#### Other electrical music aspects

Includes metronome (see S04-C09 also). Electric bell, gong, chimes, sound-to-light converter

## W04-V

## Analysis, synthesis and processing of sound waves

Includes acoustic noise reduction system using antiphase sound, which is covered by W04-V07 codes. Novel aspects of speech recognition or synthesis are respectively assigned W04-V01 and W04-V02. Inventions involving the use of these techniques only, without any novelty being involved, are covered by W04-V04 codes. General audio signal processing aspects, including sound mixing and switching are covered in W04-G.

Digital, speaker, word, code, memory, model, pattern reference, encode, allophonic, formant, phoneme, linear predictive coding (LPC)

## W04-V01 [1987]

## Novel aspects of analysis or recognition

Parsing, segmentation, speaker-dependent, speaker-independent

## W04-V02 [1987]

## Novel aspects of synthesis or generation

## W04-V04 [1992]

## Applications of speech analysis and synthesis

Includes systems where method of analysis or synthesis is not necessarily novel. Previously coded in W04-V (no subdivision) if substantial disclosure of details. From 2002, W04-V04A7 is introduced to specifically cover the analysis of non-speech sound waves.

## W04-V04A [1992]

## **Analysis systems**

Voice-input, hands-free

## W04-V04A1 [1992]

## **Determining presence of speech only**

Covers systems intended to discriminate speech from e.g. noise or other signals, without recognition of words, phrases, etc.

Automatic telephone dialler, call progress tone detector

## W04-V04A3 [2002]

#### **Determining speaker characteristics**

From 2014 the title of this code has been changed to reflect the previous inclusion of arrangements for determining the gender of a speaker, now covered by the specific subdivision W04-V04A3C. Inventions described by the original title of this code - i.e. 'Determining identity of speaker' - are now covered by W04-V04A3A.

## W04-V04A3A [2014]

## Identifying individual

This code covers biometric identification of a speaker based on their unique vocal characteristics and should be searched with other codes for specific applications, e.g. with W01-C01D3C and W01-C01Q8C for control of access to a mobile phone based on recognizing a speaker.

### W04-V04A3C [2014]

## Discriminating gender of speaker

This code covers discrimination between male and female speakers, e.g. based on fundamental frequencies, without necessarily involving identification of the speaker themselves.

## W04-V04A4 [2008]

## **Determining emotional status of speaker**

For determining the emotional status of a speaker by analysing characteristics e.g. volume level, pitch of the speaker's voice, and/or words used by the speaker.

Tremor

## W04-V04A5 [2005]

## Voice-actuated control of equipment or machines

See also W05-D codes for general applications of remote control using speech recognition.

## W04-V04A6 [2005]

Speech-to-text

## W04-V04A7 [2002]

## Non-speech audio analysis applications

This code covers the analysis and recognition of non-speech (i.e. non-human) sound sources, such as musical sequences, machine noise, and animal sounds, including their analysis to discriminate or identify different species of animals or birds. Application to the testing of machines is indicated by assignment of S02 or S03 codes also, such as S02-J03A for bearings or S03-F02B for determining resistance to wear.

Amphibian, avian, bearing noise, bee, bird, cat, cattle, diagnosis, dog, eagle, elephant, engine noise, fox, horse, insect, Korotkov, mammal, note, pest, pitch, rattle, termite, tuning

#### W04-V04A8 [2014]

## Comparing speech or singing with reference

Covers arrangements for determining the degree of matching of sounds made by an individual with a reference. It includes evaluating the correctness of pronunciation of spoken words in language learning (with W04-W codes) and of pitch, tempo etc. of singing (with W04-U07). Evaluation of pitch and other qualities of musical instruments using analysis of sounds is not included and is covered by W04-V04A7 and W04-U codes.

Accent, expression, intonation, judge, karaoke, performance, score

W04-V04C [1992]

Synthesis systems

W04-V04C1 [2005]

**Text-to-speech** 

## W04-V04E [2005]

## Novel circuitry for speech analysis or synthesis

Includes novel features of signal processing circuitry, e.g. automatic gain control, noise reduction, used for speech analysis/synthesis applications. Applied in conjunction with U24, W04-G and W04-V05 codes as appropriate to indicate type of novel signal processing.

#### W04-V05 [1992]

## General speech signal processing and representation

Includes details of signal processing applicable to analysis or synthesis and also coding of speech or similar signals.

W04-V05A [1992]

**Filtering** 

W04-V05C [1992]

Correlation

W04-V05E [1992]

**Noise reduction** 

W04-V05G [1992]

#### **Coding systems**

From 2002 see W04-V10 codes for non-speech audio coding. See U21-A codes for coding in general, and W02-C06 for PCM transmission systems in general (including systems without novel coding aspects).

Quantisation

## W04-V05G1 [1992]

#### Involving simulation of e.g. vocal tract

Includes channel vocoder and use of bank of bandpass filters.

W04-V05G3 [1992]

#### **Predictive coding systems**

Vector

## W04-V05G3A [1992]

## Code excited linear predictive coding

CELP, sequential optimisation, simultaneous optimisation, excitation codebook, dynamic codebook, long term predictor filter

W04-V05G5 [1992]

#### **Transform coding systems**

Orthogonal

## W04-V05G6 [2002]

#### **Comfort noise**

This code covers systems introducing so-called comfort noise into a communications channel, e.g. to avoid disturbing silence periods. Systems of this type for use in telephone speech signal processing are assigned W01-C01C7A.

W04-V05G8 [1992]

Dynamic coding

W04-V05J [1997]

## Pitch, rate change

(W04-V05, W04-V09)

Search with S05-K for systems aiding e.g. hearingimpaired persons, and W04-Y codes where forming part of a hearing aid.

W04-V05J1 [1997]

Pitch change

(W04-V05, W04-V09)

W04-V05J5 [1997]

## Rate change

(W04-V05, W04-V09)

Prior to 2002 this code was used for sample rate conversion of digital audio signals. From 2002 this topic is covered in W04-V10A.

## W04-V07 [1992]

#### Noise cancelling systems

Covers systems using a sensor such as a microphone and suitable signal processing to cancel or reduce the level of unwanted sound. This can be achieved either by means of destructive interference using antiphase sound emitted by e.g. a loudspeaker, or by electronic signal subtraction which from 2019 is covered specifically by W04-V07C1.

Active noise control, air conditioning, ANC, channel, duct, machine, vehicle

#### W04-V07A [1992]

#### Installations

Includes physical detail of e.g. transducer per se, transducer mounting, description of complete installation not involving circuitry or control.

## W04-V07C [1992]

## Control system, circuitry

This code covers signal processing aspects of sound cancelling systems, normally involving a microphone to sense ambient noise sounds. It includes systems using acoustic cancellation based on antiphase sound waves emitted from a loudspeaker and systems in which electronic cancellation is performed using audio signals alone, which from 2018 are covered by W04-V07C1. See U22-G codes also, e.g. U22-G01A5 for adaptive filters, and U22-G03 codes for details of DSP in general (also assigned codes in T01-J08).

#### W04-V07C1 [2019]

## Cancellation using electronic signal subtraction

This code covers arrangements for cancelling or reducing unwanted sounds based on electronic subtraction of corresponding unwanted signals from a wanted audio signal, rather than generation of antiphase sound waves. For application to noise-cancelling headphones search with V06-V04A4.

## W04-V09 [1992]

## Other sound signal details

## W04-V10 [2002]

#### **Audio coding**

Includes general audio encoding methods and apparatus e.g. for compression, bandwidth reduction etc., chiefly in entertainment applications. Coding methods and apparatus specifically for speech signals, generally involving lower bandwidth, data rate and quality for communications applications, are covered by W04-V05G.

### W04-V10A [2002]

#### Standards conversion

Includes sample rate conversion.

## W04-V10C [2002]

#### **Nonuniform coding**

Includes floating point and nonuniform companding systems.

## W04-V10E [2002]

## **Predictive coding**

Includes differential, adaptive and companded predictive systems.

DPCM, ADM, CVDSM,CPDM, ADPCM, NICAM, time domain

## W04-V10G [2002]

#### **Perceptual coding**

Covers data reduction methods which use psychoacoustic models to reduce bit rate while retaining acceptable perceived audio quality, e.g. assigning higher quantisation errors to exploit masking properties of human hearing.

## W04-V10G1 [2002]

### Frequency domain coding

## W04-V10G1A [2002]

## **Subband coding**

Covers arrangements to feed input signal into filter bank for analysis and comparison with psychoacoustic model. Includes MPEG-1, Layers I and II, and Precision Adaptive Subband Coding (PASC).

Filter bank

#### W04-V10G1C [2002]

## **Transform coding**

Covers arrangements using e.g. discrete Fourier Transform (DFT), discrete cosine transform (DCT) and modified discrete cosine transform (MDCT). Includes AC-2 and perceptual audio coding (PAC). Also includes AAC coding used in MPEG2 and MPEG4 standards (also coded in W04-V10G1J).

Adaptive transform coding, ATC, dynamic bit allocation

## W04-V10G1G [2002]

#### **Hybrid coding**

Covers arrangements using a combination of subband and transform methods. Includes adaptive transform acoustic coding (ATRAC) and MPEG-1 Layer III.

Hybrid filter bank

## W04-V10G1J [2002]

## **Multichannel coding**

Covers arrangements to reduce redundancy and irrelevancy of multichannel signals in order to reduce overall bit rate. Includes AC-3, MPEG-2 multichannel coding and AAC (see also W04-V10G1C).

## W04-V10G7 [2002]

#### **Reducing artefacts**

Coded in conjunction with other W04-V10G codes to indicate type of perceptual coding system. Reduction of noise and other unwanted signals for speech coding is covered by W04-V05E with an appropriate W04-V05G code.

## W04-V10G9

[2002]

#### Other perceptual coding systems

#### W04-W

## **Educational equipment (electrical)**

Teach, student, tape, visual, monitor, play, learn, train

#### W04-W01

## **Question and answer apparatus**

Respond, test, correct multiple choice, keyboard, stylus, interactive

### W04-W05

[1992]

## **Educational and conference equipment**

Includes e.g. electronic blackboards. *Audio-visual aid, classroom equipment* 

#### W04-W05A

[1997]

## **Educational equipment in general**

This code is intended for systems and equipment used in a formal educational setting, e.g. a classroom. Electrical aspects of educational equipment used by individuals, e.g. at home, is covered by W04-W09.

#### W04-W05C

[1997]

#### **Conference equipment**

Includes electrical aspects of presentation equipment, including speaker aids, such as prompting systems, public address aspects (see W04-S05 codes also) etc.

#### W04-W07

[1992]

## Simulation systems, training and demonstration

See also under application. The following are **not** included:

- (1) Flight simulator W06-B04
- (2) Ship simulator W06-C04
- (3) Military training equipment W07-D codes
- (4) Sports training W04-X01A codes
- (5) Musical training W04-U07

#### W04-W07A

[1992]

## **Training simulator**

Includes land vehicle driving simulators, also coded in X22-X.

Machine/control system operator training, telegraph operator training

## W04-W07C

[1992]

### **Demonstration of process or effect**

Includes system for demonstrating physical phenomena which is also coded in S01 to S03 according to nature of phenomenon being modelled.

Physics, chemistry, mechanics, electrical, electronic

#### W04-W07E

[1997]

Virtual and augmented reality

See T01-J40 codes for computing aspects of virtual and augmented reality systems. Video-based augmented and virtual reality is covered by W04-W07E1 codes.

AR. VR

## W04-W07E1

[1997]

#### Video aspects

Includes image generation (also coded in T01-J10C) and image displays.

#### W04-W07E1A

[1997]

## **Head mounted display**

See W03-A08E7 for head mounted displays primarily for TV receiver applications, W05-E07 in general, and T04-H03C9 for claimed computer aspects. Displays employing direct retinal projection techniques are also assigned W04-Q01L.

HMD

#### W04-W07E3

[1997]

**Acoustic aspects** 

## W04-W07E5

[1997]

## **Tactile or mechanical aspects**

For example shaking of seat.

## W04-W07E9

[1997]

#### Other aspects of virtual reality

W04-W09

## Other educational equipment

This code is intended for electrical aspects of educational equipment used outside a classroom environment, e.g. by individuals at home, and includes language learning aids, individual study aids, electronic dictionaries and e-books, including software enabling reading of e-books

## W04-X

#### Sports, games, toys

Electrical aspects only are included. Non-electrical details are coded by P36 codes.

Leisure, recreation, pastime

## W04-X01 [1983]

### **Sports and leisure**

The title of this code has been changed to indicate the existing coverage of leisure activities in addition to organized sports. W04-X01 codes cover sports and leisure activities with some electrical aspect. From 2011 W04-X01K codes are introduced to indicate, where significant, the kind of sport or leisure activity involved and are assigned in addition to existing W04-X01 codes. For example, an alerting device to warn an angler of a fish biting would be assigned W04-X01E and W04-X01H to indicate sports equipment with a warning function and W04-X01K7A to denote fishing.

Fish, line, rod, reel, alarm, ski, pitch, court, lane, race, starter, ball, archery, athletics, ball-games, fencing, fishing, golf, gymnastics, hunting, racing, running, shooting

## W04-X01A [1983]

**Training equipment** 

## W04-X01A1 [1992]

#### Performance monitors

This code covers arrangements for general measurement during sports training, such as lap timing, speed, or distance covered, and also measurements on the individual performing the training, such as medical and physiological parameter monitoring, e.g. of pulse rate. For medical monitoring equipment in general and to highlight specific performance measurements, see also S05. See also W01-C01P8 for using software or devices incorporated in a telephone e.g. smartphone, to measure medical parameters. Measurements relating to actual playing of competitive sports are covered by W04-X01C.

Exercise, time, practice, stopwatch, strength testing, ergometer, pedometer

## W04-X01A3 [1992]

#### **Simulators**

Includes golf swing trainer, and simulation of game playing.

## W04-X01A5 [1992]

## Fitness training equipment

Includes exercise bikes, rowing machines, treadmills and similar equipment. Analogous equipment for medical purposes, e.g. physiotherapy, is covered by S05-A05.

Brake, Mechanical resistance, Weights, Rehabilitation equipment

## W04-X01A5A [2011]

## **Exercise bicycle**

Covers static exercise bicycle. Cycling on or off roads as a sport or leisure activity is covered by W04-X01K3C which is **not** assigned for exercise bicycles.

## W04-X01A5C [2011]

#### **Exercise treadmill**

Covers static arrangements for 'on-the-spot' running. Running in the sense of athletics, jogging or cross-country running is covered by W04-X01K3A which is **not** assigned for treadmills and the like.

## W04-X01A9 [1992]

Other sports training equipment

## W04-X01C [1992]

Counting, timing, measuring, scoring

## W04-X01C1 [1992]

## Counting, timing, measuring, scoring detection

From 2011 this code is subdivided to separately indicate measurement or timing aspects from the 'yes/no' aspects of determining that a point or goal has been scored, or that a foul or fault condition exists.

## W04-X01C1A [2011]

## Counting, timing, measuring

See also S02 codes for measurement of length or distance and S04 codes and T05-G03 for timing aspects.

Lap, recording, start, finish, measure, photo-finish

## W04-X01C1C [2011]

#### **Detection of scoring or fault condition**

Includes detection of scoring such as 'goal line' technology in football (soccer) or determining that a ball is out of play in e.g. a tennis match.

VAR

#### W04-X01C3 [1992]

#### Scoring, score display

See T04-H and W05-E codes for display details.

## W04-X01D [1992]

#### Locators and guiding systems

Includes arrangements for retrieving lost equipment, and guiding systems for e.g. golf courses.

## W04-X01E [1992]

#### Sports equipment per se

Covers equipment used by players. Includes electrical aspects of fishing rods, bats, skis, trampolines, hunting rifles and paintball guns. For electrical aspects of firearms, see also W07. Includes walking sticks for hiking (see also X27-A02E). General details of sport equipment are coded under P36-A08A.

## W04-X01F [1992]

## Sports grounds, stadia, courses, installations

Includes bowling alleys and equipment provided by administrators of sports facility e.g. golf carts, buggies, etc.

## W04-X01H [1992]

## Warning systems, alarms, protection

Includes systems warning of dangerous and nondangerous conditions. See W05-A codes also for signalling aspects.

## W04-X01K [2011]

## Type of sport or leisure activity

These codes are assigned, normally in addition to codes indicating novel aspects, to denote the main application of a sports or leisure-based invention with electrical content. If an invention is applicable to a large number of categories, or no application is given, W04-X01K codes are **not** assigned. In the descriptions below the terms 'sport' and 'leisure activity' are used interchangeably.

#### W04-X01K1 [2011]

## Sports using ball, puck, or shuttlecock

W04-X01K1 codes do not include sports involving measuring the distance over which a projectile, e.g. a javelin, is thrown which are covered by W04-X01K3A, or the launching or throwing of projectiles at a target which are covered by W04-X01K5 codes.

Bowling, curling

W04-X01K1A [2011]

Baseball

W04-X01K1C [2011]

**Basketball** 

W04-X01K1E [2011]

Billiards, pool, snooker

W04-X01K1G [2011]

Cricket

W04-X01K1J [2011]

Football (soccer)

W04-X01K1L [2011]

Golf

W04-X01K1N [2011]

Hockey

Includes ice hockey.

W04-X01K1P [2011]

**Racquet sports** 

Includes badminton, tennis, squash, etc.

W04-X01K1R [2011]

Rugby, American football

W04-X01K1T [2011]

**Table tennis** 

W04-X01K1V [2011]

Volleyball

Includes beach volleyball.

W04-X01K1X [2011]

Other sports played with ball or similar projectile

W04-X01K3 [2011]

Athletics, cycling, racing, air and waterbased sports

W04-X01K3A [2011]

#### Athletics and running

Includes running on track, cross-country, or marathons, and sports based on jumping and throwing, e.g. high jump, javelin, shot-put etc. (Darts is not included and is covered by W04-X01K5C).

#### W04-X01K3C [2011]

#### Cycling

Electrical aspects of cycles are covered by X22 codes. Static exercise bicycles are not included and are covered by W04-X01A5A.

Velodrome

W04-X01K3E [2011]

Horseracing

## W04-X01K3G [2011]

#### **Motor racing**

Electrical aspects of vehicles are covered by X22 codes.

## W04-X01K3J [2011]

### **Swimming**

Swimming pools per se are not included (see X25-X06) unless the invention concerns some sports aspect, e.g. related to competition or performance measurement.

#### W04-X01K3L [2011]

## Watercraft-based racing and water skiing

Includes rowing, sailing and power boat racing. Electrical aspects of watercraft are covered by W06-C codes. Skiing on snow, or dry slopes, is covered by W04-X01K3P.

## W04-X01K3N [2011]

#### Air sports

Includes flying, gliding, hang gliding, parachuting

### W04-X01K3P [2012]

## Skiing, snowboarding, curling

(W04-X01K3X)

Electrical aspects of skis are also assigned W04-X01E and testing of ski binding release force is also assigned S02-F03A and W04-X01H.

W04-X01K3X [2011]

Other racing

W04-X01K4 [2011]

**Combat-based sports** 

W04-X01K4A [2011]

## **Boxing and martial arts**

Wrestling is covered by W04-X01K4G.

W04-X01K4C [2011]

**Fencing** 

Épée, foil, sabre

## W04-X01K4E [2011]

## Paintball, laser-simulated shooting

Shooting at targets is covered by W04-X01K5E and at animals for hunting by W04-X01K7C.

## W04-X01K4G [2011]

#### Wrestling

Boxing and martial arts are covered by W04-X01K4A

W04-X01K4X [2011]

Other combat-based sports

W04-X01K5 [2011]

Archery, darts, shooting

## W04-X01K5A [2011]

#### Archerv

Covers shooting at targets using longbow, crossbow, etc. Shooting animals for hunting is covered by W04-X01K7C.

#### W04-X01K5C [2011]

#### **Darts**

Prior to 2011 darts was coded as a sport or as a game (in W04-X02B) depending on emphasis. From 2011 W04-X01K5C will be assigned instead for all aspects of darts.

### W04-X01K5E [2011]

## Shooting

Covers shooting at e.g. paper targets, or 'clay pigeons'. Simulated shooting at 'war game' opponents using e.g. light beams and paintball shooting is covered by W04-X01K4E. Shooting animals for hunting is covered by W04-X01K7C. Electrical aspects of weapons are covered by W07 codes.

## W04-X01K5X [2011]

## Other sports involving launching projectiles at a target

W04-X01K7 [2011]

Fishing, hunting

W04-X01K7A [2011]

#### **Fishing**

Covers fishing for sport or leisure purposes only, e.g. angling. Commercial fishing is covered by X25-N02.

## W04-X01K7C [2011]

#### Hunting

Includes shooting with e.g. rifle or bow and arrow. The use of these weapons to shoot at targets is covered by W04-X01K5E and W04-X01K5A respectively. Electrical aspects of weapons are covered by W07 codes.

W: Communications

W04-X01K9 [2011]

Other kinds of sport

W04-X01X [1992]

## Other sports

Includes animal training.

Horse, racing, stable, fishing boat, trolling, water ski, tow

W04-X02 [1983]

#### Games

Play, target, ball, number, score

W04-X02A [1983]

### **Arcade games**

Non-electrical aspects are coded in T05-H codes only, (assuming G07 IPC).

Motor, token, drive, change, arcade game

W04-X02A1 [1997]

## Pinball and pachinko machines

Launch, solenoid, trap

W04-X02A3 [1997]

## Amusement-with-prizes gambling machine

Fruit, symbol, reel, token

W04-X02A5 [2005]

### **Games with physical interaction**

Grapple, whack-a-mole

W04-X02A8 [1997]

## Arcade security, management, multimachine control

Includes overall control, and security aspects (see W02-F01A codes for CCTV, W05-B codes for alarms).

W04-X02B [1983]

## **Board and card game equipment; Dice games**

From 2011 W04-X02B7 is introduced for electrical aspects of dice games and is assigned alone or in addition to W04-X02B1 or W04-X02B5 as necessary if the dice aspect is significant. Dice games with an electrical aspect that are played in a casino are also assigned W04-X02E.

Electronic card dealing, chess, draughts, roulette, 'battleships'

W04-X02B1 [1997]

### **Board games**

Checkers, chess, draughts

W04-X02B5 [1997]

## Card game equipment

Includes dealing equipment.

W04-X02B7 [2011]

#### Dice games

Includes electrical aspects of dice-based games and electronic representations of dice. Board or card games are covered by W02-X02B1 and W04-X02B5 respectively and W04-X02B7 is only assigned as well as those codes when the dice aspect is novel.

W04-X02C [1983]

#### Video games

For 'arcade' game aspect search with W04-X02A. For control of visual display units see T04-H and W03 codes also. For manual control arrangements, such as joystick, see T04-F codes and for computer aspects, including networked games, see T01-J and T01-N codes.

Program, image, memory, memory card, screen, arcade game, home video game, console, controller, sound effect generator, software, computer games, online games

W04-X02E [1997]

**Casino games and equipment** 

W04-X02G [1997]

**Betting, Lottery equipment and Bingo** 

W04-X03 [1983]

Amusements, toys

W04-X03A [1992]

#### Music based entertainment apparatus

See codes relating to recording/playing equipment where this is involved.

W04-X03A1 [1992]

Juke box

Disk, select, play, sequence

W04-X03A3 [1992]

Karaoke

Sing, perform, screen, cue, lyrics, microphone

W04-X03C [1992]

## Ornaments, mobiles, household items, novelties

Includes animated ornaments, musical greetings cards, etc. See also X27.

Dancing flower, motor drive, sound responsive, animated dummy, robot

## W04-X03E [1992]

#### **Tovs**

From 2002 W04-X03E8 is applied to indicate use of remote control. For **novel** remote control aspects W05-D codes are also assigned, e.g. W05-D06A1A and W05-D08C for radio control.

Doll, robot, speech synthesiser

## W04-X03E1 [1992]

### **Model vehicles**

Car, train, boat, ship, aircraft, sound generator

## W04-X03E1A [2002]

## **Model aircraft**

Includes spacecraft.

W04-X03E1B [2002]

Model boat

W04-X03E1C [2002]

Model wheeled vehicle, e.g. car, truck

W04-X03E1D [2002]

#### Model racing track

Includes arrangements to drive wheeled vehicles on model road track.

### W04-X03E1E [2002]

Model train and train set

## W04-X03E1M [2002]

Model vehicle used for commercial or industrial purpose

W04-X03E2 [1992]

### **Outdoor toys and playing equipment**

Includes electrical aspects of skateboards, balls, slides, swings, playground equipment etc.

W04-X03E5 [1997]

Dolls, stuffed toys

W04-X03E6 [2002]

## **Animated toys**

Covers moving toys of a non-humanoid or non-vehicle form. Includes robots, virtual pets and gyroscope toys.

W04-X03E8 [2002]

Remote control

W04-X03E9 [1992]

Other toys

## W04-X03G [1992]

#### **Entertainment venues**

Screen, stage, special effects, box office, amusement park, merry-go-round, Ferris wheel

#### W04-X03G1

Theatre, auditorium, concert equipment

W04-X03G3 [1997]

Fairground, theme parks, etc.

## W04-X03G4 [2002]

### Disco, night club, bar, restaurant, etc.

Includes personal calling arrangements to facilitate human interaction.

### W04-X03G5 [1997]

#### Cinema equipment

For photographic aspects see S06-B codes also.

#### W04-X03G7 [2005]

### Museums, exhibitions

Prior to 2005 electrical equipment for museums was coded in W04-W09.

#### W04-X03G8 [2005]

#### Information provision, guiding devices

Apply in conjunction with other W04-X03G codes.

## W04-X03X [1992]

#### Other amusements

Electronic aid, puzzle solving

#### W04-Y

## **Hearing aids**

Ear, speech, acoustic, adjust, frequency response, receiver, deaf, implant, transducer, auditory, coil, nerve, medical prosthesis, amplifier, level/tone/bandwidth control, filtering, remote control, construction, casing, battery housing

## W04-Y01 [1992]

## **Constructional details**

Includes constructional details of aid per se, and ancillary equipment.

### W04-Y01A [1992]

## Casing, housing

Includes 'hygiene' arrangements, e.g. to prevent accumulation of cerumen.

## W04-Y01A1 [1992]

## Arrangements to reduce unwanted coupling

Includes design of housing, acoustic tube, etc. to minimise acoustic feedback. Gain control for this purpose is covered by W04-Y03A1A and feedback or noise reduction in DSP-based hearing aids (from 2014) by W04-Y03G7.

## W04-Y01B [1992]

## Internal details, e.g. PCB mounting.

Includes disposition of components, etc.

## W04-Y02 [1992]

## **Electroacoustic transducers for hearing aids**

This code covers novel details of electroacoustic transducers used in hearing aids, such as microphones and earphones. V06 codes are also assigned as necessary to highlight novel details of the transducer.

W04-Y03 [1992]

Circuitry

W04-Y03A [1992]

## **Audio amplifier**

See U24-G codes for further details of amplifier per

## W04-Y03A1 [1992]

## **Gain control**

See U24-C codes for control of gain in general.

#### W04-Y03A1A [1992]

## Feedback reducing arrangement

For design of e.g. housing to minimise feedback see W04-Y01A1. Feedback reduction in DSP-based hearing aids is covered (from 2014) by W04-Y03G7.

## W04-Y03A3 [1992]

#### Tone and bandwidth control

From 2005 digital signal processing is covered in W04-Y03G. See W03-C05 codes for audio amplifier control other than for hearing aids, and U25-F codes for bandwidth control in general.

### W04-Y03C [1992]

## Interfacing arrangements

For systems involving near-field link, such as inductive loop, see W02-C02 codes also especially W02-C02G3A.

Couple, induce, transfer

## W04-Y03C1 [1992]

## With separate part of hearing aid

Equipment to set-up a hearing aid as a programming exercise by e.g. a technician, is not regarded as part of the hearing aid itself, and thus not coded here - see W04-Y03C5.

## W04-Y03C1A [1992]

## For signal transfer

Includes transcutaneous transfer of audio information for implanted type aid.

## W04-Y03C1C [1992]

For remote control

## W04-Y03C5 [1992]

## With separate apparatus or system

This code covers interfacing with separate equipment, e.g. for programming, such as setting-up characteristics by technician, rather than by intended wearer, and also arrangements for operation with e.g. TV receiver, telephone, or across-counter communication system. Prior to 2014 it was also used (with W04-Y20) for programming in a general sense but this topic is now covered by W04-Y03P.

#### W04-Y03D [2006]

### Self-testing and diagnostic systems

#### W04-Y03E [1992]

#### **Power supply circuitry**

Includes details of battery per se (see X16 codes also).

#### W04-Y03G [2005]

#### Digital signal processing

Analogue filtering and tone control is covered in W04-Y03A3.

## W04-Y03G1 [2005]

#### Frequency domain manipulation

Includes digital filtering and use of transforms etc. for frequency shifting portions of the audio spectrum.

### W04-Y03G3 [2005]

### **Spatial localisation**

Includes use of direction finding algorithms to pinpoint location of speaker and amplify relevant frequencies.

## W04-Y03G5 [2005]

## Using digital speech processing

Covers coding input signal as speech and manipulating parameters to enhance intelligibility. Also coded in W04-V as appropriate.

#### W04-Y03G7 [2014]

## Noise and feedback suppression

This code covers arrangements in hearing aids using digital signal processing specifically to suppress or reduce internally-generated noise, external noise, or acoustic feedback. Suppression of acoustic feedback by acoustic design of the hearing aid (e.g. the shape of the housing) is covered by W04-Y01A1 and by gain reduction in analog hearing aids is covered by W04-Y03A1A. Background noise, cellphone noise, cellular phone noise, digital filter, howling, Larsen effect, multiplex noise, notch filter, pulse noise, TDMA noise, whistling

## W04-Y03P [2014]

## Hearing aid programming and setting-up

This code covers programming, e.g. setting-up characteristics by a technician. When interfacing aspects are novel W04-Y03C5 is also assigned. Prior to 2014 W04-Y03C5 and W04-Y20 were assigned for programming aspects in general. When audiometering is involved S05-D01D2 is also assigned.

Compensate, computer, frequency response, hearing test, PC

## W04-Y05 [1992]

## Characterised by type

Codes in this section are applied irrespective of claimed novelty to indicate the type of hearing aid only.

W04-Y05A [1992]

**External** 

W04-Y05A1 [1992]

### **Carried within auditory meatus**

Includes 'in-the-ear' type hearing aid.

W04-Y05A3 [1992]

## **Carried outside auditory meatus**

Includes e.g. 'behind-the-ear' type.

W04-Y05A5 [1992]

## Combined with other apparatus, e.g. spectacles

Electrical aspects of spectacles are coded in X27-A02D.

W04-Y05C [1992]

### **Implanted**

See S05-F01 also for implanted hearing aids.

W04-Y05C1 [1992]

#### With external apparatus e.g. for control

Includes e.g. inductive link system transferring signals from external unit.

W04-Y20 [1992]

Other hearing aid details

## W05: Alarms, Signalling, Telemetry and Telecontrol

This class covers the following topics:

- [1] alerting and personal calling (W05-A codes)
- [2] alarms (W05-B codes);
- [3] monitoring and testing of alerting systems and alarms (W05-C codes);
- [4] remote control and remote monitoring (W05-D codes); and
- [5] general displays and advertising (W05-E codes).

Note that inventions are assigned W05-B codes if they relate to alarms with some 'emergency' or 'urgency' aspect. Condition-responsive signalling arrangements e.g. 'status alarms' which indicate non-hazardous conditions such as incorrect posture, need for diaper changing, a fault condition in a machine etc. are **not** regarded as alarms in the sense of W05-B codes and are covered by W05-A codes instead. When alerting specifically involves audible signalling W05-A02 codes are assigned and if specifically visual signalling is involved W05-A03 codes are assigned. If the type of signalling is not disclosed or is unimportant a general W05-A code is assigned.

#### W05-A

## Signalling and personal calling arrangements

Covers signalling and warning systems characterised by either the means of attracting attention or the transmission medium. For personal alarm or alerting device attached to clothing see X27-A02B1 codes as well as appropriate W05 codes.

## W05-A01

Using mechanical, hydraulic, pneumatic, or electric transmission

## W05-A01A [1997]

Using mechanical, hydraulic, or pneumatic transmission

## W05-A01A1 [1997]

## Vibration based annunciator

See also W05-A05C1A for pager application. Mechanical ringers specifically for telephones are assigned W01-C01F1F. See also V06 codes for details of vibration transducers per se e.g. V06-L or V06-M codes, especially V06-M10.

Vibration transmitter

### W05-A01C [1997]

#### Using electric transmission

## W05-A01C1 [1997]

#### Telephone line signalling

For annunciator systems combined with telephone equipment see W01-C05A.

#### W05-A01C3

#### [1997]

## Power line signalling

Use of power lines to transmit control or measurement signals is covered by W05-D06P. See also W02-C01A3 and X12-H03E for power line communication in general.

#### W05-A02

## With audible alerting

From 2002 this code is subdivided to distinguish novel audible alerting devices from systems **using** audible signalling. For cases in which these aspects cannot be determined W05-A02 will continue to be assigned. Codes relating to applications should be considered also, e.g. doorbells in X27-X also, fire or police vehicle siren in X22-B03 and X22-P10.

Tone generator, oscillator, bell, buzzer, recorded speech, synthesised speech, explosive device

#### W05-A02A [2002]

### Novel audible alerting device

This code is intended for novel audible signal generators themselves. Electroacoustic transducers are assigned V06 codes also.

Tone generator, oscillator, bell, buzzer, recorded speech, synthesised speech, explosive device

## W05-A02C [2002]

## Alerting system using audible indication

This code is intended for systems characterised by the use of audible alerting in which the means of producing the signal is not novel. For example, it may be used to indicate that a warning system employs audible signalling, the means of producing it being unspecified or unimportant.

#### W05-A03

## With visible indication

From 2002 W05-A03E is assigned with W05-A03A or W05-A03X to indicate that the means of visual signalling is itself novel. W05-A03C is also introduced to highlight alerting aspects using a display. Thus, for example, a paging receiver with some novelty in the use of a display would be assigned W05-A03E and W05-A05C1A.

#### W05-A03A

## Using visible light sources

From 2002 W05-A03C is introduced for display devices and takes precedence over this code for active displays, i.e. self-luminous ones which are covered by W05-A03C1. For passive displays in which e.g. backlighting colour or intensity is used as a means of alerting W05-A03A will be assigned with W05-A03C, the backlighting aspect being conveyed by X26-U04A codes also.

Flashing light, lamp

## W05-A03C [2002]

## **Using display devices**

(W05-A03X)

This code takes precedence over other W05-A03 codes and is intended for arrangements using displays, e.g. in matrix or seven-segment form. W05-A03A may be assigned as well where the alerting novelty involves backlighting, in which case W05-E05B codes are also used. Novel displays themselves are also assigned W05-A03E, and codes from other classes as appropriate, e.g. U14-K01 codes for LCDs.

Back-lit display

### W05-A03C1 [2002]

## Using self-luminous display devices

(W05-A03A, W05-A03X)

This code takes precedence over W05-A03A and is intended for arrangements using displays which are light emitting, e.g. those using an array of LEDs or electroluminescent elements, or a 7-segment LED display. Visual alerting using a light source such as one or more LEDs which are not part of a display that can present variable information is covered by W05-A03A.

## W05-A03E [2002]

## **Novel visual indication device**

This code is used with other W05-A03 codes as appropriate to indicate that a visual indicator is itself novel.

## W05-A03X

#### Other visible indication aspects

Includes electromagnetically-operated indicators. From 2002 display-based signalling, e.g. matrix or seven-segment type, is covered by W05-A03C. Flag, semaphore signal, smoke, chemical dye

#### W05-A04

## With audible and visible indication; Order telegraphs

From 2002 this code is subdivided to separate the above topics.

## W05-A04A [2002]

## Alerting with audible and visible indication

This code is intended for alerting systems in which audible and visible signalling are used **together**. Arrangements in which these modes are employed separately are covered by W05-A02 and W05-A03 codes.

Simultaneous audible/visible signalling

#### W05-A04C

#### [2002]

## Order telegraphs and menu-based signalling

This code is used for signalling systems in which selection from a number of options is transmitted. It includes 'ship's telegraphs', for which W06-C01B codes are assigned, e.g. W06-C01B7, and also arrangements in e.g. a restaurant for transmitting orders. Where a radio link is involved W05-A05A is also assigned, along with W02 codes as necessary, for novel 'RF' details.

## W05-A05 [1983]

## **Electromagnetic transmission; Pagers**

These codes relate to the use of an EM transmission medium to convey an alerting signal, rather than the form of the alerting signal once received. To discriminate this aspect other W05-A codes should be used in conjunction with W05-A05 codes if necessary.

## W05-A05A [1992]

## Using radio transmission

Includes emergency broadcast receivers, for which W02-G03 or W03-B codes are also assigned, depending on receiver type.

## W05-A05B

[1992]

#### Using UV or IR transmission

### W05-A05C

[1992]

## **Paging**

Systems linked to the telephone network are assigned W01-C05A also. Mobile radio systems in general are covered by W02-C03C codes.

Selective calling, ERMES, FLEX®, MBS, POCSAG,

Selective calling, ERMES, FLEX®, MBS, POC RDS, TAP, TDP, TNPP, WCTP

#### W05-A05C1

[1992]

#### **Apparatus**

## W05-A05C1A [2002]

#### **Receiver details**

Covers details of the pager itself. Used alone or in conjunction with W05-A05C1C for constructional details. See W02-G03 and W02-C03C codes for RF aspects. Vibrators for silent alerting are also assigned W05-A01A1.

## W05-A05C1C [2002]

#### **Constructional details**

Constructional details of electronic equipment in general are assigned V04-S or V04-T codes, which are used here in addition as appropriate.

## W05-A05C1E [2002]

### Paging center details

This code may be used with W05-A05C1C for constructional details. See W02 codes for RF aspects.

Transmitters, aerials, control desks

#### W05-A05C2 [1992]

## System/method

This code is intended to cover a complete paging system e.g. from a mobile radio, protocol, or operating system perspective. For novelty in selective calling search with W01-B05A5 and for radio system details with W02-C03C codes.

W05-A05D [1992]

Tone decoder

W05-A05X [1992]

Other EM signalling aspects

## W05-A10 [2013]

## Condition-responsive alerting in general

(W05-A)

These codes are intended to indicate arrangements for signaling a condition, e.g. to remind a person to do something or to indicate the state of a machine, including malfunctions. They do not cover conditions involving emergencies, hazards to personal safety, etc. which are covered by W05-B alarm codes. W05-A10 codes may be assigned with other W05-A codes indicating audible or visual signaling if this is important or claimed but the codes can be used alone to indicate non-urgent or non-emergency 'alarm' conditions when the means of alerting is not stated or is unimportant. Other codes outside W05 are also assigned as necessary, e.g. W04 codes for use with educational or sports-related inventions.

## W05-A10A [2013]

## Alerting relating to human activity or human status

Includes alerting to modify human behavior such as reminding a person to do or not do something and alerting a person to non-urgent conditions such as incontinence detection (see also X27-A02A) or the need for changing a baby (see also X27-X01). Inventions concerned with warning related to personal safety are not included and are covered by W05-B07 codes instead. Note that arrangements for avoiding loss or forgetting of personal items are included but that those intended as theft alarms are not assigned W05-A10A and are covered by W05-B01 codes, e.g. W05-B01A5C.

Bed-wetting detector, computer usage warning, diaper alarm, leaving behind alarm, nappy alarm, posture alarm, reminder alarm, workstation alarm

#### W05-A10C [2013]

## Alerting relating to equipment, machine or vehicle operation and status

Includes warning or indicating operational state, such as fault conditions or the need for maintenance or replenishment of consumable items.

Battery indicator, malfunction, mode, overheat, refill, service indicator, temperature, wear indicator

#### W05-A10X [2013]

## Other general condition-responsive alerting

#### W05-B

#### **Alarms**

Since 1997 this code group has been expanded to cover 'disaster' alarms (W05-B08 codes), including alarms indicating failure in utility systems at source, in the distribution system, or at the point of consumption. Otherwise, condition-responsive circuitry relating to e.g. abnormal state of a machine, electrical equipment, etc. is not included and is coded in the appropriate place for the monitored equipment (See T05-E also) but may also be assigned W05-A codes if the signalling or alerting aspect is significant. From 2005, new code subgroups are introduced for personal safety alarms (W05-B07 codes) and general equipment details of alarm systems (W05-B10 codes).

#### W05-B01

## Burglar/intruder alarms; Scaring thieves

Search with X22-D03 also to distinguish inventions relating to vehicle theft alarms. Antitheft systems for vehicles, or other applications, not including alarms are excluded from W05-B01 codes. Includes alarm aspects of weapons detection (from 2011 also specifically covered by W07-F05C), e.g. at an airport or entrance to a building, for which technology-specific codes are assigned as appropriate, e.g. W05-B01A for detection based on electric or magnetic field systems (also covered by S03-C02 codes and S03-C06).

Personnel presence detection, restricted area monitoring, patient/detainee absconding detection

#### W05-B01A

## Electrical/magnetic field disturbance

Includes actuation by sensed variation of capacitance and inductance, and e.g. Doppler radar systems (see W06-A04A2 also).

Cable, electrodes, coil, antenna, interrogation loop, resonant circuit

## W05-B01A1 [1992]

#### Intrusion detection system

Includes interference with field distribution and proximity sensor(see U21-B02C codes for proximity switch circuits). Includes variation in circuit capacitance or inductance.

#### W05-B01A2 [1992]

#### Theft detection system using tags

These codes relate to theft detection systems based on sensing the presence of a tag associated with the item to be protected.

#### W05-B01A2A [1992]

### Ferromagnetic tag

Includes systems using non-linear magnetic properties, e.g. to generate harmonics from an applied magnetic field. For novel magnetic materials V02-A01 codes are also assigned.

## W05-B01A2B [1992]

#### Inductive tag

Includes LC resonant circuits, also coded in U25-E05B1, in arrangements in which energy is 'sucked out' by the tuned circuit causing a detectable drop in field strength. Tags including electrical devices to generate harmonics, e.g. a diode, are regarded as simple transponders, and are thus covered by W05-B01A2C.

## W05-B01A2C [1992]

#### RF transponder tag

See W02-G05A for transponder tags per se. Includes simple arrangements to generate harmonics, e.g. using diodes, for which U23-B01 is also assigned to indicate an analogue frequency multiplier. Transponders based on a passive tuned circuit arrangement **without** any active device to modify the interrogating signal are covered by W05-B01A2B.

#### W05-B01A2E [1997]

## Manufacture of theft detection tag.

This code is used with other W05-B01A2 codes to define the type of tag being manufactured.

## W05-B01A5 [1997]

## Theft detection and human separation alarms based on signal level or response

The title of this code has been expanded from 2002 to better reflect its coverage of alarm systems triggered by signal falling below threshold or non-response in a transponder interrogation system. This may be applied to the detection of child or elderly person wandering off, or the removal of, or separation from, an object of value. Novel RF details are assigned W02-C03 and W02-G codes as appropriate, e.g. W02-G03J1C for novel radio receiver signal strength determining circuitry.

## W05-B01A5A [2002]

## Detecting separation of child or supervised person

This code is used either alone, or with W05-B01A5B in the case of transponder-based systems, and may be applied to the monitoring of a single person or a group such as children on a school trip, in which case W04-W codes are also assigned.

## W05-B01A5B [2002]

## **Transponder-based systems**

This code is normally used with W05-B01A5A or W05-B01A5C, depending on the nature of the protection involved. Transponder-based systems for determining presence or for recognition in general are covered by W06-A04B codes, e.g. W06-A04B5 codes for object and human identification, and W02-G05 codes. From 2002, these W02 and W06 codes are not normally assigned for protection systems of the W05-B01A5 type unless specific 'RF' novelty is involved. Transponder-based remote measurement and control systems are covered by W05-D08G (from 2002 - formerly W05-D04G).

## W05-B01A5C [2002]

## Protected object theft detection and separation alarms

This code is used either alone, or with W05-B01A5B in the case of transponder-based systems, and concerns monitoring to determine that an item to be protected is within a desired range of an individual or specified point. Analogous systems for protection of a person or a group of people are covered by W05-B01A5A. Tracking systems for locating luggage in an airport or similar are covered by W06-B02A5.

#### W05-B01B

## Mechanical actuation intrusion or theft alarms

The title of this code has been expanded from 2002 to better reflect its coverage of alarms actuated as a consequence of physical action involving contact, e.g. the opening of a door or window, or the lifting of an article which results in the making or breaking of an electrical circuit. The emphasis is on mechanical contact with the sensing arrangement, thus an arrangement involving an optical fiber in which light transmission is modified by e.g. the weight of an intruder, is regarded as fitting into this category. (W05-B01B1 in the case of intruder sensing).

Loop continuity/attitude detection for shoplifting prevention, pressure mats, reed switches, limit switches, lock tampering detection, incorrect keyed-in password/code detection

## W05-B01B1 [2002]

## Mechanically-actuated intrusion alarms

Covers intruder and burglar alarms.

## W05-B01B2 [2002]

## Mechanically-actuated theft alarms

Covers theft alarms triggered by lifting of articles, or similar.

## W05-B01C [1987]

#### Optical, ultrasonic actuation

(W05-B01X)

## W05-B01C1 [1992]

## **Ultrasonic actuation**

This code has been subdivided from 2002 to cover separately intruder / burglar alarms and theft alarms. The codes include actuation by interference with sonic waves. See W06-A05 codes also for systems analogous to radar.

Ultrasonic transmitter/receiver, Doppler detector

## W05-B01C1A [2002]

## Ultrasonically-actuated intrusion alarms

Covers intruder and burglar alarms involving ultrasonic sensing.

#### W05-B01C1B [2002]

#### Ultrasonically-actuated theft alarms

Covers theft alarms involving ultrasonic sensing.

## W05-B01C2 [1992]

## **Optically actuated alarm**

The scope note of this code has been modified from 2002 to cover intruder / burglar alarms and theft alarms. Arrangements involving 'lidar' techniques are also assigned W06-A06 codes while 'light barrier' aspects are also assigned S03-C08 codes.

Light beam, light barrier, optical transmitter/receiver

## W05-B01C2A [2002]

## **Optically-actuated intrusion alarms**

Covers intruder and burglar alarms involving optical sensing.

### W05-B01C2B [2002]

#### Optically-actuated theft alarms

Covers theft alarms involving optical sensing.

#### W05-B01C5 [1992]

Image scanning and comparing system scanner or motion detection; CCTV

### W05-B01C5A [1997]

## Image scanning and comparing system scanner or motion detection

See also W02-F01A5 for CCTV surveillance, W04-M01G codes for camera mounting details, and T04-D07D codes for pattern recognition aspects. Novel video signal movement detectors in general are coded in W04-P01A1, used computer image processing aspects in T01-J10B2 codes.

## CCTV surveillance automatic alarm actuation

## W05-B01C5C [1997]

## CCTV triggered upon intruder detection by other means

This code covers alarm systems in which the presence of an intruder is sensed by a detection arrangement distinct from the CCTV system, which then actuates it to enable a protected area to be monitored. See also W02-F01A5 for CCTV surveillance aspects.

## W05-B01D [1987]

## Scaring thief or attacker and personal defensive alarms

From 2002 this code is subdivided to separately cover arrangements for preventing robbery from e.g. banks, and for personal defence of private individuals, e.g. anti-mugging alarms.

#### W05-B01D1 [2002]

### Scaring thief or attacker

This code covers the use of dyes to stain currency, gas or similar for incapacitation, and arrangements for trapping criminals, e.g. in a bank or cash machine lobby. Other codes which may also be assigned include T05-D codes for entry/exit registers, access control and automatic road blocks, T05-L05A for strongboxes, and T05-L03 codes for ATMs. Anti-mugging alarms for public use are covered by W05-B01D5.

Dye, smoke, trigger

## W05-B01D5 [2002]

#### Personal defence alarms

This code includes arrangements for deterring an assailant and attracting attention, normally using acoustic signalling, for which W05-A02 codes are assigned as appropriate. Arrangements for self defence in a military or law enforcement context are covered by W07-F01A.

Siren, whistle, spray

## W05-B01E [2005]

#### Passive acoustic intrusion detection

(W05-B01X)

Covers sensing of intrusion, e.g. using microphones to detect sound produced. Intruder alarms using e.g. reflection of ultrasonic waves are covered by W05-B01C1A. Acoustic detection of glass breakage for alarm purposes is covered by W05-B01G5.

## W05-B01G [1997]

### Glass breakage detector

(W05-B01B, W05-B01X)

#### W05-B01G1 [1997]

## Based on electrical 'switching' action

### W05-B01G5 [1997]

## Based on acoustic signal detection and analysis

W04-V04A7 is also assigned for the acoustic signal analysis aspect from 2002. Passive acoustic sensing of intrusion, not specifically for detection of glass breaking sounds, is covered by W05-B01E.

#### W05-B01X

### Other intruder or theft alarm aspects

Includes apparatus for detecting a change in breathing of criminal, and change in physiological parameters of victims, e.g. pulse rate (see also S05-D01 codes).

#### W05-B02

#### Fire alarms

Electrical aspects of fire-fighting systems, e.g. using sprinklers or other extinguishing methods, are coded in X25-X.

#### W05-B02A

## Responsive to smoke or gas

For detectors per se search S03 also. Includes detection of inflammable gas as a fire hazard. Alarms indicating failure in gas supply are assigned W05-B08J.

HV generator, shield

## W05-B02A1 [1992]

## Using light-emitting and receiving device

Includes optical scattering type, see S03-E04C codes also.

Light source, photodetector

#### W05-B02A3 [1992]

## **Using ionisation chamber**

See S03-E10 for detector details.

#### W05-B02A5 [1992]

## Detecting specific combustion products e.g. gas, produced by the fire

See appropriate S03 codes for gas analysis. Carbon monoxide alarms are covered by W05-B07L1 as a personal safety alarm, e.g. for detecting a malfunctioning heating appliance. When a fire alarm incorporates the sensing of a build-up of carbon monoxide or some other toxic combustion product, W05-B02A5 and W05-B07L1 may be assigned together.

## W05-B02B [1992]

## Radiation actuation e.g. from fire

(W05-B02X)

Flame detection for controlled combustion, is covered by X27-G02.

Temp. measurement, thermal trip, fire-type discrimination for automatic fire-fighting system

#### W05-B02B1 [1992]

#### Infrared radiation detection

IR radiation detector, photodetector, filter

### W05-B02B5

[1992]

#### Ultra-violet flame detection

Photodetector, filter

### W05-B02C

[1992]

#### Mechanically actuated alarm

Covers fire alarm actuation by breaking glass, or conductors.

### W05-B02D

[1992]

#### **Electric actuation of alarm**

Covers fire alarm actuation by thermally-responsive switch, or similar.

#### W05-B02X

#### Other fire alarm aspects

#### W05-B03

## Alarms responsive to two or more different conditions

Covers alarm sensor inventions, e.g. an IR sensor responsive to body heat for an intruder alarm and to heat radiation from a fire for a fire alarm, and not connection of a common alarm transducer (e.g. a klaxon, bell, or flashing light) to a number of separate sensors.

#### W05-B04

## Alarms responsive to unspecified condition

#### W05-B05

## Alarms with signalling to central station and alarm signal transmission

These codes includes alarms connected (electrically or by e.g. EM transmission) to a police or fire station, i.e. 'central station' alarms. They describe the transmission medium and mode between any alarm sensor and alarm reproducing transducer. Other W05-B codes are assigned as appropriate where alarms of a specific type are involved, e.g. W05-B01 codes for intruder alarms. From 2008, W05-B05A7 is introduced for 'reverse' transmission, i.e. to highlight novel aspects of alarm signalling from a central station to sensors or alarm substations.

#### W05-B05A

[1992]

### Alarm signalling mode

These codes define the mode of communication between sensors and central station. From 2008 the title of this code has been changed to reflect the inclusion of 'reverse' transmission, i.e. to highlight novel aspects of alarm signalling from a central station to sensors or alarm substations, for which W05-B05A7 has been introduced.

#### W05-B05A1

[1992]

## With sensor signalling to central station

#### W05-B05A5

[1992]

## With cyclic interrogation or polling from central station

Polling protocol in data networks is covered by W01-A06F1C and centralised control aspects in general by W01-A06E2A.

#### W05-B05A7

[2008]

## With central station signalling to alarm sensors or substations

This code covers 'reverse' transmission, i.e. alarm signalling from a central station to sensors or alarm substations.

## W05-B05B [1992]

#### Transmission medium

These codes define the medium used for communication between sensors and central station. W01 or W02 codes are also assigned as necessary to highlight particular **novel** aspects from a communications viewpoint, but from 2002, W05-B05B codes are used **without** W01 or W02 codes where there is no specific novelty in the communication system or equipment. **Note that from 2002, transmission via the telephone network (landline and radio) is transferred to W05-B05G and that W05-B05B3 is therefore discontinued.** 

## W05-B05B1

[1992]

### **Using power transmission lines**

Also assigned W02-C01A3 and in X12-H03 for **novel** aspects of power line transmission. (Prior to 2002, these codes were routinely assigned also)

### W05-B05B2

[1992]

#### Using radio transmission system

See appropriate W02-C03 codes for transmission details. From 2002, W02 codes are only assigned for **novel** aspects. Prior to 2002 mobile telephone networks used for alarm signal transmission were coded for the radio aspect, i.e. W05-B05B2 was assigned. From 2002, where radio systems are part of a **telephone network** W05-B05G5 codes take precedence.

## W05-B05B3\* [1992-2001]

## **Using telephone transmission**

\*This code is now discontinued and from 2002 this subject matter is transferred to W05-B05G1. W05-B05B3 remains valid and searchable for records between 1992 and 2001. Prior to 2002, W01-C05A was routinely assigned also for inventions making use of the telephone network for alarm transmission.

#### W05-B05B4 [1992]

## **Using optical link**

Includes fiber and free-space links.

## W05-B05B5 [2002]

### **Using internet**

(W01-A06B7, W05-B05B3, W05-B05B9)

This code covers the **use** of the internet as an alarm signal transmission medium. As such, 'internet' codes in W01-A06B7 are **not** normally used, unless some novel aspect from a data communications viewpoint is involved. Use of other, e.g. private, data transmission network is covered by W05-B05B6, but note that W05-B05B5 takes precedence over W05-B05B6 for systems involving joint use of internet and other data networks.

## W05-B05B6 [2006]

### Using data network

This code covers the use of data networks as an alarm signal transmission medium, other than internet-based systems which are covered by W05-B05B5 which takes precedence for use of the internet and systems involving joint use of internet and other data networks e.g. a local area network. W01-A06 codes are also assigned for novel data network aspects.

### W05-B05B9 [1992]

#### Other alarm signal transmission medium

## W05-B05G [2002]

## Using telephone transmission

This code and its subdivisions cover all aspects of telephone network transmission of alarm signals and from 2002 are used for this topic in place of W05-B05B2 or W05-B05B3 as appropriate. The breakdown of the codes is based on that used for telemetry and telecontrol signal transmission medium, as represented by W05-D06G codes. In the event that an invention concerns both alarm signal transmission **and** telemetry or telecontrol aspects, **W05-D06G** codes will be used in preference. From 2002, pure applications of telephone networks to alarm signal transmission are not covered in W01 (e.g. W01-C05A) or W02, these codes now being used only in cases of genuine 'communications' novelty.

## W05-B05G1 [2002]

#### Landline

(W05-B05B3)

### W05-B05G5 [2002]

#### Radio telephone

(W05-B05B4)

## W05-B05G5A [2002]

### **Cordless telephone transmission**

(W05-B05B2)

## W05-B05G5C [2002]

## **Cellular telephone transmission**

(W05-B05B2)

This code is intended for cellular systems of the 'TDMA' kind, especially GSM. Alarm signal transmission over UMTS or similar networks is assigned W05-B05B5G, which takes precedence.

## W05-B05G5G [2002]

#### **UMTS transmission**

(W05-B05B2)

This code is intended for alarm signalling over a 'third generation' or similar network, such as '4G', and takes precedence over W05-B05G5C which is intended for use of cellular systems of the 'TDMA' kind, especially GSM. **Novel** multiple access aspects are highlighted by assignment of W02-K05 codes, especially W02-K05A7 for CDMA, and W02-K07C for OFDM.

## W05-B05G5J [2002]

#### **WLL transmission**

(W05-B05B2)

This code is intended for alarm signalling over a fixed radio telephone link of 'wireless local loop' or similar type. Novel details of the radio system are highlighted by additional assignment of W02-C03D codes for the 'point-to-point' aspect.

## W05-B05G5X [2002]

## Other telephone network alarm signal transmission

## W05-B07 [2005]

### Personal safety alarms

(W05-B09)

Anti-mugging and personal defence alarms are covered by W05-B01D5. Alarms warning of abduction or separation from children based on transponders or received signal level are covered by W05-B01A5A.

W05-B07A [2005]

Industrial worker protection alarm

W05-B07C [2005]

## Aged or infirm persons protection alarm

Monitoring of patients in hospital is also assigned S05-G02B codes.

W05-B07E [2005]

## **Driver or pilot protection alarm**

X22-E04 is also assigned for road vehicle driver alertness alarms.

W05-B07G [2005]

## **Protection alarm triggering condition**

These codes are assigned with W05-B07A, W05-B07C, W05-B07E or W05-B07X as appropriate to indicate the condition being sensed, which in general involves measurement or observation of some aspect of the individual or their activity.

W05-B07G1 [2005]

Based on body position or attitude

W05-B07G3 [2005]

## Based on lack of activity

Includes detection of an alarm condition directly based on lack of movement or indirectly based on non-use of lighting, water supply, toilet etc.

W05-B07G5 [2005]

## Based on medical parameter or medical equipment failure

From 2012 the title of this code has been revised to reflect the previous inclusion of alarms related to the malfunctioning of medical equipment in addition to its original main scope of alarms based on a 'medical parameter' meaning a measurement or observation of some aspect of an individual. These two topics are now covered separately by the subdivisions below, the codes being normally assigned with W05-B07C. S05 codes as also assigned appropriate.

## W05-B07G5A [2012]

## Alarm based on medical parameter

This code covers alarms triggered by a measurement or observation of some aspect of the individual, e.g. by sensing abnormal cardiac rhythms. S05-D codes are also assigned as appropriate for the condition sensed, e.g. S05-D01A1 for an alarm triggered by ECG measurements. Alarms indicating a problem with equipment used to treat a patient are not included and are covered by W05-B07G5C.

## W05-B07G5C [2012]

## Alarm based on medical equipment failure

This code covers alarms generated by a malfunction in medical equipment that represents a danger or risk to a patient, such as an alarm indicating a problem with infusion apparatus or a ventilator. S05 codes are also assigned as appropriate for the type of equipment, e.g. S05-J01A for an alarm indicating a problem with an infusion device. Alarms which are triggered by a measurement on the patient themselves are not included and are covered by W05-B07G5A.

W05-B07G9 [2005]

Based on other parameter

W05-B07J [2005]

Accidental falling into water alarm

W05-B07J1 [2005]

### Swimming pool alarm

X25-X06 is also assigned for electrical aspects of swimming pools.

W05-B07J3 [2005]

#### Person overboard alarm

See W06-C01B codes also for details of on-board aspects of ship or boat systems.

W05-B07J9 [2005]

Other accidental falling into water alarm

W05-B07K [2006]

## Detecting presence of person in hazardous

Covers alarms indicating the presence of a person in a hazardous area, (other than in water as covered by W05-B07J codes), e.g. a person fallen onto a railway track (see X23-A09A3 also) or a highway (see T07 codes also). Industrial safety systems in general are covered by X25-X12. For specific details of the detection system, see S03-C06 and other S03-C codes as appropriate.

#### W05-B07L [2005]

#### Dangerous gas alarms

Covers detection of the presence of explosive, toxic, or other gases hazardous to life. Smoke detectors are covered by W05-B02A codes.

## W05-B07L1 [2005]

## Sensing poisonous combustion products

This code is intended for detecting the presence of toxic combustion products, e.g. carbon monoxide, or other dangerous gases. Carbon monoxide alarms in association with combustion monitors for gas heaters and the like are also assigned X27-G02, and those for use with a fire alarm system are also assigned W05-B02A5.

## W05-B07N [2011]

## **Electrical safety alarm**

This code covers alarms warning of electrical hazards, e.g. using a detector to warn an electrician that power lines, switchgear or other electrical equipment is 'live', or failure of safety measures such as residual current circuit breakers or earthing. To denote industrial applications of electrical safety alarms W05-B07A is also assigned and for inventions specific to the electrical supply industry X12 and X13 codes are also assigned as appropriate, e.g. X12-G01D for power line maintenance. W05-B07N is not assigned for mains supply failure alarms which are covered by W05-B08J codes (i.e. as 'Utility-based alarms'). Earth current, leakage, live, RCCB, residual current circuit breaker.

## W05-B07X [2005]

#### Other personal safety alarm

## W05-B08 [1997]

## Disaster, terrorist attack and utility failure warning and alarm systems

In 2005, the title of this code was expanded to better reflect its coverage. S03-C05 is also assigned for novel aspects of geophysical natural disaster prediction and detection. Emergency broadcast radio receivers are assigned W05-A05A, which may be searched in conjunction with W05-B08 codes as appropriate.

## W05-B08A [1997]

Earthquake alarm

#### W05-B08C [1997]

#### Adverse weather-related disaster alarm

Includes flooding, landslide, avalanche.

#### W05-B08G [2005]

#### Terrorist attack alarm

Includes systems, manually or automatically actuated, e.g. for warning of an attack in progress.

## W05-B08J [1997]

#### **Utility-based alarm**

Covers alarms indicating failure of supply interruption of utilities, e.g. due to adverse weather or faults at the point of generation or consumption.

#### W05-B08J1 [2005]

#### Domestic consumer utility alarm

Covers alarm at domestic customer premises.

#### W05-B08J3 [2005]

#### Industrial consumer utility alarm

Covers alarm at industrial customer premises.

## W05-B08J5 [2005]

#### Commercial consumer utility alarm

Covers alarm installed on commercial premises, e.g. in a shop or hotel.

## W05-B08J7 [2005]

## **Utility supply producer alarm**

Covers alarms relating to safety issues and the like affecting plant and distribution systems of a utility provider.

## W05-B08X [2005]

## Other disaster or public information warning and alarm systems

#### W05-B09

## Other alarm system details

See general note for W05-B code group.

#### W05-B10 [2005]

## General details of alarm systems

(W05-B09)

Codes in this subgroup cover equipment details of alarm systems. When specific to a particular alarm type, other W05-B codes are assigned as appropriate.

### W05-B10A [2005]

#### **Alarm switches**

(W05-B09)

Novel details of electromechanical switches are covered by V03 codes and electronic switches by U21-B codes.

#### W05-B10C [2005]

## **Alarm constructional details**

(W05-B09)

Covers external aspects such as housings and internal details such as PCB mounting. See V04-S and V04-T codes for further details.

....

## W05-B10E [2005]

#### **Alarm power supplies**

(W05-B09)

Power supplies in general are covered by U24 codes, (assuming low-power types), which are also assigned as appropriate to indicate novel aspects.

#### W05-B10X

[2005]

## Other general alarm system details

(W05-B09)

#### W05-C

## Monitoring and testing of signalling or alarm systems

This code group relates to monitoring and testing of equipment and systems covered by W05-A and W05-B.

Redundancy, standby supplies

#### W05-C01

[1992]

## Testing of signalling or alarm systems

Includes checking for power disruptions etc. Fail-safe

#### W05-C01A

[1992]

#### Sensor fault

Covers apparatus/system for checking that fault lies within sensor itself. Includes self-testing sensors, (with W05-C01C from 2002).

Sensor checking, faulty sensor identification

### W05-C01B

[1992]

#### Line fault

Covers apparatus/system for checking if fault lies within line.

Loop continuity checking

#### W05-C01C

[2002]

#### Self testing systems

Includes arrangements for testing on switch-on or start-up. Self-testing sensors are also assigned W05-C01A.

#### W05-C01J

[2005]

## **Detection of tampering with alarm systems**

Covers sensing of deliberate tampering or unauthorised access to alarm equipment, e.g. through opening of housing.

## W05-C02 [1992]

## Monitoring of signalling or alarm systems

From 2009, the scope of this code has been extended to include protection against false alarms, previously covered by W05-C05, and new subdivisions are introduced to distinguish this topic from other 'processing' and hardware aspects.

Alarm condition simulation, alarm acceptance

## W05-C02A [2009]

## Control desk, indicators, displays and other hardware

This code is intended for hardware aspects of alarm monitoring centers and the like.

### W05-C02C [2009]

## Alarm interpretation, prediction and false alarm discrimination

This code is intended for control aspects, including software, involved with the determination that an alarm condition exists.

## W05-C02C1 [2009]

## Alarm interpretation and processing

This code covers arrangements for determining that an alarm condition exists, e.g. based on outputs of several sensors, and extracting relevant data such as time, location, etc. When emphasis is on predicting an alarm condition W05-C02C3 is assigned and when emphasis is on disregarding of false alarms W05-C02C5 codes take precedence.

#### W05-C02C3 [2009]

#### **Alarm prediction**

This code covers arrangements for predicting an alarm condition based on e.g. trend in change of measured values from sensors, etc.

### W05-C02C5 [2009]

## **False alarm prevention**

(W05-C05)

This code covers arrangements for preventing or reducing the incidence of false alarms, including compensating for noise or other spurious effects.

## W05-C02C5A [2009]

## False alarm prevention involving sensor features

(W05-C05)

This code covers arrangements which are **part of the alarm sensor** for preventing or reducing false alarms

## W05-C02C5C [2009]

## False alarm prevention involving features external to sensors

(W05-C05)

This code covers arrangements which are **external to the alarm sensor** for preventing or reducing false alarms, e.g. by corroborating the output from several sensors.

## W05-C03 [1992]

### Arming/disarming of alarms

This code covers enabling and disabling of alarms by an authorized person, e.g. by use of an input security code. It includes temporary and permanent disabling of EAS tags at point-of-sale, for which W05-B01A2 codes are also assigned as appropriate.

#### W05-C05\*

[1992-2008]

#### **False alarm protection**

\*This code is now discontinued and from 2009 the topic of false alarm prevention is covered by W05-C02C5 codes to place it in the same hierarchy as alarm interpretation and prediction. W05-C05 remains valid and searchable for records prior to 2009.

#### W05-D

## Transmission systems for measurement or control signals

The codes in this group relate to telemetry and telecontrol systems and specifically inventions concerned with actual measurement or control signal transmission. In 2002 the codes were revised to better distinguish between the concepts of transmission medium (represented by W05-D06 codes), application (W05-D07 codes), and function or mode (covered by W05-D08 codes). The W05-D01, W05-D03 and W05-D04 subgroups used pre-2002 are still valid for records from 1980-2001. W05-D codes are intended to be used in combination to represent particular topics. For example, a wireless sensor network can be represented by W05-D06F1 (use of wireless data networks) with W05-D08E (code indicating remote measurement). Similarly, an infrared link used in a home automation system for remote control is coded as W05-D06A3, W05-D07A and W05-D08C. Note that applications of remote control to audio/video (AV) equipment such as TV receiver remote control (W03-A02C codes), recording equipment remote control (W04-E04A), and general audio-video equipment remote control (W03-G05A codes), are not covered by W05-D codes unless of general application also. In 2018 W05-D06E1 codes were introduced to denote use of the internet as a transmission medium for IoT communication. These codes should also be

considered for signal transmission aspects of Industry 4.0 systems, for which W05-D07B (for factory automation applications) is also likely to be relevant.

Remote actuation, control, remote operation, remote monitoring, process-variable transmission systems

## W05-D01\* [1980-2001]

#### **Digital encoders**

\*This code is now discontinued. From 2002 W05-D01 and its subdivisions are no longer used, the idea of 'absolute' position encoders being conveyed by a new U21 code, U21-A03J5, with other U21-A03J codes being assigned also to specify the technology used. W05-D01 codes remain valid and searchable for records prior to 2002, and were used for rotary or linear encoders giving unique digital representation of position (see U21-A03 codes also) but not systems determining speed or position by counting pulses generated by movement (covered by S02-G01 codes).

## W05-D01A\* [1980-2001]

#### Magnetic or inductive

\*This code is now discontinued.

Magnet, magnetic field, winding, coil, resolver

### W05-D01B\*

[1980-2001]

### **Photoelectric**

\*This code is now discontinued.

Light source, detector, shield, opaque/transparent sections, step-variable transmission, pattern

## W05-D01X\*

[1980-2001]

## Other digital encoders

\*This code is now discontinued. Electrode, brush, wiping contact, contact pattern capacitance

## W05-D02

## Multiplex systems and multiple access

This code covers multiplexing and multiple-access schemes, especially as used in data networks. To highlight novel aspects of such systems, W01-A and W02-K codes are also assigned as appropriate, e.g. W01-A06F1 codes which highlight access control protocols. Within W05-D, novelty in signal format or protocol other than for multiple access purposes is indicated by assignment of W05-D08J. Prior to 2012 W01-B06 was assigned for selection (i.e. switching) aspects of telemetry and telecontrol systems in addition to relevant W05-D02 codes but from 2012 that code is discontinued and the topic is covered by appropriate W05-D02 codes only. *Cyclic sensor interrogation, sequential monitoring* 

W05-D02A [2002]

**Time division** 

TDM

W05-D02A1 [2002]

**TDMA** 

W05-D02C [2002]

**Frequency division** 

**FDM** 

W05-D02E [2002]

## **Spread spectrum**

Transmission of measurement and control signals via UMTS is assigned W05-D06G5G, and as an inherent SS system is not assigned W05-D02E codes. Spread spectrum communication in general is assigned W02-K05 codes. For transmission systems for measurement or control W02-K05 codes are only assigned for actual novelty in the spread spectrum aspect.

W05-D02E1 [2002]

Hybrid spread spectrum system

W05-D02E6 [2002]

Frequency hopping spread spectrum

W05-D02E7 [2002]

**Direct sequence spread spectrum** 

CDMA, code division multiple access

W05-D02E9 [2002]

Other spread spectrum type

W05-D02J [2007]

## Sensor or actuator addressing

This code involves addressing for a multiplex or multi-access scheme and may be used alone or with other W05-D02 codes defining the scheme.

W05-D02X [2002]

## Other multiplex and multiple access systems

Wavelength division multiplexing, WDM

## W05-D03\* [1980-2001]

### **Electric signal transmission**

\*This code is now discontinued. From 2002 W05-D03 and its subdivisions are no longer used, the subject matter being covered by new subgroups for 'Transmission medium' (W05-D06) and 'Function and mode' (W05-D08). W05-D03 codes remain valid and searchable for records between 1980 and 2001. W05-D06 'medium' codes are assigned on the basis that pure applications with no novelty in the communications are **not** coded in W01 or W02. Prior to 2002, codes from those classes were routinely assigned in addition to W05-D03 codes.

### W05-D03A\* [1980-2001]

### **Using pulses**

\*This code is now discontinued.

Digital data transmission, pulse modulator/ demodulator, pulse code/width/amplitude/repetition rate/position modulation

#### W05-D03B\* [1980-2001]

## Using frequency, phase, current or voltage magnitude

\*This code is now discontinued. From 2002 analogue measurement or control signal transmission is indicated by W05-D08A. Continuous

#### W05-D03C\* [1992-2001]

## **Telephone line**

\*This code is now discontinued. From 2002, telephone line transmission for measurement and control signals is covered by W05-D06G1. Prior to 2002 W01-C05B3E or W01-C05B3F were assigned for all aspects of telephone line transmission in telemetry and telecontrol but from 2002 are only assigned for novelty in the telephone system or equipment.

Modem, public line

## W05-D03D\* [1992-2001]

#### **Power line**

\*This code is now discontinued but prior to 2002 was assigned with W02-C01A3 and X12-H03 codes. From 2002, power line transmission for measurement and control signals is covered by W05-D06P.

Power line carrier communication, PLCC, mains

## W05-D03E\*

[1992-2001]

#### Wired system; Dedicated wiring

\*This code is now discontinued. See W01-A06 codes for networks e.g. LAN, WAN, etc. From 2002, dedicated wired systems for transmission of measurement and control signals are covered by W05-D06R and the use of data networks by W05-D06F.

#### W05-D03X\*

[1980-2001]

### Other electric signal transmission aspects

\*This code is now discontinued but included inductive systems of e.g. rotary transformer type, with W05-D04. and V02 codes assigned as appropriate. From 2002 these aspects are covered by W05-D06T1.

Dynamo-electric devices, rotating/stationary part transmission using coils

## W05-D04\*

[1980-2001]

#### Using radio link; Non-electric systems

\*This code is now discontinued. From 2002 W05-D04 and its subdivisions are no longer assigned, the subject matter being covered by new subgroups for 'Transmission medium' (W05-D06) and 'Function and mode' (W05-D08). W05-D04 codes remain valid and searchable for records between 1980 and 2001. W05-D06 'medium' codes are assigned on the basis that pure applications with no novelty in the communications aspect are **not** coded in W01 or W02. Prior to 2002, codes from those classes were routinely assigned in addition to W05-D04 codes.

### W05-D04A\*

[1987-2001]

#### Radio link

\*This code is now discontinued. From 2002 see W05-D06A1A for radio systems or W05-D06G5 codes for radio telephone systems as appropriate. Radio-link remote vehicle locking, garage door opening, radio control of models, robot vehicles etc.

## W05-D04A1\*

[1987-2001]

#### Remote control

\*This code is now discontinued. From 2002, this topic is represented by assignment of W05-D08C (remote control) with W05-D06A1A for general radio systems or W05-D06G5 codes for radio telephone systems as appropriate.

Telecontrol

## W05-D04A5\*

[1980-2001]

#### Remote monitoring

\*This code is now discontinued. From 2002, this topic is represented by assignment of W05-D08E (remote monitoring) with W05-D06A1A for general radio systems or W05-D06G5 codes for radio telephone systems as appropriate.

Telemetry moving object

### W05-D04B\*

[1992-2001]

#### **Optical link**

\*This code is now discontinued. See W02-C04 codes for optical transmission in general. Light, IR, UV

#### W05-D04B1\*

[1992-2001]

#### **Optical fiber**

\*This code is now discontinued. From 2002 this subject matter is transferred to W05-D06C. Fiber-optic

#### W05-D04B3\*

[1992-2001]

### Free space transmission

\*This code is now discontinued. From 2002 this subject matter is transferred to W05-D06A3. Line-of-sight link

### W05-D04B5\*

[1992-2001]

#### Remote control

\*This code is now discontinued. From 2002, this topic is represented by assignment of W05-D08C (remote control) with W05-D06A3 for free space optical systems or W05-D06C for optical fiberbased systems as appropriate.

Telecontrol

## W05-D04B7\*

[1992-2001]

#### Remote monitoring

\*This code is now discontinued. From 2002, this topic is represented by assignment of W05-D08E (remote monitoring) with W05-D06A3 for free space optical systems or W05-D06C for optical fiber- based systems as appropriate.

Telemetry

## W05-D04B9\*

[1992-2001]

### Other optical system details

\*This code is now discontinued.

#### W05-D04C\*

[1992-2001]

#### Ultrasonic link

\*This code is now discontinued. From 2002, this topic is represented by assignment of W05-D06A5. Sound transmission, telemetry, telecontrol

#### W05-D04D\*

[1992-2001]

## Pneumatic, hydraulic, mechanical transmission

\*This code is now discontinued. From 2002, this topic is represented by assignment of W05-D06M.

#### W05-D04D1\*

[1992-2001]

## **Mud-pulse telemetry**

\*This code is now discontinued. From 2002, this topic is represented by assignment of W05-D06M1. See also X25-E02A1 for well logging.

#### W05-D04G\*

[1997-2001]

## **Using transponders**

\*This code is now discontinued. It was used with other W05-D04 codes as appropriate. From 2002, this topic is represented by assignment of W05-D08G. RF transponder systems are also assigned W02-G05 codes.

#### W05-D05

## Preventing or correcting errors; Monitoring

#### W05-D05A

[1992]

## Noise suppression/compensation

Spread spectrum systems with inherent resistance to interference are covered by W05-D02E codes (or W02-K05 codes prior to 2002), and only assigned W05-D05A when this resistance is part of the novelty.

Filtering, redundancy

#### W05-D05A1

[2002]

## Based on error detection or correction

See U21-A06 for digital signal error detection in general and W01-A01B codes for specific application to data transmission.

#### W05-D05B

[1992]

## Security

This code is intended for novel aspects of remote measurement and remote control systems that relate to security in the sense of preventing or detecting unauthorized access, or other tampering with the system such as a remote locking/unlocking system for a vehicle (see W05-D07D and X22-D01A also). It is **not** intended as a code to indicate 'security' as an application and so is only used for specific aspects relating to **improving** the security of the telemetry or telecontrol system itself.

Access restriction, signal coding

#### W05-D05B1

[2009]

### Security based on use of codes

This code is intended for novel aspects of codebased security in remote control or monitoring systems. The term 'code' is intended to encompass the use of encryption and also generated pseudorandom digital words and digital passwords, but signal coding for error correction purposes is not included, being covered by W05-D05A1. For inventions involving the prevention or detection of interception of transmitted coded signals which are not themselves novel, W05-D05B5 codes take precedence.

#### W05-D05B5

[2009]

# Security based on preventing or detecting interception, malicious software, or unauthorized access

From 2012, the scope of this code has been widened to include arrangements for protecting against malicious software and preventing unauthorized access to a remote control or monitoring systems, e.g. via a network, in addition to its previous coverage of methods or apparatus for the detection and/or prevention of interception and retransmission of control or measurement signals, now covered by W05-D05B5A. W05-D05B5 codes take precedence over W05-D05B1 when coded signal interception or modification is to be avoided but both codes may be assigned together if the form of the coded signals themselves is also novel. Inventions relating to factory automation (FA) systems are also assigned W05-D07B.

### W05-D05B5A

## Security based on preventing or detecting interception

[2012]

This code is intended for security arrangements based on the detection and/or prevention of interception and retransmission of control or measurement signals. Where novel communications aspects are involved other telecommunications codes such as W01-A05L5 are also assigned as appropriate. W05-D05B5C takes precedence over this code for arrangements protecting against modification of software, e.g. by viruses, and W05-D05B5E takes precedence for preventing unauthorized access to a network-based control system.

Eavesdropping, intercept, relay attack

## W05-D05B5C [2012]

# Security based on protecting against malicious software or modification of control programs.

This code is intended for security arrangements based on the detection and/or protection against malicious software, such as viruses, trojans, worms etc., or other unauthorized modification of control programs. T01-N02B3 is also assigned for malicious software protection. W05-D05B5E takes precedence for protection of network-based control systems against unauthorized access.

#### W05-D05B5E [2012]

## Security based on preventing or detecting unauthorized network access

This code is intended for security arrangements based on the detection and/or prevention of unauthorized access to a networked control system. As such it is likely to be assigned with W05-D06E for remote control or measurement systems connected to the internet or W05-D06F for data network-based systems in general. Control of access to data networks in general is covered by W01-A06E1C and firewall aspects are also assigned T01-N02B1D.

### W05-D05B9 [2009]

## Other security aspects of remote control or remote monitoring systems

#### W05-D05C [1992]

## Testing/monitoring of system

Includes setting up and commissioning. See W02-C01D codes for line system testing, W02-C04C1 codes for optical system testing, and W02-C05 codes for monitoring of transmission systems in general. S01 codes may also be assigned for specific electrical testing.

Fail-safe, sensor/actuator monitoring, continuity testing, loopback

## W05-D06 [2002]

### **Transmission medium**

The codes in this subgroup are intended to allow the transmission medium for remote measurement or control signals to be separately highlighted, and replace the codes previously used which related to media in W05-D03 and W05-D04. To specify telemetry, telecontrol, or mode, W05-D08 codes are assigned as well as appropriate. W01 or W02 codes are also assigned as necessary to highlight particular **novel** aspects from a communications viewpoint, but W05-D06 codes are used **without** W01 or W02 where there is no specific novelty in the communication system or equipment. Note that part of the code structure below (W05-D06G codes in particular) is also used to define telephone

network signalling for 'central station' type alarms (W05-B05G codes). In the event that an invention concerns both telemetry or telecontrol **and** alarm signal transmission aspects, **W05-D06G** codes will be used in preference.

#### W05-D06A [2002]

#### Non-contact transmission media

(W05-D04)

These codes are intended to include 'wireless' or 'cordless' transmission systems, and thus encompass free-space optical, radio, and similar technologies.

## W05-D06A1 [2002]

#### Radio and near-field

Includes RF or near field systems using electric, or more commonly, magnetic field transfer as used for rotary couplings, 'smart card' or 'tag' type coupling where ends of link can be separated by variable (short) distance.

## W05-D06A1A [2002]

#### Radio

(W05-D04A)

This code is mainly intended for dedicated radio systems - transmission over radio telephone networks is covered by W05-D06G5 codes and transmission over wireless data networks is covered by W05-D06F1, **both of which take precedence over this code.** Radio systems in general are covered by W02-C03 codes, and radio equipment by W02-G codes, which are also assigned for **novel** aspects.

## W05-D06A1B [2002]

## **Near-field**

(W02-C02, W05-D03X, W05-D04)

Near-field systems in general are covered by W02-C02 codes, which are also assigned for novel aspects. This code is intended for near-field communication **without** a mechanical connection, i.e. it does **not** include capacitive or inductive couplings, e.g. of rotary type, which are covered by W05-D06T codes.

#### W05-D06A3 [2002]

### Free space optical

(W05-D04B3)

This code covers arrangements for transmitting remote control or measurement signals over a free-space optical path, using infrared, visible, or ultraviolet light. Optical fiber and light guide systems involving a mechanical connection are covered by W05-D06C. Novel optical communication system aspects are represented by W02-C04 codes, especially W02-C04B2 codes for free-space transmission, these being also assigned

where application to other systems as well as remote control or monitoring are indicated. *IR, UV* 

## W05-D06A5 [2002]

#### Sonic or ultrasonic link

This code is primarily intended for transmission of remote monitoring or control signals through air or similar gaseous medium. Systems involving sonic or ultrasonic transmission with a mechanical connection - including transmission through water - are covered by W05-D06M codes. Sonic or ultrasonic communication in general is covered by W02-C07 codes.

#### W05-D06C [2002]

## Optical fiber and light guide system

(W05-D04B1)

This code covers arrangements for transmitting remote control or measurement signals over a fiber-optic path, using infrared, visible, or ultraviolet light. Free space optical transmission is covered by W05-D06A3. **Novel** optical communication system aspects are represented by W02-C04 codes, especially W02-C04B1 codes for fiber-based transmission, these being also assigned where application to other systems as well as remote control or monitoring are indicated. *IR, UV* 

### W05-D06E [2002]

## Internet-based transmission

(W01-A06B7)

This code covers the use of the internet as a medium for measurement or control signal transmission, including use in 'internet of things' (IoT) applications. From 2018 specific subdivisions for this topic are introduced (W05-D06E1 codes). W01-A06 (data network) codes are not normally assigned for internet-based remote control and monitoring unless some novel aspect from a data communications viewpoint is involved but T01-N codes may also be assigned for significant computing aspects, especially T01-N01F. The use of data networks other than the internet for telemetry and/or telecontrol signal transmission is covered by W05-D06F codes and use of telephone networks by W05-D06G codes.

Web-based control, web-based monitoring

## W05-D06E1 [2018]

## Internet-based transmission for IoT communication

This code covers the use of the internet as a measurement or control signal transmission medium specifically for 'internet of things' (IoT) applications. Please note that W05-D06E1 codes are assigned for inventions where some aspect of control or measurement signal transmission is significant and not for all aspects of equipment that may be capable of operating in such a system for which codes for the equipment itself should be used. Additional W05-D06 codes are assigned for significant details such as intermediate arrangements for connecting to the internet but please note that use of wireless data networks is indicated by W05-D06E1A and use of cellular communications networks by W05-D06E1C. Search with W05-D07 codes for specific applications, e.g. with W05-D07A for home automation systems using IoT technology or with W05-D07B for use in factory automation including Industry 4.0 applications.

## W05-D06E1A [2018]

## Wireless network-based transmission for IoT communication

This code represents the use of wireless networks which form a significant part of IoT systems with the exception of cellular radio networks which are represented by W05-D06E1C. The use of wireless data networks in general for carrying remote control and measurement signals is covered by W05-D06F1.

6LoWPAN, BLE, Bluetooth®, LoRaWAN, Thread, wireless LAN, SigFox, WLAN, Z-wave, Zigbee®

#### W05-D06E1C [2018]

## Cellular network-based transmission for IoT communication

This code represents the use of cellular radio networks as wireless wide-area networks (WANs) for handling remote measurement and control signals for IoT purposes. The use of cellular radio networks for non-IoT remote control and monitoring purposes is covered by W05-D06G5 codes.

5G IoT, CloT, LTE Cat 0, LTE Cat 1, LTE Cat 3, LTE IoT, LTE-M1, massive IoT, narrow band IoT, NB-IoT

## W05-D06F [2005]

#### **Data network-based transmission**

This code covers the use of data networks as a transmission medium, other than internet-based systems which are covered by W05-D06E. W01-A06 codes are also assigned for novel data network aspects.

CAN, controller area network, EIB, European installation bus, field bus, FlexRay, KNX, LAN, local area network, profibus, VAN, vehicle area network

## W05-D06F1 [2016]

#### Wireless network

Covers use of a wireless (radio) based data network excluding networks used for internet of things applications which are covered by W05-D06E1 codes. Novel details of data networks are covered by W01-A06 codes. This code takes precedence over W05-D06A1A which covers the use of nonnetwork radio communication for remote control or remote measurement. For wireless sensor networks search with W05-D08E. Radio systems in general are covered by W02-C03 codes and radio equipment by W02-G codes, which are also assigned when these aspects are novel.

Bluetooth®, wireless LAN, WLAN, Zigbee®

#### W05-D06G

[2002]

#### **Telephone**

(W01-C05B3E, W01-C05B3F)

In addition to the **previously used** codes indicated below, W01-C05B3E or W01-C05B3F were routinely assigned depending on the remote control or remote monitoring aspect. Where some **novel** aspect of the telephone system itself is involved these W01 codes will also be assigned.

W05-D06G1 [2002]

Landline

(W05-D03C)

W05-D06G5 [2002]

Radio telephone

(W01-B05A1, W02-C03)

W05-D06G5A [2002]

**Cordless telephone transmission** 

(W01-B05A1B, W02-C03C3)

## W05-D06G5C [2002]

## Cellular telephone transmission

(W01-B05A1A, W02-C03C1)

Use of 3G, 4G, 5G or similar non-TDMA mobile telephone systems is covered by W05-D06G5G, which takes precedence over this code. Novel radio system aspects of cellular networks are represented by W02-C03C1 codes. From 2018 cellular 'internet of things' (CloT) systems are not coded here and are covered by W05-D06E1C.

#### W05-D06G5G [2002]

## Third, fourth or fifth-generation mobile phone system

The title of this code is amended (2018) to better reflect its coverage. Novel radio system aspects of cellular networks are represented by W02-C03C1 codes. This code is intended for measurement or control signaling over a 3G, 4G, 5G or similar network, and takes precedence over W05-D06G5C which is intended for use of cellular systems of the 'TDMA' kind, especially GSM. Significant multiple access aspects are highlighted by assignment of W05-D02 codes, novel aspects of these being assigned W02-K codes also, such as W02-K05A7 for CDMA, and W02-K07C for OFDM. Please note that from 2018 cellular 'internet of things' (CIoT) systems are not coded here and are covered by W05-D06E1C.

## W05-D06G5J [2002]

### WLL and fixed access systems

(W01-B05A1G, W02-C03D)

This code is intended for measurement or control signalling over a fixed radio telephone link of 'wireless local loop' or similar type. Novel details of the radio system are highlighted by additional assignment of W02-C03D codes for the 'point-topoint' aspect.

#### W05-D06G5X [2002]

## Other telephone network measurement or control signal transmission

## W05-D06M [2002]

## Pneumatic, hydraulic, mechanical

This code covers the transmission of measurement or control signals through water or other liquids. Systems involving sonic or ultrasonic transmission **without** a mechanical connection, e.g. via the air, are covered by W05-D06A5.

#### W05-D06M1 [2002]

Mud pulse telemetry

W: Communications

## W05-D06P [2002]

#### **Power line communication**

(W05-D03D)

### W05-D06R [2002]

#### **Dedicated wired system**

(W05-D03E)

This code is intended for electric signal transmission over wires specifically installed for the purpose. Fiber-optic systems of this type are covered by W05-D06C.

### W05-D06T [2002]

#### Inductive or capacitive coupling

(W05-D03X, W05-D04)

These codes are intended for mechanically-associated inductive or capacitive coupling, e.g. of rotary type between fixed and moving parts of a machine. Arrangements using near-field transmission **without** mechanical association, i.e. in a 'cordless' sense, are covered by W05-D06A1B.

## W05-D06T1 [2002]

## Inductive coupling

(W05-D03X, W05-D04)

Search with V02 codes for specific novel aspects, e.g. V02-F02D for rotary transformers.

## W05-D06T5 [2002]

## **Capacitive coupling**

(W05-D03X, W05-D04)

W05-D06X [2002]

Other medium

W05-D07 [1992]

## Transmission of control or measurement signals for specific systems

These codes are intended to highlight application and are used with other W05-D codes as appropriate for details of e.g. transmission mode or medium.

## W05-D07A [1992]

## For home automation

ncludes home bus systems. See also X27-V for home automation.

Heating, ventilating, air conditioning, water heater, lighting, intelligent home

## W05-D07B [1992]

#### For factory automation

This code covers transmission of measurement and control signals for factory automation applications. When internet-of-things (IoT) aspects are significant, e.g. in connection with Industry 4.0 data communications, W05-D06E1 codes are also assigned. Control systems-related data communications arrangements in general are also assigned T06-A11. Total factory control in general is covered by T06-A04A2A when based on numerical control and for non-NC systems by T06-A04B7.

Cyber-physical systems, digital manufacturing, FA, fieldbus, IEC 61158, inventory, process control, process monitoring, production line, smart factory, total factory control

## W05-D07C [1992]

## For building control

Includes systems for intelligent buildings. HVAC, heating, ventilating, air conditioning, environment control, computer, sensor interrogation, alarm

## W05-D07D [1992]

#### For vehicles

This application code is assigned for remote measurement and/or control of any vehicle equipment or systems. Codes relating to the specific type of vehicle and on-board equipment or system should also be searched. See also X21, X22 and X23 for land vehicles and W06 for aircraft, space vehicles or marine craft. Search with W05-D02 codes for multiplex systems and with W05-D06F for data network aspects (e.g. CAN bus).

## W05-D07E [1997]

#### For office automation

See S06 section for printer, facsimile and photocopier.

## W05-D07F [1997]

## For power generation and distribution

Includes power plant and systems control. See also X12-H codes.

## W05-D07G [1997]

## For utility meters i.e. electricity, gas, water

See also S01-B01 and X12-H04A for remote reading of electricity meters, and S02-K08A for remote meter reading in general.

## W05-D07H [2006]

## For earth drilling and well logging

(W05-D07X)

Prior to 2006 this topic was covered by W05-D07X. For mud pulse telemetry W05-D06M1 and W05-D08E are also assigned. See S03-C codes and X25-E02 codes for well logging in general, and class H01 for all aspects of oil and gas production.

#### W05-D07M [2011]

### For medical systems and equipment

S05 codes are also assigned to indicate specific details.

#### W05-D07N [2018]

## For agricultural systems and equipment; Farming

This code covers applications of remote measurement and control to agriculture and farming, including livestock aspects. X25-N codes are also assigned and should be included in searches for specific topics, e.g. X25-N01B for control or monitoring of irrigation and X25-N02A for animal feeding.

Automatic feeder, culture, fertilizing, harvesting, greenhouse, hen-house, milking, soil erosion

### W05-D07P [2022]

### Scientific analysis systems

Includes control or measurement signalling, for application systems such as weather measuring equipment, pollution level measurement, Chemical reaction or hazardous substance measurement, radiation measurement etc.

Pollution, weather, chemical reactions

## W05-D07X [1992]

## Other application of telemetry and telecontrol systems

From 2006 oil rig and drilling applications are transferred to W05-D07H.

### W05-D08 [2002]

#### **Function and mode**

These codes are intended to indicate, irrespective of transmission medium or application (respectively conveyed by use of W05-D06 and W05-D07 codes) the purpose of the system in terms of remote control or remote monitoring. They are also used to flag an analogue system, on the basis that the majority of inventions are likely to relate to switching or digital transmission, signal format and that transponders are involved.

#### W05-D08A [2002]

#### **Analogue system**

## W05-D08C [2002]

#### Remote control

Prior to 2002, see W05-D04A1 for radio-based remote control and W05-D04B5 for optical systems.

## W05-D08C1 [2002]

## Remote control and monitoring

This code takes precedence over W05-D08E when transmission of telecontrol **and** telemetry signals are involved.

## W05-D08E [2002]

#### Remote monitoring

For systems involving transmission of both telecontrol and telemetry signals, W05-D08C1 takes precedence over W05-D08E. For sensor networks search with W05-D06F codes, e.g. W05-D06F1 is assigned with W05-D08E to denote wireless sensor networks. (Prior to 2016 see W05-D06F and W05-D08E).

## W05-D08G [2002]

#### **Using transponders**

(W05-D04G)

RF transponder-based systems in general are assigned W02-G05 codes, which are also used here for **novel** aspects of radio-based systems. Transponder systems for identification purposes are assigned W06-A04B for radio signal systems, W06-A05B for sonar-type systems, and W06-A06B for optical systems.

#### W05-D08J [2002]

#### **Novel signal format or protocol**

This code is intended to highlight that the nature of signals used in a telemetry or telecontrol system is novel in some way. These aspects could include novelty in waveforms, voltage levels, modulation, protocols or the like, and are further highlighted by the assignment of codes in e.g. U21 or W01 as appropriate where their use conveys additional information. Systems involving multiplex and multiple access schemes are covered by W05-D02 codes, and signal coding for security by W05-D05B1. W05-D08J will not normally be assigned for these cases unless a specific signal format or protocol novelty exists.

## W05-D08L [2005]

## 'Learning' and 'universal' type remote controllers

(W05-D08X)

Covers remote controls capable of controlling different equipment types, e.g. after 'training' in signal format. Remote controllers for general audio or video entertainment systems with this property are covered by W03-G05A1A.

#### W05-D08N [2005]

## Constructional details of telemetry / telecontrol equipment

(W05-D08X)

Covers external aspects such as housings and internal details such as PCB mounting. See V04-S and V04-T codes for further details.

## W05-D08P [2009]

## Power supply for telemetry / telecontrol equipment

(W05-D08X)

This code covers power supplies specifically for remote measurement or remote control systems. Novel details of power supplies are also assigned relevant codes in U24, e.g. U24-D and U24-E codes.

#### W05-D08R [2009]

## Repeaters and extenders for remote control and remote monitoring

(W05-D08X)

This code covers arrangements for extending the range of remote control or remote monitoring systems, including devices such as 'remote control extenders', usually based on repeaters. Novel aspects of repeaters are also assigned codes depending on technology, e.g. W02-C04A5 for optical repeaters and W02-G05C for radio types. W05-D08R is intended for arrangements permitting increased separation between e.g. controller and controlled device. Modifications to codes or command sets to increase the scope of the controlled functions and the like are **not** included, being covered by W05-D08J. Remote control extenders specifically for use with AV equipment are covered by W03-G05A8.

## W05-D08X

[2002]

## Other function or mode aspects

#### W05-D09

## Other transmission systems for measurement or control signals

This code covers systems for transmitting or receiving remote control or remote measurement signals not fitting into any other W05-D subdivision code.

#### W05-E

### **Display arrangements**

W05-E codes include, in general, display aspects not catered for elsewhere and for specific applications and device technology relevant codes in other classes should be considered, such as T04 codes for computer monitors and W03 codes for television displays. However, note that from 2007, certain W03-A codes (nominally for TV receivers) are used in a general sense for application to displays capable of presenting video information. (See the note at the start of W03 class for further details). Therefore, those searching with W05-E codes are advised to also consider use of W03-A codes for equipment capable of video display where that aspect is significant. From 2007 W05-E10 is introduced for 'electronic paper'.

#### W05-E01

#### Forming character by selecting elements

Includes seven-segment types. *Matrix, row, column* 

## W05-E01A

#### **Drive circuitry**

Addressing, row/column/segment selection, decoder, driver, switching

## W05-E01B

### **Element arrangements**

Matrix, cell, alphanumeric display, filament, lamp, gas discharge, fluorescent, LED, LCD, Shutter, flap, electromagnetic actuator

## W05-E02

#### Arrays or layers of characters

Includes displays where characters are permanently fixed to e.g. moving band, or selectively uncovered, back-lit, etc.

Moving drum, disc, band, motor drive

#### W05-E03

## Advertising displays and systems

This code covers displays used for advertising and similar commercial purposes (in W05-E03A codes), e.g. building signs with company logos and the like, and also advertising via other media such as TV broadcasts and the internet, provided that some visual aspect is involved. These codes may be used alone, or in conjunction with W05-E01 to W05-E05 codes. Signs for indicating emergency exits and the like in buildings are not assigned W05-E03 codes and are covered by W05-A03 codes and other W05-E codes as appropriate.

Lighting control, sequencer, discharge tube, incandescent lamp, LED, animated mobile, rotating display

#### W05-E03A

## **Advertising displays**

These codes are assigned when some novelty in the actual means of presentation itself, is involved.

## W05-E03A1 [2002]

## Static illuminated signs and billboards

## W05-E03A3 [2002]

## Signs and billboards with moving parts

Covers arrangements for bringing a different advertisement into view and for moving part of an advertisement, e.g. animation.

#### W05-E03A5 [2002]

## Addressable or switchable advertising displays

These codes cover displays, generally using switched light sources or addressable back-lit elements, without physical movement of the display itself being involved. Codes specific to the display technology or elements involved are assigned as necessary from e.g. U12, U14, V05, or X26.

## W05-E03A5A [2002]

## With separately controllable or addressable display elements

This code covers displays with some electrically controllable or addressable aspect, e.g. to allow the appearance of limited movement of a portion of the display. W05-E05A5C takes precedence for matrix-type displays of video type in which there is no restriction on the information presented.

## W05-E03A5C [2002]

## Novel matrix-type display for advertising

This code takes precedence over W05-E03A5A and covers novel aspects of displays of video or analogous type allowing all display points in a matrix to be addressed as desired.

#### W05-E03A5E [2002]

## Video advertising using standard display

This code includes the use of standard video terminals, of 'TV set' or 'VDU' type arranged to present advertising messages, e.g. to persons in a queue or similar situation in a public area.

#### W05-E03A6 [2014]

## Advertising displays including additional information aspect

This code and its subdivisions cover display arrangements or signs for advertising or similar commercial purpose which include an additional, non-visual aspect.

#### W05-E03A6A [2014]

## Advertising displays including audio aspects

This code covers display arrangements, billboards, or signs for advertising or similar commercial purpose which include an audio aspect, e.g. using recordings. See also W04-E30A3 for audio players in general. W05-E03A6A is not assigned for advertising using standard video displays, as covered by W05-E03A5E which are normally expected to include an audio aspect. Audible advertising without any visual element is covered (from 2014) by W05-F.

#### W05-E03A6X [2014]

Advertising displays including other additional information aspect

#### W05-E03A7 [2002]

# Advertising displays involving synchronisation with movement of an observer

This code includes arrangements for presenting sequences of video or film type images so as to be viewable by an observer in a vehicle, e.g. a passenger on a train. Systems based on cine film or analogous methods are also assigned S06-B codes (e.g. S06-B05), and those using video projection are also assigned W04-Q01 codes.

### W05-E03A9 [2002]

## Other advertising display aspects

W05-E03C

[2002]

#### TV advertising

This code covers novel aspects of the creation and transmission of television advertising. For systems checking that commercial messages are actually transmitted, e.g. at a designated time, see W02-F04C5.

## W05-E03E [2002]

#### Internet advertising

Novel aspects of internet communication are covered by W01-A06B7 codes as appropriate, and internet advertising applications in general by T01-N01A2C.

#### W05-E03G

[2002]

## Telephone network advertising

This code covers text-based and similar systems involving visual presentation, and does **not** include purely audio messages.

#### W05-E03M

[2015]

#### **Mobile Advertising**

Includes advertising mounted on, or carried by vehicles and portable advertising displays and devices.

Advertising

#### W05-E05

[1987]

#### **General display details**

W05-E05 codes may be used alone, in conjunction with other W05-E codes or to highlight display aspects in conjunction with other classes. Note that from 2007, provision has been made to use W03-A codes (nominally for TV receivers) in a wider sense for displays capable of presenting video, thus the use of W03-A codes in a search in addition to W05-E05 codes should be considered for such displays.

## W05-E05A

[1987]

## **Filters**

From 2007, filters specifically for video displays are covered by W03-A08E1. W05-E05A will continue to be assigned to general or non-video cases.

Polarizer, anti-glare filter, diffuser, lens, fiber-optic

#### W05-E05B\*

[1987-2006]

#### Back lighting and analogous systems

\*This code is now discontinued. From 2007, the topics of back and edge lighting for displays are covered by new X26 codes, X26-U04A and its subdivisions, which are used in conjunction with other X26-D codes as appropriate, W05-E05B codes remain valid and searchable for records prior to 2007, and covered back and edge lighting of displays, especially LCDs, in which U14-K01A4C is also assigned, but also the lighting of any translucent or transparent information source, such as advertisements, also assigned W05-E03A1. Note that back lighting or similar for computer monitors or telephone displays was not included, being covered by T04-H03D and W01-C01A2A respectively. X26 codes were also assigned as appropriate for light sources and optical components for illumination.

Passive display, liquid crystal display module, illumination, lamp, light fitting

#### W05-E05B1\*

[2002-2006]

## **Back lighting**

\*This code is now discontinued.

#### W05-E05B3\*

[2002-2006]

## **Edge lighting**

\*This code is now discontinued.

#### W05-E05B5\*

[2002-2006]

#### Diffusers and light source filters

\*This code is now discontinued. X26-D01E1 is assigned for diffusers and X26-D01C for filters.

#### W05-E05B6\*

[2005-2006]

#### **Light guide**

\*This code is now discontinued. X26-D01F is assigned for this topic.

#### W05-E05B7\*

[2002-2006]

#### **Novel light sources**

\*This code is now discontinued but was normally used with a code specific to the light source itself, e.g. in X26.

#### W05-E05B9\*

[2002-2006]

## Other back lighting and analogous system details

\*This code is now discontinued.

## W05-E05C [1987]

## Composite display i.e. made up of several individual displays

Multiple CRT, discharge tube, matrix display, large screen, sports ground, stock market, truck-mounted display, passenger information, video wall

## W05-E05F [2020]

## Flexible/foldable/bendable displays

Includes the structural details of flexible or foldable displays as used in mobile phones and other portable display devices. See also U14 for liquid crystal and electroluminescent displays, and U12 for light emitting diode (LED) displays. Flexible display monitors for computers are coded under T04-H03N.

## W05-E05G [2006]

## **General constructional details**

This code is used with other W05-E codes or alone, as appropriate. It is not assigned for single applications covered elsewhere, such as for construction of a TV set display. From 2007, constructional details specific to video displays are covered by W03-A09 codes. W05-E05G will continue to be assigned to general or non-video cases.

#### W05-E07 [1997]

### **Head-mounted display**

This code is used for general or unspecified applications only, and not when a specific code exists elsewhere. Head mounted displays specifically for TV receiver and similar applications are coded in W03-A08E7, and for virtual reality in W04-W07E1A.

## W05-E08 [2002]

## Display technologies not covered elsewhere

This code is intended for electrical displays not covered elsewhere, and is normally used with codes from other sections as appropriate, e.g. with S06-A codes for electrophotographic displays. Specific display technologies such as EL, LED, LCD, PDP, CRT are not included, and are covered in U12, U14, or V05 as appropriate. Novel technology aspects of electronic paper which cannot be coded elsewhere are covered here, and from 2007 W05-E10 is also assigned.

## W05-E10 [2007]

## **Electronic paper**

This code is intended as a general reference for 'electronic paper', interpreted as the use of mainly flexible electronic displays to provide a re-writable medium for presenting information in a form resembling normal printed matter, no power supply being required once data is written. Novel technology aspects will continue to be covered in e.g. U14 codes or in W05-E08.

## W05-F [2014]

## **Audible advertising**

This code covers advertising involving audible communication only. Advertising involving audible and visual aspects is not included and is covered by W05-E03A5E for video advertising using a standard display, W05-E03A6A for other visual advertising displays that include audible information and in W05-E03C for TV advertising. W05-F includes audible advertising via the telephone network which is also assigned W01-C05B5G.

Audio Advertisement

### W06: Aviation, Marine and Radar Systems

#### W06-A

#### Radar, navigation, etc.

Includes analogous systems where principles are applicable to radar, sonar, etc. See also under application, e.g. for aircraft and ships where systems are specific.

#### W06-A01

#### **Beacon systems**

Includes aerials, receivers and transmitters, but see W02-B and W02-G codes also for specific features of RF systems.

#### W06-A01A [1992]

## Fixed beacon providing navigational reference

From 1992, airport/landing strip systems are also coded in W06-B02E.

Hyperbolic, Loran-C, Omega, aircraft landing aid, ILS, microwave landing system, MLS, optical, sonic, ultrasonic system

## W06-A01C [1992]

## Portable or vehicle-borne beacon for location

Survival craft, liferaft, distress

#### W06-A02

#### **Direction finders**

Bearing measurement, incident radiation angle measurement, DF

#### W06-A02A

#### **Using radio waves**

Antenna direction pattern changing is also covered by W02-B06 codes.

RDF, rotary antenna, antenna array, electronic beam steering, phase comparison, tracking

## W06-A02A1 [1992]

## **Automatic direction finder**

Includes systems resolving relative phases of signals from different antennae.

## W06-A02C [1992]

## **Using light**

(W06-A02X)

IR, UV, visible, light source location

## W06-A02C1 [1992]

## Tracking object with electronic imaging

See T04-D codes also, e.g. T04-D07D for detecting movement or position. Includes warehouse monitoring aspects.

Pattern recognition

#### W06-A02E

[1992]

#### Using sonic or ultrasonic waves

Sound source location, gunfire location

#### W06-A02X

#### Other

Nuclear radiation, Geiger counter

#### W06-A03

## **Position fixing**

Use with W06-A02 codes if direction finding aspect is present.

Multiple direction finding

#### W06-A03A

[1992]

## Satellite based system e.g. GPS

See W02-K05 codes for pseudonoise aspects. Global positioning system, NAVSTAR, coarse, fine, secure, military

## W06-A03A1

[1997]

#### **Novel aspects of GPS**

Includes novel details concerning the overall GPS infrastructure. Novel GPS receivers are not included here and are coded in W06-A03A5R.

Infrastructure

#### W06-A03A5

[1997]

## **GPS applications**

Includes **use** of GPS information without necessarily any novel aspect of GPS per se.

## W06-A03A5A

[2002]

## Includes systems using ground based transmitter of known accurate position to correct for GPS timing errors, e.g. due to ionospheric conditions, to provide more accurate positioning. Also includes use of pseudolites that transmit GPS format signals when line of sight to sufficient orbiting GPS

satellites is restricted.

#### W06-A03A5C

[2002]

## **Absolute position determination**

Differential and assisted GPS

Includes use of GPS purely as a navigation tool.

## W06-A03A5E [2002]

## Position determination for secondary purpose

Includes use of GPS position information for control of e.g. setting up of television channels, local information services accessing, etc., without necessarily presenting the geographical information to the equipment user.

[2002]

#### W06-A03A5G

## Use of GPS as a time standard

Includes use of GPS timing information, e.g. for time-stamping transmitted data.

## W06-A03A5J [2002]

## Use of GPS as a frequency standard

## W06-A03A5M [2007]

## **GPS Jamming/anti-jamming**

Includes arrangements for protecting GPS receiver from radio frequency (RF) interference to prevent GPS receiver code and carrier tracking from being effected, resulting in poor navigation performance, e.g. in weapons fire and control systems (see also W07 codes). See W02-L01 codes instead for jamming/anti-jamming of (non-GPS) communications in general.

## W06-A03A5R [2002]

#### **Novel GPS receiver**

Includes novel hand-held or vehicle-borne GPS receiver. This code is normally applied when there is some novelty in the receiver construction itself such as a novel housing or display. For general use of a GPS receiver for position fixing, see W06-A03A5C instead. W02-G03 codes (for communications receivers) are also assigned as appropriate.

## W06-A03A5X [2002]

#### Other GPS applications

## W06-A03B [2005]

## **Using radio waves**

Includes the use of a number of radio receivers to determine the position of a transmitted radio signal, e.g. by triangulation, and also determination of own position based on reception of broadcast signals, or other transmissions, from known locations. The use of dedicated beacons transmitting special signals is covered by W06-A01A

Base station, cell site, cellular, radio station, time-ofarrival, TOA, TV station

## W06-A03D [2005]

## **Using light waves**

## W06-A03F [2005]

#### Using sonic or ultrasonic waves

Includes use of omni-directional hydrophones to determine sound source location. See also W02-C07C for hydrophones per se

#### W06-A04

#### Radar systems

#### W06-A04A

#### **Primary radar systems**

Includes primary or passive target radar systems where a radar/radio signal is transmitted towards a target and the reflected signal is detected.

Non-cooperating/passive target systems

#### W06-A04A1

#### **Determining target position**

Includes radar based rangefinding (see also S02-B01) and position determination.

Monopulse, distance, height measurement, tracking system, aircraft radio altimeter, level sensing, ground penetrating radar

#### W06-A04A2

#### Using relative movement

Clutter suppression is covered by W06-A04E5. For Doppler intruder detector see W05-B01A codes also.

Frequency measurement, target discrimination/classification, MTI, velocity measurement, clutter suppression

#### W06-A04B

## Secondary radar systems

Includes secondary or active radar systems where a radar/radio signal is transmitted towards a target and then a reply signal is actively re-transmitted by the target back towards the originating transmitter/receiver. From 1997 remote reading of e.g. meters, etc., is excluded - see W05-D08G, W05-D08E and W05-D07G codes. All RFID transponder details and interrogation systems are also covered by T04-K codes, such as T04-K03B for novel RFID tags and T04-K02 codes for reading and writing aspects. See also W02-G05 codes for novel RF details such as antenna (W06-A04G7 also), associated with RFID systems. Analogous systems using other than radio waves are coded in the appropriate sections: e.g. W06-A05B codes for sonic/ultrasonic systems, and W06-A06B codes for light based systems.

Interrogation, response, reply, ID, code, sequence, security

## W06-A04B1

#### [1992]

#### For vehicle or aircraft identification

Includes radio frequency identification of vehicles and aircraft or parts of them, e.g. identification of tyres on a motor vehicle so that a specific deflated tyre can be identified. Also see T04-K03B for RFID transponders per se and T04-K02 codes for reading/writing aspects. See also W02-G05 codes for novel radio/RF details of RF transponders/tags such as antennae. See also W06-A04H1 for anticollision radar and W06-A04H7 for aircraft control aspects. Aircraft on-board navigation systems are also coded in W06-B01B1.

RFID, transponder, IFF, identification of friend or foe, air traffic control, ATC, flight identification

#### W06-A04B3

## [1992]

### Security and coding aspects

Includes coding to prevent errors, suppress interference, or for military security.

Squawk

#### W06-A04B5

## [1992]

## For object identification

Includes analogous industrial systems for monitoring livestock, people, workpieces, etc.

#### W06-A04B5A

## [2002]

#### **Animals and livestock**

Includes monitoring of livestock, pets and other animals. See also X25-N02 for monitoring livestock. See also X27-H03 for RF transponders used in pet access control collars and pet monitoring.

Dog, cat, pet, cattle, cow, sheep, horse, pig

## W06-A04B5C

## [2002]

## **People**

For monitoring and identifying people. Also includes monitoring of passport, business cards ID.

#### W06-A04B5E

## [2002]

### Workpieces

For monitoring industrial workpieces such as bottles on production line. See also T05-G02B1A for systems interrogating transponders attached to workpieces.

#### W06-A04B5G

### [2007]

#### Goods/cargo

Includes monitoring or identifying of goods or cargo, e.g. during shipment/transportation. See also X25-F11 for tracking of goods in e.g. warehouse. See also T04-K03B for transponder tags/labels, T04-K02 for reading and writing aspects, and T01-N01A2E for Internet based tracking. Also see W02-G05 codes for novel RF aspects of transponder tags/interrogation. Monitoring/identifying of goods/articles during their manufacture is covered by W06-A04B5E and T05-G02B1A instead.

#### Cold chain, logistics

#### W06-A04B7

#### [2005]

## Using different response medium

Includes secondary radar systems where transmitted and received signals take different forms, for example, when the transmitted signal is radio but the re-radiated signal received is e.g. acoustic.

#### W06-A04C

#### **Display arrangements**

Cathode ray tube, CRT, LCD, liquid crystal, solidstate, PPI, sector, Cartesian, selective brightening, electronic cursor, character generator, MTI

### W06-A04D

#### **Pulse system details**

See U22 for pulse generation and processing in general. TR switching is coded in W06-A04G5 also. Continuous wave radar systems are covered by W06-A04F.

Pulse generator, pulse shaping

#### W06-A04D1

[1992]

**Pulse generators** 

## W06-A04D3

[1992]

#### Pulse compression, 'chirping'

### W06-A04E

## Jamming; Anti-jamming; Monitoring; Transforming co-ordinates; Processing

Codes in this section are used for signal processing aspects of radar systems, either alone or with other codes in W06-A04 as appropriate.

## W06-A04E1 [1987]

## Jamming; Anti-jamming, including 'passive' systems

Includes e.g. 'passive' chaff systems. Jamming/antijamming in general is covered by W02-L codes. Passive reflectors and absorbers are coded in W02-B03 codes also. Signature modification and camouflage aspects, such as radar absorbing coating on aircraft, are coded in W06-A04X only (and in W07-F codes as appropriate).

Noise generator, pulse insertion, window dispersion system, steerable antenna, nulling, notching, cancelling, EW, electronic warfare

#### W06-A04E1A [1992]

### Jamming of radar

Includes electronic countermeasures for 'actively' jamming a radar signal. Passive countermeasures are coded in W06-A04E1 only.

#### W06-A04E1C [1992]

## Anti-jamming and countermeasures to jamming

Includes systems for overcoming an enemy's attempts to actively jam radar signal. Noise and clutter suppression in general is covered by W06-A04E5.

## W06-A04E3 [1987]

## Monitoring, testing, transforming coordinates

## W06-A04E3A [1992]

## Monitoring, testing, target simulation, calibration

Includes operator training.

Maintenance, repair, fault, monitor

#### W06-A04E3C [1992]

## Detecting existence, type, or position of radar

Hostile radar monitoring, police speed trap warning receiver, instantaneous frequency measurement receiver, IFM

#### W06-A04E3E [1992]

#### **Coordinate transformation**

Display systems per se are covered by W06-A04C. Video standards conversion in general is covered by W04-N05A.

Cartesian, polar

#### W06-A04E5 [1987]

#### Noise/clutter suppression

Moving target discrimination in general is covered by W06-A04A2. Suppression of deliberate interference for anti-jamming is covered by W06-A04E1C. See W06-A04E9 also for correlation signal processing. Noise reduction for receivers in general is covered by W02-G03B codes.

Signal-to-noise ratio improvement, S-N, SNR, velocity discrimination, anti-clutter gain control, ACG, selective blanking, Constant false alarm rate, CFAR

#### W06-A04E9 [1987]

## Other jamming; Anti-jamming; Monitoring; Transforming co-ordinates and processing aspects

Includes transformation and correlation processing. See T01-J04B1 for FFT and T01-J04B2 for data processing implementations of correlators.

Signal processing, angle correction, motion compensation, convolution

#### W06-A04F [1992]

#### Continuous wave radar

See U23-A codes for oscillators per se and U23-D codes for phase/frequency control.

CW, carrier, oscillator, FM, ramp, STALO, feedback, linearise

#### W06-A04G [1992]

## **General details of radar equipment**

Codes in this section are used alone or with other W06-A04 codes as appropriate.

#### W06-A04G1 [1992]

## **Transmitter circuitry**

Transmitters in general are covered by W02-G01 codes.

## W06-A04G3 [1992]

#### **Receiver circuitry**

Receivers in general are covered by W02-G03 codes.

## W06-A04G5 [1992]

## Transmit/receive switching

See also W06-A04D for pulse system aspects. Gas filled switching tubes are covered by V05-A03, electronic switching in general by U21-B codes.

TR

## W06-A04G7

#### Antennae and antenna control

See W02-B codes for details of antenna systems. Beam steering, phased array, active array, scanning, rotary mount, motor drive

[1992]

## W06-A04G9 [1992]

## Other radar equipment details

## W06-A04H [1992]

## **Radar systems and applications**

Codes in this section are used with other W06-A04 codes or alone, as appropriate.

## W06-A04H1 [1992]

## **Vehicle applications**

From 2005 radar anticollision systems have been transferred to W06-A04H1K. Prior to 2005, anticollision systems remain searchable in W06-A04H1.

## W06-A04H1A [2005]

#### Land vehicles

Includes radar systems used on-board motor vehicles and trains.

### W06-A04H1B [2005]

#### **Aircraft**

Includes planes and helicopters.

#### W06-A04H1C [2005]

#### Ships

Includes marine vessels, boats and submarines.

## W06-A04H1K [2005]

## Anticollision

Can be used in conjunction with above W06-A04H1 codes. Search with W06-B01B1 for aircraft based systems, and X22-J05A for motor vehicles. See W06-A04H1 for anticollision systems prior to 2005.

## W06-A04H2 [1992]

#### Weather radar

Includes on-board aircraft weather radar when used with W06-B01B1. See also S03-D05 for meteorology.

Meteorological

## W06-A04H3 [1992]

#### Mapping/imaging

Synthetic aperture radar per se is coded in W06-A04J.

## W06-A04H5 [1992]

## Tracking, target seeking

See also W07-A01C for missile radar target-seeking system.

## W06-A04H7 [1992]

## **Traffic control and monitoring**

Includes air traffic control, also coded in W06-B02E when based at airport. (Prior to 1992 not coded in W06-B02). See W06-A04B codes also for aircraft automatic ID systems.

ATC

## W06-A04H8 [1992]

### Industrial radar system

This code is used chiefly in conjunction with other W06-A04 codes to indicate an analogous system used in an industrial environment. For example, use with W06-A04A1 for monitoring levels in a container (also coded in S02-C06D5).

## W06-A04H9 [1992]

## Other radar applications

## W06-A04J [1992]

## Synthetic aperture radar

See also W06-A04H3 for mapping. *SAR* 

## W06-A04L [2005]

## Bistatic/Multistatic/Passive radar systems

(W06-A04X)

Covers radar systems where the transmitter and receiver(s) are positioned in different locations and includes multistatic radar. See also W06-A04H2 (and S03-D codes) for bistatic weather radar. Also includes passive radar systems that utilize third party signals from commercial broadcast or communications transmitters to detect and track objects based on e.g. time-of-arrival difference of direct and reflected signal paths, or measurement of the bistatic Doppler shift and direction of arrival of the echo.

Passive coherent location, passive covert radar

#### W06-A04X

### Other radar system aspects

Includes signature modification by e.g. absorber materials. For absorber materials per se, see W02-B03D. Includes radar absorbing coatings and paints.

## W06-A05 [1983]

#### Sonar systems

Does not include ultrasound equipment used purely for medical application. See appropriate codes in S05 and S03 only. Does not also include low range systems e.g. for determining material properties or flaws. See appropriate S03 codes only.

Ultrasonic/sonic measurement, object presence/size/thickness determination, Doppler measurement, transponder, locator

## W06-A05A\* [1983-2001]

### For air, sea, land vehicles

\*This code is now discontinued and transferred to W06-A05H codes from 2002 onwards. It remains searchable for 1983 to 2001. For **specific** cases, codes for vehicle type are also assigned. See W02-C07 for hydrophone systems. See also W06-C01B1 and X25-N02 for fish-locating equipment used in commercial fishing.

Depth measurement, contact/target detection and classification, echo detection, ultrasonic transmitter/receiver, piezoelectric transducer, fish finding equipment

## W06-A05B [1997]

#### Secondary sonar systems

Includes secondary or active sonar transponders for identification. From 1997 remote reading of measured values is excluded - see W05-D08G, W05-D08E, E05-D07G and W05-D06A5 codes. Interrogation, response, reply, ID, code, sequence, security

#### W06-A05B1 [2005]

#### For vehicle or marine craft identification

### W06-A05B3 [2005]

#### Security and coding aspects

Includes control of sonar/ultrasound signal to prevent detection by unauthorised persons. *ID, code, sequence, security* 

## W06-A05B5 [2005]

#### For object identification

Includes identification of persons, objects, workpieces etc.

## W06-A05B7 [2005]

#### Using different response medium

Includes secondary sonar systems where transmitted and received signals take different forms, for example, when the transmitted signal is ultrasound but the re-radiated signal received is e.g. radio.

W06-A05C [1992]

**Details of sonar systems and equipment** 

W06-A05C1 [1992]

**Transmitter circuits** 

W06-A05C3 [1992]

**Receiver circuits** 

W06-A05C3A [1992]

**Display arrangements** 

W06-A05C5 [1992]

**Sonobuoys** *Repeater* 

W06-A05C6 [2011]

Testing, monitoring, calibrating

W06-A05C7 [1992]

#### **Transducers**

Includes transducers per se, beam forming, and mounting arrangements. See V06-V01N and other V06 codes as appropriate.

Piezoelectric, casing, mounting

#### W06-A05C8 [2002]

#### Sonar jamming/anti-jamming

Includes equipment and methods.

W06-A05C9 [2002]

Other sonar equipment details

W06-A05D [2005]

#### **Primary sonar systems**

Includes primary or passive target sonar systems where a sonar signal is transmitted towards a target and a reflected signal is detected. This code is only applied when no specific sonar application or novel aspect is mentioned. For example, a novel primary sonar receiver will only be coded in W06-A05C3, with the fact that it is used in a primary sonar application, capable of being determined by the omission of any secondary sonar (W06-A05B) codes.

## W06-A05D1 [2005]

## **Determining target position**

Includes sonar distance or height sensing.

#### W06-A05D2 [2005]

#### Using relative movement

Includes sonar velocity sensing.

Doppler measurement, speed, velocity

W06-A05H [2002]

Sonar systems and applications

W06-A05H1 [2002]

**Vehicle applications** 

W06-A05H1A [2002]

**Land vehicles** 

Also see X22 codes for further vehicle details.

W06-A05H1B [2002]

**Aircraft** 

W06-A05H1C [2002]

**Ships** 

See W02-C07 for hydrophone systems. See W06-C01B1 and X25-N02 for fish locating equipment used in commercial fishing.

Depth measurement, fish finding equipment

W06-A05H1K [2002]

Anticollision

Can be used in conjunction with above W06-A05H1 codes. Search with X22-J05B for motor vehicle anticollision systems.

Anticollision

W06-A05H3 [2005]

Mapping/imaging

Includes sonar imaging of seabed (see also S03-C codes).

W06-A05H5 [2002]

Tracking, target seeking

Contact/target detection and classification, echo detection

W06-A05H8 [2002]

**Industrial sonar systems** 

W06-A05H9 [2002]

Other sonar applications

W06-A05J [2007]

Synthetic aperture sonar

See also W06-A05H3 for mapping/imaging. Includes improving the spatial resolution of an active sonar array by combining data coherently between pings (acoustic pulses) to synthesize a longer effective array.

W06-A06 [1983]

Non-radio e.m. wave, e.g. light, systems

Optical communication in general is covered by W02-C04 codes.

Lidar, distance measuring equipment, DME, transmitter/receiver, light beam modulation

W06-A06A\* [1983-2001]

For air, sea, land vehicles

\*This code is now discontinued and is transferred to W06-A06H codes from 2002 onwards. It remains searchable for records between 1983 and 2001. For **specific** systems, appropriate vehicle code is also assigned.

Anticollision system, target detection

W06-A06B [1997]

Secondary light-based systems

Includes secondary or active optical radar/LIDAR systems. Includes use of optical transponders for identification. From 1997 remote reading of measured values is excluded - see W05-D08G, W05-D08E, W05-D07G and W05-D06A3 codes.

Interrogation, response, reply, ID, code, sequence, security

W06-A06B1 [2005]

For vehicle or aircraft identification

W06-A06B3 [2005]

Security and coding aspects

ID, code, sequence, security

W06-A06B5 [2005]

For object identification

Includes secondary light-based systems for identifying and monitoring of people, objects, workpieces etc.

W06-A06B7 [2005]

Using different response medium

Includes secondary light-based systems where transmitted and received signals take different forms, for example, when the transmitted signal is optical but the re-radiated signal received is e.g. ultrasonic.

W06-A06C [2005]

Details of non-radio e.m. wave, e.g. light, systems and equipment

Can be used alone or in conjunction with other W06-A06 codes as appropriate.

W06-A06C1 [2012]

**Transmitter circuits** 

W06-A06C2 [2012]

**Receiver circuits** 

W06-A06C3 [2006]

### **Display arrangements**

Cathode ray tube, CRT, LCD, liquid crystal

W06-A06C5 [2006]
Monitoring; Testing; Calibrating

W06-A06C8 [2006]

## Jamming/anti-jamming

Includes countermeasures and counter-counter measures for optical targeting systems, such as laser designed to illuminate and confuse missile optical targeting sensor. See also W07-F03.

## W06-A06D [2005]

## **Primary light-based systems**

Includes primary or passive target optical radar or LIDAR (light detection and ranging) where a lidar/laser signal is transmitted towards a target and a reflected signal is detected. This code is only applied when no specific optical radar application or novel aspect is mentioned. For example, a novel primary LIDAR receiver will only be coded in W06-A06C, with the fact that it is used in a primary LIDAR application, capable of being determined by the omission of any secondary LIDAR (W06-A06B) codes.

## W06-A06D1 [2005]

## **Determining target position**

Includes light-based distance and height sensing. Prior to 2005 indeterminate-application distance sensing was covered in W06-A06.

W06-A06D2 [2005]

#### Using relative movement

Includes light-based velocity sensing.

W06-A06H [2002]

Non radio e.m. wave, e.g. light, system applications

W06-A06H1 [2002]

Vehicle applications

W06-A06H1A [2002]

**Land vehicles** 

Also see X22 codes for further vehicle details.

W06-A06H1B [2002]

Aircraft

W06-A06H1C [2002]

Ships

W06-A06H1K [2002]

#### **Anticollision**

Can be used in conjunction with above W06-A06H1 codes. Search with X22-J05C for motor vehicle anticollision systems.

Anticollision

#### W06-A06H2 [2006]

#### Weather lidar

Includes laser radar systems designed for meteorological use. See also S03-D codes for meteorology.

## W06-A06H3 [2005]

## Mapping/imaging

Includes LIDAR mapping of e.g. rain forest canopy. See S02-B04 only for photographic imaging/surveying.

## W06-A06H5 [2002]

## Tracking, target seeking

See W07-A01C only for missile heat seeking system.

Target detection, tracking, optical, IR

## W06-A06H8 [2002]

#### Industrial non-radio e.m. wave systems

Includes detecting presence of e.g. bottles to be filled on production line.

W06-A06H9 [2002]

Other non-radio e.m. wave, e.g. light, systems

W06-A06J [2017]

**Continuous wave Lidar** 

W06-A06K [2017]

Synthetic aperture Lidar

#### W06-A07

## **Gyroscopes; Inertial navigation systems**

From 2007 this code has been expanded to include inertial navigation systems (INS) using e.g. on-board linear accelerometers and rate gyroscopes to determine position/attitude of e.g. missile (see also W07 codes). Includes electrical aspects of gyroscopes used for navigational applications. Includes laser types (see V07 and V08 also). Non-electrical and non-electro-optical types are coded in S02-B07 only.

Optical, fiber, motor driven

## W06-A08 [1992]

# General or combination system for land navigation

See S02-B08. See T07-A05 also for roadside aspects. See X22-E06D only for on-board vehicles aspects. For purely satellite navigation see W06-A03A5 only.

Vehicle, guidance, beacon, satellite, dead-reckoning

#### W06-A09

### Other (incl. compasses)

Non-electrical aspects of compasses are coded in S02-B06 only.

Magnetic field measurement, heading/course indication

#### W06-B

## Aviation and aerospace systems

#### W06-B01

**Aircraft** 

#### W06-B01A

# Control systems for power plant, control surfaces, etc; Auto-pilots

Braking control, anti-skid system

#### W06-B01A1 [1983]

#### For power plant

Speed, power, flow, starting

## W06-B01A1A [2006]

#### IC engine power plant

Includes control of internal combustion engines e.g. driving propellers.

Propeller, IC

## W06-B01A1C [2006]

#### Gas turbine/jet engine power plant

Includes control of gas turbine jet engines such as turboprop, turbofan, turboshaft, RAMjet, SCRAM jet engines and pulse detonation engines. Also includes control of small gas turbines used as auxiliary power units (APUs) e.g. to generate power when aircraft is on the ground (see also X11-C01 for gas turbine driven electricity generation plant). Gas turbine engine control, Supersonic Combustion RAMJET

## W06-B01A1X [2006]

#### Other power plant

Includes control of aircraft power plant not already provided for.

## W06-B01A5 [1983]

# Affecting flight path, e.g. autopilots, control surfaces

See T06-B01 for course/attitude control in general. Flap/aileron/rudder controls, trim adjustment, course correction

#### W06-B01B [1997]

#### Instrumentation; Communications

## W06-B01B1 [1983]

### For navigation

See W06-A04H1 for anticollision radar systems, and W06-A04H2 for weather radar.

Instrument landing system, ILS, microwave landing system, MLS, beacon homing systems, radar navigation, collision-avoidance, course, heading attitude, altitude, air-speed, ground-speed measurement, stall warning devices, wind shear warning, turbulence detection

## W06-B01B3 [2002]

## Head-up displays/head mounted displays

Includes displays built into pilot's helmet or goggles. See X27-A02B1A for electrical aspects of helmets and goggles.

#### W06-B01B5 [1983]

### For vehicle/engine parameters

Engine speed, temperature, fuel gauges, cabin pressure, outside temperature/ pressure, ice build-up, weight on landing gear detector

#### W06-B01B6 [1992]

#### Black box recorder

See T03/W04 for dynamic recording aspects also.

#### W06-B01B7 [1992]

## **Communications equipment; Antennae**

See W02-B codes for antennae, W02-G codes for communication equipment such as transceivers, receivers, etc., and W01-C04 for intercoms. For (radio)telephone for use by passengers, search with W01-C07 codes. Public address systems are covered by W06-B01C7.

Aerial mounting, cabling, crew headsets, radio telephone installation

## W06-B01B8 [1992]

#### Data bus systems

See appropriate codes in T01, W01, and W05 (e.g. W05-D codes). This code is used for data bus aspects in general whether for control or instrumentation, (W06-B01A codes also assigned for specific control aspects).

#### W06-B01C

# Electrical equipment (incl. de-icing, lighting)

## W06-B01C1 [1992]

#### **Electrical installations**

Includes connectors, fittings, and wiring for general application to on-board electrical systems. (See V04 and X12-G codes also). Non-hardware aspects of data bus systems are covered by W06-B01B8.

## W06-B01C2 [2002]

# External lighting for signalling or navigational reference

## W06-B01C3 [1992]

## Electrical power generation, distribution and control

See X11, X12, X13 and X16 also.

Alternator, generator, invertor, battery, circuitbreaker

#### W06-B01C4 [1992]

## **De-icing equipment**

Includes thermal and electromechanical systems.

#### W06-B01C5 [1992]

# **Environmental control and internal lighting**

Includes pressurisation system, heating, etc.

#### W06-B01C6 [2007]

## **Electric propulsion**

See also X11 codes for high power electric motors per se and X13-F/G codes for high power electric motor control systems.

#### W06-B01C7 [1992]

## Public address and in-flight entertainment

PA, loudspeaker, amplifier, tape recorder, video, VTR, projection

## W06-B01C8 [2005]

#### **On-board security systems**

Includes anti-hijack systems and arrangements to subdue attackers. Use with W06-B01A5 for systems preventing attackers from piloting aircraft, e.g. into building, and W06-B02E for systems enabling remote flying of aircraft from the ground.

Terrorism, hijack

## W06-B01C9 [1992]

#### Other aircraft electrical equipment

Includes emergency escape equipment, food preparation equipment, toilets, etc. Also includes aircraft-mounted weather influencing systems (see also X25-X20) and camera arrangements for aerial imaging/photography.

Oxygen mask, escape hatch

#### W06-B02

#### Airport control systems and equipment

Passenger handling, security, ground equipment

#### W06-B02A [1992]

**Security systems** 

## W06-B02A1 [1992]

## For personnel

Includes detection of concealed weapons, suspicious behavior and detection of infectious diseases in people (see also S05-D codes) at airport. For passport checking see W06-B02R instead.

Magnetic, electromagnetic

## W06-B02A5 [1992]

## For baggage inspection or tracking

Includes use of transponder tags or bar-code reader. See S03-C03 and S03-E06B codes also for inspection.

X-ray, neutron, image, tracking, inspection, monitoring, smuggling

## W06-B02A5A [2006]

#### **Baggage inspection**

Includes detection of concealed articles such as guns and explosives or other illegal substances, e.g. using x-rays or neutron sensors. See S03-C03 and S03-E06B codes also for inspection.

Image, drugs, narcotics, guns

## W06-B02A5E [2006]

## **Baggage tracking and monitoring**

Includes all aspects of tracking and monitoring of location of baggage within airport, e.g. using transponder tags (see also W06-A04B5 and W02-G05 codes) or bar-code reader (see also T04).

#### W06-B02C [1992]

#### Passenger information equipment

Includes displays (see W05-E codes also), public address (see W04-S05 codes), passenger guidance robot, etc.

## W06-B02D

## **Ground equipment for servicing aircraft**

[1992]

Truck, empty, fill, refuel, power line, luggage, baggage

## W06-B02E [1992]

# Ground based navigation and communication equipment

See W06-A codes for details of beacons etc. Includes runway lights. Only coded here if specific to airports.

Air traffic control, runway lighting, approach lighting, ILS marker, outer marker, beacon

#### W06-B02L [2014]

# Aircraft launching/towing, landing, arresting and mooring

Includes catapult for launching military aircraft (Q25-P13) from aircraft carrier (Q24-P13) or launching/winch arrangements for gliders (see also Q25-P05). See Q25-R07 for mechanical details. Also includes arrangements for inflating, launching and mooring hot air balloons. Also includes electrical aspects of landing areas such as helipads that can't be covered elsewhere. See Q25-R02 for runways and helipads per se and W06-B02E for navigation-aiding markers and lights.

## W06-B02R [2007]

#### Check-in/reservation

Includes on-line seat reservation of booking of flights (see also T01-N01A2 codes), and check-in via e.g. mobile phone. See W06-B02C also for airport based information terminals/displays. Also includes ticket purchase authentication method for airport, and passport checking/control

## W06-B02S [2011]

## **Airport safety**

(W06-B02X)

Includes fire-fighting (see also X25-X05) and evacuation equipment. Also includes electrical details of bird and animal scaring equipment (see also X25-X02).

Fire fighting, sprinkler, evacuation, smoke alarm

## W06-B02T [2011]

## Airport terminal equipment

Includes airport specific equipment such as environmental controls including heating, airconditioning and internal terminal lighting. Includes transportation of passengers and baggage within terminal, such as travelators and bridges/gangways, baggage conveying/sorting. For baggage conveyors used to load aircraft see W06-B02D instead. Also includes general Wi-Fi and internet access terminals provided within airport (also see T01 codes and W06-B02R for terminals used for check-in/reservation).

Lift, escalator, travelator, baggage conveyor, lighting, heating, air conditioning, transportation, wi-fi

## W06-B02X [1992]

## Other airport systems

Only coded here if specific to airports. Includes electrical airport terminal equipment not covered elsewhere. For mechanical details of airport terminals see Q25-R instead. Includes airport taxi service priority scheduling arrangement.

#### W06-B03

## Space vehicles

Satellites, electrical system, solar panels, cooling, foldable antenna reflectors, space exploration vehicles, space suits, protection systems

## W06-B03A [1992]

#### **Propulsion systems**

Search with V05-E05A for ion beam thrusters. See also X14-F04 for plasma generators.

#### W06-B03A1 [2017]

#### **Engine/propulsion system control**

Engine fuel supply control.

#### W06-B03B [1992]

#### **Power supplies**

Includes solar power installations, also coded in X15-A codes, e.g. X15-A02 codes for solar panels.

## W06-B03C [1992]

## Space vehicle communications and connectivity

Includes antennae, antennae mountings, transceivers etc. - but not internal circuitry or general systems aspects of satellite repeaters which are covered by W02-G05 codes. Includes all space vehicle/space station and control center communications and data bus and network arrangements.

## W06-B03D [1992]

## Life support systems

Includes spacesuits.

Anti-G suit, cooling, heating, oxygen

## W06-B03E [1992

# Electrical systems for on-board experimentation or manufacture

### W06-B03F [2002]

## **Navigation and position control**

Includes attitude control of satellite or space craft. See also T06-B01 codes for position, attitude and altitude control.

Attitude control, navigation

## W06-B03H [2002]

#### **Electrical installations**

Includes connectors, fittings and wiring. *Electrical systems* 

## W06-B03J [2002]

#### Instrumentation

Includes on-board electrical instrumentation, and system status monitoring, testing and reporting.

Monitor, test, status, instrumentation

#### W06-B03L [2021]

**Spacecraft launching systems** 

## W06-B03M [2022]

Space vehicle docking and coupling arrangements

#### W06-B03X [1992]

## Other space vehicle aspects

Includes space exploration vehicles. Can be used to imply e.g. satellite-based aspect, e.g. to imply photographic imaging (S02-B04) takes place from satellite-mounted camera. See W06-B09 for aircraft based aerial photography.

## W06-B04 [1983]

#### Training equipment, simulators

(W06-B09)

See W04-W07 codes for training and educational equipment in general, and W04-W07A for simulators other than for aircraft or space vehicles.

## W06-B05 [1992]

## Testing of aircraft or space vehicles

See appropriate codes in section S. For in-flight testing also see W06-B01 codes for aircraft and W06-B03 for space vehicles.

## W06-B06 [2008]

## Design of aircraft and spacecraft

Includes all electrical details of aircraft/spacecraft design. Also see T01-J15 codes for computer aided design (CAD) per se.

#### W06-B08 [1997]

# Manufacture and maintenance of aircraft or space vehicle

Includes manufacturing process of electrical components only or substantial electrical equipment for manufacture or maintenance of any part of vehicle.

#### W06-B09

## Other aviation and aerospace systems

Includes other aircraft and space craft systems not covered elsewhere, such as antistatic or RF screening. From 2006, aircraft types are covered by W06-B15 codes, though other aircraft types such as balloons, airships, and gliders remain searchable in W06-B09 prior to 2006. Also includes aerial refuelling arrangements.

Protective coating for antistatic or RF screening purposes, aerial refuelling

## W06-B10 [2020]

# Salvaging, recycling and recovery of aircraft and space vehicles or equipment

Including salvaging, recovery and recycling of aircraft and space vehicles. Includes recovery of space vehicle propulsion systems such as reusable booster rockets (also see W06-B03A). Also includes systems for removal of space debris.

#### W06-B15 [2006]

## Specific aircraft types

(W06-B09)

### W06-B15A [2006]

## Lighter-than-air craft

Includes balloons and airships.

Blimp, dirigible

## W06-B15B [2006]

Helicopter; Rotorcraft

## W06-B15C [2006]

Glider

## W06-B15D [2006]

#### Commercial and civil aircraft

Only applied if specific to commercial or civil aircraft. Can be used in conjunction with other W06-B15 codes.

## W06-B15E [2006]

## Military aircraft

Only applied if specific to military aircraft. Can also be used in conjunction with other W06-B15 codes. See W07 also for military equipment per se.

W06-B15F [2006]

Microlight

W06-B15G [2006]

VTOL (Vertical Take-Off and Landing) aircraft

W06-B15H [2021]

## **Emergency services aircraft**

Includes fire fighting and disaster response aircraft and helicopters; police, law enforcement and border security helicopters and drones; and coastguard search and rescue helicopters (see also W06-B15B for helicopters and W06-B15U for drones and UAV).

#### W06-B15P [2024]

## Personal flying aids

Includes jet packs and flying suits worn by user. Use with other codes as appropriate such as W06-B15G for VTOL. Also see Q25-X01 for flying suits.

Flying hoverboard

#### W06-B15U [2007]

#### **Unmanned aerial vehicles**

Includes UAVs and micro UAVs used for geophysical surveying, imaging, military reconnaissance (see also W07-F04), logistics such as food and commodity delivery (see X25-F12), etc.

## W06-B15X [2006]

## Other aircraft types

(W06-B09)

Includes sea planes, motor vehicles convertible into aircraft, agricultural and crop dusting aircraft (see X25-N01 for insecticide and pesticide spraying per se) and electrical aspects of other aircraft such as hang gliders, ornithopters or parachutes.

#### W06-C

Shipping

#### W06-C01

Marine-craft

## W06-C01A

#### **Control systems**

Steering equipment, automatic pilot, bridge, helm

## W06-C01A1 [1992]

## **Engine control**

See W06-C01C9 for engine related hardware such as fuel pumps or ignition systems. Includes IC engine and gas turbine engine control, exhaust gas emissions reduction.

Power control, speed control, pollution control

## W06-C01A5 [1992]

## Steering, course control

See T06-B01A for course control in general. Automatic pilot, heading, rudder, trim

#### W06-C01B

#### Instrumentation; Communications

Includes aerials (search with W02-B codes) and radio communication equipment (with W02-G codes).

## W06-C01B1 [1992]

#### Instrumentation for navigation

See X25-N02 and W06-A05D1 for fish locating using sonar. See W06-A03A5 and S02-B08 codes for GPS navigation per se. See W04-X01D for sports fishing.

Navigation, compass, satellite, radar, sonar installations, speed, course, depth measurement, chart recorders, fish finding equipment, anticollision

## W06-C01B5 [1992]

## Instrumentation for monitoring ship condition

Includes engine monitoring. See also relevant S01-S03 codes.

## W06-C01B7 [1992]

### **Communications equipment**

Includes equipment for communication on-board and with other vessels or shore stations. See also W01 and W02 codes for telephone and radio communications per se.

## W06-C01B8 [1992]

#### **Data bus systems**

See appropriate codes in T01, W01, and W05 (e.g. W05-D codes). This code is used for data bus aspects in general, whether for control or instrumentation. (W06-C01A codes also assigned for specific control aspects).

## W06-C01C

#### **Electrical equipment (incl. lighting)**

Includes external lighting for general illumination of navigational reference (see also X26). See W06-C01C5 only for internal lighting.

## W06-C01C1 [1992]

#### **Electrical installations**

Includes wiring, connectors, etc. of general application to on-board systems. V04 and X12 codes are also assigned as appropriate.

Switch, plug, duct, trunking, cables, junction box, fittings

## W06-C01C3 [1992]

# **Electrical power generation and distribution**

See also U24/X12 for power generation/distribution, X15 for solar/wind power generation and X16 for battery/fuel cell aspects.

#### W06-C01C5 [1992]

# **Environmental control and internal lighting**

Includes heating, air-conditioning and demisting / defrosting of ship windows. Also includes internal ship lighting (see also X26 codes for illumination per se). For external lighting see W06-C01C. Climate control

## W06-C01C6 [2006]

## Public address and on-board entertainment

See also W04 codes for public address and gaming systems per se.

PA, loudspeaker, amplifier, tape recorder, video, VTR, projection, television, game

#### W06-C01C7 [1992]

#### **Electric propulsion**

See X11 codes also for motors per se, and X13 for motor control.

#### W06-C01C9 [1992]

#### Other electrical marine vessel equipment

Includes specific equipment such as electric fuel pump or ignition system, e.g. for outboard motor.

#### W06-C01S [2019]

## Ship emergency/safety equipment

Includes all aspects of ship safety such as roll-over prevention, ballast control to improve stability etc. Navigational equipment that can prevent grounding or collision can be covered in W06-C01B1. Also see Q24-B09 for mechanical details of ship emergency/safety equipment. See W06-C10 and Q24-X01 codes instead for lifesaving in water equipment.

## W06-C04 [1992]

## Simulators and training equipment

(W06-C09)

Simulators and training equipment in general are covered by W04-W07 codes.

#### W06-C05

[1992]

## Testing of ships or ship equipment

## W06-C06 [2008]

#### **Design of marine vessels**

Includes all electrical details of ship and marine craft design. Also see T01-J15 codes for computer aided design (CAD) per se.

#### W06-C07 [1992]

## Port equipment, buoys, beacons

Prior to 2016 buoys intended for use in a port, harbor, estuary, river or other waterway were covered by W06-C07 while those intended for use in open sea were covered by W06-C09. From 2016 electrical aspects of buoys for all applications are covered by W06-C07C.

## W06-C07A [2016]

## Port and mooring equipment

Includes electrical aspects of maintenance and dry dock facilities and also loading and unloading equipment such as cranes, hoists and the like, also covered by X25-F05 codes. Mechanical aspects of port equipment are covered by Q24-R codes and of cranes and other lifting equipment by Q38-B. Includes electrical details of onshore and offshore mooring equipment.

Cleaning, renovating, repairing

## W06-C07C [2016]

#### **Buoys and beacons**

This code covers electrical aspects of buoys and beacons irrespective of their location, i.e. open sea, harbour, inland waterway etc. (Previously buoys intended for use in a port, harbour, estuary, river or other waterway were covered by W06-C07 while those intended for use in open sea were covered by W06-C09, but now W06-C07C covers them all). Buoys in general (including those with no electrical aspects) are covered by Q24-P18. Beacon navigation systems are covered by W06-A01 codes.

Marker buoy, lighthouse, lightship, navigation marker, radio beacon

## W06-C07E [2016]

#### Marine traffic control

Includes offboard/port equipment for controlling marine vessels. Also includes communications between port/shore and vessels or between vessels for traffic control or prioritization purposes.

Marine traffic lights, sign, priority

## W06-C08 [2002]

# Marine vessel manufacture / assembly / dismantling

Includes electrical aspects of ship or boat manufacture, assembly or dismantling for recycling or disposal. For ship maintenance see W06-C07A. Shipbuilding, recycle, dismantle

#### W06-C09

## Other shipping details

Includes electrical aspects of diving equipment which in general is covered by Q24-X04. Pre-2016 this code covered buoys intended for use in open sea. From 2016 electrical aspects of buoys for all applications are covered by W06-C07C. Includes marine salvage systems (see also W06-C15F for environmental and salvage vessels per se).

Diving equipment, diver communication systems

## W06-C10 [2006]

#### Life saving equipment

Includes life jackets. See W06-C15C code scope note instead for emergency or survival craft per se. Buoyancy aid, life vest, light, alarm, beacon, distress

## W06-C15 [2006]

Specific marine vessel types

## W06-C15A [2006]

#### Personal/recreational watercraft

Includes jet-skis, kayaks and canoes. See W04-X codes for electrical aspects of sports equipment such as water skis.

W06-C15B [2006]

**Submarines; Submersible craft** 

## W06-C15C [2006]

#### **Emergency/rescue craft**

Includes life boats and life rafts. See W06-C10 instead for life saving accessories such as life jackets.

Survival craft, inflatable craft

## W06-C15D [2006]

#### Commercial vessels

Only applied if specific to commercial vessels. Can be used in conjunction with other W06-C15 codes.

#### W06-C15D1 [2006]

## **Fishing boats; Trawlers**

Includes electrical cranes, hoists, winches etc. for handling fish and whales.

## W06-C15D3 [2006]

#### **Tankers**

Includes oil tankers.

## W06-C15E [2006]

## Military vessels

Includes aircraft carriers, destroyers, frigates etc. Use with W06-C15B for military specific submarines or W06-C15F for military specific hovercraft. See also W07 for military equipment per se.

## W06-C15F [2012]

#### **Environmental and salvage vessels**

Includes vessels for collecting pollution/rubbish from open water or any other vessel helping to maintain the environment. Also includes salvage vessels in general (see also W06-C09 for salvage systems per se).

Oil spill, oil slick, salvage, floating refuse collection

#### W06-C15G [2017]

# Floating buildings, drilling platforms, workshops

Includes electrical aspects of floating vessels, towers, houses and buildings normally designed to be static at a fixed location.

#### W06-C15H [2006]

#### Hovercraft

See also W06-C15D or W06-C15E for commercial or military specific hovercraft respectively.

#### W06-C15U [2014]

**Unmanned vessels** 

## W06-C15X [2006]

#### Other marine craft types

Includes amphibious vessels and swamp boats. Includes marine vessels not already provided for.

## W06-T [2008]

## Other transportation systems

Includes all aspects of teleportation and time travel. Includes all transportation aspects not able to be covered by any other of the transport related EPI codes.

Time machine, space-time, theoretical

# W07: Electrical Military Equipment and Weapons

See W04-X01 codes for analogous equipment (e.g. for sports) corresponding to W07-B or W07-D codes.

#### W07-A

## Missile guidance, navigation and propulsion control

See T06-B01B for target-seeking control in general, and T01-J07D for data processing aspects.

Projectile/shell/torpedo target seeking, heat seeking, radar guidance, image/pattern recognition, aerials, radomes, sensors, optomechanical scanning, remote guidance by radio/light/wire/ optical fiber

#### W07-A01 [1992]

## **Guidance and target seeking system**

From 1997 propulsion control is covered by W07-A01G code.

## W07-A01A [1992]

## **Navigational aspects**

Covers position determination without reference to target, e.g. by dead reckoning, use of GPS (also coded in W06-A03A5), star recognition etc.

## W07-A01C [1992]

#### Target-seeking/tracking system

Includes heat-seeking and radar (or analogous). Use with W07-A01E1 for laser tracking. Also see W06-A codes for target tracking.

Target seeking, tracking, radar, IR, heat

## W07-A01C1 [2002]

## Laser targeting

Includes use of laser to mark target so that missile can home in on target using reflected light. Use of laser beam containing positional information about target, see W07-A01E1 only.

Laser marking, laser pointing, target designation

#### W07-A01E [1992]

## Remotely guided

Covers control by e.g. ground based operator. Remote control aspects are also coded in W05-D codes.

#### W07-A01E1 [1992]

#### By non-wire links

Includes radio and free-space optical systems.

Beam-rider

## W07-A01E3 [1992]

## By electric cable or optical fiber

See also appropriate codes in V07 for fiber-optic aspects, e.g. V07-H codes.

Reel, dispense, pay-out, tension, control

#### W07-A01G [1997]

#### **Propulsion control**

Prior to 1997 propulsion control was coded in W07-A01.

#### W07-A01H [2002]

## Missile stability/flight control

Includes control of fins e.g. to stabilise missile flight, control missile rotation or act as air brake to control missile range. For course correction see other W07-A01 codes.

## W07-A03 [1992]

#### Details of sensing systems per se

Includes on-board sensors normally associated with navigation/targetting. Codes in this section are used with W07-A01 codes or alone as appropriate.

### W07-A03A [1992]

#### **Antennae**

Includes antenna on-board missile and not ground based antennae. Radomes are covered by W07-A03D. For full details of radio antennae see W02-B codes.

## W07-A03B [1992]

## **Optical sensors and elements**

Includes optical detectors, lenses, filters, video cameras, etc. For solid-state sensor details see appropriate codes in U12, U13, or U14. Video cameras are also coded in W04.

#### W07-A03D [1992]

#### Radomes, protective enclosures

Includes covers transparent to RF and also optical range, e.g. IR.

#### W07-B

#### Weapon sights; Aiming

Includes mountings e.g. for fixing flashlight to barrel of rifle. See also X26 for torch per se. Laser range finding

## W07-B01 [1992]

## Weapon sights

Illuminated sights, image processing, laser sighting

## W07-B05 [1992]

#### Weapon aiming systems

Includes electrical systems for correcting weapon aim. Also includes electrical aspects of munitions such as rearward facing LED for tracer bullet used to covertly illuminate bullet trajectory to enable aim adjustment.

Aiming control, correction, compensation

### W07-C

#### Fuzes, arming

Detonate, mine, charge, explosive, missile

## W07-C01 [1992]

#### **Fuzes**

Fuzes for non-military application, e.g. blasting, are coded in X25-D codes. Includes detonator elements per se.

## W07-C03 [1992]

#### **Fuze actuation system**

The codes in this section relate to the actual means of actuating the fuze.

Ignition, impact switch

#### W07-C03A [1992]

#### Responsive to sensed vibration

Includes 'seismic' detection system for e.g. landmine.

## W07-C03C [1992]

#### Responsive to sensed proximity

Includes proximity fuzes working by e.g. radar or analogous system, also assigned W06-A codes as appropriate.

## W07-C03E [1992]

### Time delay actuation

Electronic time delay circuits are also coded in U21-B02A codes.

## W07-C05 [1992]

#### Arming/disarming systems

Covers electrical details of arming and disarming systems, including safety/security arrangements. *Safing* 

## W07-D [1983]

## **Training equipment**

Training equipment in general is coded in W04-W codes. Simulators for aircraft are coded in W06-B04, for ships in W06-C04.

W07-D01 [1992]

**Target practice systems** 

W07-D05 [1992]

Simulation systems

W07-E [1992]

**Electrically operated weapons** 

W07-E01 [1992]

#### **Electrical firing**

Includes electrically activated trigger for hand gun, or electric actuation of firing charge.

W07-E05 [1992]

#### Weapon launching systems

Rocket, grenade, launcher

#### W07-E05A [1992]

#### With electrical propulsion

Includes rail guns, also coded as electrical machines in X11, e.g. X11-H09.

## W07-E06 [2007]

#### **Munitions**

Includes electrical aspects of munitions such as projectiles, bullets, missiles, grenades that cannot be coded elsewhere. Also see K03-A codes for physical and mechanical aspects of explosives and ammunition. Includes e.g. arrangements for electronic interrogation and identification of artillery projectiles inside gun before firing.

#### W07-E07 [2002]

## **Laser weapons**

See V08 for novel laser details.

#### W07-E08 [2005]

#### Non-lethal electric weapons

Includes stun guns and electrical aspects of other non-lethal weapons. Also see W07-F codes for self-defence systems. Also includes electromagnetic weapons or EMP (electromagnetic pulse) weapons for disabling electronic circuitry in hostile weapons systems or degrading explosives.

## W07-E09 [2002]

### Other electrically operated weapons

## W07-F [1992]

# Protection for weapons, personnel or equipment

Includes camouflage aspects. For radar signature modification search with W06-A04X.

## W07-F01 [1992]

#### **Protection for personnel**

Includes fingerprint recognition e.g. for hand gun.

## W07-F01A [1992]

## Self defence equipment

Includes analogous system for use by e.g. law enforcement officer. Includes e.g. electrical aspects of mace/pepper spray or e.g. combined flashlight/spray. Anti-mugging alarms are coded in W05-B01D.

## W07-F01B [2012]

## Military specific clothing

Includes clothing, shoes and helmets with electrical content specifically for use by military personnel. Also see X27-A02B1 codes.

Wearables

#### W07-F03 [1992]

## **Protection for weapons or equipment**

Includes launching of countermeasures to protect aircraft from seeker missile or use of laser to confuse IR sensor on hostile missile. See also W06-A04E1 codes and W06-A06C8 respectively for radar and lidar jamming and countermeasures. Decoy, flare, anti-radar chaff, jamming, stealth.

## W07-F04 [2002]

#### Early warning and reconnaissance systems

Includes early detection of incoming missiles, and e.g. remote controlled unmanned vehicles for gathering front line video reconnaissance information about enemy forces. See also W02-F01 codes for CCTV aspects.

UAV, unmanned aerial vehicle, MAV, micro aerial vehicle, drone, autonomous

## W07-F05 [1992]

#### Mine sweeping; Weapon/bomb detection

From 2011 this code has been expanded to include all aspects of explosives and weapons detection, as well as systems for making explosives safe or clearing mines or depth charges. See W06-C01 codes for on-board ship aspects. Degaussing is covered by V02-D.

## W07-F05A [2011]

## Mine sweeping; Bomb detection

Includes all aspects of explosives detection and making safe. Includes detection of roadside improvised explosive devices or mine or depth charge detection and clearing. See W06-C01 codes for on-board ship aspects. Degaussing is covered by V02-D, W07-F03 and W06-C09. See S03 codes for novel sensing arrangements per se.

[2011]

## W07-F05C

## Weapon detection

(W07-F01)

Includes detecting the presence of weapons e.g. during security check at an airport (see also W06-B02A codes), school, hospital etc. See S03 codes for e.g. X-ray sensing per se.

Arms detector, metal detector, knife, gun, X-ray

## W07-G [1992]

#### Assisted/night vision equipment

From 2010 this code has been expanded to include all assisted vision systems as well as all night vision applications. See also V05 for image intensifier tube aspects. This code can be applied for vision enhancement systems such as daytime image enhancement and thermal or IR imaging (see also W04-M01E codes for thermal imaging camera details per se).

## W07-G01 [1992]

Goggles

### W07-H [1992]

# Military equipment testing, inspection and measurement

Includes evaluation of weapons and weapon systems, measurement of muzzle or projectile velocity, military equipment/installation inspection, etc. See also appropriate codes in e.g. S02 or S03 depending on the nature of test involved. See W07-A03 codes for on-board munitions measuring/sensing systems.

## W07-J [1992]

# General aspects of military electrical equipment

#### W07-J01 [1992]

#### Electrical installations, cables, connectors

See V04 and X12 codes for full details of cables, connectors, and electrical fittings.

## W07-J03 [1992]

### Power generation and distribution

Includes generators, battery power supplies, fuel cells and batteries per se, etc. See also U24, X12, and X16 codes as appropriate.

#### W07-J05 [1992]

#### **Electrical equipment constructional details**

See V04-S and V04-T codes also for casings and constructional details of electrical equipment in general.

## W07-J07 [2011]

## Manufacture of military equipment

(W07-X)

Includes all manufacturing aspects of weapons and equipment.

#### W07-J09 [1992]

## Other military electrical equipment details

#### W07-X

## Other military equipment

Includes equipment and systems with specific military application not covered elsewhere.

## W07-X01 [2002]

## Military vehicle systems

Includes electric equipment specifically for military vehicle. See also X22 if the electrical aspect relates to normal vehicle operation, e.g. ignition system, lighting, steering, braking.

Tank, personnel carrier

#### W07-X03 [2007]

#### Military/battlefield communications

Includes all communications equipment (but not radar - see W06-A codes instead) with specific military application. Includes all aspects of communications between troops on the battlefield and between troops and command centre. See also W01/W02 for telephone/radio communications per se.

## W07-X05 [2012]

# Military equipment management/maintenance

Includes management and tracking of military assets.

Inventory, tracking, record keeping, servicing

## W07-X07 [2007]

#### Soldier aids

Includes robotic exoskeletons to assist infantry in carrying heavy loads, and robotic "mules" (see also X25-F05A codes) controlled by soldier to carry military equipment or weapons.

# **Section X: Electric Power Engineering**

X11: Power Generation and High Power Machines	. 841
X12: Power Distribution/Components/Converters	. 847
X13: Switchgear, Protection, Electric Drives	. 863
X14: Nuclear Power Generator	. 879
X15: Non-Fossil Fuel Power Generating Systems	. 882
X16: ELECTROCHEMICAL STORAGE	. 888
X21: ELECTRIC VEHICLES	. 896

X24: ELECTRIC WELDING	. 932
X25: Industrial Electric Equipment	. 935
X26: LIGHTING	. 952
X27: DOMESTIC ELECTRICAL APPLIANCES	. 960

# X11: Power Generation and High Power Machines

#### X11-A

#### Steam turbine plant

Coal-fired power plant

#### X11-A01

#### **Turbines**

Impulse, reaction

#### X11-A01A

#### **Rotors**

Shaft, groove

## X11-A01A1

#### **Blades**

Includes constructional details, including materials, of blades per se. Constructional details of rotors other than blades are coded under X11-A01A2.

#### X11-A01A2

### Materials and mounting

Includes constructional details, including materials, of rotors, excluding constructional details of blades (which are coded under X11-A01A1). Also includes anti-vibration arrangements and mountings/supports of rotors, blade carriers, etc. *Anti-vibration, mounting, blade carrier* 

## X11-A01B

#### Stators; Seals

Nozzles, blades, fluid guide conduit, sealing fluid

#### X11-A01C

## Cooling; Bearings; Mountings; Casings

Includes details of cooling and de-icing arrangements, anti-vibrations and lubricating arrangements. Also includes details of bearings, mountings and supports, collection of condensation water and drainage.

Anti-vibrations arrangements and mountings/supports for rotors (including for the blades) are only coded under X11-A01A2.

## X11-A01D\* [1980-2010]

#### Regulation by flow control

\*From 2011 this code is transferred to X11-A10A, but remains searchable for records from 2010-2011

Valve control

#### X11-A01E\*

## [1980-2010]

#### Starting; Shutting down

\*From 2011 this code is transferred to X11-A10B, but remains searchable for records from 2010-2011.

Control systems, overspeed protection

#### X11-A01X

#### Other turbine details

Includes manufacture.

#### X11-A08

#### [2010]

#### **Environmental protection**

Includes arrangements for reducing carbon footprint and improving emissions, such as chimney smoke filters and scrubbers for capturing sulphur emissions from coal fired power stations, e.g. carbon capture arrangements.

Flue gas desulphurisation, carbon capture, waste gas scrubbing

#### X11-A09

#### [1983]

#### Other plant details

Includes plant layout and electrical aspects of steam generators. Also includes details of power plant boiler, condenser, feedwater pumps. Coal-conveyor, chimney smoke-filter, steam generator

## X11-A10

## [2011]

#### Monitoring, operation and control

Includes general monitoring, operation and control details. Also includes testing.

## X11-A10A

#### [2011]

#### Regulation by flow control

(X11-A01D) Valve control

# **X11-A10B**

## [2011]

## Starting, shutting down

(X11-A01E)

Control systems, overspeed protection

#### X11-B

#### **Hydroelectric plant**

Electric power generation produced from sea power, including wave power and tidal energy, is coded under X15-C codes instead.

Hydel

#### X11-B01

#### Turbines, Pelton wheels, water wheels

Vanes, buckets, nozzle, blades, rotors, stator, casing

## X11-B05 [1997]

#### Mini and micro plants

(X11-B09)

Run-of-river, streams

#### X11-B06 [1997]

## Pumped storage plant

(X11-B09)

#### X11-B09

#### Other details

Includes details of osmotic power or salinity gradient power (also covered by X15-C). From 2005, tidal flow base electric power generation is covered by X15-C codes.

## X11-B10 [1997]

## Monitoring, operation and control

(X11-B09)

#### X11-C

# Gas turbine; IC engine, Combined cycle and cogeneration plants; Other plants

For aircraft and ships see W06-B and W06-C codes, respectively.

#### X11-C01 [1997]

#### Gas turbine plant

(X11-C)

Includes electrical details of gas turbines and external combustion engines used for electric power generation.

## X11-C02 [1997]

## IC engine plant

(X11-C)

Includes electrical details of IC engine power plant.

## X11-C03 [1997]

## **Combined cycle plant**

(X11-A09, X11-C)

Includes electric power generation by combinations of gas turbine and steam turbine cycles, as well as gas and/or steam turbine cycles operating in combination with fuel cells, solar systems or any other power generation equipment.

Electric power generation using combinations of fossil and non-fossil fuel sources are also coded under X15-J.

Details of fuel cells are covered by X16-C codes, and solar systems and other systems using nonfossil fuel sources are covered by X15 codes. *Hybrid* 

## X11-C04 [1997]

## **Cogeneration plant**

(X11-A09, X11-C)

Includes combined heat and electric power generation. Combined heat and electric power generation using non fossil fuel sources are coded under X15-K.

CHP

## X11-C05 [2007]

## Rankine cycle plant

Involves the generation of electricity by heatevaporation of a working fluid that drives a turbine. For water/steam working fluids, see X11-A01 codes. Heat input sources include waste heat, solar (see also X15-A codes), etc.

#### X11-C08 [2010]

#### **Environmental protection**

Includes arrangements for reducing carbon footprint and improving emissions, e.g. catalytic converters for exhaust gases.

Catalytic converter

## X11-C10 [1997]

#### Monitoring, operation and control

Includes maintenance and repair of power plant.

## X11-C15 [2002]

## Microturbine plant

Note: Small machines are in V06.

#### X11-D

#### **Synchronous machines**

See also X11-H02B for details of linear synchronous motors.

Generator, motor, alternator

X11-D01 [1992]

Salient-pole rotor

X11-D02 [1992]

**Cylindrical rotor** 

X11-D03 [1992]

**Rotary exciter** 

X11-D03A [1992]

**Brushless exciter** 

Rotary rectifier

X11-D04 [1992]

**Static exciter** 

Static rectifier

X11-D05 [1997]

**Hybrid synchronous machines** 

(X11-D)

Includes combined permanent magnet and wound rotor type synchronous machines.

X11-E

**Asynchronous induction machines** 

See also X11-H02A for details of linear induction motors.

X11-E01 [1987]

**Wound rotor** 

Includes slip ring and pole-change winding type motors.

X11-E05 [1997]

Induction generator

(X11-E)

Inductor alternator

X11-F

DC mechanical-commutator and universal machines

Motors, generators, series-, shunt-, compoundexcitation

X11-G

Permanent magnet synchronous machines

Motors, generators

X11-G01 [2008]

Interior permanent magnet

X11-H

Other electric machines

X11-H01

Non-mechanical-commutator machines

Includes both AC/DC brushless motors. *Electronically-commutated, brushless* 

X11-H01A [1997]

Permanent magnet

(X11-H01)

For details of speed and torque regulation/control, see also X13-F03C1 and X13-G01C1.

PM AC/DC brushless

X11-H01B [1997]

Switched reluctance

For details of speed and torque regulation/control, see also X13-F03C2 and X13-G01C2.

SR AC/DC brushless

X11-H01C [1997]

**Sensorless** 

(X11-H01)

For details of speed and torque regulation/control, see also X13-F03C3 and X13-G01C3.

BEMF

X11-H02

Linear, sectional and rolling motors

X11-H02A [1997]

**Asynchronous** 

(X11-H02)

See X11-E for details of non-linear induction motors

Induction, LIM, AC

X11-H02B [1997]

**Synchronous** 

(X11-H02)

See X11-D for details of non-linear synchronous motors

LSM, AC

X11-H02C [1997]

**Direct current** 

(X11-H02)

DC

X11-H03

Clutches, brakes, gears; MHD generators and electrodynamic pumps

## X11-H03A [1987]

### Clutches, brakes, gears

This code covers electrodynamic type devices only. Electric or magnetic clutches, brakes and gears are in X25-L02.

## X11-H03B [1987]

# MHD generators and electrodynamic pumps

Includes details of electromagnetic pumps for high/medium power applications. Electromagnetic pumps for low power applications are coded under V06-M06K.

## X11-H03B1 [1997]

## **MHD** generators

(X11-H03B)

Magneto-hydro-dynamic

#### X11-H04

## Non-dynamo-electric machines

Includes electrostatic generators, motors, clutches or holding devices and thermal effect motors.

#### X11-H05 [1987]

## **Superconducting machines**

(X11-H09)

See X12-D06 for superconductors per se. *Cryogenic, heat insulation* 

## X11-H09

#### Other

Includes more than one rotor or stator-, DC interrupter-, AC mechanical commutator-, perpetual motion dynamoelectric- and acyclic-machines, and dynamoelectric converters, etc.

Torque motors, Schrage motors, motor-generator sets, amplidynes, metadynes

## X11-H20 [2002]

#### Starter-generator/motor-generator

#### X11-J

## **Constructional details of electric machines**

This code is used either alone or in conjunction with the different types of machines listed above. Magnetic materials are in V02-A02.

## X11-J01

## **Magnetic circuits**

#### X11-J01A

## Stationary parts

Includes means for mounting magnetic stationary parts to stator structure.

Slots, magnetic poles, cores, laminations, magnetic wedges, magnets, tooth, yokes

#### X11-J01B

## **Rotating parts**

Includes spider to mount or fasten magnetic part to rotor structure.

Cores, slots, magnets, magnetic poles laminations, magnetic wedges, tooth, yokes

#### X11-J01X

## Other magnetic circuits

#### X11-J02

#### Windings

#### X11-J02A

## Conductor shape, form, construction or layout

Includes twisted- or hollow-conductors; provision of cooling fluid ducts.

Coils, double-layer, strip or rectangular section

#### X11-J02B

#### Insulation; Shielding; Protection

Includes coil-, slot-insulation and materials, preventing or reducing eddy current losses, protecting against moisture or chemicals. *Corona protection* 

#### X11-J02C

#### Fastening windings

Includes wedges, end turn ties.

## X11-J02X

#### Other windings

From 2013, details of windings layout are coded under X11-J02A.

#### X11-J03

## **Current collection arrangements**

Includes commutators, slip-rings, brushes and their connections to windings, commutation improving arrangements (see also V04-L01).

Commutator segments

#### X11-J04

### **Association with electric components**

Includes devices for measuring or protecting machine, resistors, switches or RFI suppressor (see W02-H also), etc.

Direction/rotation detectors

#### X11-J05

## Mechanical energy handling arrangements (Structural association with)

#### X11-J05A

Clutches, brakes, gears, pulleys, mechanical starters

#### X11-J05B

Mechanical loads, driving or auxiliary machines

#### X11-J05X

# Other mechanical energy handling arrangements

Bearings, flywheels, balancing, shaft

#### X11-J06

## **Cooling or ventilating systems**

## X11-J06A

## Using liquid or solid cooling medium

Includes cryogenic coolers.

#### X11-J06X

## Other cooling or ventilating systems

Includes ambient air flow through the machine and use of fans.

Hydrogen cooling

#### X11-J07

## Casings, enclosures, supports

#### X11-J07A

#### Supporting brushes or bearings

Includes bearing shield mounting arrangement or end shield. Also includes cooling and greasing of bearings.

#### X11-J07X

## Other casings, enclosures, supports

Includes casings, enclosures, seals, ribs or fins to improve heat dissipation, noise/vibration reduction.

Machine mountings, housings, explosion-proofing, vibration-damping

## X11-J07X1

#### [2002]

## Connectors; Terminal boxes; Junction boxes

#### X11-J08

## Manufacture, testing, repair and maintenance

See also S01-G07 for electrical tests, and T01-J15 for simulation and design of motors and generators.

#### X11-J08A

# Stator/rotor bodies; Commutators; Brushes; Slip-rings

Includes brush wear indicator. See also V04-P02 for general commutators, brushes etc.

Cores, laminating, slotting, magnetic poles, magnetic circuits, casting, moulding

#### X11-J08B

## Windings

Includes direct winding of stator/rotor coils and laying of pre-wound coils.

Winding jigs, inserting wires, conductor bending, coiling

#### X11-J08C

# Insulating, impregnating, centring, balancing

Includes insulating of windings or core laminations and heating or drying of windings, rotors or machines.

Taping

## X11-J08M

## [1997]

## Testing, repair and maintenance

(X11-J08)

Includes analysis, diagnosis, monitoring, fault detection.

## X11-J08P

## [1997]

## Characterised by use of microprocessors

(X11-J08)

## X11-J08X

## Other manufacture, testing, repair and maintenance

Castings, enclosures, supports, end shields, bearings

## X11-J15

#### [2002]

#### **Materials**

## X11-J15A [2002]

#### **Conductive materials**

Includes details of materials for thermal or electrical conduction.

X11-J15B [2002]

**Magnetic materials** 

X11-J15C [2002]

#### Insulative materials

Includes details of materials for thermal or electrical insulation.

## X11-U [1997]

# Electric machines characterised by applications

These codes are used in conjunction with other X11 codes as appropriate.

X11-U01 [1997]

**Electric power generation** 

X11-U01A [1997]

## Steam turbine generator

See X11-A codes for details of steam turbine plants, and X11-J codes for constructional details.

Turbogenerator

## X11-U01B [1997]

## Hydrogenerator

See X11-B codes for details of water power generation, and X11-J codes for constructional details of generator.

## X11-U01C [1997]

## Gas turbine generator

See X11-C01 for details of gas turbine generator, and X11-J codes for constructional details.

## X11-U01D [1997]

## IC engine generator

See X11-C02 for details of IC engine plant, and X11-J codes for constructional details.

#### X11-U01E [1997]

## Wind turbine generator

See X15-B codes for details of wind power generation, and X11-J codes for constructional details of generator.

## X11-U01M [2002]

#### Microturbine generator

See X11-C15 for details of microturbine plants, and X11-J codes for constructional details.

X11-U02 [1997]

**Road vehicles** 

X11-U03 [1997]

Railways

X11-U04 [1997]

**Aviation and aerospace** 

X11-U05 [1997]

Ships and boats

X11-U06 [1997]

Military

X11-U07 [1997]

**Industrial machines** 

# X12: Power Distribution / Components / Converters

#### X12-A

#### **Power resistors**

Covers all high power resistors e.g. for lightning arrestors, electric motor loading, etc. Low power resistors are in V01-A. Also includes manufacture. *Voltage-, surge-arrestors, varistors, varistor stack* 

#### X12-B

## **Power capacitors**

Includes capacitors generally of the type used for power factor improvement,

transmission/distribution reactance compensation, super- or double layer-types for e.g. electric vehicle (see also X21-B04). Low power capacitors are in V01-B. V01-B codes can also be assigned in conjunction with X12-B to highlight the type and novel aspect of the power capacitor, including manufacture. See also X16-L02 for capacitive energy storage in general.

CVT, capacitor bank, ultra-capacitor

#### X12-C

Power transformers, reactors

#### X12-C01

Cores, coils, connections, bushings and terminals; Manufacture

X12-C01A [1987]

#### Cores

Includes magnetic circuit for transformer or reactor e.g. laminations, cores made from strips or sheets, yokes.

Core clamping plates, amorphous cores

X12-C01B [1987]

## Coils, windings, connections

Foil windings, insulation spacers, conductors, disc-, poloidal-, spiral-, toroidal-coils

X12-C01B1 [1987]

For reactor

X12-C01B2 [1987]

For transformer

X12-C01B2A [2002]

Using cables as windings

X12-C01C [1987]

#### **Bushings and terminals**

Glands, grommets, bulk heads

X12-C01D [1987]

#### Manufacture; Maintenance

Includes methods and apparatus.

X12-C01D1 [1992]

Cores

X12-C01D2 [1992]

#### Coils

Includes winding, insulating and connecting leads of coils for power transformers and reactors. Manufacture of insulating materials themselves when not part of the process of manufacturing windings is covered by X12-C01B codes and appropriate X12-E codes.

X12-C01D3 [1992]

**Testing** 

X12-C01D4 [1992]

Superconducting coils/magnets

X12-C01D5 [1992]

**Bushings and terminals** 

X12-C01D6 [1992]

### Casing

Also includes transportation packaging.

X12-C01D7 [2002]

#### Maintenance

(X12-C09)

Includes all aspects of repairs and maintenance, e.g. oil change, polychlorinated biphenyl disposal (see also X12-E02A).

X12-C01E [1992]

## Power and distribution transformers

(X12-C, X12-C01)

Also includes transformers for welding, electric furnaces, transmission lines, etc.

X12-C01F [1992]

## **Power reactors**

(X12-C, X12-C01)

Also includes short circuit current limiting-, saturable- reactors.

## X12-C01G [1992]

#### Instrument transformers

(X12-C, X12-C01)

Includes voltage and current transformers. For capacitive voltage transformers see X12-B. For electrical instrumentation see S01-D01 codes. *CT. PT. VT. IT* 

## X12-C01H [2005]

## Induction heating coils

See also X25-B02A codes.

## X12-C01X [1992]

## Other transformer/reactor aspects

Includes other details of transformer or reactor not covered elsewhere.

#### X12-C02

# Cooling, fault detection, control, and tap changing

## X12-C02A [1987]

## Cooling

Includes fans, gas cooling, evaporative cooling. Cooling channels or ducts, heat pipes

#### X12-C02A1 [1987]

#### Oil-cooling

Includes conservators, expansion chambers.

## X12-C02A2 [1987]

Water cooling

## X12-C02A3 [1992]

# Superconducting device/equipment cooling

Includes all superconducting-related cooling aspects.

#### X12-C02A3A [2005]

#### Cryostats

Cryogens, cryogenics

#### X12-C02A3C [2005]

#### Other

Includes, for example, thermoelectric cooling.

## X12-C02B [1987]

## Fault detection, monitoring, control

Constructional details of controllers are also included here. Includes for example moving a slider along a winding, etc to vary the output.

## X12-C02B1 [1987]

## Tap changing

Tap switches, no-load-, on-load-tap changer

## X12-C03 [1987]

# Casing, mounting, supporting or suspending transformers or reactors

(X12-C09)

Also includes noise/vibration reduction.

Tanks, containers, noise damper

#### X12-C04 [1987]

## Preventing or reducing unwanted electric/ magnetic effects

(X12-C09)

Includes electric or magnetic screens or shields, using auxiliary coils or cores.

#### X12-C05 [1987]

#### Superconducting coil

(X12-C01, X12-C09)

Includes coil for transformer or reactor. See X12-D06 for superconductors per se.

## X12-C05A [1987]

## For magnets

(X12-C09)

## X12-C06 [1992]

#### High power or large (electro) magnets

(X12-C09)

Includes magnets of the types typically used e.g. for lifting device (see X25-F05 also), accelerators (see X14-G also), etc.

## X12-C09

#### Other general transformer/reactor details

Includes oil cleaners, pressure relief, etc.

Corrosion protection, structural association with built-in electric component

## X12-D

#### Cables, conductors, conductive materials

Covers high power and low power cables/conductors, fibers and other structures.

## X12-D01

#### **Materials**

Superconducting materials are in U14-F01 and X12-D06B.

## X12-D01A

#### Metals or alloys

#### X12-D01B

**Oxides or sulphides** 

#### X12-D01C

Carbon, silicon, or other non-metallic material; Conductive polymers

X12-D01C1 [1992]

**Conductive polymers** 

X12-D01D [2005]

#### **Nano-materials**

Includes conductive materials of small dimensions. This code is used in conjunction with the other X12-D codes as appropriate.

Nanotube, carbon nanotube, single wall nanotube, multiwall nanotube, double wall nanotube, SWNT, DWNT, MWNT

#### X12-D01E [2005]

#### Ion/proton conductors

To be used in conjunction with other X12-D codes, as appropriate.

#### X12-D01F [2005]

#### **Conductive dispersions**

Generally used when a conductive material is within a dispersion.

X12-D01F1 [2005]

Organic vehicle

X12-D01F2 [2005]

Inorganic vehicle

## X12-D01X

#### Other materials

Includes conductive materials not covered elsewhere.

#### X12-D02

Non-insulated conductors; Conductive films and structures

#### X12-D02A

**Conductive layers on insulating supports** 

#### X12-D02A1 [1992]

#### **Transparent conductive film or electrodes**

See also U14-K01A1 for application to LCDs. *ITO*, indium titanium oxide

## X12-D02A2 [2005]

## **Anisotropic film**

For application to connectors, see V04-A11.

## X12-D02C [2005]

#### Non-insulated conductors

Includes only aspects of conductive part of wires and cables. For other details, such as sheaths, see X12-D03 codes. For manufacture of non-insulated conductors, per se, or forming part of insulated cables, see X12-D07E.

Conductors, wires, stranded conductors, bundled conductors

## X12-D02C1 [2005]

#### **High power conductors**

Includes conductive part of an insulated wire or cable, non-insulated overhead power line, etc. designed to carry high currents.

## X12-D02C1A [2005]

#### **Bus bars**

Bus bars, per se; installations are in X12-G03.

#### X12-D02C2 [2005]

## Low power conductors

(X12-D02X, X12-D05)

Includes conductive part of an insulated wire or cable or non-insulated wires designed to carry low currents

X12-D02C2A [2005]

Communication

X12-D02C2B [2005]

Audio/video

X12-D02C2C [2005]

**Control and instrumentation** 

## X12-D02C2D [2005]

#### **Conducting nanostructures**

Includes nanowires, nanotubes and nanofibers for general use. Specific applications to, for example, battery electrodes are also covered by X16-E codes. For normal size fibers, see X12-D02C2E. DWNT, SWNT, MWNT, carbon nanotube, CNT

#### X12-D02C2E [2005]

#### **Fibers**

For nanofibers, see X12-D02C2D.

#### X12-D02X

#### Other

Includes other conductive structures, such as, within a poorly conductive structure.

#### X12-D03

Insulated conductor construction

#### X12-D03A

Flexible, extensible or flat cables

X12-D03A1 [1992]

Flat or ribbon cables

X12-D03A2 [1992]

Flexible and extensible cables

#### X12-D03B

Sheaths, armouring; Reducing losses; Indicating defects

X12-D03B1 [1992]

#### Sheaths and armouring

Includes repair of sheaths for which the general 'cable repair' code X12-G01D is also assigned. Repair of a cable sheath in the sense of rectification during manufacture is covered by X12-D07A. *Jacket* 

## X12-D03B2 [1992]

#### **Indicating defects**

Includes sensors incorporated within the cable structure to indicate temperature rise, water ingress, etc.

## X12-D03B3 [1992]

#### **Reducing losses**

Includes arrangements to reduce losses in conductors, sheaths and armourings.

#### X12-D03C

#### Cable markings and heat protection

For flame retardants, see also X12-D03X for records prior to 1992.

## X12-D03C1 [2007]

#### **Heat protection**

Includes measures for improved heat dissipation, shielding or conduction from cables to, for example, operate within rated thermal limits. Also includes flame retardants.

## X12-D03C1A [2013]

#### Cooling

Includes all aspects of cable cooling such as cables per se with integral cooling channels, as well as installations for actively cooling cables and conductors.

Heat dissipation, fan, coolant, air cooling, liquid cooling

## X12-D03C2 [2007]

#### Cable markings

Includes printed markings, use of different color insulation, integral RF tags (also assigned T04-K and W02-G05 codes), and the like, to provide ratings and identification information and to distinguish wires and cables. Markings for security purposes and for deterring theft are also assigned X12-D10.

## X12-D03D [1992]

## Insulation and its disposition, materials

(X12-D03X)

See also X12-E01, X12-E02 codes.

#### X12-D03E [1992]

#### Screens

(X12-D03X)

Includes screens to avoid potential gradients, and to reduce interference. Covers both electrostatic and electromagnetic fields' shielding.

## X12-D03F\* [1992-2004]

## Composite optical fiber- and electric- cable

(X12-D03X)

\*This code is now discontinued. It has been transferred to X12-D08 from 2005 but remains searchable for records between 1992 and 2004.

## X12-D03G [1992]

#### **Lubricating layers**

(X12-D03X)

#### X12-D03H [1992]

## **Protection**

(X12-D03A, X12-D03X)

Includes protection against e.g. corrosion, termites, chemical attack, etc. Mechanical protection is in X12-D03B1.

## X12-D03J [1997]

#### Contact cable

(X12-D03,X12-D03X)

Sensor cable

## X12-D03K [1997]

## Floating and submarine cables

(X12-D03,X12-D03X)

## X12-D03L [1997]

## Rigid-tube cable

(X12-D03,X12-D03X)

## X12-D03M [2002]

#### Wire harness

(X12-D03,X12-D03X)

Includes harnesses per se, and is used in conjunction with other X12-D03 codes as appropriate.

## X12-D03N [2006]

#### **Drain wire**

(X12-D03X)

Includes the uninsulated wire located beneath, and in contact with, a grounded shield.

#### X12-D03P [2006]

## **Cable-strengthening core**

(X12-D03X)

Includes, for example, steel wire or core located within cable covering to impart strength.

## X12-D03Q [2006]

#### **Cable-connector combination**

Includes a combination of cable and connector where neither is, or both are, novel. See V04-M17 also.

## X12-D03R [2011]

Stranded conductors

## X12-D03X

Other insulated conductor aspects

#### X12-D04

## High power and low power cables

#### X12-D04A [2006]

## **High power**

Includes cables carrying power beyond the level of 110/220V mains. Also includes high power DC cables.

## X12-D04C [2006]

## Low power

Includes cables carrying power up to and below the level of 110/220V mains. Also includes low power DC cables.

#### X12-D05

#### Low power cables or wires

Conductive parts of cables are covered by X12-D02C codes. Other details are covered by X12-D03 codes. The codes in this subsection are used in conjunction with each other as appropriate. For example, a coaxial, RF communication cable would be coded in X12-D05A, X12-D05J and X12-D05M. A loudspeaker cable would be coded in X12-D05B and X12-D05K.

## X12-D05A [2005]

Communication

X12-D05B [2005]

Audio/video

X12-D05C [2005]

**Control and instrumentation** 

X12-D05J [2005]

HF

X12-D05K [2005]

LF

X12-D05L [2005]

**High speed data** 

X12-D05M [2005]

Coaxial

X12-D05N [2005]

#### **Twisted pair**

Includes twisted pairs of both shielded and unshielded type.

STP, UTP

## X12-D06

#### Superconducting cable/materials

Superconducting wire and line manufacture is covered by X12-D07E1C. Details of superconducting cables, such as sheaths, are covered by X12-D03 codes. Superconducting machines and reactive components are covered, respectively, in X11 and by X12-C codes.

#### X12-D06A [1992]

**Cables or lines** 

X12-D06A1\* [1992-2005]

## Manufacturing

\*This code is now discontinued and has been transferred to X12-D07 from 2006. It remains searchable for records prior to 2006.

X12-D06B [1992]

**Materials** 

Includes all aspects of materials (see also U14-F01 codes).

X12-D06B1 [1992]

**Metal Alloys** 

X12-D06B1A [1992]

Manufacturing and processing

X12-D06B2 [1992]

**Oxide Materials** 

X12-D06B2A [1992]

Manufacturing and processing

X12-D07

Manufacture, salvaging

X12-D07A

Sheathing, armouring, screening, etc.

Also includes impervious material coating.

X12-D07B

Insulating conductors or cables

X12-D07B1

By extrusion, by liquid bath, by spraying

X12-D07B9

Other (including winding on tape)

X12-D07C [1992]

Stranding-up

(X12-D07X)

X12-D07D [1997]

Cable harness manufacture

(X12-D07X)

See also V04-V02 code.

Wiring harness, wiring loom

X12-D07E [2002]

Non-insulated conductor or conductive part of insulated cable

(X12-D02X)

Includes manufacture and testing of non-insulated conductors. Other cable testing aspects are covered by X12-D07F.

X12-D07E1 [2005]

**High power conductors** 

X12-D07E1A [2005]

**Bus bars** 

X12-D07E1C [2006]

Superconducting line/wire

(X12-D06A1)

X12-D07E2 [2005]

Low power conductors

X12-D07E2A [2005]

Nano-wires; Nanotubes

X12-D07E2C [2005]

**Fibers** 

X12-D07E3 [2006]

**Conductive films** 

(X12-D07X)

X12-D07F [2007]

**Cable testing** 

(X12-D07X)

Includes testing of insulated conductors. Testing of non-insulated conductors is covered by X12-D07E codes. See also S01-G14 for electrical tests on wires and cables. For non-electrical tests, see S02 and S03 classes.

## X12-D07X

#### Other cable manufacturing aspects

Cable marking machine, cable reels, bobbins, spools, salvaging

X12-D08 [2005]

Composite optical fiber- and electric- cable

See also V07-F01B4 for optical fiber cables.

X12-D09 [2005]

Composite power- and signal- cable

Includes cables having a common outer covering that encloses low and high power cables.

## X12-D10 [2014]

#### **Cable security**

This code includes arrangements for preventing or deterring theft of cables, e.g. due to monetary value of conductor materials, based on features of the cable itself, and not features of fittings or installations which are covered by X12-G11. Other X12-D codes are also assigned as appropriate, such as X12-D01 codes for novelty in conductor materials or X12-D03C2 when markings applied to insulated cables enable identification of them after cable theft. Cables incorporating special features to trigger an alarm indicating attempted theft, e.g. by cutting, are also assigned W05-B01 codes.

Code, compound, etch, jacket, laser, marker, signature, trace, unique

#### X12-E

#### Insulators

For insulating materials used in general electronic equipment/device, see also V04-X01B from 1997 onwards. Prior to 1997, see also V04-S02. Materials for general electrical equipment are also coded here.

#### X12-E01

**Inorganic substances** 

#### X12-E01A

**Ceramics** 

#### X12-E01B

Mica, asbestos, metallic oxides, cements, gases

#### X12-E01C [2005]

#### Inorganic material within organic vehicle

Includes a mixture where the inorganic material is a major constituent.

## X12-E01D [2005]

#### Inorganic nanomaterials

Includes insulating materials of small dimensions. This code is used in conjunction with the other X12-E codes as appropriate.

## X12-E01X

#### Other inorganic insulating substances

Includes glass.

## X12-E02

#### **Organic substances**

#### X12-E02A

Liquids, asphalts, bitumens, pitches, natural rubbers

#### X12-E02B

Resins, waxes, synthetic polymers

#### X12-E02C

[2005]

## Organic material within an inorganic vehicle

Includes a mixture where the organic material is a major constituent.

#### X12-E02D [2005]

#### **Organic nanomaterials**

Includes insulating materials of small dimensions. This code is used in conjunction with the other X12-E codes as appropriate.

#### X12-E02X

#### Other organic insulating substances

Includes gases, fibrous materials, paper.

#### X12-E03

Insulators

#### X12-E03A

Suspension-, supporting-, pin-, lead-through insulators

#### X12-E03C [1997]

#### **Insulating bodies**

(X12-E03A,X12-E03X)

## X12-E03C1 [2005]

## Tapes, sleeves, tubes

Bead, bobbin

## X12-E03C3 [2005]

#### **Grommets**

See also X12-G04A3 for use of a grommet within an electrical installation.

#### X12-E03D [2005]

## **Insulating nanostructures**

Includes nanotubes and nanofibers.

DWNT, SWNT, MWNT, carbon nanotube, CNT

## X12-E03X

#### Other insulators

Includes e.g. measures for improving voltage distribution, composite insulators.

#### X12-E04

#### Manufacture

Also includes electrical and mechanical testing of insulators. See also S01-G codes for electrical tests.

#### X12-F

## Spark gaps; Circuits

Does not include spark plugs which are covered by the relevant codes for the motor, X22-A01E1 for land based vehicle motors and W06 for water based vehicle motors.

#### X12-F01

## Spark gaps

Electrodes, voltage-, surge- or lightning protectors/arrestors

## X12-F01A [1992]

### Overvoltage protection

Includes arcing horns. See also X13-C03.

#### X12-F02

Circuits

## X12-F03 [1992]

#### Ioniser, ozoniser

(X12-F09)

See also X27-E01B codes for domestic applications.

## X12-F04 [1992]

#### Corona discharge

Includes rings and pointed electrodes. See S06-A02 codes for copiers.

#### X12-F09

#### Other spark gap aspects

Includes manufacture.

#### X12-G

#### Cable or line installation and maintenance

See W01-D codes for telecommunications cable installation. Low power connectors are in V04.

### X12-G01

#### Methods and equipment

#### X12-G01A

### For installing lines or cables

Maintenance and repair of cable installations is covered by X12-G01D which can be assigned along with X12-G01A codes as necessary. X12-G01A codes are also assigned as appropriate for removal of previously-installed cables.

Laying cables, cable puller

## X12-G01A1 [1992]

#### Overhead installation

Includes transposing of conductors and stringingup lines and cables etc.

#### X12-G01A7 [1992]

Underground, building, and water installations

## X12-G01A7A [1992]

**Digging trenches** 

#### X12-G01A7D [1992]

#### Installing cables in ducts, ground

Ducts per se are in X12-G04A1. This code also covers removal of buried cables.

## X12-G01A7E [2022]

#### Installing cables on vehicles

Includes laying of cables on land/air/water vehicles.

## X12-G01A7G [1992]

**Submarine** 

## X12-G01A7J [1992]

## Cable marking for circuit identification

#### X12-G01B

## For removing cable insulation or armouring

See V04-P03 for electronic circuit application. Wire stripping

## X12-G01C [1983]

# Cable and fault locating; Cable/line installation measuring/testing

(X12-G01X)

See S01-G05 also for electrical fault location determination, and S03-C02 codes for cable location by, for example, magnetic fields. Also includes indicators/detectors/recorders for line/cable breaks, lightning strikes, line strain, tripped breaker, etc

## X12-G01D [1992]

#### Maintenance/repair

(X12-G01X)

Includes the use of unmanned vehicles, e.g. radio controlled helicopter for inspecting overhead transmission lines (see also W06-B15U), cleaning of insulators, de-icers, etc.

#### X12-G01E [1992]

## Joining or terminating

(X12-G01X)

Connections per se are in X12-G02.

# Crimping tools X12-G01E1

[1992]

## Superconducting wires/cables

(X12-G01X)

## X12-G01F [1992]

## **Safety arrangements**

(X12-G01X)

Includes lightning protection, earthing arrangements.

Earth wire, ground wire, earthing grids, lightning-conductors, lightning-rods

#### X12-G01X

## Other cable/line installing aspects

#### X12-G02

#### Cable or line connectors or fittings

#### X12-G02A

**Cable or line connectors** 

#### X12-G02B

#### **Cable terminations**

End connection, terminals, crimping, ferrules, cable glands

#### X12-G02C

## **Cable junctions**

Joints, splices, protective tubes

#### X12-G02C1 [1992]

## **Cold and Heat-shrinkable covers**

From 2014 this code is expanded to cover coldshrinkable covers (previously coded as X12-G02C and now specifically covered by X12-G02C1C) as well as heat-shrinkable covers (now specifically covered by X12-G02C1A).

Sleeve

#### X12-G02C1A [2014]

#### **Heat-shrinkable covers**

(X12-G02C1)

This code is intended for insulation sleeves which shrink around a cable junction on application of heat

Elastomer, heat gun, thermoplastic

## X12-G02C1C [2014]

## **Cold-shrinkable covers**

(X12-G02C)

This code is intended for insulation sleeves which shrink around a cable junction without application of heat, e.g. due to pre-stressing of the sleeve material.

Core, elastomer, rubber, support

#### X12-G02D [2005]

#### **Grounding connector**

For low power earthing connectors, see V04-A05.

## X12-G02E [2005]

## **Sliding connector**

Includes, for example, pantograph collectors for a train. Brushes, slip rings for electric motors are covered by V04-L, V06-M and X11-J codes.

## X12-G02F [2005]

#### Vibration dampers

Includes dampers for an overhead line.

#### X12-G02G [2007]

#### Superconductor cable connector/fitting

(X12-G02X)

High power superconducting cable connectors only are covered here. For low power superconducting wire connector, see V04-A10.

### X12-G02X

## Other cable/line connectors or fittings

Includes connectors or fittings for gas- or oil-filled cables.

Seals, clamps, cooling

#### X12-G03

## **Installations of bus-bars**

Power rail

#### X12-G04

## For buildings, in ground etc.

Vehicle installations from 1992 onwards are coded exclusively in X22-X01. However, individual items like wire or cable clamps or grommets, which are more generally applicable to other installations are also coded here and, if relevant, elsewhere in X12-E or W01-D or X22-X01. Also, floor structures especially designed to carry cabling is included in X12-G04A or X12-G04A1 depending on whether space between floors is left for cables or concrete ducting is incorporated.

#### X12-G04A

# In, on, or through walls, floors or ceilings, e.g. conduit

Wire harness

X12-G04A1 [1992]

Ducts, ladders, trays, conduits

Includes manufacture.

X12-G04A1A [2007]

Rigid

X12-G04A1C [2007]

Flexible

X12-G04A1E [2007]

#### **Fittings**

Includes fittings for joining ducts and distribution boxes, brackets, etc.

## X12-G04A2 [1992]

#### Clamps

Includes cable ties, clips and hooks and their manufacture. Cable ties for low-power cables used in e.g. electronic equipment are covered by V04-T01A.

## X12-G04A3 [1992]

### **Grommets, bushings**

Includes arrangements for leading cables through walls and manufacture.

#### X12-G04B

## Distribution and junction boxes

Ceiling roses and junction boxes are also coded in V04-B09, provided they are of low voltage and low power types. Distribution boxes are also in X13-E02 for industrial switchgear.

#### X12-G05

#### **Overhead installations**

Supports, suspensions, reinforced towers, pylons

## X12-G08 [1992]

# Cable or line for supplying relatively movable parts

(X12-G09)

#### X12-G09

# Other general cable/line installation aspects

Includes labels, signs and tapes warning of e.g. high voltage cable installations, or the presence of cables within a wall or below ground for which X12-G04A codes are also assigned.

## X12-G10 [2007]

## Cable dispensing reel

(X12-G09)

Includes details of automatic cord winders for headsets.

Cable drums, reels

## X12-G11 [2014]

## Cable or line installation security

This code includes arrangements for preventing or deterring theft of cables, e.g. due to monetary value of conductor materials, based on features of fittings or installations and not features (e.g. markings) of the cable itself which are covered by X12-D10. Other X12-G codes are also assigned as appropriate, such as X12-G04 codes for underground cable installations. Installations incorporating special features to trigger an alarm indicating attempted theft are also assigned W05-B01 codes.

#### X12-H

## Power supply or distribution

For installations and constructional details of substations see X12-G and X13-E codes, respectively. Note: X13-E is used for constructional details only of switchyards, switchboards etc. X12-H is used for all aspects of load monitoring, control, fault diagnosis, etc.

#### X12-H01

## Circuit arrangements for supply or distribution

## X12-H01A

#### Adjusting, compensating, balancing

Power control

## X12-H01A1 [1992]

#### Voltage control

X12-H01A1A [1992]

By load shedding

X12-H01A1C [1992]

By reactive power control

X12-H01A1E [2006]

## By using tap-changing transformer

See X12-C02B1 for tap changers per se.

X12-H01A2 [1992]

## (Re)active power compensation

From 2011 this code will cover both active and reactive compensation types.

Power factor controller, PFC, VAR compensation

X12-H01A2A [1992]

On transmission/distribution side

X12-H01A2B [1992]

On load side

X12-H01A2C [2002]

## Compensation implemented by series capacitors and shunt reactors

Also includes series/parallel capacitor banks, and synchronous capacitors. This code is used in conjunction with X12-H01A2A or X12-H01A2B whenever possible.

Saturable reactor, synchronous compensator, shunt capacitor

#### X12-H01A2D [2002]

## **Static VAR compensation**

Includes compensation obtained by the use of capacitors and reactors, respectively, to generate and absorb vars with at least one of them being variable. The variable capacitor or reactor may involve the use of, respectively, thyristor-switched capacitor compensator or thyristor-controlled reactor compensator. This code is used in conjunction with X12-H01A2A or X12-H01A2B whenever possible.

SVC, TCR, TSC

#### X12-H01A2E [2006]

#### **Power converter**

Involves the use of static converters to compensate for system reactance. See also X12-J for converters.

## X12-H01A3 [1992]

# Short circuit current or in-rush current limiter and over voltage limiter

Includes the use of series reactors/superconducting coils (see also X12-C codes), etc. Applicable only to power lines.

## X12-H01A4 [1992]

## Harmonics and ripple reduction

Filters in general are covered by U25-E codes. The use of this code is restricted for power lines. Filtering in converter systems is covered by X12-J01E. Also includes suppression of electromagnetic interference for which W02-H codes are also assigned.

## X12-H01A5 [1992]

Reducing or preventing power oscillations

## X12-H01A6 [1992]

Eliminating or reducing asymmetry in polyphase networks

#### X12-H01A7 [1992]

## Balancing network load by energy storage

(X12-H01A, X12-H09)

For general storage of electric energy, see X12-H06. This code involves the use of e.g. flywheels, batteries, pumped storage hydroelectric plants (see X11-B06, too).

## X12-H01A8 [2006]

Frequency regulation

## X12-H01A9 [2006]

## Load-shedding

Includes load shedding to maintain the balance between generated power and load demand. Also includes shedding to regulate system frequency (see also X12-H01A8). For load shedding to regulate voltage, see X12-H01A1A.

#### X12-H01B

## Multisource systems, system interconnections, power transfer

Generator synchronising, load sharing

## X12-H01B1 [1997]

## Distributed power generation system

(X12-H01B)

Includes connection to the utility mains of geographically-distributed solar power, wind power, fuel cell power, gas microturbines, etc. See also U24-J or X12-J codes for power converter details.

## X12-H01B2 [2005]

## **Bulk power transfer/interconnection**

Includes arrangements for parallel feeding of a single network by two or more generators, converters, or transformers and also controlling the sharing of output among them.

## X12-H01B2A [2008]

## Synchronising generator(s) with network

Includes arrangements to synchronise frequency, phase sequence, etc.

## X12-H01B3 [2005]

Interconnection of networks operating at different frequencies

## X12-H01B4 [2005]

## Aircraft and ships

See also W06-B/C codes.

## X12-H01B5 [2006]

## **Electric traction vehicles**

Includes high level power distribution system onboard a train, tram, electric vehicle, hybrid electric vehicle. Generally applicable to voltage buses in excess of 42V. Also includes on-board charging and charging control of vehicles. IC engine-driven vehicle systems are covered by U24-H and X22-F codes.

## X12-H01C [1992]

#### High power supply

(X12-H01X, X12-J)

Includes supplies for e.g. welding, induction heaters, etc. Static converters and their controllers are covered by X12-J and X13-G03 codes.

## X12-H01D [1992]

## **HVDC, DC systems**

(X12-H01X)

Converter stations, rectifiers, inverters

#### X12-H01E [2007]

## Non-contact power distribution

(X12-H01X)

Includes distribution of energy by electromagnetic waves (See X12-H09 for records prior to 1992). See X21-B01A1C and X16-G03 for non-contact electric vehicle battery charging. Low power non-contact power distribution is coded in U24-H02 codes. WPT, near-field

#### X12-H01E1 [2021]

#### Using capacitive coupling

## X12-H01E2 [2021]

## Using inductive coupling

See also X12-C codes for novel high power inductive components.

#### X12-H01E3 [2021]

## **Using radio waves or microwaves**

See also W02 codes for novel RF details such as directional array or Yaqi antennae.

## X12-H01E4 [2021]

## **Using light**

Includes use of off-board mains supply. See X16-G01 for mains battery charging.

#### X12-H01E5 [2021]

## **Using ultrasonic waves**

See also V06 codes for novel ultrasonic transducers.

#### X12-H01E8 [2021]

## Wireless power transmission control, monitoring and optimization

Includes optimizing position for non-contact power transfer, reducing electric, magnetic or electromagnetic leakage/interference, detecting foreign objects, as well as transmitting data during power transfer.

## X12-H01X

Other circuit arrangements for supply or distribution - including unspecified systems

## X12-H02

## **Emergency or auxiliary supplies**

Low power UPS systems are in U24-J. Standby supplies

## X12-H02A [1992]

**Diesel-generator rotary UPS** 

#### X12-H02B [1992]

Static UPS

## X12-H02C [1992]

**Rotary UPS** 

## X12-H03 [1983]

# Remote control and monitoring; Power system communications

(X12-H09)

## X12-H03A [1992]

### Remote control and monitoring

Includes network state monitoring, breaker tripping, relay/breaker tripping display. Also includes supervisory display of various system parameters. Constructional details of supervisory desks are in X13-E01. See also W05-D codes for transmission systems for measurement or control signals.

Remote load switching, mains-based switching

## X12-H03A1 [2005]

## Economics-driven inter-tie or multi-source control

Includes control of network power transfer based on generation costs and tariffs offered for buying and selling of energy. Also includes provision for considering pollution-related costs and setting off of pollution credits. See also X12-H07 and T01-J codes.

## X12-H03A3 [2007]

# Switching control for equipment connected to mains supply

Includes remotely generated signals to switch domestic equipment, e.g. air conditioner, fridge etc., on and off. For load shedding-related switching see X12-H01A codes. See also W05-D codes.

#### X12-H03E [1992]

#### **Power systems communications**

Includes e.g. power line carrier communications (PLCC) (see W02-C01A), mains-based load control signalling. Also includes pilot relaying (see X13-C01 codes).

#### X12-H03E1 [2005]

## High power transmission/distribution networks

Typically includes communication/control signals sent over high power lines.

#### X12-H03E1A [2005]

## Economics-driven inter-tie or multi-source communication

Includes control of network communication based on tariffs offered for buying and selling of energy. See also X12-H07 and T01-J codes.

#### X12-H03E3 [2005]

#### Low power mains network

Typically includes communication/control signals sent over mains wires to switch appliances.

X12-H03E5 [2005]

Radio network

X12-H03E7 [2005]

Internet/intranet

X12-H04 [1992]

#### **Utility load measurements**

(X12-H09)

Includes meters and metering/measuring arrangements relating only to electrical power systems covering generation, transmission and distribution. Also covers such measurements for domestic, commercial and industrial premises. See also S01 codes for all electrical measurements.

#### X12-H04A [1992]

## Remote metering

(X12-H09)

Includes arrangements for obtaining meter readings from the customer premises-based meters. Customers, in this context, include domestic, commercial and industrial users. Does not cover arrangements for metering/measuring power line electrical values for display at, for example, a load control centre. Such items are in X12-H04D. See also W05-D codes for transmission of measured values.

## X12-H04B [2005]

## Internet/intranet metering

#### X12-H04C [2006]

## Individual transmission/distribution/mains line meters

Includes current, voltage, power, energy, frequency, etc. meters, per se. Does not include meters not designed for the purpose of generation, transmission/distribution. Where the meter has the facility to be interrogated by a central station or electricity provider, see also X12-H04A.

#### X12-H04D [2006]

#### Metering/measurement systems

Includes arrangements/circuitry for obtaining measures of voltage, current, etc for power systems. Individual current/voltage transformers are covered by X12-C codes. By their nature, these are 'remote' measurements but are not coded in X12-H04A.

## X12-H04E [2006]

### Other metering/measurement systems

Includes recording of transients, harmonics, over voltages/current data, line fault parameters, lightning strikes, etc.

## X12-H04U [2005]

## **Applications**

To be used in conjunction with other H04 codes.

## X12-H04U1 [2005]

#### **Protection**

Includes metering arrangements for use with protection devices. See also S01, X12-C01G and X13-C for electrical instrumentation, instrument transformers and protection circuits.

## X12-H04U2 [2005]

#### **Network control**

See also X12-H03A codes for control and monitoring of networks.

## X12-H05 [1992]

#### **Network simulators**

(X12-H09)

Includes not only network simulation but also modelling of the system to manage load demand/generation, predicting power consumption and outcomes of operational parameter changes, etc. T01-J15 codes for computer-aided design and simulation are also assigned as appropriate.

#### X12-H06 [1992]

## **Electric energy storage**

(X12-H09)

For pumped storage hydroelectric systems, see also X11-B06 and X12-H01A7 codes. This code includes systems using superconducting coils, etc. See also X16-L. Storage for load-balancing purposes is in X12-H01A7.

#### X12-H07 [2005]

# Power trading across separate networks/generators

Includes computerised trading of power based on varying tariffs and pollution costs and credits. See also T01-J codes. To be used with other X12-H03 codes for communication and control aspects.

## X12-H08 [2013]

## **Smart grids**

Includes smart grids used for power transmission and management. Use with other X12-H codes as appropriate, such as X12-H03 codes for remote control and monitoring, X12-H04 codes for smart metering of power usage, X12-H01B codes for distributed power supply/control and X15-A08 and X15-B05 for solar/wind power control/monitoring. Also see other codes such as X27-V for home automation e.g. where smart grid automatically turns off household equipment, or manages use of off-peak power for domestic equipment. *Intelligent* 

#### X12-H09

## Other power supply/distribution aspects

#### X12-J

#### Power converters

See U24-D for low power converters.

#### X12-J01

#### **General converter details**

#### X12-J01A

## Generation of control voltages

See U21-B01 and U21-B05 codes for electronic switching.

X12-J01A1	[1992]
-----------	--------

For bipolar transistor

X12-J01A1A [1992]

For IGBTs

X12-J01A3 [1992]

For FETs

X12-J01A5 [1992]

For thyristors

X12-J01A7 [1992]

For control of other devices

X12-J01A9 [1992]

#### **Characterised by PWM**

See U22-E for PWM in general.

## X12-J01B [1983]

#### **Circuit protection**

(X12-J01X)

See also X13-C04D.

X12-J01C [2012]

**Power factor correction** 

X12-J01E [1992]

**Reducing harmonics and ripples** 

(X12-J01X)

See U25-E for filters in general.

X12-J01E1 [2006]

**Harmonics reduction** 

X12-J01E2 [2006]

Ripple reduction

X12-J01E5 [2014]

Reducing electromagnetic interference

(X12-J01E)

This code covers measures to reduce electromagnetic interference generated by the converter itself, e.g. based on circuitry or on constructional details such as screening for which V04-U codes are also assigned. W02-H01 codes (general codes for EMI/RFI reduction at source) are also assigned as appropriate.

Electromagnetic compatibility, EM, EMC, filter, harmonic, PWM frequency, radio frequency interference, RF, SMPS, switched mode, switching frequency, switching regulator, switching transient

X12-J01G [1992]

**General cooling details** 

(X12-J01X)

See also V04-T03 codes.

## X12-J05B [2005]

#### Inverter-type

To be used in conjunction with other inverter codes such as X12-J05A.

## X12-J05B1 [2005]

Voltage source inverter

X12-J05B2 [2005]

**Current source inverter** 

## X12-J05B3 [2005]

## **Utility inter-tie inverter**

Includes inverters fed by solar/wind power/etc generators for connecting to a mains/utility supply. For low power inverters, see U24-D codes.

## X12-J06 [2005]

## Pulse voltage supply

See U24-D06 for low power pulse supply. See U22-A03 also for energy-storage pulse generation.

## X12-J09

#### Other converters

Includes dynamic converters.

## X12-J10 [2007]

## **Bidirectional converter**

This code is used in conjunction with other codes to indicate a bidirectional novelty.

# X13: Switchgear, Protection, Electric Drives

#### NOTES:

- (1) This class contains high power and indeterminate size apparatus. Low power mechanical and electromechanical switches are coded in V03 only, and electronic switches are coded in U21 only.
- (2) X13-A01 and X13-A02 codes are common to switches, circuit breakers and circuit protectors.

### X13-A

# Contactors

(X13-A04X)

# X13-A04G1 [1987]

# **Electromagnetic**

Electromagnets, arc control, cores

X13-A04G5 [1997]

Characterised by type of interrupting

medium

X13-A04G5A [1997]

Air gap

X13-A04G5B [1997]

**Gas-insulated** 

X13-A04G5C [1997]

Vacuum

X13-A04H [1987]

High power vacuum and gas-filled tubes

(X13-A04X)

See also V05-A09 and V05-B codes.

Thyratrons, discharge tubes

X13-A04X

Other switches

Includes explosively-actuated high power switches.

X13-B

**Circuit breakers** 

X13-B01

Air-break without arc control

Includes isolators, sectionalisers and fuse-switches. *Blades* 

X13-B02

Breaking incorporating arc extinguishing

Includes air and liquid circuit breakers.

Oil-break

X13-B02A [1987]

Vacuum circuit breakers

Contacts, electrodes, bellows

X13-B02B [1992]

**Gas circuit breakers** 

X13-B03

Breaking with separate arc extinguishing means

Oil-break

X13-B03A [1983]

Air/gas-blast circuit breakers

X13-B03A1 [1992]

Gas-blast circuit breakers

X13-B03A1A [1997]

SF6 circuit breakers

Sulphur hexafluoride

X13-B04

Arc extinguishing, prevention and detection

Includes use of magnets, auxiliary/multiple contacts, insulating body between contacts, impedances, arcing horns, etc.

Blow-out magnets, resistance-switching

X13-B05 [1983]

**Driving mechanisms** 

(X13-B09)

Includes fluid-, pneumatic-, hydraulic-, motorisedor EM-actuators.

Electromagnetic, springs, linkages, pistons, cranks, rods

X13-B08 [1992]

Manufacture, assembly, testing, maintenance

(X13-B09)

Measurements, monitoring

X13-B08A [1997]

**Optical fiber sensors** 

X13-B08B [1997]

Microprocessors

X13-B09

Other circuit breaker details

Includes interlocks, cases, ensuring operation at a predetermined point, vents for arc products, DC circuit breaker, etc.

X13-C

**Emergency protective circuit arrangements** 

This code is for power equipment protection. Low power electronic apparatus protection is in U24-D and U24-F. Exceptions: certain overcurrent and overvoltage protection aspects are in X13-C03 and its application e.g. telephone line protection is in W01-C.

#### X13-C01

# Disconnection responsive to electrical input

Note: X13-C01A to X13-C01X codes may be used together with X13-C04, X13-C10, X13-C15 and X13-C20 codes.

#### X13-C01A

#### **Excess current**

Overcurrent, short-circuits

#### X13-C01B

# Earth fault current or potential

Includes ELCB and RCCB. See also X13-D05. Earth leakage circuit breakers, residual current circuit breakers, leakage current

#### X13-C01C

# Excess, under- or no-voltage

#### X13-C01D

# Difference between magnitudes or phase of voltages or currents

Differential protection

# X13-C01E [2007]

#### Distance or impedance

Includes all aspects of distance/impedance relaying. See also S01-D05B for impedance measurements.

#### X13-C01F [2008]

#### Arc fault

For detecting and protecting against arcing faults.

# X13-C01X

# Other disconnection responsive to electrical input

Includes protection schemes responding to power reversal, impedance, loss of synchronism, frequency deviations, etc.; and also includes automatic disconnections and reconnections, indicating operation of fault clearing apparatus, protection CTs and PTs, etc.

Fault indicators, auto-reclosure

# X13-C02

# Disconnection responsive to non-electrical input

Includes disconnection responsive to temp., line rupture, overspeed of motor/generator etc.

Heat, thermal, line breakage

#### X13-C03

# Limiting excess current or voltage

See X12-A and X12-F codes also. Surges, transients

X13-C03A [1997]

**Overvoltage limiters** 

X13-C03A1 [1997]

SiC surge arresters

Silicon carbide

X13-C03A2 [1997]

**MOV** surge arresters

Metal-oxide varistors

X13-C03A3 [1997]

SF6 surge arresters

X13-C03B [1997]

Overcurrent or earth fault current limiters or suppressors

Peterson coil

X13-C03B1 [1997]

Superconducting current limiter

# X13-C04

Protection circuits characterised by applications

X13-C04A

Cable or line systems

# X13-C04B

Transformers, generators or sync. capacitors

#### X13-C04C

#### Motors

Includes means responding to excess current, voltage increase or reduction, phase interruption, increase or decrease of speed, wrong direction of rotation, etc.

# X13-C04D

### **Converters**

Includes rectifiers and inverters. See also X12-J01B.

#### X13-C04X

# Other protection circuits characterised by applications

Includes protection for distribution gear, static capacitors, busbars, etc.

#### X13-C09

# Other emergency protective circuit arrangements

Includes personnel protection.

X13-C10 [1992]

Solid-state (analogue) relay protection

X13-C15 [1997]

Digital or numeric relay protection

X13-C15A [1997]

Microprocessors

X13-C15B [1997]

**Artificial intelligence** 

X13-C15B1 [1997]

X13-C15N [1997]

Characterised by novelty of specific

components

X13-C15N1 [1997]

Signal conditioning

X13-C15N2 [1997]

A/D signal conversion

X13-C15N3 [1997]

**Protection algorithms** 

X13-C20 [1997]

**Testing of protection schemes** 

X13-C20A [1997]

**Programmable simulators** 

# X13-D

# Fuses; Moulded case circuit breakers; General circuit protectors

#### X13-D01

**Melting fuses** 

#### X13-D01A

#### **Electrical details**

Includes fusible member and its materials, caps, cartridge fillings.

Fuse-links, -elements, -strips, terminals

#### X13-D01B

#### **Constructional details**

Includes fuse operation indicators, holders, bases, distinguishing marks, etc.

Housing, body, cover

X13-D01C [1992]

Manufacture, assembly, testing

(X13-D06)

X13-D01T [1997]

Characterised by type of fuse

X13-D01T1 [1997]

**Semi-enclosed fuses** 

X13-D01T2 [1997]

**Cartridge fuses** 

X13-D01T3 [1997]

**Expulsion fuses** 

X13-D01T4 [1997]

**Striker fuses** 

X13-D01T5 [1997]

**Printed fuses** 

X13-D01T6 [1997]

**Fuse resistors** 

X13-D01T7 [1997]

**SMT fuses** 

X13-D01T8 [1997]

Vacuum fuses

X13-D01T9 [1997]

SF6 fuses

#### X13-D02

#### Overload circuit breakers

See X13-D03, X13-D04 and X13-D06 to X13-D09 codes for details.

# X13-D02A [1983]

#### Hand reset mechanism

Reset mechanisms include levers, tumblers, knobs, push-buttons.

# X13-D02B [1983]

#### Power reset mechanism

Includes reclosure types of reset mechanisms.

# X13-D02C [1983]

Separate resetting action

#### X13-D03

# Electrothermal or combined EM and electrothermal release mechanisms

Includes bimetal element, expanding rod, strip or wire. fusible mass.

#### X13-D03A [1997]

# Combined EM and electrothermal release mechanisms

#### X13-D04

# Electromagnetic release mechanisms; Reset mechanisms

Electromagnets, armatures, poles

#### X13-D04A [1992]

Reset mechanisms

#### X13-D05

# Protective switches actuated by abnormal electrical conditions other than solely by excess current

Earth fault currents, current falling below certain level, excess or under voltage, ELCB or RCCB.

### X13-D06

#### **Constructional details**

Includes housings, casings, bases, mountings, operation indicators, terminals, connections, distinguishing marks.

Terminal colour coding

# X13-D07 [1987]

#### Arc control

(X13-D09)

Arc extinguishing, arc chutes, arc splitters, blow out magnets, arc quenching

# X13-D08 [1992]

### Manufacture, assembly, testing

For monitoring malfunction of circuit breakers and harmful gases released from them. (X13-D06)

#### X13-D09

# Other fuses; Moulded case circuit breakers; General circuit protectors

Includes CT for MCCB, locking/interlocking, name or rating plate and the protectors not covered by X13-D01, X13-D02 and X13-D05.

Electrodynamic release, motor-driven

#### X13-D10 [2002]

#### Solid state circuit breakers

Contactless

# X13-D11 [2002]

#### Miniature circuit breakers

# X13-D12 [2005]

#### Thermal fuses

Includes one-shot thermal fuses, thermal protectors and thermal cutoffs.

# X13-D20 [2002]

# Circuit breakers characterised by novel mechanism

X13-D20A [2002]

Sensing mechanism

X13-D20B [2002]

Trigger mechanism

X13-D20C [2002]

Latching and release mechanism

X13-D20D [2002]

**Operating mechanism** 

# X13-E

#### Switchboards, switchyards

**Note:** This code covers switching devices in association with each other or with transformers, fuses etc. Also, includes mainly constructional details with electrical aspects of power distribution control in X12-H. Motor control centres are covered, with electrical aspects in X13-F and X13-G.

#### X13-E01

#### Boards, desks, frameworks

Includes mounting of switches thereon, mosaic or mimic diagrams for supervisory desks or panels. Rails, slides, building blocks

#### X13-E02

# Casings, boxes

Includes mounting of devices therein, switch box nameplate.

Switch cabinets

#### X13-E03

# Indoor, outdoor or board mounting arrangements

Includes pole mounted units, and transformer substations.

Switch yards

X13-E03A [1992]

**Switchgear carriage** 

X13-E03B [1992]

Switchgear cubicle

X13-E03C [1997]

### Characterised by use of SF6

GIS, gas insulated switchgear, sulfur hexafluoride aas insulated switchgear

#### X13-E04

# Wiring, circuit and safety arrangements

Shutters, guards, earth-pins, -plates, fuse arrangements, CT-, PT- arrangements, interlocks, earthing, racking

# X13-E04A [1987]

# Wiring; Bus-bars

Includes clamps, arrangements for bus-bars and wiring of units on boards or in boxes.

Arrangements, layouts

X13-E08 [1992]

Manufacture, assembly, testing, maintenance, repair

(X13-E09) Monitoring

X13-E08A [1997]

**Optical fiber sensors** 

X13-E08B [1997]

Microprocessors

#### X13-E09

#### Other switchboards, switchyards

Includes venting arc gases from cubicles, cooling, etc.

#### X13-F\*

# Starting, stopping or regulating electric machines

\*This code is now discontinued and transferred to X13-H from 201401, but remains searchable and valid for records prior to 2014.

Low power motor control is in V06-N.

#### X13-F01\*

# Starting electric motors or converters

\*This code is now discontinued and transferred to X13-H01A from 201401, but remains searchable and valid for records prior to 2014.

Includes details of star-delta starters, motor control centres, switches, EM contactors. Also includes starting of generators.

#### X13-F02\*

# Stopping or slowing electric machines

\*This code is now discontinued and transferred to X13-H01B from 201401, but remains searchable and valid for records prior to 2014.

Plugging, supply reversal, reversing motor, regenerative-, resistive-, dynamic-braking

# X13-F03\*

# Speed regulation of electric motors

\*This code is now discontinued and transferred to X13-H01 from 201401, but remains searchable and valid for records prior to 2014.

Involves measuring of speed and comparing with a reference to change motor speed; universal motor speed control.

#### X13-F03A\*

# Varying field or armature current in DC motors

\*This code is now discontinued and transferred to X13-H01C from 201401, but remains searchable and valid for records prior to 2014.

#### X13-F03A1\*

# **Using tubes or semiconductors**

\*This code is now discontinued and transferred to X13-H01C1 from 201401, but remains searchable and valid for records prior to 2014.

Pulse modulation, chopper control, static converters

# X13-F03A1A\* [1992-2013]

# Field supply control

# X13-G01E\* [1997-2013]

#### **Synchronous motors**

\*This code is now discontinued and transferred to X13-H01G from 201401, but remains searchable and valid for records prior to 2014.

# X13-G01E1\* [2006-2013]

#### With permanent magnet

\*This code is now discontinued and transferred to X13-H01G1 from 201401, but remains searchable and valid for records prior to 2014.

# X13-G01E2\* [2006-2013]

#### Without permanent magnet

\*This code is now discontinued and transferred to X13-H01G2 from 201401, but remains searchable and valid for records prior to 2014.

#### X13-G01F\* [1997-2013]

#### **Linear motors**

\*This code is now discontinued and transferred to X13-H01H from 201401, but remains searchable and valid for records prior to 2014.

# X13-G01F1\* [1997-2013]

### **Asynchronous**

\*This code is now discontinued and transferred to X13-H01H1 from 201401, but remains searchable and valid for records prior to 2014.

Induction, AC, LIM

# X13-G01F2\* [1997-2013]

# **Synchronous**

\*This code is now discontinued and transferred to X13-H01H2 from 201401, but remains searchable and valid for records prior to 2014.

AC, LSM

# X13-G01F3\* [1997-2013]

#### **Direct current**

\*This code is now discontinued and transferred to X13-H01H3 from 201401, but remains searchable and valid for records prior to 2014.

DC. linear

#### X13-G01X\*

# Other speed or torque of electric motors

\*This code is now discontinued and transferred to X13-H01X from 201401, but remains searchable and valid for records prior to 2014.

Includes control for multi-motors, etc.

#### X13-G02\*

# **Electric generators control**

\*This code is now discontinued and transferred to X13-H02 from 201401, but remains searchable and valid for records prior to 2014.

See V06-N40 codes for speed control of low power generators.

# X13-G02A\*

### Varying field

\*This code is now discontinued and transferred to X13-H02A from 201401, but remains searchable and valid for records prior to 2014.

#### X13-G02T\* [1997-2013]

# Characterised by type of prime mover or generator

\*This code is now discontinued and transferred to X13-H02T from 201401, but remains searchable and valid for records prior to 2014.

#### X13-G02T1\* [1997-2013]

#### Steam turbine generator

\*This code is now discontinued and transferred to X13-H02T1 from 201401, but remains searchable and valid for records prior to 2014.

# X13-G02T2\*

[1997-2013]

### **Hydrogenerator**

\*This code is now discontinued and transferred to X13-H02T2 from 201401, but remains searchable and valid for records prior to 2014.

#### X13-G02T3\*

[1997-2013]

#### IC engine generator

\*This code is now discontinued and transferred to X13-H02T3 from 201401, but remains searchable and valid for records prior to 2014.

### X13-G02T4\*

[1997-2013]

### Gas turbine generator

\*This code is now discontinued and transferred to X13-H02T4 from 201401, but remains searchable and valid for records prior to 2014.

# X13-G02T5\*

[1997-2013]

# Wind turbine generator

\*This code is now discontinued and transferred to X13-H02T5 from 201401, but remains searchable and valid for records prior to 2014.

#### X13-G02T6\*

[2002-2013]

### Microturbine generator

\*This code is now discontinued and transferred to X13-H02T6 from 201401, but remains searchable and valid for records prior to 2014.

#### X13-G02T7\*

[2006-2013]

# Synchronous generator

\*This code is now discontinued and transferred to X13-H02T7A from 201401, but remains searchable and valid for records prior to 2014.

# X13-G02T8\*

[2006-2013]

# **DC** generator

\*This code is now discontinued and transferred to X13-H02T8 from 201401, but remains searchable and valid for records prior to 2014.

# X13-G02T9\*

[2006-2013]

#### Other generators' control

\*This code is now discontinued and transferred to X13-H02T9 from 201401, but remains searchable and valid for records prior to 2014.

#### X13-G02T9A\*

[2006-2013]

# Induction generator

\*This code is now discontinued and transferred to X13-H02T7B from 201401, but remains searchable and valid for records prior to 2014.

# X13-G02X\*

[1980-2013]

#### Other control details

\*This code is now discontinued and transferred to X13-H02X from 201401, but remains searchable and valid for records prior to 2014.

Includes control by varying prime mover speed, controlling clutch or other mechanical power transmission device, obtaining desired frequency or voltage in predetermined relation, capacitor variation for asynchronous generator.

Prime-mover control, frequency control

#### X13-G03\*

[1980-2013]

#### Static converters

\*This code is now discontinued and transferred to X13-H03 from 201401, but remains searchable and valid for records prior to 2014.

This code is used together with X12-J01A and converter-type codes. For low power converter control see U24-D codes.

#### X13-G03A\*

[1980-2013]

# **Controlling DC/AC stages or converters**

\*This code is now discontinued and transferred to X13-H03A from 201401, but remains searchable and valid for records prior to 2014.

Inverter control

# X13-G03B\*

[1980-2013]

#### Controlling AC/DC stages or converters

\*This code is now discontinued and transferred to X13-H03B from 201401, but remains searchable and valid for records prior to 2014.

Rectifier control

# X13-G03C\*

[2006-2013]

#### **DC-DC** converter

\*This code is now discontinued and transferred to X13-H03C from 201401, but remains searchable and valid for records prior to 2014.

# X13-G03D\*

[2006-2013]

#### **AC-AC** converter

\*This code is now discontinued and transferred to X13-H03D from 201401, but remains searchable and valid for records prior to 2014.

### X13-G03X\*

[1980-2013]

# Other converters' control

\*This code is now discontinued and transferred to X13-H03X from 201401, but remains searchable and valid for records prior to 2014.

# X13-G04\* [1980-2013]

# Dynamo-electric brakes or clutches; Nonstatic converters

\*This code is now discontinued and transferred to X13-H04 from 201401, but remains searchable and valid for records prior to 2014.

From 2006, controllers for reactors/transformers are covered by X12-C02B codes only. For static converters, see X12-J01A and X13-G03 codes only.

# X13-G10\* [1997-2013]

#### Microprocessor based control

\*This code is now discontinued and transferred to X13-H05 from 201401, but remains searchable and valid for records prior to 2014.

Includes details of DSP processor, ECU, PLC etc.

# X13-G15\* [2002-2013]

#### Remote motor control

\*This code is now discontinued and transferred to X13-H06 from 201401, but remains searchable and valid for records prior to 2014.

#### X13-G20\* [2002-2013]

# Starter-generator/motor-generator control

\*This code is now discontinued and transferred to X13-H07 from 201401, but remains searchable and valid for records prior to 2014.

# X13-G25\* [2005-2013]

# Speed control of electrical machines characterized by specific switching or control device

\*This code is now discontinued and transferred to X13-H10 from 201401, but remains searchable and valid for records prior to 2014.

# X13-G25A\* [2005-2013]

# Characterized by bipolar transistors and diodes

\*This code is now discontinued and transferred to X13-H10A from 201401, but remains searchable and valid for records prior to 2014.

# X13-G25B\* [2005-2013]

#### **Characterized by IGBTs**

\*This code is now discontinued and transferred to X13-H10B from 201401, but remains searchable and valid for records prior to 2014.

# X13-G25C\* [2005-2013]

# Characterized by FETs

\*This code is now discontinued and transferred to X13-H10C from 201401, but remains searchable and valid for records prior to 2014.

# X13-G25D\* [2005-2013]

### **Characterized by thyristors**

\*This code is now discontinued and transferred to X13-H10D from 201401, but remains searchable and valid for records prior to 2014.

### X13-G25E\* [2005-2013]

# Characterized by combination of switching devices

\*This code is now discontinued and transferred to X13-H10E from 201401, but remains searchable and valid for records prior to 2014.

# X13-G25F\* [2005-2013]

# Characterized by AC-to-DC converter

\*This code is now discontinued and transferred to X13-H10F from 201401, but remains searchable and valid for records prior to 2014.

### X13-G25G\* [2005-2013]

# Characterized by DC-to-AC converter

\*This code is now discontinued and transferred to X13-H10G from 201401, but remains searchable and valid for records prior to 2014.

# X13-G25H\* [2005-2013]

# Characterized by AC-to-AC

\*This code is now discontinued and transferred to X13-H10H from 201401, but remains searchable and valid for records prior to 2014.

#### X13-G25J\* [2005-2013]

# Characterized by DC-to-DC converter

\*This code is now discontinued and transferred to X13-H10J from 201401, but remains searchable and valid for records prior to 2014.

# X13-H [2014]

# **Control of electric machines**

(X13-F, X13-G)

Low power motor control is in V06-N.

# X13-H01 [2014]

# Speed or torque regulation of electric motors or converters

(X13-F03, X13-G01)

Includes universal motor speed control.

#### X13-H01A [2014]

# Starting electric motor or converters (X13-E01)

Includes details of star-delta starters, motor control centres, switches, EM contactors. Also includes starting of generators.

X13-H01B [2014]

Stopping or slowing electric machines or converters

(X13-F02)

Plugging, supply reversal, reversing motor, regenerative-, resistive-, braking, dynamic braking

X13-H01C [2014]

Speed or torque regulation by varying field or armature in DC motors

(X13-F03A, X13-G01A)

Involves measuring of speed and comparing with a reference to change motor speed, universal motor speed control.

X13-H01C1 [2014]

**Using tubes or semiconductors** 

(X13-F03A1, X13-G01A1)

Pulse modulation, chopper control, static converters

X13-H01C1A [2014]

Field supply control

(X13-F03A1A, X13-G01A1A)

X13-H01C1B [2014]

**Armature supply control** 

(X13-F03A1B, X13-G01A1B)

X13-H01C9 [2014]

Other details of speed or torque regulation by varying field /armature current in DC motors

(X13-F03A9)

Ward-Leonard sets, metadynes, amplidynes

X13-H01D [2014]

Speed or torque regulation by varying stator or rotor current in AC motors

(X13-F03B, X13-G01B) Brush shifting, transductor

X13-H01D1 [2014]

**Using semiconductors** 

(X13-F03B1, X13-G01B1)

X13-H01D1A [2014]

Frequency control

(X13-F03B1A, X13-G01B1A)

X13-H01D1B [2014]

Voltage control

(X13-F03B1B, X13-G01B1B)

X13-H01D1C [2014]

**Vector speed regulation** 

(X13-F03B1C, X13-G01B1C)

Field-oriented, flux-vector, direct-torque, vector control

X13-H01D9 [2014]

Other details of speed or torque regulation by varying stator or rotor current in AC motors

(X13-G01B9)

X13-H01E [2014]

**AC/DC** brushless motors

(X13-F03C, X13-G01C)

X13-H01E1 [2014]

Permanent magnet

(X13-F03C1, X13-G01C1)

PM AC/DC brushless

X13-H01E2 [2014]

Switched reluctance

(X13-F03C2, X13-G01C2) SR AC/DC brushless

X13-H01E3 [2014]

Sensorless

(X13-F03C3, X13-G01C3)

**BEMF** 

X13-H01F [2014]

**Asynchronous motors** 

(X13-F03D, X13-G01D) Induction

X13-H01G [2014]

Synchronous motors

(X13-F03E, X13-G01E)

X13-H01G1 [2014]

Synchronous motors with permanent magnet

(X13-F03E1, X13-G01E1)

X13-H01G2 [2014]

Synchronous motors without permanent magnet

(X13-F03E2, X13-G01E2)

X13-H01H [2014]

**Linear motors** 

(X13-F03F, X13-G01F)

X13-H01H1 [2014]

**Asynchronous linear motors** 

(X13-F03F1, X13-G01F1) Induction, AC, LIM

X13-H01H2 [2014]

**Synchronous linear motors** 

(X13-F03F2, X13-G01F2)

AC, LSM

X13-H01H3 [2014]

**Direct current linear motors** 

(X13-F03F3, X13-G01F3)

DC, linear

X13-H01X [2014]

Other speed or torque regulation of electric motors

(X13-F03X, X13-F09, X13-G01X)

Includes control for multi-motors, etc.

X13-H02 [2014]

**Electric generators control** 

(X13-G02)

See V06-N40 codes for speed control of low power generators.

X13-H02A [2014]

Varying field

(X13-G02A)

X13-H02B [2014]

Frequency control

(X13-G02X)

X13-H02C [2014]

Voltage control

(X13-G02X)

X13-H02D [2014]

**Vector speed control** 

(X13-G02X)

X13-H02E [2014]

**Capacitor variation** 

(X13-G02X)

Asynchronous generators are coded under X13-H02T7B.

X13-H02T [2014]

Characterised by type of prime mover or generator

(X13-G02T)

X13-H02T1 [2014]

Steam turbine generator

(X13-G02T1)

X13-H02T2 [2014]

Hydrogenerator

(X13-G02T2)

X13-H02T3 [2014]

IC engine generator

(X13-G02T3)

X13-H02T4 [2014]

Gas turbine generator

(X13-G02T4)

X13-H02T5 [2014]

Wind turbine generator

(X13-G02T5)

X13-H02T6 [2014]

Microturbine generator

(X13-G02T6)

X13-H02T7 [2014]

Synchronous/Asynchronous generator

X13-H02T7A [2014]

Synchronous generator

(X13-G02T7)

X13-H02T7B [2014]

**Asynchronous generator** 

(X13-G02T9A)

Induction

X13-H02T8 [2014]

DC generator

(X13-G02T8)

X13-H02T9 [2014]

Other generators' control

(X13-G02T9)

#### X13-H02X [2014]

### Other electric generator control details

(X13-G02X)

Includes control by varying prime mover speed, controlling clutch or other mechanical power transmission device. From 2014, details of frequency control are coded under X13-H02B, voltage control under X13-H02C and by variation of capacitor under X13-H02E.

Prime-mover control

# X13-H03 [2014]

#### Static converters control

(X13-G03)

This code is used together with X12-J01A and converter-type codes. For low power converter control see U24-D codes.

# X13-H03A [2014]

# **Controlling DC/AC stages or converters**

(X13-G03A)

Inverter control

# X13-H03B [2014]

# Controlling AC/DC stages or converters

(X13-G03B)

Rectifier control

### X13-H03C [2014]

#### Controlling DC-DC converters

(X13-G03C)

# X13-H03D [2014]

# **Controlling AC-AC converters**

(X13-G03D)

### X13-H03X [2014]

# Other converters' control

(X13-G03X)

#### X13-H04 [2014]

# Dynamo-electric brakes or clutches; Nonstatic converters

(X13-G04)

From 2006, controllers for reactors/transformers are covered by X12-C02B codes only. For static converters, see X12-J01A and X13-H03 codes only.

#### X13-H05 [2014]

#### Microprocessor based control

(X13-F10, X13-G10)

Includes details of DSP processor, ECU, PLC etc.

# X13-H06 [2014]

#### Remote motor control

(X13-G15)

#### X13-H07 [2014]

# Starter-generator/motor-generator control

(X13-F20, X13-G20)

# X13-H10 [2014]

# Speed control of electrical machines characterized by specific switching or control device

(X13-F25, X13-G25)

These codes are used together with other X13-H codes as appropriate.

# X13-H10A [2014]

# Characterized by bipolar transistors and diodes

(X13-F25A, X13-G25A)

# X13-H10B [2014]

# **Characterized by IGBTs**

(X13-F25B, X13-G25B)

# X13-H10C [2014]

#### Characterized by FETs

(X13-F25C, X13-G25C)

# X13-H10D [2014]

# **Characterized by thyristors**

(X13-F25D, X13-G25D)

# X13-H10E [2014]

# Characterized by combination of switching devices

(X13-F25E, X13-G25E)

# X13-H10F [2014]

# Characterized by AC-to-DC converter

(X13-F25F, X13-G25F)

Rectifier

# X13-H10G [2014]

# Characterized by DC-to-AC converter

(X13-F25G, X13-G25G)

Inverter

#### X13-H10H [2014]

# Characterized by AC-to-AC converter

(X13-F25H, X13-G25H)

X13-H10J [2014]

**Characterized by DC-to-DC converter** 

(X13-F25J, X13-G25J)

X13-H99 [2014]

Other control details of electric machines

X13-U [1997]

# Characterized by application to specific equipment or industry

For records prior to 2005, these codes were used for applications of medium and high power electric machines control only. From 2005 onwards, these codes are used for applications of fuses, protectors, circuit breakers, and medium and high power switches and electric machines control. See V03 codes for low power electric switches and V06 codes for low power electric machines.

X13-U01 [1997]

**Road vehicles** 

X13-U02 [1997]

**Railways** 

X13-U03 [1997]

**Aviation and aerospace** 

X13-U04 [1997]

**Ships and boats** 

X13-U05 [1997]

Military

X13-U06 [1997]

**Industrial machines** 

#### X14: Nuclear Power Generation

See also section K for further details of nuclear reactors and nuclear power.

#### X14-A

#### **Reactor processes**

Includes all aspects of reactor processes.

#### X14-A01

#### **Fast fission**

Fast-breeder, fast neutrons

#### X14-A02

#### **Thermal**

Includes boiling-water reactor, pressurised water reactor.

Gas-cooled, PWR, BWR, AGR, thermal neutrons

#### X14-A03

# [1992]

#### **Fusion reactors**

Includes plasma confinement and generation. JET, Tokamak, toroidal-, poloidal-coils, plasma generation

# X14-A03A

# [1992]

# **Cold fusion**

(X14-A09)

Electrolysis, palladium

# X14-A09

#### Other reactor processes

Includes sub-critical reactors.

# X14-B

### **Reactor components**

Includes all aspects (electrical and non-electrical) of components except for cooling where certain items e.g. heat exchangers are excluded.

# X14-B01

#### Pressure vessels, containment

Concrete structures, seals, walls

# X14-B02

### Shielding; Emergency protection

Includes biological-, reflecting- and thermal-shields.

Neutron shield, emergency shut-down, neutron reflection, gamma radiation thermal shielding

#### X14-B03

#### Cooling

Includes pumping or circulating of coolant. Circulation pumps, liquid, sodium circulation, coolant flow control

#### X14-B04

#### **Fuel elements**

#### X14-B04A

#### Manufacture

Includes fuel element manufacture and materials for the fuel and its cladding.

# X14-B04X

### Fuel assemblies and other details

Includes bundles of pin-, rod- or tube-shaped fuel elements, spacer grids, casings, jackets.

Cladding, grids

#### X14-B05

#### Moderator or core structure

Includes locating or supporting of fuel elements, supporting complete structure.

Fuel supports, fuel grids, moderator composition, supporting core, grid supports, heavy water, graphite, core shroud

# X14-C

# **Nuclear power plant and control**

Documents are included in X14-C02 to X14-C06 only if some electrical aspects are disclosed. X14-C01 covers both electrical and non-electrical aspects.

# X14-C01

#### Control of nuclear reaction

Includes control or poison rods and their drive arrangements. Also includes control circuits.

Control material, neutron absorber, shut-down, hafnium, boron, cadmium, erbium, europium

#### X14-C02

# Monitoring and testing reactor

See also section S for general instrumentation e.g. S03-G codes covers nuclear or X-radiation.

Probes, measuring-temp, -reactivity, -radioactivity, -strain, -neutron-flux

#### X14-C03

#### **Fuel handling**

Includes fuel handling arrangements to load fuel elements into the reactor and discard used elements. Also includes storage and associated handling of unused fuel, prior to use in the reactor. Robots, lifting devices, discharging/dismantling irradiated fuel

#### X14-C04

#### Manufacture of reactor

#### X14-C05

**Power plant** 

#### X14-C05A

# Generation of electricity or mechanical energy

#### X14-C05B

#### Plant control

Regulating plant parameters, flow, level, feedwater control

#### X14-C05C [2002]

# Measurements relating to plant

(X14-C05X)

For in-situ reactor-related measurements, see X14-C02. Includes arrangements, for example, to check the integrity of welded joints. See also the relevant instrumentation codes in section S.

#### X14-C05X

# Other nuclear power plant aspects

Includes safety suits, personal radiation monitors, cabling, protection. Also includes electrical details of water desalination systems for producing potable water (see also X25-H03 for water treatment). If water is used for cooling the reactor, X14-B03 should be applied.

Cable inlets, plant simulator, dosimeter badge, nuclear desalination, hot cell

### X14-C06

[2013]

Maintenance, service, repair

# X14-C99 [2018]

#### Other nuclear power plant details

Includes arrangements to provide heat for purposes other than conversion into power, e.g. for heating buildings.

#### X14-D

# Radioactive waste treatment, power plant decommission, decontamination, etc.

Includes only electrical apparatus and methods for water disposal, decommission of power plant, decontamination of radioactive contaminants, e.g. safety wear (masks, clothes, etc.), etc.

Decontamination, disposal, storage, electrolytic waste disposal, decommission

#### X14-E

# **Energy from radioactive sources**

Includes only electrical apparatus and methods for radioactive/nuclear cells, etc.

# X14-F

# Plasma technique

Includes generation and handling of plasma for fusion reactors. For other uses, only electrical aspects are included.

# X14-F01 [1992]

#### For fusion

Magnetic confinement

# X14-F02 [1992]

# For integrated circuit manufacture

See also appropriate U11-C codes.

#### X14-F03 [1992]

#### For burners and torches

See also X24-D05. Plasma gun

# X14-F04 [2002]

# For propulsion

Covers plasma propulsion techniques for ordnance, space vehicles, etc. See also W06-B03 and W07 codes.

# X14-G

#### **Particle accelerators**

Documents are included in X14-G only if some electrical aspects are disclosed. See also K08-G and L03-H04D.

#### X14-G01 [1987]

#### Linear

Linac, magnets

X14-G02 [1987]

Cyclic

Synchrotrons, cyclotrons, betatrons, magnets

# X15: Non-Fossil Fuel Power Generating Systems

NOTES:

See X11-A, X11-B and X11-C codes for steam turbine plants, coal-fired power plants, hydroelectric plants, gas turbine plants, IC engine plants, co-generation plants, etc. Nuclear power generation details are covered by X14 only. See also X11-J codes for in-depth constructional details of the generators, e.g. stator, rotor, windings, insulation, etc. See also X12 codes for details of power distribution to e.g. power transmission networks (powergrids).

#### X15-A

### Solar power

X15-A codes cover all details of solar batteries, solar power, solar powered charging of batteries, when there is some novelty/importance regarding the solar aspect. Includes power generation from solar rays as well as other optical radiation, photoelectrochemical and thermophotovoltaic actions. If details about e.g. the semiconductor materials used in the cell (photolayers, etc.), the photoreceivers, the manufacture/packaging of the cells, etc., U12-A02A codes should also be applied. See also X15-A04 or X15-A05 to highlight small scale or large scale power generation, respectively.

Photoelectrochemical and dye-sensitized solar cells are also coded under X16-A04. Chargers using solar energy to charge a battery are also coded under X16-G02A.

Details of redox batteries, such as vanadium redox batteries, used for storing energy generated from solar farms to supply power during low generation periods, are coded under X16-C.

#### X15-A01

# Solar heat/radiation collection; Concentrators

Includes solar heat/radiation collection and concentration for both solar thermal energy conversion systems (see also X15-A01A) as well as systems using direct conversion of solar energy (see also X15-A02).

# X15-A01A [2005]

# Heat collecting panels; Heat collecting pipes

Includes panels provided with pipes carrying liquid that is heated by the sun. Direct conversion panel details are in X15-A02.

Collectors, heat pipes

# X15-A01A1 [2011]

# **Working fluids**

(X15-A01C4)

Includes arrangement details of working fluids such as water, molten salts etc.

Heat absorber

# X15-A01C [2005]

#### Concentrators

Includes arrangements to direct sun's rays onto the solar panels/heat pipes using reflectors, lenses and sun-tracking dishes. This code can be applied in conjunction with X15-A01A to highlight application to solar thermal energy conversion systems or X15-A02 to highlight application to direct solar energy conversion systems.

# X15-A01C1 [2010]

#### Mirrors

Focussing mirror, parabolic mirror, parabolic troughs

#### X15-A01C2 [2010]

#### Lenses

Focussing lenses, Fresnel lenses

#### X15-A01C3 [2010]

# Tracking arrangements

Includes heliostats.

# X15-A01C4\* [2010-2010]

#### Working fluids

\*From 2011 this code is transferred to X15-A01A1, but remains searchable for records in 2010. Includes arrangement details of working fluids such as water, molten salts, etc.

### X15-A01C9 [2010]

# Other concentrators details

#### X15-A02

# Direct conversion photovoltaic panel details; Solar/photovoltaic cells details

X15-A01C codes can be used in conjunction with X15-A02 codes to highlight the concentrators, e.g. mirrors, tracking arrangements, etc. See also U12-A02A codes.

# X15-A02A [1983]

# Single cells

Includes photovoltaic or solar cells (see also U12-A02 codes) and their manufacture. See U12-A02A7 for circuitry arrangements for solar cells.

# X15-A02B [1983]

#### Assemblies of cells

Includes details of interconnections between individual cells. Details of the solar panel or module are covered by X15-A02C.

#### X15-A02C [2002]

# Solar/photovoltaic panel details

Includes mechanical details of solar/photovoltaic panels, modules or tiles, including anti-reflective coating, glass cover to protect the cells from the elements, cleaning system for removing dust (sand) and dirt from the surface of the solar/photovoltaic panels. Also includes interconnections between panels. Mechanical details of roof structures are coded under X15-A02X only. Details of single cells and assemblies of cells (including interconnections between individual cells) are coded under X15-A02A and X15-A02B, respectively.

Solar cell modules, panels, tiles, anti-reflective coating

### X15-A02D [2002]

#### Photoelectrochemical cells

(X15-A02A)

See also X16-A04 and other X16 codes for more detailed breakdown of the details of such cells, and U12-A02 codes.

# X15-A02D1 [2005]

#### Dye-sensitised solar cells

Includes the use of an organic dye and electrolyte for absorbing solar energy and hole transport. DSSC, Gratzel cells

# X15-A02E [2002]

# Thermophotovoltaic cells

Includes cells where IR rays are converted to electricity. See also U12-A02 codes.

# X15-A02F [2005]

# **Organic solar cells**

Includes cells that use electron-acceptor and electron-donor organic materials.

# X15-A02X [2010]

# Other solar/photovoltaic panels/cells details

Includes mechanical details of roof structures. Mechanical details of solar/photovoltaic panels, modules or tiles are coded under X15-A02C only. Includes wiring to solar battery, details of junction boxes (also covered by V04-B09 and X12-G04B codes), cooling arrangements and solar module packaging. Packaging details of electronic goods are also coded under Q34-M02.

# X15-A04 [2002]

# Small scale solar power generation

Covers generation of electricity, for example, to power watches, calculators, etc. Also includes domestic or micro installations. This code is used in conjunction with other X15-A codes.

#### X15-A05 [2002]

# Large scale solar power generation

Covers high power systems, for example, for powering space crafts, vehicles, etc. Includes solar systems installed on roofs of buildings (see also X27-E01A5 for domestic solar heating systems). This code is used in conjunction with the above relevant codes.

Solar-powered vehicles, solar water heating system

# X15-A05A [2010]

# Solar tower; Solar chimney

Includes use of greenhouse structure to heat air to create updraft in tower containing turbines to generate power.

# X15-A05B [2010]

# **Solar Stirling engine**

Includes use of concentrated solar energy as heat source within engine.

#### X15-A05H\* [2010-2015]

#### **Hybrid/Combination plant**

\*This code is now discontinued and has been transferred to X15-A10 from 201601. It remains searchable for records prior to 2016.

Includes solar thermal plants that are combined with other (including fossil fuel-based) heat or electricity generating equipment to cope with overcast skies or night operation. Details of combination plants not involving solar power are coded under X15-J.

# X15-A05X [2010]

# Other large scale solar power generation

# X15-A08 [2010]

# Control, monitoring and testing

Includes control, monitoring and testing details of solar and photovoltaic cells, solar heat collecting devices and concentrators. This code is used in conjunction with other X15-A codes as appropriate. Also includes solar cell evaluation apparatus or solar simulator e.g. to measure theoretical outputs of solar panels.

Simulation

#### X15-A09

# Other solar power aspects

Includes use of solar energy to raise steam for driving generators. Excludes solar energy for heating water, which is covered by X27-E01A codes.

# X15-A10 [2016]

# **Hybrid/Combination plant**

(X15-A05H)

Includes solar thermal plants that are combined with other (including fossil fuel-based) heat or electricity generating equipment to cope with overcast skies or night operation. Also see X15-A05 for large scale solar combined plant. Also includes small scale combined solar and wind turbine power generation (also see X15-A04 for small scale solar combined power generators). Details of combination plants not involving solar power are coded under X15-J.

### X15-A15 [2019]

# Manufacture, servicing and maintenance (solar power)

Includes manufacture, servicing and maintenance details of solar power energy plants. This code is used in conjunction with other X15-A codes as appropriate.

# X15-B

# Wind power

Includes arrangements for electricity generation using wind power. Details of converters and interconnection to the utility mains are covered by, respectively, U24-D/X12-J and X12-H01B codes.

Details of redox batteries, such as vanadium redox batteries, used for storing energy generated from wind farms to supply power during low generation periods, are coded under X16-C.

#### X15-B01

#### Motors

Constructional details, e.g. gearing systems, clutches, cooling and ventilating systems, manufacture details, rotors and stators details, etc, are also covered by X11-J codes. Blade details are covered by X15-B01C.

# X15-B01A [1987]

# **Turbines**

Vanes, windmills, drives

### X15-B01A1 [2005]

# Large scale

# X15-B01A3 [2005]

#### Small scale

Includes microturbines, e.g. those located at the bottom of a chimney, vehicles, e.g. electric vehicles, etc. For small scale power plants, see X15-R04

# X15-B01A5 [2010]

**Horizontal turbines** 

X15-B01A6 [2010]

**Vertical turbines** 

X15-B01B [1987]

#### Generators

See also X11.

Asynchronous, synchronous

# X15-B01C [2010]

# Blade design; Blade material

Includes construction details of blades, including design, materials of blades per se, and attachments for connecting/supporting the blades.

Damping arrangement, de-icing

#### X15-B02 [2005]

### **On-shore systems**

This code is used in conjunction with other codes as appropriate.

#### X15-B03 [2005]

### Off-shore systems

This code is used in conjunction with other codes as appropriate.

#### X15-B04 [2006]

#### Small scale power plant

This code is used in conjunction with other codes as required to indicate the small scale nature, where disclosed, of the plant such as used in vehicles, within a chimney etc.

Small size

# X15-B05 [2006]

#### Control, monitoring and testing

Includes electrical aspects only. Includes blade pitch control, control of blade angle, noise emission monitoring, etc.

Speed control, simulation, speed prediction

#### X15-B06 [2006]

#### Support structures

Includes wind turbine tower and its manufacturing.

#### X15-B09

# Other wind power aspects

Includes details of lightning protection system, etc.

# X15-B15 [2019]

# Manufacture, servicing and maintenance (wind power)

Includes manufacture, servicing and maintenance details of wind power energy plants. This code is used in conjunction with other X15-B codes as appropriate.

#### X15-C

# Sea power

Includes use of heat differential between different depths. Hydroelectric power generation using water turbines driven by river flow or river falls is coded under X11-B only.

Details of power plant, e.g. turbines, blades, etc, are also covered under X11-B and X11-J codes.

Details of osmotic power or salinity gradient power are covered by both X11-B09 and X15-C.

Ocean currents, ocean thermal energy conversion, vortex power

X15-C01 [1983]

Wave power

X15-C01A [2010]

Wave energy capture methods

X15-C01A1 [2010]

#### Point absorbers: Buovs

Includes floating structure with components that move relative to each other due to wave action.

Salter duck \*, Edinburgh duck \*, buoyant moored device

# X15-C01A2 [2010]

# **Attenuators; Surface following**

Includes long multi-segment floating structures oriented parallel to the direction of the waves that flex at the segments and drive hydraulic pumps or other converters.

Hinged contour device, Pelamis ®

#### X15-C01A3 [2010]

# Terminator devices; Oscillating water columns

Includes devices that extend perpendicular to the direction of wave propagation and capture or reflect the power of the wave.

OWC

# X15-C01A4 [2010]

# **Overtopping devices**

Includes reservoirs that are filled by incoming waves to levels above the average surrounding ocean and where gravity causes the water released to fall back and drive hydro turbines.

X15-C01A9 [2010]

Other wave energy capture methods

X15-C01B [2010]

**Installation location** 

X15-C01B1 [2010]

On-shore installation

X15-C01B2 [2010]

Near-shore/Off-shore installation

X15-C01C [2010]

#### Power take-off

Includes details of power take-offs such as hydraulic ram, elastomeric hose pump, pump-to-shore, hydroelectric turbine, air turbine and linear electrical generator.

X15-C02 [2005]

Tide energy

Tidal, tides

X15-C02A [2010]

Tide energy plant type

X15-C02A1 [2010]

**Tidal stream systems** 

X15-C02A2 [2010]

**Barrages** 

X15-C02A3 [2010]

**Tidal lagoon** 

X15-C02A9 [2010]

Other tide energy plant type

X15-C02B [2010]

**Novel turbine arrangements** 

# X15-C03 [2010]

# Control, monitoring and testing

Includes control, monitoring and testing details of either wave power and/or tide energy plants. This code is used in conjunction with other X15-C codes as appropriate.

Simulation

# X15-C15 [2019]

# Manufacture, servicing and maintenance (sea power)

Includes manufacture, servicing and maintenance details of sea power energy plants. This code is used in conjunction with other X15-C codes as appropriate.

# X15-D [1997]

# Thermoelectric power generation

(X15-X)

Includes details of thermoelectric generators that convert heat directly into electricity, or generate power from temperature difference (Seebeck effect). Details of thermoelectric devices applied to refrigeration using the Peltier effect are coded under X27-F02B1 only. See also U14 codes.

Thermovoltaic elements, thermoelectric battery

# X15-E [1997]

# Biomass, biofuel and waste fuel combustion power generation

(X15-X)

Includes electrical details of power generation using biomass, waste fuel and biofuels. Biofuels, including their production, are covered by CPI codes. Also includes systems such as electrostatic precipitators for reducing nitrogen oxides, volatile organic compounds and particulate emissions. Waste-to-Energy

X15-G [2010]

#### **Geothermal power**

(X15-X)

# X15-G01 [2011]

# **Electricity generation**

Includes generation of electricity from steam produced by heating water pumped down to underground hot rocks.

Geothermal power

# X15-G02 [2011]

# Thermal power

Includes use of geothermal energy for water heating and provision of hot water to homes and buildings.

Geothermal heating

#### X15-H [2010]

#### Profiting from waste heat

Includes waste heat recovery arrangements, e.g. for recovering heat from sewage or waste water for use in water heating (see X27-E03) e.g. for shower or dishwasher. See X11-C04 instead for combined heat and power plants per se.

### X15-J [2011]

# **Combined cycle plant**

Includes electric power generation by combinations of different non-fossil fuel sources or combinations of non-fossil fuel and other fossil fuel sources such as gas turbines (see also X11-C01). Details of combination plants involving solar power are also coded under X15-A05H (pre-2016).

See X11-C03 only for electric power generation solely using fossil fuel sources.

Hybrid

# X15-K [2011]

# **Cogeneration plant**

Includes provision of combined heat and electric power using non-fossil fuel sources.

Combined heat and electric power generation using fossil fuel sources are coded under X11-C04. CHP

# X15-T [2011]

#### Power generation from traffic flow

(X15-X)

Includes using vehicular traffic flow, animal or human traffic flow etc. to generate electricity. Includes use of compressible hydraulic cylinders or piezoelectric generators buried beneath road that use weight of traffic passing over them to generate electricity.

Parasistic energy harvesting, hydraulic compressible speed bump

# X15-V [2011]

# Control, monitoring and testing

Includes control, monitoring and testing details of all X15 sections other than X15-A (solar power), X15-B (wind power) and X15-C (sea power). Control, monitoring and testing details for solar, wind and sea power are only coded under X15-A08, X15-B05 and X15-C03 respectively.

Simulation

#### X15-W

# [2011]

# Constructional details, manufacture, servicing and maintenance

Includes constructional, manufacturing, servicing and maintenance details for all X15 sections other than X15-A (solar power), X15-B (wind power) and X15-C (sea power). This code is used in conjunction with other X15-D to X15-X codes as appropriate.

# X15-X

# Other non-conventional power generation

Includes non-conventional power generation systems that can't be coded elsewhere, such as power generated from muscle contraction/relaxation, human exercise. From 2010, geothermal plants are transferred to X15-G. From 2011, generation of electricity from vehicular, animal or human traffic flow is transferred to X15-T.

# X16: Electrochemical Storage

NOTES:

- (1) Manufacture of a cell of a particular type is coded with the cell.
- (2) General details like lead acid battery cases are coded with the cell type and its relevant code e.g. X16-F01 and X16-B01B.
- (3) Electrode details are not coded with the cell type if specific provision is made in X16-E.

#### X16-A

# Non-rechargeable or primary cells

Cooling, heating and air-conditioning details are coded under X16-K codes, and also under one or more X16-A code(s) to highlight the type of primary cells/batteries. The same applies to battery charging (X16-G codes), battery measurements and testing (X16-H codes), and battery/cell materials recovery and recycling (X16-M).

# X16-A01

# With aqueous electrolyte

#### X16-A01A

### Dry cells

Button cells, Zinc-carbon battery

# X16-A01B [1992]

# Metal-air cell

(X16-A01X, X16-D)

See also X16-D.

Zinc-air

#### X16-A01X

Other primary cells

### X16-A02

With non-aqueous electrolyte

# X16-A02A [1987]

# Lithium-based cell

Lithium-copper oxide, lithium-thionyl chloride, lithium-chromoxide, lithium-manganese dioxide, lithium-sulphur dioxide, lithium-polycarbon monofluoride

# X16-A03 [1987]

#### Reserve cells

X16-A03A [1987]

Thermal cells

X16-A03B [1987]

Sea-water cells

(X16-A01X)

X16-A04 [1987]

# **Photoelectrochemical cells**

See also U12-A02A and X15-A02D codes.

# X16-A05

[2005]

# Micro- and printed-primary cell

To be used together with the battery electrolyte type e.g. non-aqueous cell.

#### X16-B

# Rechargeable or secondary cells

Cooling, heating and air-conditioning details are coded under X16-K codes, and also under one or more X16-B code(s) to highlight the type of secondary cells/batteries. The same applies to battery charging (X16-G codes), battery measurements and testing (X16-H codes), and battery/cell materials recovery and recycling (X16-M).

### X16-B01

Cells

#### X16-B01A

### Alkaline

Nickel-zinc, alkali

#### X16-B01A1 [1992]

Nickel-cadmium

# X16-B01A3 [1992]

#### Metal-hydrogen

(X16-B01A, X16-B01X)

Includes nickel-hydrogen, etc. cells.

# X16-B01B

# Lead-acid

Also includes recombination type and valve regulated lead acid (VRLA) type.

# X16-B01C

# Sodium-sulphur cells

X16-B01C1 [1992]

High-temperature sodium-sulphur cells

X16-B01C2 [2024]

Low-temperature / Room-temperature sodium-sulphur cells

RT-Na-S

X16-B01D [1987]

Metal-halogen

(X16-B01X)

See also X16-D02.

X16-B01F [1992]

Non-aqueous

(X16-B01X)

Includes organic electrolytes.

X16-B01F1 [1992]

Lithium-based

(X16-B01X)

Includes secondary lithium cells when the state of the electrolyte is not known.

X16-B01F1A [2005]

Lithium-based cells with liquid electrolytes

Includes lithium-sulphur batteries.

Li-S battery

X16-B01F1C [2005]

Lithium-based cells with solid electrolytes

Includes lithium based solid state batteries. See X16-B01S for solid state batteries in general.

SSB

X16-B01G [2005]

Micro- and printed-secondary cells

To be used together with any other battery electrolyte-type cell e.g. alkaline.

X16-B01S [2023]

**Solid State batteries** 

Includes batteries with solid electrolyte. Also see X16-B01F1C for lithium based solid state batteries. See also X16-J01 for solid electrolytes per se. For quasi solid-state electrolytes see X16-J01G instead. SSB

X16-B01X

Other secondary cells

Includes gas-tight accumulators.

X16-B09

Other secondary cells' aspects

Includes servicing, maintenance and battery/cell reconditioning. If recycling, see also X16-M and X25-W04.

X16-C

Fuel cells and associated components

Fuel cell electrodes, casings and electrolytes are coded under X16-E06A, X16-C18 and X16-J codes respectively. Cooling, heating and air-conditioning details are coded under X16-K codes, and also under one or more X16-C code(s) to highlight the type of fuel cells. The same applies to battery charging (X16-G codes), battery measurements and testing (X16-H codes), battery/cell materials recovery/recycling (X16-M) and manufacturing details (X16-S).

Redox cell, oxidants, VRB, Vanadium redox battery

X16-C01 [1992]

Solid oxide and solid polymer fuel cell

X16-C01A [1997]

Solid oxide fuel cell

Includes cells using e.g. zirconium oxide electrolyte.

SOFC

X16-C01A1 [2005]

**Tubular** 

Includes tubular solid oxide electrolyte with inner and outer electrodes.

X16-C01A3 [2005]

Monolithic

Includes planar and corrugated solid oxide electrolyte with electrodes on its major surfaces.

X16-C01C [1997]

Solid polymer fuel cell

PEM, SPEFC, SPE fuel cell, proton exchange membrane, solid polyethylene fuel cell, SPFC, PEMFC, direct methanol fuel cell, DMFC

X16-C02 [1992]

Molten carbonate fuel cell

**MCFC** 

X16-C03 [1992]

Alkaline fuel cell

**AFC** 

X16-C04 [1992]

Phosphoric acid fuel cell

**PAFC** 

X16-C06 [2005]

**Bio-fuel cell** 

Includes, for example, cells with electrodes having a 'bio' catalyst.

X16-C07 [2005]

Micro/flat fuel cell

Includes fuel cells using, for example, a small replaceable fuel tank. To be used together with the type of cell such as SOFC.

X16-C09 [1992]

Control

Includes catalyst temperature control using fuel and air flow, gas and air circulation, etc.

X16-C15 [1992]

Fuel/gas supply arrangements, storage facility; Combustion products/exhaust gas handling

X16-C15A [2005]

Fuel/gas supply arrangements

For supplying gas to electrodes.

X16-C15A1 [2005]

**Manifolds** 

X16-C15A2 [2005]

Flow plates
Bipolar plates

X16-C15A3 [2005]

**Fuel wicking** 

X16-C15A4 [2005]

Liquid and air transmission pump

X16-C15C [2005]

**Fuel storage facility** 

X16-C15C1 [2005]

**Bulk storage facility** 

X16-C15C2 [2005]

Replaceable fuel container

Cartridge, reservoir, cassette, tank

X16-C15C3 [2005]

Hydrogen storage/absorption material

X16-C15C3A [2005]

Nanomaterial/nanotube

X16-C15E [2005]

Exhaust/waste handling

X16-C16 [1997]

Anode and cathode gases separators or separating arrangements

(X16-F02)

See X16-F02 for other membranes and anode and cathode separators.

X16-C17 [1997]

**Fuel processing** 

X16-C17A [2005]

Hydrogen generation

Includes all aspects of hydrogen manufacture if for ultimate, stated use in fuel cells.

X16-C17A1 [2005]

Reformer

Includes extraction of hydrogen from hydrocarbons such as methanol, gasoline, etc.

X16-C17C [2005]

**Catalyst** 

For electrode catalyst, see X16-E06A5A.

X16-C17E [2005]

Heater

Includes heating arrangement for fuel processing. For battery and fuel cell heating, see X16-K02.

X16-C18 [2005]

Fuel cell housing, stack, and sealing arrangements

(X16-F01, X16-F01A, X16-F06) See X16-F codes for batteries.

X16-D

Hybrid cells, etc.

Includes fuel cell in combination with primary or secondary cell.

X16-D01 [1992]

Metal-air

X16-D02 [1992]

Metal-halogen

X16-E

**Electrodes** 

X16-E01, X16-E02 are either used on their own or in conjunction with the relevant battery type.

X16-E01

**Active materials** 

X16-E01A [1992]

**Organic compounds** 

X16-E01A1 [1992]

**Polymers** 

X16-E01C [1992]

**Inorganic compounds** 

X16-E01C1 [1992]

Oxides, complex oxides

X16-E01E [1992]

**Conductive material** 

X16-E01G [1992]

Manufacturing

X16-E01H [1992]

Characterised by active material size/structure

To be used together with X16-E01A/E01C codes.

X16-E01H1 [2005]

**Nanomaterials** 

To be used together with X16-E01A/E01C codes.

X16-E01J [2005]

Binders and fillers

(X16-E09)

X16-E02

Carriers, plates, collectors

Collectors, grids, supports

X16-E03

**Primary cell electrodes** 

X16-E03A [1992]

Non-aqueous electrolyte

X16-E03A1 [1997]

Lithium-based non-aqueous electrolyte

X16-E04

Lead-acid accumulator electrodes

X16-E05

Alkaline accumulator electrodes

X16-E05A [1992]

Nickel-cadmium

X16-E05C [1992]

Metal-hydrogen

(X16-E05, X16-E09)

Includes nickel-hydrogen, etc. cells. Also includes hydrogen storage alloys.

X16-E06

Fuel and hybrid cell electrodes

Also includes inert electrodes and catalysts.

X16-E06A [1992]

Fuel cell

X16-E06A1 [2005]

**Electrode materials** 

Includes all 'active' materials for the electrodes and catalysts. For fuel processor catalyst, see X16-C17C1.

X16-E06A1A [2005]

Nanomaterials/nanotubes

Nanocarbon

X16-E06A5 [2005]

**Electrode details** 

Includes constructional and arrangement details of electrodes.

X16-E06A5A [2005]

**Catalyst** 

For fuel processor catalyst, see X16-C17C1.

X16-E06A5C [2005

Membrane electrode assembly

MEA

X16-E06A5E [2005]

Gas diffusion layer

GDL

X16-E06C [1992]

Hybrid

(X16-E06,X16-E09)

X16-E06C1 [1992]

Metal-air

X16-E06C2 [1992]

Metal-halogen

X16-E07 [1987]

Depolariser

(X16-X)

X16-E08 [1992]

Non-aqueous electrolyte cell electrodes

(X16-E09)

X16-E08A [1992]

Lithium-based

(X16-E09)

X16-E09

Other electrode aspects

Includes electrodes not coded above and miscellaneous items relating to electrodes.

Surfactant

X16-E10 [1992]

Sodium-sulphur

(X16-E09)

X16-E11 [2005]

Photoelectrochemical cell electrode

See also U12-A02 and X15-A02 codes for solar cells.

X16-F

Constructional details of cells or batteries

X16-F01

Cases, seals, shapes

For battery holders, see X16-F06 codes.

X16-F01A [1987]

**Sealing arrangement** 

Gaskets

X16-F01C [2005]

Casing

Used in conjunction with X16-F01A and X16-F01F codes when appropriate.

Covers, containers, housings, walls, lids

X16-F01F [1992]

Characterised by shape of casing

Used when casing/sealing arrangement is novel.

X16-F01F1 [1992]

**Button/coin** 

X16-F01F2 [1992]

Cylindrical/tubular

X16-F01F3 [1992]

**Prismatic** 

X16-F01F4 [2005]

Micro- or printed-battery

X16-F02

Separators, membranes, spacers

Steam separators are not coded here but under X16-K01 only, and fuel cell separators are coded under X16-C16 only.

Cotton, nylon, polypropylene, cellulose-rayon, cellulose-nylon, cellulose-nylon paper, polyethylene, cellophane, polytetrafluoroethylene, woven, non-woven, diaphragm

X16-F03

Terminals, internal connections, vents, filler caps

X16-F03A [1987]

**Terminals; Internal connections** 

X16-F03A1 [2005]

**Terminals** 

Includes externally accessible terminals to contact any equipment being powered by the battery. See X16-F05 for connections used for grouping cells or batteries to form packs.

X16-F03A3 [2005]

Internal connections

Includes internal connections within cell or battery, inaccessible on the outside.

# X16-F03B [1987]

# Vents, filler caps

Includes arrangement for filling/topping-up with liquids (e.g. electrolytes), or for draining liquids from the casing.

Valves, safety devices, pressure relief

#### X16-F04 [1987]

# **Electrolyte circulating arrangement**

(X16-F09)

Includes arrangement for stirring the electrolyte.

#### X16-F05 [1987]

# **Battery connectors; Jumper cables**

(X16-F09)

Details of internal connections are coded under X16-F03A3. Includes connectors for connecting terminals of adjacent batteries or connecting cells outside a battery casing. See also V04 for connectors.

Clamps, interconnectors

#### X16-F06 [1992]

# Battery holder/compartment associated with electrical/electronic equipment; Battery packs; Charging pods

(X16-F09)

Grouped/stacked fuel cells are covered by X16-C codes

# X16-F06A [2005]

# **Battery packs**

Also covers individual batteries or cells grouped together by external connectors such as groups of batteries for electric vehicles, power station batteries, etc. Battery packs using a specific type of cell such as alkaline are also covered by X16-B01 codes.

Battery module

# X16-F06C [2005]

# Battery compartment/holder associated with electrical/electronic equipment

See also V04-S03 for casings incorporating such holders/compartments.

#### X16-F06E [2005]

# Charging pods; Cells or battery holder

Includes constructional details. For battery charging circuits, see X16-G codes.

#### X16-F06E1 [2005]

#### **Charging pods**

Includes battery-powered equipment holders designed for charging the battery.

# X16-F06E2 [2005]

# Cell or battery holder

Includes battery or cell, per se, holder for charging. For example, a mains plug adapter with charging circuit within and section for holding cells to be charged.

#### X16-F09

# Other cell constructional details

Includes getter, packaging carton, theft prevention, nameplate labels, vibration damping arrangements, protection against corrosion/dust/water, arrangement for preventing undesired use such as automatic interruption of current due to temperature change, shock, etc.

Guarantee label, waterproof, dustproof

#### X16-G

**Battery chargers** 

#### X16-G01

**Using AC mains** 

#### X16-G02

# **Using other sources**

Jumper cables are coded in X16-F05.

# X16-G02A [1983]

Using solar cells

# X16-G02B [2002]

Using another battery

#### X16-G02C [2002]

# **Using generator**

Includes battery charging using an electric generator.

Piezoelectric

#### X16-G02C1 [2008]

IC engine-driven

# X16-G02C2 [2008]

Wind power-driven

# X16-G03 [2005]

### Non-contact charger units

To be used in conjunction with other codes. For example, non-contact mains charger is also coded in X16-G01.

X16-H [1987]

**Battery measurements and testing** 

(X16-G)

Includes electrical and non-electrical measurements.

X16-H01 [1992]

Remaining charge

See also S01-G06 codes.

X16-H02 [1992]

# Measurements / testing associated with intrinsic / extrinsic properties

Includes sensing level, density or humidity of electrolytes, detecting leakage of electrolyte solution, measuring durability of electrolyte film, measuring fuel (e.g. hydrogen) level, concentration or density, measuring specific gravity of electrolytes, measuring membrane air permeability, etc. Temperature control / monitoring is coded under X16-H05 only. See also relevant S codes, e.g. S02-C06 codes for level measurements.

X16-H03 [2002]

Voltage/current

See also S01-D and S01-G06 codes.

X16-H04 [2002]

**Battery classification** 

Includes testing to classify battery into different types.

X16-H05 [2009]

**Temperature** 

Includes details of temperature control and monitoring. See also S03-B codes for temperature measurements.

X16-H09 [2002]

**Smart battery** 

This code is used where a battery provides power to an equipment and also stores status data and/or has the facility to transfer this data to the equipment.

X16-J [1987]

**Electrolytes** 

(X16-X)

Includes dendrite inhibitor, composition.

X16-J01 [1992]

Solid

Includes gel electrolyte as well.

X16-J01A [1992]

Organic

X16-J01C [1992]

Inorganic

X16-J01E [2005]

**Nanomaterials** 

To be used together with other appropriate X16-J codes.

X16-J01G [2005]

Gel

To be used together with other appropriate X16-J codes.

Quasi solid state

X16-J02 [1992]

Liquid

X16-J03 [1992]

Molten/fused salt

Includes electrolytes which are normally solid at room temperature but liquid at operating temperatures.

X16-J07 [1992]

**Aqueous** 

X16-J08 [1992]

Non-aqueous

X16-J09 [1992]

**Electrolyte holders or matrix** 

X16-K [1987]

Battery cooling, heating, etc.

(X16-X)

X16-K01 [2005]

Coolina

Water cooled, refrigeration, baths, coolant circulation, steam separator

X16-K02 [2005]

Heating

Includes, for example, heating to aid correct battery operation.

# X16-K03 [2005]

### Air conditioning

Includes humidification, such as moisture introduction within a fuel cell gas, PEMFC humidity control, etc

# X16-L [1987]

# Other types of electric energy storage

(X16-X)

Includes non-chemical and non-battery types of storage of electric energy. See also X12-H codes for storage of excess generated energy. Does not include pumped storage hydroelectric systems. Includes flywheel storage systems.

# X16-L01 [1987]

# Storage heaters

See also X27-E01A4.

# X16-L02 [1987]

# **Capacitors**

Includes capacitors of the type used for supplying power e.g. electrochemical double layer capacitor/supercapacitor (see also V01-B01D codes).

# X16-M [2002]

### **Battery materials recovery**

Includes recovery and recycling details. See also X16-A, X16-B, X16-C codes to highlight the type of batteries/cells. See also X25-W04 for electrical recycling details. Details of battery manufacturing are coded under X16-S.

# X16-S [2020]

# Battery manufacturing apparatus/method

Includes all apparatus, mechanisms and method used during the manufacture of battery parts. Details of battery materials recovery are coded under X16-M only. Manufacture of active materials is coded under X16-E01G only. See also other X16 codes as appropriate to highlight the type of batteries/cells manufactured. Prior to-2020, manufacturing details of batteries were coded in X16-X.

Modelling, simulation

# X16-X

# Other general battery aspects

From 2020, manufacturing details of batteries are coded under X16-S.

# **X21: Electric Vehicles**

# X21-A

# **Electric propulsion and braking**

#### X21-A01

#### **Electric propulsion**

Includes all aspects of electric traction for ridden vehicles except electric train/tram (see X23-A codes), electric luggage trolleys (see X25-F05 codes) and electric ship propulsion (see W06-C01 codes). Also, any application not catered for specifically is included. In general, this code will be used in conjunction with other claimed aspects e.g. heating systems.

# X21-A01A [1987]

#### Wheelchair

Includes invalid carriages and mobility vehicles for disabled persons. Also see S05-G02A for wheelchairs or S05-K01 for mobility aids. See Q22-C02 for novel mechanical details of wheelchairs.

# X21-A01B [1987]

#### Forklift truck

Includes electric motor driven forklift trucks (see also X25-F05A). See also X21-X for novel hydraulic fork assemblies. IC engine-driven trucks are instead coded in X22-P05F and X25-F05A, as well as other X22 codes as appropriate depending on the claimed aspects.

#### X21-A01C [1997]

#### **Electric bicycle**

Includes electric tricycle.

# X21-A01D [1997]

# **Hybrid vehicle**

Includes vehicles utilising electric traction motor and other power source, i.e. internal combustion engine. Can be used in conjunction with other X21-A01 codes such as X21-A01H for hybrid bus. HEV, PHEV, plug-in hybrid vehicle

# X21-A01D1 [2002]

#### Parallel hybrid vehicle

Includes vehicle whose wheels are driven by both electric motor and e.g. internal combustion engine, including four wheel drive type vehicles where IC engine drives front wheels and electric motor(s) drive rear wheels. Also see X22-P04A and other relevant X22 codes.

# X21-A01D3 [2002]

### Series hybrid vehicle

Includes vehicle with electric traction motor and battery that is charged e.g. by IC engine driven generator. See also X21-B04C for on-board IC engine driven generator. Previously coded as electric vehicle in X21-A01F and X21-B04C and not X21-A01D as only electric traction present.

#### X21-A01E [1997]

# **Electric golf cart**

Excludes electric golf trolley. See also W04-X01F codes.

# X21-A01F [1997]

#### Electric motor car

Includes electric vehicles (EV). Can also be applied to indicate general or unspecified electric vehicle application. See X21-A01J instead for fuel cell powered electric vehicles.

# X21-A01G [2002]

#### Electric scooter/motorcycle

See W04-X03E2 for child's electric toy scooter.

# X21-A01H [2002]

# Electric bus/lorry

Includes trolley buses. See X23 only for trams.

#### X21-A01J [2007]

#### Fuel cell vehicle

(X21-A01F)

Includes electric vehicles powered using fuel cell technology. Can be used in conjunction with other X21-A01 codes as appropriate, e.g. X21-A01H for fuel cell bus. See X21-A01F for battery driven electric vehicles. Unspecified vehicles using fuel cells are considered to be electrically-propelled vehicles rather than motor vehicles and are thus coded here.

FCV

# X21-A01L [2015]

### Driverless/autonomous electric vehicles

Includes electric vehicles that can drive themselves. Used with other X21 codes as required, e.g. X21-H for automatic steering and X21-A05 for safety/monitoring arrangements.

# X21-A01M [2002]

#### Other electric vehicles

Includes riding or ride-on type electrically propelled mowers (see also X27-A01A) as well as personal electric transportation devices such as self-balancing vehicle or electric skateboard. See W04-X03E2 for outdoor toys such as skateboards.

Segway®, hoverboard

# X21-A01R [2021]

#### Recreational electric vehicles

Includes electric recreational vehicles such as camper, go-kart, RV, ATV, electric snowmobile or electric ski cycle.

#### X21-A02

# Mounting of propulsion units; Gearing

### X21-A02A

[2002]

#### Transmission system and its control

Includes control of clutch, gear ratio and general transmission details.

Gearing, clutch, drive shafts

#### X21-A02C

[2021]

# Thermal management of transmission systems

Includes transmission cooling arrangements. See also X11-J codes for high power motor/transmission cooling.

# X21-A03

# Electrodynamic and (electro)mechanical brake systems

Includes electrical details of thermal management of electric braking systems. See also Q18-A05 for mechanical details and X11-J06 codes for cooling of motors used in

electromechanical/electrodynamic brake systems.

# X21-A03A [1997]

# (Electro)mechanical

Also includes mechanical friction brakes with additional electrical details.

ABS, anti-lock braking

# X21-A03C [1997]

# **Electrodynamic**

Includes regenerative, resistive and eddy current braking. See also V06-N06 and X13-F02 codes.

#### X21-A04

# Traction motor speed or torque control

See also V06-N, X13-F03 and X13-G01 codes. Includes control of motor output torque, e.g. to supplement torque delivered to wheels by IC engine of hybrid vehicle during gear shifting (see also X21-A01D1 and X22 codes as appropriate).

# X21-A04A [1997]

#### **Rectifier control**

See also U24-D, X12-J and X13-H03B codes.

#### X21-A04C

[1997]

#### Inverter control

See also U24-D, X12-J and X13-H03A codes.

#### X21-A05

# Safety; Monitoring; Instrumentation

From 2010 this code has been expanded to include general instrumentation, e.g. for vehicle dashboard. Includes protective arrangements, anticollision systems etc. Also includes overall arrangements for determining whether it is safe to operate in autonomous driving mode. See also X21-A01L for autonomous electric vehicles per se.

# X21-A05A [2013]

#### Safety systems

Includes electric vehicle safety systems such as cameras for internal/external view, airbags, seatbelts, horns, anti-collision systems, noise generators to make vehicle more noticeable to pedestrians etc.

# X21-A05A1 [2022]

#### Passenger and pedestrian protection

Includes airbags to protect vehicle occupants or pedestrians, seat belts, active head restraints etc.

# X21-A05A2 [2022]

# **External view and internal-view cameras**

Includes rear-view reversing cameras and 'enhanced' or 'assisted' vision cameras/display.

# X21-A05A3 [2022]

#### Horns, noise generators

Includes noise generators to make vehicle more noticeable to pedestrians etc.

Pedestrian awareness

# X21-A05A5 [2022]

# Anti-collision and parking systems

Includes radar, sonar and LIDAR. Also see W06-A04 for radar details, W06-A05 for sonar details and W06-A06 for LIDAR details.

# X21-A05E [2013]

# **Monitoring; Instrumentation**

Includes general instrumentation, e.g. for vehicle dashboard. Use in conjunction with X21-A06 codes to indicate the variable being monitored such as X21-A06D for monitoring remaining battery capacity.

# X21-A05E6 [2024]

# **Navigational aids**

Includes general navigation systems and information processing aspects of vehicle guidance systems.

GPS, GNSS, dead reckoning, beacons, inertial navigation

### X21-A05E7 [2024]

# Collision-imminence warning/alarm

Includes lane deviation or crossing alarms, and distance to obstacle indicator. For control of systems to prevent collision, see X21-A05A5.

Road marking sensor, lane marking sensor, deviation, collision warning display

# X21-A05E9 [2024]

# Service-need/vehicle system malfunction displays

Includes lights and alarms for indicating faults/problems with any onboard systems. Fault, failure

# X21-A06 [1997]

# Measurements

(X21-A05)

Includes battery remaining charge indicators (see also S01-G, X16-H and X21-B01 codes), maximum distance before need for recharging, speed, novel sensors, etc.

# X21-A06A [2021]

#### Speed and slip sensor

Includes sensing of wheel speed or general vehicle speed.

# X21-A06B [2021]

# Acceleration and shock sensor

Includes measurement of acceleration, deceleration and shock or impact sensing.

# X21-A06C [2021]

#### **Temperature sensor**

Includes measurement of battery, motor and other system temperatures.

# X21-A06D [2021]

### **Current and voltage sensors**

Includes remaining battery capacity measurement, and other electrical apparatus parameters measurement. See also X16-H codes and S01-G06A.

#### X21-A06F [2021]

#### Distance and deviation sensors

Includes measurement of distance to object and distance between vehicles to maintain safe distance. Also includes lane deviation measurement. See also X21-A05 codes for safety and monitoring per se.

# X21-A06H [2021]

# Position or angle sensors

Includes rotary or angular position sensing (see also S02-A10D codes), resolvers, encoders (see also U21-A03J).

# X21-A06X [2021]

#### Other vehicle measurements

# X21-A07 [1997]

# **Electric traction motor; Motor-generator**

Includes details of the traction motor per se. See also V06-M and X11 codes for further detailed breakdown of motor details. Also includes motorgenerator. See X11-H20 for motor-generators per se. See X11-J06 for motor cooling details.

#### X21-B

# Power supply and related aspects

# X21-B01

# **Battery and fuel cell arrangements**

Includes traction batteries and fuel cells, and their charging (see also X16).

# X21-B01A [1997]

#### Traction battery; Fuel cell

Includes novel battery and fuel cell details and their grouping to attain higher operating voltage. See also X16 codes for a more detailed breakdown of batteries and fuel cells (X16-C), per se.

# X21-B01A1 [1997]

# **Charging arrangements**

See also X16-G codes. Includes battery discharging arrangements, e.g. to fully discharge battery before recharging.

# X21-B01A1A [1997]

## **On-board charging systems**

Includes charging battery using onboard device such as generator. Also see X16-G02C for battery charging using generator.

#### X21-B01A1C [1997]

# Off-board charging systems

Includes use of off-board mains supply. See X16-G01 for mains battery charging. Also see X16-G03 for wireless battery charging and X12-H01E codes for non-contact power distribution.

Wireless, inductive

## X21-B01B [2002]

# Battery/fuel cell management system

Includes battery/fuel cell control, charging control, on-board power supply systems, over-voltage and short-circuit protection. See U24 / X12 codes for further power supply details.

Power control, voltage, current, power conversion

# X21-B01B1 [2021]

# **Battery thermal management**

Includes heating and cooling arrangements for batteries and fuel cells. Also see X16-K01 and X16-K02 for battery cooling and heating respectively.

#### X21-B01E [2012]

# Battery exchange/leasing

Includes arrangements for enabling a depleted battery to be removed from a vehicle and replaced with a fully charged battery. Also includes battery leasing.

Lease, exchange, replace

# X21-B02

# Power supply lines; Power feed

Includes off-board power supply aspects, such as overhead lines for trolley buses (see also X12-G codes).

Power supply cables, overhead lines

#### X21-B03

# **Current collectors**

Overhead pick-up shoes, brushes

# X21-B04 [1997]

#### Combination of battery and other source

Includes e.g. additional use of electrolytic capacitor, mechanical flywheel, secondary battery.

# X21-B04A [1997]

# Wind turbine or solar cell array

See also X15-B and X15-A codes for wind and solar power generation respectively.

#### X21-B04C

[1997]

# On-board IC engine-driven generator

#### X21-B04C1

[2002]

#### IC engine control

Control of internal combustion engine driving generator in series hybrid vehicle. This code is not applied for parallel hybrid vehicles, since novel engine control can be adequately highlighted by the application of X22-A codes.

Fuel injection control, ignition timing control, pollution control, series hybrid

# X21-B05 Power converter

[1997]

Includes details of DC-DC converters, power rectifiers and inverters (see also U24-D and X12-J codes depending on power level). Converter control is covered by X21-A04 codes.

#### X21-C

[1997]

# **Electric vehicle accessories**

(X21-A01)

#### X21-C01

[1997]

# Passenger compartment heating systems

#### X21-C02

[1997]

# Passenger compartment air conditioning/ventilation systems

Includes passenger compartment air-conditioning, cooling, ventilating and air treatment arrangements.

#### X21-C03

[2020]

# Passenger accommodation; Passenger cabin

Includes passenger accommodating arrangements such as seats, beds, seat belts, tables, electric blinds, electric windows. See Q14-C codes for mechanical details.

#### X21-C12

[2020]

#### In-car office/information equipment

Includes systems to allow working from in-car "office" such as email, internet browsing for booking tickets, hotel reservations, local information, navigation systems etc. For internet gaming see X21-C13 instead.

#### X21-C13 [2020]

## In-car entertainment systems

Includes all in-car entertainment devices such as television (including streamed TV services) and games machines powered from vehicle supply. *DVD, TV, MP3, MP4, game* 

#### X21-C20

#### [1997]

# Other electric vehicle accessories

Includes electric vehicle accessories not covered by other X21-C codes.

# X21-D

#### [1997]

## **Electric connectors and wiring installations**

See V04 codes for electric connectors and X12-G04 codes for common installation features like wiring clamps.

# X21-E

#### [1997]

#### **Electric switches**

Includes all switches associated with electric vehicles. See also V03 codes. See U21 for electronic switching.

# X21-F

[1997]

# Lights

Includes internal and external vehicle lighting. See also X26 codes or more details.

Headlamp, taillamp, ambience lamps

#### X21-H

[2002]

# Steering systems

Includes electric steering arrangements and automatic steering.

Power steering, automatic steering

#### X21-J\*

# [2012-2013]

## Servicing and testing

\*This code is now discontinued and transferred to X21-X16 from 201301, but remains searchable for 2012 patents. Includes electric vehicle maintenance and servicing equipment. For arrangements for exchanging depleted battery with fully charged one, see X21-B01E instead.

# X21-K [2010]

# Electric vehicle communications and connectivity; Multiplexing; Networking; V2X

(X21-X)

Includes vehicle to everything communications (V2X; C-V2X). Includes all communications, connectivity, networking and multiplexing, including cellular (also see W02-C03C1L) and dedicated short range communication (also see W01-A06C4E). Includes communication within an electric vehicle (intra-vehicle), communications between vehicle and other vehicles (inter-vehicle), roadside (V2I), pedestrians (V2P) etc. Includes electric vehicle telephones and hands-free systems. See W01 and W02 codes for telecommunications per se.

Multiplex, DSRC, 5G, cellular, data transmission, LAN, local area network, WAN, wide area network, Bluetooth®, CAN bus, controller area network, bus, Ethernet, VAN, UART, universal asynchronous receiver/transmitter

# X21-K02 [2021]

# Electric vehicle to network; Vehicle to cloud communications

Includes electric/hybrid vehicle to cloud (V2C) communication that uses V2N access to broadband cellular mobile networks to enable data exchange with the cloud (also see T01-N codes). Includes over the air (OTA) updates to vehicle software; Remote vehicle diagnostics (also see X22-X16). V2N, V2C, IoT

#### X21-K03 [2021]

# Intra-vehicle; Vehicle to device communications networking/connectivity

Includes in-car high speed, integrated communications networks and multiplexing arrangements for interconnecting various vehicle systems e.g. using wireless LAN, serial data bus, Bluetooth® etc. (see also W01 codes), avoiding the need for dedicated point-to-point wiring. Includes vehicle to device (V2D) and cellular V2D (C-V2D) communications to e.g. connect tablet, smartphone or wearable to e.g. vehicle infotainment system. Includes app for controlling vehicle locking. V2D, C-V2D, App, mobile phone

# X21-K05 [2021]

#### Inter-vehicle communications; V2V

Includes communication between different electric/hybrid vehicles to enable them to wirelessly exchange information about their speed, location, and heading. Includes DSRC V2V and C-V2V communication providing 360 degree awareness of other vehicles. Includes vehicle to motorcycle communication.

Platooning, cooperative adaptive cruise control, V2M, C-V2M

# X21-K06 [2021]

# Electric vehicle to pedestrian communications

Includes communication between vehicle and persons, pedestrians or cyclists including V2P and cellular V2P communication. Includes warning pedestrian, cyclist or electric scooter rider of danger e.g. approaching vehicle and for warning drivers of presence of other road users.

V2P, C-V2P, cyclist, e-bike, bicycle, scooter

# X21-K08 [2021]

# Electric vehicle to offboard/infrastructure communications; V2I

Includes communication between electric/hybrid vehicle and offboard infrastructure, roadside units or traffic signals (also see T07-B codes) or device. Includes cellular vehicle-to-infrastructure (C-V2I) communications. Also includes dedicated short range communication (DSRC) based V2I.

Infrastructure, offboard, V2I, C-V2I, traffic signal

# X21-K08G [2021]

# Electric vehicle to grid communications; V2G

Includes communication between vehicle and grid (V2G) to enable plug-in hybrid and electric vehicles to supply vehicle electric power to electricity grid for peak load levelling or to stabilise intermittent renewable power supplies. Also see X12-H codes for power distribution and X21-B01A1C for smart charging, e.g. charging vehicle battery at night while supplementing grid load during the day. Also includes vehicle to home (V2H) power transfer e.g. for emergency power supply (see X12-H02) or supplementing renewable wind/solar power. Sell electricity, load-levelling, bidirectional V2G, unidirectional V2G, V1G, smart charging, backup power

# X21-M [2012]

#### Suspension systems and control

Includes electrical control of mechanical springs and dampers, electrical springs and dampers. For electrical suspension control of IC engine vehicle refer X22-M only.

#### X21-N [2012]

#### Noise/vibration/Harshness reduction

Includes all electrical details of arrangements to reduce noise, vibration and harshness in the vehicle. For mechanical NVH reduction see Q17-N instead.

# X21-R [2018]

#### Rider assist

Includes systems for assisting riding of vehicles such as motorcycles or mono-wheel vehicles. Includes balance-aiding and self-balancing systems e.g. using gyroscopes or automatic steering correction to keep motorcycle upright.

Gyroscope, balance, balancing

# X21-U [2005]

# Electric vehicle rental, hiring and sharing systems

Includes overall system associated with electric vehicle hiring and rental with some on-board vehicle aspect, e.g. enabling user to book vehicle on-line (see T01-N and T01-J05 codes) while central controller provides authorisation and remote access to allocated vehicle. Also includes car pooling arrangements with some on-board vehicle aspect. Also see T01-J05A2N for business processes related to the transportation industry.

# X21-W [2020]

# General By-wire/(Semi)Autonomous

Includes general by-wire control systems including 'total' electric vehicle by-wire control and specific controllers not covered elsewhere. Also includes general (semi)autonomous electric vehicle control but specific system control codes can also be applied such as X21-A04 for electric motor control and X21-B01B for on-board electric power supply control. For systems for determining whether it is safe to operate in autonomous driving mode see X21-A05. See X21-A01L for driverless/autonomous electric vehicles per se and Q19-L for mechanical aspects of an autonomous vehicle.

# X21-X [1997]

#### Other electric vehicle features

Includes electrically operated fork assembly on forklift truck (also see X21-A01B and X25-F05A for forklift per se).

# X21-X03 [2018]

# **Anti-theft and Anti-hacking**

Includes anti-theft arrangements with some kind of immobilisation of electric vehicle and systems for preventing hacking or overriding of electric vehicle systems. Includes devices for preventing door lock/motor start signal jamming, code grabbing, 'App' (application) hacking etc. See W05-B codes for theft alarms per se. See X21-K for electric vehicle communications/networking per se.

Door lock, hack, steal, immobilizer

#### X21-X05 [2024]

# Electrical aspects of doors, boots, windows

Includes electrical door opening/closing devices. Also includes electrical aspects of streamlining devices such as spoilers.

Roof spoiler, boot spoiler aerodynamic, sliding door, remote control tailgate opening, electrochromic glass, privacy glass

## X21-X16 [2013]

# Electric vehicle maintenance and testing

Includes electric vehicle servicing equipment. See X21-B01E for battery exchange equipment. Also includes arrangements for testing electric vehicle systems. See X21-J instead from 2012-2013.

# X21-X20 [2013]

# Electric vehicle design/manufacture/assembly

Includes electric details of design, manufacture and assembly of electric/hybrid vehicles and their components. See X25-X14 for manufacturing/assembly plant per se. Also includes systems for dismantling vehicle to enable recycling of materials (see also X25-W04). See X16-M and X21-B01 codes also for recycling of batteries and their materials. See T01-J15 codes for computerised design.

#### **X22: Automotive Electrics**

#### X22-A

#### For internal combustion engines

#### X22-A01

#### Ignition

Includes spark modification arrangement, obtaining ignition using laser.

### X22-A01A

# Ignition systems (using)

Includes ignition coil and cable, accessories e.g. connectors.

# X22-A01A1

Magneto- or dynamo-electric generators without subsequent storage

[1987]

#### X22-A01A2

Inductive energy storage

# X22-A01A3

Glow plug heating

(X22-A01A9)

Diesel engine, compression ignition

# X22-A01A5 [1992]

# **Automatic ignition disablement**

(X22-A01A9)

Includes disabling ignition e.g. after crash to prevent fire (also see X22-A01A7). Ignition disablement for anti-theft purposes is covered by X22-A08C only.

## X22-A01A7 [1992]

#### Safety

(X22-A01A9)

#### X22-A01A9

#### Other ignition systems

Includes capacitive energy storage, ignition noise reduction circuits (see W02-H also). For ignition noise reduction associated with spark plugs, see X22-A01E1J.

RFI suppression

#### X22-A01B

# Advancing or retarding ignition

Ignition control, ignition timing, pre-ignition

X22-A01B1 [1983]

## Dependent on knock detection

Pinking or detonation detection

X22-A01B2 [1992]

**Advancing** 

X22-A01B3 [1992]

Retarding

#### X22-A01C

Distributors; Circuit makers/breakers; Pick-up devices

# X22-A01C1 [1992]

#### **Distributors**

See V04-L09 for distributors in general. Distributor rotor, distributor cap

# X22-A01C2 [1992]

#### **Circuit-makers or -breakers**

# X22-A01C3 [1992]

#### **Pick-up devices**

Pick-up devices, e.g. sensor wheel in distributor, adapted to sense particular points of timing cycle. For sensing points of timing cycle, e.g. using cam shaft sensor, see X22-A05C instead.

#### X22-A01D

## Testing ignition installations or timing

Includes ignition mis-fire detection. See also S02-J01A.

Strobes, timing light

#### X22-A01E

# Spark and glow plugs

Includes plasma plugs, connectors, covers.

X22-A01E1 [1987]

#### Spark plugs

Spark gaps, discharge

X22-A01E1A [1992]

**Electrodes** 

X22-A01E1C [1992]

Insulators

Ceramic

X22-A01E1E [1992]

Manufacture

X22-A01E1G

[1992]

Ignition coil/spark plug combinations

X22-A01E1J

[1992]

Ignition noise reduction/spark plug combination

#### X22-A01E3

# **Glow plugs**

Includes glow plugs for pre-heating compression ignition diesel engines (see also X22-A20C).

#### X22-A02

Fuel systems

X22-A02A [1983]

# **Fuel injection apparatus**

Electromagnets, injectors, piezoelectric, ultrasonic, common rail, direct injection

# X22-A02A1 [2005]

#### **Fuel injection valve**

Includes atomiser, EM fuel injection valve (also see V02 codes, e.g. V02-E02A1 for electromagnetic valve per se), and injectors.

Electromagnetic, piezoelectric, EM, valve, atomiser

[2005]

#### X22-A02A3

# **Common rail arrangements**

Includes fuel injection systems using a common rail fuel assembly. Also see X22-A20C for diesel engine applications.

Common rail

#### X22-A02A5 [2005]

# Non-diesel direct injection

Includes direct injection arrangements, e.g. for use in petrol engine.

Homogeneous, stratified, direct

# X22-A02B [1987]

#### **Fuel filters and heaters**

(X22-A02, X22-A09)

Diesel fuel heaters, electric heaters, PTC element, preheaters

X22-A02C [1987]

#### Carburettors

Atomisers

# X22-A02D [1987]

#### **Fuel pumps**

See X22-A03A3 for fuel pump control.

# X22-A02E [1992]

# Fuel vapour recovery system; Fuel purging

See X22-A03A4 for fuel purging control.

#### X22-A02F

[2005]

# Fuel additive/treatment systems

Fuel additive/treatments to improve combustion. Includes water/steam injection and fuel ionising arrangements.

Steam, water, magnetic, ultrasonic, economiser, urea

# X22-A02R [2013]

# Fuel pressure regulator

Includes electronic pressure regulators and electromagnetic valves for controlling fuel pressure. Also see X22-A02A3 if regulator is used in a common rail fuel system.

#### X22-A03

**Engine control** 

#### X22-A03A

**Fuel control** 

X22-A03A1 [1983]

# **Fuel-injection**

Valve controllers

#### X22-A03A1A [1992]

Injection timing

# X22-A03A1C [1992]

Injection quantity

#### X22-A03A2

Air-fuel ratio; Exhaust gas recirculation

X22-A03A2A [1992]

#### Air-fuel ratio

Mixture control

#### X22-A03A2B [2021]

# Variable compression ratio

Includes control of engine compression ratio so that lower ratios are used at higher loads to increase power and higher ratios are used at lower loads to increase fuel efficiency.

#### X22-A03A2C

[1992]

#### **Exhaust gas recirculation**

**EGR** 

# X22-A03A3 [1997]

# **Fuel pump control**

(X22-A02D, X22-A03A)

See X22-A02D for fuel pumps, per se.

# X22-A03A4 [1997]

# **Fuel purging control**

(X22-A02E, X22-A03A)

See X22-A02E for fuel purging systems, per se.

# X22-A03A5 [2013]

# **Fuel pressure regulation**

Includes fuel pressure regulator control to limit high pressure of fuel. For novel fuel pressure regulators per se, see X22-A02R. For fuel pump control see X22-A03A3 instead.

# X22-A03B [1983]

# Speed

(X22-A03X)

Includes throttle valve and air control.

#### X22-A03B1 [1992]

#### Cruise control

(X22-A03B, X22-G)

This code is used for general cruise control systems either on its own or in conjunction with X22-G03A (transmission based cruise control) or X22-C02D4 (brake based cruise control).

Adaptive cruise control

# X22-A03B1A [1992]

#### By throttle control

Includes the use of servomechanisms operated electrically or fluidically.

# X22-A03B1C [2007]

# Active cruise control

Includes adaptive cruise control and inter-vehicle distance or vehicle spacing/separation control, e.g. using radar distance sensing (see also W06-A04 codes).

Automatic distance regulation, ADR

#### X22-A03B2 [1992]

#### Drive-by-wire/electronic throttle control

Includes 'drive-by-wire' type controllers e.g. using servomotors to control throttle position.

#### X22-A03B3 [1992]

# **Idling speed control**

# X22-A03B5 [1992]

# **Exhaust braking control**

Engine braking

## X22-A03C [1987]

# **Turbocharging, supercharging**

(X22-A03X)

## X22-A03D [1987]

#### Power

(X22-A03X)

Includes multi-cylinder in/out of operation control. Load control, multi-cylinder switching, torque

# X22-A03D1 [1992]

#### Traction control

Used alone or in conjunction with X22-C02C1, or X22-G03B depending on variable being controlled. Wheel slip control, ASR

# X22-A03E [1987]

#### Stop-start

Includes automatically stopping engine while waiting at level crossing to reduce fuel consumption.

(X22-A03X)

# X22-A03F [1992]

#### Complete engine management

Includes, generally by using a computer, simultaneous control of several aspects of the IC engine e.g. ignition, fuelling, EGR, etc. Also includes integrated engine/transmission control. See also X22-G.

#### X22-A03F1\* [1992-1996]

#### **Fuzzy** control

\*This code is now discontinued and transferred to X22-A03K. It is still searchable and valid for records from 1992 to 1996.

#### X22-A03G [1992]

## Inlet/outlet valve control

(X22-A03X)

Includes control of intake and exhaust valve timing. Also includes cam control in which multiple, selectable cam lobes can be selected to adjust valve timing, deviation and lift.

#### X22-A03H [1997]

#### **Temperature control**

(X22-A03X)

#### X22-A03I [2005]

#### **Swirl control**

Includes control of air motion in combustion chamber e.g. to enable stratified or ultra-lean burn combustion.

#### X22-A03J [1997]

#### Pollution control

(X22-A03A,X22-A03X,X22-A07)

Exhaust gas recirculation and cleaning systems, per se are in X22-A07.

# X22-A03K [1997]

#### **Fuzzy control**

Fuzzy logic systems per se are covered by T01-J16B where novel technology details are given. See X22-A03F1 codes for records from 1992 to 1996. See also X22-Q for fuzzy control applied to nonengine systems.

#### X22-A03L [1997]

# Secondary air control

(X22-A03B,X22-A03X)

Includes secondary air introduction control for air intake and exhaust passages. It is used on its own or together with other relevant codes e.g. X22-A03J if secondary air control is performed with a view to reducing pollutants.

#### X22-A03W [2006]

#### **Engine-related by-wire control**

Includes engine-based by-wire controllers not covered elsewhere. Drive-by-wire for vehicle/engine speed control is coded in X22-A03B2 instead. See X22-W for general non-engine based by-wire control. Also see X22-K codes for novel vehicle networking/communications systems that enable the by-wire control.

## X22-A03X

# Other IC engine control aspects

Includes vibration suppression control.

#### X22-A04 [1983]

#### Starting motors

Includes motor per se and associated gearing. See X11 for further details of high power motors. Starter solenoid is included in X22-A08 only. For combined starter/generator also see X22-F02 and X11-H20 (or X13-G20 for starter/generator control).

# X22-A05 [1983]

# Engine related measurements and sensors

(X22-A09)

Only includes on-board measurement or off-board diagnostics interfacing with on-board system. General measurement systems are included in section S, and vehicle testing systems are coded in S02-J. Includes electrical sensors per se as well as their mounting arrangements.

#### X22-A05A [1983]

# **Knock detectors; Pressure; Vibration**

(X22-A09)

See also S02-F codes for further details. Includes combustion chamber pressure measurement.

# X22-A05A1\* [1992-2004]

#### **Ambient pressure**

\*This code is now discontinued and transferred to X22-A05A4, but remains searchable and valid for records from 1992 to 2004.

#### X22-A05A2 [2005]

#### **Knock detection**

Includes pinking and pre-ignition detection.

## X22-A05A3\* [1992-2004]

#### **Negative pressure**

\*This code is now discontinued and transferred to X22-A05A4, but remains searchable and valid for records from 1992 to 2004.

# X22-A05A4 [2005]

# **Pressure detection**

Includes detection of both ambient and negative pressure.

#### X22-A05A6 [2005]

# Vibration/noise detection

#### X22-A05B [1983]

#### **Gas sensors**

(X22-A09)

See also S03-E03 codes for gas sensors per se. Exhaust gas, oxygen, lambda, air, emissions, CO, NOx

#### X22-A05C [1987]

# Engine rotation or speed sensors; TDC position sensors

For ignition point sensing see X22-A01C3. Crankshaft angle/position, rpm counter

X22-A05D [1987]

Fuel, gas and air flow sensors

X22-A05E [1992]

Throttle position sensor

(X22-A09)

X22-A05F [1992]

**Temperature** 

X22-A05F1 [1992]

**Exhaust** 

X22-A05F3 [1992]

**Engine** 

X22-A05G [1992]

**Engine torque** 

X22-A05H [1992]

Multi-fuel proportion measuring

X22-A05L [2012]

#### Fuel/oil level sensing

Includes fuel and oil level sensors. For dashboard warning of fuel/oil level see X22-E01A and X22-E01C respectively.

X22-A05N [2005]

# **Engine related diagnostics**

Includes diagnostic devices interfacing with engine management system.

X22-A05X [1992]

Other IC engine measurements/sensors

X22-A06 [1987]

#### Air treatment; Air filters

(X22-A09)

From 2009 the scope of this code has been widened to include all electrical aspects of intake air treatment and filtering, such as: air filters with integral clogging detectors (see also X22-A05X for clogging detection and maybe X22-E10 and X22-E01 for driver warning), and e.g. photochemical treatment of intake air with UV light to create ozone to improve combustion. Control of intake air flow using a standard throttle valve should instead be coded in X22-A03B instead under speed control. For novel mechanical aspects of intake air treatment and filtering see Q51-H05 and Q17-E codes.

X22-A07 [1987]

# Catalytic converters, exhaust gas cleaning

(X22-A09)

Includes pollution reduction hardware such as particle burner, exhaust gas particle trap clogging detector, exhaust gas recirculating valve and system. For control of EGR, see X22-A03A2C. For pollution control see X22-A03J instead.

Filters, catalysts, electric heaters, EGR, valve

X22-A08 [1987]

# Starters, ignition switches, relays

(X22-A09)

Includes starter solenoid. Further details of switches and relays are in V03-C and V03-D. Novel gearing and starter motors per se are coded in X22-A04. X22-A08 can also be applied to indicate "engine starting" when dealing with engine control patents, where the control is specifically implemented while trying to start an engine.

Solenoids

X22-A08A [1992]

# Remote/keyless IC engine starting

X22-A08C [1997]

#### IC engine immobiliser

For general anti-theft devices see X22-X03.

# X22-A09

#### Other IC engine aspects

Includes lubricating, engine braking, etc. *Exhaust braking* 

X22-A10 [1992]

# **Engine cooling**

(X22-A09)

Fans, pumps

X22-A11 [1992]

#### Inlet/exhaust valves

(X22-A09)

X22-A12 [1992]

# Engine noise/vibration reduction and damping

(X22-A09)

Includes active noise and vibration suppression devices such as electrically controlled engine mounts. See X22-A03X for general engine noise/vibration control. See W04-V07 codes also for active audible noise cancelling.

# X22-A13 [1992]

## **External heating to assist starting**

Includes electric resistance heater built into engine block or off-board heater slid under engine block, both powered by e.g. off-board mains supply.

#### X22-A14 [1992]

# Turbo- and super-charger

Turbo- and super-charger control is coded in X22-A03C only.

# X22-A15 [1992]

# Intake air heaters; Engine/cooling water heaters

(X22-A09)

# X22-A16 [2002]

# Vehicle engine servicing equipment

Includes electrical aspects of oil change/reconditioning apparatus. Includes onboard systems that burn dirty oil in combustion chamber and replenish engine with clean oil. Oil change

# X22-A17 [2010]

# Waste heat recovery

(X22-A09)

Includes engine exhaust heat recovery systems, e.g. for passenger compartment heating. See X22-F03 also if exhaust heat is being converted into auxiliary supply of electric power.

# X22-A20 [1992]

#### Type of engine

This code relates to type w.r.t fuel used. Petrol- and indeterminate fuel-types are NOT covered.

# X22-A20A [1992]

#### Mixed fuel

Includes e.g. alcohol and petrol dual fuel type engines. Also includes engines combusting e.g. petrol and oxyhydrogen (HHO).

Brown's gas

X22-A20C [1992]

Diesel

X22-A20E [1997]

#### Single unconventional fuel

Includes e.g. alcohol burning engines and bio-fuel engines.

# X22-A20E1 [2007]

#### Gaseous fuels

Includes engines running on LPG (liquefied petroleum gas), natural gas, hydrogen or liquid nitrogen. (See X21 codes for vehicles using hydrogen in a fuel cell arrangement). See Q51-D07A for mechanical aspects of gaseous fuelled engines.

# X22-A20E3 [2007]

#### **Bio fuels: Alcohol**

Includes engines running on free fatty acid methyl ester ("bio diesel") or alcohol such as methanol or ethanol. See Q51-D07C for mechanical aspects of bio fuel/alcohol fuelled IC engines.

#### X22-A20G [2010]

#### Air

Includes engines that are capable of being driven completely or partially by compressed air.

#### X22-A20T [2007]

#### Two-stroke

Includes IC engines operating on two-stroke cycle, e.g. used in moped (see also X22-P02).

# X22-A20X [2011]

#### Other engines

Includes implosion engines using e.g. HHO (Brown's gas) made e.g. from electrolysis of water to produce hydrogen and oxygen which when combusted contracts to suck up piston rather than push it down.

Oxyhydrogen

#### X22-B

# Lighting or signalling

See also X26 for further details. Vehicle lamp circuitry and mounting arrangements are coded in X22 only.

#### X22-B01

#### Main lights

Headlamps, light control, fault detection, fog lamps

# X22-B01A [1987]

#### **Bulbs; Light sources**

Includes novel light sources such as headlight bulbs per se.

# X22-B01A1 [1992]

#### Discharge lamps

Includes Xenon and High Intensity Discharge (HID) tubes. See also X26-A codes.

# X22-B01A3 [1992]

#### **Incandescent lamps**

See also X26-B codes. Halogen lamps

# X22-B01A5 [2008]

#### **LEDs**

Includes novel light emitting diodes used for vehicle headlamps. See also U12-A01 codes and X26-H for LEDs per se.

#### X22-B01B [1987]

#### **Fixtures**

Includes lenses, reflectors, bulb holders. *Parabolic reflectors, sockets* 

# X22-B01C [1987]

**Washers** 

# X22-B01D [1987]

#### **Switches**

See also V03 codes for mechanical switches per se. Electronic switching is covered by U21 only.

# X22-B01E [1992]

# Position control/beam aiming arrangements

Includes mechanical and motorised arrangements for adjusting headlamp position, and controlling movement of e.g. reflector to adjust headlamp aim e.g. to follow curve as vehicle negotiates a bend. See also X26-L.

Tilt control, aim, direction

#### X22-B01F [2002]

#### **Headlight control circuitry**

Includes control of headlamp or front fog/driving lamp illumination and automatic dimming.

#### X22-B02

#### **Indicators**

For indicating intention or presence of vehicle to other road users.

# X22-B02A

#### **Braking indicators**

From 2005, direction and braking indicators are separated, with turning indicators transferred to X22-B02D and braking indicators remaining in X22-B02A. Prior to 2005, X22-B02A remains searchable for both turning and braking indicators.

Switches, centre, high level brake lamp, stop lamp

# X22-B02A1 [1992]

# Slowing/accelerating indication

Includes activation of vehicle brake lights in response to driver removing foot from accelerator pedal. See X22-B02A for brake lighting in response to depression of brake pedal.

Slowing, decelerating, accelerating

#### X22-B02A2

# [2002]

# Indicating level of braking intensity

Includes selective illumination of array of LEDs to indicate braking severity.

#### X22-B02B [2005]

#### **Fixtures**

Includes reflectors, lenses and bulb holders (see also X26-D01 codes).

Lens, reflector, refractor, diffuser, filter

# X22-B02D [2005]

#### **Turning/direction indicators**

See X22-B02A for records prior to 2005. Switches, direction, flasher, repeater, indicator

#### X22-B02R [2005]

#### **Reversing indicators**

Includes reversing lights and audible reversing warnings.

Backing, reverse, beep

#### X22-B02X

# Other vehicle indicator arrangements

Includes side lights, tail lights, hazard lights and warning lights. Reversing lamps and novel fixtures such as reflectors, are coded also in X22-B02R and X22-B02B respectively, from 2005.

#### X22-B03

Interior lighting; Horns; Portable emergency signal devices

# X22-B03A\*

# [1992-2004]

# Audible reversing warning

\*This code is now discontinued and transferred to X22-B02R from 2005 onwards. It remains searchable and valid for records up to 2004.

#### X22-B03B

#### [2005]

# Interior lighting

Includes courtesy lights, dashboard lights and lighting for other compartments such as vehicle boot.

# X22-B03E [2005]

## **Emergency signalling devices**

Includes portable emergency services flashing lights and emergency sirens, search- or spot-light mounted on vehicle roof and electrical details of warning triangle (see also T07-X) to be placed on the road before scene of an accident or broken down vehicle. For mechanical details of emergency signalling devices see Q14-C05 instead.

# X22-B03H [2005]

#### Horns

For mechanical details of vehicle horns see Q14-C04 instead.

# X22-B05 [1992]

# Illuminated displays for other drivers

(X22-B09)

Includes illuminated number plates and displays conveying e.g. "Thank You", "Assistance required" or other messages, e.g. to help diffuse road rage situation. Also includes illuminated hub caps and decorative emblems and displays for advertising. (See also W05-E03A codes).

Bus destination sign, illuminated licence plate, number plate, emblem, decoration, advertisement

#### X22-B09

#### Other vehicle lighting arrangements

Includes general use light switches and door-lock lights. Also includes illumination not intended to warn other road users of vehicle presence/intentions, such as flood light to warn driver of puddle when exiting vehicle.

# X22-C\* [1980-1996]

#### Braking, steering

\*This code is now discontinued. The 'braking' aspect of the code is transferred to X22-C02 from 1997 onwards but remains valid and searchable for documents from 1980 to 1996. The 'steering' aspect of the code is valid and remains searchable for records from 1980 to 1982. However, since 1983 steering systems have been located in X22-C05, which will remain in force.

Hand brakes, dual-circuit, servo, steering

#### X22-C01\* [1983-1996]

#### Anti-skid and anti-lock arrangements

\*This code is now discontinued and transferred to X22-C02C from 1997 onwards. It is still searchable and valid for records from 1983 to 1996.

Modulating brake pressure

# X22-C01A\* [1992-1996]

#### **Braking for traction control**

\*This code is now discontinued and transferred to X22-C02C1 from 1997 onwards. It is still searchable and valid for records from 1992 to 1996. This code was previously used either on its own or in conjunction with X22-A03D1 and X22-G01B. It normally included sensing of wheel acceleration to control braking.

ASR, traction control braking, anti-slip braking

#### X22-C01B\*

[1992-1996]

#### **Anti-lock braking**

\*This code is now discontinued and transferred to X22-C02C3 from 1997 onwards. It is still searchable and valid for records from 1992 to 1996. It previously included sensing of wheel deceleration to control braking pressure.

ABS, anti-lock braking

# X22-C02 [1997]

# **Braking**

(X22-C)

See X22-C for records from 1980-1996. See Q18-A codes for mechanical aspects of vehicle brake systems.

# X22-C02A [1997]

# **Parking brakes**

(X22-C)

Includes electrical aspects of hand brakes and foot actuated parking brakes. See X22-G codes also for transmission based parking brakes. See X22-C for records from 1980-1996.

# X22-C02C [1997]

#### **Braking force controller**

(X22-C,X22-C01)

See X22-C and X22-C01 for records from 1983 to 1996.

#### X22-C02C1 [1997]

#### Anti-slip brake regulation

(X22-C01A)

This code is used either on its own or in conjunction with X22-A03D1 and X22-G03B. Normally includes sensing of wheel acceleration to control braking force for the wheel that has lost its grip. See X22-C01A for records from 1992 to 1996. ASR, traction control braking

# X22-C02C3 [1997]

#### Anti-lock brake system

(X22-C01B)

Normally includes sensing of wheel deceleration to control braking pressure to then prevent any wheel from locking. See X22-C01B for records from 1992 to 1996.

ABS, anti-skid braking system

# X22-C02C5 [2005]

# **Electronic stability control**

(X22-C02C)

Includes control of braking to enhance vehicle stability, e.g. to control vehicle yaw. See X22-M for vehicle suspension based electronic stability control.

X22-C02C7 [2002]

**Brake-by-wire** 

X22-C02D [1997]

# **Automatic brake initiation**

(X22-C,X22-C01)

Involves braking without any driver intervention. See X22-C for records from 1980 to 1996.

#### X22-C02D1 [1997]

### **Collision prevention**

(X22-C)

See also X22-J05 codes. See X22-C for records from 1980 to 1996.

# X22-C02D1A [2013]

#### **Brake safety**

Includes arrangements for detecting inadvertent depression of accelerator pedal instead of brake pedal and automatically applying brakes in response. For novel pedal position sensing see X22-X06L.

# X22-C02D2 [1997]

#### Automatic hill stop brake

Includes brake that is released when the clutch or accelerator pedal is depressed. See X22-C for records from 1980 to 1996.

# X22-C02D3 [1997]

## Theft prevention

(X22-C)

See also X22-X03. See X22-C for records from 1980 to 1996.

# X22-C02D4 [2002]

#### **Cruise control**

Includes brake activation to maintain distance between vehicles.

Automatic distance regulation, ADR, cruise control

# X22-C02X [2012]

#### Other braking arrangements

#### X22-C05 [1983]

# Steering

Includes electrical aspects of steering wheel details. See Q18-B codes for mechanical aspects of vehicle steering systems.

# X22-C05A [1992]

#### Power steering

Includes speed responsive power-assisted steering. Includes motor/gearing arrangements and power steering control.

Power assist

# X22-C05A1 [1992]

#### Four-wheel steering

Includes electrical aspects only. See Q18-B09 instead for mechanical passive four wheel steering systems.

## X22-C05A3 [2002]

Steer-by-wire

# X22-C05A3A [2005]

# Steering feedback/'feel' control

Includes arrangements for controlling e.g. torque feedback to steering wheel to improve or adjust driver 'feel', e.g. due to lack of mechanical linkage between wheels and steering wheel.

Feel, feedback

#### X22-C05B [1992]

#### **Automatic steering**

See T06-B01A, and T07-D01 codes.

#### X22-C05C [1992]

#### Displays, controls, switches, etc

Includes connectors also when specifically used with steering system. See also X22-X01A.

#### X22-D

## Lockable switches; Locks; Theft alarms

Includes key, and lock heaters for de-icing.

# X22-D01 [1992]

#### Locks and keys

Includes electrically-operated central locks. Also includes door lock heaters (see also X25-B codes for electric heating per se, and possibly X22-J02C prior to 2007). See Q14-H01 for mechanical aspects of vehicle locks.

# X22-D01A [1997]

# Remote-controlled and keyless entry

# X22-D01A1 [2005]

#### Remote-controlled

Includes radio control. Also see W05-D codes for remote control aspects.

Radio-controlled, IR, infrared, remote-locking

# X22-D01A2 [2005]

# **Keyless entry**

Includes use of radio frequency (RF) transponders for keyless door (un)locking (see also T04-K03B and W06-A04B and W02-G05B codes as appropriate).

#### X22-D01A2A [2005]

#### **Biometric access**

Includes fingerprint and voice recognition or retinal scanning (see also S05-D01C5A).

# X22-D01A2C [2005]

## Card/keypad access

Includes smart/magnetic strip card reader or keypad code entry devices (also see T04 codes).

[1992]

# X22-D02 [1992]

#### Lockable switches

Includes lockable cover of switch panel.

#### Theft alarms/theft monitoring

See also W05-B codes.

# X22-D03A [2005]

#### Theft alarms

X22-D03

Includes audible and visual alarms (see also W05-B01 codes), e.g. sirens or flashing vehicle hazard lights (see also X22-B codes).

# X22-D03C [2005]

#### Theft monitoring

Includes remote monitoring/indication of vehicle theft, e.g. to central station or vehicle owner (see also W05-B05 codes). Also includes GPS tracking of stolen vehicle (see also W06-A03A5 codes). For incar camera systems capturing image of thief for onboard recording or remote transmission, see also W02-F01 codes.

#### X22-E

# Instrumentation for dashboard and steering wheel

Includes touch-sensitive screens (see also T04-F codes). Also includes internal display for passengers e.g. in a bus indicating approaching stops (see also T07-A05D). For more details about general instrumentation for vehicles, section S codes must be searched. For example, S01-G06 for battery charge indicator, S02-G codes for speed sensors, S02-J codes for brake and transmission testing, and S02-K06 for recording or indicating in general. Also includes control of all information/warnings presented to driver according to driving situation, e.g. to prioritise important warnings and prevent driver from being distracted by display of minor warnings during emergency situations. For haptic feedback also see W05-A01A1 and for voice warnings see W04-V04C codes. For mechanical aspects of dashboard construction or mechanical instrumentation, see Q17-A11 instead.

Displays, panels, instruments

# X22-E01 [1983]

# **Engine performance and operation indicators**

# X22-E01A [1992]

#### Fuel

Includes specific fuel consumption, filter clogging, fuel contamination, level.

# X22-E01B [1992]

#### **Temperature**

Includes engine radiator/coolant temperature.

# X22-E01C [1992]

#### Oil

Includes pressure, level, contamination.

#### X22-E02 [1983]

Brakes, tyres, transmission, steering

# X22-E02A [1992]

#### **Brakes**

Includes brake wear indicator, brake oil contamination and level indicators, parking brake failure detector.

#### X22-E02B [1992]

#### Wheels and tyres

Includes tyre pressure measurement (see also S02-F04C1A).

# X22-E02C [1992]

#### **Transmission**

Includes gear change indication.

#### X22-E02D [2005]

# Steering

Includes indication of information directly relating to vehicle steering system, e.g. steering angle display. For indication of failure of steering angle sensor also see X22-E10 and X22-X06H. This code is not used for general displays mounted on steering wheel. E.g. for speedometer mounted on steering wheel, see X22-E05 and X22-C05C only.

#### X22-E03 [1987]

## **Battery charging/condition indicators**

From 2006 this code has been expanded to include all vehicle battery warning/indicating aspects. See X22-E and X22-F01 codes prior to 2006. Includes indication of remaining battery capacity (see also S01-G06A and X16-H01), or battery charging/discharging indication. Also includes warning that battery is connected to off-board charger, to prevent vehicle driving off while connected.

# X22-E04 [1987]

# Driver/passenger alertness alarms; driving behaviour sensing/warning

From 2014 this code has been expanded to include all driver/driving behaviour/condition analysis and warning. Includes driver reflexes/breath tester up to the end of 2013.

# X22-E04A [2014]

#### Driver/passenger alertness alarms/tester

Includes driver reflexes/breath tester, e.g. for preventing driver from driving if drunk or under the influence of drugs. Includes alerting driver through vibration alert through steering wheel or seat (also see W05-A01A1 for vibration based annunciation). Also includes vital sign monitoring for driver or passengers to check on condition of health of vehicle occupants.

Intoxication detector, drowsiness detector, haptic indication, vital signs, remote monitoring

# X22-E04D [2014]

#### Driver/driving behaviour analysis

Includes systems for monitoring driving behaviour, especially of young persons, e.g. to enable reduction in price of car insurance when safer driving is confirmed.

#### X22-E05 [1987]

# Vehicle or engine speed; Mileage indicators

Includes tachographs (see T05-G also), rpm counter. Accident data recorders which give more details like acceleration, brake application, etc. are coded in X22-E12.

Odometers, milometers, taximeters, tachometer

# X22-E06 [1987]

# **Navigational aids**

See W06-A and S02-B08 codes also for general navigation systems. Information processing aspects of vehicle guidance systems are covered by T01-J07D3.

Vehicle position sensors, information display, direction indicators, head-up display, HUD

# X22-E06A [1992]

# Using dead reckoning systems

Includes use of map information stored in e.g. CD-ROM, and compass and wheel turn angle sensors.

X22-E06B [1992]

**Using GPS** 

X22-E06C [1992]

Using roadside beacons

#### X22-E06D [1992]

#### Using combination of methods

From 2002, W06-A08 is no longer applied for combination navigation systems specifically for motor vehicles.

# X22-E06F [2002]

# **Navigation information updating system**

Includes system for updating map information e.g. for area in which vehicle travels, using information from off-board centre. Also used when off-board traffic centre provides driver with alternative route to destination to avoid congestion/accident (see also X22-E11, T07-G01 and T07-A05C codes).

# X22-E07 [1992]

# **Head-up display**

Includes general projection displays, e.g. for head-up display of current vehicle speed (see also X22-E05) or head-up display of e.g. navigational data (see also X22-E06). See also W04-Q01K for head-up video displays.

Projection, windscreen, head-up

#### X22-E08

[1992]

#### Radar surveillance detector

See W06-A04E3C also.

#### X22-E09

[1992]

#### TV/video camera for all round view

Only used when camera image is presented to driver. For video image recognition of e.g. road signs or obstacles, see X22-E13A only. Also see W04-M01 codes for novel video cameras per se, and W02-F01E for CCTV systems where image is presented to driver.

#### X22-E09A

[2006]

#### For external view

Includes rear-view reversing cameras and 'enhanced' or 'assisted' vision cameras/displays, such as IR imagers for assisting driver when driving at night or in poor weather conditions (see also W07-G and W04-M01E codes as appropriate). Also see W02-F01E for vehicle external view CCTV system.

## X22-E09C

[2006]

#### For internal view

Includes video camera for enabling driver to view interior of vehicle, e.g. to enable bus driver (also see X22-P05A) to see if passenger wants to alight or to monitor vandalism. Can also be used for antitheft purposes, e.g. to capture image of thief inside vehicle (see also X22-D03C).

#### X22-E10

[1992]

# Service-need/general accessories malfunction displays

Includes faulty lights, oil-change alarms, etc. For indicating faults/problems with any onboard systems.

#### X22-E11

[1992]

# Traffic management/driver information systems

Includes presentation of all types of traffic, weather and road information to driver (see also T07-G codes for off-board traffic and weather information provision aspects). See X22-E06F instead for systems for updating vehicle navigational route information.

Congestion, accident, flood, pot hole, road surface repairs

## X22-E12

[1997]

#### Accident data recorder

(X22-E05)

Includes automatic recording of speed, acceleration, brake application, direction indicator position, headlight on/off status, etc. Tachographs are only coded in X22-E05.

ADR, drive recorder

#### X22-E13

[1997]

# Collision-imminence warning/alarm

(X22-E

Includes lane deviation or crossing alarms, and distance to obstacle indicator (see also X22-X06 codes). For systems detecting imminence of collision, see X22-J05 codes. For systems preventing collision by e.g. automatic brake application, see X22-C or other appropriate codes. Road marking sensor, lane marking sensor, deviation, collision warning display

#### X22-E13A

[2002]

# Image recognition

Includes video image recognition of obstacles or road signs, e.g. to identify change of speed limits or hazards, road edges. See also T01-J10B/T04-D codes for image recognition. For systems presenting actual video image of road to driver display, see X22-E09 instead.

#### X22-E14

[2002]

# Warning of approaching emergency vehicle

Includes detection of siren and activation of dashboard light or muting vehicle radio.

Ambulance, police car, fire engine

#### X22-E99

[2008]

#### Other instrumentation

Includes dashboard instrumentation and warnings not covered previously.

#### X22-F

# Power supplies; Batteries; Alternators; Charging

Includes solar cell panels.

# X22-F01 [1987]

#### **Batteries**

Includes vehicle battery, per se. Other battery details are in X16.

Connectors, cut-off switch

#### X22-F01A [1987]

# Charging

Includes chargers per se (see also X16-G) and charging control.

X22-F01A1 [1992]

**Jumper cables** 

X22-F01A2 [1992]

Off-board chargers

X22-F02 [1987]

# **Alternators; Dynamos**

Includes vehicle alternator per se (with further details in X11), output controllers (see also X13-G02). For combined starter/generator also see X22-A04 and X11-H20 (or X13-G20 for starter/generator control). Also includes dynamos used as a primary power source on bicycles. Rectifiers, regulators, dynamo, AC generator, DC generator

#### X22-F03 [1997]

#### **Auxiliary supply**

(X22-F,X22-X)

Includes power supply arrangement for external apparatus, e.g. welding equipment, and encompasses additional battery or generator, including roof mounted wind turbines or solar panels (see also X15 codes). Also includes power supply for microprocessor used e.g. for engine or other controllers. Includes power generated from exhaust heat recovery (see Q51-J02F for mechanical details of exhaust heat recovery).

Wind turbine, solar panel, back-up battery

# X22-F04 [2002]

#### Vehicle power supply control systems

Includes prioritisation of supply of power to specific or essential vehicle systems.

# X22-F05 [2002]

# Use of cigar lighter socket or auxiliary output as power supply, e.g. for vehicle accessories

Includes kettle, perfume dispenser, portable light and other devices that are powered from cigar lighter socket. Includes Non-contact charging pad to charge mobile phone (also see U24-H02 and W01-C01E5E codes). Used in conjunction with other X22 and cross-reference codes as appropriate.

[1997]

Mobile phone charging, wireless charging

# X22-F09

# Power supply or battery circuit disablement; Switches

(X22-F, X22-X)

Includes automatic disabling of power from electrical circuits to prevent fire risk upon sensing of crash. Also includes hidden switches for power cut-off for anti-theft purposes.

# X22-G [1983]

#### Power train

Includes power take-off arrangements used to drive auxiliary devices. Also see X22-P09 and X25 for tractor power take-off.

# X22-G01 [1992]

# Transmission/clutch/gear systems

Includes electrical aspects of powertrain hardware such as novel solenoid valves used in the hydraulic system, electric aspects of differentials (See X22-G05 only for four-wheel drive aspects), motor gearing etc. that are used in an unspecified type of transmission system. Use X22-G01C/X22-G01E instead if type of transmission is detailed.

Automatic transmission, manual transmission, CVT, differential

# X22-G01A\* [1992-2004]

#### Cruise control

\*This code is now discontinued and transferred to X22-G03A. It is still searchable and valid for records from 1992-2004. This code is used either on its own or in conjunction with X22-A03B1 or X22-C02D4 depending on variables being controlled.

#### X22-G01B\* [1992-2004]

#### **Traction control**

\*This code is now discontinued and transferred to X22-G03B. It is still searchable and valid for records from 1992-2004. This code is used either on its own or in conjunction with X22-A03D1 or X22-C02C1 depending on variables being controlled.

# X22-G01C [2005]

#### **Automatic transmission systems**

Includes continuously variable transmission (CVT).

## X22-G01D [2009]

#### Semi-automatic transmission systems

Includes manually shifted transmissions in which all the operations normally performed by the driver when changing gear are performed by electronically controlled actuator assemblies. Includes clutchless transmissions and paddleshift transmission control arrangements.

# X22-G01E [2005]

#### Manual transmission

#### X22-G03 [2005]

# Powertrain/transmission control systems

Includes integral engine/transmission control (also see X22-A03F). Search with T01-J07D1A for microprocessor controlled transmission. See also X22-G01 for records prior to 2005.

# X22-G03A [2005]

#### Cruise control

This code can be used on its own or in conjunction with X22-A03B1 or X22-C02D4 depending on the variables being controlled. See also X22-G01A for records prior to 2005.

# X22-G03B [2005]

## **Traction control**

This code can be used on its own or in conjunction with X22-A03D1 or X22-C02C1 depending on the variables being controlled. See also X22-G01B for records prior to 2005.

# X22-G03G [2005]

# Shift-by-wire

Includes steering wheel mounted gear change arrangements. Paddle-shift.

#### X22-G03N [2005]

# Transmission noise/vibration/harshness control

Includes arrangements for reducing shift-shock. see also X22-A03F for integral engine/transmission control aspects. See also X22-X08 for passenger compartment noise and vibration reduction in general and X22-A12 for engine noise reduction.

# X22-G05 [1992]

#### Four wheel-drive systems

Includes electrical aspects of four, six and all wheel drive systems, such as electrically lockable differentials and electrically locking hubs.

# X22-G07 [2012]

#### Lubrication/cooling arrangements

Lubrication and cooling aspects of transmission systems. For mechanical aspects refer to Q13-A20 and Q13-A22.

#### X22-H

[1983]

#### Window winders

(X22-X)

Electric window, power window

#### X22-H01

[1987]

#### **Control**

See also V06-N.

Control circuits, obstruction detection

#### X22-H02

[1987]

#### Motors

Includes motors per se. See V06-M codes for further motor details.

# X22-J [1983]

#### Vehicle accessories

(X22-X

Includes electrical aspects of motor vehicle accessories. See Q14 for mechanical details of vehicle accessories.

#### X22-J01

[1983]

[1983]

# Windscreen wipers

Includes screen washers, motors per se and their controllers (with details in V06-M and V06-N). Also includes snow and ice removal e.g. by using vibrators. For rain or moisture sensors see X22-X06E codes and S03-F09, and S03-E codes.

Switches, position detection, washers

#### X22-J02

# Heating, ventilating, air-conditioning

Includes electrical aspects of overall passenger compartment HVAC system.

Control, motors, temp sensors, fans, blowers

#### X22-J02A [1987]

#### **Demisters**

For windscreens, mirrors, See also X25-B01C1C.

# X22-J02C [1992]

#### Heating

Includes heating for passenger compartments. See X25-B01 codes for electrical heating per se.

# X22-J02D [2005]

#### Ventilating

Includes electrical aspects of passenger compartment ventilating. See X22-J02E instead if ventilator/blower is part of an air-conditioning/climate control system. See X22-J03A5 instead for ventilated seats.

# X22-J02E [1992]

# Air conditioning; Climate control

For novel temperature or humidity sensing arrangements see X22-X06X and S03 codes. Compressors, refrigeration

X22-J02E1 [2005]

Climate control

X22-J02E3 [2005]

#### Air treatment arrangements

Includes de-odorisers, perfume dispensers and air ionisers etc. Also includes sterilisation arrangements for killing microorganisms, e.g. using UV radiation.

De-odorisers, perfume dispenser, ioniser

# X22-J03 [1983]

#### Seats, seat belts

(X22-X)

Control, motors

X22-J03A [1992]

**Seats** 

X22-J03A1 [1992]

Heaters

X22-J03A2 [1992]

**Massaging devices** 

X22-J03A3 [2002]

#### Headrest

Includes automatic adjustment of vehicle headrest according to driver preference. From 2005 active head restraints are transferred to X22-J03A3A.

# X22-J03A3A [2005]

#### Active head restraint

Includes active control of seat headrest to place it in optimum position to protect occupant's head/neck during a collision. Prior to 2005, active head restraints were coded in X22-J03A3 and X22-J11.

# X22-J03A5 [2007]

# Cooling

(X22-J03A, X22-J02)

Includes ventilating and air-conditioning systems used to cool motor vehicle seats. See X22-J03A and X22-J02 codes prior to 2007.

X22-J03B [1992]

**Belts** 

Inertia sensors

X22-J03B1 [1992]
Automatic release, retraction

X22-J04 [1983]

Mirrors

(X22-X)

Includes mirrors with heaters, loudspeakers, lights, aerials.

Motors, rear-view mirrors, adjusting, wing mirrors, positioning, demisters

#### X22-J05 [1983]

## Anti-collision and parking aids

(X22-X

These codes are used either on their own or in conjunction with other codes for related anticollision aspects. The latter include:

- (a) imminence of collision warning systems (see X22-E13);
- (b) controlling vehicle automatically to avoid collision e.g. automatic application of brakes (see X22-C02D1);
- (c) measuring and indicating distance to obstacle or preceding vehicle (see X22-X06F); and
- (d) detecting deviation from lane or road marking (see X22-X06G).

Distance sensing, warning alarm

#### X22-J05A [1992]

## Radar systems

For more details on radar see W06-A04.

# X22-J05B [1992]

# Sonar systems

See W06-A05 also.

Ultrasonics

# X22-J05C [1992]

# **Optical systems**

Includes e.g. laser rangefinder. See W06-A06 codes also.

Lidar

# X22-J05M [2021]

# **External sensor mountings; Cleaning**

Includes external environmental sensor motorized mountings and positioning systems. Includes sensor cleaning arrangements such as wipers or washers for LIDAR (see also X22-J05C), SONAR, or camera (see also X22-E09A).

# X22-J06 [1983]

# Lighters

Socket, heater coil

# X22-J07 [1987]

# Air bags

Includes inflatable side curtains and knee bolsters.

# X22-J08 [1987]

# Sun visors; Sun roof; Convertible soft top roof

Includes obstruction detection and roof open/close motors.

Controllers, convertible tops, vanity mirror lights

# X22-J09 [1992]

#### Sun screens, curtains

(X22-J, X22-X)

#### X22-J10 [1992]

#### **Accessories remote starting arrangements**

# X22-J11 [2002]

# Passenger safety systems

Includes anti-submarining seats, flip-up roll over bars and roll over control arrangements. For airbags and seatbelt pre-tensioners see X22-J07 and X22-J03B1 only. From 2005 active head restraints are coded in X22-J03A3A only. Also includes general passenger safety aspects such as systems preventing driver from using mobile telephone or viewing movie whilst driving. Fire extinguishers, bumpers

#### X22-J11A [2002]

# **Emergency signalling**

Includes manually activated signalling and automatic mayday signalling or automatic activation of locating beacon after vehicle accident (also see W06-A01C for vehicle borne locating beacon). Automatically illuminated 'assistance required' sign (also see X22-B05).

# X22-J11B [2002]

#### **Pedestrian protection systems**

Includes vehicle mounted apparatus such as exterior bonnet airbag to protect other road users in event of collision.

# X22-J11C [2010]

#### Vehicle specific clothing

Includes electrical details of all vehicle specific clothing. See X22-P01 and X22-P02 for bicycle and motorcycle wearables. See Q14-C16 for mechanical details of vehicle specific clothing. Helmets, jackets, gloves, electric heating, LED, lighting, wearable

# X22-J12 [2002]

# In-car office/information equipment

Includes e-mail, facsimile equipment powered by vehicle supply and on-board aspects such as novel displays and user interfaces used to view e.g. Internet information. From 2007 general Internet browsing e.g. for downloading local tourist information, map information, restaurant menus and shop opening times or for making hotel reservations and booking tickets, is transferred to X22-K08.

## X22-J13 [2002]

#### In-car entertainment systems

Includes television and games machine powered from vehicle supply. Includes monitors e.g. mounted in rear of headrest (see X22-J03A3 also). VTR, DVD, TV, MP3, game

# X22-J14 [2012]

# License plates

Includes license plates with RFID transponder (also see W06-A04B and T04-K codes). Illuminated number plates are also codes in X22-B05.

# X22-J15 [2012]

#### **Passenger display arrangements**

Includes prompter for reminding passenger of approaching destination point, and for reminding passenger to not forget personal items when disembarking.

# X22-J19 [2013]

#### Steps and running boards

Includes automatically controlled retractable steps (see also X22-X19 and S05-K if for disabled person assistance) and illuminated running boards. See Q14-I instead for mechanical details.

# X22-J20 [2010]

# Vehicle stands, supports, jacks

(X22-J99)

Includes on-board kick-stands for bicycles or motorcycles (see also X22-P01 or X22-P02 respectively), as well as electrical details of off-board stands and supports for parking cycles. For mechanical details of e.g. cycle stands see Q14-J instead. For parking fee charging details see T05 codes. Also includes electrical details of on-board jacks. See X22-X16 for off-board servicing equipment.

Holder, support, rack, stand, kickstand, parking, lock

#### X22-J99

[2007]

#### Other vehicle accessories

(X22-J)

Includes electrical accessories not covered elsewhere such as refrigerated cool box (see also X27-F codes) powered from cigarette lighter socket (see also X22-F05). See Q14 instead for mechanical vehicle accessories.

Ash trav

# X22-K [1987]

# Vehicle communications and connectivity; Multiplexing; Networking; V2X

(X22-X)

Includes vehicle to everything communications (V2X; C-V2X). Includes all communications, connectivity, networking and multiplexing, including cellular (also see W02-C03C1L) and dedicated short range communication (Also see W01-A06C4E). Includes communication within a motor vehicle (intra-vehicle), communications between vehicle and other vehicles (inter-vehicle), roadside (V2I), pedestrians (V2P) etc. Includes vehicle telephones and hands-free systems. See W01 and W02 codes for telecommuncations per se.

Multiplex, DSRC, 5G, Fcellular, data transmission, LAN, WAN, wide area network, Bluetooth®, CAN bus, controller area network, bus, ethernet, VAN, UART, universal asynchronous receiver/transmitter, V2X, C-V2X

# X22-K01\* [2007-2008]

#### **Multiplex control system**

\*This code is now discontinued and combined with X22-K03 from 2009 onwards since current vehicle networking and multiplexing are essentially the same thing. It is still searchable and valid for records from 2007 to 2009. See W05-D02 also for multiple access and multiplexing control signals transmission, and T01-J07D1B for multiplex control system using microprocessor technology. Used to highlight multiplex control of distributed (electrical) loads via single electric cable/bus and fiber-optic systems.

#### X22-K02 [2021]

# Vehicle to network; Vehicle to cloud communications

Includes vehicle to cloud (V2C) communication that uses V2N access to broadband cellular mobile networks to enable data exchange with the cloud (also see T01-N codes). Includes over the air (OTA) updates to vehicle software. Remote vehicle diagnostics (also see X22-X16). Includes browsing and downloading information such as navigation data (see X22-E06F), local tourist information, shop opening times (see X22-J12), restaurant menus, music files (see X22-J13) and making hotel reservations or booking tickets using in-car connectivity to the cloud. See X22-K08 for connectivity to e.g. wifi hotspot in service station. V2N, V2C, IoT

#### X22-K03

[2007]

# Intra-vehicle; Vehicle to device communications networking/connectivity; Multiplexing

(X22-K01)

Includes in-car high speed, integrated communications networks and multiplexing arrangements for interconnecting various vehicle systems, e.g. using wireless LANs or serial data buses, Bluetooth® etc. (see also W01 codes), avoiding the need for dedicated point-to-point wiring. For enabling internal communications between previously standalone vehicle control systems such as engine and braking systems. Includes DSRC vehicle to device (V2D) and cellular vehicle to device (C-V2D) communications to e.g. connect smartphone, tablet or wearable to vehicle infotainment system. Includes app for controlling vehicle locking/starting.

CAN bus, CAN 2.0, LAN, LIN, Ethernet, wireless, UART, VAN, ABUS, SAE J1850, local interconnect network, controller area network, universal asynchronous receiver/transmitter, V2D, C-V2D, mobile phone

# X22-K05 [2007]

#### Inter-vehicle communications: V2V

Includes communication between different vehicles to enable them to wirelessly exchange information about their speed, location, and heading. Includes DSRC V2V and C-V2V communication providing 360 degree awareness of other vehicles. Also includes systems such as Bluetooth (RTM) ad-hoc networks for allowing communication between different vehicles, e.g. for passing traffic or navigation data between vehicles (see also X22-E06F, for informing vehicle of presence of nearby vehicles e.g. by transmitting GPS position data between vehicles, or for automatic collision avoidance (see also X22-J05 codes) or other safety purposes.

Platooning, cooperative adaptive cruise control, wireless, piconet, cellular V2V

# X22-K06 [2021]

# Vehicle to pedestrian communications; V2P

Includes communication between vehicle and persons, pedestrians or cyclists including DSRC V2P and cellular V2P communication. Includes warning pedestrian or cyclist of dangers such as approaching vehicle and for warning drivers of presence of other road users.

V2P, C-V2P, cyclist, bicycle

# X22-K08 [2007]

# Vehicle to offboard/infrastructure communications: V2I

(X22-J12)

Includes communication between motor vehicle and offboard infrastructure, roadside units or traffic signals (also see T07-B codes). Includes cellular vehicle-to-infrastructure (C-V2I) communications. Also includes dedicated short range communication (DSRC) based V2I. Includes systems for communication between vehicle and external systems such as wifi hotspot in service station for downloading information via offboard system that provides connectivity.

Infrastructure, offboard, V2I, C-V2I

# X22-K11 [2008]

#### Vehicle telephone

Includes all aspects of car phones, including handsfree arrangements. Also see W01 codes for telephones and cellular communication per se. Also see X22-X02B for novel phone mounting arrangement.

#### X22-K99 [2007]

# Other multiplexing/networking/communications

# X22-L [1987]

# Speech synthesizers; Speech recognition units for various applications; Gesture control

(X22-X)

From 2020 this code has been expanded to cover other forms of non-touch control mechanisms such as gesture control. See W04-V codes also for speech analysis/synthesis per se. Includes systems for recognizing hand movements, facial expressions or eye movements used to control vehicle functions (also see S05-D01C5A). For microphones etc. used for car telephone see X22-K11 instead.

Microphone, gestural, eye tracking, gaze

#### X22-M [1987]

# Suspensions

(X22-X)

Includes control of suspensions.

Dampers, height controllers, shock absorbers, spring vibration control, levelling

# X22-M01 [2006]

# Suspension systems

Includes electrical aspects of motor vehicle suspension hardware.

#### X22-M01A [2008]

#### Mechanical springs/dampers

Includes electrical aspects of motor vehicle suspensions using mechanical/pneumatic/fluid springs and dampers.

#### X22-M01C [2008]

## **Electrical springs/dampers**

Includes suspensions that utilise linear electromagnetic motors (LEMs) at each wheel in place of conventional shock absorbers and springs. See also V06 codes for linear electric motors per se.

## X22-M03 [2006]

#### Suspension control

Includes suspension control arrangements such as active suspension, electronically controlled dampers, body roll control etc.

#### X22-N [1987]

# Switches for general application

(X22-X)

See also V03 for mechanical switches per se. Electronic switching is covered by U21 codes only. X22-P [1992]
General vehicle types

X22-P01 [1992]
Bicycle

**Bicycle** *Tricycle* 

X22-P02 [1992]

Motorcycle

Moped

X22-P03 [1992]

External combustion e.g. gas turbine

X22-P04 [1992]

Hybrid

Includes vehicles with electric motor- and IC engine-prime movers. Also see X21-A01D and other X21 codes as appropriate.

Parallel hybrid

X22-P04A [2007]

**Hybrid-electric** 

Includes series/parallel/mixed hybrid-electric and hybrid-fuel cell vehicles

X22-P04E [2007]

**Hybrid-mechanical** 

Includes electrical details of hybrid-flywheel and hybrid-pneumatic or hybrid-hydraulic vehicles.

Petro-hydraulic, petro-air, compressed air

X22-P05 [1992]

**Commercial vehicles** 

Includes non-specific delivery vehicles

X22-P05A [2002]

**Bus/coach** 

X22-P05B [2002]

Lorry/truck

Includes articulated trucks/heavy goods vehicles.

X22-P05C [2002]

Taxi

X22-P05F [2005]

**Forklift truck** 

See also X25-F05A. Electric forklift trucks are coded in X21-A01B only.

X22-P05H [2010]

Road cleaning vehicles

(X22-P05X)

Includes road sweepers and snow ploughs (see also X25-U05).

X22-P05R [2010]

Refuse collection vehicles

(X22-P05X)

Includes rubbish trucks.

X22-P05X [2002]

Other commercial vehicles

Includes commercial vans and tow trucks.

X22-P06 [1992]

Military

X22-P07 [1992]

Construction

Bulldozer

X22-P08 [1992]

Recreation

Go-kart, caravan, RV, snowmobile, ATV

X22-P09 [1992]

Agricultural

See also X25-N codes.

X22-P10 [1992]

**Emergency services** 

Includes ambulances, fire engines, police cars.

X22-P11 [2002]

**Towed trailers** 

Includes electrical aspects, e.g. lights on rear of trailer towed by vehicle (see X22-B02 codes also) or trailer of heavy goods vehicle (see X22-P05B also).

X22-P12 [2012]

**Amphibious vehicles** 

Also see W06-C15X or Q24-P30 as appropriate.

X22-P15 [2015]

#### **Driverless/autonomous vehicles**

Includes vehicles that can drive themselves. Used with X22-C05B, X22-C02D, X22-A03B codes and X22-J05 codes as required for automatic steering, braking, speed control and radar type anti-collision systems.

#### X22-Q [1992]

#### Non-engine related fuzzy control

This code is used either on its own or in conjunction with other related codes, e.g. X22-M for suspension systems. Fuzzy logic systems, per se, are covered by T01-J16B where novel technology details are given.

# X22-R [2018]

#### **Rider assist**

Includes systems for assisting riding of vehicles such as motorcycles or mono-wheel vehicles. Includes balance-aiding and self-balancing systems e.g. using gyroscopes or automatic steering correction to keep motorcycle upright.

Gyroscope, balance, balancing

#### X22-U [2005]

# Motor vehicle rental, hiring and sharing systems

Includes overall system associated with motor vehicle hiring and rental with some on-board vehicle aspect, e.g. enabling user to book vehicle on-line (see T01-N and T01-J05 codes) while central controller provides authorisation and remote access to allocated vehicle. Also includes car pooling arrangements with some on-board vehicle aspect. See also T01-J05A2N for business processes related to the transportation industry. Hiring, leasing, rental, car-pool, car sharing, internet

# X22-W [2006]

booking

# Non-engine related by-wire control

Includes general by-wire control systems, including 'total' vehicle by-wire control and specific controllers not covered elsewhere such as by-wire headlamp beam aiming controller (see also X22-B01E and X26-L). By-wire brake (X22-C02C7), shift (X22-G03G) and steer (X22-C05A1) controllers are coded in their relevant sections ONLY. See X22-A03W only for general engine based by-wire controllers. Also see X22-K codes for novel vehicle networking/communications systems that enable the by-wire control. Also includes overall systems for determining whether it is safe to operate in autonomous driving mode and for switching between manual and (semi)autonomous driving modes. See also X22-P15 for autonomous vehicles per se and other codes as appropriate. Includes vehicle intelligent adaptive control systems. Driver-profile auto adaptation

#### X22-X

#### Other vehicle aspects

Includes static electricity (see also X25-S) and cathodic protection (see also X25-R06), driving instruction simulators (see also W04-W07A), etc.

#### X22-X01 [1987]

# Wiring harnesses; Electrical connectors in general

See V04 also for connectors and harnesses. Includes all wiring/cabling installations.

# X22-X01A [1997]

#### **Electric connectors**

See also V04 codes.

# X22-X01B [1997]

# Wiring or cable installations

Includes also wiring harnesses, see V04-V02 and X12-D07.

#### X22-X01B1 [1997]

#### Clamps

For general cable clamps, see also X12-G04A2.

#### X22-X01B2 [1997]

#### **Grommets or bushing**

See also X12-E03C and X12-G04A3.

# X22-X01C [2012]

## Fuse box/wiring box

Includes fuse boxes and their covers (see also X13-D codes), and wiring boxes.

# X22-X02 [1987]

# Aerials; Radio and loudspeaker mountings, etc.

See W02-B and W03-B codes for further aerial and radio details.

Antenna, window aerials, automatic aerial retraction

X22-X02A [1992]

**Aerials** 

X22-X02A1 [1992]

**Roof/body mounted** 

X22-X02A3 [1992]

Glass-mounted

# X22-X02B [1992]

# Radio, cassette player, CD player, minidisk player, and loudspeaker mountings; etc.

Includes mounting for other electronic devices such as mobile phone, handheld navigation device or computer.

Car telephone mounting

# X22-X03 [1992]

#### **Anti-theft and Anti-hacking**

Includes anti-theft arrangements with some kind of immobilisation of vehicle (see X22-A08C for engine based immobilisers) and systems for preventing hacking or overriding of vehicle systems. Use with X22-D codes such as X22-D01A for arrangements for preventing jamming, code grabbing, App hacking etc. to illegally gain vehicle access. See W05-B codes for theft alarms per se. See X22-K codes for vehicle communications per se.

Steal, theft, override

#### X22-X04

#### [1992]

[1992]

# Refrigeration for container trucks

See also X27-F for refrigeration per se.

#### X22-X05

# Electrical aspects of doors, boots, windows

Includes electrical door opening/closing devices (see X22-D01 instead for door locking arrangements and X22-H codes for window winders). Also includes electrical aspects of streamlining devices such as spoilers.

Roof spoiler, aerodynamic, sliding door, remote control tailgate opening, electrochromic glass, privacy glass

#### X22-X06 [1992]

# Non-engine related measurements/sensors

These codes are used on their own or in conjunction with other codes depending on claimed aspects. For general instrumentation, S01, S02, and S03 codes should also be searched. Includes electrical sensors per se and their mounting arrangements. These codes are generally applied when the sensor is novel per se or when a standard sensor is used in an unusual way.

# X22-X06A [1992]

# Wheel speed and slip sensors

Includes sensing of wheel speed or general vehicle speed. Measurement of engine speed is coded in X22-A05C only.

# X22-X06B [1992]

#### Acceleration or shock sensors

Includes measurement of acceleration, deceleration and shock or impact sensing. See also S02-G03.

#### X22-X06C [1997]

#### Road friction sensor

See also S03-F08.

# X22-X06D [1997]

## **Seat occupation sensor**

Also includes child seat presence or absence detector to then inhibit or trigger e.g. air bag. See also S03-C06.

# X22-X06E [1997]

#### Rain or moisture sensor

(X22-J01.X22-X06)

See S03-F09 and S03-E codes. Includes humidity sensor.

#### X22-X06F [1997]

#### Distance to obstacle measurement

See also X22-E13 or X22-J05 codes and S02-B01.

## X22-X06G [1997]

# Lane deviation sensing arrangement

Includes optical recognition of white line.

# X22-X06H [1997]

#### Steering angle/torque sensor

From 2010 this code has been expanded to include steering torque sensing. Prior to 2010 see X22-X06(X).

# X22-X06J [1997]

#### Yaw sensor

Measuring angular rotation or movement around yaw axis/direction of heading.

Centre of gravity, vertical axis accelerometer, gyroscope

#### X22-X06K [1997]

# **On-board weighing system**

See X22-P05B for lorry on-board load/cargo weighing arrangements.

#### X22-X06L [1997]

# Control pedals' position sensors

# X22-X06M [2002]

## Submergence sensing arrangement

For detecting submergence of vehicle in water, e.g. for control of vehicle windows to allow escape from sinking vehicle.

Sinking detection

# X22-X06N [2005]

# Non-engine related diagnostics

Includes diagnostic devices interfacing with vehicle control devices. See also S02-J codes for testing per se.

# X22-X06T [2010]

# **Temperature sensor**

Includes non-engine temperature sensing e.g. for control of vehicle air conditioner (see also S03-B codes). For engine related temperature sensing see X22-A05F codes instead.

#### X22-X06X [2005]

# Other non-engine related measurements/sensors

Includes other specific measurements and sensors such as suspension height sensor (see also X22-M), gear shift and gear position sensors (see also X22-G). Includes coupling sensor.

Ground clearance measurement

# X22-X07 [1992]

# **Road toll devices**

See also T07-A03E for roadside charging aspect.

#### X22-X08 [1992]

#### Noise/vibration/harshness reduction

Includes general noise, vibration and harshness (NVH) control for improving comfort of vehicle occupants. For transmission based NVH control see X22-G03N only, and for engine based vibration and noise reduction see X22-A12 or X22-A03X as appropriate. See also W04-V. See Q17-N for mechanical NVH reduction arrangements.

# X22-X09 [1992]

# On-board tyre inflator

#### X22-X10 [1992]

#### **Electronic components**

Includes components e.g. ASICs for vehicles but with no mention of its specific use. See also appropriate U codes. Also includes general electronic control units where specific function being controlled is not detailed. See X22-A03 for general engine based ECUs where specific engine system being controlled is not detailed.

# X22-X11 [2002]

# Agricultural implements and their control

Includes electrical aspects of implements attached to tractor and driven by power take-off.

#### X22-X12 [2002]

# **Pedal arrangements**

Includes pedals that are electrically positioned according to driver's requirements and other electrical arrangements connected to pedal operation or adjustment. See X22-X06L for control pedals' position sensors per se.

Electronic accelerator pedal

# X22-X16 [2005]

# Vehicle maintenance equipment and service monitoring; Vehicle testing

Includes on-board aspects associated with e.g. fleet maintenance, vehicle servicing equipment (see X22-A16 for engine servicing equipment) and remote service monitoring (see X22-E10 for on-board service required warning). Includes off-board arrangements for testing/measuring vehicle wheel alignment (see also S02-J02A), vehicle rolling roads and engine dynomometers (see also S02-J01A). See X22-X06 codes for on-board vehicle measurement systems.

#### X22-X18 [2007]

#### Vehicle (un)loading arrangements

Includes tail lifts used on lorries (see also X22-P05B), vehicle mounted cranes and other loading/unloading ramps/fixtures. See Q15 codes for mechanical (un)loading aspects.

#### X22-X19 [2007]

# Disabled people aids

(X22-X)

Includes all systems or vehicle adaptations for helping physically challenged persons drive or travel in motor vehicle. Includes wheelchair lifting arrangements and ramps. See also S05-K01. For mechanical aspects see Q15-B13 instead.

#### X22-X20 [2008]

# Vehicle design/manufacture/assembly

Includes electrical details of design, manufacture and assembly of vehicles and vehicle components. See Q16-D codes for mechanical aspects of vehicle design and manufacture.

# X22-X20A [2008]

# Vehicle

# manufacture/assembly/dismantling

Includes manufacture and assembly of motor vehicles and their components. See X25-X14 for manufacturing/assembly plants per se. Also includes systems for dismantling vehicles e.g. to enable recycling of materials (see also X25-W04). Spray painting, end-of-life disposal

# X22-X20E [2008]

# Vehicle design

Includes all electrical details of vehicle design. Also see T01-J15 codes for computer aided design (CAD).

Simulation testing

# X23: Electric Railways and Signalling

**Note:** Also includes non-electric traction railways with substantial electrical content in the disclosure. See Q21 instead for mechanical aspects of railways.

#### X23-A

#### **Electric railways**

#### X23-A01

#### Propulsion, braking, suspension

# X23-A01A [1983]

# **Propulsion**

Includes transmission of mechanical power. *Drive system, mountings* 

# X23-A01A1 [1987]

#### **Electric motor**

Includes motors per se, with further details in X11. Linear motors, induction motors, dc motors, coils, magnetic circuits

#### X23-A01A2 [1987]

# **Engines**

Includes engine control and electrical hardware aspects of railway vehicle engines.

Diesel-electric locomotive, diesel, petrol, fuel

#### X23-A01A2B [2016]

#### **Engine control**

Includes general combustion engine control such as speed, fuel and ignition control. For pollution control see X23-A01A2C instead.

#### X23-A01A2C [2014]

# **Exhaust gas cleaning systems; Pollution reduction**

Includes electrical details of locomotive engine exhaust gas cleaning systems and pollution reduction arrangements. For mechanical aspects see Q21-C01C and Q51-J02 codes.

Catalytic converters, EGR, catalyst electric heating

# X23-A01A3 [1997]

#### **Power converters**

See X23-A02A for converter control for train/tram motors. See also X12-J and X13-G03 codes.

# X23-A01A4 [1997]

# **Magnetic levitation arrangements**

Includes superconducting magnets/coils for levitation or suspending of railway car. See also X12-C05 codes.

# X23-A01A5 [1997]

#### **Transformers**

Includes supply step-down and converter transformers. See X12-C codes for further transformer details.

#### X23-A01B [1983]

#### **Braking**

Includes train brakes as well as track brakes.

#### X23-A01B1 [1997]

## (Electro)mechanical brakes

Includes electromagnetic and electrically-operated mechanical brakes (see X25-L02 also) as well as electro-pneumatic and electro-hydraulic brakes.

Electro-magnetic, electrohydraulic, electropneumatic

#### X23-A01B3 [1997]

#### **Electrodynamic brakes**

Includes resistive, eddy current and regenerative brakes (see also X13-F02).

#### X23-A01B5 [1997]

#### **Automatic braking**

Includes ATP(automatic train protection)-triggered braking to prevent accidents. See also X23-B02.

# X23-A01C [2005]

#### Suspension

Includes electrical aspects of railway vehicle suspension systems, such as carriage/ride tilt control. Magnetically levitated suspension/propulsion systems are coded in X23-A01A4 only.

# X23-A01L [2012]

# **Lubrication arrangements**

Electrical aspects of train/locomotive lubrication.

# X23-A02

# Motor control; Monitoring operation

Includes motor protection, safety interlocks e.g. dead man's handle, operating data monitoring. Also see X13-C.

#### X23-A02A [1987]

#### **Motor control**

See also X13-F or X13-G.

# X23-A02C [1997]

#### **Automatic train control**

See also X23-A01B5 for automatic braking. Includes train door opening, vehicle status reporting, speed limiting, etc.

#### X23-A02E [1997]

#### Data bus

Includes the bus, per se, and associated hardware for communications (see also W05-D06F) between sub-systems and the main system on the train. Also, allows remote monitoring and control on multiple unit trains. Carries signals from ATP and ATC systems for various controls and status reporting.

#### X23-A02G [2002]

# **On-board monitoring systems**

Includes on-board radio communication, e.g. between head and end of train, and general on-board system monitoring. Includes on-board camera and image analysis to prevent collision.

#### X23-A03

# **Power supply aspects**

# X23-A03A [2002]

# Power supply lines; Off-board supply

Includes all power supply aspects i.e. track side poles, insulators, (see also X12-G codes) etc., supply protection (see also X13-C codes), substations for feeding power to the railway network (see also X13-E codes).

Electric overhead supply, power rails

# X23-A03C [2002]

# On-board power supply systems; Power supply control

Includes on-board generators per se, with further details in X11 or X13 if its control is part of the invention, and power supply or conversion arrangements etc.

Battery, fuel cell

# X23-A04

#### **Current collectors**

Pick-up, pantograph, brushes, shoes

#### X23-A05

# Measuring; Testing

Includes brake monitoring sensors, track straightness determination, etc.

#### X23-A08 [2012]

# Shunting or short distance haulage devices

Electrical aspect of shunting or short distance haulage devices.

#### X23-A09

# Other on-board (electric) railway train details

Includes connectors for cables passing between carriages etc. Includes refrigerated compartment for transporting cargo. For other offboard railway system details see X23-S99 instead.

# X23-A09A\* [2002-2009]

## Off-board/railway station systems

\*This code is now discontinued and transferred to X23-S. It is still valid and searchable for records prior to 2010. From 2005 major electric track laying equipment is transferred to X23-X. For station based passenger information/communications systems see X23-C02.

# X23-A09A1\* [2005-2009]

# **Security systems**

\*This code is now retired and transferred to X23-S01. It remains searchable and valid for records prior to 2010.

# X23-A09A1A\* [2005-2009]

#### For personnel

\*This code is now discontinued and transferred to X23-S01A. It is still valid and searchable for records prior to 2010. Includes detection of concealed weapons. Also includes all aspects of passenger tracking and monitoring, including authorisation/access control for passengers (see T05-D codes also).

#### X23-A09A1E\* [2005-2009]

## For baggage

\*This code is now discontinued and transferred to X23-S01E. It is still valid and searchable for records prior to 2010. Includes all aspects of baggage inspection, monitoring and tracking. Includes use of transponder tags (see also W02 codes) or barcode reader (see also T04 codes). See S03-C03 and S03-E06B codes for inspection.

# X23-A09A3\* [2005-2009]

# Station safety systems

\*This code is now discontinued and transferred to X23-S03. It is still valid and searchable for records prior to 2010. Includes fire-fighting arrangements and automatic platform-edge doors control. Prior to 2005, platform edge doors control was coded in X23-A09.

# X23-A09A9\* [2005-2009]

#### Other station details

\*This code is now discontinued and transferred to X23-S99. It is still valid and searchable for records prior to 2010. Includes transportation of baggage and passengers, and railway station specific heating and air-conditioning.

# X23-A10 [1997]

# **Environmental control and lighting**

(X23-A09)

Includes on-board train heating and airconditioning systems, internal and external train lighting.

# X23-A13 [2002]

#### On-board train accessories

Includes electrically adjustable seats, electric windows, electric door locks etc. Also used for intrain entertainment systems.

#### X23-A15 [2013]

# Passenger safety systems

Includes seat belts, airbags and fire-fighting equipment on-board the train. For station based passenger safety systems see X23-S03 instead. See X25-X05 also for fire-fighting equipment per se.

#### X23-A16 [2014]

# Cargo (un)loading arrangements

Includes train mounted cranes and other loading/unloading ramps/fixtures. See Q21-J06 for mechanical (un)loading aspects. For station side equipment see X23-S99 instead.

# X23-A17 [2014]

# **Traction increasing equipment**

Includes dispensing of particulate matter such as sand under train wheels on track to prevent wheel slippage and increasing grip. For mechanical aspects see Q21-D10A

#### X23-B

# Signalling; Safety

#### X23-B01

On route devices controlled by passage of train

#### X23-B01A [1997]

# Axle counters; End-of-train passage detection

Includes null flux detector and eddy current detector.

# X23-B01C [1997]

#### **Track circuits**

Includes associated transmitter and receiver circuits (see also W02 codes e.g. W02-C02 codes for near field systems, W02-C03 codes for radio systems, and W02-G codes for radio equipment per se).

AC-, DC-, audio frequency-, track circuits

#### X23-B02

# On route devices controlling vehicle device

For ATP and ATC signalling to control brakes and train operation see X23-A01B5 and X23-A02C codes.

Cab-, ATP-, automatic train protection-, ATC-, automatic train control-, signalling

# X23-B02A [1997]

# **Magnetic and inductive transponders**

Includes train-mounted detector coils to pick-up safe passage tone, speed monitor tone and proceed tone from track-side equipment.

# X23-B02C [1997]

#### Radio communication link

Includes provision of communications (see also appropriate W02-B, W02-C and W02-G codes) between the driver and signal centres. Also includes RF beacons to provide track data like speed limits, gradients, speed and braking commands, destination, stopping patterns, etc.

#### X23-B02C1 [1997]

# Radio communications system for speech

Includes speech radio for train dispatching and safety-critical operational messages. On-board public telephones are coded in X23-C01 only.

#### X23-B03

#### Points and signal operation; Signals

Lamp details are in X26. Road/rail traffic intersection signalling is also in T07. Switching, lamps, relays

# X23-B04

Station blocking; Interlocking between points and signals; Warning devices along route

# X23-B04A [1997]

# Signals and points interlocking

Includes relay interlocking.

# X23-B04A1 [1997]

#### Solid state interlocking

Includes processor-based interlocks. SSI, solid state interlocking, electronic

# X23-B04C [1997]

# Station blocking; Track blocking

Includes track blocking for preventing two trains from entering same track block, for anti-collision purposes.

#### X23-B04E [1997]

# Warning and safety devices along route or between trains

From 2006 this code has been expanded to include warning devices operating between trains as well as warning devices along train route.

#### X23-B04E1 [2002]

# Signalling to portable alarm unit

Includes transmission of on-coming train warning to portable unit carried by track maintenance personnel. Also see W05 codes.

#### X23-B05

# Traffic control; Classification yards

Includes marshalling of trains. Used for local control of trains e.g. in shunting yard. For control of entire railway network see X23-B05C only.

# X23-B05A [1997]

#### Rail/road crossing systems

Includes level crossings.

#### X23-B05C [1997]

#### Integrated central control

Includes system for automated transit control, automatic train scheduling and supervisory system. Also includes vehicle movement, power distribution, alarms for faults, system status information.

#### X23-B09 [1997]

# Other signalling aspects

Includes e.g. track conductors for improved signal transmission compared with use of the rails in track circuits.

#### X23-C [1997]

# Passenger information/communications systems

(X23-A09,X23-B)

Railway/train information

# X23-C01 [1997]

# On-board PA system; Displays; Telephones

(X23-B02C1)

Includes automatically triggered, e.g. by train or signalling, systems. See W04-S05 and W05-E codes, respectively, for PA systems and general displays. See also W05-A codes for warning tones. Also includes on-board public telephones (also see W01 codes), systems for enabling use of passenger's mobile phone e.g. while in tunnel, and passenger information arrangements e.g. allowing on-board internet browsing (see also T01 codes).

#### X23-C02 [1997]

# Off-board platform/station systems

Includes automatically triggered, e.g. by train or signalling, systems. Also includes station based timetable displays, internet browsing systems, computerised ticket reservation systems and other station based information/communications systems.

#### X23-D [2014]

# Type of carriage or wagon

Includes electrical details of specific types of carriages. For mechanical aspects see Q21-C03 codes.

# X23-D01 [2014]

# Wagon/freight car

Includes electrical details of wagons, vans or freight cars.

#### X23-D02 [2014]

# Hopper car

Includes electrical details of e.g. wagons for carrying particulate material with dispensing openings at bottom of wagon.

# X23-D03 [2014]

#### Tanker wagons

Includes tankers carrying fluids.

# X23-D04 [2014]

#### Mine cars

Includes electrical aspects of mine locomotives and cars. Also see X25-D for mining.

## X23-D05 [2018]

#### **Passenger carriages**

Includes electrical aspects of passenger carriages. See Q21-C03A for mechanical details.

# X23-D09 [2014]

#### Other railway vehicles

Includes electrical details of rail vehicles convertible for use on road (see also Q19-R02).

# X23-P [2014]

# **Railway Type**

Includes electrical details of special railway types.

# X23-P01 [2014]

#### **Elevated railways**

Includes electrical details of elevated railways with or without suspended vehicles.

#### X23-P02 [2014]

#### Monorail

Includes electrical details of monorail aspects.

# X23-P03 [2014]

# **Cableways**

Includes electrical aspects of aerial ways, cableways.

# X23-P05 [2014]

# Magnetically levitated railways

For novel MAGLEV train suspension/ propulsion details see X23-A01A4 also.

# X23-P06 [2014]

# **Underground railways**

Includes electrical details of underground railways/Metro

Subway, metro

# X23-P09 [2014]

#### Other railway types

Includes rack railway.

# X23-N [2012]

#### Noise/vibration/Harshness reduction

Includes all electrical details of arrangements to reduce noise, vibration and harshness in the train. For mechanical NVH reduction see Q21-N instead.

# X23-S [2010]

# Station/off-board railway systems

(X23-A09A)

Includes electrical aspects of all offboard/station/platform details. From 2005 major electric track laying equipment has been transferred to X23-X. For station based passenger information/communications systems see X23-C02 instead. See Q21-A codes for mechanical details of offboard railway stations and tracks. For offboard power supply systems see X23-A03A instead.

# X23-S01 [2010]

# **Security systems**

(X23-A09A1)

Includes off-board systems for protecting railway passengers and cargo.

# X23-S01A [2010]

# For personnel

(X23-A09A1A)

Includes detection of concealed weapons. Also includes all aspects of passenger tracking and monitoring, including authorisation/access control for passengers (see T05-D codes also).

# X23-S01E [2010]

#### For baggage

(X23-A09A1E)

Includes all aspects of baggage inspection, monitoring and tracking. Includes use of transponder tags (see also T04-K03B, W06-A04B and W02-G05 codes) or bar-code reader (see also T04-A03B1). See S03-C03 and S03-E06B codes for inspection.

#### X23-S03 [2010]

# Station safety systems

(X23-A09A3)

Includes fire-fighting arrangements (see also X25-X05) and automatic platform-edge doors control (see also X25-U01). Prior to 2005, platform edge doors control was coded in X23-A09.

# X23-S05 [2010]

# **Tunnels**

(X23-A09A5)

Includes electrical details of tunnel construction and maintenance, as well as tunnel lighting arrangements (see also X26 codes). See Q21-A codes for mechanical details of railway or subway tunnels.

# X23-S99 [2010]

# Other offboard/station details

(X23-A09A9)

Includes transportation of baggage and passengers (see also X25-F codes), and railway station specific heating and air-conditioning (see also X27-E codes).

# X23-X [2005]

# Other railway system details

Includes major electric railway track laying equipment and track maintenance equipment (coded in X23-A09A prior to 2005). See Q21-A01 for mechanical details of track maintenance/construction.

Track repair, track-laying

# X23-X16 [2014]

# Maintenance; Servicing; Testing

Includes locomotive/train servicing and testing equipment.

Service, maintain, test, diagnostics

# X23-X20 [2014]

# Rail vehicle design/manufacture/assembly

Includes electric details of design, manufacture and assembly of railway trains and their components. See X25-X14 for manufacturing/assembly plant per se. Also includes systems for dismantling vehicle to enable recycling of materials (see also X25-W04). See X16-M for recycling of batteries and their materials. See T01-J15 codes for computerised design.

## X24: Electric Welding

Note: Patents are coded in X24 only if the soldering or welding equipment is useful in the electrical or electronic industry e.g. PCBs, electric motors, or if substantial electrical content is disclosed.

#### X24-A

# **Electric soldering**

#### X24-A01

# Solder, soldering methods, flux

Solder wire

# X24-A01A [1992]

#### Solder, flux

Includes details of solder manufacture. See also P55-D01.

#### X24-A01C [1992]

**Soldering methods** 

#### X24-A02

# (De)soldering equipment, irons, bits, baths

Includes soldering equipment and systems. Tinning, heaters

#### X24-A02A [1992]

(De)soldering irons, bits

## X24-A02C [1992]

Wave soldering baths

# X24-A02E [1992]

Reflow soldering using laser, hot gas, electric heating, etc.

(X24-A09)

For use of laser, see also X24-D03B.

# X24-A02X [2007]

#### Other soldering equipment

Includes spray soldering systems using solder droplets in stream of hot gas to build up solder deposit, e.g. for fixing conductor wires to semiconductor circuit (see also U11 codes). Also includes ultrasonic and laser soldering equipment.

# X24-A04 [2006]

#### Soldering accessories

Includes solder feeding devices and dispensers.

#### X24-A09

#### Other electrical soldering aspects

Includes brazing, control and measurements. Also includes cooling details of soldering, soldering simulators and recycling of solder. From 2006, solder feeding devices have been transferred to X24-A04...

#### X24-B

# Arc welding or cutting

#### X24-B01

Seam and built-up arc welding

#### X24-B02

**Arrangements or circuits** 

#### X24-B02A

# Generating ignition voltage; Stabilising and magnetic control of arc

Arc ignition, moving arc

#### X24-B02X

#### Other circuit details

Includes protective circuits, remote controls. Power supplies, pulse supply

#### X24-B03

#### Automatic feeding of electrodes or work

Includes welding robots, motor control. Robot control, positioning, guiding

#### X24-B04

# **Electrodes and accessories**

Includes welding rods, electrodes, materials and media. Also includes all aspects of cables and connectors, and other accessories with significant electrical content. Includes protective mask (see also X27-A02B1A).

# X24-B05

#### Submerged-arc welding, stud welding

Includes shielded metal-arc welding using a covered electrode stick, and submerged arc welding where weld area is protected by granulated flux. Also includes electroslag and flash butt welding.

#### X24-B06

# **Using shielding gas**

Includes WIG (Wolfram inert gas), GMAW (gas metal-arc welding) or MIG (metal inert gas), TIG (tungsten inert gas) or GTAW (gas tungsten-arc welding) and associated shielding gas feed control. Also includes plasma-arc welding/cutting (PAW) where heat for melting is provided by arc formed between non-consumable tungsten electrode and constricting orifice of torch itself.

WIG, MIG, TIG, GMAW, GTAW, plasma-arc

#### X24-B09

# Other arc welding or cutting aspects

Includes welders using insulated electrodes, percussion welding, testing.

Inspecting, measurements

#### X24-C

#### Resistance welding or cutting

#### X24-C01

# **Electric supply or control circuits**

Monitoring

# X24-C04 [2006]

#### **Electrodes and Accessories**

#### X24-C09

# Other resistance welding or cutting aspects

Includes spot welding, resistance seam welding (forming a series of overlapping spot-welds), resistance butt welding and projection welding (where the flow of current is confined to protrusions embossed on surface of material to be welded). For robotic spot welding see also X25-A03E1.

Spot welder, seam, projection

# X24-D

## Other welding, cutting or boring

#### X24-D01

# Welding by induction heating

#### X24-D02

#### **Electron-beam welding or cutting**

See V05-F02 also for electron beam equipment. Beam focussing, melting, cutting, etching, trimming, hole punching, shaping, beam control, multiple beam

#### X24-D03

#### Laser beam welding or cutting

See appropriate V08 codes for laser control details. Shaping, optical system, control

#### X24-D03A [1992]

#### For metal working

Covers all aspects of working metal using laser beam (and having sufficient electrical content) e.g. cutting, trimming, hole forming etc. Also see appropriate corresponding codes in X25-A codes e.g. for cutting per se. Also includes laser-hybrid welding combining laser welding and e.g. shielded arc welding (also see X24-B06), and robotic laser welding.

Laser-hybrid

# X24-D03B [1992]

# For electrical and electronic components

Covers etching of PCBs see V04-R01C5 also, cutting substrate see U11-C07A4 also, trimming resistor valve see V01-A04H3 and trimming capacitor valve see V01-B04C3 also. For reflow soldering using laser see X24-A02E also.

#### X24-D03X [1992]

# Other laser beam welding/cutting aspects

Includes details of laser cutting through other materials, such as glass, ceramics, etc.

#### X24-D04

#### Welding of plastics materials

See also X25-A06 and maybe T06-D13 for plastics working. Includes dielectric welding, RF welding and high frequency welding to fuse plastics together.

Electric resistance heaters, HF welding

# X24-D05 [1987]

# Flame or gas welding/cutting

From 2006, details of plasma welding are covered by X24-B06 only.

Blow torch

#### X24-D06\*

[1992-2005]

#### Ultrasonic

(X24-D09)

\*This code is now discontinued and transferred to X24-D08A. It is still searchable for records from 1992-2005.

# X24-D07\*

#### **Friction welding**

(X24-D09)

\*This code is now discontinued and transferred to X24-D08C. It is still searchable for records from 1992-2005.

# X24-D08 [2006]

# Solid state welding

Includes low temperature welding processes not involving fusion. Includes hot pressure welding and roll welding.

Cold welding, HPW, ROW

#### X24-D08A

[2006]

[1992-2005]

# **Ultrasonic welding**

Involves applying ultrasonic vibrations parallel to interface of surfaces being joined, which are under compressive force, so that welding is reached through a solid state process involving atomic movement and diffusion. Also see X24-D04 for ultrasonic welding of plastics.

USW

#### X24-D08C

[2006]

#### **Friction welding**

Includes friction stir welding, and inertia welding. *FRW* 

# X24-D08E

[2006]

[2006]

#### Magnetic pulse welding

Includes cold welding of electrically conductive metals in the total absence of fusion.

Cold welding, inductor coil, capacitor discharge

#### X24-D08G

# **Diffusion bonding**

Involves solid state diffusion by application of pressure and temperature to a joint surface for a prescribed period of time.

Aerospace, titanium, loading press, cladding, diffusion welding, DFW

#### X24-D08X

[2006]

# Other solid state welding/bonding

Includes explosive welding and forge welding processes.

EXW, FOW

#### X24-D09

# Other welding, cutting or boring aspects

(X24-B09)

Includes non-specific welding apparatus with substantial electrical content, electrolytic welding and high frequency welding used on non-plastic materials. High-frequency welding used on plastic materials is coded under X24-D04 only.

#### X24-D10

[2006]

#### Welding, cutting, boring accessories

Coverage is restricted to all aspects of cables and connectors, with other accessories requiring significant electrical content.

Welding mask, goggles

# X24-D11

[2020]

#### **Testing of weld**

Includes testing, monitoring aspects of welding.

#### X24-E\*

[1980-2005]

# Welding rods, electrodes, materials or media

\*This code is now discontinued, but remains searchable for records prior to 2006. Novel welding rods, electrodes, cables, connectors etc. are now covered by the electrode/accessory codes in the relevant areas, e.g. X24-B04, X24-C04 and X24-D10.

# X24-F

#### **Electro-erosion**

#### X24-F01

Apparatus, devices, electric circuits

# X24-F01A

# For electro-erosion in an electrolytic medium

Electrochemical, ECM

# X24-F01B

[1992]

# **Electrical discharge machining**

(X24-F01X)

Includes arc or spark discharge.

Discharge machining, EDM, discharge wire cut, EDWC

#### X24-F01X

# Other electro-erosion/machining apparatus

# X24-F02

# **Electrodes**

Includes moving and spacing of electrodes.

# X24-F04 [2006]

# **Electro-erosion accessories**

Includes cables and connectors for electro-erosion and electrical discharge machining equipment. See also V04 codes for connectors and X12 codes for cables.

# X24-F09

# Other electro-erosion details

# X24-G

Welding generators/motors or transformers/inductors

See also X11, X12.

# **X25: Industrial Electric Equipment**

This class, apart from the exceptions below, includes only those patents with substantial electrical content. Appropriate control aspects relating to various codes in this class are in T06-D. For example, general machine tool control is represented by X25-A03F and T06-D06. EXCEPTIONS: Electric furnaces and heating, components (e.g. pumps) and electrolysis apparatus.

#### X25-A

#### Working materials

#### X25-A01

# **Casting metals**

Includes all electrical aspects of casting e.g. EM stirrer. Control see T06-D05B also.

Moulding, continuous-, centrifugal-casting, ingot, foundries, die, ladles

#### X25-A02

# Shaping (excluding cutting)

Control see T06-D05A also.

Forming, extruding, corrugating, seaming, folding, squeezing, blanking, electromagnetic forming, electro-hydraulic forming

# X25-A02A [1983]

#### **Presses**

Control details see T06-D20. *Baling, rams* 

# X25-A02B [1983]

# Rolling

Control details see T06-D05A1.

Mills, sheets, foils, tubes, strips, bars, rods

#### X25-A02C [1992]

#### **Forging**

Control details see T06-D05A.

#### X25-A02D [1992]

#### Hammering, bending, punching

For control details see T06-D05A. See X25-X10 instead for engraving systems Stamping

# X25-A02E [1992]

#### Wire drawing

Control details see T06-D05A.

# X25-A02F [2018]

# Straightening/stretching; Edge/Metal Flanging

Covers electrical details only. Mechanical details are covered in P52 class. Also includes finishing details such as attaching head to a drawing-pin, and metal shaping using fluid pressure, shock waves, etc.

Chemical explosives, edge-curling, edge armoring

#### X25-A03

#### **Tools**

Includes screw tighteners and general aspects of tools. For general control of machine tools see T06-D06 also. For systems for cleaning of work space, e.g. combined sanding and dust extracting machine, also see X25-H05.

Workpiece positioning, work tables, tool changing, chucks, turret

# X25-A03A [1983]

#### **Turning**

Includes lathes.

#### X25-A03B [1983]

Boring, drilling, cutting

#### X25-A03B1 [2002]

# Boring, drilling

Centre-point

# X25-A03B2 [2002]

# Cuttina

Includes cutters, saws, trimming, grooving. See also T06-D07 for control apparatus.

#### X25-A03C [1983]

#### Milling, grinding, polishing

(X25-A09)

Control details T06-D07A also.

# X25-A03C1 [1992]

# Milling

Broaching, nanometer milling machine

# X25-A03C2 [1992]

# Grinding, abrading, honing, lapping

Blasting, planing, sanding, sander

# X25-A03C3 [1992]

### Polishing, burnishing

# X25-A03D [1983]

#### **Handheld tools**

Used in conjunction with the above codes if applicable. For example, handheld drills are also coded in X25-A03B.

#### X25-A03E [1983]

#### **Manipulators**

Control details see T06-D07B also and for CAM/CAD robot programming see T01 also. Robots, grappling, gripper, programmable

# X25-A03E1 [1992]

# Applications e.g. welding

# X25-A03E2 [1992]

# Assembling

Covers robots used in car manufacturing plants when robot details are claimed. See also X25-F01 for conveyor details.

# X25-A03F [1983]

#### **Control**

Used in conjunction with above codes for different tool types. Also includes details of industrial automation system.

Monitoring, simulation

# X25-A03R [2019]

#### Riveting

See also T06-D06A and X25-A03F for riveter control. See X25-X prior to 2018.

# X25-A04

# **Cathodic sputtering**

Mainly apparatus for sputtering and chemical vapour deposition included. For methods, substantial electrical details must be disclosed. See U11-C09 for sputtering and CVD apparatus used for integrated circuit manufacture and appropriate T03/W04 codes for magnetic head manufacture. Non-cathodic, e.g. general plasma (laser) deposition is not included - see X25-A09 and X14-F codes.

Cathodes, targets, coating, deposition, anodes, evaporation

# X25-A05 [1983]

# Working glass

(X25-A09)

Forming glassware, gob

# X25-A06 [1983]

# **Working plastics**

(X25-A09)

Includes welding (see also X24-D04), fusing, extruding, moulding, injecting etc. For control details, see T06-D13 also.

# X25-A07 [1987]

# Working rubber

(X25-A06)

Tyre manufacture

# X25-A08 [2006]

# 3D/4D/5D printing; Additive manufacturing

Details of 3D scanners are coded under T04-M05. See also X25-A06 for electrical aspects of working plastics.

3D replicator, rapid prototyping, solid freeform fabrication, SFF, 3D modelling, active origami

# X25-A08A [2016]

# Method for 3D/4D/5D printing and additive manufacturing

# X25-A08B [2016]

# Apparatus for 3D/4D/5D printing and additive manufacturing

Computer control details of 3D printing/additive manufacturing machines are coded under T01-J07B3 and T06-D17. For details of 3D scanners see T04-M05. For ink-jet printhead details see S06-G03. *Extruder* 

#### X25-A08C [2016]

# Types of 3D/4D/5D printing and additive manufacturing

# X25-A08C1 [2016]

Stereolithography

SLA

#### X25-A08C2 [2016]

# Fused deposition modelling/3D/4D/5D printing using inkjet technology

Inkjet technology is also coded under S06-G10. FDM®, extruders, extrusion tips, fused filament fabrication, FFF

# X25-A08C3 [2016]

#### Selective laser sintering

SLS

X25-A08C4 [2016]

Laminated object manufacturing

LOM

X25-A08C9 [2016]

Other types of 3D/4D/5D printing and additive manufacturing

X25-A08M [2016]

# 3D/4D/5D printing and additive manufacturing materials

Codes in X25-A08M section indicate the type of material used to produce the printed object. For novel material compositions, see the relevant codes in classes A-M.

X25-A08M1 [2016]

Metals

X25-A08M2 [2016]

**Plastics** 

X25-A06 should also be applied.

X25-A08M3 [2016]

# **Organic materials**

Includes organic materials used to produce biological products such as human tissue replacements. See also X25-A08U2.

X25-A08M4 [2018]

Food

See also X25-A08U7 and X25-P01X. *Chocolate* 

X25-A08M8 [2020]

#### **4D-compatible materials**

Materials which are compatible with 4D printing techniques. This code is used in conjunction with other X25-A08M codes.

Programmable matter

X25-A08M9 [2020]

# Other 3D/4D/5D printing and additive manufacturing materials

Includes specific materials not covered by other X25-A08M codes, e.g. concrete, silica sand, magnesium sand, chromite sand, etc.

X25-A08U [2016]

# 3D/4D/5D printing and additive manufacturing applications

Codes in X25-A08U section are used in conjunction with other X25-A08 codes to highlight what is manufactured using the 3D/4D/5D printing and additive manufacturing systems.

X25-A08U1 [2016]

#### **Domestic and personal items**

See also P21-P28 classes.

Watch, clothes, footwear, jewellery, kitchen equipment, tableware

X25-A08U2 [2016]

### Pharmaceutical: Medical

See also B class codes for pharmaceutical applications; P32 for prosthetics.

Bio-printing, prosthetics, pills, tissue engineering

X25-A08U3 [2016]

#### Vehicles; Aerospace

See Q24/Q25/W06 classes for aerospace and shipping; Q11-Q19/X21/X22 for land vehicles and Q21/X23 for railway vehicles.

X25-A08U4 [2016]

### Industrial

Includes manufacture of components not covered by other X25-A08U codes. Includes manufacture of components used in the construction and building industry. See X25-A06 for electrical aspects of working plastics.

Tool, robotics, television, phone, oil/gas industry

X25-A08U5 [2016]

# Sports, toys, entertainment and arts

Includes art pieces, figurines, action figures, etc. For manufacture of sports equipment, toys and novelty items see also P36 class.

X25-A08U6 [2016]

#### Defence

See also Q79/W07 classes for military weapons etc. Weapons, ammunitions, military

X25-A08U7 [2016]

### Food industry

See also X25-P codes for electrical aspects of food processing.

X25-A08U9 [2016]

Other specific 3D/4D/5D printing and additive manufacturing applications

#### X25-A08X [2016]

# Other details of 3D/4D/5D printing and additive manufacturing

#### X25-A09

#### Other material working aspects

Includes metallic coating, e.g. plasma deposition, plasma spray coating or plasma transferred arc hardfacing, e.g. for applying wear-resistant metallic material such as Stellite® to steel. For other coating, such as painting, see X25-K05.

Cement, ceramic, concrete

# X25-A10 [2007]

## Working wood

Includes arrangements for working wood. See other X25-A codes to highlight the action being carried out, e.g. X25-A03A for wood turning. For felling of timber or processing lumber see X25-X01 instead.

Turning

#### X25-B

# **Electric heating**

All domestic applications are also in X27.

# X25-B01

#### Ohmic resistance heating

Includes protective arrangements, IR heaters e.g. quartz lamps.

# X25-B01A

#### **Electrodes**

# X25-B01B

# Heater element materials or conductor arrangements

#### X25-B01C

#### **Plate heaters**

Includes resistance heaters having extended surface area substantially in a two-dimensional plane.

#### X25-B01C1

#### Non-flexible elements

X25-B01C1A [1992]

**Panels** 

## X25-B01C1B [1992]

### Hotplate; Cooker hob

Covers all aspects of resistance heating in cookers, see X27-C02 also.

# X25-B01C1C [1992]

#### Windscreen heater, demister

Includes windscreen and wing mirror heaters. See also X22-J02A for vehicle windscreen demister.

[1992]

#### X25-B01C3

#### Flexible elements

(X25-B01C9)

Includes heating nets or webs.

# X25-B01C3A [1992]

#### **Electric blanket**

See X27-E02 also for electric blanket.

# X25-B01C3B [1992]

# **Under carpet, wall heating elements**

See X27-E01A3 also, for wall, carpet and underfloor heating.

#### X25-B01C3C [1992]

#### Pads, seats

See X22-J02 and X22-J03 also for vehicle seat. See X27-E02 also for domestic application. See X27-A also for domestic seat application.

Mattress

#### X25-B01C9

# Other plate heaters

Foils

#### X25-B01D

# Rod or tube elements

Also includes heating cables.

Electric bar heater

#### X25-B01E

# With granular, powdered or fluid current path, furnace elements

# X25-B01E1 [1992]

### **Furnace elements**

See X25-C01 also for ohmic resistance furnace.

# X25-B01E2 [1992]

# Water, immersion heaters

See X27-E03A also for domestic water heating.

#### X25-B01F [2005]

#### **Positive Temperature Coefficient heaters**

PTC, self regulating

X25-B01H

Infrared heaters (includes lamps)

[1992]

Halogen, IR

X25-B01H1 [1992]

Cooking apparatus

See also X27-C02A for cooker.

X25-B01H3 [1992]

**Industrial applications** 

Includes dryers, etc.

X25-B02

Electric-, magnetic- or electromagneticfield heating

Laser heating

X25-B02A

**Induction heating** 

Power supply, control

X25-B02A1 [1983]

**Inductors** 

See X12-C also.

Coils

X25-B02A2 [1992]

Cooking appliances

See also X27-C06 for induction cooker.

X25-B02B

Microwave heating

Details of microwave power tubes per se are in V05, waveguide devices in general in W02-A. Includes circuits, feed lines, waveguides, mode stirrers and door seals.

Control, antenna, magnetrons, chambers

X25-B02B1 [1992]

Cooking; Oven

Aspects of cooking vessels are only in X27-C01. Microwave oven, chambers, magnetrons, antenna, control

X25-B02B3 [1992]

Industrial scale heating; Drying

For large scale food processing etc. see X25-P01 and X27-C also, for drying see X25-G also.

X25-B02D [1992]

Dielectric heating

Includes radio frequency (RF) heating where alternating electric field causes molecules to repeatedly align with field creating heat similar to friction.

X25-B02F [2011]

Thermoelectric/Solid state heating

(X25-B)

Includes thermoelectric heating using an applied voltage to cause a temperature difference across the thermoelectric module, e.g. a sandwich formed from two ceramic plates with N and P type bismuth telluride in between. Charge carriers, i.e. electrons and positive holes absorb heat on one side of the thermoelectric module and transport it to the other side where it is used for heating. See X27-F02B1 for thermoelectric cooling.

Peltier heater, thermoelectric heat pump, solid state

X25-B02X

Other electric-, magnetic- or electromagnetic-field heating aspects

Includes electron beam heating, etc.

X25-B03

**Electric discharge heating** 

X25-B03A

**Electrodes or electrode arrangements** 

X25-B03B

Arc discharge or glow discharge

X25-B03X

Other electric discharge heating aspects

Includes power control, power supplies.

X25-B04

Automatic switching for heating equipment

Control, thermostats

X25-C

Industrial furnaces

Elements for the various heater types are in X25-B. Other details are coded in relevant places in X25-C. Incinerators for industrial waste disposal are also coded under X25-W01A. Mechanical details of general solid waste disposal are coded by P43-E codes.

Cremation

#### X25-C01

#### Ohmic resistance

Resistance element, temp control, power supply, charging/discharging, crucible, hearth

#### X25-C02

# **Electric discharge**

Includes arc furnaces.

Electrode, power supply, crucible, hearth

#### X25-C03

#### Monitoring, control

#### X25-C05 [1992]

#### Induction furnace

(X25-C09)

Zone melting, coreless, core-type, coil

#### X25-C07

#### **Gas Furnaces**

Includes electrical aspects of gas furnaces. Electrode, power supply, crucible, hearth

#### X25-C09

#### Other industrial furnaces

# X25-D

# Soil-shifting; Mining

# X25-D01 [1983]

# Soil shifting, excavators

Includes fuzes and blasting using explosives (see W07-C codes for military applications). See T06-D08E also, for control details.

Dredger, bulldozer

# X25-D02

# Mining

Covers rock or ground testing (see also specific S03 codes e.g. S03-E14E which includes investigation methods of soil, rock etc.). Use T06-D11 also, for control details.

Dust removal, roof condition monitor, rock hardness testing, powered support, quarries, miner's helmets, blasting, detonator, mineshaft ventilation

# X25-D02A [1983]

#### Handling material, e.g. lift, conveyor

See also X25-F.

Vehicles, mine locomotives

# X25-D02B [1983]

#### **Tools**

Shears, drills, picks, cutters

#### X25-D02C [1992]

# Intrinsically safe power supply/equipment; Testing

#### X25-E [2020]

#### Earth-drilling, well logging

Also includes pumping and heating to aid oil recovery. Control details see T06-D12 also. Also see H01-A, H01-B and H01-C codes respectively for well logging, drilling and producing.

Cables, connectors

# X25-E01 [1983]

# **Drilling equipment**

Covers large-scale deep-well drilling e.g. oil, gas, water, etc. For drilling in the construction industry, see X25-U, and for drills used in the mining industry, see X25-D02B.

# X25-E02 [1983]

#### Well logging

Geophysical prospecting in general is in S03-C.

# X25-E02A [1992]

#### Measuring arrangements

Sondes, sampling, penetration depth, measuring, testing, surveying

#### X25-E02A1 [1992]

#### **Transmission details**

See appropriate W05-D codes for transmission details.

#### X25-E03 [2006]

# Well production; Extraction of oil, gas, water, etc.

Includes pumping assemblies. Also see X25-L03A for novel electric pumps per se.

# X25-F

# Conveying, lifting, hauling, handling materials

Includes filling materials, labelling, tagging, e.g. electronic tagging using e.g. radio frequency ID tags to track goods/items during conveyance (see also W06-A04B5 and W02-G05 codes), etc. General control details are also coded in T06-D08 as appropriate.

Tagging machines, weighing

# X25-F01 [1983]

#### Conveyors

Includes vibratory feeders and detecting articles on conveyor.

Belts, transporting goods, shelving and retrieving, locating, addressing

# X25-F01A [1983]

#### Conveyor control

See also T06-D08C for control.

#### X25-F02 [1983]

# Web/strip/coil handling

See T06-D08A also for control details dealing with web-advancing apparatus, and T06-D08B also for control of article feeding or tension regulation.

Rolls, sheets, tension-control, filaments, winding, coiling, wrapping, tension control

#### X25-F02A [1992]

Paper or envelope handling

X25-F03 [1983]

Packing; Dispensers

#### X25-F03A [1987]

# Packing; Bottling; Packages; Labelling/tagging

Includes all electrical details of packaging plant and methods as well as electrical details of packages/bottles per se. For packaging of TV receivers, AV equipment or electronic components in general, see W03-A19C, W03-G10G and V04-X01A respectively. From 2012, mechanical details of packaging processes and equipment are coded under Q31, details of container/closure and transit packaging under Q32, details of packaging container and closure materials under Q33, and the types of goods packages, bottled, labelled, etc, under Q34

# X25-F03A1 [2011]

### Packing/Bottling plant and methods

Includes methods for filling and sealing packages as well as bottling and tinning plants. Also see other X25 and X27 codes as according to what is being packaged, e.g. see also X25-P01X for canning food, X25-P01C for bottling milk and X27-A02 for packaging beauty treatments. Also includes unpacking and bundling details.

Wrapping, stapling, stapler, canning, filling

# X25-F03A3 [2011]

# Electrical aspects of packaging; Smart packages; Labels and tags

Includes electrical details of packages/bottles per se such as packages with built in sensors, displays, expiry or deterioration indicators or tags. See X25-F11 and T05-G02 for systems for tracking of packages or goods being shipped. If the package is intended for a specific use, also see other X25 and X27 codes as appropriate, e.g. X25-P01X for food, X25-P01C for milk and X27-A02C for packages for stationery.

Carton, box, bottle, pouch, lid, sensor, display

# X25-F03A3A [2011]

## **Smart packages**

Includes packages/bottles containing smart devices such as RFID tags or electric time-temperature or food quality indicators. Novel aspects of tags and labels are also assigned X25-F03A3C. Also see T04-K and W02-G05 for novel transponders/labels attached to package, and X25-F11 and T05-G02 for systems for tracking of packages or goods being shipped. If the package is intended for a specific use, also see other X25 and X27 codes as appropriate, e.g. X25-P01X for food, X25-P01C for milk and X27-A02C for packages for stationary. See X27-F05 for intelligent refrigerators that monitor smart food items.

Sensor, alarm, warning, display

# X25-F03A3C [2011]

#### Labels and tags

(X25-F08)

Includes novel labels or tags applied to smart packages for which X25-F03A3A is also assigned. Also includes methods and systems for the attachment of labels or tags to goods, or the printing of a label on a package (also see S06-G codes for printing using inkjet technology). Also see T04-K and W06-A04B5 codes for labelling/tagging using a smart or RFID tag/label and also W02-G05 codes when novel RF details are involved, such as receiver or transmitter circuitry or antennae. See T03-H02A codes for labelling of record carriers such as CDs or cassettes. Productidentifying tags providing electronic article surveillance (EAS) capability are also assigned W05-B01A2 codes depending on the technology use. Also see X25-F11 for tracking of tagged/labelled goods and X25-F07 for automated warehousing utilising tagged goods.

Bar code, smart label, transponder, RF-ID, transponder, passive tag, battery-assisted passive tag, BAP, active tag

# X25-F03B [1992]

#### **Dispensers**

Dispensing measured volumes in general is covered by S02-C04 codes.

Stamps

# X25-F03B1 [1992]

#### **Dispensers for comestibles**

Includes vending machines for food/drink etc, see relevant T05-H codes also. See X27-X for stock control in pub e.g. optics etc.

Beer, water, dispensing

### X25-F03B2

### **Forecourt dispensers**

Includes petrol pump, air dispenser in garage for vehicle tyres, etc.

[1992]

# X25-F04 [1983]

#### Lifts

Includes details of passengers lifts and goods lifts. Electrical details of doors are also coded under X25-U01.

Elevators, floor indicators, door operation, escalators

# X25-F04A [1983]

#### **Control**

See also T06-D08D for control details. Floor-call, speed/acceleration control, motor control, dispatching

### X25-F05 [1983]

#### Cranes, hoists, winches, trucks

Includes lifting magnets, cable car, jack, ski lift, vehicle mounted equipment (see X22-also). For control details see T06-D08E also. Details of passengers lifts and goods lifts are included under X25-F04.

# X25-F05A [1987]

# Trucks, goods or robotic vehicles

Includes IC engine and electric forklift trucks, vehicles mounted with lifting platform (also see X22-X18 or Q15-A codes), and walk behind trucks (also see X22-P05F or X21-A01B for IC engine and electric fork lifts respectively). See T06-D08F for forklift control. See Q19-C06 instead for mechanical aspects of forklift trucks. Also includes walking robots and electrical aspects of shopping trolleys such as electric drive arrangements and advertising displays/bar-code readers. See Q22-A02 for mechanical aspects of trolleys and Q38-B for mechanical details of trucks and robotic vehicles.

Fork lift, walking robot, electric shopping trolley, climbing robot, inspection robots, autonomous,

# X25-F05A1 [1987]

# **Running on tracks**

Includes robotic vehicles/trucks running on tracks or following painted lines on factory floor using e.g. optical sensors or image processing (see also T01-J10B/T04-D codes). See also T06-B01A and T06-D08F for 2D position control of goods conveying vehicles.

Factory automation vehicles, automatic guided vehicle, AGV

# X25-F06 [1987]

#### Sorting

(X25-F)

See also X25-W04 for recycling, and T05-K.

#### X25-F07 [2002]

#### Automated warehousing

Includes shelving and retrieving arrangements. See also T06-D08 for control, X25-F01 for conveyors, X25-F05A for conveying trucks and X25-F03A3C for warehousing of tagged goods. Electrical details of manipulators used to grab goods are also coded under X25-A03E.

Three dimensional warehouse, stereoscopic warehouse, intelligent warehouse

## X25-F08\*

[2002-2010]

#### Labelling/Tagging

\*This code is now discontinued and transferred to X25-F03A3C but remains searchable and valid for codes from 2002-2010. Includes details of the actual attachment of the label or tag to the item, or printing of the label on the item (also see S06-G codes for printing using inkjet technology). See X25-F03A codes if the labelling/tagging is part of the packing/bottling arrangement, and X25-F11 for goods tracking arrangements. See also T04-K, W06-A04B5 and possibly W02-G05 codes for labelling/tagging using a smart or RFID tag/label. See T03-H02A codes for labelling of record carriers such as CDs or cassettes.

# X25-F09

[2007]

#### **Inventory/Stock management**

Includes inventory management and monitoring of materials/articles being removed/replaced from storage area. See T01-J05A2 for non-networked inventory monitoring or T01-N01A2 for network, e.g. Internet, based systems.

Stock control

#### X25-F11

[2007]

# **Goods tracking**

Includes arrangements for monitoring location of goods containers or individual articles being moved. For use of radio transponders attached to goods, also see X25-F03A3C and T04-K03B for transponder tags/labels and T04-K02 for reading and writing aspects. See also T01-N01A2E for Internet based tracking. Novel RF details of transponder tags/interrogation are also covered by W02-G05 codes and W06-A04B5 codes cover RF transponder identification. See W05-B01A2 codes instead for theft alarms triggered by transponder tags.

# X25-F12 [2016]

# **Delivery methods and equipment**

Includes use of drones to deliver articles in remote or difficult locations (also see W04-X03E1M and W06-B15U for unmanned aerial vehicles used for commercial/industrial application). Also see S02-B04 for aerial photographic surveying and W07-F04 for aerial reconnaissance.

Delivery, drop, package, post, supplies, logistics, quadcopter, rotorcraft

#### X25-G

# **Drying**

See T06-D20 for control details also.

Heater control, air flow control, microwave heaters, infrared heaters, electric heaters

#### X25-H

# Separating materials, cleaning, sterilizing

#### X25-H01

## **Magnetic separation**

Coils, electromagnets

#### X25-H02

**Electrostatic separation** 

#### X25-H02A

From gases or vapour

#### X25-H02A1

#### Plant or installations

Electrostatic precipitation, power supply, controllers

#### X25-H02A2

**Constructional details** 

#### X25-H02B

From liquids or solids

# X25-H03

[1983]

## Water and sewage treatment

(X25-H09)

Includes water distillation, water sterilization e.g. using ultraviolet radiation, desalination plant, aerator, swimming pool cleaning (see X25-X06 also). Water recycling is also coded under X25-W04.

#### X25-H04

# **Ground/soil decontamination**

Includes cleaning of contaminated soil, e.g. from pollution by petroleum or heavy metal spills.

#### X25-H05

[2006]

[2006]

# **Industrial workspace cleaning**

Includes e.g. vacuum systems for dust extraction or removing swarf etc. during machining of materials. Can be used in conjunction with X25-A codes as appropriate. See X27-E01B only for general airconditioning of industrial work spaces.

Vacuum, dust, extraction

#### X25-H06

[2011]

# **Mechanical separation**

Includes separation by mechanical means such as centrifugal separators and separation by floatation.

#### X25-H09

# Other material separation and cleaning aspects

Includes electrodialysis, dry cleaning plant (see X27-D09 for domestic scale dry cleaning), general disinfection and sterilization, etc. From 2011, separation by floatation is coded in X25-H06. Details of industrial laundry equipment are also coded under X25-T05.

Fractional distillation, general cleaning

#### X25-H09A

[2002]

#### Ultrasonic cleaning

Includes ultrasonic bath and ultrasonic sterilizers. See X27-D07A for domestic ultrasonic mixed mode cleaning.

#### X25-H09C

[2002]

#### Vehicle washer

Includes electrical aspects of vehicle washing equipment.

Car wash

#### X25-J

# Mixing, crushing

Includes centrifuges, magnetic mixing, ore crusher. See T06-D04 for control details. Includes large scale shredders. Small size shredders, e.g. used in offices to shred confidential documents, are coded under X27-A02C only.

Pulverising, grinding, milling, ball mills, cyclone

### X25-K

# Spraying and coating equipment

# X25-K01

**Electrostatic spraying equipment** 

X25-K05

[1987]

# **Coating equipment**

#### X25-K09

# Other spraying and coating equipment

Includes atomisers.

# X25-L

#### Components

Includes novel electrical components per se, and mechanical parts of these components, e.g. a mechanical impeller used in an electric pump. To be coded in the X25-L section, the electrical components themselves need to be novel. Therefore, a novel electrohydraulic system using off-the-shelf solenoid valves will be coded in X25-L09 but X25-L01A will not be applied as well since the valves are not novel. Motor vehicle applications are excluded from this section - See X22 instead.

#### X25-L01

#### **Valves**

Includes electro hydraulic valves.

Motorised valves, electric actuators, position

monitor, fluid-pressure actuator (electrical)

# X25-L01A [1983]

#### **Electromagnetic**

Details of electromagnets are in V02-E. *Solenoids, control, coils* 

#### X25-L02

### Electric brakes, clutches, gears

Electromagnets, EM coupling, transmission

### X25-L03 [1983]

# **Pumps, compressors**

(X25-L09)

Electrically-driven, controllers

# X25-L03A [1992]

**Pumps** 

#### X25-L03B [1992]

### Compressors

See X27-F02C1 for compressor used in refrigeration.

### X25-L04 [1983]

# Blowers, fans

(X25-L09)

Electrically-driven, controllers

# X25-L05 [1987]

#### **Vibrators**

(X25-L09)

Electromagnetic, motorised, coils, electrodynamic

# X25-L06 [1987]

#### Seals, magnetic bearings

(X25-L09)

Magnetic seals

# X25-L07 [1987]

# Heat exchangers, heat pipes

(X25-X)

Includes heat exchanger comprising built-in electric resistance heater to supplement heat exchange or solenoid flow control valve.

# X25-L09

#### Other electrical components

Includes shock absorbers, electroviscous actuators, etc. Electrohydraulic valves are coded under X25-L01 only. Novel details of electrohydraulic systems other than valves are coded under X25-L09.

Dampers, electrorheological fluid

#### X25-M

#### Locks

Alarm systems are in W05-B. See also T04-A and T05-D for card readers and access control systems, respectively.

Keys, alarms

# X25-M01 [1983]

#### **Electronic**

Codes, keyboard-operated, magnetic card, memory

# X25-M02 [1983]

#### **Electric/magnetic**

Electromagnets, solenoids, slides, bars, coil, bolts

#### X25-N

# **Agriculture**

#### X25-N01 [1983]

#### **Arable**

Includes insecticide spraying, bird scarers, greenhouse. See also X25-X02 for vermin/insect extermination. Also includes details of rice polishing/milling and flour polishing/milling (see also X25-P01X for general food processing).

Seed treatment, grain silos, ventilation, parasite/vermin extermination, agricultural produce grading/sorting, hay baling, weeding

# X25-N01A [1983]

#### Soil working, sowing, harvesting

Includes tractors. For control see T06-D01A. From 2015, mechanical details of soil working and planting are coded under P11, and mechanical details of harvesting are coded under P12.

Ploughs, depth control, combine harvesters, threshers

# X25-N01B [1987]

# Fertilising; Irrigating; Culture

See T06-D01B for control details. Includes rain influencing systems for agricultural reasons (see also X25-X20 code).

Sprinklers

# X25-N02 [1983]

#### Livestock

Includes branding, bee-keeping, egg incubator, horse training (see W04-X01 also). For control details see T06-D01C also.

Poultry-, cattle-, fish-farming, trawler fishing gear, eggs grading

# X25-N02A [1987]

### Feeding and drinking

Also includes manufacture of animal feed (also coded under X25-P01X).

Automatic feeders, dispensers, compound feed

# X25-N02B [1987]

#### Milking

See also X25-P01C for milk processing, and X25-F03A for milk bottling.

Milking control, metering, monitoring

# X25-N02C [1987]

#### **Housing; Fencing**

Includes heating and air conditioning. For electric fence see X25-X11 also.

# X25-P

# Foodstuff industry, tobacco, pharmaceuticals

#### X25-P01 [1983]

#### **Bulk food processing**

See T06-D02 for control details also.

Industrial cooking, bread baking, food sorting

# X25-P01A [2002]

# Industrial cooking/baking equipment

Includes industrial scale food processing such as mixing bread dough and kneading, and also industrial cooking/baking systems such as large scale ovens. For domestic cooking/baking see X27-C codes instead.

# X25-P01B [2002]

# Industrial beer brewing/alcoholic beverage production equipment

Includes electrical aspects of large scale beer or wine making equipment, and - since 2006 - this code also covers electrical details of equipment for producing all type of alcoholic beverages, including spirits, etc. See X27-X02 only for small scale domestic brewing/wine making. Also includes packaging/bottling of beverages. See also X25-F03A1 for bottling.

Distillery, winery

# X25-P01C [2002]

# Milk processing

Includes pasteurisation. See X25-N02B for milking control, metering and monitoring for livestock. See X25-F03A for bottling of milk.

# X25-P01X [2002]

### **General food processing**

Includes meat slicing, food packing/canning (also see X25-F03A for food packing/tinning). Also includes food/packaging sterilization/disinfection e.g. using mechanical cleaning, chemicals, heat, radiation or electricity. See e.g. X27-D10 for general domestic scale sterilizing/disinfecting. Also includes details for milling and polishing rice or other seeds, manufacturing of animal feed, and 3D printed food. Details of 3D printing are also included under X25-A08M4 and X25-A08U7. Manufacturing of animal feed is also coded under X25-N02A.

Packing, canning, tinning, sterilising, UV, microwave, ultrasonic, plasma, flour/rice polishing/milling, oil pressing

#### X25-P02 [1987]

#### **Pharmaceuticals**

For control details see T06-D02A also.

# X25-P03 [1997]

# **Tobacco**

(X25-P)

Cigarette manufacture, perforating filter paper, cigarette packing

#### X25-Q

# **Metallurgic processes**

For control details see T06-D09 also. For industrial furnaces per se, see X25-C. Also includes electrical details of powder metallurgy process (see also M22-H).

# X25-Q01 [1983]

#### Iron and steel manufacture

Furnace control, arc furnaces, blast furnaces, cupola

# X25-Q02 [1983]

#### Heat treatment, cold working, etc.

Annealing, quenching, hardening, tempering

#### X25-R

# Electrolysis, electrophoresis

#### X25-R01

#### For production of non-metals

**Terminals** 

#### X25-R01A

**Cells** 

#### X25-R01B

### **Electrodes**

Anodes, cathodes

#### X25-R01C

### **Separators**

Membranes, ion exchange separators, diaphragms

#### X25-R01D

**Control** 

#### X25-R02

#### For metal refining, etc.

Cells, electrowinning, baths

# X25-R03

# **Electroforming**

#### X25-R04

### **Electroplating**

Does **not** include electroless (e.g. nickel) plating via a chemical reduction process without use of electrical energy (see M13-B codes instead).

Electrodeposition

#### X25-R04A

#### Cells

Electrodes

#### X25-R04B

#### **Control**

Current control, measurements, monitoring

#### X25-R05

### **Anodising**

Coating

#### X25-R06

# Electrolytic cleaning, etching, polishing; Sacrificial anodes

Corrosion protection, cathodic protection

#### X25-R07

[1983]

# **Electrophoretic coating**

Includes anodic and cathodic coating of electrode with non-conductive organic coating, where colloidal particles suspended in a liquid medium migrate under the influence of an electric field and are deposited onto the electrode.

Electropainting, E-coating, electrocoating, EP

### X25-S

# Static electricity prevention

Includes lightning rods (see also X12-G) and materials.

Antistatic coatings, discharging

#### X25-S01

[1992]

# Clean room; Computer installation

See also T04-L08 when used with computer installations e.g. data centers, and U11-C15 when the clean room is used during semiconductor manufacturing.

# X25-T

[1983]

#### **Textile and paper industries**

(X25-X)

# X25-T01\*

[1983-2005]

#### Fiber, yarn, etc. manufacture

(X25-X)

\*This code is now discontinued and transferred to X25-T04A from 2006. It is still searchable and remains valid for records from 1983-2005. See T06-D03B for control details also.

Spinning, winding, bobbins, twisting, combing, carding, crimping

#### X25-T02\*

[1983-2005]

#### Fabric manufacture

(X25-X)

\*This code is now discontinued and transferred to X25-T04B from 2006. It is still searchable and remains valid for records from 1983-2005. From 2006 embroidery machines have been transferred to X25-T04C. See T06-D03C for control details also.

Knitting machines, tension-control, embroider, looms, wefting machines, warping machines

#### X25-T03\*

[1983-2005]

# **Sewing machines**

(X25-X)

\*This code is now discontinued and transferred to X25-T04C from 2006. It is still searchable and remains valid for records from 1983-2005. See T06-D03D for control details also.

# X25-T04

[2006]

# **Textile industry**

Bleaching, binding

#### X25-T04A

[2006]

#### Fiber, yarn, etc. manufacture

See T06-D03B also for control details.

Spinning, winding, bobbins, twisting, combing, carding, crimping

# X25-T04B

[2006]

# **Fabric manufacture**

See T06-D03C also for control details. Tension-control

#### X25-T04B1

[2006]

# Weaving machines

Looms, wefting, warping machines, tension-control

# X25-T04B2

[2006]

#### **Knitting machines**

Weft knitting

# X25-T04B3

[2006]

# Non-woven fabric production machines

Includes production of non-woven fabrics such as wadding, felt or fleece, and the production of fabrics, e.g. by welding together thermoplastic fibers (see also X24-D04).

Cotton wool

#### X25-T04C [2006]

# Sewing machines; Embroidery machines

See T06-D03D also for control details of sewing and embroidery machines.

Sew. embroider

#### X25-T04D [2007]

# **Textile printing; Textile dyeing**

See also S06-G10 if using inkjet printing. See also F03-F codes for dyeing/printing.

#### X25-T04G [2006]

# Other textile industry aspects

Includes industrial scale fabric pressing/ironing, fabric cutting, industrial electric scissors etc.

#### X25-T05 [2017]

# **Industrial laundry equipment**

Includes commercial and industrial laundry washing and drving equipment. Also includes industrial dry-cleaning plants (see also X25-H09), laundry feeders (see also X25-F01), folders, industrial ironing equipment, stackers and garment baggers (see also X25-F03A).

Drying details are also coded under X25-G, and cleaning details are also coded under X25-H codes. Domestic scale laundry washing and drying equipment is coded under X27-D only.

Batch dryer, washer extractor, batch washing system

#### X25-T09 [1987]

#### Paper industry

(X25-X)

See T06-D03A also for control details.

#### X25-T09A [2002]

Paper manufacture

X25-T09B [2002]

Cardboard manufacture

#### X25-T09C [2002]

# Paper shredding/cutting

See X27-A02C also for domestic size shredder and business equipment.

#### X25-T09G [2002]

# Other paper industry aspects

See also X25-W04 for paper recycling, X25-A02A for paper press, and X25-F02A only for paper and envelope handling. Includes book binding (see also S06-C05).

Binding, printing

#### X25-U [1983]

#### **Building, construction industry**

(X25-X)

Concrete mixers, pile-drivers, stone cutters

#### X25-U01 [1983]

#### **Doors and windows**

(X25-X)

Includes gates, skylights, Also includes lift doors. Lift doors are also coded under X25-F04.

Doors control, drive motors, garage door, road barrier, electrochromic covering

#### X25-U02 [1997]

# Car Parks; Car storage and retrieval (X25-X)

#### X25-U05 [1987]

# Road construction; Road maintenance e.g. road cleaning, gritting

Includes electrical details of road tunnels, e.g. ventilation system. Also includes monitoring of road condition, e.g. damage of road surface. If road condition is transmitted to the driver of a vehicle. T07-G02 should also be applied. If the monitoring system is mounted on the vehicle, see X22 only. De-icing, snow ploughs

#### X25-V [1987]

# Cryogenics

(X25-X)

Includes electrical aspects of cryogenics producing very low temperatures (i.e. below -150 degrees Celsius).

#### X25-W [1997]

# Industrial waste disposal, recycling; **Electric steam boilers**

(X25-X)

#### X25-W01 [1997]

#### **Industrial waste disposal**

(X25-X)

Includes details of large scale garbage disposal control systems and large non-domestic bins. Domestic waste disposal, such as kitchen waste disposal units and electrical rubbish bins, are coded under X27-K only. Recycling processes/systems are coded under X25-W04 only. Does not include radioactive waste disposal (see K07-B or X14-D).

### X25-W01A [2002]

#### **Incinerators**

Electrical details of furnaces are coded under X25-C.

# X25-W02 [1997]

#### **Electric steam boilers**

(X25-X)

# X25-W04 [2002]

# **Recycling processes/systems**

Includes recycling processes for plastics, paper and aluminium, as well as retrieval and sorting of waste for recycling. See also X25-F06 for sorting, and X25-T09 for paper industry. For recycling of copier and printer components also see S06-K04C. Water recycling is also coded under X25-H03.

# X25-X

# Other

Includes fume cupboard, ventilators etc. For riveting see X25-A03R.

# X25-X01 [2002]

# **Timber industry**

Includes tree felling and transporting equipment, wood drying (see X25-G also) and sawing of lumber. For wood working such as wood turning, see X25-A10 instead.

# X25-X02 [2002]

# Vermin/insect extermination, repulsion or trapping

Includes devices for killing, trapping and deterring/scaring pests such as rats or flies. See X27-X for domestic insecticide dispenser, and X25-N01 for arable insecticide spraying.

# X25-X03 [2002]

# Killing and stunning of animals

Includes abattoirs (see also X25-N02 for livestock animals). Also includes animal deterrent/repulsion systems, e.g. for preventing wild animals from straying into specific area. Also see X25-N02 for deterring livestock and X25-X11 for electric fences per se. For vermin/insect deterrent systems see X25-X02 instead.

Abattoir, stun

# X25-X04 [2002]

#### Ozone manufacture

Also see X27-E01B2 for air-conditioning, and X12-E03

# X25-X05 [2002]

# Fire fighting equipment

Includes details of early fire warning systems e.g. in buildings. W05-B02 codes are also assigned for fire alarms. Mechanical details of fire fighting equipment are coded by P35-C codes.

Sprinklers, fire extinguishers

# X25-X06 [2002]

# **Swimming pools**

Includes electrically operated covers, lights, heaters, etc. See X26 for lighting and X27-E03/X25-B for electric water heating.

# X25-X07 [2002]

# Leather working/cutting

See X27-A02B1B also for footwear manufacture.

# X25-X08 [2002]

## Stirling engines

Includes engines used in refrigeration systems. See X27-F for refrigeration.

#### X25-X09 [2002]

Lubricating systems

# X25-X10 [2002]

### **Engraving systems**

Includes engraving using mechanical means as well as laser marking. Also includes stamping. See X25-A02D for punching/stamping.

Laser coding

# X25-X11 [2002]

# **Electric fence**

See also X25-N02C for livestock fencing.

# X25-X12 [2002]

#### **General industrial safety systems**

Used in conjunction with other X25 codes as appropriate.

# X25-X13 [2005]

#### Industrial combustion

Includes boilers using solid, liquid or gaseous fuels and involving electrical aspects. Domestic scale combustion, e.g. central heating gas boiler, is not included - see X27-G.

# X25-X14 [2005]

# Manufacturing/assembly plants

Includes assembly line systems and general manufacturing plants. For novel assembly/manufacturing devices, such as manipulators or conveyors, see X25-A03E and X25-F01, respectively. Control details of manufacturing processes using 5G technology are also covered by W02-C03C1L.

Industry 4.0, vehicle assembly line, car manufacturing plant

# X25-X20 [2008]

#### Weather influencing/manipulation

Includes all electrical aspects of systems for controlling weather conditions such as using artificial lightning to produce rain or disperse clouds. Also includes electrical aspects associated with dispersing materials for cloud seeding. For measurement of weather conditions see S03-D codes. See W06-B01C9 for aircraft-mounted weather influencing systems, and X25-N01B if rain is being influenced for agricultural reasons.

X25-Y [1997]

**Pipelines** 

X25-Y01\* [1997-2004]

## **Toilets**

\*This code is now discontinued and transferred to X27-L from 2005. It is still searchable and remains valid for records from 1997-2004. Public and domestic toilets and urinals. Includes toilets with integral bidets (see also X27-A02A).

# X25-Y02 [1997]

# **Pipelines**

Includes flow control valves, sensors and other electrical components, e.g. for large scale oil, sewage and water pipes. See also X25-L01 for valves per se, and X25-H03 for water and sewage treatment.

# X26: Lighting

NOTES:

(1) Also includes illumination obtained by unconventional sources like LED, EL devices. However, such devices used for displays and signalling are not included.

(2) Vehicle lamp circuitry / control and mounting arrangements onto vehicle body are coded in X22 only. X26 codes are applied to highlight the type of lamp (e.g. LED, incandescent, etc.), or novel details of fixtures (e.g. lenses, refractors, etc.).

#### X26-A

# Discharge (including arc) lamps

Discharge tubes for purposes other than lighting are in V05.

X26-A01

Lamps

X26-A01A

# Multi-discharge path, arc, electron-stream and external electrode lamps

Xenon lamp

X26-A01B [1987]

#### Electrode-less, microwave lamps

(X26-A01X)

Waveguides, antennae, EM coils, field generation, inductive coupling, travelling wave discharge, microwave discharge, capacitive discharge, sulphur lamp

# X26-A01B1 [2008]

# Plasma lamps

Includes electrode-less lamps using plasma discharge.

X26-A01C [1997]

# Dielectric barrier discharge lamps

(X26-A01X)

X26-A01D [2002]

#### High pressure discharge lamps

Covers metal halide, sodium vapour, etc lamps. *HID, high intensity discharge* 

# X26-A01E [2002]

#### Low pressure discharge lamps

Covers mercury, sodium, etc lamps operating at fractional pressures. Low pressure electrodeless and fluorescent lamps are in X26-A01B and X26-A01E1, respectively.

Deuterium arc lamp

X26-A01E1 [2002]

**Fluorescent lamps** 

X26-A01X

Other discharge lamps

X26-A02

Construction

X26-A02A

**Containers; Seals** 

Includes end caps.

X26-A02A1 [1987]

# Seals; Leading-in conductors

Leads, cement, cermet seals

X26-A02A2 [1992]

**Containers** 

Bulb, envelope, chamber, tube

X26-A02A2A [2002]

Inner envelope

X26-A02A2B [2002]

Outer envelope

X26-A02B

Electrodes, shields, screens

X26-A02C

**Fillings** 

Metal halides, mercury, sodium, iodides

# X26-A02D

#### Filters, phosphors

Fluorescent coatings, luminescent coatings

[2002]

#### X26-A02E

Inductor or HF coil (X26-A02X)

Includes coil and toroidal core for operating electrodeless lamp. Coil arrangements, e.g. for impedance matching, are also covered by the

relevant V02-F and U25 codes.

# X26-A02F [2005]

# Integral light source and reflector

For reflectors as part of a light fixture, see X26-D01A.

#### X26-A02G [2005]

# Integral operating circuit/envelope

Includes constructional details of the combination. Electrical details of the operating circuits are covered by X26-C01 codes.

#### X26-A02X

# Other discharge lamp constructional details

Includes pressure maintenance, gettering, tubeshatter prevention, cooling, etc.

Amalgams

#### X26-A03

#### Manufacture

Also includes testing, phosphor recovery, packaging, etc.

X26-A03A [1992]

Welding end caps

X26-A03B [1992]

Container

Includes coating of films.

X26-A03C [1992]

**Electrodes** 

#### X26-B

#### **Incandescent lamps**

# X26-B01

#### Lamps

Includes photo-flash bulbs (see also S06-B03B). *Photoflash arrays, primers* 

X26-B01A [2005]

#### **Halogen lamps**

Tungsten lamp

X26-B01B [2005]

# **Heating lamp**

See X25-B/X27-C codes, respectively, for industrial/cooking/heating applications.

#### X26-B02

#### Constructional details

#### X26-B02A

# Envelopes, seals, filament mountings, connections

# X26-B02A1 [1987]

#### **Envelopes, seals**

Includes end caps, filters e.g. coated onto the inside of the envelope.

Bulbs

### X26-B02A2 [1987]

# Filament mountings, connections

Also includes lead wires, lead-in conductors.

# X26-B02A3 [2005]

**Filaments** 

(X26-B02X)

# X26-B02B [2005]

# Integral light source and reflector

For reflectors as part of a light fixture, see X26-D01A.

#### X26-B02X

# Other incandescent lamp constructional details

Includes fillings, getters, etc.

#### X26-B03

# Manufacture

Also includes testing, packaging etc.

#### X26-B03A [1992]

**Incandescent bodies** 

X26-B03B [1992]

Vessels

# X26-C

# Lamp operation and control

Vehicle lamp circuitry and control are coded in X22-B01F only. LED circuitry and control are coded in X26-H03 only.

# X26-C01

#### Discharge (including arc) lamps

For unspecified lamp-type controllers, see X26-C03 codes.

#### X26-C01A

# **Operating and controlling flashlamps**

For camera flash see S06-B03A also. Strobes

#### X26-C01B

Lamp operating circuits; Starters

X26-C01B1 [1992]

# Inductive ballast; Inductive components; Starter switches

Includes normally non-electronic starting aids.

X26-C01B1A [2005]

Inductive ballast

Includes inductive starting circuit.

X26-C01B1C [2005]

# Inductive components

Includes novel inductors/transformers specifically for use in (non)electronic ballasts. See V02-G codes for further details for reactors and transformers.

X26-C01B2 [1992]

**Electronic ballast** 

Ignition circuit

X26-C01B2A [1992]

Inverters

See also U24-D05 codes for further details.

X26-C01B3 [1992]

# For electrodeless lamps

This lamp-type code is used with the above 'ballast' codes, as appropriate.

X26-C01B4 [2002]

# For high pressure discharge lamps

This lamp-type code is used with the above 'ballast' codes, as appropriate.

X26-C01B5 [2002]

# For low pressure discharge lamps

This lamp-type code is used with the above 'ballast' codes, as appropriate.

X26-C01B5A [2005]

Fluorescent lamp

CCFL, cold cathode fluorescent lamp

X26-C01C

**Controlling lamp intensity** 

Dimming

X26-C01D [2005]

#### Current/power/voltage control

For general low power control circuits for voltage and current. See also U24-D/E codes.

On-Off

X26-C01E [2005]

Remote control

See also W05-D codes for remote controllers.

#### X26-C01X

Other discharge lamp operation/control

#### X26-C02

# **Incandescent lamps**

For unspecified lamp-type controllers, see X26-C03 codes.

X26-C02A [2005]

**Halogen lamps** 

X26-C02B [2005]

#### **Heating lamp**

See X25-B/X27-C codes, respectively, for industrial/cooking/heating applications.

X26-C02C [2005]

#### Dimmer

See also W05-D codes for remote controllers.

#### X26-C03

### Lamps (general)

See also V04-Q30U and other V04-Q codes for details of printed circuits.

Transformers, wiring, PCB

### X26-C03A

Regulating voltage or current; Controlling intensity

X26-C03A1 [1992]

Regulating voltage or current

X26-C03A5 [1992]

#### Controlling intensity

Dimming

# X26-C03C [1992]

# Remote-controlled switching

(X26-C03X)

Includes all aspects of remotely controlling the light, including remotely adjusting the brightness (also coded in X26-C03A5) and remotely switching the light on/off (also coded in X26-C03E). See also W05-D codes. Also includes real-time monitoring of street lamps.

### X26-C03E [1992]

# **On-off switching**

(X26-C03X)

Includes use of person presence/absence detection.

#### X26-C03X

# Other general lamp circuit arrangements

Includes circuitry to detect lamp failure.

# X26-D [1983]

#### **Fixtures**

Arrangement details for supporting, suspending or attaching the light/lamp to e.g. a wall, ceiling, floor, etc, not involving details of light distribution are coded by X26-R. For vehicle lighting, see also X22-B codes.

# X26-D01 [1992]

# Reflectors, refractors, diffusers, filters, screens

Generally, includes items considered to be part of the light fitting structure. So, excludes optical systems that are at some distance from the light source.

X26-D01A	[2002]
Reflectors	

X26-D01B [2002]

Refractors

Lens

X26-D01C [2002]

**Filters** 

X26-D01D [2002]

**Screens** 

Gobo, "Goes-Before-Optics"

# X26-D01E [2002]

### **Diffusers**

A diffuser in the form of a cover for a light fitting is also coded in X26-D03.

# X26-D01E1 [2002]

# For displays

Includes diffusers for back- and edge-lighting arrangements for displays (see also X26-U04A1 and X26-U04A2 respectively). See also W05-E05B codes (only for records prior to 2007) and U14-K01A codes, respectively, for general display and LCD back-lighting.

#### X26-D01F [2002]

# **Light guides**

Includes light guides such as a plate, glass block, optical fibre, etc. used locally within a light fitting. For guiding of light over some distance, see X26-G. Where the light guiding aspect relates to the backlighting of an LCD, see also U14-K01A and W05-E05B (only for records prior to 2007) codes.

X26-D01G [2002]

**Polarisers** 

X26-D02 [1992]

#### Cooling

For cooling arrangements associated with the lamp itself, see X26-A02X and X26-B02X.

#### X26-D03 [2002]

# Housing or case for light fitting

Includes protective fittings such as a cage, etc. Also includes cover glasses, globes and bowls as part of the housing for the light fitting. This code is used in conjunction with other codes as appropriate, e.g. X26-D01E for a globe with diffusing property.

#### X26-E [1983]

#### **Portable lights**

(X26-X)

Includes lights which can be carried around personally or moved around.

X26-E01 [1987]

Portable battery-powered lights

X26-E01A [2005]

**Torches** *Flashlights* 

X26-E01A1 [2005]

LED-based

X26-E01B [2005]

Lanterns

X26-E01C [2005]

**Penlights** 

X26-E01D [2005]

**Key ring lights** 

X26-E01E [2005]

# Portable lights using renewable/green energy resources, e.g. solar lights

From 2006, this code has been expanded to include all small solar powered lights, such as garden/path lights, etc. From 2020, this code has been expanded further to include all portable lights using renewable/green energy resources, including wind powered lights or combinations of different green energy resources. Details of the solar cells are covered by X15-A codes and details of wind power are covered by X15-B codes. Nonportable lights using renewable/green energy resources are coded under X26-S.

# X26-E01F [2005]

#### Wearable

Includes portable lights mounted on clothing, shoes, jewellery, etc.

Watch, helmet mine lamp

X26-E02 [1987]
Portable mains-powered lights

X26-E02A [2005]

**Table lamps** 

X26-E02B [2005]

Floor lamps

X26-E02C [2005]

#### **Emergency**

Includes portable and fixed emergency lights, e.g. exit lights with batteries previously charged by the mains, and emergency lights in e.g. an operating theatre when the main power is off.

# X26-E02D [2005]

# **Night lights**

Includes light/mains plug combinations used in, say, children's rooms.

# X26-F [1987]

#### Lamp holders

(X26-A02X, X26-B02X)

See also V04-K01.

Bayonet, screw holder

# X26-G [1987]

# Illumination using optical guiding structures

(X26-X)

Includes, in general, the use of guides such as optical fibers, rods, etc in leading light from a source to a distant location. For light guiding structures within a light fitting or for 'local' use, see X26-D01F. For optical fiber-based illumination, see also V07-N03. Guiding of solar/sun light is not included unless a space is illuminated with a combination of natural and electric lights with, for example, the latter controlled to supplement or supplant natural light depending on ambient conditions.

# X26-H [1992]

#### **Light emitting diodes (LEDs)**

(X26-X)

Includes all LEDs only when used for illumination. OLEDs or organic LED-based lighting is covered by X26-J **only**.

#### X26-H01 [2008]

# LEDs; Details of P-N junctions and semiconductor structures

Includes semiconductor P-N junction type LEDs, per se, when used for illumination. See also U12-A01 codes for more details of the diodes.

#### X26-H02 [2009]

#### **Constructional details of LED lights**

Includes constructional details of LED lamps such as envelopes, lead wires, lead-in conductors, reflectors, etc. See also X26-D codes for cooling arrangements (X26-D02), reflectors (X26-D01A), housing (X26-D03), etc.

Leading-in conductor, seal

# X26-H03 [2008]

LED circuits/control

### X26-H03A [2011]

# **LED** circuits

Includes circuits for driving/operating LEDs. See also U12-A01A5 codes.

# X26-H03C [2011]

#### **LED** control

Includes voltage control, intensity control, remote switching, on/off control, etc. LED control is only coded here and does not need an X26-C03 code to be applied.

Dimming

# X26-J [1992]

# **Electroluminescent devices (EL)**

(X26-X)

Includes electroluminescent devices - such as OLEDs - and their circuits, when used for illumination. Does not includes EL/OLED (organic LED) displays. See also U14-J codes for all electroluminescent light sources and displays. Manufacture of electroluminescent light sources are not covered by X26 codes, but by U14-J codes only. LED-based lighting is covered by X26-H **only**.

#### X26-K

[1992]

# **Stage Lighting**

(X26-X)

Gobo, "Goes-Before-Optics"

### X26-L

[2002]

### Beam aiming arrangement

(X26-X)

Includes motorised movement of, for example, a reflector to vary beam direction. See X22-B01E also for vehicle applications. Also includes movement of the light, per se, as in stage lights, etc.

Searchlight positioning

# X26-M [2002]

#### Decorative or special-effects lighting

(X26-X)

Includes lighting for Christmas decorations, decorative light strings, etc. See also W04-X03C for novelties and ornamental lights, and X26-X for light strings.

# X26-N

[2002]

#### Laser

(X26-X)

Includes arrangement of lasers for illumination. See V08 codes for claimed details of lasers.

# X26-P

[2002]

#### **Shades**

(X26-X)

# X26-Q

[2008]

#### Lamps with non-visible output

Includes lamps that primarily produce illumination outside of the visible spectrum.

# X26-Q01 [2008]

# **IR lamps**

Includes all lamps that produce IR illumination, e.g. IR LEDS (see also X26-H codes) used for night vision/surveillance system illumination. Can be used in conjunction with other X26 codes as appropriate, such as X26-U03 for infrared lamps used for heating/curing. See also X25-B01H for infrared heating lamps, and X27-C02A for domestic cooking hobs using infrared lamps.

# X26-Q03 [2008]

# **UV lamps**

Includes all lamps that produce UV illumination, e.g. fluorescent back-lights (see also X26-A codes) and sun tan lamps (see also X26-U01).

Ultraviolet

#### X26-R [2010]

# Supporting/suspending arrangements for light fitting

(X26-X)

Includes arrangement details for supporting, suspending or attaching the light/lamp to e.g. a wall, ceiling, floor, inside a refrigerator, in a vehicle, etc. Includes wall, ceiling or floor attachments, lamp posts, clips, clamps, suction or magnetic attachments, details of pendants, hand grips, etc. Details of light distribution, e.g. reflectors, refractors, filters, polarisers, etc, are covered by X26-D codes.

# X26-S [2017]

# Lights using renewable/green energy resources, e.g. solar lights

Covers all kinds of non-portable lights powered by renewable/green energy, such as solar or wind powered lights, or combinations of different green energy resources. Portable lights using renewable/green energy resources are coded under X26-E01E. Details of solar panels are coded under X15-A, and details of wind power under X15-B.

#### X26-U [2005]

#### Lighting applications

To be used with other relevant X26 codes. See also appropriate classes e.g. S05 for medical applications.

### X26-U01 [2005]

#### Cosmetic

Includes lights for sun tanning, and (flashing) lights for toothbrushes, vanity/compact mirrors, etc. See also X27 codes.

#### X26-U02 [2005]

#### Medical

Includes lights used during treatment of acne, jaundice, psoriasis, etc., during photo-chemistry, colour and light therapies, in surgical instruments (e.g. endoscope), etc.

# X26-U03 [2005]

# Heating/curing, disinfection/sterilisation

Includes e.g. IR heat lamps or UV lamps used for curing adhesives or inks. Not used when X26-B01B/C02B are applied. See also X25-B01H for infrared heating lamps. Also includes disinfection and/or sterilisation using UV or IR light sources see also X27-D10.

#### X26-U04 [2005]

# Displays/signs

For back- and edge-lighting.

# X26-U04A [2007]

#### **Displays**

Includes light sources and fittings for lighting of displays. For LCDs see also U14-K01A codes, and T04-H03D if LCD is also for computer monitors.

#### X26-U04A1 [2007]

#### **Back-lighting**

See also U14-K01A4C for LCD back-lighting. For records prior to 2007, see also W05-E05B1.

# X26-U04A2 [2007]

#### **Edge-lighting**

For records prior to 2007, see also W05-E05B3.

# X26-U04B [2007]

#### Signs

Includes the lighting of any translucent or transparent information source, such as advertisements (see also W05-E03A1), trafficrelated signs (see also T07-B codes and X26-U06 for street signs) etc.

# X26-U05 [2005]

# **General lighting system**

Includes general lighting systems on building sites. GLS

# X26-U05A [2005]

#### **General commercial lighting**

Includes general lighting arrangements used specifically in commercial/business applications such as office lighting.

#### X26-U05B [2009]

# **General domestic lighting**

Includes general lighting arrangements used in domestic settings, e.g. ceiling pendant lights, wall lights, bathroom mirror lights. Also includes lighting arrangements in domestic appliances (e.g. refrigerator, oven, hood, furniture, etc.), and garden lighting. Lights for toothbrushes are coded under X26-U01 only. Domestic applications are also coded under X27 codes.

#### X26-U06 [2005]

#### Street

Includes street lighting (e.g. lamppost), illuminated traffic bollards (also see T07-X), and lighted signs, such as road signs (also see T07-B codes). Illuminated road signs are also coded under X26-U04B and T07-B codes. Also includes lighting details of traffic lights (see T07-B05A for traffic signalling per se). Includes tunnel and bridge lighting details.

Lamppost, bollard, road markings

# X26-U07 [2005]

# Vehicles

Includes lighting for motor vehicle, electric vehicle and train.

# X26-U08 [2005]

#### Marine vessels

Includes beacon lights and ship navigation lights. See also W06-C01C (lighting equipment for marine vessels) and W06-C07C (buoys and beacons).

#### X26-U09 [2005]

#### Aircraft/space craft

# X26-U10 [2006]

#### **Projectors**

Includes display projectors and cine projectors. See also W04-Q01 and S06-B, codes respectively.

X26-U11 [2006]

Cameras

#### X26-U11A [2006]

# **Digital cameras**

See also W04-M01 codes.

# X26-U11B [2006]

#### Film-based cameras

See also S06-B codes.

# X26-U12 [2016]

#### Plant growth

Includes LEDs or any other lighting arrangements for plant growing purpose.

Greenhouse

# X26-U99 [2006]

# Other lighting applications

Includes light arrangement in reptile houses, aquaria, vivaria, umbrellas, vases, sewing machines, screwdrivers, keys, handbags, clothes, rucksacks, walking stick lights, etc. Cosmetic items, e.g. toothbrushes, are coded under X26-U01 only. See also X27 codes for domestic/personal items. Also includes teaching equipment using training and simulation aids i.e. for illustrating light refraction etc.

# X26-V [2020]

#### Maintenance, repair and cleaning of lamps

This code is used in conjunction with other X26 codes as appropriate.

# X26-X

# Other light sources and details

Covers lighting details not involving light emission (X26-A, etc.), light distribution (X26-D) or light/lamp attachments. Includes light strings/garland etc. Light strings for Christmas lights or other decorative or novelty lights are also coded in X26-M. From 2010 see X26-R only for supporting/suspending arrangements for light fitting. Also includes water-tight and gas-tight arrangements.

Insect repellent

# **X27: Domestic Electrical Appliances**

Also includes industrial cooking, space heating, refrigeration and combustion, with significant electrical content. Non-electrical domestic appliances with some electrical aspects are also covered here.

#### X27-Δ

# **Garden and personal articles**

# X27-A01 [1983]

# **Garden equipment**

Includes electrical aspects only e.g. power distribution, motor, switch, etc. Includes potted plants.

# X27-A01A [1987]

# Lawn mower, hedge clipper

Includes hedge trimmers, Strimmers®, tree and shrub clippers and also robotic type lawn mowers (T06-B01A may also be required for 2-D position control).

Electric motor, switch, cable, IC engine, protective cut-out

# X27-A01B [2006]

#### **Garden furniture**

Includes garden furniture such as patio heaters, patio umbrellas etc. incorporating some electrical content, such as built-in lights (see also X26 codes).

# X27-A02 [1983]

#### **Personal articles**

Includes e.g. calorie counter, wristwatches are not included - see S04, bathroom scales, hair thickening device, umbrella, beauty treatment, powder compact, pill timing/warning device, also W05-A and S05-X, key finder (see W05-A also depending on transmission details). From 201501, non-electrical details of umbrellas are coded under P24-A02

Facial steamer

# X27-A02A [1983]

# **Personal hygiene**

Includes articles for washing - e.g. foot washers, bidets, contact lens steriliser, incontinence detector, weighing scales, roller towel.

# X27-A02A1 [1987]

#### Driers, hair curlers

Includes drier for hair, hands, feet, nail polish and body. Also includes hair extension apparatus and hair straighteners etc. From 201501, non-electrical details of hair curlers, etc, are coded under P24-C01.

Heating element, hair brush, smoothing tongs

#### X27-A02A2 [1987]

#### Massaging devices, sunbeds

Includes light sources. See also S05-A and X26-A. Solarium, ultraviolet, lamp, tan, UV, sunbed

#### X27-A02A3 [1987]

**Electric toothbrushes; Electric razors** 

# X27-A02A3A [1992]

#### **Electric toothbrushes**

Includes electric toothbrushes and toothpaste dispensers. From 201501, non-electrical details of manual toothbrushes are coded under P24-E.

Motor, switch, head, brush, battery

### X27-A02A3B [1992]

# Electric razors; Hair clippers; Depilatory tool

(X27-A02A)

Includes all aspects e.g. blades, foil, handle. Also includes electric hair clipper. From 201501, non-electrical details of shaving equipment are coded under P24-C02.

Head, motor, switch, brush, battery, wet, dry

#### X27-A02A4 [1997]

#### Bath; Shower; Washbasin

(X27-X)

Includes electrical aspects such as electric mixer tap or presence detector. For electric water heating aspects of e.g. showers or baths, see X27-E03A1 only.

Sink, tap, detector, EM valve

# X27-A02B [1983]

# Clothing, jewellery

Includes electrical aspects only, flashing badges, shirts, buttons etc. See also W05-A as appropriate.

# X27-A02B1 [1987]

# Clothing

Includes electrical aspects only. X27-A02B1 codes can be used alone or in conjunction with one another depending on claimed aspects.

Backpack, rucksack

# X27-A02B1A [2002]

#### Garments

Includes electrical aspects of e.g. shirts, buttons, protective helmets, heated gloves, life jackets. Non-electrical details of garments are coded by P21 codes.

# X27-A02B1B [2002]

#### Footwear and its manufacture

Includes safety boots and shoes (see X25-X07 for electrical aspects of leather cutting). Non-electrical details of footwear are coded by P22 codes.

# X27-A02B1E [2005]

#### With integral electrical parts

Includes clothing in which e.g. lighting, sensors, wiring, heating elements (see-X25-B01 codes), actuators and other electrical parts are integrated into fabric. E.g. includes electrical elements such as resistive heating elements woven into fabric, flexible electrical coatings applied to fabric or fibers, or e.g. LEDs moulded into plastic sole of shoe. Also see X25-T codes for fabric manufacture per se.

#### X27-A02B1F [2005]

#### With attachable electrical parts

Includes electrical parts that are attachable to clothing. E.g. includes LED fixed to cap by clip, or LED incorporated in button that is sewn onto e.g. shirt fabric.

# X27-A02B2 [1987]

### **Jewellery**

In general includes jewellery with electrical devices e.g. flashing LEDs to create eye-catching effect. Brooch, clip, jewel

### X27-A02C [1987]

# Stationery and business equipment

Includes electrical aspects only of pens, briefcases, diaries, files incorporating computer, note pads, etc. For notepad computers and PDAs see T01 only, and for electronic blackboards and other conference equipment see W04-W05 only. Bag, magnetic clasp or button, suitcases

#### X27-A02D

# Spectacles, goggles

Includes electrical aspects only, e.g. liquid crystal light valve for welding goggles, see X24 also. For the manufacture of glasses see also X25-A03C2 and X25-A05 for glass lenses or X25-A06 for soft, plastic lenses.

# X27-A02E [2007]

#### Walking sticks

Includes sticks with integral electrical components. Also see S05-K01 for walking sticks used by physically challenged person. From 201501, non-electrical details of walking sticks are coded under P24-A01.

# X27-A02F [2014]

#### **Electronic cigarettes**

Includes details of atomizer, cartridge, disposable cartomizer. Packaging details are coded under Q34-M02. Electrical details of tobacco cigarettes (including their manufacture) are coded under X25-P03.

E-cigarette, personal vaporizer, PV, electronic nicotine delivery system, ENDS

# X27-A03 [1997]

#### **Furniture**

(X27-A)

Electrical aspects only of mattresses, beds, chairs, tables, seats, sofas, pillows (including travel pillows), cushions etc. Heaters for seats, beds, pillows, etc. are coded under X27-E02. See also X25-B codes for novel electrical heating elements per se. See also X26 codes for novel lighting elements.

Mattress, chair, table, cupboard

#### X27-B

# Kitchen appliances

Includes all aspects of electrical kitchen appliances. Tableware, glassware and cutlery (with no electrical content) are coded under P27-B03.

Other non-electrical kitchen equipment, such as spice racks, egg slicers, coffee grinder, vacuum flasks, etc. are coded under P28-A.

# X27-B01 [1983]

#### Tea/coffee machines, kettles

Includes water reservoir, flow heater, jug, jug funnel etc. Excludes paper filters and funnels for cups. Large size coffee/tea machine, see X25-P01 also.

Percolator, cappuccino machine, espresso maker

# X27-B02 [1987]

# Pop-up toasters

# X27-B03 [1987]

#### Food processors/mixers

Includes juice extractor, food processor tools, ice-cream manufacture, blenders, fruits and vegetables peeling machines. See X27-C08 instead for bread makers. Small handheld fruit and vegetable peelers are coded under X27-B04.

Motor, beater, grinder, chopper, blade, churner

# X27-B04 [1987]

# Knives, tin openers etc.

Includes bottle openers, and handheld fruit and vegetable peelers.

Can opener

### X27-B05 [1997]

#### Extractor hoods

(X27-B)

For extractors for use in toilets, see X27-L. For ventilators per-se see X27-E01B1.

#### X27-B09 [2007]

# Other kitchen appliances

Includes electrical details of food warmer for serving trolley, soda mixer, beverage dispenser for e.g. carbonated drinks, kitchen tap, milk frother (see X27-B01 instead if part of cappuccino machine), buffet food container with automatic lid etc. Also includes cutlery or drinking vessels (cups, glasses, etc.) with electrical content, such as integrated lights, temperature displays, etc. Also includes baby bottle sterilisers and baby food warmers. Food warmers, bottle sterilisers, and cutlery specially made for children/babies are also coded under X27-X01.

#### X27-C

#### Cooking appliances

Includes all aspects of apparatus using electrical heating, and electrical aspects only of gas cooker. Excludes discardable hob covers e.g. metal foil.

# X27-C01 [1983]

#### Microwave ovens

See also X25-B02B for microwave heating in general. Covers all aspects, including heater for browning, switches, fans, lamps, etc. Microwave-transparent cooking-ware is included only if the patent bears an 'H' IPC.

#### X27-C01A [1987]

# **Constructional details**

Includes chamber/cavity, door, seal, interlocks etc.

X27-C01B [1987]

Magnetron, control, waveguide, turntable

X27-C01B1 [1992]

Magnetron, waveguide, turntable

Antenna

X27-C01B3 [1992]

Control and power supplies of microwave oven

Timer, programmer

X27-C02 [1983]

Electric ovens, hobs

Ceramic, plate, glass, hotplate

X27-C02A [1987]

Using lamps

Lamps are also in X26-B.

Filament, halogen, incandescent, infrared, tungsten

X27-C02C [2002]

Fan assisted electric ovens

X27-C03 [1987]

**Electric grills and electric fryers** 

(X27-C09) Air fryer

X27-C03A [1992]

Electric deep-fat fryers

Rotofryer, twin fryer

X27-C03B [1992]

Electric grills; Oven toasters; Electric roasters

X27-C03C [1992]

**Electric ariddles** 

Includes sandwich maker, steak griddle etc.

X27-C03D [2009]

#### Electric frying pans; Electric woks

Includes standalone electric frying pans and electric woks. Electric deep-fat fryers are coded under X27-C03A only.

# X27-C04 [1987]

# Electric steamers; Electric pressure and rice cookers

(X27-C09)

Includes cooking by steam using self-contained vessel with heater.

Rice cooker, egg steamer, pressure cooker

# X27-C05 [1987]

#### Gas cookers

(X27-C09)

Includes electric aspects only. Gas igniters are in X27-G01 only, unless forming part of cooker construction, e.g. pilot lighter.

Hob, burner, valve

#### X27-C06 [1987]

#### Induction cookers

(X27-C09)

See also X25-B02A for general aspects of induction heating.

#### X27-C07 [1992]

#### Combination ovens

Includes joint cooking apparatus such as resistance, microwave, convection. See appropriate X25, X27 codes for claimed heating.

# X27-C08 [2006]

#### **Breadmakers**

For specific electric heating details also see appropriate X25-B codes.

# X27-C09 [1983]

# Other cooking appliances

Includes electrical devices inserted into food to measure temperature, cooking time estimation. Also includes slow cookers, and other cooking vessels with electrical content not covered by other X27-C codes. Non-electrical cookware and ovenware are coded under P28-A02 only.

#### X27-D

# Cleaning and disinfecting appliances

Includes all aspects of domestic cleaning. Commercial and industrial laundry washing and drying machines are coded under X25-T05 only. General cleaning is also in X25-H09.

# X27-D01 [1983]

# Washing machines

Includes all aspects, e.g. feet, doors, water inlet/outlets pipes etc. Excludes kitchen 'furniture' aspects such as worktop under which machine is kept.

Control, programme timer switch, cam, pump, detergent dispenser, motor, laundry machine, drum, packaging for machine

#### X27-D01A [1983]

#### **Clothes washers**

Also see X27-D07 codes for mixed mode cleaning, e.g. using ultraviolet radiation to kill bacteria. Also includes details of washing machines specifically made for washing shoes.

X27-D01A1 [2007]

**Machine types** 

X27-D01A1A [2007]

#### Vertical axis washers

Includes vertical axis top loader machines.

#### X27-D01A1B [2007]

# Front loading horizontal axis washers

Includes drum type washer.

X27-D01A1C [2007]

Top loading horizontal axis washers

# X27-D01A1D [2007]

### Tilt axis washers

Includes fixed and variable tilt axis washers.

# X27-D01A1X [2007]

# Other machine types

Includes twin tub machines.

#### X27-D01A3 [2007]

Component parts/constructional details

#### X27-D01A3A [2007]

#### Providing mechanical energy to clothes

Includes drums, lifters, agitators, pulsators.

# X27-D01A3B [2007]

# **Drive arrangements**

Includes drive motors, drive belts and transmissions. See also V06-M codes for novel motors/transmissions per se.

Contra rotation

# X27-D01A3C [2007]

#### **Casings**

Includes machine housings, doors, seals, feet, wheels, insulation etc.

# X27-D01A3D [2007]

# **Dispensing systems**

Includes soap powder and fabric conditioner dispenser trays and from 2007 ball type dispensers placed in the washing machine drum.

# X27-D01A3E [2007]

#### Liquid management systems

Includes water supply/discharge pipes, valves, pumps, pump seals, water heaters, water recirculation/recovery and spray systems. Details of steam generating arrangements are also included under X27-D07E.

#### X27-D01A3F [2007]

# Vibration damping systems

Includes active suspensions and counter weights for reducing machine noise and vibration.

# X27-D01A3X [2007]

### Other component parts

Includes packaging such as boxes and transit bolts. Also see Q32-A08 and Q32-T for boxes and transit packaging per se.

#### X27-D01A5 [2007]

# **Control systems of clothes washers**

Includes all electrical control aspects such as programme timer switches. Also see T06-A05C for use of control algorithms to optimise wash cycle according to sensed parameters. For control of mechanical variables such as liquid flow or level, also see T06-B codes.

# X27-D01B [1983]

# **Dishwashers**

Also see X27-D07 codes for mixed mode cleaning, e.g. using ultrasonic vibration to enhance cleaning action.

X27-D01B1 [2007]

**Machine types** 

# X27-D01B1A [2007]

# **Built-in or wheeled**

Includes front loading traditional type full size or slimline dishwashers.

Free-standing

# X27-D01B1B [2007]

#### **Drawer type**

Includes twin drawer dishwashers.

# X27-D01B1X [2007]

### Other configurations

Includes top loading or portable, small size 'counter top' dishwashers.

# X27-D01B3 [2007]

### Component parts/constructional details

X27-D01B3A [2007]

Racks

# X27-D01B3B [2007]

#### **Drive arrangements**

Includes pump drive motors, belts, transmissions etc.

## X27-D01B3C [2007]

#### Casings

Includes machine housings, doors, seals, tubs, feet, wheels, insulation etc.

# X27-D01B3D [2007]

# **Dispensing systems**

Includes salt and cleaning powder/tablet dispensers.

#### X27-D01B3E [2007]

# Liquid management systems

Includes water supply/discharge/recirculation, valves, water heaters, pumps, pump seals and spray arms.

# X27-D01B3F [2007]

# **Drying systems**

Includes heater elements (see also X25-B01 for electrical resistance heating per se), heat exchangers, air flow arrangements, vents, condensing arrangements etc.

#### X27-D01B3G [2007]

#### Soil collection and management

Includes filters, screens, sizers and choppers.

# X27-D01B3X [2007]

#### Other component parts

# X27-D01B5 [2007]

# **Control systems of dishwashers**

Includes all electrical control aspects. Also see T06-A05C for use of control algorithms to optimise cleaning cycle according to sensed parameters. For control of mechanical variables such as liquid flow, also see T06-B codes.

# X27-D01C [1987]

#### Combined washer/driers

This code can be used in conjunction with X27-D01A or X27-D02 codes as appropriate to highlight the novel aspects.

# X27-D02 [1983]

### **Laundry driers**

Includes clothes and shoe driers.

Drum, spin, tumble, condenser

X27-D02A [2007]

Machine types

X27-D02A1 [2007]

**Electric vented tumble driers** 

X27-D02A2 [2007]

Gas vented tumble driers

X27-D02A3 [2007]

Heat pump tumble driers

X27-D02A4 [2007]

Condensing tumble driers

X27-D02A5 [2007]

Microwave tumble driers

X27-D02A6 [2007]

#### Non-tumble driers

Includes cabinets, bags, drying rooms and drawers for drying flat or hanging clothes. See also X27-D07E for use of stream to assist in removing creases from hanging clothes during drying.

X27-D02A9 [2007]

Other driers

X27-D02B [2007]

**Component parts/constructional details** 

# X27-D02B1 [2007]

#### Providing mechanical energy to clothes

Includes drums and lifters.

#### X27-D02B2 [2007]

#### **Drive arrangements**

Includes drive motors, drive belts, gears etc. See also V06-M codes for details of motors/transmissions per se.

Contra rotation

# X27-D02B3 [2007]

# **Heating systems**

Includes electrical heaters (see also X25-B codes), combustion aspects (see also X27-G codes) and heat exchangers.

# X27-D02B4 [2007]

#### Air moving systems

Includes blowers, ducts, vents, valves and air recirculation arrangements.

# X27-D02B5 [2007]

#### **Casings**

Includes housings, doors, seals, feet, wheels, insulation etc.

# X27-D02B6 [2007]

# **Dispensing systems**

Includes deodoriser/conditioner (see also X27-D07M) dispensers.

# X27-D02B7 [2007]

# **Vibration damping systems**

Includes damping arrangements to reduce machine noise

# X27-D02B8 [2007]

# Lint management systems

Includes mechanical lint/fluff filters.

#### X27-D02B9 [2007]

#### Other component parts

# X27-D02C [2007]

#### Control systems of laundry driers

Includes all electrical control aspects such as programme/temperature control switches. Also see T06-A05C for use of control algorithms to optimise drying performance according to sensed parameters such as load weight. For sensing of temperature or moisture content, see also S03-B and S03-E02C1 codes respectively.

# X27-D02L [2007]

#### **Clothes lines**

See X27-D06 prior to 2007. Includes motorized arrangements for raising and lowering line or for rotating rotary washing line. Details of purely mechanical clothes lines are coded under P28-C05.

# X27-D02X [2007]

# Other laundry driers

For electrical aspects of mangles, see X27-D09 instead

# X27-D03 [1983]

#### Irons

For electrical aspects of ironing boards search X27-D09 also.

Steam, sole plate, heater

# X27-D04 [1983]

#### Vacuum cleaners

Includes constructional details of vacuum cleaner, e.g. casing. Details of replaceable items, e.g. nozzles, tools, are coded under X27-D04A only. Also see X27-D07 for mixed mode cleaning, e.g. using ultraviolet radiation to kill mites or bacteria. For combined vacuum cleaner and e.g. carpet washer, also see X27-D08.

Motor, suction, fan

#### X27-D04A [1992]

#### **Accessories**

Includes all aspects e.g. paper bag, wheels, attachments, tools, nozzles etc.

Hose, nozzle filter, brush, bag

# X27-D04B [1992]

#### Motors

Includes vacuum cleaner motors per se. See also V06 codes for a more detailed breakdown of motors per se.

#### X27-D04B1 [1992]

# **Control systems of vacuum cleaners**

#### X27-D04C [2002]

#### Cyclone type

Includes dual and multi-cyclone type vacuum cleaners.

#### X27-D04R [2006]

#### **Robotic vacuum cleaners**

Includes autonomous vacuum cleaners. Also see X27-U for domestic assistance robots per se.

Automatic guidance

# X27-D05 [2002]

#### Floor cleaners/washers/polishers

From 2006 this code has been expanded to include all floor sweeping, washing and polishing machines. Also includes robotic floor cleaning machines (T06-B01A may also be required for 2-D position control). For carpet cleaning see X27-D08 only. Sweeper

# X27-D06\* [2002-2006]

#### **Clothes lines**

\*This code is now discontinued and transferred to X27-D02L from 2007. It is still searchable and valid for records from 2002-2005. Includes motorised arrangements for raising and lowering line or for rotating rotary washing line.

# X27-D07 [2005]

# Mixed mode cleaning

Includes cleaning systems with secondary cleaning, disinfecting, deodorising or sterilising function. This code can be used in conjunction with other X27-D codes to specify the primary cleaning function.

# X27-D07A [2005]

### **Using vibration**

Includes use of ultrasonic vibrator to provide enhanced cleaning action.

#### X27-D07C [2005]

# **Using radiation**

Includes use of ultraviolet or microwave radiation e.g. to kill germs.

UV, microwave

#### X27-D07E [2007]

#### Using steam/vapour

Includes steam generation arrangements and vapour generation from a liquid/solid. Includes use of steam in refresh cycles to deodorise and remove creases from unwashed clothes.

Anti-wrinkle, de-crease, non-iron, refresher

# X27-D07F [2007]

#### **Bubble systems**

Includes water aeration arrangements and air bubble generators for improving cleaning.

### X27-D07K [2007]

# Using chemicals

Includes anti-microbial generators, chemical coatings for machine components and spray systems to deliver disinfectant to the clothes.

# X27-D07K1 [2007]

#### **Chemical coatings**

Includes drums (see also X27-D01A3A for washing machines) coated with anti-microbial substance e.g. nano-silver (see also D09-A01 and E35-B chemistry codes).

# X27-D07K3 [2007]

#### **Chemistry generation**

Includes silver/copper/zinc/ozone/ions generated inside the machine using e.g. electrolysis systems (see also X25-R codes), photocatalysts etc.

Anti-microbial, ionisation, ozoniser

# X27-D07K5 [2007]

### **Dispensing systems**

Includes systems for dispensing/spraying e.g. antimicrobial/sterilising chemicals to the clothes.

#### X27-D07M [2007]

#### **Fabric enhancement**

Includes electrical aspects of systems for treating clothes with stain resistance or water and insect repellency chemicals. See also X27-D01A3D and X27-D02B6 for fabric conditioner dispensers used in clothes washer and drier respectively.

# X27-D07X [2005]

#### Using other medium

Includes use of other systems to provide a secondary cleaning/deodorising action.

## X27-D08 [1992]

#### Carpet cleaners/ shampoo machines

#### X27-D09

# Other cleaning appliances

Includes mangles, trouser press and domestic scale dry cleaning (for commercial dry-cleaning, see X25-H09 and X25-T05 only). Also includes electrical aspects of ironing boards and clothes pegs. Details of ironing boards with no electrical details are coded under P28-C05.

# X27-D10 [2006]

#### Disinfection and sterilization arrangements

Includes general disinfection and sterilization systems not covered elsewhere, e.g. using ultraviolet/microwave radiation or heat. For mixed mode cleaning/sterilizing see X27-D07 codes only. For air treatment arrangements see X27-E01B2 only. Industrial food processing sterilization is covered by X25-P01X only, and medical sterilization is covered by S05-G01 codes only.

# X27-D11 [2024]

#### Eco features of cleaning appliances

This code can be used in conjunction with other X27-D codes to highlight the type of cleaning appliances, e.g. X27-D02 for tumble dryers, X27-D01B for dishwashers. Details of water recovery in washing machines are also coded under X27-D01A3E. Also includes energy recovery systems that improve operating efficiency. Also see U24-K for power supply unit power-saving mode/operation.

Green, power reduction

#### X27-E

# Heating, ventilating, air conditioning

Includes all aspects of electric heating and electrical aspects only of other types of heating e.g. gas or oil combustion. See also X27-G for details of domestic combustion. Details of electric heaters are also in X25-B.

#### X27-E01

# Space heating and air conditioning systems

For heating combined with cooling i.e. air conditioning, e.g. by using refrigeration systems, see also X27-E01B.

Room, building

#### X27-E01A [1983]

# Heating systems (incl. control)

Includes control circuits, thermostat, heating cost measurement and calculation, storage heater control system.

# X27-E01A1 [1987]

# Circulating water, warm air

Includes central heating systems pump or fan.

#### X27-E01A2 [1987]

Electric radiant bar and fan-heaters, oil filled electric heaters

# X27-E01A3 [1987]

Electric underfloor, electrically-heated carpets

#### X27-E01A4 [1987]

#### **Electric storage heaters**

See also X16-L.

# X27-E01A5 [1987]

#### Solar heating

Includes electrical aspects only e.g. combination solar and electric heating.

Collector

# X27-E01B [1983]

# **Air-conditioning**

Includes only electrical aspects of air conditioners (e.g. mechanical heat exchangers are excluded), control systems, refrigeration systems (see also X27-F). Vehicle air-conditioning is only in X22-J02E.

# X27-E01B1 [1987]

#### **Electric fans, ventilators**

Motor, ceiling, blade, table, portable

# X27-E01B2 [1987]

# Ozoniser, air cleaner and freshener, (de)humidifier

Details of air cleaning for computer rooms or laboratories are also coded in T04-L08, and clean rooms are also coded in X25-S01.

Electrostatic, filter, purification, atomiser, ion generation

# X27-E01C [2010]

# **Climate control**

Includes systems that automatically maintain room temperature by e.g. automatic window opening (see X25-M01 for novel electric windows per se), usage of waste heat etc.

# X27-E02 [1987]

# Electric blankets, heating pads

(X27-E09)

See also X27-A if part of bed construction. If pad is portable, see also X27-A02.

#### X27-E03 [1987]

#### **Water heaters**

Includes electric details of gas and solar water heaters.

Temperature-control

#### X27-E03A [1987]

#### **Electric**

Includes through-flow heater, water bed heater.

# X27-E03A1 [1987]

#### Shower, whirlpool bath, sauna

Includes Jacuzzi $^{\circ}$  and Turkish bath, which is also coded in X27-A02A.

#### X27-E09

# Other heating, ventilating, air conditioning aspects

Includes foot warmer.

### X27-F

# Refrigeration

Includes all domestic and industrial systems, e.g. cold rooms and components, display cabinets, water coolers, heat pump systems (for airconditioning, see X27-E01B also), refrigerated containers for lorry (see also X22-X04). Cryogenics is in X25-V. Also includes refrigerant per se. From 2006 ice manufacture is transferred to X27-F04, though ice manufacture remains searchable in X27-F prior to 2006.

#### X27-F01 [1983]

#### Constructional details

Includes door, seal, feet, cabinets, ice tray.

# X27-F02 [1983]

# Refrigeration/heat pump systems/components

Includes air circulation e.g. by fan.

#### X27-F02A [1987]

# **Refrigeration systems**

Includes details of overall refrigeration system.

#### X27-F02A1 [2005]

# **Magnetic cooling**

Includes magnetic fridge and freezers that utilise magnetocaloric effect of some metals that become hot when magnetised and cool when demagnetised.

Magnetic, magnetocaloric

# X27-F02B [1987]

#### **Heat pump systems**

Also includes heat recovery using refrigerant.

# X27-F02B1 [2005]

#### Solid state heat pumps

Includes thermoelectric cooling, e.g. for mini fridge and freezers and picnic coolers. See V04-T03C instead for thermoelectric cooling used in electronic devices, and U14-E05A2 for thermoelectric devices. Also includes electrocaloric effect cooling using e.g. thin film perovskite PZT (PbZrTiO3) to provide cooling under an applied electric field. See X25-B02F for thermoelectric heating.

Thermoelectric, Peltier effect

# X27-F02C [1987]

#### **Components**

Includes heat exchangers, expansion valve absorbers, adsorbers, condenser, evaporator, etc.

### X27-F02C1 [1987]

# Compressors, electric motors, pumps

Screw, rotating vane, scroll, centrifugal, rotary, swashplate, reciprocating

#### X27-F02C2 [1987]

# Frost/temp. sensors, interior lights, switches

See also S03-B codes for temperature sensors, X26 codes for lighting and V03 codes for switches per

Thermostat

# X27-F02X [2007]

# Other refrigeration components

# X27-F03 [1983]

#### **Refrigeration control**

Includes defrost activation, ice monitoring, leak detection.

# X27-F04 [2006]

### Ice manufacture

Includes domestic and industrial ice manufacture. For ice cube trays per se, see X27-F01 only. Also includes working/handling of ice and production of ice or snow for winter sports etc. See also P36-A08C for ice rinks.

# X27-F05 [2007]

# Intelligent refrigerators

Includes reader-writer equipment to know the content of the fridge (see also T04-K codes), or screen display on fridge door displaying a list or an image of the fridge content. This code does not include details on refrigeration per se, see X27-F03 for refrigeration control details.

# X27-G

# **Domestic combustion**

Includes domestic boilers using solid, liquid or gaseous fuels and involving electrical aspects. Exhaust gas sensors per se are not included, see e.g. S03-E02, S03-E03. Combustion processes for central heating are also coded in X27-E03. See X25-X13 instead for industrial combustion aspects such as gas fired furnaces.

# X27-G01 [1983]

#### **laniters**

Includes cigarette lighters using piezoelectric crystal (also see X27-A02 and V06-M06D).

Ignition, light spark, fuel

#### X27-G02

# [1983]

#### **Combustion control: Flame monitors**

Includes fuel/air supply control.

# X27-H [1987]

# **Domestic pets**

(X27-X)

Includes electrical aspects only.

Dog, cat, fish, budgerigar, tortoise, rabbit, guinea pig

### X27-H01 [1987]

# Aquarium, vivarium

Covers electrical aspects such as air conditioning, heating, lighting systems, etc. of aquaria and vivaria. Other environment-controlled housings, such as kennels, dog houses, aviaries etc, are coded under X27-H04.

Heater, pump, lighting, air

# X27-H02 [2005]

#### Feeding and drinking

Includes heated food bowl and timed food dispenser.

Timer, dispenser

# X27-H03 [2005]

#### Control and training

Includes electrical or electromagnetic shocking apparatus for the control/training of pets, e.g. dogs. Also includes ultrasonic deterrent devices for confining pets within a specific area. Includes pet searching systems, transponder collars for controlling pet access e.g. through cat flap, and RFID or identification tags. Transponders and RFID are also coded under T04-K codes and W06-A04B5 and W02-G05B codes as appropriate.

Control, train, shock, deterrent, behaviour, identification tag, pet searching system

## X27-H04 [2009]

#### **Environmental control; Housings**

Includes electrical aspects, such as air conditioning, heating, lighting systems, etc. for kennels, aviaries, etc. Details for aquaria or vivaria are coded under X27-H01 instead. Electrical details of pet transporting bags/boxes or carriers are coded under X27-H09 only.

Dog house, kennel, aviary

# X27-H09

[2007]

# Other domestic pet aspects

Includes heated pet transporting bags/boxes.

#### X27-K

[1997]

# **Domestic waste disposal**

Includes only electrical aspects of domestic waste disposal, such as kitchen waste disposal units and electrical rubbish bins. Large non-domestic bins are coded under X25-W01 only.

# X27-L

[2005]

#### **Toilets**

Includes all electrical aspects of public and domestic toilets and urinals. Includes toilets with integral bidets (see also X27-A02A). Prior to 2005, toilets were coded in X25-Y01.

#### X27-T

[1997]

#### **Curtains, blinds**

(X27-X)

Includes electrical aspects, e.g. remote curtain opening/closing device.

#### X27-U

[2006]

#### **Domestic assistance robots**

Includes e.g. humanoid robots which carry out general housework, nursing (see also S05 codes) and other duties. For task-specific robots also see relevant codes elsewhere, e.g. X27-D codes for cleaning robots. For industrial scale robots see X25-A03E or X25-F05A only.

# X27-V

[2006]

#### Home automation

Includes systems for automatically controlling/programming multiple pieces of domestic equipment, e.g. using internet or telephone communication. For remote control of individual domestic devices, use the appropriate device code only (see also W05-D codes), and for individual robotic/automated equipment, such as a robotic vacuum cleaner, use the appropriate code (e.g. X27-D04R) only.

Total home control

#### X27-X

# Other domestic electrical appliances

Includes ash tray, insecticide dispenser for house, wallpaper stripping iron, mail box, paper towel dispenser (also X25-F03), pill bottle warning alarm indicating lid removal (also W05-A02) etc. Can also be used for indicating general domestic appliance "white goods" application, including mechanical aspects of unspecified or general white goods.

Mosquito repeller, doorbell

# X27-X01

[2002]

### **Baby equipment**

Includes equipment for babies, toddlers and young children. Includes baby monitoring alarms, babies prams, nappy wetting alarm, baby chamber pot (see X25-L also), etc. Also includes cutlery and cups with electric contents, such as lights or temperature displays. Cutlery and cups with electric contents are also coded under X27-B09.

Baby food/bottle warmer, baby bottle sterilizer

#### X27-X02

[2002]

# Domestic beer brewing/alcoholic beverage production equipment

Includes beer brewing plant (domestic scale), beer mat, beer dispenser (see also X25-F03B1). Also includes domestic wine production equipment. Industrial beer brewing/alcoholic beverage production equipment is coded under X25-P01B. Also include electrical details of wine cellars. Refrigeration details of wine cellars are coded under X27-F codes.

#### X27-X03

[2007]

# White goods with built-in secondary function

Includes white goods such as refrigerators and microwaves having additional built-in device providing secondary function, e.g. television, video display, computer for e.g. Internet browsing. This code can be used in conjunction with other X27 codes to highlight the primary function of the device. For example, a refrigerator with a built-in TV display will be also coded in X27-F01 and W03-G03A/W03-A codes.

# **PART 2: Subject Index and Appendices**

## **Subject Index**

This index provides a detailed listing of technologies and indicates the corresponding manual codes. While the intention has been to produce a comprehensive index, it is not possible to include entries for all possible variations in particular technological fields without the result becoming very unwieldy.

Thus, in cases where a desired subject heading cannot be found as an index entry, alternatives such as abbreviations, terms in full, or synonyms should be considered.

## **Appendix 1: EPI Subject Matter Coverage**

Patents are included in EPI in two ways, namely:

- 1. Automatic inclusion based on the assigned IPC
- 2. Intellectual selection based on technical content

#### **Automatic inclusion criteria**

Some sections of the IPC relate to subject matter which is always of relevance to EPI. Thus assignment of any IPC from section H, will result in inclusion. Patents bearing certain other IPC subsections are also automatically included, to ensure that all disclosures received by Clarivate can be assigned to at least one part of our overall classification system. Since some of these IPCs relate to technologies which are not inherently electrical, this results in the inclusion in EPI of some inventions of a purely mechanical nature, in the fields of instrumentation and control, for example.

It should be noted that where an IPC is considered to be inappropriate the normal correspondence between IPC and Clarivate classification does not apply. In some cases, this may necessitate the assignment by Clarivate of an additional IPC to enable the invention to be covered by the most suitable class of the General and Mechanical Patents Index, rather than EPI. From 2006 mechanical patents relating to the transportation area have been intellectually selected for inclusion in EPI.

Below is a list of IPC sections and subsections which normally guarantee the inclusion of a patent in EPI. For further details of the relation between IPC and EPI classes please refer to Appendix 4, the concise guide to EPI classification. (For details of the correspondence between IPC and manual codes see Appendix 3).

#### Intellectual selection criteria

Patents are included on this basis provided that at least one of the following criteria is satisfied:-

#### a Relevance to an electrical industry

This may involve the product of an industry itself, or manufacturing methods and equipment (whether electrical or not) used in that industry. Examples of such industries include electrical and electronic components, semiconductor device manufacture, data recording, telecommunications, and computers.

### **b** Significant electrical content

Patents included on this basis may relate to any field of technology, provided that any electrical aspect forms a significant part of the invention, and is not just an incidental feature. For example, in the case of a machine tool, the presence of an electric motor or limit switch alone would not normally justify its inclusion. If the incorporation of motor or switch in the tool was the novel aspect then it would be included. In the industrial field, examples of inventions that are covered by EPI on the basis of significant electrical content include conveyors, lifting equipment, food processing, metallurgy, textiles etc.

Note that the electrical content required must normally be a claimed feature of the invention. However, disclosures with considerable electrical content in a detailed description of the invention which is clearly referred to in general terms in the claims would be included.

Note also that the use of existing electrical apparatus or techniques in patents claiming a process or method only would not normally be sufficient for inclusion

#### c Relevance to automotive electrics

Any patent of this type with electrical content - not necessarily claimed - is included in EPI

## d Relevance to domestic electrical equipment

All aspects of domestic electrical equipment are selected, including purely mechanical details such as refrigerator door seals or shelves for electric cookers.

#### e Relevance to other specified subjects

All novel aspects of the following are included:-

Clocks and watches

Electrophotography

Holography

Line printers and electronic typewriters

Steam turbines

#### f Relevance to non-electrical content

From the dates highlighted below, patents coverage has been extended so that general or mechanical aspects of an invention are also selected for inclusion in the Electrical (or Engineering) Patent Index .

From 2006 all mechanical aspects of transportation related patents (vehicles, aircraft, ships, trains) are included.

From 2012 all mechanical aspects of packaging related inventions are included.

From 2015 patents are also selected to highlight general or mechanical aspects of an invention for other technologies.

## **Appendix 2: EPI Manual Coding Criteria**

EPI manual codes are normally assigned in two ways, namely:-

- 1 To highlight the novel aspect of an invention itself
- 2 To indicate significant application

In the first case, codes will usually be assigned based on the content of the patent claims. In the second case, applications may be derived from either the claims or the wider disclosure of the specification.

The following general points should be noted regarding the assignment of EPI codes:-

- A patent may be selected for inclusion in EPI based on its intended use only, the actual novel aspect being outside the scope of EPI codes. For example, the invention may relate to a novel chemical compound of relevance to an electrical or electronic industry, such as a polymer composition intended as a magnetic tape substrate. In such a case, only the application aspect can be conveyed by EPI codes.
- Where an invention has no stated application, is of universal application, or a series of applications is given which are merely standard uses for such a device, manual codes are usually assigned to describe only the invention itself. Examples of this include a common electronic component such as a capacitor, or a battery of a type used in a wide variety of portable devices. However, significant electrical applications which are emphasised, or are one among several non-electrical applications, will be coded.
- 3 EPI manual codes are hierarchical in structure, such that an increase in the number of characters represents a finer subject breakdown. This means that in cases where the precise details of an invention cannot be determined with certainty, or where several code subdivisions are equally applicable, a general manual code may be assigned. A more general code is also assigned if an appropriate sub-division code does not exist. Thus, when formulating a search, users are advised to consider the inclusion of a more general code in addition to finer subdivisions which are known to be relevant.
- In many areas of the EPI coding system, in addition to codes for a product, separate subdivision codes are provided to represent materials used in the product, their manufacture, and manufacture of the product. Where 'materials' and 'manufacture' codes are not available, these topics are coded as the product itself. Note that in general, the manufacture of materials used in a product is not coded as manufacture of the product unless it is one of a number of steps in a process for manufacturing the product as a whole. Thus, manufacture of a polymer material which can be used as a magnetic tape substrate is coded as a tape substrate. Subsequent processing of the material, such as cutting or shaping to form the actual substrate, is coded as substrate manufacture.

As explained in *Appendix 1*, patents are included in EPI either by virtue of patent office-assigned IPC or by an intellectual selection process. Irrespective of the initial route by which the invention is included, the same intellectual criteria are used to assign manual codes. However, it should be noted that the requirements for electrical content differ between EPI classes since, as explained in Appendix 1, some inventions are included because of their assigned IPC being 'guaranteed' for EPI and may not have an electrical aspect. For example, a patent in the field of instrumentation or control, included only on the basis of its IPC, cannot be assigned for an application in X25 (industrial equipment) since the electrical content requirements for that class are not satisfied. Conversely, an invention selected for X25 based on its electrical content can be coded for any significant control or instrumentation content where relevant.

## **Appendix 3: IPC to EPI Manual Code Approximate Concordance**

The following concordance is intended to assist users in determining, for an IPC relating to a technical field of interest, the EPI manual code, or code group, which represents similar subject matter. Where it is thought helpful, some combinations of IPCs which may be used to represent a particular topic have been included. When seeking the EPI code (or codes) corresponding to such a combination, the IPCs will be found in alphanumeric order. This table is intended as a general guide only, to be used as a 'short cut' to finding an approximately equivalent area of the EPI coding system. Where a number of code subdivisions correspond to a particular IPC, only the highest level code is shown for clarity. In addition, it should be remembered that patents bearing IPCs relating to technologies which are not inherently electrical will only be included in EPI if the specification in question has substantial electrical content.

### **Appendix 4: Concise Guide to EPI and Mechanical Classification**

In the following list, the main IPCs for each class are indicated purely as a guide.

#### P1 AGRICULTURE, FOOD TOBACOO

### P11 Soil working, planting

(A01B, C)

### **P12 Harvesting**

(A01D, F)

### P13 Plant culture, dairy products

(A01G, H, J)

### P14 Animal management and care

(A01K, L, M)

#### P15 Tobacco

(A24)

#### **P2 PERSONAL, DOMESTIC**

### **P21 Wearing apparel**

(A41, A42)

#### **P22 Footwear**

(A43)

### P23 Haberdashery, jewellery

(A44).

### P24 Hand, travelling articles, brushes

(A45, A46)

#### **P25 Office furniture**

(A47B)

### P26 Chairs, sofas, beds

(A47C, D)

### P27 Shop, household, furnishings, upholstery

Covers upholstery from 201201, prior to 2012 this was classified as Q39. (A47F, G, H, B68F, G)

#### P28 Kitchen, sanitary equipment

(A47J, K, L)

#### P3 HEALTH, AMUSEMENT

### P31 Diagnosis, surgery

(A61B)

### P32 Dentistry, bandages, veterinary, prosthesis

(A61C, D, F)

### P33 Medical aids, oral administration

(A61G, H, J)

### P34 Sterilising, syringes, electrotherapy

(A61L, M, N)

### P35 Life-saving, fire-fighting

(A62)

### P36 Sports, games, toys, saddlery

Covers saddlery from 201201, prior to 2012 this was classified as Q39. (A63, B68B, C)

#### **P4 SEPARATING, MIXING**

### P41 Crushing: centrifuging, separating solids

(B02, B03, B04, B07)

### P42 Spraying, atomising

(B05)

### P43 Sorting, cleaning, waste disposal

(B06, B08, B09)

#### **P5 SHAPING METAL**

**P51 Rolling, drawing, extruding** (B21B, C)

**P52 Metal punching, working, forging** (B21D-L)

**P53 Metal casting, powder metallurgy** (*B22*)

**P54 Metal milling, machining** (B23B-H)

**P55 Soldering, welding metal** (*B23K*)

**P56 Machine tools** (B23P,Q)

**P6 SHAPING NON-METALS** 

**P61 Grinding, polishing** (*B24*)

**P62 Hand tools, cutting** (B25, B26)

**P63 Working, preserving wood** (B27)

**P64** Working cement, clay, stone (*B28*)

### **P7 PRESSING, PRINTING**

**P71 Presses** 

(B30)

**P72 Working paper** 

(B31

**P73 Layered products** 

(B32)

**P74 Printing: lining machines** 

(B41B-G)

P75 Typewriters, stamps, duplicators

(B41JN)

P76 Books, special printed matter

(B42)

P77 Writing, drawing appliances, bureau/desk accessories

(B43)

**P78 Decorative art** 

(B44)

P8 OPTICS, PHOTOGRAPHY, GENERAL

**P81 Optics** 

(G02)

**P82 Photographic apparatus** 

(G03B)

P83 Photographic processes,

compositions

(G03C)

**P84 Other photographic** 

(G03D-H)

P85 Education, cryptography, adverts.

(G09)

**P86 Musical instruments, acoustics** 

(G10)

#### **Q1 VEHICLES IN GENERAL**

Includes mechanical aspects of vehicles in general and associated vehicle equipment.

### Q11 Wheels; Tyres; Connections

Alloy, steel, spoked wheels. Hubs, axles, rims, bearings, covers. Snow chains, spikes. Wheel manufacture, assembly and mounting. Inflatable, solid, runflat, heavy duty tyres. Tyre sidewalls, beads, valves, reinforcements, inserts. Tyre manufacture, mounting and inspection. Connections, hitches, towing, draw gear. (B60B-D)

### **Q12 Suspension systems**

Rigid and resilient suspensions. Springs, dampers, shock absorbers, anti-roll bars. Ride height adjustment. Ball joints, Panhard rods, Watt linkages, trailing arms. (B60G)

### Q13 Powertrain; Chainset; Transmission systems and their control

Automatic, double clutch, manual, semiautomatic, CVT transmissions. Torque converter, clutch, retarder, gearbox, differential. All wheel drive, 4WD. Cranks, pedals. Cooling and lubrication. Powertain/transmission control. Power take-offs. (B60K, B60W, B62M)

### Q14 Vehicle accessories

Seats, saddles, beds. Safety devices, inflatable airbags, seatbelts, crash bars, horns, reflectors. Sun shades/visors, curtains. Mirrors, windscreen wipers. Luggage racks, panniers, mudguards. Side cars, forecars. Anti-theft arrangements, locks. Steps, stands. Heating, ventilating and air-conditioning. Sanitation. (B60H, B60N, B60Q, B60R, B62H-J)

### Q15 Vehicle arrangements for transporting special loads

Loading and unloading arrangements. Ramps, platforms, conveyors, belts, rollers, vibrators. Carrying buildings, meat, animals, reels, vehicles, concrete. Cargo tie-down equipment. On-board weighing equipment. (B60P)

### Q16 Vehicle servicing; Maintenance; Cleaning equipment; Vehicle design and manufacture

Servicing, maintenance, repair. Car wash, cleaning. Vehicle manufacture/assembly. (B60S)

### Q17 Vehicle construction; Fittings; Propulsion arrangements

Subframes, chassis, superstructures. Doors, windows. Sunroofs, convertible roofs. Dashboards, instrumentation. Body finishing parts. Endless tracks. Air-cushion equipment. Engine propulsion arrangements. Engine cooling, mounting, lubricating. Noise/vibration/harshness reduction/control. (B60J-K, B60R, B60V-W)

### Q18 Brake systems; Steering systems; Control

Discs, drums, pads, callipers, valves, cylinders. Disc/drum brake assemblies. Brake cooling. Brake control, pedals, levers. Steering systems. Rack and pinion. Hydraulic power assistance. Steering wheel, steering column. (B60T, B62L)

### **Q19 Vehicle applications**

Cycles, motorcycles, scooters, mopeds. Cars, vans, trucks, buses, taxis. Military vehicles, tanks. Agricultural vehicles, tractors, combine harvesters. Recreational vehicles, SUV, MPV, motor home, camper van, snow mobile. Emergency vehicles, police car, fire engine, ambulance. Electric and hybrid vehicles.

#### **Q2 SPECIAL VEHICLES**

Includes mechanical aspects of special vehicles.

### **Q21 Railways**

Track construction. Station/platform equipment. Monorail, elevated, rope/cable, tramway, funicular, rack railways. Propulsion. Passenger carriage, freight car, wagon, hopper, buffer car. Superstructures, under frames, bogies, doors, windows. Brake systems. Accessories. HVAC, sanitation. Railway servicing, maintenance, manufacture, assembly. Train control. Level crossings, gates, signals, points. (B60L-M, B61)

#### Q22 Hand/foot/animal drawn vehicles

Hand carts, wheelbarrows. Perambulators. Sledges/ice boats. Wheelchairs. Foot propelled vehicles. Horse-drawn carts. (B62B-C)

### Q24 Ships; Waterborne vessels; Related equipment

Hulls, frames, keels, decks, bulkheads, masts. Windows, doors, hatches, port holes. Accessories. Heating/ventilating/airconditioning. Sanitation. Desalination plants. Safety equipment, fire-fighting, lifeboats, life vests. Mooring/anchoring. Ship propulsion, propellers, engines, steering. Boats, submarines, hovercraft, surfboards, canoes. Harbour, dock, pier, jetty, boat hoist. Marine vessel servicing, maintenance, manufacture, assembly. (B63)

### Q25 Aircraft; aviation; cosmonautics

Aircraft construction, fuselage, hull, wings. Doors, windows, undercarriage.
Accessories. Sanitation, toilets, shower, HVAC. Safety systems, fire-fighting, oxygen supply, escape slide, parachute. Aircraft propulsion and steering. Altitude/attitude control, flaps, control surfaces. Balloon, helicopter, glider, military, commercial aircraft. Ground equipment, hangar, runway construction. Space vehicles. Aircraft/spacecraft servicing, maintenance, manufacture, assembly. (B64)

#### Q3 CONVEYING, PACKAGING, STORING

From 2012 manual codes have been assigned for all mechanical details of conveying, packaging and storing (B65, B66)

### Q31 Packaging processes and equipment

From 2012 Q31 has been redefined to cover codes that are intended to highlight the equipment/methods etc. used for packaging/labelling material/goods during primary and secondary packaging. The type of container/bottle being filled/labelled/closed etc., as well as the container material can be specified by assigning Q32 and Q33 codes, respectively. The type of product being packaged/bottled can also be highlighted by the assignment of Q34 codes. For novel details of the actual container/bottle or its closure see Q32 codes instead. Details of transit packaging are coded under Q32-T. Prior to 2012 Q31 remains searchable for packaging and labelling in general. (B65B,C)

# Q32 Container/Closure Types, Special packaging features and Transit packaging

From 2012 Q32 has been redefined to cover container and closure types and special features of containers/packaging. Q32 codes should be used in conjunction with Q31, Q33 and Q34 codes as appropriate. Manufacturing and recycling details are covered by Q31-R. Prior to 2012 Q32 remains searchable for containers in general.

### Q33: Packaging container and closure materials

From 2012 Q33 has been redefined to highlight the material the container or closure is made of. Q33 codes should be used with Q31, Q32 and Q34 as appropriate. Prior to 2012 Q33 remains searchable for closures in general.

### Q34: Types of goods packages, bottled, bound, labelled, unpacked

From 2012 Q34 has been redefined to highlight the type of product being packaged/bottled etc. and should be used in conjunction with other Q31-Q33 codes as appropriate. Prior to 2012 Q34 remains searchable for packaging elements/types in general (now covered in general by Q32).

**Q35:** Refuse Collection; Conveyors (*B65F*,*G*)

**Q36: Handling Thin Materials** (B65H)

Q37 Container traffic (pre-1984 only)

**Q38:** Hoisting; Lifting; Hauling; Trucks (B66)

### Q39 Liquid, handling, saddlery, upholstery - discontinued 2012

From 201201 liquid handling is incorporated into Q31-Q34, saddlery is incorporated into P36 and upholstery is incorporated into P27.

### **Q4 BUILDINGS, CONSTRUCTION**

### **Q41** Road, rail, bridge construction (E01)

## Q42 Hydraulic engineering, soil shifting and sewerage

(E02,3)

### **Q43** General building constructions (E04B)

### **Q44 Structural elements**

(E04C)

### **Q45** Roofing, stairs, floors (*E04D*,*F*)

### **Q46** Building aids, special structures (E04G,H)

### **Q47** Locks, window and door fittings (*E*05)

**Q48** Blinds, shutters, ladders, doors (*E06*)

### **Q49 Mining**

(E21)

### Q5 ENGINES; PUMPS; COMPRESSORS; FLUID PRESSURE ACTUATORS

Includes engines, pumps, compressors, actuators etc. of relevance to the transportation area.

### Q51 Internal combustion engines; Reciprocating engines; Rotary engines

Internal combustion engines. Reciprocating, rotary, oscillating piston engines. Hot gas positive displacement engines, steam engines. Pistons and cylinders. Valves and valve drive arrangements. IC engine cooling/lubricating. Fuel systems. Ignition systems. Exhaust systems, silencing, pollution control. (F01, F02B,D,F,G,M,N,P)

### Q52 Reaction engines: External combustion; Gas turbines; Rockets

Gas turbine, turbofan, turboprop, RAMJET, rocket engines. Pulse detonation engines. External combustion engines, steam turbines. Rotors, stators, nozzles, nacelles, afterburners. Fuel systems. Ignition systems. Lubrication and cooling. (F01D, F02C, F02K, F02M)

### Q53 Positive displacement fluid engines (i.e. driven by fluid)

Liquid driven positive displacement engines and motors. Reciprocating, rotary, oscillating piston engines. Valves, pistons, cylinders, seals. (F03C)

### Q54 Non-positive displacement fluid engines (i.e. driven by fluid);

Miscellaneous motors and machines for producing mechanical power/thrust Liquid driven non-positive displacement engines and motors. Impulse, reaction, friction, endless chain type engines. Waterwheels, water turbines. Francis, Kaplan and propeller turbines. Spring motors. Gravity/inertia motors. Wind, solar, geothermal, muscle power motors. (F03B,D,G,H)

## Q55 Positive displacement fluid machines/pumps/compressors (i.e. for driving fluid)

Positive displacement pumps, compressors. Scroll compressors. Reciprocating, rotary or oscillating piston machines. Valves, seals, rotors, casings. (F04B,C)

## Q56 Non-positive displacement fluid machines/pumps/compressors (i.e. for driving fluid)

Radial flow, axial flow, jet and diffusion pumps and compressors. Fans. Siphons. Shafts, bearings, rotors, casings, cavitations reducers. (F04D,F)

### Q57 Fluid pressure actuators; Hydraulic/pneumatics in general

Telemotors. Servomotors. Pyrotechnic actuators Controlling fluid flow. Hydraulics. *(F15)* 

#### **Q6 ENGINEERING ELEMENTS**

Includes novel engineering elements of relevance to the transportation area.

### **Q61 Fastening elements; Connections**

Nuts, bolts, washers. Rivets and rivnuts. Nails, staples, dowels. Clamps, suction cups, hooks. Torque-limiting, anti-tamper, locking, friction grip, key connections. (F16B)

### **Q62 Shafts and bearings**

Flexible and rigid shafts. Crankshafts, eccentrics. Pivotal connections. Ball joints Ball, roller, sliding contact and hydrodynamic bearings Cooling and lubricating. Manufacture. (F16C)

### Q63 Couplings; Clutches; Brakes; Springs; Dampers Universal joints

Constant velocity (CV) joints. Slip, yielding, impulse couplings. Fluid couplings. Clutches. Disc, drum and band brakes. Brake pads, callipers. Springs, shock absorbers, dampers. Coil springs and leaf springs. (F16D,F)

#### Q64 Belts; Chains; Gearing

Drive belts, timing belts. Drive chains. Pulleys, sprockets, gearing. Cams, cam followers, worms, toothed gears. Fluid gearing. Gearing control, gear levers. Lubrication and cooling. (F16G,H)

### Q65 Pistons; Cylinders; Packing; Seals

Pistons, plungers. Cylinders and liners. Seals, packing. Piston rings *(F16J)* 

### **Q66 Valves; Taps; Cocks; Vents**

Lift, gate, sliding, diaphragm and rotary valves. Valve seats, seals, casings, housings. Poppet valves. Check valves. Safety/equalising valves. Vent valves. (F16K)

### **Q67 Pipes; Joints; Fittings**

Pipes and hoses. Pipe/hose connections/joints. Compression joints. Quick fastening/release connections. Seals. Clips. Pipe laying and repair. (F16L)

### **Q68 Other engineering elements**

Frames. Machinery beds. Engine beds. Axle stands. Trestles. General lubrication arrangements. General safety devices. (F16M-S)

### Q69 Storing/distributing gas/liquid

Pressure vessels. Gas holders/tanks. Vessel filling and discharging equipment. Pipeline systems.

(F16T, F17)

### **Q7 LIGHTING, HEATING**

### **Q71 Lighting**

(F21)

### **Q72 Steam generation**

(F22)

### **Q73 Combustion equipment/processes**

(F23)

### Q74 Heating; Ranges; Ventilating

(F24)

### **Q75** Refrigeration; Liquefaction

(F25)

### Q76 Drying

(F26)

### Q77 Furnaces; Kilns; Ovens; Retorts

(F27)

### Q78 Heat exchange in general

(F28)

### Q79 Weapons; Ammunition; Blasting

(F41,42)

#### S INSTRUMENTATION MEASURING AND TESTING

Includes electrical aspects of medical equipment, photographic and printing apparatus.

#### **S01 Electrical Instruments**

Oscilloscopes, multimeters, electricity meters, semiconductor devices and PCB testing, NMR, MRI, magnetic and electric field measurement, radio test equipment, instrument housing and other details. (G01R, G12B)

### **S02 Engineering Instrumentation**

Measuring dimensions, weight, flow rate, mechanical vibrations, force, acceleration and velocity measurement, measurement transducers, testing engines and machines, gyroscopes, scales, dials, pointers and other details. (G01B-H, L, M, P)

**S03 Scientific Instrumentation** 

Photometry, calorimetry.
Thermometers.
Meteorology, geophysics, measurement of nuclear or X-radiation. Investigating chemical or physical properties.
Immunoassay, LAB-ON-CHIP, Chemical indicators or reagents.
(G01J, K, N, T-W)

#### **S04 Clocks and Timers**

Electronic and mechanical clocks and watches. Time switches. Time-interval measuring. (G04B-G)

### **S05 Electrical Medical Equipment**

Electrotherapy. Electrosurgical apparatus. Blood cell counters. Electrical diagnostic apparatus. Tomography. Veterinary apparatus.

(A61B, C, F - J, L- N)

### **S06 Electrophotography and Photography**

Cameras, film projectors and processing (electrical aspects only). Electrography, xerography. Rotary press printers (electrical aspects only). (G03, G03G)

#### T COMPUTING AND CONTROL

Covers control systems, data recording equipment, computing devices and peripheral apparatus, including construction details.

### **T01 Digital Computers**

Electronic data processors, interfaces and programme control. Mechanical digital computers.

(G06C-F, T, G16)

### **T02 Analogue and Hybrid Computers**

Function evaluators, equation solvers, simulators. (G06G, J)

### **T03 Data Recording**

Analogue and digital recording on tape, disc etc, using for example, magnetic, optical, magneto-optical, capacitive methods. (G11B)

### **T04 Computer Peripheral Equipment**

Card and tape punches and readers. Magnetic, optical and smart cards. VDUs, character and graphics generators. Pattern recognition, magnetic ink recognition, bar codes. COM equipment. (G06K)

### T05 Counting, Checking, Vending, ATM and POS Systems

Counting systems. Ticket issuing, registering and franking apparatus. Attendance registering apparatus. Coin and paper currency handling. Point-of-sale equipment. Electronic funds transfer. (G06M, G07B-G)

### **T06 Process and Machine Control**

General control systems. (Non)numerical, programmable and adaptive control. Control of non-electrical variables e.g. temperature or flow. Control system applications e.g. machine tools, lifts. (G05B, D)

### **T07 Traffic Control Systems**

Road traffic monitoring. Road traffic control. Traffic light systems, flow control. Traffic, weather and navigation data updating. (G08G)

#### **U SEMICONDUCTORS AND ELECTRONIC CIRCUITRY**

Includes semiconductor components *per se*, their manufacture and circuitry. Circuits using electronic components are included, e.g. filters and oscillators.

### **U11 Semiconductor Materials and Processes**

Semiconductor, insulating and conductive materials. Crystal growth. Substrate and layer processing: deposition, etching, doping and heat treatment. Packages, mountings and assembly. Testing and handling of both integrated and discrete semiconductor devices. (Manufacture of LEDs, lasers, solar cells and aspects of thick film and hybrid circuits are covered in U12 and U14). (C30B, H01L)

#### **U12 Discrete Devices**

Discrete semiconductor devices or specific components of integrated circuits. Optoelectronic devices: discrete Photodetectors, LEDs and lasers both discrete or array. Solar cells. Hall-effect, magnetoresistive or spintronic devices. Diodes, capacitors and resistors. Bipolar transistors, thyristors, FETs. Quantum interference devices. Micromechanical devices. Semiconductor transducers. (H01L)

### **U13 Integrated Circuits**

(H01L)

Digital circuits, especially with matrix array, e.g. ROM, DRAM, SRAM memories, programmable logic and gate array. Solid state image sensors, e.g. CCD, photodetector array. Excludes routinely integrated circuits with no integration novelty.

### **U14 Memories, Film and Hybrid Circuits**

Digital memories including magnetic, optical, semiconductor, ferroelectric, analog memories. Testing of memories. Thermoelectric devices. Superconductive materials and devices. Acoustic wave devices. Thin film arrays and layers. Thick film and hybrid circuits including multilayer ceramic wiring boards and aspects of manufacture. Electroluminescent light sources. Liquid crystal displays, electrochromic, electrophoretic, electroluminescent and electrowetting displays. Non-display switchable glass panels.

(G11C, H01L)

### **U21 Logic Circuits, Electronic Switching** and Coding

Logic gates, inverters, buffers, field programmable gate arrays. A/D and D/A conversion, position encoders, delta modulation. Code conversion, data compression, error detection and correction. Counter circuits, frequency dividers. Electronic switching, proximity/touch switches. (H03K, M)

### **U22 Pulse Generation and Manipulation**

Rectangular and triangular wave Oscillators, pulse generators, (astable, bistable, etc). Pulse shaping and manipulation. Pulse modulation and demodulation including PAM, PPM, PFM, and PDM. Digital filters. DSP. (H03H, K, L)

### **U23 Oscillation and Modulation Oscillators, mixers.**

Amplitude and angle (de)modulation. Frequency and phase comparators. PLLs, indirect and direct frequency synthesisers. (H03B-D, H03L)

### **U24 Amplifiers and Low Power Supplies**

DC, LF, HF, small signal and power amplifiers. Gain control. Volume compression or expansion. Limiters. Voltage and current stabilisation, power supplies, converters, inverters, rectifiers. Low power protection. (H03F, H03G, G05F, H02M)

### **U25 Impedance Networks and Tuning**

Tone or bandwidth control. Impedance converters. Analogue filters (active and passive). Voltage dividers, attenuators, impedance matching, baluns. Tuning circuits. AFC. (H03H, H03J)

#### **V ELECTRONIC COMPONENTS**

Includes electrical and electro-optical components. Component mounting and construction details. Electrical discharge devices, for purposes other than lighting, are included

### **V01 Resistors and Capacitors**

Low power fixed and variable discrete devices. Thermistors and varistors. Electrolytic (including double-layer, superand ultracapacitors) and non-electrolytic capacitors. (H01C, G)

#### **V02 Inductors and Transformers**

Low power inductive components. Communication type inductive components. (Electro)magnets. Magnetic materials. (H01F)

### V03 Switches, Relays

Low power switches and relays. Thermally or magnetically operated switches. (H01H)

#### **V04 Printed Circuits and Connectors**

PCBs and their manufacture. Low power connectors. Electronic apparatus, housings and constructional details. RFI/EMI screening. General circuit manufacture. (H01R, H05K)

### **V05 Valves, Discharge Tubes and CRTs**

Vacuum tubes, klystrons, TWTs, magnetrons, CRTs, field emission displays, camera tubes, X-ray tubes and operating circuits. Photoelectric discharge tubes, electron multipliers, plasma/ion processing tubes. Electron and scanning probe microscopes. Gas filled tubes. Gas discharge displays. (H01J, H05G)

### V06 Electromechanical Transducers and Small Machines

Audio, communication, and measurementtype transducers. Electromechanical resonators. Small electric machines and their controllers. Micromachines. (H04R, H03H, H02K)

### **V07 Fibre-optics and Light Control**

Light-guides, optical fibres, integrated optics and optical cables. Connectors, couplers, mode selectors, polarisers. Control of intensity, phase, polarisation, wavelength and direction. Spatial light modulators. Optical fibre amplifiers. (G02B, F)

#### **V08 Lasers and Masers**

Optical resonators. Laser pumping, control e.g. intensity, frequency stabilisation, cooling, testing. Gas, semiconductor, solid state, dye-free electron, X-Ray lasers. Masers. (H01S)

#### **W COMMUNICATIONS**

Covers telecommunications, audio and video equipment, telemetry/telecontrol and radar, aviation, marine and military systems where electrical details are included.

### **W01 Telephone and Data Transmission Systems**

Error detection and correction. Code conversion.

Synchronising. Secret data communication. Data networks (LAN, WAN, etc). ISDN. Baseband and broadband data transmission. Exchanges, call metering, test equipment, equipment racks, intelligent network, call centre. Subscriber equipment, cordless, cellular and satellite phones. Telephone line and cable installation.

(H04L, M, Q, W)

### W02 Broadcasting, Radio and Line Transmission Systems

Aerials, waveguides, resonators and other distributed constant components. Transmitters, transceivers, transponders. Communication receivers. Line transmission systems. Radio systems, including diversity, relay, mobile (including cellular). Optical and ultrasonic wave transmission systems. Spread Spectrum communication. Secret communication, jamming. TV systems, including stereoscopic, cable, subscription, satellite, interactive and high definition. Stereophonic broadcast systems. (H01P, Q, H04B, H, J,K)

#### **W03 TV and Broadcast Radio Receivers**

AM/FM and DAB radio receivers, car radios. TV receivers including text aspects and MHEG, DVB, high definition, satellite, 3D/stereoscopic, stereophonic and surround sound. Remote control and interconnection. (H04)

### W04 Audio/Video Recording and Systems

Stereophonic systems, loudspeaker enclosures, public address Audio/visual recording applications, formatting, signal processing and constructional aspects. General audio signal processing and sound mixing. Electronic musical instruments. Video cameras, TV studio and special effects equipment. General video signal processing. Projection TV and analogous systems. Video games, karaoke. Electronic educational apparatus. Sports equipment, toys. Speech coding, analysis and synthesis. Antiphase sound cancelling. Hearing aids. Audio and video aspects of multimedia.

(G10H,L, G11B, H04N)

### W05 Alarms, Signalling, Telemetry and Telecontrol

Burglar and fire alarms. Personal call arrangements. Paging systems. Signal transmission systems for remote control and monitoring, e.g. in home bus systems, vehicle remote control bus systems. Advertising arrangements (electrical aspects). (GO8B, C)

### W06 Aviation, Marine and Radar Systems

Radar, sonar and lidar. Velocity and depth measuring equipment. Position fixing and direction finding. Navigation systems, e.g. GPS. Airport control systems. Ship and aircraft control and instrumentation. Flight simulators. Space vehicles, including satellites.

(G01S)

### W07 Electrical Military Equipment and Weapons

Target indicating systems. Sighting and aiming devices. Missile direction control. Military training equipment. Arming and safety devices. Electric weapons. Personnel and equipment protection. Battlefield communications. Military reconnaissance. (F41, F42B, C)

#### X ELECTRIC POWER ENGINEERING

Includes power generation, storage, distribution and utilisation. Electrical details of ground vehicles. Industrial-use patents with significant electrical detail are included. Patents relating to domestic electrical appliances do not have to contain electrical novelty to be included.

# X11 Power Generation and High Power Machines

Conventional power generating prime movers. Dynamo-electric machines. MHD generators. (H02K, N)

#### X12 Power Distribution/Components/

Converters High power AC, DC and HVDC distribution/control. Power and communication cables. Superconducting cables, coils and magnets. Installing power cables and lines. Power transformers, reactors. Spark gaps and circuits. Insulators. High power connectors. Power converters. Conductive, superconductive and insulating materials. (H01B, H01T, H02G, H02J, H02M)

# X13 Switchgear, Protection, Electric Drives

Electric machine and static power converter controllers. Switchboards, switchyards, switchgear. Power system protection. Circuit protectors, circuit breakers, fuses. (H02B, H02H, H02P)

#### **X14 Nuclear Power Generation**

Nuclear reactor processes, components and power plants. Control mechanisms. Plasma techniques. Particle accelerators. (G21, H05H)

# X15 Non-Fossil Fuel Power Generating Systems

Geothermal, wind, wave and solar energy, types of power generation. (F03D, F24J)

#### X16 Electrochemical Storage

Primary, secondary and fuel cells and batteries. Battery chargers. Non-electrochemical storage of electric energy. (H01M)

#### **X21 Electric Vehicles**

Electric cars, trolley buses, hybrid vehicles, fuel cell vehicles. Propulsion, braking. Traction batteries. Control equipment. (B60L)

#### **X22 Automotive Electrics**

Vehicle accessories. Vehicle lighting. IC engine ignition. IC engine controllers. Batteries and charging. Starting motors, and generators. Engine and vehicle instrumentation. Non-engine related controllers e.g. transmissions, brakes. Passenger safety. Intra/inter-vehicle communications, multiplexing. (B60K, Q, R, T; F02D, M, N, P; F21M)

#### X23 Electric Railways and Signalling

Electric propulsion and braking. Traction motors and control. Traction power supplies. Power supply lines, current controllers. Signalling equipment. Railway traffic control. (B60L, B61L)

#### **X24 Electric Welding**

Electric soldering. Arc, induction, electron beam, resistance, laser beam, solid state and HF welding. Electroerosion. (B23K)

## **X25 Industrial Electric Equipment**

3-D printing / Additive manufacturing, Electric furnaces and kilns. Resistance, induction, electric discharge and EM field heating. Electrostatic spraying and cleaning. Vibrating apparatus. Electrolytic processes, electro-refining metals. Electrically powered tools. Industrial drying equipment. Ore separating magnets. Magnetic work holders, lifting magnets. Textile and paper manufacture, sewing and embroidery machines. Industrial food processing. Industrial components e.g. pumps, fans. Electric construction/building equipment. Electric agricultural equipment. Cryogenics. (H05B, F27)

## **X26 Lighting**

Discharge, incandescent and electric arc lamps. Operating and control equipment. Light fittings. Portable lighting devices. Stage lighting equipment. LED, EL and fibre-optic illumination, including display back-lighting. (F21, H01J, H01K, H05B)

#### **X27 Domestic Electric Appliances**

Washing machines, dryers, irons. Vacuum cleaners. Electric cookers, microwave ovens. Kitchen equipment. Refrigerators. Water heaters. Space heating and air conditioning equipment. Personal and hygiene electrical appliances. Home automation appliances. (A47, F24)

## **Appendix 5: Nanotechnology**

This appendix is designed as a quick reference guide for all manual codes across the chemistry, life sciences and engineering technologies that relate to Nanotech industries.

For full details please look up the relevant code in the applicable manual. Classes A-N are covered by the CPI manual and section P-X by the EPI manual.

Note - Items in italics are of nanotech interest but may contain details not applicable to nanotech.

## **Appendix 6: Green technology**

This appendix is designed as a quick reference guide for all manual codes across the chemistry, life sciences and engineering technologies that relate to "green technologies" such as "green" transportation, e.g. hybrid, fuel cell and other zero emissions vehicles; alternative power sources such as wind and solar power; bio-fuels and any other technologies that enable control of pollution or reduction of carbon footprints.

For full details please look up the relevant code in the applicable manual. Classes A-N are covered by the CPI manual and section P-X by the EPI manual.

Note - Items in italics are of green interest but may contain details not applicable to green technologies.
