now discontinued.

#### W04-E02A3\* [1992-2001]

#### **Disk driving arrangement**

\*This code is now discontinued and from 2002 T03-F02 (and T03-N01) codes are assigned for this topic.

## W04-E02A3A\* [1992-2001]

## **Disk drive components**

\*This code is now discontinued. Prior to 2002 it included motors (see V06-M codes also), turntables, spindle brakes, etc.

## W04-E02A3C\* [1992-2001]

#### Disk drive speed control

\*This code is now discontinued. Motor control circuits are also assigned V06-N codes.

## W04-E02A5\* [1992-2001]

#### Disk changing systems

\*This code is now discontinued and from 2002 the subject matter is covered by T03-F01 and T03-N01 codes (previously assigned as well as W04-E02A5). For general aspects of optical disk 'jukebox' systems, see W04-C10A5. See also T03-Q codes for library systems in general.

## W04-E02A5A\* [1992-2001]

## Single feeding of manually-loaded disk

\*This code is now discontinued.

### W04-E02A5C\* [1992-2001]

## Selecting from simultaneously-loaded disks

\*This code is now discontinued but previously included carousel-type arrangements enabling initial loading of several disks for playing sequentially or in a selected order. Arrangements to feed one disk at a time into recording/playing equipment from a library of carriers were covered by W04-E02A5E.

## W04-E02A5E\* [1992-2001]

## Automatic feeding from library of disks

\*This code is now discontinued and the subject matter covered by T03-Q05 codes and in T03-F01F5 (and T03-N01).

## W04-E02B\* [1983-2001]

#### For tape

\*This code is now discontinued. Reel, spool

## W04-E02B1\* [1983-2001]

#### **Cassettes**

\*This code is now discontinued. Prior to 2002 the code was assigned only for cassettes themselves, not all cassette recording related aspects. For magnetic tape cassettes W04-B04B1 was also assigned. These topics are now covered by T03-H01B codes (or T03-H01C for loop-type cassette) and T03-N03.

Housing, casing, mould plastics, audio/video cassette, protective cover

## W04-E02B1A\* [1992-2001]

## **Cassette manufacture**

\*This code is now discontinued and the subject matter is now coded in T03-H01B8 codes alone.

## W04-E02B1C\* [1992-2001]

## **Cassette constructional details**

\*This code is now discontinued.

## W04-E02B1E\* [1992-2001]

### Cassette for helical-scan tape

\*This code is now discontinued but was previously only assigned for cassettes where the helical-scan aspect impacts on the design to a significant extent. T03-N02 is assigned for all aspects of helical scan equipment and carrier cases.

VHS, VTR, DAT, protective cover

## W04-E02B3\*

[1983-2001]

#### **Drive**

\*This code is now discontinued. W04-B04B3 codes were assigned in preference for magnetic tape recorders.

Control, capstan, roller, pulley, belt, gear

#### W04-E02B5\*

[1983-2001]

## **Operating mode control**

\*This code is now discontinued.

Select, switch, function, play, record, position, fast forward, rewind, pause, stop, autostop

#### W04-E02B5A\*

[1992-2001]

#### **Automatic control**

\*This code is now discontinued. For magnetic tape recorders, W04-B04B5A was assigned from 1992.

#### W04-E02B5C\*

[1992-2001]

#### Manual control

\*This code is now discontinued. For magnetic tape recorders W04-B04B5C was assigned between 1992 and 2001.

#### W04-E02B5E\*

[1992-1996]

## Special reproduction mode

\*This code is now discontinued but was used for topics such as arrangements for replay at differing speeds. Since 1997, that subject matter has been covered by W04-E20 codes, applicable to all recorder types (rather than just tape recorders). W04-E02B5E remains valid and searchable for records between 1992 and 1996.

#### W04-E02B7\*

[1983-2001]

#### **Helical scan**

\*This code is now discontinued.

Head drum, guide, rotating cylinder, tape looping

## W04-E03\*

[1983-2001]

#### Record carriers

\*This code is now discontinued and from 2002 this subject matter is now covered by codes in T03-H only. The codes in this subgroup remain valid and fully searchable for records prior to 2002 and covered general aspects of record carriers.

Disk, compact, tape, manufacture, clean

### W04-E03A\*

[1997-2001]

## Labels and authentication marks

\*This code is now discontinued.

#### W04-E03A1\*

[1997-2001]

#### Labels

\*This code is now discontinued but prior to 2002 it included labels applied to the carrier itself and to housings such as a cassette case or jewel box.

#### W04-E03A5\*

[1997-2001]

## Authentication markings for record carrier

\*This code is now discontinued but covered both human-readable and machine-readable markings, such as bar coding (see T04-A and T04-C codes also). Identification of counterfeit audio or video recordings by added signals is included in W04-G01L3 and W04-F01L3 respectively.

Code, serial number, hologram, pressing plant

#### W04-E04

[1987]

## Remote control, time programming

See S04-C for timer aspects. Prior to 2002 see W04-B04B5 and T03-E05 codes also for tape recorder operating mode control. From 2002 W04-B04B5 is no longer used.

#### W04-E04A

[1992]

#### Remote control

For general aspects of audio/video remote control see W03-G05A codes, and for remote control specific to TV receivers, W03-A02C codes. Remote control in general is covered by W05-D codes.

## W04-E04C

[1992]

#### Time programming

Time programming devices in general are covered by S04-C, e.g. S04-C02.

## W04-E04C1

[1992]

## Programming from record carriers or programming codes

Includes input of timer information by e.g. bar code reading, (reading of bar codes is also coded in T04-A03B1), and 'universal' programming devices learning function of normal remote control unit (from 1997, also assigned W03-G05A1A). From 2005 use of electronic programme guides and GUIs is covered in W04-E04C8.

# Video Plus W04-E04C5

[1992]

## Programming and control based on off-air signals

For signal processing aspects, such as extraction of control signals, use with W04-F01K. Prior to 1997, this code was used for arrangements to prevent recording of commercial messages in conjunction with W04-J05. From 1997 this topic is wholly covered by W04-E04C5C.

## W04-E04C5A [1997]

## Involving transmitted programme identification

Includes systems such as VPS. Transmission of such signals is covered by W02-F05C.

#### W04-E04C5C [1997]

## Preventing recording of commercial messages

(W04-E04C5, W04-J05)

This code covers arrangements, usually relating to the recorder itself only, for pausing recording when a commercial message is being transmitted and continuing recording once the programme resumes.

Blank screen, cue

## W04-E04C5E [2005]

## Overriding prevention of recording of commercial messages

See W02-F10N for variation of subscription fees based on choice of whether or not to receive commercial messages.

Blank screen, cue

#### W04-E04C7 [2002]

#### With learning function

This code covers automatic time programming arrangements based on learned user preferences, e.g. through monitoring of manual time programming operations or manual channel selection. For analogous arrangements for channel selection in TV receivers see W03-A18A5C.

#### W04-E04C7A [2006]

## **Determining recording priority**

Deciding between conflicting time programming settings, searching for repeat showings etc.

## W04-E04C8 [2005]

## Using programme guides

Includes use of EPG data transmitted with TV signal or interfacing with PC receiving programme guide information from e.g. Internet.

## W04-E10\* [1992-2001]

## Head-record carrier motion synchronisation

\*This code is now discontinued. Since 2002 this subject matter has been covered by T03-A05, T03-E, T03-F, T03-G and T03-J03 codes only. W04-E10 remains valid and fully searchable for records prior to 2002

Tape track, magnetic, speed, rotating VTR/DAT head, drum, position, scan, motor pulse synchronisation, phase, servo drive, dynamic tracking arrangement

#### W04-E20 [1997]

## **Recorder operation mode**

The codes in this section, which replace W04-E02B5E used with tape equipment only, are assigned together with other W04 codes to indicate operating mode for any recorder type. W04-E20A and W04-E20C codes include arrangements with differing recording and reproduction speeds.

W04-E20J is assigned as appropriate when recording is involved, and W04-E20R for reverse operation (normal forward operation being otherwise assumed).

W04-E20A [1997]

**High speed** 

W04-E20C [1997]

Slow speed, time-lapse, freeze-frame

W04-E20C1 [1997]

Slow speed

W04-E20C3 [1997]

Time-lapse

W04-E20C5 [1997]

## Freeze frame and still picture

Use with W04-E20R for recording of still pictures. Electronic still picture cameras only capable of still-picture recording are not included here - see W04-M01B1 codes.

#### W04-E20E [1997]

#### Search mode

For arrangements linked to the use of indexing signals or carrier travel, see W04-H codes.

W04-E20G [2007]

Erasing

(W04-E20X)

## W04-E20J [1997]

#### Recording

This code is assigned with other W04-E20 codes as appropriate, e.g. with W04-E20A for high-speed recording.

#### W04-E20K [2007]

## Multiple viewing angle and foveation aspects

(W04-E20X)

Covers general aspects of multiple-viewing angle systems. Multi-view displays are covered in W03-A12A and/or W04-Q01S while encoding systems are covered in W04-P01A2.

#### W04-E20M [2002]

## Simultaneous playing and recording

Covers arrangements to allow playback of one section of carrier while recording onto another section, e.g. to allow playing from start of recorded programme before recording is finished.

## W04-E20P [2008]

## **Playlist management**

This code covers the creation and selection of playlists, either manually or automatically. Indexing aspects are covered by W04-H01C codes. Automatic selection of playlists based on sensed emotional or mental state is also assigned S05-D01X (and other S05-D codes as appropriate). For determination of such states based on voice analysis, W04-V04A4 is also assigned and if based on image analysis T04-D07F codes are also assigned.

Favorite, top-rated, star-rated, daytime, evening, weekend, jazz, classical, rock, pop, tempo, rhythm

## W04-E20R [1997]

#### Reverse mode

Covers e.g. reverse playback.

## W04-E20S [2005]

## Changing recording quality

Covers arrangements to allow switching from SP to LP mode during recording and automatic adjusting of recording quality to fit programme within available capacity of recording medium.

## W04-E20T [2005]

#### **Multiple operation modes**

This code is used for inventions concerned with several modes of operation with no particular emphasis on any given one.

Trick play

## W04-E20V [2005]

#### Time shift recording

Covers arrangements to allow viewer to select recording from start of current programme even when this programme is part-way through by use of buffer to continuously record a given channel or set of channels. For arrangements to allow pausing of programme while viewing and then continue recording programme from pause point search in conjunction with W04-E20M.

#### W04-E20X [1997]

## Other recording equipment mode

## W04-E30 [2013]

## General audio and video (AV) recording and playing equipment

These codes are intended to indicate equipment for audio or video recording and playing in general, including 'media players' which are also covered by T01-J30C. The codes do not take account of storage technology (e.g. hard disk, solid-state memory etc.) and are not applied for specific equipment that is covered elsewhere in W04.

#### W04-E30A [2013]

## General AV recording and playing equipment characterised by content

#### W04-E30A1 [2013]

## Multimedia and media players and recorders

This code takes precedence over W04-E30A3 and W04-E30A5. Prior to 2013 this topic was chiefly covered by W04-P01C8 when solid-state storage was involved. Media players in a computer context are also covered by T01-J30C and AV equipment in general requiring operation with a PC is also covered by W03-G06.

## W04-E30A3 [2013]

#### Audio players and recorders

Prior to 2013 this topic was chiefly covered by W04-G01B8 when solid-state storage was involved and that code can also be assigned for novel aspects specific to recording in solid-state memory. This code is assigned for 'MP3 players'.

#### W04-E30A5 [2013]

## Video players and recorders

Prior to 2013 this topic was chiefly covered by W04-P01C8 and that code can also be assigned for novel aspects specific to recording in solid-state memory.

#### W04-E30A5A

[2013]

## Digital photo frames and viewers

This code is assumed to refer to portable equipment so W04-E30C1A is not also assigned.

#### W04-E30C

[2013]

General AV recording and playing equipment characterised by form

#### W04-E30C1

[2013]

## Self-contained AV recording and playing equipment

Includes players and recorders as separate equipment.

## W04-E30C1A

[2013]

## Portable AV recording and playing equipment

Portable AV equipment in general is covered by W03-G04.

#### W04-E30C5

[2013]

# General AV recording and playing equipment incorporated in other equipment

Includes players and recorders incorporated into a PC, mobile phone, or similar equipment. AV equipment in general combined with other equipment in a single housing is assigned W03-G03A.

#### W04-F

#### General video signal recording

This code is used merely to highlight video recording or reproduction in a general sense. It relates to recording and reproduction using dynamic methods such as tape, disk, etc. but excluding static storage in e.g. flash memory which is covered by W04-P01C codes (except in the case of dynamic video recorders/players in which solid-state memory is also used for signal processing, this being covered by W04-F01M codes). W04-F can be used alone or with other codes. Its subdivision codes (all W04-F01 and W04-F02 codes) are applied for novel signal processing details either alone or with technology-specific codes such as W04-B, W04-C or W04-D codes as necessary.

Signal processing for dynamic recording in general or recording and reproduction of non-audio or non-video information is covered by T03-P codes. *Video, tape, disk, drum, colour, digital, frame, field* 

#### W04-F01

## Video signal processing for recording

Frequency band translation, AM/FM recording, compression, noise reduction

#### W04-F01A

[1992]

## Signal transformation, frequency changing, demodulation

Includes e.g. 'colour-under' system.

## W04-F01A1

[1992]

## Signal transformation and frequency changing

Folding

## W04-F01A1A

[1992]

#### **Modulation and demodulation aspects**

See U23 codes for novel demodulator circuits.

#### W04-F01A5

[1992]

## Dynamic range control, amplitude compression, AGC

Compression by coding is covered by W04-F01F codes. See also U24-C01 and U24-C02 codes for AGC and compression respectively.

### W04-F01B

[1992]

## **Equalising and peaking circuits**

See W04-B for equalising specific to magnetic recording.

#### W04-F01B1

[1992]

#### Peaking, crispening

Crispening for general video processing is covered by W04-P01E3.

#### W04-F01C

[1992]

## Synchronising signal processing

#### W04-F01D

[1992]

## Signal processing specific to colour video (W02-F06)

## W04-F01D1

[1992]

#### **Luminance/chrominance separation**

Luma-chroma, Y-C, comb filter, digital filter

## W04-F01D3

[1992]

## **Colour synchronising**

Signal processing of TV synchronising information in general is covered by W04-F01C.

Colour burst, subcarrier

W04-F01E [1992]

**Noise reduction** 

W04-F01E1 [1992]

Head switching noise suppression

W04-F01F [1992]

## Signal coding and compression

Covers compression as part of signal coding. Compression of dynamic range without coding is covered by W04-F01A5. Prior to 1997, video coding aspects specifically for recording were covered by W04-F01F codes only, but from 1997 codes are also be assigned from the general W04-P01A section to indicate the nature of the coding involved.

## W04-F01F1\* [1992-2006]

## **Movement-responsive compression**

\*This code is now discontinued. Since 2007 all predictive motion-based coding systems have been covered in W04-P01A codes.

## W04-F01F5 [1997]

## **Error detection and correction**

See T03-P01A for error detection in recording in general.

#### W04-F01H [1992]

Multistandard and HDTV signal processing (W02-F06, W04-F01)

W04-F01H1 [1992]

Recognition of standard, automatic switching

W04-F01H3 [1992]

## Standards conversion

(W04-F01, W04-N)

Standards conversion in video recording is **not** assigned the general code W04-N05A. Prior to 1992 search W04-F01 and W04-N.

#### W04-F01H3A [2005]

#### **Transcoding**

This code covers the conversion of one form of video coding to another, e.g. MPEG-2 to MPEG-4, or changing the sample rate without changing the type of coding, during the recording or reproduction of video signals. Transcoding of video in general is covered by W04-N05A1.

## W04-F01H3C [2010]

## **Upscaling of video signals**

This code covers upscaling, especially of reproduced video, to provide e.g. improved resolution on an HD display device. Codes for recording and reproducing equipment are also assigned as appropriate, e.g. W04-C10A3 for DVD video players.

#### W04-F01H5 [1992]

**HDTV** signal processing

#### W04-F01K [1992]

## Signal processing for additional picture information

Includes arrangements to enable recording of data contained in blanking periods, e.g. teletext signals (prior to 1992 see W02-F05B and W04-F01), or in connection with VPS data. Also covers recording of other supplementary signals received off-air. All aspects of control of recorder by off-air signals are coded in W04-E04C5.

Closed caption, region code

## W04-F01L [1992]

## Copy restriction, copy marking and scrambling

From 1997 the title of this code is expanded to reflect the inclusion of arrangements to enable identification of copy recordings (now assigned W04-F01L3).

#### W04-F01L1 [1997]

## Signal processing to prevent or restrict recording or viewing

Includes arrangements either preventing copying completely, or producing unacceptable quality copy. For signal processing aspects specific to magnetic recording W04-B01C1A is also assigned. Similar inventions for audio recording are assigned W04-G01L1, but W04-F01L1 takes precedence for combined audio and video recording.

## W04-F01L3 [1997]

## Signal processing to indicate occurrence of copying

Includes arrangement to insert a signal, in general not visibly affecting reproduction, but enabling subsequent identification of copy or recording source. Similar systems for audio recording are coded in W04-G01L3, but W04-F01L3 takes precedence for combined recording of audio and video information. Distinguishing legitimate from illegitimate copies based on other marking methods is covered by T03-H02A1C.

Watermarking

## W04-F01M [1992]

## **Processing involving memory**

(W04-F01, W04-P01C)

This code is used for circuits employing memories as part of the recording signal processing system, and is **not** used for frame stores per se or frame store processing system of general application as covered by W04-P01C codes.

Freeze-frame, still picture

#### W04-F01M1 [1997]

#### For storing still picture

See also W04-D10 for use of memory in video hard copy systems. Electronic still picture cameras using memory card storage are not included here - see W04-M01B1C and W04-P01C5.

#### W04-F01M5 [1997]

## In connection with signal processing

Search with other W04-F codes as appropriate, e.g. with W04-F01F for coding involving use of memory circuitry, or W04-F02B for timebase error correction.

## W04-F01P [2006]

#### Multiple channel recording

Covers simultaneous recording of separate video streams. For simultaneous recording of multiple camera outputs search in conjunction with W04-M01V.

## W04-F01X [1992]

#### Other recording signal processing

#### W04-F02

Drop-out and time-base error compensation

## W04-F02A [1992]

#### **Drop-out compensation**

Noise reduction for video recording other than due to drop-out is covered by W04-F01E codes, error correction is covered by W04-F01F5.

Correct, error, concealment

## W04-F02B [1992]

#### **Timebase error compensation**

For skew correction in general see T03-A06H. *Phase, TBC* 

#### W04-G

## Audio signal processing; Mixing and studio equipment

W03-C and W03-G codes are used as appropriate to convey additional information regarding audio equipment.

## W04-G01 [1987]

## General audio recording and audio processing for recording

#### W04-G01A [1992]

#### For dynamic recording

This code is used for signal processing irrespective for record media, (see T03-P codes also).

#### W04-G01B [1992]

#### For static recording

Covers recording in solid-state memory.

## W04-G01B3 [1992]

Signal processing aspects

### W04-G01B5 [1992]

Memory addressing and control

#### W04-G01B7 [1992]

### Static recording applications

This code is used merely to highlight the use of static recording and is generally assigned when no significant details are given of the audio recording or playback device used. Solid-state audio recorders and players with novel details described are covered by W04-G01B8.

## W04-G01B8 [2002]

#### Solid state digital audio player/recorder

This code is assigned for novel details of solid-state audio recorders and players. Applications of such devices without any significant novel details being described are covered by W04-G01B7.

[1992]

MP3 player

## W04-G01B9

Other static recording aspects

#### W04-G01D [1992]

Noise and distortion reduction

## W04-G01F [1992]

## Audio signal coding and decoding

Includes sampling, digitising, etc. See W04-V05G for speech coding for non-recording applications, and U21-A codes for coding in general. See also W04-V10 for general audio coding.

#### W04-G01F1 [1992]

#### **Error detection and correction**

Also coded in T03-P01A.

Bit error rate, BER, Reed-Solomon, cross interleave

## W04-G01L [1997]

## Copy restriction, copy marking and scrambling

## W04-G01L1 [1997]

## Signal processing to prevent or restrict recording or listening

Includes arrangements either preventing copying completely, or producing unacceptable quality copy. For signal processing aspects specific to magnetic recording W04-B01C1A is also assigned. Similar inventions for video recording are assigned W04-F01L1, which takes precedence for combined audio and video recording.

## W04-G01L3 [1997]

## Signal processing to identify occurrence of copying

Includes arrangement to insert a signal, in general not audibly affecting reproduction, but enabling subsequent identification of copy or recording source. Similar inventions relating to video recording are coded in W04-F01L3, which takes precedence for combined recording of audio and video information. Distinguishing legitimate from illegitimate copies based on other marking methods is covered by T03-H02A1C.

W04-G01M [2005]

Multiple channel recording

W04-G01M1 [2005]

Stereo and surround sound recording

W04-G01M3 [2005]

#### Recording of separate audio track

Covers arrangements to record alternative language versions of soundtrack.

W04-G01M5 [2005]

Multitrack recording

## W04-G03 [1992]

#### **Audio noise reduction**

For audio recording noise reduction see W04-G01D.

W04-G03A [1992]

Improving signal-to-noise ratio

W04-G03C [1992]

#### Reducing acoustic feedback

Use with W04-S05 codes for public address application.

Howl-round, howling, Larsen effect, squealing

## W04-G04 [1992]

## Audio signal dynamic range and frequency control, other effects

#### W04-G04A [2005]

#### Audio signal dynamic range control

Includes AGC, compression, expansion, limiting and companding schemes. See also U24 codes. Note that audio signal compression in the sense of coding is not included, being covered by W04-V05G codes or speech and W04-V10 codes for audio signals in general.

#### W04-G04E [2005]

## Frequency enhancement and addition of harmonics

Includes exciters, enhancers, bass expanders etc. See W04-U03E for delay-based effects, e.g. reverberation, flanging, phasing.

#### W04-G05 [1992]

## Sound mixing and switching

Blending, mixing console, multichannel sound system

#### W04-G05A [1992]

## **Control aspects**

Includes circuitry and control elements per se, e.g. slider potentiometers.

#### W04-G05B [1992]

## Interfacing

Includes connection to MIDI systems. For musical instrument aspects see W04-U05 also.

## W04-G05C [1992]

## **Mixer circuitry**

For amplifier circuitry see U24-G01C and other U24-G codes as appropriate.

W04-G05E [2007]

Switching and routing of audio sources

W04-G08 [2006]

### Sound recording studio equipment

Use in conjunction with W03-C, W04-U03E, W04-S and other W04-G codes as necessary. Includes all professional audio equipment for use in recording or audio broadcast studio.

## W04-H

## **Editing; Indexing**

Except for audio/video signal processing aspects, also coded in T03-J, T03-K codes.

W04-H01 [1992]

Index signal recording and detection

W04-H01A [1992]

Time code system

**SMPTE** 

W04-H01C [1997]

## Indexing information relating to recorded contents

Includes 'table of contents' information, recorded separately or interleaved with main recorded information, but usually by same recording process in either case. For records prior to 2002 labels providing such information in human-readable form are covered by W04-E03A1. From 2002 these are covered by T03-H02A1A only.

Metadata

W04-H01C1 [1997]

## User-recordable contents index information

Includes 'user table of contents' information, and thus implies use of recordable, rather than 'read-only' carriers.

UTOC

W04-H01C5 [2006]

#### **Automatic content indexing**

Includes thumbnail indexing, and use of EPG data to generate searchable indexing information.

W04-H01C8 [2006]

Differentiating between different data types

Music photo video (MPV)

W04-H01E [2006] Error management information W04-H03 [1992]

Measuring travel of carrier

See also T03-J05 codes.

W04-H05 [1992]

Editing, dubbing, splicing tape

W04-H05A [1992]

**Dubbing** 

W04-H05A1 [2007]

**User controlled dubbing** 

W04-H05A5 [2007]

**Automatic dubbing** 

Includes automated back-up and archival operations.

W04-H05C [1992]

Splicing

W04-H05E [1997]

**Editing** 

W04-H05E1 [2006]

User controlled editing

W04-H05E5 [2006]

**Automatic editing** 

## W04-J

#### Monitoring/testing recording equipment

W04-J01 [1992]

## Theft alarms, security system, access control

See W05-B01 codes also for theft alarms. Antitheft, disconnection-detector

W04-J01A [2005]

#### Access control

Includes child lock systems, user authentication and user interfacing aspects of region control.

W04-J01C [2005]

Theft alarms

W04-J03 [1992]

**Recording equipment operation displays** 

W04-J03A [1997]

Dedicated display

## W04-J03C [1997]

#### **On-screen display**

For such arrangements in TV receivers see W03-A13G. Includes menus etc. on digital camera display.

OSD

#### W04-J05 [1992]

## Recording equipment controls and circuits (general)

Automatic level control, gain control, intensity control, feedback, compensate, correct, jog wheel

#### W04-J07 [1992]

## **Recording equipment testing**

Codes in this section are used together with the appropriate code for the function being tested.

#### W04-J07A [1992]

## **Testing during manufacture**

Includes testing complete and partially complete equipment.

Production line testing

#### W04-J07C [1992]

## Post-manufacture equipment testing and monitoring

Includes self-testing apparatus.

Signal-to-noise ratio, distortion, head alignment, inbuilt testing circuit

## W04-K

## Synchronising, co-operation with other equipment, and interfacing

The title of this code has been changed to reflect the fact that audio/video recording and reproduction aspects of multimedia systems (coded in W04-K05 until 1997, and in W04-K10 between 1997 and 2004) are no longer included. Computing aspects of multimedia are covered by T01-J30 codes. Codes in this group are used with the appropriate code for the type of recording equipment involved or alone if the type is not specified. To indicate co-operation of W04 equipment with other types of equipment or systems in a general sense W04-K itself may be assigned (i.e. without subdivision).

#### W04-K01

#### Synchronisation between recording units

Includes synchronisation of e.g. photographic and audio equipment and also general arrangements with the emphasis on timing to enable recording or playback equipment to work together.

'Blip' detector for slide projector, re-recording synchronisation, synchronous dubbing

## W04-K05 [1987]

#### **Recording equipment systems**

Includes use of several recording/playback units e.g. for picture file, and recording equipment used as a 'functional block' in a larger system. Prior to 1997, this code included audio/video recording and reproduction aspects of multimedia systems.

Combination recording, home entertainment system, animated objects control, video game, simulator

#### W04-K05A [1997]

#### Multiple recording equipment systems

Includes audio/video file server arrangements, e.g. for on-demand entertainment systems (see W02-F10K also).

## W04-K05C [1997]

## Recording/reproducing unit as 'functional block'

This code covers arrangements involving interconnection of a recording equipment with some other system, e.g. self-contained VTR used to store surveillance camera image (with W04-B10C and W02-F01A5 or W05-B01C5 codes).

## W04-K06 [1992]

#### Modulator/demodulator

Includes arrangements to interface recording equipment with e.g. TV receiver (for VTR search with W04-B10C).

## W04-K07 [1992]

## Interfacing arrangements e.g. cables, plugs, etc.

See V04 codes for plug and connector details.

#### W04-K08 [2002]

#### Interfacing with PC

Includes arrangements to allow control of recording equipment by PC or downloading of recorded material.

#### W04-K10\* [1997-2004]

## Audio/video aspects of multimedia

\*This code is now discontinued. Prior to 2005 it was used to indicate audio/video aspects only of multimedia, but due to the ubiquity of that term the code was discontinued. Since 2005 audio and video aspects of personal computers have been assigned the relevant W04 code in conjunction with T01 codes. (Multimedia computer systems are covered by T01-J30 codes).

#### W04-L

## **Recording housings**

From 2002 this group no longer includes containers for record carriers. Constructional details specific to audio/video recording equipment are still coded in W04-L05 but any non-specific constructional aspects are coded in T03-L05 only.

For records prior to 2002 codes in this section cover housings for storing record carriers, and housings and constructional details of audio/video recording equipment. Corresponding codes in the T03-L section are also applied, (additional information may be gained by use of T03-N codes where W04-L codes are not specific).

## W04-L01\* [1987-2001]

#### For record carriers

\*This code is now discontinued and from 2002 this subject matter is assigned T03-L01 codes only. W04-L01 codes remain valid and fully searchable for records prior to 2002. W04-L01 covered cassette boxes, racks, record cases, etc., but **not** casings in which carriers are driven during the recording or playback process.

## W04-L01A\* [1992-2001]

#### **Record carrier container**

\*This code is now discontinued but prior to 2002 covered containers for individual carriers. Storage racks were covered by W04-L01C codes.

## W04-L01A1\* [1992-2001]

#### For disks

\*This code is now discontinued. *CD, compact disk case* 

## W04-L01A3\* [1992-2001]

#### For tape

\*This code is now discontinued. Cassette case, spool/reel box

## W04-L01C\* [1992-2001]

#### Storage racks, boxes, cases

\*This code is now discontinued. It covered racks and similar structures used for storage only, from which a carrier is removed **with** its individual container. (Individual containers were covered by W04-L01A codes). This code was also used for display arrangements in retail stores.

## W04-L01C1\* [1992-2001]

#### For disks

\*This code is now discontinued. Floppy disk box, file box, record case

#### W04-L01C3\*

[1992-2001]

#### For tape

\*This code is now discontinued. Cassette rack

#### W04-L05

[1987]

Housings and constructional details of recording equipment

#### W04-L05A

[1987]

#### Cabinets, casings, stands

See V04-S codes for casings in general.

#### W04-L05B

[1987]

## Construction e.g. mounting of PCBs, components

See V04-T codes for these details for electronic equipment in general.

#### W04-M

#### Video and synchronising signal generators

#### W04-M01

#### Video cameras

Electrical aspects of photographic cameras are covered by S06-B codes. Features common to both photographic and video cameras are coded in both sections. Novel imaging and camera aspects of endoscopes are included here. See also S05-D codes and W02-F01M for this topic.

Imager, image pick-up, electronic imaging

#### W04-M01A

## **Camera tube arrangements**

Image pick-up tubes per se are coded in V05-D codes only, but details such as tube/coil assemblies are included.

Tube biasing, power supplies, deflection signal generators, deflection coil, focusing, astigmatism correction, screening, vidicon, plumbicon, imageorthicon camera

#### W04-M01B

## Solid state pick-up device arrangements

CCD Camera

## W04-M01B1 [1987]

## **Digital camera**

This code is used for solid-state video cameras used predominantly for recording single frames in e.g. RAM, hard disk or optical disk. W04-M01B1 codes are used for **any** aspect of the camera. For still-picture recording facility in camera designed primarily for video recording see W04-E20C together with W04-M01B and W04-M01K.

Shutter release control, disk drive control, disk loading/unloading system, interface for hard copy

### W04-M01B1A [1992]

## Dynamic recording type

W04-B14 and W04-C10A3 codes are also assigned for recording on magnetic and optical disks respectively.

#### W04-M01B1C [1992]

## Static recording type

Includes camera storing image in solid state memory.

Digital still-picture camera, digital camera

#### W04-M01B1E [2005]

Video recording aspects

## W04-M01B1S [2013]

## Digital single lens reflex camera

This code is assigned for **all** aspects of digital SLR cameras. For specific novel optical details search with W04-M01C codes as appropriate, e.g. W04-M01C5 for mirror arrangements.

DSLR

## W04-M01B5 [1992]

#### Solid state image pick-up element

Covers image pick-up per se which is also assigned U13-A codes.

## W04-M01B5A [1992]

#### **Reading methods**

Covers methods of read-out and operation circuitry integral with the pick-up element. For 'electronic-shutter' arrangements based on e.g. limiting charge accumulation time, search with W04-M01D5C. (Electro-optical shutters separate from the image sensor and based on e.g. liquid crystal devices are not included and are covered by W04-M01C7A from 2014).

Shift register

## W04-M01B7 [1992]

#### **External circuitry**

Covers drive circuitry external to pickup per se. Includes circuitry linked to CCD.

#### W04-M01B8 [2009]

## **Image sensor movement arrangements**

This code and its subdivisions cover devices imparting mechanical movement to the image sensor for focusing or other purposes. Similar arrangements acting on optical system components are covered by W04-M01C1 codes or W04-M01C9 as appropriate. Details of actuators and the like are indicated by assignment of V06 codes.

Displacement

## W04-M01B8A [2009]

## Image sensor movement for enhancing imaging

This code covers arrangements for imparting mechanical movement to the image sensor for enhanced imaging, such as resolution improvement (previously treated as optomechanical scanning by assignment of W04-M01E5) or as an anti-shake measure with W04-M01D7.

Dithering

## W04-M01B8B [2009]

#### Image sensor movement for focusing

This code covers arrangements for imparting mechanical movement to the image sensor for focusing purposes, e.g. where the lens system is fixed. Arrangements for moving lenses for focusing are covered by W04-M01C1B. Manual focusing is indicated by assignment of W04-M01D1 and automatic focusing with W04-M01D5D.

## W04-M01B8C [2009]

## Image sensor movement for cleaning

This code covers arrangements for imparting mechanical movement to the image sensor for cleaning purposes, e.g. the use of ultrasonic vibration to remove dust from a sensor window. Particle, speck, foreign body, detachable lens.

#### W04-M01B8X [2009]

Other image sensor movement

## W04-M01C [1987]

## (Auto)focusing, zooming, lenses for TV camera, shutters, filters

Single lens reflex (SLR), optical system, beam splitter, iris, aperture

#### W04-M01C1 [1992]

#### Lens system

Search with W04-M01G1B for constructional details of lens systems.

## W04-M01C1A [1992]

#### **Novel lens details**

Covers novel aspects only of single lenses and lens groups such as zoom lenses. Search with W04-M01B5 for lens or lens array integral with image pick-up element which from 2018 is also specifically covered by W04-M01C1G. Since 2011 the use of variable lenses, including those with electrically-controlled variable parameters has been indicated by W04-M01C1E. If the variable lens is novel W04-M01C1A is also assigned. Note that 'lens systems', 'lens barrels' and 'lens tubes' without any novelty in lenses themselves are not included and are covered by W04-M01C1 with W04-M01G1B for constructional details such as lens mounting arrangements.

Abbe number, aberration, concave, convex, chromatic, coating, focal length, glass, material composition, plano-concave, plano-convex, plastics, power, refractive power, V number

## W04-M01C1B [1992]

#### Motor drive for focusing

See V06-M codes for details of motors or actuators themselves, and V06-N codes for novel drive circuitry for motor control. This code is used with W04-M01D5D (focus control) for control of focus involving novel motor drive aspects, or position feedback, only, for all other aspects of automatic focusing, W04-M01D5D is used alone. W04-M01C1B is assigned with W04-M01D1 codes for manual control of focus. From 2009, focusing by movement of the image sensor alone is not included, being covered by W04-M01B8B.

Stepper, piezoelectric, shift, HF content, hillclimbing, servo, automatic

#### W04-M01C1C [1992]

#### Motor drive for zooming

See V06-M codes for details of motor per se, and V06-N codes for novel drive circuitry for motor control. This code is used with W04-M01D5E (magnification control) for control involving novel motor drive aspects, or position feedback, only, for all other aspects of magnification control, W04-M01D5E is used alone.

Stepper, shift, automatic

## W04-M01C1D [2014]

#### Detachable/interchangeable lens

This code covers lens units that can be removed from or fitted to a camera body. For interfacing and electrical connection details W04-M01D8A is also assigned.

Interchangeable, long focus lens, long lens, telephoto

### W04-M01C1E [2011]

#### Variable lenses

This code covers the use of lenses with variable properties, e.g. where the lens is physically deformed to change its refractive power. If the variable lens is novel W04-M01C1A is also assigned. (V07 codes are also assigned for lenses with electrically-controlled variable parameters). W04-M01C1E does not cover lens systems in which magnification or focus is changed by changing the distance between lenses or between a lens and an image sensor.

Liquid crystal lens, ring electrodes, variable optical power lens element

## W04-M01C1G [2018]

## Lens or lens system integral with image sensor

This code covers lenses or lens systems that are integral with an image sensor. When novel lenses are involved W04-M01C1A is also assigned. Optical elements that are part of an integrated circuit image sensor are also assigned U13-A01F. *Microlens, wafer level optics* 

#### W04-M01C3 [1992]

## **Filters**

Neutral density

#### W04-M01C3A [1992]

#### For colour separation

Covers RGB matrix-type filters.

## W04-M01C3C [1992]

## For removing specific wavelengths

This code covers filters designed to block transmission of specific wavelengths, e.g. optical high-pass filters such as IR-cut filters. Video cameras intended for imaging in the infrared spectrum are covered by W04-M01E1 codes.

## W04-M01C3D [2011]

## **Neutral density filter**

This code covers filters designed to reduce the intensity of light, normally independent of wavelength, e.g. to allow use of different exposure settings.

ND filter, optical all-pass

## W04-M01C3E [1992]

## Integral with pick-up device

#### W04-M01C3G [2011]

## **Polarizing filter**

This code covers filters designed to block or reduce the intensity of light with a particular polarization, e.g. to reduce the effect of reflections.

## W04-M01C5 [1992]

## Beam splitter, mirror

Includes beam splitter or movable mirror for viewfinder of SLR camera.

#### W04-M01C6 [1992]

## Connection with external optical system

Includes connection with e.g. endoscope, which is also coded in S05-D04.

Coupler, fiber-optic, beam splitter

#### W04-M01C7 [1992]

## Electro-optical shutter, (electro)mechanical shutter and shutter drive

This code includes electromechanical or electrooptical shutters and from 2014 it is subdivided to distinguish these from motors and actuators for driving an electromechanical shutter which are specifically covered by W04-M01C7E. See V02-E02 for electromagnetic actuation and V06-M codes for motors. Electro-optical shutters are covered by W04-M01C7A. Electronic control of shutters is not included and is covered by W04-M01D5C. Electronic shutter action using controlled read-out of solid state imager is not included and is covered by W04-M01B5A and W04-M01D5C.

## W04-M01C7A [2014]

#### **Electro-optical shutter**

This code covers electro-optical shutter arrangements without moving parts, e.g. using liquid crystal devices. (Note that U14 or V07 codes are not assigned for this topic). 'Electronic shutter' arrangements based solely on controlling the image sensor itself, e.g. by limiting charge accumulation time, are not included and are covered by W04-M01B5A and W04-M01D5C. *LC, light valve* 

## W04-M01C7C [2014]

#### (Electro)mechanical shutter

This code covers novelty in the shutter itself. Novel aspects of motors or actuators driving the shutter are covered by W04-M01C7E.

Blade, curtain, focal plane, leaf

## W04-M01C7E [2014]

## (Electro)mechanical shutter drive

See also V02-E02 for electromagnetic actuators and V06-M codes for motors.

Solenoid

#### W04-M01C8

[1992]

# Electro-optical iris diaphragm, (electro)mechanical iris diaphragm, and iris drive

This code includes mechanical, electromechanical or electro-optical iris diaphragms and from 2014 it is subdivided to distinguish these from motors and actuators for driving an electromechanical iris which are specifically covered by W04-M01C8E. See V02-E02 for electromagnetic actuation and V06-M codes for motors. Electro-optical iris diaphragms are covered by W04-M01C8A. Electronic control of irises is not included and is covered by W04-M01D5C.

## W04-M01C8A [2014]

#### **Electro-optical iris diaphragm**

This code covers electro-optical iris diaphragm arrangements without moving parts, e.g. using liquid crystal devices. The general code for electro-optical area modulation, V07-K01A2, is also assigned.

LC, light valve

### W04-M01C8C [2014]

#### (Electro)mechanical aperture/iris

This code covers novelty in the iris diaphragm itself. Novel aspects of motors or actuators driving the iris are covered by W04-M01C8E.

Aperture, stop

#### W04-M01C8E [2014]

## (Electro)mechanical aperture/iris drive

See also V02-E02 for electromagnetic actuators and V06-M codes for motors.

Solenoid

#### W04-M01C9

[1992]

## Other optical aspects of video cameras

Includes white balance reference plate, optical arrangements compensating camera shake (with W04-M01D7), lens cap, and arrangements for cleaning the optical system including 'windscreen

wiper' devices and ultrasonic vibration devices for dust removal. From 2009 ultrasonic and other vibration devices acting on the image sensor itself are covered by W04-M01B8 codes. Prior to 2009 W04-M01C9 was assigned for any aspect of correcting for optical system distortions, including those using image processing (with W04-N05C3). From now on W04-M01C9 will only be assigned for systems acting directly on the optical system itself. From 2009 compensation by means of image manipulation processing for optical system geometry distortions, e.g. arising from use of wideangle lenses, is covered by W04-N05C3E. W04-M01D6 or W04-M01D6A will continue to be assigned also when the processing is performed within the camera, but not when performed subsequently.

## W04-M01D [1987]

## Control circuits, monitoring, displays, viewfinders

Codes in this section are used for general control circuits and with other codes for specific purposes. Studio aspects for control of several cameras, mixing, etc. are covered by W04-N codes.

### W04-M01D1 [1992]

## Operator controls and warning devices

Covers controls actually operated by user and devices signalling state of camera. Use with W04-M01D3 for warning as part of viewfinder display. Switch, key, knob, setting, display, indicator

#### W04-M01D1A [1992]

#### Remote control

When remote control of camera combined with recording equipment is involved, W04-E04A codes are also used, otherwise see W05-D codes when remote control signal transfer aspect is significant.

## W04-M01D1C [2011]

## **GUI control aspects of cameras**

This code covers the use of graphic user interfaces for controlling a camera and employing the camera display, including the use of touchscreens. Novel aspects of displays for cameras are covered by W04-M01D3A and of touchscreens by W04-M01D3E.

#### W04-M01D2 [1992]

#### **General control and monitoring circuits**

Prior to 1997 this code included generation and distribution of synchronising signals within camera, (also coded in W04-M05). From 1997 see W04-M01D2M.

## W04-M01D2A [1992]

## **Light metering**

Photometry in general is covered by S03-A01 codes, which are not assigned here unless broader application is indicated. Thus, methods involving determination of scene brightness from the video signal itself (rather than a separate photosensitive device) would not normally be assigned S03 codes.

#### W04-M01D2C [1992]

## Range finding and subject location/tracking

Includes rangefinding for setting focus. Focus detection by video signal characteristics (e.g. HF content) is covered by W04-M01D2E. Includes tracking using 'beacon' transmitter, and automatic systems using movement/position detection, which are also coded in e.g. W06-A02C1. Prior to 1997 this code included identification of subject or region of interest by eye-gaze direction determination, when used with S05-D01C5A. From 1997, see W04-M01D2G, which is used alone to represent the gaze-direction aspect. (Similar systems for photographic cameras are covered by S06-B01E). This code also included detection of faces and facial expression but from 2011 this topic is covered by W04-M01D2F instead.

#### W04-M01D2E [1992]

## **Focus detection**

Covers determination of focusing state by video signal characteristics, such as HF content. Control of optical system is covered by W04-M01D5D.

#### W04-M01D2F [2011]

#### Face and facial expression detection

This code covers the detection and identification of faces, parts of faces and facial expression of subjects to be photographed, e.g. to determine a region of interest or to control shutter actuation. Prior to 2011 this topic was covered by W04-M01D2C. Determination of eye gaze direction of the camera user is **not** included and is covered by W04-M01D2G. Facial recognition and detection as an application of image recognition is covered by T04-D07F1 which is also assigned as appropriate.

## W04-M01D2G [1997]

## **Eye-gaze direction determination**

This code covers the determination of gaze direction of the camera user for purposes such as control of exposure parameters. Prior to 1997, see W04-M01D2C and S05-D01C5A, which was used to discriminate the eye-gaze aspect. See also W04-M01D3 codes for aspects involving viewfinders, e.g. IR LEDs, dedicated image sensor, special optics, etc. Analogous systems for photographic cameras are covered by S06-B01E. Detection and identification of faces, facial features, or expressions of **subjects** to be photographed is **not** included, and is covered by W04-M01D2F

### W04-M01D2J [1992]

## Camera condition monitoring and testing

Includes calibration arrangements and self-checking circuits e.g. for low battery state in portable cameras (also assigned S01-G06 and X16-H codes).

#### W04-M01D2M [1997]

## Synchronising signal generation and distribution

Synchronising signal generators and 'studio' aspects are covered by W04-M05, which was assigned for this topic, with W04-M01D2, prior to 1997.

## W04-M01D2R [2007]

## Controlling use of camera in restricted area

(W04-M01D9)

See W01-C01P6C for camera phones.

## W04-M01D2S [2014]

## **Software version control**

This code covers software updating and version control for cameras. Software version management in general is covered by T01-F05F, which is also assigned for camera inventions as necessary Download, firmware

#### W04-M01D2X [1992]

## Other general control and monitoring circuits for cameras

This code covers control or sensing arrangements for video or still cameras not provided for in the above subdivisions. It includes accelerometers and the like (see e.g. S02-G03 or S02-H also) for use in detection of camera shake or vibration, for which W04-M01D7 is also assigned when part of a compensation system and the use of navigation information from e.g. GPS receivers, for which W06-A03A5 codes are also assigned.

## W04-M01D3 [1992]

#### Viewfinders

For display of menus etc. see W04-J03C.

## W04-M01D3A [1992]

#### **Display device**

This code is intended to indicate novelty in the actual display device itself, such as an LCD for which U14-K01 codes are assigned to indicate the specific novel aspects. W04-M01D3A is **not** assigned for novelty in the camera or camera circuitry for which W04-M01D3C is used when specific display drive aspects are involved, or W04-M01D3 for more general details. Novel aspects of touchscreens are covered by W04-M01D3E which is assigned with this code when the display itself is also novel.

## W04-M01D3C [1992]

## Display drive circuitry

Covers matrix addressing, drive circuits, etc.

## W04-M01D3E [2011]

## Touchscreens for digital or video cameras

This code covers novel aspects of touchscreens for cameras. The use of touchscreens and graphic user interfaces for controlling a camera is covered by W04-M01D1C. When the display device itself is novel W04-M01D3A is also assigned.

## W04-M01D4 [1992]

#### Character/subtitle generators

Subtitle generators for TV studio/video production use are coded in W04-N05C1A.

## W04-M01D5 [1992]

#### **Exposure control**

Includes evaluation of scene condition information (provided by devices covered by W04-M01D2 codes), and control of function to optimise imaging.

## W04-M01D5A [1992]

**Evaluation of exposure conditions** 

## W04-M01D5B [1992]

**Back-light compensation** 

#### W04-M01D5C [1992]

#### Control of aperture and/or shutter time

For electronic shutter action (simulating mechanical shutter) search with W04-M01B5A.

Iris, stop, diaphragm

## W04-M01D5D [1992]

#### **Automatic focus control**

Mechanical aspects of focus adjustment are covered by W01-M01C1B for lens movement and W04-M01B8B for image sensor movement. Detection of focus state is covered by W04-M01D2E. Manual setting of focus is covered by W04-M01D1 with W04-M01C1B or W04-M01B8B. For automatic control, W04-M01C1B or W04-M01B8B are not assigned unless significant aspects of actuator driving are involved.

Closed loop, hill-climbing, servo, feedback, optimize

## W04-M01D5E [1992]

## Zooming and magnification control

This code is normally used alone unless specific aspects of control and interaction with the motor circuit per se are involved.

## W04-M01D5H [1997]

## **Light source control**

Search with W04-M01H1 for control of continuous lighting units and W04-M01H5 for control of flash units. Drive circuit for discharge-tube type flash lamps are covered by X26-C01A.

#### W04-M01D5X [1992]

#### Other exposure control aspects

## W04-M01D6 [1992]

#### Image processing and function control

Used with W04-P and W04-N codes as appropriate, e.g. W04-P01D1 for white balance control, W04-N05C5E for red-eye removal (see T04-D07F1A for eye detection). From 2009 compensation by means of image manipulation processing for optical system geometry distortions, such as those arising from use of wide-angle lenses, is covered by W04-N05C3E. W04-M01D6 or W04-M01D6A is also assigned when the processing is performed within the camera, but **not** when performed subsequently. Prior to 2009 W04-M01C9 was also applied for this topic but from 2010 is only assigned for systems acting directly on the optical system itself.

#### W04-M01D6A [1997]

#### **Image acquisition aspects**

Covers processing associated with e.g. read-out of image sensor, such as compensation for imager characteristics. Use in conjunction with W04-P01H1 (and W04-M01B7) for solid state circuit imager dark current compensation.

## W04-M01D6C [2006]

### Multi-standard processing

Includes arrangements for changing resolution of still pictures (see also W04-M01B1) and standards conversion (see also W04-N05A).

## W04-M01D7 [1992]

## **Motion compensation**

This code covers arrangements for countering the effects of unwanted motion, such as camera shake. See W04-P01 and W04-M01G codes respectively for electronic and (electro-) mechanical movement compensation systems. Compensation involving movement of the image sensor is also assigned W04-M01B8A or W04-M01C9 if achieved optically.

## W04-M01D8 [2002]

## Video and digital camera interfacing

(W04-M01D9)

This code covers arrangements for interfacing of video and digital cameras with other equipment and systems. From 2014 the code is subdivided to distinguish between interfacing with separate parts of the camera or accessories, e.g. detachable lenses (W04-M01D8A) and interfacing with equipment or systems that are not part of the camera or camera system (W04-M01D8C). Search with W04-K codes for specific aspects of interfacing, e.g. W04-K07 for novel connectors or cables.

#### W04-M01D8A [2014]

## Interfacing with separate part of camera or camera system

This code covers interfacing with separate parts of a camera or accessories that may be detachable from the main camera body, such as lenses (for which W04-M01C1D is also assigned) or electronic flash units (for which W04-M01H5 is also applied).

#### W04-M01D8C [2014]

## Interfacing with separate equipment or system

This code covers novel aspects of interfacing with equipment or systems that do not form part of the camera or camera system. It includes interfacing with equipment such as computers, for which W04-K08 is also assigned and also interfacing with printers, other cameras and data networks.

## W04-M01D9 [1992]

## Other camera control

## W04-M01E [1987]

## For IR imaging, optomechanical scanning

(W04-M01X)

Includes 'staring' and scanning types. Non-video night vision systems are covered by W07-G codes, (tubes per se are coded in V05-D03 codes).

#### W04-M01E1 [1992]

## IR imager

FLIR imager, pyroelectric camera, heat sensing camera

#### W04-M01E1A [1992]

#### IR-sensitive pick-up device

See also appropriate code for solid-state pick-up element e.g. U14-E01, or U13-A codes.

#### W04-M01E5 [1992]

#### **Optomechanical scanning systems**

See V07-K05 also. Prior to 2009 this code was also used to indicate arrangements for increasing imaging resolution by imparting movement to an image sensor, e.g. to achieve dithering. This topic is now covered by W04-M01B8A.

Galvanometer mirror, polygonal mirror, motor driven scanning

#### W04-M01E5A [1992]

## With single scanning direction

Includes systems with subscanning action provided by motion of subject or imaging platform.

Satellite, missile, push-broom, vehicle, traffic, rail,

## W04-M01E5C [1992]

#### With main- and sub-scanning

Includes optomechanical/electromechanical arrangements to provide simultaneous line and field scanning.

#### W04-M01F [1987]

## For X-ray and other non-light imaging

(W04-M01X)

Includes medical diagnostic imaging (see S05-D02 or S05-D03 codes also), but **not** systems where the primary means of 'imaging' uses visible radiation. Medical ultrasound systems are **not** routinely covered in W04-M01F.

Image converter, image intensifier

## W04-M01F1 [1992]

#### X-ray imaging

W04-M01F3 [1992]

## **Nuclear imaging**

Gamma camera

W04-M01F5 [1992]

**Ultrasonic imaging** 

W04-M01G [1987]

#### **Constructional details**

Includes mounting, tripod, housing etc., and constructional features of cameras per se.

#### W04-M01G1 [1992]

#### **Camera construction**

Cooling, condensation prevention, heating

## W04-M01G1A [1992]

## Camera housing

Casing, cabinet

## W04-M01G1B [1992]

#### Internal constructional details

Card, circuit board, cooling, fan, layout, PCB, screening, shield

## W04-M01G5 [1992]

#### Carrying case for portable camera

Includes shoulder straps, etc.

## W04-M01G7 [1992]

#### Tripods, supports

Includes collapsible supports and permanent mountings e.g. for surveillance camera (also assigned W02-F01 codes).

#### W04-M01G7A [1997]

**Fixed mounting** 

## W04-M01G7C [1997]

### Movable mounting

Includes motor-driven positioning system. Search with W04-M01D2C for arrangements tracking a subject by moving the camera.

## W04-M01H [1992]

#### **Light sources**

(W04-M01X)

See X26 codes for details of light sources per se and fittings. Includes lighting integral with, or detachable from, portable cameras. TV studio lighting is covered by W04-N01. Prior to 1997, light source control was covered in W04-M01D9, but is now transferred to W04-M01D5H.

W04-M01H1 [1997]

**Continuous illumination** 

W04-M01H5 [1997]

## Flash light

Electronic still-picture cameras are assigned W04-M01B1 codes. Recording of single pictures with other types of recording equipment, e.g. VTRs, is covered by W04-E20C5 and W04-B10 codes. See S06-B03 codes for details of photographic camera flash circuits.

Stroboscope

W04-M01H5A [2007]

## Pre-light emission/Red eye reduction

Includes use of separate light source for pre-light emission before main flash to prevent red eye. Light source control aspects are covered in W04-M01D5H. See S06-B03A1 for non-digital camera.

#### W04-M01J [1992]

## Camera systems for imaging still pictures

(W04-M01X)

Covers the use of video cameras to image static objects such as slides and photographs, e.g. for video slide viewer (also coded in S06-B06B). 'Digital' ('electronic still picture') cameras are covered by W04-M01B1 codes, and telecine machines by W04-M02. Facsimile systems are not included and are covered by S06-D to K codes.

### W04-M01K [1992]

#### Camera-recorder

(W04-M01X)

Codes indicating the recording technology used are also assigned when significant, e.g. W04-B10G for DV tape, W04-B14C3 for hard disk, W04-C10A3 for optical disk, or W04-P01C8 for solid-state types. For a video recording facility in a digital camera W04-M01B1E takes precedence.

#### W04-M01L [1992]

## Stereoscopic image generating camera system

Complete stereoscopic TV systems are covered by W02-F03B codes, stereoscopic TV receivers are assigned W03-A12A and other W03-A codes as appropriate. Search with W04-M01V for stereoscopic imaging systems employing two or more video cameras.

### W04-M01M [2005]

#### **Audio aspects**

Covers all audio aspects of video cameras. Prior to 2005 this topic was included in W04-M01X.

W04-M01P [1992]

**Power supplies** 

W04-M01P1 [1992]

**Mains power** 

W04-M01P5 [1992]

## **Battery power supply**

Includes battery per se. See X16 codes also.

W04-M01P5A [1992]

**Battery charging** 

W04-M01S [2005]

#### Panoramic camera

(W04-M01X)

Use in conjunction with W04-M01C6 for optical arrangements and with W04-N05C5 for 'stitch mode'. For moving platforms see also W04-M01G7C.

## W04-M01V [2006]

## Multiple camera systems

(W04-M01X)

Search along with W04-F01P and W02-F01A for CCTV security systems recording multiple camera outputs. Search with W04-M01L for stereoscopic imaging systems employing e.g. two video cameras.

#### W04-M01V1 [2014]

## Multiple cameras within same equipment housing

This code covers the use of two or more digital or video cameras or image sensor arrangements that are contained within the same housing and are therefore part of the same equipment, e.g. for stereoscopic imaging with W04-M01L or in a mobile phone with front and rear-facing cameras used at the same time, for which W01-C01D3C and W01-C01P6C are also assigned.

#### W04-M01V5 [2014]

#### Multiple cameras in separate housings

This code is assigned for inventions depending on the use of two or more digital or video cameras that are contained within separate housings and therefore are not part of the same equipment. For stereoscopic imaging search with W04-M01L and for multiple-camera aspects of CCTV surveillance systems with W02-F01A5.

## W04-M01W [2011]

### Internal wiring of camera

This code is intended to highlight **internal** wiring details, including wires, cables and flexible PCB wiring arrangements, but **not** wiring within an integrated circuit. It includes both novel wires and cables (for which X12-D codes are also assigned) and constructional aspects such as the arrangement of wiring for which W04-M01G1B is also assigned. Arrangement of wiring within equipment in general is covered by V04-T01A.

#### W04-M01X

## Other video camera aspects

This code covers aspects of electronic imaging cameras not covered by the above subdivisions, including industrial inspection applications where the use of the camera is significant and linked to the novelty in some way. S02 or S03 codes, (e.g. S02-J04 or S03-E04 codes) are applied for these topics as appropriate. Also included are additional devices built-into a camera, for which codes for the particular device should also be employed when searching.

#### W04-M02

#### **Telecine**

See W04-M01 codes for image pick-up details and S06-B05 codes (cinematography) also.

Film, scan, frame, intermittent, gate, pull, continuous, photograph, cine

## W04-M05 [1992]

## Synchronising and blanking signal generators

(W04-M09)

TV receiver synchronising circuitry is covered by W03-A06.

## W04-M07 [1992]

## Video pattern generators

Includes generation of test patterns (see also W02-F04A).

#### W04-M09

## Other video source aspects

#### W04-N

## Video special effects and manipulation, TV studio equipment

Codes in W04-N relate to equipment for use in TV studios or for analogous purposes. W04-N05G codes are used to indicate application but only if this is stated or implied.

Video mixing desk, special effects generator, picture inlay, chromakeying, delay compensation, lighting control desk

## W04-N01 [1992]

## Studio and outside broadcast equipment

Includes e.g. lighting, camera control consoles (also coded in W04-N05B codes for video mixing and switching aspects, but not cameras per se, (covered by W04-M01 codes), or telecine, (covered by W04-M02)). For video processing see W04-N05 codes which cover such aspects as standards conversion, chroma keying, etc.

TV opaque projection, telop, teleprompter, autocue, intercom, talkback

## W04-N05 [1992]

## **Equipment with video processing function**

See also W04-P codes as appropriate for video processing. Where computer data processing is involved, T01-J10 codes are also assigned.

### W04-N05A [1992]

## Standards conversion equipment

Standards conversion in TV receivers is covered by W03-A11A, in recording equipment by W04-F01H3.

## W04-N05A1 [2005]

**Transcoding** 

#### W04-N05B [1992]

## Video mixing and switching equipment

Includes equipment for CCTV monitoring. (See also W02-F01 codes. W04-N05G5 is also assigned).

#### W04-N05B1 [1992]

## Video mixing equipment

Fade, blend, wipe, merge, combine, channel

## W04-N05B5 [1992]

### Video switching equipment

Where actual switching details are involved, W01-B codes may be assigned also.

## W04-N05C [1992]

## Image generation and manipulation, including special effects equipment

These codes cover the generation and manipulation of images for special effects or other purposes, such as image correction. Generation of images by video cameras is not included, being covered by W04-M01 codes. Manipulation of images in TV receivers is not included and is covered by W03-A13E codes. For computer-based image processing aspects search with T01-J10 codes.

## W04-N05C1 [1992]

## Image generation system

This code covers the generation of images electronically, e.g. using computer graphics techniques, and **not** the generation of images of real-world scenes using e.g. a camera.

#### W04-N05C1A [1992]

## Subtitle and text generator

Crawling text

#### W04-N05C3 [1992]

## **Image manipulation systems**

This code covers the application of image processing techniques to the manipulation of images, including moving, enlarging/reducing, correcting geometry and image cropping (as represented by W04-N05C3G from 2014). T01-J10 codes for computer-based image processing are also assigned as appropriate.

#### W04-N05C3A [1997]

Moving image, or part of image

### W04-N05C3C [1997]

Enlarging or reducing image

## W04-N05C3E [2009]

### **Correcting image geometry**

This code covers the application of image manipulation processing to the correction of faults in image geometry. Examples include 'keystone' correction in video projectors (with W04-Q01J) and compensation for camera optical system distortions (with W04-M01D6 codes as appropriate if carried out in the camera itself). Prior to 2009 W04-M01C9 ('Other optical aspects of video cameras') was assigned to indicate that optical system defects were being compensated for. From 2009 W04-M01C9 is no longer applied for this topic and would only be assigned for systems acting directly on the optical system itself.

Screen angle, perpendicular, normal, trapezium, fisheye, wide angle, lens, aberration.

## W04-N05C3G [2014]

## Image cropping

Covers selection of a desired area of an image and deleting the remainder.

Border, edge, trim, remove frame

## W04-N05C5 [1992]

#### Picture inlay or overlay system

For combining real-world and computer generated images for augmented reality search with W04-W07E1. Picture inlay circuitry for TV receivers is covered by W03-A13 codes.

Inset, superimpose

## W04-N05C5A [1992]

## By chroma keying

Colour, blue, background, video switch

#### W04-N05C5E [1997]

## Replacing designated part of image

Includes arrangements e.g. using recognition techniques to detect text in an image, or 'coding' a region of an image in some way, to substitute text in another language, or alternative images. For application to inserting 'domestic' advertisements in e.g. a sporting event broadcast from overseas, search with W05-E03C (TV with advertising) from 2002, W05-E03 prior to that.

## W04-N05C7 [2014]

## Image manipulation for stereoscopic or depth imaging

This code covers arrangements for creating stereoscopic or pseudo-stereoscopic images, e.g. from separate still images or video sources, and also for modifying the perceived depth of such images, both previously covered by W04-N05C9. W04-N05C7 is not assigned for normal stereoscopic video cameras, which are covered by W04-M01L, unless image processing to vary the depth characteristic of images produced is also involved.

Blend, merge, offset, parallax

## W04-N05C9 [1992]

#### Other special effect equipment

Prior to 2014 this code included simulation of 3-D images and also modification of the perceived depth of such images, both of which are now covered by W04-N05C7. Stereoscopic video camera arrangements are covered by W04-M01L, stereoscopic TV systems in general by W02-F03B codes and computer graphics aspects of three dimensional image generation are covered by T01-J10C4.

## W04-N05G [1992]

### Characterised by application

Codes in this section are intended to discriminate between broadcast and video production applications, and those performing analogous functions for use in e.g. industry. The codes are only applied when an application is stated.

W04-N05G1 [1992]

For TV studio or video production facility

W04-N05G3 [2007]

For digital cinematography

W04-N05G5 [1992]

For industrial or commercial application

## W04-P

## Video signal processing

See W03-A codes for TV receiver details, W04-F codes for application to recording. Where computer data processing of video is involved, T01-J10 codes are also assigned.

Image, camera, television, chrominance, luminance, code, encode, picture, memory

#### W04-P01 [1987]

## Video processing type and applications

For application to video cameras (i.e. circuitry forming part of camera), search with W04-M01D6.

## W04-P01A [1987]

#### **Encoding**

Includes encoding and decoding apparatus and methods e.g. for compression, bandwidth reduction, etc. See T01-J10D for computer-based image compression and coding, U21-A codes for encoding in general, W04-V05 codes for speech signal encoding, W04-V10 codes for audio coding, and W02-G04 codes for bandwidth reduction in non-video systems.

From 2002 the corresponding W02-F07 codes which covered 'systems' aspects of PCM and narrow band TV have been discontinued and are replaced by the general code W02-F07M 'Digital image transmission'. Thus, W04-P01A codes should be used to discriminate types of coding. Compression of still-picture information, e.g. in facsimile, is covered by S06-K07 codes.

Motion detection, vector quantisation, digitising, fractal, transformation

## W04-P01A1 [1992]

#### **Movement detection system**

This code is used as a general code for detection and estimation of movement and may thus be used for applications such as automatic alarm actuation. (See also W02-F01, W05-B01C codes). When specific to hybrid or predictive video coding W04-P01A4A and W04-P01A5A are respectively assigned instead of W04-P01A1.

#### W04-P01A2 [2007]

## Multiple video stream encoding, using foveation zones

Includes compression techniques using redundant data across multiple video streams or viewing angles.

## W04-P01A3 [1992]

## **Transform coding**

This code is intended for transform video and image coding methods, e.g. JPEG and its variants. Combined transform and predictive coding is covered by W04-P01A4 codes which take precedence over this code.

#### W04-P01A3A [2005]

## **Novel transform aspects**

DCT, Wavelet

W04-P01A3C [2005]

Quantisation

W04-P01A3E [2005]

## Run length, variable length encoding

Entropy coding

#### W04-P01A3F [2014]

## Converting between variable and fixed rate transform encoding

This code is intended to highlight fixed and variable rate aspects of transform-based video encoding. Fixed and variable rate aspects of hybrid video encoding are covered by W04-P01A4F, which takes precedence over this code.

#### W04-P01A3G [2012]

## Transform coding motion detection and estimation

Motion detection or estimation for hybrid coding is covered by W04-P01A4A, for purely predictive coding by W04-P01A5A, and for general and noncoding purposes by W04-P01A1.

## W04-P01A3J [2012]

## **Transform coding motion compensation**

Motion compensation for hybrid coding is covered by W04-P01A4C and for purely predictive coding by W04-P01A5C.

## W04-P01A4 [1997]

## **Hybrid coding**

(W04-P01A3, W04-P01A5)

This code is chiefly intended for combined transform and predictive coding, e.g. MPEG coding, H.263, H.264 and variants. From 2014, all coding for the purposes of broadcasting and streaming is assumed to be of this type unless specific details indicate otherwise.

AVC, CABAC, HEVC

## W04-P01A4A [1997]

## Hybrid coding motion detection and estimation

(W04-P01A3, W04-P01A5A)

Motion detection or estimation for purely predictive coding is covered by W04-P01A5A and for general and non-coding purposes by W04-P01A1.

## W04-P01A4C [1997]

#### **Motion compensation**

(W04-P01A3, W04-P01A5A)

Motion compensation for predictive coding is covered by W04-P01A5C (prior to 1997 see W04-P01A5A).

## W04-P01A4E [2005]

#### **Novel transform aspects**

Novel transform aspects for pure transform coding are covered by W04-P01A3A.

DCT, MDDT, Mode Dependent Directional Transformation, wavelet

#### W04-P01A4F [2008]

## Converting between variable and fixed rate encoding

This code is intended to highlight fixed and variable rate aspects of video encoding.

W04-P01A4G [2005]

Quantisation

W04-P01A4J [2005]

## Run length, variable length encoding

Entropy coding

## W04-P01A4L [2005]

#### **Reducing artefacts**

Reduction of noise and errors in video signals in general is covered by W04-P01F codes.

## W04-P01A4N [2005]

3-dimensional transforms

## W04-P01A4S [2005]

#### **Scalability arrangements**

Covers arrangements to allow change in bandwidth according to conditions or capability of receiver.

#### W04-P01A5 [1992]

**Predictive coding** 

#### W04-P01A5A [1992]

#### Motion detection and estimation

Motion detection or estimation for hybrid coding is covered by W04-P01A4A and for general and noncoding purposes by W04-P01A1.

## W04-P01A5C [1997]

Motion compensation

## W04-P01A5G [2011]

## Quantization for predictive video coding

Quantization for hybrid coding is covered by W04-P01A4G which takes precedence over this code.

## W04-P01A6 [2014]

## **Detecting and correcting errors**

This code is intended to highlight inventions concerned with detection and/or correction of errors in video encoding. It includes arrangements for dealing with errors arising from corrupted image data and also problems with recognizing type of coding, start codes, or other ancillary data. Error detection and correction in digital data transmission in general is covered by W01-A01B codes and for digital data in general by U21-A06 codes.

#### W04-P01A7 [1992]

#### Subsampling

Involves methods for discarding sampled values, e.g. by considering values of adjacent sample points.

Multiple sub-Nyquist sampling encoding, MUSE, phase alternate sub-Nyquist sampling, PASS, sample dropping, merging

## W04-P01A8 [1997]

## **Coding based on fractals**

Covers image coding using algorithms to generate fractal codes

Fractional dimension, graftal, pattern, shape, irregularity

#### W04-P01B [1987]

## For non-visible spectrum imaging

Includes video processing specific to IR, X-ray etc., e.g. in medical systems, (see S05-D codes also, such as S05-D02A).

Digital subtractive imaging, angiography, DSA

## W04-P01C [1987]

## Frame stores, video memory and solidstate video recorder/player

See W04-N05C codes also for TV special effects application.

## W04-P01C1 [1992]

## Novel frame stores and video memory This

code is assigned for novel aspects of solid-state memories intended to store still images or video. Circuitry for reading from or writing into memories of this type is covered by W04-P01C5. Use of solid-state memory in computer systems is covered by T01-H01B3 codes and novel memories in general are covered by U14-A codes.

#### W04-P01C5 [1992]

## Memory addressing and control

Variable readout control, scan conversion, scan reversal

#### W04-P01C8 [2005]

#### Solid state video recorder/player

Includes devices storing and reproducing video and also still pictures, e.g. in an electronic photoframe.

Digital photo frame, digital picture frame.

## W04-P01D [1987]

White balance and colour temperature control

W04-P01D1 [1992]

White balance control

## W04-P01D3 [1992]

## Colour balance and colour temperature control

## W04-P01E [1987]

#### **Gamma and aperture correction**

Contour

## W04-P01E1 [1992]

#### Gamma control

Correction for unequal amplitude response is covered by W04-P01H1.

## W04-P01E3 [1992]

## **Edge correction, crispening**

Peaking, emphasis circuit

## W04-P01E5 [1992]

Aperture correction

## W04-P01E7 [1992]

## Compensating phase shift in signal processing

Includes correction of phase errors in colour separation from single image pick-up device.

#### W04-P01E8 [1992]

## Dynamic range control, amplitude compression

See U24-C02B for amplitude compression in general.

## W04-P01F [1992]

## Noise reduction, error concealment

(W04-P01X)

Codes in this section are used to indicate arrangements for improving signal-to-noise ratio of a video signal, which may include compensating for noise-introducing defects in, for example, imaging devices. Compensation for imperfect imaging device characteristics in general is covered by W04-P01H codes. Noise reduction in connection with video recording is covered by W04-F01E codes and specifically for received radio signals, by W02-G03B codes.

#### W04-P01F1 [1992]

#### **Noise reduction**

(W04-P01X)

## W04-P01F3 [1992]

#### **Error concealment**

(W04-P01X)

Includes interpolation with adjacent pixel values.

#### W04-P01H

[1992]

## Compensation processing for imager characteristics

(W04-P01X)

Gamma and aperture correction is covered by W04-P01E codes. See W04-P01F codes for particular noise reduction or error concealment. Specifically, use W04-P01H with W04-P01F3 for systems concealing defective pixels. For video camera application see e.g. W04-M01B7 and W04-M01D6A.

## W04-P01H1

[1992]

## Non-uniform amplitude response correction

(W04-P01X)

Includes correction for dark current and varying sensitivity of imager photosites.

#### W04-P01H3

[1992]

## Correcting for 'charge-leakage' phenomena

(W04-P01X)

Includes correction for blooming.

#### W04-P01K

[1992]

## Clamping circuits

(W04-P01X)

Covers circuits establishing DC level of video signal. For such circuitry in TV receivers, see W03-A04C and, in general, U24-C02A5.

#### W04-P01L

[1992]

#### Luminance/chrominance separation

This code covers processing of color video signals involving the separation of luminance and chrominance components. For application to color TV receivers or color video displays see W03-A05B codes.

Luma-chroma, Y-C

#### W04-P01N

[1992]

## **Time shifting**

(W04-P01X)

Includes delay circuits and compensation for delays e.g. to equalise signal paths, for timebase correction etc. (For recording see W04-F02B).

## W04-P01X

[1987]

#### Other video signal processing

#### W04-Q

#### Colour coders; TV projection

#### W04-Q01

[1987]

## Video projectors and projection displays

This code and its subdivisions cover displays using projection of video or similar information on a screen. Codes relating to application are also assigned, e.g. for projection TV receivers search with W03 codes, for computer displays search with T04-H03E. Also included are special-purpose projection displays such as head-up displays projecting video information (covered by W04-Q01K) and direct retinal projection displays (covered by W04-Q01L).

Projection screen, transmission screen, optical system, laser projection system

#### W04-Q01A

[1987]

#### **Using CRT**

For optical and cooling aspects of tubes see V05-D07C codes also.

Colour filter, liquid filter, tube face cooling, alignment/convergence adjustment

#### W04-Q01B

[1987]

## Using light valve, e.g. LCD, laser sources

See V07-K01A2 for area modulation of light in general.

Liquid crystal, light source, cooling

#### W04-Q01B1

[1992]

With laser light source

## W04-Q01B2

[2007]

With LED light source

## W04-Q01B3

[1997]

#### Using mirror-array device

#### W04-Q01B5

[1992]

#### Novel light valve

Search with W04-Q01B3 for novel mirror-array devices.

## W04-Q01B7

[1992]

#### **Light source**

Laser aspects are covered by W04-Q01B1. See also appropriate codes in X26 for light sources, reflectors, etc. For light source testing and monitoring search in conjunction with W04-Q01J.

## W04-Q01E [1992]

#### **Optical system**

Includes lenses and filters, but **not** light valves, which are covered by W04-Q01B. For systems specific to the type of projection system e.g. using a CRT, see also the appropriate W04-Q01 code. Screens are covered by W04-Q01F.

W04-Q01E1 [1997]

Lens system

W04-Q01E1A [1997]

Focus adjustment

W04-Q01E1C [1997]

**Novel lens details** 

W04-Q01E3 [1997]

**Filter** 

W04-Q01E3A [1997]

Colour filter, colour separation filter

W04-Q01E3C [1997]

Removing specific wavelength

Includes IR cut filters.

W04-Q01E5 [1997]

## **Reflection systems**

Includes static mirrors and prisms. Optomechanical and electro-reflective scanning systems are covered in W04-Q01-E07S

W04-Q01E7 [2005]

Beam splitter, polarizer and other optical arrangements

W04-Q01E7A [2005]

**Beam splitter** 

W04-Q01E7C [2005]

## Polarising, diffraction gratings, polarising filters

Prior to 2007 polarisation filters are covered in W04-Q01E3.

Quarter wave plate

W04-Q01E7S [2007]

## **Scanning arrangements**

Includes optomechanical and electro-reflective scanning systems

W04-Q01E7X [2007]

Other optical elements

W04-Q01F [1992]

Screens

W04-Q01F1 [1992]

Transmission screens

W04-Q01F3 [1992]

Reflective screens

W04-Q01F5 [2005]

## Volumetric, non-planar projection screens or media

From 2014 video projectors specifically intended for use with screens of this type are covered by W04-Q01P.

W04-Q01H [1992]

## Constructional details, cooling

See V04-S and V04-T03 codes respectively for construction and cooling of electrical equipment in general.

W04-Q01H1 [1997]

Casing, cabinet, mountings

W04-Q01H5 [1997]

Internal construction and cooling

W04-Q01J [2002]

## Projection display circuitry and control systems

Covers circuitry for controlling the output of a projection display and includes auto-focusing and arrangements to correct distortion of the projected image when the screen is not normal to the projection axis. W04-N05C3E (W04-N05C3 prior to 2009) is also assigned for this topic when compensating pre-distortion of image geometry is used.

W04-Q01J1 [2005]

#### Monitoring display output

Covers use of sensors or CCD.

W04-Q01J3 [2011]

## Video projector remote control

Remote control for TV receivers is covered by W03-A02C codes and for AV equipment in general by W03-G05A codes.

## W04-Q01J5 [2006]

## **Copy protection systems**

Includes arrangements for projecting UV or IR light onto screen in order to prevent recording by video camera. Copy protection involving signal processing is covered in W04-F01L1.

## W04-Q01J7 [2011]

## Power supplies and power saving

Novel aspects of power supplies are also assigned U24-D, -E or -F codes as appropriate. Power supplies for TV receivers are covered by W03-A07 codes and for AV equipment in general by W03-G02 codes, which were also assigned with W04-Q01 codes for projector PSU inventions prior to 2011.

#### W04-Q01K [1992]

## Head-up display application

See also under application, e.g. W06-B01B for aircraft, X22-E for automobiles.

## W04-Q01L [2002]

## **Direct retinal projection display**

This code is intended for displays which directly project an image onto the retina of the viewer, and thus is likely to be in the form of a head-mounted display. For application to such displays the following codes are also assigned: W03-A08E7A for TV receiver HMD, W04-W07E1A for virtual reality HMD, and W05-E07 for HMD of general application.

#### W04-Q01P [2014]

#### Panoramic and volumetric projection

This code covers video and electronic image projectors which form images on non-planar screens, such as adjoining walls of a room or curved or annular screens. Novel screens for use with this kind of projector are covered by W04-Q01F5. Image processing systems to adapt image geometry to the projection screen surface are covered by W04-N05C3E. When applied to virtual reality systems W04-W07E1 is also assigned while for simulators other codes are assigned as necessary, e.g. W06-B04 for aircraft, W06-C04 for ship and W04-W07A and X22-X for land vehicle driving simulators.

## W04-Q01S [2005]

Stereoscopic and 3-dimensional projection display

W04-Q05 [1992]

#### Colour coder

Modulator, subcarrier generator

#### W04-R

### Stereo- and quadraphonic systems

Left, right channel, stereophonic, amplifier

W04-R01 [1992]

System type

W04-R01A [1992]

**Pseudo-stereophonic** 

Frequency separation

W04-R01C [1992]

Stereophonic

W04-R01C1 [1992]

**Binaural** 

Dummy head, recording, sound source location

W04-R01C5 [1992]

Surround sound system

W04-R01E [1992]

Quadraphonic

W04-R05 [1992]

#### Sound field control

Parametric audio systems are covered in W04-S05P and are not coded here.

W04-R05A [1992]

Responsive to e.g. sensed location of listener

#### W04-S

Loudspeaker enclosures; Public address systems

W04-S01 [1992]

Loudspeaker enclosures and leads

W04-S01A [1992]

Mountings for enclosure

W04-S01C [1992]

Connectors, leads

Plug, socket, wiring

W04-S01E [1992]

**Enclosure** 

Speaker, acoustic, box, housing, cabinet baffle, reflex enclosure, acoustic wadding, port, grille, dust cover

## W04-S01E1

#### Loudspeaker mounting

Also coded in V06-A and V06-G01.

#### W04-S01E5

## Achieving desired directional effect or frequency response

[1992]

[1992]

Also coded in V06-A and V06-G02.

### W04-S05 [1992]

## Public address and stage equipment

Includes analogous equipment used in sound broadcasting and recording apart from mixing desks which are coded in W04-G05.

Loudhailer, PA system, concert, exhibition, conference, monitor loudspeakers, acoustic feedback suppression, phase/frequency shifter

#### W04-S05A [1992]

## Amplifiers, mixing desk

Details of mixing desks are covered by W04-G05 codes.

#### W04-S05C [1992]

#### Microphones, stands

Microphones in general are covered by V06-B02.

#### W04-S05C1 [1992]

#### Cordless/wireless microphone

#### W04-S05P [2005]

## Parametric audio systems

Covers use of separate ultrasound sources providing highly directional beams that interfere at precise location. Includes non-public address application of parametric audio systems.

## W04-T

#### Circuits for transducers

See also V06-H. This code is used for circuits through which the transducer current flows, e.g. for impedance matching. It is **not** intended for circuitry preceding an amplifier which drives the transducer, for example.

Loudspeaker, microphone, amplify, feedback, impedance matching, crossover network, bridge network, motional feedback, motion pick-up transducer, MFB

## W04-T01 [1997]

### Impedance matching

Impedance matching in general, using lumped constant circuit elements, is covered by U25-D05.

## W04-T03 [1997]

#### Motional feedback (MFB)

This code is assigned for audio reproduction systems in which the output transducer, e.g. a loudspeaker, is incorporated into a feedback loop so that any non-linearity in its characteristics can be compensated for. Includes use of an additional transducer such as a microphone or accelerometer and also networks to isolate a signal such as back EMF that corresponds to motion of e.g. a diaphragm or voice coil.

## W04-T05 [1997]

#### Frequency selective networks

Includes crossover networks.

#### W04-U

#### **Electrical musical instruments**

#### W04-U01

#### **Electronic tone generation**

See also U23 codes for novel tone-generating circuits, e.g. reading sine wave values from memory, covered by U23-F codes.

Memory-storage, waveform generator, read-out circuit, variable clock, master oscillator, sample, synthesis

#### W04-U01A [1997]

#### **Tone generators**

Includes oscillators used in additive and subtractive synthesisers (see W04-U03C) and waveform generators using acoustic modelling.

## W04-U01C [1997]

## **Memory access**

Covers use of stored values (using ROM or RAM) to produce periodic waveforms, e.g. in 'wavetable' synthesis.

## W04-U01C1 [1997]

#### Sampling

(W04-U01, W04-U04D)

See also W04-U03 codes for control aspects and synthesisers, and W04-U04D for input-output aspects.

## W04-U02

## Electromechanical tone generation; Instruments using pick-ups

#### W04-U02A [1992]

### Instruments using pick-ups

Electric quitar, violin, transducer, string, bridge, fret

W: Communications

## W04-U02A1 [1992]

#### Pick-up per se

See V06 codes for transducer detail.

### W04-U02C [1992]

## Electromechanical tone or sound generation

Player piano, solenoid actuation, drum, percussion

#### W04-U03

## Controlling tone frequencies; Producing special effects

Level control, tone mixing, waveform shaping

#### W04-U03A [1992]

## Controlling generation or combination of tones

## W04-U03C [1992]

## **Synthesis**

Includes use of time varying filters and amplifiers, FM etc.

Additive, subtractive

## W04-U03E [1992]

### **Special effects**

Includes delay effects, e.g. reverberation. Also covers novel special effect processing for amplified or recorded acoustic instruments or voice, e.g. in karaoke device.

#### W04-U04

#### Other electrophonic instrument details

Includes selection circuits, accompaniment, keyboards, I/O, and construction.

#### W04-U04A [1992]

## Keyboards, pedals, and circuitry

Key switch, electronic switch, stop, voice, pedals

## W04-U04C [1992]

#### **Accompaniment systems**

Automatic rhythm generator

## W04-U04D [1992]

#### Input/output arrangements

Includes arrangements for interfacing with other equipment. See W04-U05 for MIDI aspect.

#### W04-U04G [1992]

#### **Constructional details**

## W04-U04J [1997]

#### Other electronic musical instruments

Covers non-keyboard instruments with electronic actuators, e.g. guitar synthesizers, electronic drum pads.

#### W04-U05 [1992]

## Musical equipment interfacing standards, MIDI

(W04-U09)

Includes general aspects. See also W04-U04D for specific circuitry or operation details for instrument per se, and W04-G05B for sound mixing interface aspects.

#### W04-U06 [1997]

## Sequencers and composition systems

(W04-U07)

Includes transcription systems. Prior to 1997 these were coded under W04-U07.

### W04-U07 [1992]

## Musical training system

(W04-U09)

Includes practice equipment. From 1992 to 1997 electronic music transcription systems were included. These are now coded under W04-U06.

Practice equipment, keyboard order/position display

#### W04-U08 [1992]

## Sound-to-light conversion equipment

Colour organ

## W04-U09
